1. Understand two-sided limits, one-sided limits, limits at infinity, continuity and uniform continuity for functions on the real line.
2. Understand derivatives, differentiability theorems, the Mean Value Theorem, Taylor's Theorem, L'Hopital's Rule and the Inverse Function Theorem for functions on the real line.
3. Understand integration on the real line: the Riemann integral, Riemann sums, the Fundamental Theorem of Calculus and improper Riemann integrals.
4. Understand sequences and infinite series of functions, including uniform convergence, limit supremum, limit infimum, power series and analytic functions.

MATH 529. Complex Analysis
3 Credits (3)
Rigorous treatment of complex differentiation and integration, properties of analytic functions, series and Cauchy's integral representations.

Prerequisite: MATH 332.

MATH 530. Special Topics
1-3 Credits
Specific subjects to be announced in the Schedule of Classes. May be for unlimited credit with approval of the department.

MATH 5310. Introduction to Topology
3 Credits (3)
Topological spaces: general spaces and specific examples such as metric spaces, Hausdorff spaces and/or normed vector spaces; separation axioms; continuity, compactness, connectedness; related theorems. Crosslisted with: MATH 4310.

MATH 5320. Logic and Set Theory
3 Credits (3)
Same as MATH 4320 with additional assignments for graduate students.

MATH 5330. Elementary Number Theory
3 Credits (3)
Same as MATH 4330 with additional assignments for graduate students.

MATH 5340. Abstract Algebra I: Groups and Rings
3 Credits (3)
Same as MATH 4340 with additional work for graduate students. Taught with MATH 4340.

Prerequisite: MATH 5350 or consent of instructor.

MATH 5350. Advanced Linear Algebra
3 Credits (3)
Same as MATH 4350 with additional work for graduate students.

**MATH 5360. Introduction to Real Analysis I**

3 Credits (3)

Same as MATH 4360 with additional work for graduate students.

**Learning Outcomes**

1. Understand two-sided limits, one-sided limits, limits at infinity, continuity and uniform continuity for functions on the real line.
2. Understand derivatives, differentiability theorems, the Mean Value Theorem, Taylor’s Theorem, L’Hospital’s Rule and the Inverse Function Theorem for functions on the real line.
3. Understand integration on the real line: the Riemann integral, Riemann sums, the Fundamental Theorem of Calculus and improper Riemann integrals.
4. Understand sequences and infinite series of functions, including uniform convergence, limit supremum, limit infimum, power series and analytic functions.

**MATH 5365. Introduction to Real Analysis II**

3 Credits (3)

Same as MATH 4365 with additional work for graduate students.

**Learning Outcomes**

1. Understand the algebraic structure, including planes and linear transformations, of Euclidean spaces.
2. Understand the fundamental notions of metric spaces: limits of functions, interior/closure/boundary of sets, compact sets, connected sets, continuous functions and the Stone-Weierstrass Theorem.
3. Understand derivatives, differentials, tangent planes, the Chain Rule, the Mean Value Theorem, Taylor’s Formula and the Inverse Function Theorem for functions on n-dimensional Euclidean space.
4. Understand integration on n-dimensional Euclidean space: Jordan regions, Riemann integration on Jordan Regions, iterated integrals and change of variables.

**MATH 540. Directed Reading**

1-6 Credits

May be repeated for a maximum of 6 credits. Consent of instructor required. Graded: S/U.

**MATH 5410. Complex Analysis**

3 Credits (3)

**MATH 542. Topology**

3 Credits (3)

Covering spaces and their classification, singular homology, degree theory, Brouwer’s fixed point theorem, CW-complexes and cellular homology, and other applications.

**Prerequisite(s):** MATH 541 or consent of instructor.

**MATH 5420. Topology I**

3 Credits (3)

Connectedness and compactness of topological spaces, introduction to the quotient topology, elementary homotopy theory, the fundamental group, the Seifert-van Kampen theorem.

**Prerequisite(s):** MATH 5350 and MATH 5365, or consent of instructor.

**MATH 5425. Topology II**

3 Credits (3)

Covering spaces and their classification, singular homology, degree theory, Brouwer’s fixed point theorem, CW-complexes and cellular homology, and other applications.

**Prerequisite(s):** MATH 5420 or consent of instructor.

**MATH 5428. Topics in Topology**

3 Credits

Topics in modern topology. The material covered will reflect current research topics in the field and may vary each time the course is offered. To be taken up to 3 times. May be repeated up to 9 credits.

**Learning Outcomes**

1. Gain knowledge of advanced methods in the area of topology.
2. Develop potential to explore literature in the area of topology.
3. Develop potential to conduct supervised research in the area of topology.

**MATH 5430. Mathematical Structures in Logic**

3 Credits (3)

**Prerequisite:** MATH 5320.

**MATH 5435. Universal Algebra and Model Theory**

3 Credits (3)

**Prerequisite:** MATH 5320.

**MATH 5438. Topics in Foundations**

3 Credits

Topics in modern foundations. The material covered will reflect current research topics in the field and may vary each time the course is offered. To be taken up to 3 times. May be repeated up to 9 credits.

**Learning Outcomes**

1. Gain knowledge of advanced methods in the area of foundations.
2. Develop potential to explore literature in the area of foundations.
3. Develop potential to conduct supervised research in the area of foundations.

**MATH 5440. Partial Differential Equations I**

3 Credits (3)

The basic equations of mathematical physics. Laplace, Heat and Wave Equations. The method of characteristics, introduction to conservation laws, special solutions.

**Prerequisite(s):** MATH 5220 and MATH 5365 or consent of instructor.

**MATH 5445. Partial Differential Equations II**

3 Credits (3)

Sobolev spaces theory: basic definitions and properties, embedding theorems, weak solutions of boundary value problems and variational methods for partial differential equations.

**Prerequisite(s):** MATH 5460 or consent of instructor.

**MATH 5450. Abstract Algebra II: Fields, Rings and Modules**

3 Credits (3)

Topics covered include field extensions; algebraic closure; polynomials; irreducibility criteria; Noetherian rings; algebraic sets; Nullstellensatz; modules; applications to linear algebra.

**Prerequisite(s):** MATH 5340 or consent of instructor.

**MATH 5453. Module Theory and Homological Algebra**

3 Credits (3)

Introductory concepts of homological algebra, including projective, injective and flat modules; projective and injective resolutions; exactness of functors; homology of chain complexes; derived functors.
Prerequisite(s): MATH 5450 or consent of instructor.

MATH 5455. Introduction to Commutative Algebra and Algebraic Geometry
3 Credits (3)
Introduction to the basic notions and techniques of modern algebraic geometry, including the necessary commutative algebra foundation. Topics likely to include algebraic and projective varieties, Nullstellensatz, morphisms, rational and regular functions, local properties. Other topics may include Noether normalization, dimension theory, singularities, sheaves, schemes, Grobner bases.

Prerequisite(s): MATH 5450 or consent of instructor.

MATH 5458. Topics in Algebra
3 Credits
Topics in modern algebra. The material covered will reflect current research topics in the field and may vary each time the course is offered. To be taken up to 3 times. May be repeated up to 9 credits.

Learning Outcomes
1. Gain knowledge of advanced methods in the area of algebra.
2. Develop potential to explore literature in the area of algebra.
3. Develop potential to conduct supervised research in the area of algebra.

MATH 5460. Measure and Integration
3 Credits (3)
Measure spaces, measurable functions, extension and decomposition theorems for measures, integration on measure spaces, absolute continuity, iterated integrals.

Prerequisite: MATH 5365 or consent of instructor.

MATH 5463. Real Analysis
3 Credits (3)
Differentiation, Lp spaces, Banach spaces, measure and topology, other selected topics.

Prerequisite: MATH 5460.

MATH 5465. Introduction to Functional Analysis
3 Credits (3)
Banach spaces. The three basic principles: uniform boundedness principle, closed graph/open mapping theorems, Hahn-Banach theorem.

Prerequisite(s): MATH 5463, or consent of instructor.

MATH 5466. Topics in Analysis
3 Credits
Topics in modern analysis. The material covered will reflect current research topics in the field and may vary each time the course is offered. To be taken up to 3 times. May be repeated up to 9 credits.

Learning Outcomes
1. Gain knowledge of advanced methods in the area of analysis.
2. Develop potential to explore literature in the area of analysis.
3. Develop potential to conduct supervised research in the area of analysis.

MATH 5468. Topics in Algebra
3 Credits (3)
Topics in modern algebra. The material covered will reflect current research topics in the field and may vary each time the course is offered. To be taken up to 3 times. May be repeated up to 9 credits.

Learning Outcomes
1. Gain knowledge of advanced methods in the area of algebra.
2. Develop potential to explore literature in the area of algebra.
3. Develop potential to conduct supervised research in the area of algebra.

MATH 551. Mathematical Structures in Logic
3 Credits (3)

Prerequisite(s): MATH 524.

MATH 553. Algebra with Connections
3 Credits (3)
Connections between Algebra and other K-12 curriculum strands, especially Geometry and Probability / Data Analysis. Apply algebraic modeling and reasoning to a variety of mathematical problem solving situations. Does not fulfill requirements for degrees in mathematics. Consent of instructor required.

Prerequisite(s): Admittance into the MC2-LIFT program.

MATH 564. From Number to Algebra
3 Credits (3)
The progression from Number to Algebra in the K-12 curriculum as a concrete-to-abstract progression. Important concepts considered across the grade levels include the different uses of variables, equivalence in different contexts, patterns, and ratios. Does not fulfill requirements for degrees in mathematics. Consent of instructor required.

Prerequisite(s): Admittance into the MC2-LIFT program.

MATH 567. From Measurement to Geometry
3 Credits (3)
The progression from Measurement to Geometry in the K-12 curriculum as a concrete-to-abstract progression. Important concepts considered across the grade levels include the different uses of variables, equivalence in different contexts, patterns, and ratios. Does not fulfill requirements for degrees in mathematics. Consent of instructor required.

Prerequisite(s): Admittance into the MC2-LIFT program.

MATH 571. Partial Differential Equations I
3 Credits (3)
The basic equations of mathematical physics. Laplace, Heat and Wave Equations. The method of characteristics, introduction to conservation laws, special solutions.

Prerequisite(s): MATH 518 and MATH 528 or consent of instructor.

MATH 581. Abstract Algebra II: Fields, Rings and Modules
3 Credits (3)
Topics covered include field extensions; algebraic closure; polynomials rings; irreducibility criteria; Noetherian rings; algebraic sets; Nullstellensatz; modules; applications to linear algebra.

Prerequisite(s): MATH 526 or consent of instructor.

MATH 582. Module Theory and Homological Algebra
3 Credits (3)
Introductory concepts of homological algebra, including projective, injective and flat modules; projective and injective resolutions; exactness of functors; homology of chain complexes; derived functors.

Prerequisite(s): MATH 581 or consent of instructor.

MATH 583. Introduction to Commutative Algebra and Algebraic Geometry
3 Credits (3)
Introduction to the basic notions and techniques of modern algebraic geometry, including the necessary commutative algebra foundation. Topics likely to include algebraic and projective varieties, Nullstellensatz, morphisms, rational and regular functions, local properties. Other topics may include Noether normalization, dimension theory, singularities, sheaves, schemes, Grobner bases.

Prerequisite(s): MATH 581 or consent of instructor.

MATH 593. Measure and Integration
3 Credits (3)
Measure spaces, measurable functions, extension and decomposition theorems for measures, integration on measure spaces, absolute continuity, iterated integrals.

Prerequisite: MATH 528 or consent of instructor.

MATH 594. Real Analysis
3 Credits (3)
Differentiation, Lp spaces, Banach spaces, measure and topology, other selected topics.
Prerequisite: MATH 593.

MATH 595. Introduction to Functional Analysis
3 Credits (3)
Banach spaces. The three basic principles: uniform boundedness principle, closed graph/open mapping theorems, Hahn-Banach theorem.
Prerequisite(s): MATH 594, or consent of instructor.

MATH 599. Master's Thesis
1-15 Credits
Thesis.

MATH 5996. Special Topics
1-3 Credits
Specific subjects to be announced in the Schedule of Classes. May be for unlimited credit with approval of the department.

MATH 5997. Directed Reading
1-6 Credits
May be repeated for a maximum of 6 credits. Consent of instructor required. Graded: S/U.

MATH 5999. Master's Thesis
1-15 Credits
Thesis.

MATH 600. Doctoral Research
1-15 Credits
Research.

MATH 698. Selected Topics
1-15 Credits
Selected topics.

MATH 6991. Doctoral Research
1-15 Credits
Research.

MATH 6996. Special Topics
1-3 Credits
Selected topics.

MATH 700. Doctoral Dissertation
1-15 Credits
Dissertation.

MATH 7000. Doctoral Dissertation
1-15 Credits
Dissertation.

Statistics Courses

STAT 3110. Statistics for Engineers and Scientists
3 Credits (3)
Modern probability and statistics with applications to the engineering sciences.
Prerequisite(s): C- or better in MATH 1521G or MATH 1521H.

STAT 4210. Probability: Theory and Applications
3 Credits (3)
Basic probability distributions including binomial, normal; random variables, expectation; laws of large numbers; central limit theorem.
Prerequisite(s): C- or better in MATH 2530G and C- or better in at least one-3000 level MATH or STAT course.

Learning Outcomes
1. Understand the notion of a stochastic process.
2. Learn the basic properties of special stochastic processes: Markov processes and martingales.
3. Study and assimilate the fine properties of a particular instance of the stochastic process known as Brownian motion that is both a Markov process and a martingale.
4. Understand the application of Brownian motion known the Ito calculus and become fluent in its use.
5. Apply the Ito calculus to study stochastic differential equations.

STAT 4220. Statistics: Theory and Applications
3 Credits (3)
Point and interval estimation; sufficiency; hypothesis testing; regression; analysis of variance; chi-square tests. May be repeated up to 3 credits.
Prerequisite: C- or better in STAT 4210.

STAT 5210. Probability: Theory and Applications
3 Credits (3)
Same as STAT 4210 with additional work for graduate students.

STAT 5220. Statistics: Theory and Applications
3 Credits (3)
Same as STAT 4220 with additional work for graduate students. May be repeated up to 3 credits.

STAT 5230. Elementary Stochastic Processes
3 Credits (3)
Markov chains, Poisson processes, Brownian motion, branching processes, and queuing processes, with applications to the physical, biological, and social sciences. May be repeated up to 3 credits.
Prerequisite: STAT 5210 or consent of instructor.

STAT 5310. Foundations of Probability
3 Credits (3)
Probability spaces, expectation and conditional expectation, limit theorems and laws of large numbers. May be repeated up to 3 credits.
Prerequisite: MATH 5460.

STAT 5320. Advanced Topics in Stochastic Processes
3 Credits (3)
Markov processes, martingales, Brownian motion, the Ito calculus, stochastic differential equations.
Prerequisite: STAT 5310.

Learning Outcomes
1. Understand the notion of a stochastic process.
2. Learn the basic properties of special stochastic processes: Markov processes and martingales.
3. Study and assimilate the fine properties of a particular instance of the stochastic process known as Brownian motion that is both a Markov process and a martingale.
4. Understand the application of Brownian motion known the Ito calculus and become fluent in its use.
5. Apply the Ito calculus to study stochastic differential equations.

STAT 5330. Continuous Multivariate Analysis
3 Credits (3)
Theory and applications of the multivariate normal distribution. May be repeated up to 3 credits.
Prerequisite: STAT 5220, or consent of instructor.

STAT 5335. Linear Models
3 Credits (3)
Core topics include distribution of quadratic forms, theory of regression, analysis of variance and covariance in linear models. Advanced topics chosen from random and mixed linear models, generalized linear, growth curve, and nonlinear models, quartile and copula regression. May be repeated up to 6 credits.
Prerequisite(s): STAT 5330.

STAT 5340. Advanced Theory of Statistics I
3 Credits (3)
Testing hypotheses, probability and sufficiency, uniformly most powerful tests, unbiasedness, invariance, and minimax principle.
Prerequisite: STAT 5220 or consent of instructor.

STAT 5345. Advanced Theory of Statistics II
3 Credits (3)
Estimation of parameters; unbiased estimators; equivariance; Bayes properties; large sample theory and optimality. May be repeated up to 3 credits.
Prerequisite: STAT 5340 or consent of instructor.

STAT 5348. Topics in Probability and Statistics
3 Credits
Topics in modern probability and statistics. The material covered will reflect current research topics in the field and may vary each time the course is offered. To be taken up to 3 times. May be repeated up to 9 credits.

Learning Outcomes
1. Gain knowledge of advanced methods in the areas of probability and statistics.
2. Develop potential to explore literature in the areas of probability and statistics.
3. Develop potential to conduct supervised research in the areas of probability and statistics.

Mathematics (Actuarial Science and Insurance) - Bachelor of Science

The concentration in Actuarial Science and Insurance draws on courses from mathematics and business to prepare students for a mathematical career in insurance. The coursework in this emphasis focuses on the analysis of risk and its applications to insurance finance. Students fulfilling the requirements for the Actuarial Science and Insurance Concentration earn a minor in Risk Management and Insurance.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

BFIN 323 Life/Health/Employer Benefits
Select two courses from the following:
- BFIN 303V Personal Financial Planning and Investing in a Global Economy
- or BFIN 421 Personal Financial Planning for Professionals
- BFIN 324 Property and Liability Insurance
- BFIN 391 Finance Internship and Cooperative Education I

New Mexico State University - Las Cruces 761
A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Some students may be able to bypass one or more courses in the calculus sequence MATH 1511G - MATH 1521G - MATH 2530G. The calculus sequence, Introduction to Higher Mathematics, and Linear Algebra provide knowledge that is basic to further work, and students are advised to complete them or their equivalent as early as possible.

