

SOCIAL WORK - ASSOCIATE OF SOCIAL WORK

The Social Work Associate degree program, addresses the significant history, policies, theories and functional practices applied when working with marginalized individuals, families, groups and communities.

Throughout the program students will collect, analyze, and apply data as it relates to social phenomena, including social problems and individual behavior. Core courses teach students how individuals, groups, institutions or segments of societies behave, function, and influence one another.

The curriculum was developed to provide students with the introductory-level knowledge in the field of social work study and to support a seamless transfer to the New Mexico State University Bachelor in Social Work degree (BSW).