---

1. MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.
2. See the General Education (p. 227) section of the catalog for a full list of courses.
3. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses. Note one of the VWW requirements will be satisfied using the 9 hour rule with the FIN courses that are required for the degree.
4. A grade of C- or better must be earned.
5. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may need to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Science with a major in Mathematics with a Concentration in Actuarial Science and Insurance, there is no second language requirement for the degree.
Mathematics (Applied Mathematics) - Bachelor of Science

The Applied Mathematics concentration is intended to prepare students planning a mathematically oriented career upon graduation. The coursework in this concentration provides a foundation in mathematics important in many scientific and engineering applications.

1. Math Placement: MATH 1511G Calculus and Analytic Geometry I is the starting Math course for the degree, however, students may need to complete any prerequisites prior to enrolling into this course.
2. See the General Education (p. 227) section of the catalog for a full list of courses.
3. See the Viewing a Wider World (p. 231) section for a full list of courses. Please note that the second VWW requirement will be satisfied by the 9 hour rule using the FIN courses that are required for the degree.
4. MATH 3110 Introduction to Modern Algebra is only offered in the Fall semesters, however MATH 3120 Introduction to Analysis is taught in the Spring and may be used as a substitute.
5. Do not mix options; pick one throughout.
6. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
7. MATH/STAT 300/3000-level courses that cannot be taken to fulfill this requirement: MATH 3997 Directed Readings.
8. MATH/STAT 400/4000-level courses that cannot be taken to fulfill this requirement: MATH 4991 Undergraduate Research, MATH 4997 Directed Reading, STAT 400 Undergraduate Research.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

MATH 4997 Directed Reading
STAT 400 Undergraduate Research

Non-Departmental Requirements (in addition to Gen.Ed/VWW)
C S 172 Computer Science I (C- or better) 4
Select a minimum of 9 credit hours of electives to form a coherent cluster in an applied area from the following: 9
Examples of acceptable clusters:

Signals
E E 320 Signals and Systems I
E E 395 Introduction to Digital Signal Processing
E E 496 Introduction to Communication Systems

Structures
PHYS 1310G Calculus-Based Physics I 5
C E 233 Mechanics-Statics
C E 315 Structural Analysis

Operations Research
I E 311 Engineering Data Analysis
I E 365 Quality Control
I E 413 Engineering Operations Research I
I E 423 Engineering Operations Research II
I E 460 Evaluation of Engineering Data

Algorithm Theory
C S 272 Introduction to Data Structures
C S 370 Compilers and Automata Theory
C S 372 Data Structures and Algorithms

Bioinformatics
BIOL 2110G Principles of Biology: Cellular and Molecular Biology 5
BIOL 2110L Principles of Biology: Cellular and Molecular Biology Laboratory 5
C S 486 Bioinformatics
Choose one from the following:
C S 272 Introduction to Data Structures
C S 370 Compilers and Automata Theory
C S 371 Software Development
C S 372 Data Structures and Algorithms

Computer Systems
C S 271 Object Oriented Programming
or C S 272 Introduction to Data Structures
C S 371 Software Development
C S 370 Compilers and Automata Theory
C S 474 Operating Systems I
C S 475 Artificial Intelligence I
C S 476 Computer Graphics I
C S 482 Database Management Systems I
C S 484 Computer Networks I
C S 485 Human-Centered Computing

Second Language Requirement: (not required)

Electives, to bring the total credits to 120 6
9-15 credits must be Upper-Division

Total Credits 120-121

See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
A grade of C- or better must be earned. Students may propose clusters subject to departmental approval. A cluster must contain a major or minor in any of the following fields (along with C S 172 Computer Science I) will also fulfill the Cluster Electives requirement: Computer Science, Physics, Biology, Chemistry and Biochemistry, Chemical Engineering, Engineering Physics, Electrical and Computer Engineering, Industrial Engineering, Mechanical Engineering, Civil Engineering, Economics and Finance.
If these courses are selected, they could count towards the General Education Area III requirement.
Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement
For the Bachelor of Science with a major in Mathematics with a Concentration in Applied Mathematics, there is no second language requirement for the degree.

A Suggested Plan of Study for Students
This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Some students may be able to bypass one or more courses in the calculus sequence MATH 1511G - MATH 1521G - MATH 2530G. The calculus sequence, Introduction to Higher Mathematics, and Linear Algebra provide knowledge that is basic to further work, and students are advised to complete them or their equivalent as early as possible.

Credits 30-31

1 MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.
2 See the General Education (p. 227) section of the catalog for a full list of courses.
3 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
4 A grade of C- or better must be earned. Students may propose clusters subject to departmental approval. A cluster must contain a major or minor in any of the following fields (along with C S 172 Computer Science I) will also fulfill the Cluster Electives requirement: Computer Science, Physics, Biology, Chemistry and Biochemistry, Chemical Engineering, Engineering Physics, Electrical and Computer Engineering, Industrial Engineering, Mechanical Engineering, Civil Engineering, Economics and Finance.
5 If these courses are selected, they could count towards the General Education Area III requirement.
6 Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Credits 30-31
Math Placement: MATH 1511G Calculus and Analytic Geometry I is the starting Math course for the degree, however, students may need to complete any prerequisites prior to enrolling into this course.

See the General Education (p. 227) section of the catalog for a full list of courses.

Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

See the Viewing a Wider World (p. 231) section for a full list of courses.

Students who plan to get a Masters in MATH should take MATH 3120 Introduction to Analysis as an elective.

MATH/STAT 300/3000-level courses that cannot be taken to fulfill this requirement: MATH 3997 Directed Readings.

## Mathematics (Foundations) - Bachelor of Science

The concentration in Foundations draws on courses from mathematics and philosophy to provide a close look at the underlying logical and philosophical issues in mathematics.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

| MATH 4110V | Great Theorems in Mathematics | 3 |
| Elective Course(s) | 3 |

Second Language Requirement

For the Bachelor of Science in Mathematics with a Concentration in Foundations there is no second language requirement.

Electives, to bring the total credits to 120

15 credits must be upper division.

Total Credits

120-121

1 MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.

2 See the General Education (p. 227) section of the catalog for a full list of courses.

3 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses. This course must come from outside the college. Note that one of the VWW requirements will be satisfied using the 9 hour rule with the PHIL courses that are required for the degree.

4 A grade of C- or better must be earned.

5 Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
Mathematics coursework will not count towards the degree requirements and/or elective credits in courses numbered 300 or above. Developmental coursework requirements, and elective credits to total at least 120 credits with 48 include: General Education requirements, Viewing a Wider World.

Students must complete all University degree requirements, which with a faculty advisor to select courses appropriate to their interests. Concentration. Students choosing this emphasis should work closely the curriculum are encouraged to pursue the General Mathematics.

Students seeking a foundation in pure mathematics and flexibility in the curriculum are encouraged to pursue the General Mathematics Concentration. Students choosing this emphasis should work closely with a faculty advisor to select courses appropriate to their interests.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Mathematics (General Mathematics) - Bachelor of Science

Students seeking a foundation in pure mathematics and flexibility in the curriculum are encouraged to pursue the General Mathematics Concentration. Students choosing this emphasis should work closely with a faculty advisor to select courses appropriate to their interests.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Mathematics (Probability and Statistics) - Bachelor of Science
The concentration in Probability and Statistics provides students with a strong background in mathematical, probabilistic, and statistical analysis. Students also develop skills in the analysis of problems that arise in science, engineering, and other areas. The program provides a path to graduate studies or a career in industry.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

2 See the General Education (p. 227) section of the catalog for a full list of courses.
3 Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
4 MATH/STAT 3000-level courses that cannot be taken to fulfill this requirement: MATH 3997 Directed Readings.
5 See the Viewing a Wider World (p. 231) section for a full list of courses.
6 MATH/STAT 400/4000-level courses that cannot be taken to fulfill this requirement: MATH 4991 Undergraduate Research, MATH 4997 Directed Reading, STAT 400 Undergraduate Research.
ENGL 1110G Composition I 4

English Composition - Level 2
Choose one from the following: 3
ENGL 2130G Advanced Composition
ENGL 2210G Professional and Technical Communication Honors
ENGL 2215G Advanced Technical and Professional Communication

Oral Communication
Choose one from the following: 3
ACOM 1130G Effective Leadership and Communication in Agriculture
COMM 1115G Introduction to Communication
COMM 1130G Public Speaking
HNRS 2175G Introduction to Communication Honors

Area II: Mathematics
MATH 1511G Calculus and Analytic Geometry I (Departmental/College Requirement) 1
or MATH 1511H Calculus and Analytic Geometry I Honors

Area III/IV: Laboratory Sciences and Social/Behavioral Sciences 10-11
Area III: Laboratory Sciences Course (4 credits) 2
Area IV: Social/Behavioral Sciences Course (3 credits) 2
Either an Area III/IV: Laboratory Sciences Course or Social/Behavioral Sciences Course (4 credits or 3 credits) 2

Area V: Humanities 4
Area VI: Creative and Fine Arts 2 3
General Education Elective
MATH 1521G Calculus and Analytic Geometry II (Departmental/College Requirement) 4
or MATH 1521H Calculus and Analytic Geometry II Honors

Viewing a Wider World 3 6

Departmental/College Requirements
MATH 1531 Introduction to Higher Mathematics 3
MATH 2415 Introduction to Linear Algebra 3
MATH 2530G Calculus III 3
MATH 3120 Introduction to Analysis 3
MATH 3140 Introduction to Numerical Methods 3
STAT 3110 Statistics for Engineers and Scientists 3
STAT 4210 Probability: Theory and Applications 3
STAT 4220 Statistics: Theory and Applications 3

Departmental Electives
Select at least 9 additional upper-division credits of approved courses prefixed MATH or STAT (at least 3 credits must be 400/4000-level), excluding the following: 9
MATH 3997 Directed Readings
MATH 4991 Undergraduate Research
MATH 4997 Directed Reading
STAT 400 Undergraduate Research

Non-Departmental Requirements (in addition to Gen.Ed/VWW) 4
Select one course from the following: 3
C S 153 Python Programming I
C S 158 R Programming I

Additional Requirements
Select one option from the following: 6
OPTION 1
A ST 465 Statistical Analysis I
A ST 466 Statistical Analysis II
OPTION 2

I E 311 Engineering Data Analysis
Select one course from the following:
I E 365 Quality Control
I E 460 Evaluation of Engineering Data
I E 466 Reliability

Second Language Requirement: (not required)
Electives, to bring the total credits to 120 5
12 credits must be upper division
Total Credits 120-121

1 MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.
2 See the General Education (p. 227) section of the catalog for a full list of courses.
3 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
4 A grade of C- or better must be earned.
5 Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor. Students should also consult their advisor about choosing the courses A ST 503 SAS Basics and A ST 505 Statistical Inference I as electives.

Second Language Requirement
For the Bachelor of Science in Mathematics with a Concentration in Statistics there is no second language requirement.

A Suggested Plan of Study for Students
This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Some students may be able to bypass one or more courses in the calculus sequence MATH 1511G - MATH 1521G - MATH 2530G. The calculus sequence, Introduction to Higher Mathematics, and Linear Algebra provide knowledge that is basic to further work, and students are advised to complete them or their equivalent as early as possible.

Total Credits 120-121

1. Math Placement: MATH 1511G Calculus and Analytic Geometry I is the starting Math course for the degree; however, students may need to complete any prerequisites prior to enrolling into this course.

2. See the General Education (p. 227) section of the catalog for a full list of courses.

3. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

4. MATH/STAT 300/3000-level or higher courses that cannot be taken to fulfill this req MATH 4991 Undergraduate Research, and STAT 400 Undergraduate Research.

5. See the Viewing a Wider World (p. 231) section for a full list of courses.

6. MATH/STAT 400/4000-level courses that cannot be taken to fulfill this requirement: MATH 4991 Undergraduate Research, MATH 4997 Directed Reading, STAT 400 Undergraduate Research.

Mathematics (Secondary Mathematics Education) - Bachelor of Science

The concentration in Secondary Mathematics Education allows a flexible program providing a student with a path to graduate studies in mathematics or a career in industry, as well as all the mathematics and education courses required for certification as a secondary education teacher in mathematics.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Departmental Electives

Select at least 9 additional upper-division credits of approves courses prefixed MATH or STAT (at least 6 must be 400-level), excluding the following:

- MATH 3997 Directed Readings
- MATH 4991 Undergraduate Research
- MATH 4997 Directed Reading
- STAT 400 Undergraduate Research

Non-Departmental Requirements (in addition to Gen.Ed/VWW)

- CS 172 Computer Science I
- EDUC 3120 Multicultural Education
- EDUC 3997 Secondary Field Experience
- EDUC 4420 Teaching Mathematics at the Middle and High School Level
- EDUC 4820 Secondary Student Teaching
- EDUC 4821 Middle and High School Student Teaching Seminar
- READ 4330 Content Area Literacy
- SPED 3105 Introduction to Special Education in a Diverse Society

Second Language Requirement

Electives, to bring the total credits to 120

Total Credits: 120-121

1. MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.
2. See the General Education (p. 227) section of the catalog for a full list of courses.
3. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses. Note that one of the VWW requirements will be satisfied using the 9 hour rule with the EDUC courses that are required for the degree.
4. A grade of C- or better must be earned.
5. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Notes for Minor in Education

Students must apply to the Teacher Education Program (TEP) before they can progress in the 400 level education courses. EDUC 3120 Multicultural Education, EDUC 3997 Secondary Field Experience, and SPED 3105 Introduction to Special Education in a Diverse Society are prerequisites for TEP entrance. Students can apply for TEP during the semester in which they are completing the last of these prerequisites. Students will also need to have declared the Minor in Secondary Education before applying to TEP.

Second Language Requirement

For the Bachelor of Science in Mathematics with a Concentration in General Mathematics there is no second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Some students may be able to bypass one or more courses in the calculus sequence MATH 1511G - MATH 1521H - MATH 2530G. The calculus sequence, Introduction to Higher Mathematics, and Linear Algebra provide knowledge that is basic to further work, and students are advised to complete them or their equivalent as early as possible.

Applied Mathematics - Supplemental Major

The program consists of 24 credits in the designated list of courses. To earn a supplementary major in applied mathematics a student must earn 15 credits from Categories I.A and I.B of which at least 9 credits must be from Category I.B. A student must also earn 9 credits from the Category II list of related disciplines. The courses in Category II may be taken from any combination of areas. A student may not earn a bachelor’s degree in mathematics and also a supplementary major in applied mathematics.

---

1 Math Placement: MATH 1511G Calculus and Analytic Geometry I is the starting Math course for the degree, however, students may need to complete any prerequisites prior to enrolling into this course.

2 See the General Education (p. 227) section of the catalog for a full list of courses.

3 Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

4 MATH/STAT 300/400-level courses that cannot be taken to fulfill this requirement: MATH 3997 Directed Readings.

5 See the Viewing a Wider World (p. 231) section for a full list of courses.

6 MATH/STAT 400-level courses that cannot be taken to fulfill this requirement: MATH 4991 Undergraduate Research, MATH 4997 Directed Reading, STAT 400 Undergraduate Research.

7 MATH 3110 Introduction to Modern Algebra is only offered in the Fall semesters. However, MATH 3120 Introduction to Analysis is taught in the Spring and may be used as a substitute.
Military Science

Undergraduate Program Information

The Military Science program leads to a commission as an officer in the Army Reserve, National Guard or Active Duty Army. The program consists of four parts:

1. the student’s academic major,
2. nondepartmental courses of value to the military service,
3. courses in military science and
4. a six-week Leader Development and Assessment course.

The department offers a four-year program divided into two parts: the basic course (two years) and the advanced course (two years). Selected students may qualify for the two-year program with prior military service or successful completion of a six-week summer Leaders’ Training Course. Financial assistance and scholarships are available for qualified individuals. Students should contact the Department of Military Science to obtain additional information.

Requirements

Courses should be taken in sequence, normally one per semester. The student’s Military Science advisor will recommend course sequence. Military Science students must sign up for and attend courses plus laboratories. Departmental requirements may not be taken S/U.

Minors for the Department

- Military Science - Undergraduate Minor (p. 775)
Military Science Courses

M SC 110. Introduction to Military Science
2 Credits (2+1P)
Introduction to the Army, the Profession of Arms, and critical thinking. Students will examine the Army Profession and what it means to be a professional in the U.S. Army. The overall focus is on developing basic knowledge and comprehension of the Army Leadership Requirements Model while gaining a complete understanding of the Reserve Officers’ Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Cadets also learn how resiliency and fitness supports their development as an Army leader. Includes a weekly lab facilitated by MSL III Cadets and supervised by Cadre. May be repeated up to 2 credits. Restricted to Las Cruces campus only.

M SC 111. Introduction to Leadership
2 Credits (2+1P)
Introduction to the personal challenges and competencies that are critical for effective leadership. Students learn how the personal development of life skills such as critical thinking, time management, goal setting, and communication contribute to effective leadership. Students learn the basics of the communications process and the importance for leaders to develop the essential skills to effectively communicate in the Army. Students will begin learning the basics of squad level tactics that will be reinforced during a weekly lab facilitated by MSL III Cadets and supervised by Cadre. May be repeated up to 2 credits. Restricted to Las Cruces campus only.

M SC 210. Self/Team Development
3 Credits (3+1P)
A focus on leadership and decision making. The course adds depth to the student’s understanding of the Adaptability Army Learning Area. Outcomes are demonstrated through Critical and Creative Thinking and the ability to apply Troop Leading Procedures (TLP) to apply Innovative Solutions to Problems. The Army Profession is also stressed through leadership forums and a leadership self-assessment. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during a weekly lab facilitated by MSL III Cadets and supervised by Cadre and three physical fitness sessions per week. Restricted to Las Cruces campus only.

M SC 211. Leadership in Action and Team Building
3 Credits (3+1P)
A focus on Army doctrine and team development. The course begins the journey to understand and demonstrate competencies as they relate to Army doctrine. Army Values, Teamwork, and Warrior Ethos and their relationship to the Law of Land Warfare and philosophy of military service are also stressed. The ability to lead and follow is also covered through Team Building exercises at squad level. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during a weekly lab facilitated by MSL III Cadets and supervised by cadre and three physical fitness sessions per week. Restricted to Las Cruces campus only.

M SC 225. Directed Studies
1-3 Credits
Individual directed studies under supervision of the Professor of Military Science. May be repeated up to 12 credits. Restricted to Las Cruces campus only.

Prerequisite(s): GPA 2.5 or better.

M SC 310. Leading Small Organizations I
3 Credits (3)
Part of the Senior ROTC Advanced Course, this course provides a focus on training management and the warfighting functions. It is an academically challenging course where Cadets study, practice, and apply the fundamentals of Training Management and how the Army operates through the Warfighting functions. At the conclusion of this course, Cadets will be capable of planning, preparing, and executing training for a squad conducting small unit tactics. Includes one lab meeting per week using peer facilitation overseen by MSL IVs, supervised by ROTC Cadre and three physical fitness sessions per week. Students must meet Basic Course of Military Science requirements to enroll in this course.

Corequisite(s): M SC 310 L.

M SC 310 L. Leading Small Organizations I Lab
1 Credit (1P)
Planning, coordination, execution and evaluation of training and activities with basic course students and ROTC program. Students develop and refine leadership skills in positions of responsibility. Open only to students taking M SC 310.

Corequisite(s): M SC 310.

M SC 320. Leading Small Organizations II
3 Credits (3)
Part of the Senior ROTC Advanced Course, this course provides a focus on applied leadership in small unit operations. It is an academically challenging course where Cadets study, practice, and apply the fundamentals of direct level leadership and small unit tactics at the platoon level. At the conclusion of this course, Cadets will be capable of planning, coordinating, navigating, motivating and leading a platoon in the execution of a mission includes one lab meeting per week using peer facilitation overseen by MSL IVs, supervised by ROTC Cadre and three physical fitness sessions per week. Successful completion of this course is a requirement to Cadet Summer Training Advance Camp during the summer, at Fort Knox, KY. Prerequisite(s): M SC 310

Corequisite(s): M SC 320 L.

M SC 320 L. Leading Small Organizations II Lab
1 Credit (1P)
Practice and refinement of leadership skills. Different roles assigned for students at different levels in the program. Planning, coordination, execution and evaluation of training and activities with basic course students and ROTC program. Open to students taking M SC 320.

Corequisite(s): M SC 320.

M SC 325. Advanced Directed Studies
1-3 Credits
Directed individual study of advanced subjects under the guidance of the Professor of Military Science. May be repeated up to 12 credits.

Prerequisite(s): GPA 2.5 or better.

M SC 350. Cadet Summer Training Advanced Course
3 Credits (3)
Advanced Camp. Advanced Camp is a 31-day training event which takes place at Fort Knox, KY. It is designed to assess a Cadet’s ability to demonstrate proficiency in basic officer leadership tasks. Cadets are evaluated on their ability to lead at the Squad and Platoon levels, both in garrison and tactical environments. Cadets are mentally and physically tested during a 12-day consequence driven field training exercise that replicates a combat training center rotation. Successful completion of
the Advanced Camp is a requirement for commissioning. Consent of Instructor required.

**Prerequisite(s):** M SC 310, M SC 310 L, M SC 320, and M SC 320 L.

**M SC 401. Leadership Challenges and Goal Setting**

3 Credits (3)

Part of the Senior ROTC Advanced Course, this course provides a focus on development of the Army Officer. It is an academically challenging course were Cadets develop knowledge, skills, and abilities to plan, resource, and assess training at the small unit level. Cadets also learn about Army programs that support counseling subordinates and evaluating performance, values and ethics, career planning, and legal responsibilities. At the conclusion of this course, Cadets will be familiar with how to plan, prepare, execute, and continuously assess the conduct of training at the company or field grade officer level. Includes a lab per week overseeing MSL III lesson facilitation and supervised by ROTC Cadre and three physical fitness sessions per week. May be repeated up to 3 credits. 

**Prerequisite(s):** M SC 320

**Corequisite(s):** M SC 401 L.

**M SC 401 L. Leadership Challenges and Goal Setting Lab**

1 Credit (1P)

Different roles assigned for students at different levels in the program. Practice and refinement of leadership skills. Planning coordination, execution and evaluation of training and activities with basic course students and ROTC program. Open only to students taking M SC 401. May be repeated up to 1 credits.

**Corequisite(s):** M SC 401.

**M SC 402. Transition to Lieutenant**

3 Credits (3)

The final course within the Senior ROTC Advanced Course, this course is an academically challenging course were Cadets further develop knowledge, skills, and abilities required of junior officers pertaining to the Army in Unified Land Operations and Company Grade Officer roles and responsibilities. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, practical exercises, a mid-term exam, and an Oral Practicum as the final exam. The Oral Practicum explores the Cadet’s knowledge of how they will be prepared for the 20 Army Warfighting Challenges (AWFC) covered throughout the ROTC Advanced Course. Successful completion of this course will assist in preparing Cadets for their BOLC B course following graduation and commissioning. It is a mandatory requirement for commissioning. Includes a lab per week overseeing MSL III lesson facilitation and supervised by ROTC Cadre and three physical fitness sessions per week. May be repeated up to 3 credits. 

**Prerequisite(s):** M SC 401

**Corequisite(s):** M SC 402 L.

**M SC 402 L. Transition to Lieutenant Lab**

1 Credit (1)

Different roles assigned for students at different levels in the program. Practice and refinement of leadership skills. Planning coordination, execution, and evaluation of training and activities with basic course students and ROTC program. Open only to students taking M SC 402. May be repeated up to 1 credits.

**Corequisite(s):** M SC 402.

**M SC 425. Practicum**

1-4 Credits

Independent projects conducted under the direction of the Professor of Military Science, and concerned with analysis of selected leadership or management problems. Course not eligible for S/U grade. May be repeated up to 16 credits.

**M SC 465 L. Military Decision Making - Graduate Level Lab**

1 Credit (1)

Students will work as part of a planning team in the application of the Military Decision Making Process to planning, coordination, and publish a comprehensive training plan and guidance which outlines all training and activities of the NMSU Army ROTC program for the semester following the semester of the course (i.e. the fall course develops the spring plan). Students develop and refine leadership skills in positions of responsibility. Open only to students taking M SC 465. May be repeated up to 1 credits. Consent of Instructor required. Consent of Professor of Military Science (PMS) is required and the PMS will interview all prospective students prior to enrolling into this course.

**Corequisite(s):** M SC 465.

Phone: (575) 646-4030

Website: https://armyrotc.nmsu.edu/

**Military Science - Undergraduate Minor**

The minor in Military Science is administered by the Department of Military Science (Army ROTC) in the College of Arts and Sciences. To obtain a minor in Military Science a student must complete a total of 19 credits, all of which must be upper division. A grade of C- or better must be obtained for each course. The only credits in which a grade of S will be accepted is M SC 350 Cadet Summer Training Advanced Course. Students should contact the Department of Military Science to obtain additional information.

**Molecular Biology & Interdisciplinary Life Sciences**

**Graduate Program Information**

Students of the molecular life sciences seek to reduce complex biological processes to a set of understandable molecular or chemical structure and function relationships. Integration of this knowledge into the context of complex living tissues interacting with the environment is the ultimate goal. This requires that the expertise from many diverse traditional disciplines be directed along converging experimental lines. The Ph.D. program in Molecular Biology & Interdisciplinary Life Sciences (MOLB-ILS) is designed to facilitate an interdisciplinary approach to graduate research, utilizing both traditional techniques and the latest advances in biotechnology, including the extraordinary power of recombinant DNA methodology. Participants in this program will take core courses in biochemistry, molecular biology and cell biology. Subsequent course work will be tailored for the individual student, depending upon his or her research emphasis. Participation in regular seminar programs will be expected to provide students with the widest possible scientific background. Financial aid, in the form of a limited number of MB teaching and research assistantships, is available on a competitive basis. Research Assistantships may also be available from individual faculty within the Molecular Biology & Interdisciplinary Life Sciences Graduate Program. Only the most competitive students are admitted with assistantship support.

The MOLB-ILS program offers curricula leading to the M.S. and Ph.D. degrees in the areas of biochemistry, molecular genetics, molecular biology, cell biology, bioinformatics, and microbiology. Admission to the MOLB-
ILS Program without deficiency is based on an undergraduate program essentially equivalent to that pursued by an undergraduate major in chemistry, biology, agronomy, horticulture, biochemistry, or microbiology at this university. An entering student is required to complete the Graduate Record Examination (General Aptitude). Undergraduate deficiency courses must be passed with a minimum grade of B.

Applicants are strongly encouraged to contact at least three individual program faculty before applying to identify a prospective advisor and laboratory in which to pursue graduate research. Previous course records and GPA standings (typically minimum of 3.3/4.0), GRE scores (typically minimum of 300 combined verbal and quantitative), TOEFL scores of foreign applicants (typically minimum of 550 on the paper-based or 213 on the computer-based), a letter of interest from the applicant that identified faculty laboratories of interest, and three letters of reference regarding research performance or potential are weighted heavily during the selection process.

Students with a B.S. degree in one of the disciplines listed above can expect to earn the MS degree in about 30 credits, including at least 6 credits of thesis research. The Ph.D. degree can be earned in about 30 to 40 credits of formal course work, plus additional thesis research credits, for a minimum total of 75 credits beyond the B.S. because research is central in both the M.S. and Ph.D. curricula, early selection of a research advisor is required. Ph.D. degree candidates will successfully complete a written and oral qualifying examination based on their proposed research and the subject matter in the core courses (below) at the end of the first year of study. Also at this time, the master's or doctoral committee is organized to assist in planning a program appropriate to the background and goals of the student. Ph.D. candidates will subsequently complete a comprehensive written examination and oral examination approximately at the end of the second year of study. A final, formal presentation and oral defense of the original research documented in the M.S. or Ph.D. thesis completes the degree requirements.

**Master Degree(s)**

- Molecular Biology - Master of Science (p. 159)

**Doctoral Degree(s)**

- Molecular Biology - Doctor of Philosophy (p. 201)

**Minors**

- Bioinformatics (with Computer Science) - Graduate Minor (p. 220)
- Molecular Biology - Graduate Minor (p. 224)
- Molecular Biology- Undergraduate Minor (p. 777)

A. Ashley, Ph.D. (Colorado State University) - Department of Chemistry and Biochemistry – cellular response to DNA replication stress and damage; maintenance of genomic integrity in eukaryotes; R. Ashley, Ph.D. (Colorado State University) – Department of Animal and Range Sciences – progesterone's actions mediated by membrane receptors, and chemokines' effects in early pregnancy and breast cancer; D. Bailey, Ph.D. (Cornell) – Department of Biology, S. Belteton, Ph.D. (Purdue University) - Dept of Botany and Plant Pathology - Plant tissue morphogenesis, R. Chinnasamy, Ph.D. (National Chemical Laboratory-Pune, India) – Department of Chemistry and Biochemistry; A. Corcoran, Ph.D. (University of California Los Angeles) – Molecular Biology Program; C. Cramer, Ph.D. (North Carolina State University) – onion breeding and horticulture; R. Creamer, Ph.D., (University of California-Davis) – Department of Entomology Plant and Weed Science – plant virology, fungal endophytes; J. Curtiss, Ph.D. (University of Colorado-Boulder) – Department of Biology – molecular genetics of eye development; S. Fuentes-Soriano, Ph.D. (University of Missouri-Saint Louis) – Department of Animal and Range Science; I. Guzman, Ph.D. (New Mexico State University) – Department of Plant and Environmental Sciences; K. A. Hanley, Ph.D. (University of California San Diego) – Department of Biology – emerging vector-borne viruses; I. Hansen, Ph.D. (University of Wurzburg, Germany) – Department of Biology – molecular vector biology; S. Hanson (Wisconsin) – Department of Entomology Plant and Weed Science – viral plant pathogens; J. Hernandez Gifford, Ph.D. (Washington State University) – Department of Animal and Range Sciences – reproductive physiology; O. Holguin, Ph.D. (New Mexico State University) – Department of Plant and Environmental Sciences – biochemistry including etalobelics and proteomics with a focus on chemical analysis technique; J. Houston, Ph.D. (Texas A&M University) – Department of Chemical & Materials Engineering – biomedical engineering, flow cytometry, fluorescence dynamics, biophotonics, and instrumentation development; K. Houston, Ph.D. (University of Texas) – Department of Chemistry and Biochemistry – hormonal carcinogenesis; E. Indriolo, Ph.D. (Purdue University) – Department of Biology – plant signaling, molecular biology; M. L. Kahn, Ph.D. (Stanford University) – Biophysics Program – Bacteriophage DNA Replication; G. Lopez-Martinez, Ph.D. (Ohio State University) – Department of Biology – short and long-term effects that single and repeated bouts of environmental stress can have on animals; D.N. Lozada, Ph.D. (University of Arkansas) – Department of Plant and Environmental Sciences; S. Lusetti, Ph.D. (University of Wisconsin-Madison) – Department of Chemistry and Biochemistry – DNA replication, recombination and repair; B. A. Lyons, Ph.D. (Cornell University) – Department of Chemistry and Biochemistry – structure and function relationships in breast and liver cancer cell signaling pathways; B.G. Milligan, Ph.D. (University of California-Davis) – Department of Biology – plant evolutionary biology; N. Pietrasiak, Ph.D. (University of California-Riverside) – Department of Plant and Environmental Sciences – cyanobacterial phylogenetics, molecular ecology of terrestrial algae, biocrusts; J. Randall, Ph.D., Program Director (New Mexico State University) – Department of Entomology Plant and Weed Science – molecular plant physiology, genetics, and plant/microbe interactions; I. Ray, Ph.D. (Wisconsin-Madison) – Department of Plant and Environmental Sciences – plant genetic engineering, primary and secondary metabolism, stress, legumes; L. Rodriguez-Uribe, Ph.D. (New Mexico State University) – Department of Plant and Environmental Sciences; A. Romero-Olivares, Ph.D. (University of California Irvine) – Department of Biology – impacts to our ecosystems; E. E. Serrano, Ph.D. (Stanford) – Department of Biology – neuroscience, genetics, science and ethics; C. B. Shuster, Ph.D. (Tufts University) – Department of Biology – regulation of mitosis and cytokinesis, role of the cytoskeleton during early development; G. Smith, Ph.D. (North Carolina State) – Department of Biology-environmental gene probes, microbial biodegradation; J. Song, Ph.D. (Washington) – statistical computing, systems biology, bioinformatics, computer vision; P. Trainor, Ph.D. (University of Louisville) – Department of Economics, Applied Statistics and International Business; J. Xu, Ph.D. (Second Military Medical University, China) – Department of Biology – functional genomics and population genetics of mosquito-malaria interactions; E. Yukl (Oregon Health and Science University) – Department of Chemistry and Biochemistry – structural biology and bioinorganic chemistry; J. Zhang, Ph.D. (University of Arkansas) – Department of Plant and Environmental Sciences – cotton genetics, genomics and molecular biology

**Molecular Biology Courses**

MOLB 448. Special Research Problems
1-3 Credits
Individual investigation, theoretical or experimental, under the supervision of a molecular biology faculty member. May be repeated for a maximum of 6 credits.

**Prerequisite:** consent of instructor.

**MOLB 520. Molecular Cell Biology**  
3 Credits (3)  
Same as BIOL 520.

**MOLB 542. Biochemistry I**  
3 Credits (3)  
Same as BCHE 542. B or better required.

**MOLB 545. Molecular and Biochemical Genetics**  
3 Credits (3)  
Same as BCHE 545 and BIOL 545.

**MOLB 546. Biochemistry II**  
3 Credits (3)  
Same as BCHE 546.

**MOLB 550. Topics in Molecular Biology**  
1-3 Credits  
Selected topics of current interest in field of molecular biology for master's level students. May be repeated up to 12 credits.

**Learning Outcomes**  
1. Learning goals are dependent upon topic and instructor.

**MOLB 590. Discussions in Molecular Biology**  
1 Credit (1)  
Oral presentations of ongoing research and/or research proposal for the masters thesis. Must be repeated twice for masters and a minimum of three times for doctoral students. May be repeated up to 4 credits.

**Learning Outcomes**  
1. To expose students to the fundamentals of speaking, including organization, and listening.
2. To understand and gain practice oral presentations.
3. Encourage critical thinking and discussion of scientific material during presentations.

**MOLB 597. Laboratory Rotations/Research Discussions**  
1-3 Credits  
All entering students are required to take at least one credit, during their first semester, in which they will circulate through at least three different labs working on assigned problems and discussing research programs. May be repeated for a maximum of 4 credits. Graded S/U.

**MOLB 598. Special Research Programs**  
1-3 Credits  
Individual investigation, experimental or theoretical, under the supervision of a molecular biology faculty member. Course may be repeated up to a total of 6 credits with committee approval.

**MOLB 599. Master's Thesis**  
1-15 Credits (1-15)  
Experimental and scholarly research leading to the preparation of a master's thesis.

**MOLB 600. Molecular Biology Research**  
1-15 Credits  
Laboratory research efforts prior to successful completion of doctoral comprehensive exam.

**MOLB 650. Advanced Topics in Molecular Biology**  
1-3 Credits  
Discussions and lectures on topics of current interest in molecular biology for doctoral students.

**MOLB 698. Advanced Research Projects**  
1-9 Credits  
Individualized special research assignments for doctoral-level students. Up to 9 credits, with approval of committee. Graded S/U.

**MOLB 700. Doctoral Dissertation Research**  
1-15 Credits  
Research for doctoral students after completing comprehensive exams.

### Molecular Biology- Undergraduate Minor

The Molecular Biology Program offers opportunities for students to gain theoretical training and hands-on experience in the methods of molecular biology, cellular biology, and/or bioinformatics. A formal undergraduate minor in Molecular Biology is offered and is described below; a grade of C or better is required to certify the courses. A minor in Bioinformatics is currently under development; for planning purposes, please refer to the program office for the most recent drafts of the Bioinformatics minor requirements.

This program consists of a minimum of 18 hours, distributed through five or six areas.

**Total Credits:** 18-19
Additional credit hours from the following, or additional courses from any of the above five areas, as needed to meet a minimum of 18 credit hours

Successful completion of the minor will be certified by the Molecular Biology Program. A grade of "C" or better is required of all minor courses.

Music

Undergraduate Program Information

MISSION, VISION, AND VALUES STATEMENTS

The mission of the NMSU Music Department is:

- To prepare students for professional careers and/or the pursuit of advanced degrees in music and music-related fields
- To empower our students to be life-long learners by providing a foundational education in music supported by our strong commitment to teaching, performance, scholarship and service
- To provide impactful opportunities for our diverse student body to perform, study, create and experience music
- To serve as an artistic destination for our community at an Hispanic-serving institution in the southwest U.S. border region

Vision Statement: We seek to elevate the role of music as essential to society, both as an expressive art form and an integral component of a universal education.

We will continue to:

- Enhance our public presence in the region as a destination for all students and for the community as a place of artistic and musical excellence
- Lead in the development of adaptive and relevant programs and curricula based on the needs of an ever-changing society
- Raise our profile through outstanding instruction, student success and retention, faculty scholarship and performance, and the engagement of our ensembles with the community, statewide and regionally, and with all students, regardless of major
- Foster a learning environment that recognizes the changing needs and special culture of our community, and promotes diversity and openness in our programs and instruction and in the music we study and perform.

The Department of Music values:

Access – we believe everyone in our community, regardless of background or experience, should have the opportunity to experience music in their lives

Elevation – we believe that by offering superior musical opportunities we can improve the quality of life for students and our community

Inclusion – we believe that individual expression and identity should be reflected in our musical experiences and is vital for both personal and institutional success

Admission into the Program

For a student to be officially accepted as a Music major or minor, he/she must do the following:

- perform an audition for a panel of no less than three Music faculty members
  - one of whom must be the director of his/her program area
  - one of whom must be the applied teacher of the student's principal instrument

Any student declaring Music as his/her major may be accepted for a one-semester probationary period. During that first semester, the Music faculty will determine if the student has the necessary skills and work ethic to continue as a major. The student's course work, ensemble participation and applied jury will be the basis for the decision to allow the student to continue or not.

Departmental Requirements for all Bachelor’s Degrees (Music Core)

A student must earn a grade of C- or better in all departmental requirements for any degree in the Department of Music. All students wishing to pursue a music degree must audition. Contact the department for current audition requirements.

If students change major(s) or minor(s) or do not complete the requirements for the minor at the time of graduation, they may only count a maximum of 9 credits of the applied/occupational credits toward graduation.

Recital Requirements for Music Performance and Education Degrees

Bachelor of Music

All performance majors are required to give a half recital (30 minutes of music) in the junior year and a full recital (60 minutes of music) in the senior year.

Bachelor of Music Education

All music education majors will give a half recital (30 minutes of music) in their major performance area.

B.A. Degree Program of Study/Capstone Project

All B.A. Degree Students must submit and have approved a Program of Study by the end of their Sophomore year. Programs of study will be submitted to the B.A. Degree coordinator and will determine a focus for elective courses and the Capstone Project. The Capstone Project will be derived from the program of study.

Applied Music Requirements for All Music Degrees

Music Education and Music Performance degrees require at least two semesters of applied music study at the 430 level. Students pursuing a Bachelor of Arts Degree in Music (any track) must complete at least four semesters of applied music study at the 230 level and at least two semesters at the 330 level. B.A. students may take applied lessons at the 430 level, but it is not a requirement for this degree path.

All students enrolling in applied music will audition and obtain permission from an applied teacher before enrolling for applied music credit.

Students may obtain further information by contacting the music department.
**Other Music Requirements, Fees and Regulations**

1. A Piano Proficiency Examination is required of all music performance and music education majors. Each student must enroll in Functional Piano or Applied Piano every semester, until the Proficiency is passed. Detailed requirements may be obtained from the Department of Music office. Students must pass the piano Proficiency Exam before presenting a Senior Recital.

2. Qualitative grade-point average for graduation in music is 2.0 or higher. All grades in required music courses must be C- or better.

3. An instrument rental fee is charged each semester for students using university instruments. Consult the music department concerning these fees.

4. All applied students pay an additional fee. Consult the music department concerning these fees.

5. Outside groups and individuals must have special permission to use music department facilities. Contact the music office for additional information.

**Music Ensemble**

All students majoring or minoring in Music, must enroll and participate in the ensemble appropriate for their particular degree plan. The appropriate ensemble will be determined by degree requirements in consultation with the student’s advisor and ensemble directors. The student must enroll each and every semester he/she is considered full-time until the degree requirements are met, for a minimum of 8 semesters (Music Performance), 7 semesters (Music Education), 6 semesters (B.A. Degrees). Any student receiving any kind of financial assistance through the Music Department must enroll each and every semester while he/she is attending NMSU. Music Education Students will not receive Music Scholarship funds during their semester of Student Teaching. For more information, contact the Music Office.

**Music Scholarships and Awards**

Scholarships and grants for music majors are administered through the performance areas. To be eligible for a music major scholarship or grant, students must first be admitted into the program. Program admission requirements include an audition for a panel of no less than three Music faculty members. One must be the major ensemble director of his/her program area (band, choir, opera, orchestra, keyboard). One must be the applied teacher of the student’s principal instrument and the other must be a full-time Music faculty member. Specific audition information and requirements for each performance area can be found on the Auditions page (https://music.nmsu.edu/admissions/auditions.html). (https://theatre.nmsu.edu/auditions/audition-faqs.html)

In order to have all paperwork processed before the beginning of the Fall semester, students are encouraged to have all scholarship and financial aid application materials in to the Office of Financial Aid by March 1.

The most up to date information on scholarships and grants can be obtained from the Coordinator of Scholar Dollar$ in the office of the Dean of Arts and Sciences in Brelend Hall.

For more information on any of the following scholarships please call (575) 646-2421 or email music@nmsu.edu.

**Service awards for non-majors are available based upon ensemble need and funding availability.** For more information regarding these awards or to set up an audition, please contact one of the following:

- **Winds and Percussion:** (575) 646-2304
- **Vocal:** (575) 646-2304

**Graduate Program Information**

The Master of Music degree is offered in the following areas of study: Conducting, Music Education and Performance. Applicants are expected to have an undergraduate degree in music or music education equivalent to that represented by the BM or BME degree from New Mexico State University. The music department does not require the Graduate Record Exam, but does expect each applicant to possess graduate-level language and writing skills. For admission into the Master of Music degree program, all applicants must have an undergraduate GPA of at least 3.0 and submit at least two letters of recommendation from music professionals. An audition, either in person or by recording, is required for entrance into the Performance or Conducting programs. Auditions will be based upon, but not limited to, prescribed repertoire.

For acceptance into the Music Education program, the applicant must have completed a Bachelor of Music Education degree comparable to the one offered by NMSU or take the requisite undergraduate courses at NMSU leading to state licensure before enrolling in graduate courses. (Contact the Music Department for details.)

**Note:** The degree offered is a Master of Music. The student’s official transcript and diploma will only indicate that degree. The area of study (Conducting, Music Education, Performance) will not be included as part of the official degree title.

**Recital Requirements for Performance and Conducting**

A graduate recital plus an analytical paper are required of all candidates in Performance and Conducting. Students must be enrolled in their applied area during the semester the recital is given. A minimum of 60 minutes of music is required for all Performance recitals. A minimum of three major works for the appropriate ensemble is required for all Conducting recitals. The recital may only be given after at least 6 hours of graduate applied or conducting courses have been successfully completed.

**Program of Study and Committee Selection**

After admission, each student must successfully complete MUSC 471 Graduate Theory Review before subsequent enrollment in other music theory courses. He or she must also successfully complete MUSC 477 Graduate Music History Review before subsequent enrollment in other music history courses.

During the first semester of study, a tentative Program of Study is planned, documented and filed by the student in consultation with the advisor in his or her major field. The Program of Study is subject to approval by the Music Department Head and the Graduate Music Committee. The student will also select, in consultation with his or her advisor, an advisory committee consisting of the advisor, and two additional faculty members.

**Candidacy**

In order to qualify for candidacy the student (except those in the online Music Education program) must meet the Graduate School requirement of 12 credits of graduate work in residence and must show evidence of a satisfactory quality of work in the required courses, demonstrate the desired progress in his or her performance area and, where required, submit a recital program, thesis topic, or project proposal for approval.
Thesis
A thesis is optional in Music Education and is encouraged for students considering completion of a terminal degree. Music Education candidates not writing a thesis must develop and complete an approved project before the oral examination.

Final Examination
All Master of Music candidates must take a final comprehensive oral examination. The final oral examination may not be scheduled until the graduate recital (with analytical paper) is completed or a final draft of the Music Education project or thesis has been approved by the candidate’s advisor.

Fees
Fees, in addition to tuition, will be assessed for all applied hours and recitals. (Consult the Music Department for details).

Degrees for the Department
Bachelor Degree(s)
- Music (Instrumental Performance) - Bachelor of Music (p. 796)
- Music (Piano Performance) - Bachelor of Music (p. 798)
- Music (Pre-Music Therapy) - Bachelor of Arts (p. 791)
- Music (Pre-Speech Language Pathology) - Bachelor of Arts (p. 793)
- Music (Theatre) - Bachelor of Arts (p. 795)
- Music (Vocal Performance) - Bachelor of Music (p. 800)
- Music - Bachelor of Arts (p. 790)
- Music Education (K12 Instrumental) - Bachelor of Music Education (p. 802)
- Music Education (K12 Vocal) - Bachelor of Music Education (p. 804)

Master Degree(s)
- Music (Conducting) - Master of Music (p. 160)
- Music (Music Education) - Master of Music (p. 160)
- Music (Music Education) - Master of Music (Online) (https://catalogs.nmsu.edu/global/nmsu-global/music-music-education-mm-online/)
- Music (Performance) - Master of Music (p. 161)

Minors for the Department
- Music - Undergraduate Minor (p. 806)

Professors Fred Bugbee, Department Head

Professors Chaffin, Kaplan, Shearer, Spitzer; Associate Professors Daughtrey, Espinoza, Mapp, Martinez-Rios, Smyth, L. Van Winkle, Vega-Albela; Assistant Professors Moore, College Associate Professors R. Taylor

Music Courses
MUSC 1110G. Music Appreciation: Jazz
3 Credits (3)
This course explores the ideas of music in society and its cultural relevance and is designed to increase the students’ appreciation of music as well as to enhance their listening skills. Students are introduced to various periods, styles, and composers of music and become acquainted with knowledge and appreciation of Jazz from various cultures and times.

Learning Outcomes
1. Develop a vocabulary of musical terms, and be able to describe music using those terms
2. Demonstrate knowledge of composers, their music and their relationship to historical periods
3. Recognize how music played and plays a political, social, and cultural function
4. Identify well-known pieces and the historical and social context in which they were composed
5. Demonstrate basic understanding of music notation and musical communication

MUSC 1130G. Music Appreciation: Western Music
3 Credits (3)
This course explores the ideas of music in society and its cultural relevance and is designed to increase the students’ appreciation of music as well as to enhance their listening skills. Students are introduced to various periods, styles, and composers of music and become acquainted with knowledge and appreciation of Western music from various cultures and times.

Learning Outcomes
1. Develop a vocabulary of musical terms, and be able to describe music using those terms
2. Demonstrate knowledge of composers, their music and their relationship to historical periods
3. Recognize how music played and plays a political, social, and cultural function
4. Identify well-known pieces and the historical and social context in which they were composed
5. Demonstrate basic understanding of music notation and musical communication

MUSC 1210. Fundamentals of Music for Non-majors
3 Credits (3)
A beginning course in the fundamentals of music, this course includes notation, scales, keys signatures and intervals. Aural comprehension is introduced through singing intervals, scales and triads and dictating simple rhythmic and melodic patterns and students explore the basic components of music. Traditional Grading with RR.

Learning Outcomes
1. Demonstrate and apply standard notation of pitch, rhythm, scales, intervals, keys signatures, triads, and simple melodic and harmonic composition
2. Develop and improve basic aural skills
3. Read musical notation
4. Improve and expand understanding of fundamental musical techniques and concepts
MUSC 1310. Recital Attendance
0.5 Credits (.5+1P)
This course is for music students to attend and participate in a good number of convocation, concert, and recital performances, creating a wider appreciation for the performing arts. May be repeated up to 4 credits. Restricted to: Music and Music Education majors. S/U Grading with RR. Restricted to Las Cruces campus only.
Learning Outcomes
1. Encourage student observation of serious music
2. Provide opportunities for public performances
3. To create a greater sense of community within the student body

MUSC 1410. Introduction to Music Education
2 Credits (2)
This course is an overview of teaching in the music classroom through readings and observations. Students will be introduced to the skills needed to become a reflective educator, develop observation techniques, and demonstrate knowledge of the current state of the profession. Restricted to Las Cruces campus only.
Learning Outcomes
1. Make observations and analyze the current state of musical education in public schools
2. Describe characteristics of good teaching in music
3. Articulate a personal philosophy of music education
4. Reflect on personal strengths and weaknesses as a teacher of music

MUSC 1440. Class Voice I
1 Credit (1)
Group instruction in voice and vocal pedagogy for instrumental Music Education majors, offering basic principles of healthy vocal production with particular attention to diction, development of vocal range, and the ability to impart that knowledge to elementary, junior and/or high school age students. Restricted to: Music Education majors. Traditional Grading with RR. Restricted to Las Cruces campus only.
Learning Outcomes
1. Provide the basic understanding of healthy vocal production. Including, but is not limited to, the following topics: Expanding vocal range; Learning how to practice and learn songs effectively and efficiently; Provide basic understanding of vocal pedagogy; Introduction to diction
2. Aims to equip students with the ability to impart that knowledge to elementary, junior and/or high school age students.

MUSC 1450. Ear Training I
1 Credit (1)
To develop the ability to accurately hear, identify, sing and notate musical elements including rhythm, melody, intervals and harmony. Traditional Grading with RR. Restricted to Las Cruces campus only. May be repeated up to 1 credit.
Learning Outcomes
1. Counting rhythms at sight using the Eastman Counting System.
2. Singing melodies at sight using solfege syllables.
3. Writing out rhythmic patterns.
4. Writing out melodic patterns.
5. Identifying and singing intervals.
6. Identifying and singing chord / triad qualities.

MUSC 1451. Ear Training II
1 Credit (1)
To develop the ability to accurately hear, identify, sing and notate musical elements including rhythm, melody, intervals and harmony. Restricted to Las Cruces campus only.
Prerequisite(s): Grade of C- or better in MUSC 1450.
Learning Outcomes
1. Counting rhythms at sight using the Eastman Counting System
2. Singing melodies at sight using solfege syllables
3. Writing out rhythmic patterns
4. Writing out melodic patterns
5. Identifying and singing intervals
6. Identifying and singing chord / triad qualities

MUSC 1460. Music Theory I
3 Credits (3)
Introduction to vocabulary and syntax of 4-voice 18th c. chorale music through study and harmonic analysis. May be repeated up to 3 credits.
Learning Outcomes
1. To learn the vocabulary and syntax of 4-voice 18th c. chorale music through study and harmonic analysis.
2. Expansion of vocabulary and syntax of 4-voice 18th c. chorale music through study, harmonic analysis, and part writing.

MUSC 1461. Music Theory II
3 Credits (3)
Expansion of vocabulary and syntax of 4-voice 18th c. chorale music through study, harmonic analysis, and part writing.
Prerequisite(s): Grade of C or better in MUSC 1460.
Learning Outcomes
1. To expand and apply the vocabulary and syntax of 4-voice, 18th c. chorale music through study, harmonic analysis, and part writing.

MUSC 1470. Functional Piano I
2 Credits (2)
Scales, chords, memorization. Harmonization of simple melodies with the ability to play simple melodies and rhythms. May be taken for unlimited credit. Restricted to music majors. No S/U option.
Learning Outcomes
1. 5 finger hand position in all keys
2. I-IV-V7-I cadences in all keys
3. One octave scales with hands together in C, G, D and F (major and minor)
4. Root position cross-over triads, solid and broken (major and minor)
5. Simple sight reading, harmonizing and transposition
6. Prepared pieces from the textbook
7. Simple improvisation
8. Play 2 simple vocal exercises
9. Identify intervals, key signatures and chords 1
10. Correct posture and hand position 1
11. Musical issues such as phrasing, slurs and dynamics 1
12. Good practice habits and techniques

MUSC 1471. Functional Piano II
2 Credits (2)
Scales, chords, memorization. Harmonization of simple melodies with the ability to play simple melodies and rhythms. May be taken for unlimited credit. Restricted to music majors. No S/U option.
Prerequisite: MUSC 1470 or consent of instructor.
Learning Outcomes
1. Two octave scales with hands separate in C, G, D, A, E, B and F (major and minor)
2. I-IV-I-V7-I cadences in above mentioned keys in root position and 1st inversion
3. Simple sight reading, harmonization and transposition
4. Prepared pieces from the book
5. Simple improvisation
6. Identify intervals, key signatures and chords
7. Correct posture and hand position
8. Musical issues such as phrasing, slurs and dynamics
9. Good practice habits and techniques

MUSC 1472. Functional Piano III
2 Credits (2)
For music majors preparing for the Piano Proficiency Examination. May be taken for unlimited credit. Restricted to music majors. No S/U option.
Prerequisite: MUSC 1471 or consent of instructor.
Learning Outcomes
1. Keys learned in previous semesters, adding F# and C# (D flat)
2. Secondary dominant chords added to cadence patterns
3. Two-octave, root position arpeggios, major and minor
4. Intro to chord charts, harmonization
5. More difficult sight-reading and transpositions
6. More difficult prepared pieces
7. Accompany a piece for any instrument on the Mid-Term Recital (required)

1-2 Credits (1-2)
Private or group instruction for non-music majors, secondary instruments, and music majors preparing for 2000-level applied music. May be taken for unlimited credit. May be repeated up to 99 credits.
Learning Outcomes

MUSC 2110. Chamber Ensemble
1 Credit (1)
This course is an exploration of chamber ensembles, allowing students to develop their abilities with their instruments in a group setting. Students will gain a broader understanding of chamber ensemble through study of musical history, as well as various practice exercises and performances. May be repeated up to 16 credits. Restricted to Las Cruces campus only.
Prerequisite(s): by audition only.
Learning Outcomes
1. Improve performance skills
2. Develop and improve performance skills in a group setting
3. Develop understanding and interpretation within the context of music history
4. Refine and improve technical ability
5. Demonstrate proper technique and usage

MUSC 2120. Major Ensemble
1 Credit (1)
This course is an exploration of major ensembles, allowing students to develop their abilities with their instruments in a group setting. Students will gain a broader understanding of major ensemble through study of musical history, as well as various practice exercises and performances. May be repeated up to 24 credits.
Prerequisite: by audition only.

MUSC 2130. Jazz Ensemble
1 Credit (1)
This course is an exploration of jazz ensembles, allowing students to develop their abilities with their instruments in a group setting. Students will gain a broader understanding of jazz ensemble through study of musical history, as well as various practice exercises and performances. May be repeated up to 10 credits. Restricted to Las Cruces campus only.
Prerequisite(s): by audition only.
Learning Outcomes
1. Improve performance skills
2. Develop and improve performance skills in a group setting
3. Develop understanding and interpretation within the context of music history
4. Refine and improve technical ability
5. Demonstrate proper technique and usage
6. Develop and improve improvisation skills

MUSC 2132. Percussion Ensemble
1 Credit (1)
Study and performance of contemporary percussion ensemble literature. May be repeated up to 5 credits. Restricted to Las Cruces campus only.
Prerequisite(s): by audition only.
Learning Outcomes
1. Improve performance skills
2. Develop and improve performance skills in a group setting
3. Develop understanding and interpretation within the context of music history
4. Refine and improve technical ability
5. Demonstrate proper technique and usage

MUSC 2151. An Introduction to World Music, Jazz and Music Research
3 Credits (3)
Introduces world music and jazz within a historical and cultural context, considering significant musical figures, forms, genres, styles, and representative works. A major component will be the development of effective research and scholarly writing skills for the music major or minor. May be repeated up to 3 credits. Restricted to Las Cruces campus only.
Learning Outcomes
1. This course will cover fundamental concepts and styles associated with world music (ethnomusicology), jazz and popular music, an overview of the Western European tradition, and an intense focus on research and writing about music.
2. Emphasis will be placed on writing skills as they apply to the college experience in general and the world of music education and performance in particular.
3. Students will become acquainted with the diverse ways cultures create and are affected by their respective musical arts.
4. Focus will be on style evolution, forms, genres, composers, literature, and, where appropriate, performers
MUSC 2210. Diction I  
2 Credits (2)  
This course serves as a continuing study in the concepts of the International Phonetic Alphabet. Students will continue to improve and practice their diction to develop their singing and musical abilities in order to begin the mastery of lyric diction. Restricted to music majors. Restricted to Las Cruces campus only.  
Prerequisite: MUSC 2210 or consent of instructor.  
Learning Outcomes  
1. Correctly and consistently form vowel and consonant sounds when speaking and singing in multiple languages  
2. Correctly and consistently transcribe texts in multiple languages using the International Phonetic Alphabet  
3. Understand and explain the International Phonetic Alphabet’s usage and symbols  
4. Develop and apply the concept of lyric diction to singing  
5. Gain fluency, accuracy, and confidence in pronunciation of sung text  
6. Demonstrate ability to create music recordings  
7. Work with a variety of recording, production, and sound reinforcement tools  
8. Apply basic and mixed editing techniques  
9. Use audio editing and file management techniques  
10. Demonstrate knowledge of music technology vocabulary  
11. Explain and understand the development of various music technologies  

MUSC 2220. Diction II  
2 Credits (2)  
This course serves as a continuing study in the concepts of the International Phonetic Alphabet. Students will continue to improve and practice their diction to develop their singing and musical abilities in order to begin the mastery of lyric diction. Restricted to music majors. Restricted to Las Cruces campus only.  
Prerequisite: MUSC 2210 or consent of instructor.  
Learning Outcomes  
1. Correctly and consistently form vowel and consonant sounds when speaking and singing in multiple languages  
2. Correctly and consistently transcribe texts in multiple languages using the International Phonetic Alphabet  
3. Understand and explain the International Phonetic Alphabet’s usage and symbols  
4. Develop and apply the concept of lyric diction to singing  
5. Gain fluency, accuracy, and confidence in pronunciation of sung text  
6. Demonstrate ability to create music recordings  
7. Work with a variety of recording, production, and sound reinforcement tools  
8. Apply basic and mixed editing techniques  
9. Use audio editing and file management techniques  
10. Demonstrate knowledge of music technology vocabulary  
11. Explain and understand the development of various music technologies  

MUSC 2240. Music History and Literature: Antiquity through Baroque  
3 Credits (3)  
Surveys Western art music within a historical and cultural context, considering significant musical figures, forms, genres, styles, and representative works from antiquity through the Baroque era. An additional emphasis will be given to effective research and scholarly writing skills. May be repeated up to 3 credits.  
Prerequisite: A grade of C- or better in MUSC 1450 and 1460.  
Learning Outcomes  
1. The purpose of the course is to survey the beginning history of music from the earliest ancient times through the Baroque period, ca.  
2. To learn and apply the vocabulary and syntax of 18th and 19th c. Western art music through study, chordal/formal analysis, and composition. Restricted to Las Cruces campus only.  
Prerequisite(s): MUSC 1460.  
Learning Outcomes  
1. Demonstrate fundamental knowledge of techniques and practices of music recording and production  
2. Demonstrate ability to properly use computer-based technologies to produce and record music  
3. Apply basic and mixed editing techniques  
4. Use audio editing and file management techniques  
5. Demonstrate knowledge of music technology vocabulary  
6. Explain and understand the development of various music technologies  

MUSC 2451. Ear Training III  
1 Credit (1)  
Continuation of MUSC 1451, advanced sight singing, dictation. Restricted to Las Cruces campus only.  
Prerequisite(s): Grade of C- or better in MUSC 1451.  
Learning Outcomes  
1. Count rhythms at sight using the Eastman Counting System  
2. Write out harmonic dictation  
3. Identify and sing chord / triad qualities  
4. Write out melodic patterns  
5. Identify and singing intervals  
6. Identify and sing chord / triad qualities  
7. Write out harmonic dictation  

MUSC 2452. Ear Training IV  
1 Credit (1)  
Continuation of MUSC 2451, advanced sight singing, dictation. Restricted to Las Cruces campus only.  
Prerequisite(s): Grade of C- or better in MUSC 2451 and MUSC 2460.  
Learning Outcomes  
1. Count rhythms at sight using the Eastman Counting System  
2. Write out harmonic dictation  
3. Identify and sing chord / triad qualities  
4. Write out melodic patterns  
5. Identify and singing intervals  
6. Identify and sing chord / triad qualities  
7. Write out harmonic dictation  

MUSC 2460. Music Theory III  
3 Credits (3)  
Analysis of Baroque and Classical Music. Vocabulary and syntax of 18th and 19th c. Western art music through study, chordal/formal analysis, and composition. Restricted to Las Cruces campus only.  
Prerequisite(s): Grade of C- or better in MUSC 1461.  
Learning Outcomes  
1. To learn and apply the vocabulary and syntax of 18th and 19th c. Western art music through study, chordal/formal analysis, and composition.  
2. Topics covered include: Two-Voice Eighteenth Century Counterpoint; Fugue; Borrowed Chords; Neapolitan 6th Chords; Augmented 6th Chords; Sonata Form; Rondo Form.  

MUSC 2461. Music Theory IV  
3 Credits (3)  
Analysis of Romantic, Post-Romantic, Impressionist, and Twelve-Tone Music. Vocabulary and syntax of late 19th and early 20th c. Western art
music through study, micro/macro analysis, and composition. Restricted to Las Cruces campus only.

**Prerequisite(s):** Grade of C or better in MUSC 2460.

**Learning Outcomes**
1. To learn and apply the vocabulary and syntax of late 19th and early 20th c. music through study, micro/macro analysis, and composition.

**MUSC 2470. Functional Piano IV**

2 Credits (2)
For music majors preparing for Piano Proficiency Examination. May be taken for unlimited credit. Restricted to music majors. No S/U option. May be repeated up to 99 credits.

**Prerequisite:** MUSC 1472 or consent of instructor.

**Learning Outcomes**
1. Keys learned in previous semesters, adding A flat, E flat, and B flat
2. Secondary dominant chords added to cadence patterns, all inversions
3. Arpeggios, all inversions
4. More difficult sight-reading and transpositions
5. More difficult prepared pieces
6. Four part pieces (hymns)
7. Accompany a piece for any instrument on the Mid-Term Recital (required) Score reading and transposition

**MUSC 2510. Applied Music I**

1-4 Credits
Individual instruction to develop technique, musicianship, performance and improvisational skills, as well as knowledge of significant repertoire. May be repeated up to 16 credits. Consent of Instructor required. Restricted to: Music and Music Education majors. Main campus only.

**Prerequisite:** Grade of C- or better in MUSC 2240.

**Learning Outcomes**
1. Varies

**MUSC 2740. Pride Marching Band**

1 Credit (1)
The Pride Marching Band performs at all NMSU home football games and select away games. The marching band is open to all students at NMSU and supports both instrumental and visual units. May be repeated up to 8 credits.

**Learning Outcomes**
1. To cultivate within the student a value system that encourages community service.
2. To provide the performer with experiences that will enable them to communicate thoughts/ideas/emotions in a unique and personal manner using his/her instrument, body, and physical motion.
3. To instill in students a commitment to lifelong learning.
4. To promote personal growth through the rehearsal and performance of music, choreography, and drill of high quality.
5. To encourage students to continuously participate in and support artistic performances following graduation.

**MUSC 2993. Opera Workshop**

1 Credit (1)
Study, translation, analysis, rehearsal and performance of opera. May be repeated up to 10 credits. Restricted to Las Cruces campus only.

**Prerequisite(s):** by audition only.

**Learning Outcomes**
1. Varies

**MUSC 2996. Special Topics I**

1-3 Credits
Emphasis on special areas of music; designed for highly motivated students. May be taken for unlimited credit.

**Learning Outcomes**
1. Varies

**MUSC 301. Marching Band Techniques**

2 Credits (2)
This course will help students develop the techniques needed to administer and teach all aspects of a contemporary high school marching band. This includes drill conception and design, instruction, organization, and administration. Stylistic varieties of marching fundamentals, show conception, fundamentals of charting and teaching drill, computer-aided drill design, traditional show design, contemporary show design, rehearsal techniques, and organizational concepts. Restricted to: Music, Music Education majors. Traditional Grading with RR.

**MUSC 302. Music History and Literature: Classic through Romantic**

3 Credits (3)
Surveys Western art music within a historical and cultural context, considering significant musical figures, forms, genres, styles, and representative works from the beginnings of the Classic era through the end of the Romantic era. An additional emphasis will be given to effective research and scholarly writing skills. Restricted to: Music Majors and Minors majors.

**Prerequisite(s):** A grade of C- or better in MUSC 2240.

**MUSC 303. Music History and Literature: 20th Century Through the Present**

3 Credits (3)
Surveys Western art music within a historical and cultural context, considering significant musical figures, forms, genres, styles, and representative works from the beginning of the 20th Century through the Present. An additional emphasis will be given to effective research and scholarly writing skills. Restricted to: MUS minors and majors.

**Prerequisite(s):** A grade of C- or better in MUSC 302.

**MUSC 315. Brass Techniques I**

1 Credit (1)
Methods and techniques of teaching high brass instruments, for music education majors. Main campus only.

**MUSC 316. Brass Techniques II**

1 Credit (1)
Methods and techniques of teaching low brass instruments, for music education majors. Main campus only.

**MUSC 317. Woodwind Techniques I**

1 Credit (1)
Methods and techniques of teaching high woodwind instruments, for music education majors. Main campus only.

**MUSC 318. Woodwind Techniques II**

1 Credit (1)
Methods and techniques of teaching saxophone and double reed instruments, for music education majors. Main campus only.

**MUSC 319. String Techniques I**

1 Credit (1)
Methods and techniques of teaching low string instruments, for music education majors. Main campus only.

**MUSC 321. Instrumental Techniques for Vocal Music Education Majors**

2 Credits (2)
Methods of teaching brass, woodwind, percussion, stringed and fretted instruments for vocal music education majors. Restricted to: Music and Music Education majors. Traditional Grading with RR.

**MUSC 322. Guitar Methods**
1 Credit (1)
Methods and techniques of teaching guitar, for Music Education majors. Restricted to: Music and Music Education majors. Traditional Grading with RR.

**MUSC 323. Percussion Technique I**
1 Credit (1)
Methods and techniques of teaching fundamental percussion instruments (snare drum, timpani, keyboards and essential accessories). May be repeated up to 1 credits. Restricted to: MUS,M ED majors.

**MUSC 324. Percussion Technique II**
1 Credit (1)
Methods and techniques of teaching marching percussion, drum set, and a continuation of techniques discussed in MUSC 323. May be repeated up to 1 credits. Restricted to: MUS,M ED majors. Traditional Grading with RR.

**MUSC 325. Beginning Conducting**
1 Credit (1)
A study of the fundamentals of conducting and rehearsal strategies with an emphasis on beginning technique applicable to all ensembles. Reading of musical scores with application via laboratory ensemble experience is included. Restricted to: Music and Music Education majors. May be repeated up to 1 credit.

**Prerequisite:** A grade of C or better in MUSC 2451 and MUSC 2460.

**Learning Outcomes**
1. Develop the musicianship of the student.
2. Development of basic conducting techniques.
3. Develop a knowledge of appropriate terminology, tempi, and transpositions.
4. Establishment of a gestural (nonverbal) vocabulary.
5. Cultivation of self-awareness and effective interaction through nonverbal communication.

**MUSC 326. Instrumental Conducting**
3 Credits (3)
Will continue from MUSC 325 in the training for competent musicianship with a focus on conducting gestures and movements, score study, and rehearsal techniques as it relates to the instrumental ensemble. The class will focus primarily on the development of a non-verbal vocabulary that will allow each student to clearly and artistically communicate with the members of an ensemble to solicit a predetermined musical result. May be repeated up to 3 credits. Restricted to: MUS,M ED majors. Traditional Grading with RR.

**Prerequisite(s):** A grade of C or better in MUSC 325.

**MUSC 327. Choral Conducting**
3 Credits (3)
Continuation of conducting study with emphasis on choral rehearsal techniques, ensemble management, and literature. Restricted to: Music and Music Education majors. Traditional Grading with RR.

**Prerequisite(s):** A grade of C or better in MUSC 325.

**MUSC 330. Applied Music II**
1-4 Credits
Continuation from MUS 230. Individual instruction to develop technique, musicianship, performance and improvisational skills, as well as knowledge of significant repertoire. May be repeated up to 16 credits.

Consent of Instructor required. Restricted to: Music and Music Education majors. Traditional Grading with RR.

**Prerequisite(s):** A grade of C or better in MUSC 2992 plus a juried audition.

**MUSC 340. Junior Recital**
1 Credit (1)
Public solo performance under the supervision of the appropriate applied instructor. 30 minutes of musical performance is required. Consent of Instructor required. Restricted to: Music and Music Education majors. Traditional Grading with RR.

**Corequisite(s):** MUSC 330.

**MUSC 341. BA Capstone**
1-2 Credits (1-2)
The objective of the Capstone course for the BA degree in Music is to demonstrate the accumulation, understanding and knowledge of the student’s course of study. This will take the form of an analytical paper, recital, research paper, composition or other equally encompassing project approved by the Instructor of Record. This may involve coursework from the student's minor area of study and be a multi-disciplinary collaborative effort. Restricted to: Music majors.

**Prerequisite(s):** A B- or better in MUSC 2460 and MUSC 302.

**MUSC 346. Elementary Music Methods**
2 Credits (2)
Lesson planning, curriculum, teaching methodology, materials, and procedures for teaching music in an elementary school. Emphasis on methodology of Kodaly and Orff, teaching in a multicultural setting, and developing reflective practitioners. This course requires field experience in the public schools. May be repeated up to 2 credits.

**Prerequisite:** A grade of C or better in MUSC 1410.

**Learning Outcomes**
1. Students will identify and apply ideas from various music education pedagogical approaches including Orff and Kodaly.
2. The ability to develop lesson plans for primary school teaching.

**MUSC 349. Secondary Music Methods**
2 Credits (2)
Lesson planning, curriculum, teaching methodology, materials, and procedures for teaching music in the middle school and high school. Emphasis on teaching in a multicultural setting and developing reflective practitioners. Restricted to: Music Education majors.

**Prerequisite(s):** A grade of C or better in MUSC 346.

**MUSC 350. Chamber Music**
1 Credit (1)
Small performing ensembles that may include strings, woodwinds, brass, pianos, percussion, and voices. May be repeated up to 16 credits.

**Prerequisite(s):** by audition only.

**MUSC 351. Opera Workshop**
1 Credit (1)
Study, translation analysis, rehearsal and performance of opera. May be repeated up to 10 credits.

**Prerequisite(s):** by audition only.

**MUSC 360. Special Topics II**
1-3 Credits
Emphasis on special areas of music; designed for highly motivated students. May be taken for unlimited credit.

**MUSC 361. Concert Choir II**
1 Credit (1)
Composed of both music and nonmusic majors. Emphasis on vocal techniques, sight-singing, and basics of choral musicianship. Students must assume leadership role. May be repeated up to 88 credits.

Prerequisite(s): by audition only.

MUSC 362. Philharmonic Orchestra II
1 Credit (1)
The University Philharmonic Orchestra is open to all students and performs a wide variety of standard orchestral literature. The orchestra performs each semester and the objectives include refining technique, stylistic characteristics, intonation, balance, bowings, color, rhythmic integrity and dynamics. May be repeated up to 10 credits.

Prerequisite(s): by audition only.

MUSC 363. Jazz Ensembles II
1 Credit (1)
Performance ensemble that explore repertoire written for big band, including (but not limited to) dance band, swing, and contemporary compositions. May be repeated up to 10 credits.

Prerequisite(s): by audition only.

MUSC 365. Composition I
2 Credits (2)
Significant forms for various media. Emphasis on structural aspects of original composition. May be repeated up to 2 credits.

Prerequisite: A grade of B or better in MUSC 1460.

Learning Outcomes
1. Demonstrate the ability to analyze a variety of musical compositions
2. Demonstrate the ability to develop musical compositions from basic melodic, harmonic, rhythmic, and formal structures
3. Create new musical compositions from variety of perspectives for smaller chamber ensembles

MUSC 368. University Singers II
1 Credit (1)
Select concert and touring choir of undergraduate and graduate students performing a cappella and accompanied choral literature. May be repeated up to 10 credits. Consent of Instructor required.

Prerequisite(s): by audition only.

MUSC 370. Wind Symphony II
1 Credit (1)
This elite ensemble of 50 highly qualified graduate and undergraduate students performs a varied repertoire of the highest quality literature for winds. Members will also perform concerts of chamber winds literature each semester. This ensemble is dedicated to professional level performance while fostering the musical growth of its members. Conducted by the Director of Bands, this group serves as the flagship for the entire university bands program. May be repeated up to 10 credits.

Prerequisite(s): by audition only.

MUSC 372. Marching Band II
1 Credit (1)
Composed of both majors and nonmajors. Opportunity to perform all varieties of music in a contemporary style marching unit. May be repeated up to 5 credits. Consent of Instructor required. Traditional Grading with RR.

MUSC 374. Percussion Ensembles II
1 Credit (1)
Study and performance of contemporary percussion ensemble literature. Students must assume a leadership role. May be repeated up to 5 credits.

Prerequisite(s): by audition only.

MUSC 380. Symphonic Band II
1 Credit (1)
This is a select large ensemble, chosen by audition. It provides a challenging musical environment for skilled performers by programming repertoire that ranges from works for chamber winds, to standards of the wind band literature, to cutting edge literature. Conducted by the Associate Director of Bands, this ensemble is comprised of music majors and non-music majors alike and provides the less experienced student an opportunity to hone and refine performance skills. May be repeated up to 10 credits.

Prerequisite(s): by audition only.

MUSC 386. Applied Music Pedagogy and Literature I
2 Credits (2)
Methods, materials, problems, literature, and techniques in teaching individual lessons. Consent of Instructor required. Restricted to: Music and Music Education majors. Traditional Grading with RR.

MUSC 389. Survey of Wind Literature
2 Credits (2)
An examination of beginning to advanced literature for wind bands with an emphasis on the needs of middle and high school ensembles. It will include a means to determine the quality of a piece as well as the standardized level of difficulty (grading). Restricted to: Music and Music Education majors.

Prerequisite(s): A grade of C- or better in MUSC 2452 and MUSC 2461.

MUSC 390. Survey of Orchestral Literature
2 Credits (2)
An examination of beginning to advanced literature for both string orchestra and symphony orchestra with an emphasis on the needs of middle and high school ensembles. A means to determine the quality of a piece as well as the standardized level of difficulty (grading) will be included. May be repeated up to 2 credits.

Prerequisite: A grade of C- or better in MUSC 2452 and MUSC 2461.

Learning Outcomes
1. Identify significant composers and compositions that are appropriate for all grade levels and applicable to teaching music through a performance-based environment in an orchestral setting
2. Determine the quality of a work based on aesthetic ideals
3. Determine appropriate programming strategies and repertoire selection dependent upon level of difficulty and/or varying ability levels.

MUSC 392. Survey of Choral Literature
2 Credits (2)
An examination of beginning to advanced literature for choir with an emphasis on the needs of middle and high school ensembles. A means to determine the quality of a piece as well as the standardized level of difficulty (grading) will be included. Restricted to: Music and Music Education majors.

Prerequisite(s): A grade of C- or better in MUSC 2452 and MUSC 2461.

MUSC 393. Instructional Strategies I for Instrumentalists
2 Credits (2)
An examination of beginning to advanced literature for instrumentalists with an emphasis on the needs of middle and high school ensembles. The course includes a means to determine the quality of a piece as well as the standardized level of difficulty (grading). It also allows for full ensemble instrumentation to experience both playing the repertoire and peer teaching to better rehearsal skills.

Prerequisite: A grade of C- or better in MUSC 1410.
Learning Outcomes
1. The ability to assess the graded needs of middle and high school ensembles.
2. The development of rehearsal skills.

MUSC 394. Instructional Strategies II for Instrumentalists
2 Credits (2)
The course focuses on rehearsal techniques for middle and high school ensembles. It includes a means to determine the quality of a piece of music as well as the standardized level of difficulty (grading). Students must also pass the TEP exam in order to enroll in this course.
Prerequisite: A grade of C- or better in MUSC 1410.
Learning Outcomes
1. The development of rehearsal techniques for middle and high school ensembles.

MUSC 395. Instructional Strategies I for Vocalists
2 Credits (2)
An examination of beginning to advanced literature for vocalists with an emphasis on the needs of middle and high school ensembles. The course includes means to determine the quality of a piece as well as the standardized level of difficulty (grading). It also allows for full ensemble instrumentation to experience both playing the repertoire and peer teaching to better rehearsal skills. Students must also pass the TEP exam to enroll in this course.
Prerequisite: A grade of C- or better in MUSC 1410.
Learning Outcomes
1. The ability to assess the graded needs of middle and high school ensembles.
2. The development of rehearsal skills.

MUSC 396. Instructional Strategies II for Vocalists
2 Credits (2)
The course focuses on rehearsal techniques for middle and high school ensembles. It includes means to determine the quality of a piece of music as well as the standardized level of difficulty (grading). Students will also need to pass the TEP exam in order to enroll in the course.
Prerequisite: A grade of C- or better in MUSC 1410.
Learning Outcomes
1. The development of rehearsal techniques for middle and high school ensembles.

MUSC 397. Administrative Music Methods
1 Credit (1)
Lesson planning, curriculum, teaching methodology, materials, and procedures for teaching music in the middle school and high school. Emphasis on administration. Students must also pass the TEP exam to enroll in this course.
Prerequisite: A grade of C- or better in MUSC 1410.
Learning Outcomes
1. Gain insight and experience with administrative strategies and procedures in secondary classroom
2. Work on interview skills as well as resume and cover letter composition
3. Collect a set of usable tools that a student can carry with them into their first job.
4. Gain familiarity with laws and regulations regarding programs and money spent

MUSC 413. Form and Analysis
3 Credits (3)
Forms in tonal music and basic analytic techniques including music from diverse cultures and media.
Prerequisite(s): A grade of C- or better in MUSC 2452 and MUSC 2461.

MUSC 415. Orchestration
3 Credits (3)
Scoring for full orchestra and various instrumental combinations with consideration of instrument timbres, strengths, weaknesses and ranges. May be repeated up to 3 credits. Restricted to: Music and Music Education majors.
Prerequisite: A grade of C- or better in MUSC 2452 and MUSC 2461.
Learning Outcomes
1. Write effectively andidiomatically for voice, orchestra, and Band.

MUSC 417. Studio Accompanying
2 Credits (2)
Practical application of collaborative piano skills in a studio setting for Piano Performance majors. May be repeated up to 8 credits. Consent of Instructor required. Restricted to: Music and Music Education majors.
Traditional Grading with RR.

MUSC 421. Music of the Baroque Era
3 Credits (3)
An overview of the music of the Baroque era with an emphasis on history and literature. May be repeated up to 3 credits.
Prerequisite: MUSC 303.
Learning Outcomes
1. Discuss the historical and social context from which Baroque music developed.
2. Summarize the career of several well-known Baroque composers.
3. Outline the musical traits common and unique to different regions in the Baroque period and name the most important Baroque genres.
4. Describe the musical style of several well-known and lesser-known Baroque composers, citing examples from specific works.
5. Examine thirty-three Baroque musical works.
6. Write a term paper based on an analysis of a Baroque musical work.
7. Interpret and perform Baroque works with an understanding of historically-informed performance.
8. Describe Baroque string, wind, brass, keyboard, and percussion instruments: their appearance, construction, and manner of playing.

MUSC 422. Music of the Classic Era
3 Credits (3)
An overview of the music of the Classic era with an emphasis on history and literature.
Prerequisite(s): MUSC 303.

MUSC 424. Music of the Twentieth Century
3 Credits (3)
An overview of the music of the Twentieth Century with an emphasis on history and literature. Consent of Instructor required.
Prerequisite(s): MUSC 303.

MUSC 429. Opera: History and Literature
3 Credits (3)
An overview of the operatic art form from the Florentine Camerata and Baroque opera through current 21st-century works, with an emphasis on historical context, composers, and significant works. Restricted to: Music, Music Education majors.
Prerequisite(s): MUSC 303 or consent of instructor.
Learning Outcomes

1. The student will be able to effectively identify and discuss operatic developments and traditions in historical context as well as demonstrate a knowledge of operatic composers and significant operatic works.

MUSC 430. Applied Music III
1-4 Credits
Continuation from MUSC 330. Individual instruction to develop technique, musicianship, performance and improvisational skills, as well as knowledge of significant repertoire. May be repeated up to 16 credits. Consent of Instructor required. Restricted to: Music and Music Education majors. Traditional Grading with RR.
Prerequisite(s): A grade of C or better in MUSC 330 plus a juryed audition.

MUSC 440. Senior Recital
1-2 Credits (1-2)
Public solo performance under the supervision of the appropriate applied instructor. 60 minutes of musical performance is required for enrollment of 2 hours credit. 30 minutes of musical performance is required for enrollment of 1 hour credit. Consent of Instructor required. Restricted to: Music and Music Education majors. Traditional Grading with RR.

Corequisite(s): MUSC 430.

MUSC 441. Supervised Studio Teaching
2 Credits (2)
Teaching of private lessons under supervision. May be repeated up to 6 credits. Consent of Instructor required. Restricted to: Music and Music Education majors. Traditional Grading with RR.

MUSC 450. Research Methods
3 Credits (3)
Introduction to methodology of music research. Emphasis on important scholarly resources and academic writing. Restricted to majors. Main campus only. No S/U option.
Prerequisite: consent of instructor.

MUSC 470. Special Topics III
1-3 Credits
Designed for highly motivated students. Independent study and individual guidance. May be taken for unlimited credit.

MUSC 471. Graduate Theory Review
3 Credits (3)
Comprehensive and accelerated study of modes, diatonic harmony, and classical form of the common practice period. Restricted to: Music majors. Traditional Grading with RR.

MUSC 475. Intermediate Conducting
3 Credits (3)
Serves as a bridge from undergraduate conducting study to the graduate level. Advanced undergraduate students may enroll to learn how the graduate program in conducting functions. The course also serves as the introductory experience for newly admitted graduate conducting majors. After successful completion of this course, students will be able to: Study musical scores from a conducting perspective; Demonstrate effective predetermined gestures and movements; Lead an ensemble; Research and give presentations related to composers and their music; Demonstrate advanced knowledge of conducting practices.
Prerequisite(s): A grade of C- or better in MUSC 326 or MUSC 327.

MUSC 477. Graduate Music History Review
3 Credits (3)
Comprehensive and accelerated study of music history from antiquity to the present Restricted to: Music majors. Traditional Grading with RR.

MUSC 486. Applied Music Pedagogy and Literature II
2 Credits (2)
Methods, materials, problems, literature, and techniques in teaching individual lessons. Consent of Instructor required. Restricted to: Music majors. Traditional Grading with RR.

MUSC 498. Independent Study
1-3 Credits
For students with a strong musical background wishing to explore content beyond the traditional curriculum. Restricted to majors. May be repeated for a maximum of 6 credits.
Prerequisite: consent of instructor.

MUSC 511. Survey of Traditional Harmony
3 Credits (3)
Tonal harmony in common practice and theory of the late 17th, 18th, and early 19th centuries. Restricted to: Music majors. Traditional Grading with RR.
Prerequisite(s): A grade of B or better in MUSC 471.

MUSC 513. Twentieth Century Art Music
3 Credits (3)
Analytical techniques, structural design and compositional materials from Debussy to the Minimalist school in historical context. Restricted to: Music majors.
Prerequisite(s): A grade of B or better in MUSC 471.

MUSC 518. Seminar in Music Theory
3 Credits (3)
Varying topics in Music Theory, providing a more specific and in-depth study of the particular topic. May be repeated up to 6 credits. Restricted to: Music majors. Traditional Grading with RR.
Prerequisite(s): A grade of B or better in MUSC 471.

MUSC 519. Seminar in Music History
3 Credits (3)
Varying topics in Music History, providing a more specific and in-depth study of the particular topic. May be repeated up to 6 credits. Restricted to: MUSC majors.
Prerequisite(s): A grade of B or better in MUSC 477.

MUSC 521. Music of the Baroque Era: History and Literature
3 Credits (3)
An overview of the music of the Baroque Era with an emphasis on history and literature. May be repeated up to 3 credits.
Prerequisite: A grade of B or better in MUSC 477.

Learning Outcomes

1. Discuss the historical and social context from which Baroque music developed.
2. Summarize the career of several well-known Baroque composers.
3. Outline the musical traits common and unique to different regions in the Baroque period and name the most important Baroque genres.
4. Describe the musical style of several well-known and lesser-known Baroque composers, citing examples from specific works.
5. Examine thirty-three Baroque musical works.
6. Write a term paper based on an analysis of a Baroque musical work.
7. Interpret and perform Baroque works with an understanding of historically-informed performance.
8. Describe Baroque string, wind, brass, keyboard, and percussion instruments: their appearance, construction, and manner of playing.

MUSC 522. Music of the Classical Era: History and Literature
3 Credits (3)
An overview of the music of the Classical era with an emphasis on history and literature. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 477.

MUSC 523. Music of the Romantic Era: History and Literature
3 Credits (3)
An overview of Romantic era music, with an emphasis on history and literature. Restricted to MUS Majors. May be repeated up to 3 credits.

Prerequisite: A grade of B or better in MUSC 477.

Learning Outcomes
1. Develop an in-depth knowledge of composers of the Romantic era
2. Develop the ability to recognizes major compositions of the Romantic Era
3. Develop the ability to analyze works from the Romantic Era.

MUSC 529. Opera History and Literature
3 Credits (3)
An overview of the operatic art form from the Florentine Camerata and Baroque opera through current 21st-century works, with an emphasis on historical context, composers, and significant works. Restricted to: M ED,MUS majors.

Prerequisite(s): A grade of B or better in MUSC 477.

Learning Outcomes
1. The student will be able to effectively identify and discuss operatic developments and traditions in historical context as well as demonstrate a knowledge of operatic composers and significant operatic works.

MUSC 530. Seminar in Music Education
3 Credits (3)
Varying topics in Music Education, providing a more specific and in-depth study of the particular topic. Restricted to: MUS majors.

MUSC 531. Music Education in the Diverse Classroom
3 Credits (3)
This course is designed to provide an introduction to diverse and at-risk student groups in educational settings in the music classroom. It will help the course participants explore strategies and gain skills to enhance the musical growth of marginalized groups of students. There is an emphasis on identification, behavioral patterns, building interpersonal relationships, and will include a critical review of selected current research studies in music education. Armed with this knowledge, course participants will be better prepared to understand at-risk students and how best to implement strategies in the classroom. May be repeated up to 3 credits. Restricted to: MUS majors.

Learning Outcomes
1. Students will access and utilize the basic research journals and other sources of research reports and summaries, including those identified using computer technology in the field of music education.
2. Students will describe the structure of most qualitative research studies and their aid in identifying student traits.
3. Students will understand and use most of the language, terms and vocabulary found in qualitative research reports in discussing and identifying behavioral patterns of at-risk students.
4. Students will appraise qualitative research in a systematic way; analyze and review what the research produced in order to isolate the strategies available to incorporate in classroom teaching scenarios.
5. Students will independently retrieve, critique and summarize research related to at-risk students in music education.

MUSC 535. Current Issues in Music Education
3 Credits (3)
This course examines the rich and challenging complexities of music teaching and learning from a variety of perspectives. Educational theory to pedagogical inquiry of current educational practice will be examined, calling students to critically reflect on such professional activities as lesson planning, curriculum design, repertoire choice, program assessment, advocacy in the arts, and student evaluation. Restricted to: MUS (Music Ed track only) majors.

MUSC 540. Graduate Recital/Analytical Paper
4 Credits (4)
This course is for students completing a Master of Music with a Performance emphasis. A public recital will be given and an accompanying research paper will be submitted. Restricted to: MUS majors.

Learning Outcomes
1. Students will be able to effectively identify and discuss operatic developments and traditions in historical context as well as demonstrate a knowledge of operatic composers and significant operatic works.

MUSC 546. Advanced Choral Conducting I
3 Credits (3)
This course will continue the training for competent musicianship with a focus on conducting gestures and movements, score study, and rehearsal techniques. Lessons will focus primarily on the development of a non-verbal vocabulary that will allow each student to clearly and artistically communicate with the members of an ensemble to solicit a predetermined musical result. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 475.

MUSC 547. Advanced Choral Conducting II
3 Credits (3)
This is the final course in preparation for the student's graduate conducting concert. It will continue the training for competent musicianship with a focus on conducting gestures and movements, score study, and rehearsal techniques. Lessons will focus primarily on the development of a non-verbal vocabulary that will allow each student to clearly and artistically communicate with the members of an ensemble to solicit a predetermined musical result. Restricted to: MUS majors.

Learning Outcomes
1. Students will access and utilize the basic research journals and other sources of research reports and summaries, including those identified using computer technology in the field of music education.
2. Students will describe the structure of most qualitative research studies and their aid in identifying student traits.
3. Students will understand and use most of the language, terms and vocabulary found in qualitative research reports in discussing and identifying behavioral patterns of at-risk students.
4. Students will appraise qualitative research in a systematic way; analyze and review what the research produced in order to isolate the strategies available to incorporate in classroom teaching scenarios.
5. Students will independently retrieve, critique and summarize research related to at-risk students in music education.

MUSC 548. Advanced Choral Conducting
4 Credits (4)
This course is for students completing a Master of Music with a Performance emphasis. A public recital will be given and an accompanying research paper will be submitted. Restricted to: MUS majors.

Learning Outcomes
1. The student will be able to effectively identify and discuss operatic developments and traditions in historical context as well as demonstrate a knowledge of operatic composers and significant operatic works.

MUSC 574. Advanced Choral Conducting I
3 Credits (3)
The role of the conductor is to lead, react to, alter, and reinforce the performance of the ensemble. This course will continue in the training for competent musicianship with a focus on conducting gestures and movements, score study, and rehearsal techniques. Lessons will focus primarily on the development of a non-verbal vocabulary that will allow each student to clearly and artistically communicate with the members of an ensemble to solicit a predetermined musical result. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 475.

MUSC 575. Advanced Choral Conducting II
3 Credits (3)
This is the final course in preparation for the student's graduate conducting concert. It will continue the training for competent musicianship with a focus on conducting gestures and movements, score study, and rehearsal techniques. Lessons will focus primarily on the development of a non-verbal vocabulary that will allow each student to clearly and artistically communicate with the members of an ensemble to solicit a predetermined musical result. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 475.

MUSC 576. Advanced Instrumental Conducting I
3 Credits (3)
The role of the conductor is to lead, react to, alter, and reinforce the performance of the ensemble. This course will continue in the training for competent musicianship with a focus on conducting gestures and movements, score study, and rehearsal techniques. Lessons will focus primarily on the development of a non-verbal vocabulary that will allow each student to clearly and artistically communicate with the members of an ensemble to solicit a predetermined musical result. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 475.

MUSC 577. Advanced Instrumental Conducting II
3 Credits (3)
The role of the conductor is to lead, react to, alter, and reinforce the performance of the ensemble. This course will continue in the training for competent musicianship with a focus on conducting gestures and movements, score study, and rehearsal techniques. Lessons will focus primarily on the development of a non-verbal vocabulary that will allow each student to clearly and artistically communicate with the members of an ensemble to solicit a predetermined musical result. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 475.

MUSC 578. Advanced Choral Literature
2-3 Credits (2-3)
An examination of significant choral works from 1200 to the present, including composers, genres, and historical context. May be repeated up to 3 credits. Restricted to: MUS majors.
Prerequisite(s): A grade of B or better in MUSC 475.

**MUSC 579. Advanced Instrumental Literature**

- 2-3 Credits (2-3)
- An examination of significant instrumental works from the Baroque period to the present, including composers, genres, and historical context. May be repeated up to 3 credits. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 475.

**MUSC 580. Ensemble Performance**

- 1 Credit (1)
- Performance in university ensembles. May be repeated up to 99 credits.

Prerequisite(s): by audition only.

**MUSC 582. Applied Music**

- 2-4 Credits (2-4)
- For music majors, individual instruction, including improvisation skills and techniques. Students may enroll for 2 or 4 credits. Students must audition in order to enroll. Consent of instructor required. May be repeated up to 24 credits.

**Learning Outcomes**

5. Development of Improvisatory Skills.

**MUSC 586. Applied Music Pedagogy and Literature III**

- 2 Credits (2)
- Methods, materials, problems, literature, and techniques in teaching individual lessons. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 486.

**MUSC 598. Special Research Programs**

- 1-4 Credits
- May be taken for unlimited credit.

**MUSC 599. Master's Thesis**

- 15 Credits
- Thesis.

### Music - Bachelor of Arts

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Students that wish to pursue this degree would be best served in completing this program as an accompanying degree or double major to an already existing program, completing this program with one of the concentrations, or students judiciously select a minor to accompany the BA in Music.

- MUSC 302: Music History and Literature: Classic through Romantic: 3 credits
- MUSC 303: Music History and Literature: 20th Century Through the Present: 3 credits

**Techniques Courses**

- MUSC 2310: Sound and Music Technology: 1 credit
- MUSC 325: Beginning Conducting: 1 credit

**Performance Courses**

- Any 2000 level MUSC ensemble: 3 credits
- MUSC 2510: Applied Music I: 4 credits
- MUSC 330: Applied Music II: 2 credits
- Any 300 level MUSC Ensemble: 3 credits
- MUSC 1310: Recital Attendance (4 semesters with .5 credits each): 2 credits
- MUSC 1470: Functional Piano I (or applied piano): 2 credits
- MUSC 341: BA Capstone: 1-2 credits

**Departmental Electives**

- Any 300 level MUSC Electives: 6 credits
- Any 400 level MUSC Electives: 6 credits

**Non-Departmental Requirements**

**Minor Field Courses**

- 15 credits

**Second Language Requirements (not required)**

- 0 credits

**Electives, to bring the total credits to 120**

- 9-13 credits

**Total Credits:**

- 120 credits

---

1. See the General Education Section (p. 227) of the catalog for a full list of courses
2. See the Viewing a World Section (p. 231) of the catalog for a full list of courses
3. Students must complete this requirement for 1 credit for a total of 3 semesters.
4. Students must complete this requirement for 1 credit for a total of 4 semesters.
Second Language Requirement

For the Bachelor of Arts- Music there is no second language requirement for the degree.

A Suggested Plan of Study

Additional classes may be needed based on placement test results and course prerequisites. Visit with an advisor for help with creating a customized plan. This roadmap assumes student placement and course prerequisites. Visit with an advisor for help with creating a roadmap for the degree. Course availability may vary from fall to spring semester and may be subject to change.

Music (Pre-Music Therapy) - Bachelor of Arts

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

---

1. See the General Education Section (p. 227) of the catalog for a full list of courses.
2. See the Viewing a World Section (p. 231) of the catalog for a full list of courses.
3. Students must complete this requirement for 1 credit for a total of 4 semesters.
4. Students must complete this requirement for 1 credit for a total of 2 semesters.
5. Students must complete this requirement for 1 credit for a total of 3 semesters.
6. Students must complete this requirement for 0.5 credit for a total of 4 semesters.
7. Because of the number of credits required for a music degree, including required ensembles and applied lessons, music students are not required to meet the Second Language Requirements.
8. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirement list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

### A Suggested Plan of Study

Additional classes may be needed based on placement test results and course prerequisites. Visit with an advisor for help with creating a customized plan. This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

8 Because of the number of credits required for a music degree, including required ensembles and applied lessons, music students are not required to meet the Second Language Requirements.
9 Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
Second Language Requirement
For the Bachelor of Arts- Music with a concentration in Theatre there is no second language requirement for the degree.

A Suggested Plan of Study
Additional classes may be needed based on placement test results and course prerequisites. Visit with an advisor for help with creating a customized plan. This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Music (Instrumental Performance) - Bachelor of Music
The Bachelor of Music (BM) curriculum is designed to prepare students for performance careers and private studio teaching and serves as a foundation for advanced study toward master’s and doctoral degrees: M.M., D.M.A., or Ph.D in Music. In addition, the BM degree may lead to positions as professional entertainers or teachers at the college and university levels, or lead to music related work in the business world.

Requirements - Basic Music and Performance
Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World
requirements, and elective credits to total at least 129 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Total Credits | 127-130

1 See the General Education (p. 227) section of the catalog for a full list of courses.
2 A Mathematics course is required for the degree but students may need to take any prerequisites needed to enter the course selected first.
3 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
4 All Music Majors must take MUSC 430 Applied Music III for a minimum of 2 semesters.
5 Music Performance students must take MUSC 440 Senior Recital for 2 credits.

Second Language Requirement

For the Bachelor of Music in Music with a Concentration in Instrumental Performance, there is no second language requirement for the degree.

Piano Proficiency

- Students must pass Piano Proficiency before presenting a Senior Recital.
- Students must enroll for Functional Piano until the Proficiency is passed

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 111OG Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

1 See the General Education (p. 227) section of the catalog for a full list of courses.
2 A Mathematics course is required for the degree but students may need to take any prerequisites needed to enter the course selected first.
3 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
4 All Music Majors must take MUSC 430 Applied Music III for a minimum of 2 semesters.
5 Music Performance students must take MUSC 440 Senior Recital for 2 credits.
Music (Vocal Performance) - Bachelor of Music

The Bachelor of Music (BM) curriculum is designed to prepare students for performance careers and private studio teaching and serves as a foundation for advanced study toward master's and doctoral degrees: M.M., D.M.A., or Ph.D in Music. In addition, the BM degree may lead to positions as professional entertainers or teachers at the college and university levels, or lead to music related work in the business world.

Requirements - Basic Music and Performance

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 129 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

- Area IV: Social/Behavioral Sciences Course 3
- Area VI: Creative and Fine Arts Course 4,5
- General Education Elective Course 3,5

Credits

- New Mexico State University - Las Cruces 801
Music Education (K12 Instrumental) - Bachelor of Music Education

The Bachelor of Music Education (BME) is a diversified four- to five-year degree program of teaching, performance, and specialized studies in music. The goal of this degree is to prepare the student for certification to teach music in the public schools, and serves as a foundation for advanced study toward master’s and doctoral degrees: M.M., M.M.E., D.M.A. or Ph.D in music education.

Requirements: Basic Music and Performance

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 133.5 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

1 Functional Piano is not a required course. It is recommended that students take it at the appropriate level until ready to pass the required Piano Proficiency.

2 These courses may have prerequisites and/or co-requisites, and it is the students responsibility for checking and fulfilling all those requirements.

3 See the General Education (p. 227) section of the catalog for a full list of courses.

4 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

5 It is possible to use the nine credit rule to satisfy this requirement.

  - Either Area III/IV: Laboratory Sciences Course or Social/Behavioral Sciences Course (4 or 3 credits)
- Area V: Humanities (3 credits)
- Area VI: Creative and Fine Arts (3 credits)
- General Education Elective (3-4 credits)
- Viewing A Wider World (6 credits)
MUSC 394 Instructional Strategies II for Instrumentalists 2
MUSC 397 Administrative Music Methods 1
READ 4330 Content Area Literacy 3
SPED 3105 Introduction to Special Education in a Diverse Society 3

Second Language Requirement: (not required)
Electives, to bring the total credits to 131.5 0

Total Credits 131.5-135.5

1. See the General Education (p. 227) section of the catalog for a full list of courses.

2. A Mathematics course is required for the degree but students may need to take any prerequisites needed to enter the course selected first.

3. See the View of a Wider World (p. 231) section of the catalog for a full list of courses.

4. String students may substitute MUSC 2110, MUSC 350 or MUSC 362 for MUSC 372 Marching Band II.

5. All Music Majors must take MUSC 430 Applied Music III for a minimum of 2 semesters.

Second Language Requirement
For the Bachelor of Music Education in Music Education with a Concentration in K-12: Instrumental, there is no second language requirement for the degree.

Piano Proficiency
• Students must pass Piano Proficiency before presenting a Senior Recital.
• Students must enroll for Functional Piano until Proficiency is passed.

Music Education Requirement
• Students must pass the TEP Exam before taking MUSC 346 Elementary Music Methods or MUSC 393 Instructional Strategies I for Instrumentalists.
• Students must present Senior Recital before student teaching.

A Suggested Plan of Study for Students
This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Functional Piano is not a required course. Though not listed under recommended coursework each term, it is recommended that students take it at the appropriate level each semester until ready to pass the required Piano Proficiency.

First Year Credits
ENGL 1110G Composition I 1 4
MATH 1130G Survey of Mathematics 1 3
MUSC 1310 Recital Attendance 0.5
MUSC 1440 Vocal Techniques for Instrumental Music Education Majors (Fall only) 1 1
MUSC 1450 Ear Training I (Fall only) 1 1
MUSC 1460 Music Theory I (Fall only) 1 3
MUSC 2510 Applied Music I 1 1
MUSC 372 or MUSC 2740 Marching Band II (Marching Band I will also fulfill this requirement) or Pride Marching Band 1
MUSC 1310 Recital Attendance 0.5

MUSC 1310 Recital Attendance 0.5
MUSC 326 Instrumental Conducting (Spring Only) 1 3
MUSC 393 Instructional Strategies I for Instrumentalists 2
MUSC 430 Applied Music III 1 2
MUSC 415 Orchestration 3
300-level Instrumental Ensemble Course 1

Credits 36-37

Notes:
- Honors 1 or Writing in the Humanities and Social Science
- A Mathematics course is required for the degree but students may need to take any prerequisites needed to enter the course selected first.
- String students may substitute MUSC 2110, MUSC 350 or MUSC 362 for MUSC 372 Marching Band II.
- All Music Majors must take MUSC 430 Applied Music III for a minimum of 2 semesters.

- The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.
- Functional Piano is not a required course. Though not listed under recommended coursework each term, it is recommended that students take it at the appropriate level each semester until ready to pass the required Piano Proficiency.
Mathematics coursework may be needed in order to take the necessary English credits, but may not count towards the degree requirements and/or elective credits in courses numbered 300 or above. Developmental coursework requirements, and elective credits to total at least 135.5 credits with 48 include: General Education requirements, Viewing a Wider World. Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World. These courses may have prerequisites and/or co-requisites, and it is the students responsibility for checking and fulfilling all those requirements. See the General Education (p. 227) section of the catalog for a full list of courses. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses. May use the nine-credit rule to fulfill this requirement. These courses may have prerequisites and/or co-requisites, and it is the students responsibility for checking and fulfilling all those requirements. See the General Education (p. 227) section of the catalog for a full list of courses. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses. May use the nine-credit rule to fulfill this requirement.

### Music Education (K12 Vocal) - Bachelor of Music Education

The Bachelor of Music Education (BME) is a diversified four- to five-year degree program of teaching, performance, and specialized studies in music. The goal of this degree is to prepare the student for certification to teach music in the public schools, and serves as a foundation for advanced study toward master's and doctoral degrees: M.M., M.M.E., D.M.A. or Ph.D in music education.

### Requirements: Basic Music and Performance

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 135.5 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Functional Piano is not a required course. Though not listed under the recommended coursework each term, it is recommended that students continue to take it at the appropriate level until ready to pass the required Piano Proficiency.

### Total Credits: 132.5-136.5

### Notes:

1. See the General Education (p. 227) section of the catalog for a full list of courses.
2. A Mathematics course is required for the degree but students may need to take any prerequisites needed to enter the course selected first.
3. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
4. All Music Majors must take MUSC 430 Applied Music III for a minimum of 2 semesters.

### Second Language Requirement

For the Bachelor of Music Education in Music Education with a Concentration in K-12: Vocal, there is no second language requirement for the degree.

### Piano Proficiency

- Students must pass Piano Proficiency before presenting a Senior Recital.
- Students must enroll for Functional Piano until Proficiency is passed.

### Music Education Requirement

- Students must pass the TEP Exam before taking MUSC 346 Elementary Music Methods or MUSC 395 Instructional Strategies I for Vocalists.
- Students must present Senior Recital before student teaching.

Philosophy Courses

PHIL 1115G. Introduction to Philosophy
3 Credits (3)
In this course, students will be introduced to some of the key questions of philosophy through the study of classical and contemporary thinkers. Some of the questions students might consider are: What is knowledge? What is the mind? What are our moral obligations to others? Students will engage with and learn to critically assess various philosophical approaches to such questions.

Learning Outcomes
1. Comprehend components of arguments.
2. Acquire a general understanding of the essential logical concepts needed for argument analysis, such as validity, soundness, deduction, and induction.
3. Critically assess arguments with an aim toward identifying what constitutes effective and reasonable argument strategies.
4. Learn to identify common logical fallacies.
5. Apply knowledge of argumentation principles to philosophical and scholarly texts.

PHIL 1120G. Logic, Reasoning, & Critical Thinking
3 Credits (3)
The purpose of this course is to teach students how to analyze, critique, and construct arguments. The course includes an introductory survey of important logical concepts and tools needed for argument analysis. These concepts and tools will be used to examine select philosophical and scholarly texts.

Learning Outcomes
1. Comprehend and differentiate between various philosophical approaches to questions within fields such as metaphysics, epistemology, ethics, and aesthetics.
2. Critically evaluate various philosophical arguments and positions.

PHIL 1140G. Philosophy and World Religions
3 Credits (3)
A philosophical enquiry into the religious life; an introduction to philosophical questions about religions focused on consideration of some of the traditional approaches to God and what it means to be religious. May be repeated up to 3 credits.
Learning Outcomes
1. Identify and describe philosophical theories regarding religion.
2. Develop and enhance your critical thinking skills, particularly in the evaluation of arguments about the truth or applicability of particular religious or secular viewpoints.
3. Analyze the teachings of world religions by describing their similarities and differences.
4. Explain the philosophical beliefs, practices, and ethical standards of the major world religions as well as emerging religious movements.
5. Explain how each religion evolved historically, philosophically, and spiritually as well as the contemporary ideas and practices each religion.

PHIL 1145G. Philosophy, Law, and Ethics
3 Credits (3)
An introduction to practical problems in moral, social, political, and legal philosophy. Topics to be discussed may include ecology, animal rights, pornography, hate speech on campus, same-sex marriage, justice, abortion, terrorism, treatment of illegal immigrants, and New Mexican Aboriginal Peoples' land claims.

Learning Outcomes
1. The aim of this course is to familiarize students with some of the ethical and philosophical issues that arise in connection with laws/legality in general and criminal and constitutional law in the U.S. in particular.
2. It examines issues in moral philosophy, political philosophy, and philosophy of law.
3. A question to which we repeatedly return is whether the law does and/or ought to have some necessary relation to the demands of justice and morality. Among the topics we'll cover are: What is a law? Natural law vs. positive law and legal positivism vs. natural law theory; Utilitarian, divine command, Kantian, and natural law theories of moral rightness/wrongness; The distinction between the normative and the non-normative; Is there a moral duty to obey the law? Plato's Crito and R.P. Wolff's "philosophical anarchism."; J.S. Mill and classical liberalism; Mill's "harm principle" ("the state should restrict the liberty of competent adults via the criminal law only to prevent them from wrongfully harming other persons"); Legal paternalism. Should the state make it harder for citizens to smoke tobacco and/or marijuana, for their own good?; Should voluntary euthanasia be legal? Is there a constitutional "right to die"? How should judges determine the meaning of vaguely worded constitutional requirements (e.g. "free exercise of religion," no "unreasonable search and seizure," no "cruel and unusual punishment," etc.)? Originalist vs. nonoriginalist approaches; The First Amendment, free speech, and freedom of religion; The death penalty and "cruel and unusual punishment"; The insanity defense in criminal law; Does the 14th Amendment's requirement of "equal protection" under the law compel states to recognize same sex marriage?; The Fourth Amendment and its prohibition of "unreasonable search and seizure."

PHIL 2110G. Introduction to Ethics
3 Credits (3)
This course introduces students to the philosophical study of morality and will explore questions concerning our human obligations to others and related issues. Students may be asked to relate various approaches to ethics to present-day ethical debates and their own lives.

Learning Outcomes
1. Differential between various ethical theories, which may include virtue ethics, deontology, and consequentialism.
2. Critically evaluate various ethical theories and positions.

PHIL 2230G. Philosophical Thought
3 Credits (3)
In this course, students will grapple with some of the key questions of philosophy through the study of classical and contemporary thinkers. Students will become familiar with the perennial problems in subfields of philosophy such as metaphysics, epistemology, ethics, and aesthetics. They will learn to approach these problems both critically and sympathetically.

Learning Outcomes
1. Comprehend and differentiate between various philosophical approaches to questions within fields such as metaphysics, epistemology, ethics, and aesthetics.
2. Critically evaluate various philosophical arguments and positions.
3. Identify the differences that characterize the major subfields of philosophy.

PHIL 305. Philosophy and Literature
3 Credits (3)
Examination of philosophical ideas as presented in selected literary works and literary criticism.

PHIL 306. Philosophy Through Film
3 Credits (3)
An exploration of a range of philosophical issues through the use of film. Topics include personal identity and memory, faith and the problem of evil, free will and moral responsibility, and the meaning of life. Films may include The Prestige, Memento, The Third Man, A Clockwork Orange, Fight Club, and Synecdoche, New York.

PHIL 312. Formal Logic
3 Credits (3)
Introduction to symbolic logic and its application in the analysis of arguments in scientific and ordinary discourse.

PHIL 315. Philosophy of Language
3 Credits (3)
A critical examination of philosophical inquiries into the syntactic, semantic, and pragmatic dimensions of language.

PHIL 316. Philosophy of Mathematics
3 Credits (3)
Survey of traditional philosophical problems and views concerning the nature of mathematics including such questions as: What is the nature of mathematical knowledge? What is mathematical truth? What is a number? What is proof? What is the relationship between logic and mathematics?

PHIL 320. Social and Political Philosophy
3 Credits (3)
This course critically examines such fundamental concepts as liberty, equality and human rights.

PHIL 322. Environmental Ethics
3 Credits (3)
Explores the ethical and topical issues raised by mining and grazing, air and water pollution, factory farming, global warming, and treatment of animals. It also studies some recent ecological movements such as ecofeminism, social ecology, and deep ecology.

PHIL 328. Applied Ethics
3 Credits (3)
Examines the implications of utilitarianism, Kantian ethics, natural law theory, and other moral theories for controversial moral issues such as the death penalty, euthanasia, abortion, genetic engineering, gay marriage, affirmative action, and pornography.

PHIL 331. Philosophy of Religion
3 Credits (3)
The nature, fundamental concepts, and problems of religion. Emphasis on the significance of religion for creative and practical value.

PHIL 332. Ethics and Global Poverty
3 Credits (3)
Philosophical scrutiny of and moral reflection on various aspects of global poverty and foreign aid. For example: Is poverty fundamentally a lack of income, or can it be understood as a failure to meet basic needs, or as a lack of valuable freedom? Do human rights exist? What, if any, are the moral obligations of rich countries to poor countries? Can foreign aid be immoral? How should the answers to these questions influence public policy? Restricted to: Main campus only.

PHIL 341. Ancient Philosophy
3 Credits (3)
Introduction to the philosophies of the pre-Socratics, Socrates, Plato, Aristotle, with brief discussion of the Epicureans and Stoics.

PHIL 344. Modern Philosophy
3 Credits (3)
Foundations of contemporary thought: introduction to the philosophies of Descartes, Bacon, Spinoza, Leibniz, Locke, Berkeley, Hume, Kant, and Hegel.

PHIL 346. Philosophy of Mind
3 Credits (3)
Examination of some of the most influential accounts of the mind, focusing on such issues as the relation between the mind and the body, mental causation and consciousness.

PHIL 350. Epistemology
3 Credits (3)
Introduction to epistemology. The philosophical critique of alleged ways of knowing. An examination of the nature of truth.

PHIL 351. Philosophy of Science
3 Credits (3)
Philosophical examination of the methodology of science. The logical, metaphysical, epistemological, and ethical critique of science and its impact on human affairs.

PHIL 361. Special Topics
3 Credits (3)
Specific subjects announced in the Schedule of Classes. May be repeated for a maximum of 9 credits.

PHIL 363. Independent Studies
1-3 Credits
For students with some background in philosophy. Independent work in a specific area. May be repeated for a maximum of 6 credits.

PHIL 373. Ethical Theory
3 Credits (3)
The critical examination of the justification of ethical theories with particular attention to the language of moral discourse.

PHIL 376. Philosophy of Law
3 Credits (3)
Ethical, logical, and epistemological implications of law, together with an analysis of the rhetoric of legal practice.

PHIL 380. Metaphysics
3 Credits (3)
Introduction to metaphysics: a treatment of such issues as the meaning of existence, the mind-body problem, the problem of universals, and free will versus determinism.

PHIL 385. Human Nature and the Good Life
3 Credits (3)
An examination of some of the most historically and philosophically influential conceptions of human nature and corresponding accounts of the good life.

PHIL 397. Existentialism
3 Credits (3)
The origins of existentialist thought in philosophy and literature, including the thought of Nietzsche, Kierkegaard, Dostoyevsky, Camus, and Sartre. The course covers topics in ethics and political philosophy, metaphysics, philosophical psychology, philosophy of religion, and other sub-disciplines of philosophy.

PHIL 435. Internship in Philosophy and Law
3 Credits (3)
Supervised hands-on experience for Justice, Political Philosophy, and Law majors to gain professional expertise of the law working with lawyers or judges in law offices, court rooms, and other professional legal settings. Student must be in junior and above standing to enroll. May be repeated up to 6 credits.

Prerequisite: Completion of 12 Philosophy credits; 2.5 GPA.

Learning Outcomes
1. Demonstrate practical knowledge, analytical ability and critical thinking of professional legal work by becoming familiar with such legal tasks as: preparing pleadings; preparing discovery, responding to discovery; controlling and organizing documents, information; preparing trial notebooks; preparing motions; contacting and responding to clients, witnesses, courts.

PHIL 448. Writing Philosophy
3 Credits (3)
A workshop on writing philosophy papers. Includes how to read and understand philosophical writing, organize a paper effectively, present a clear and forceful argument, and avoid common mistakes.

Prerequisite(s): completed 18 hours of philosophy credit.

PHIL 463. Independent Studies
1-3 Credits
For students with a strong background in philosophy. Independent work in a specific area. May be repeated for a maximum of 6 credits.

Prerequisite: consent of instructor.

PHIL 532. Advance Studies in Ethics and Global Poverty
3 Credits (3)
Advanced philosophical scrutiny of and moral reflection on various aspects of global poverty and foreign aid. For example: Is poverty fundamentally a lack of income, or can it be understood as a failure to meet basic needs, or as a lack of valuable freedom? Do human rights exist? What, if any, are the moral obligations of rich countries to poor countries? Can foreign aid be immoral? How should the answers to these questions influence public policy? Restricted to: Main campus only.

Name: Dana Barksdale, Administrative Assistant

Office Location: Breland Hall Room 330

Phone: (575) 646-4616
Justice, Political Philosophy, and Law - Bachelor of Arts

The aim of a Justice, Political Philosophy, and Law (JPPL) arts major is to cultivate a reasoned understanding of law and legal institutions, as well as the moral theories that support the value and justice of these institutions. JPPL offers a sequence of courses totaling 36 credit hours in critical thinking, law, policy, global justice, ethical theory, political philosophy, moral theory, feminist philosophy, and human rights. The interdisciplinary component of the major ensures that students have a well-rounded understanding of issues of justice and law. JPPL students will be well-prepared for further studies or careers in law, philosophy, politics, public service, education, human rights, or public policy.

Admission to JPPL is open to any student in good standing in the College of Arts and Sciences.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Select sufficient electives to bring total to 120, including 48 upper-division.

Total Credits 120

1 See the General Education section of the catalog for a full list of courses.
2 A Mathematics course is required for the degree but students may need to take any prerequisites needed to enter the course first.
Students must take either PHIL 1115G Introduction to Philosophy, PHIL 1145G Philosophy, Law, and Ethics, or PHIL 2230G Philosophical Thought; PHIL 2110G Introduction to Ethics; and either PHIL 1120G Logic, Reasoning, & Critical Thinking or PHIL 312 Formal Logic to fulfill the introductory courses requirement.

See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement
For the Bachelor of Arts in Justice, Political Philosophy, and Law there is no second language requirement.

A Suggested Plan of Study for Students
This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

#### Credits

|          | 30-31   |

---

1. See the General Education section of the catalog for a full list of courses.
2. A Mathematics is required for the degree but students may need to take any prerequisites needed to enter the course first.
3. The General Education Elective requirement will be satisfied with one of the "G" courses that are options under the Logic and history of Philosophy requirements listed under the Departmental/College Requirements section.
4. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
5. For the Logic course requirement, students can take either PHIL 1120G Logic, Reasoning, & Critical Thinking or PHIL 312 Formal Logic.
6. PHIL 323V will not count towards the General Education Elective requirement.
7. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
Ethics - Undergraduate Minor

A student who earns a Bachelor of Arts in Philosophy may not also earn a minor in Ethics.

Prefix | Title | Credits
--- | --- | ---
Required Courses | | |
PHIL 1115G | Introduction to Philosophy | 3
PHIL 1145G | Philosophy, Law, and Ethics | 3
PHIL 1115G | Introduction to Philosophy | 3
PHIL 2230G | Philosophical Thought | 3
PHIL 1115G | Introduction to Ethics | 3
PHIL 1230G | Logic, Reasoning, & Critical Thinking | 3
PHIL 312 | Formal Logic | 3
PHIL 373 | Ethical Theory | 3
PHIL 3110 | Introduction to Ethics | 3

Choose from the following:

PHIL 1115G | Introduction to Philosophy | 3
PHIL 1120G | Logic, Reasoning, & Critical Thinking | 3
PHIL 312 | Formal Logic | 3
PHIL 315 | Philosophy of Language | 3
PHIL 316 | Philosophy of Mathematics | 3
PHIL 346 | Philosophy of Mind | 3
PHIL 350 | Epistemology | 3
PHIL 351 | Philosophy of Science | 3
PHIL 380 | Metaphysics | 3

These courses may have prerequisites and/or co-requisites, and it is the student’s responsibility for checking and fulfilling all those requirements.

1 Students may earn up to 3 credits in this category from special topics or Honors courses approved by the head of the Department of Philosophy.

Justice, Political Philosophy, and Law - Undergraduate Minor

The aim of Justice, Political Philosophy, and Law is to cultivate a reasoned understanding of law and legal institutions, as well as the moral theories that support the value and justice of these institutions. The JPPL minor offers a sequence of courses in critical thinking, law, policy, global justice, ethical theory, political philosophy, moral theory, and human rights. JPPL students will be well-prepared for further studies or careers in law, philosophy, politics, public service, education, human rights, or public policy.

Physics

Undergraduate Program Information

A Bachelor’s degree in Physics or Engineering Physics at New Mexico State University provides the basis for careers in industry, teaching, the military, government or for study toward advanced degrees in physics or engineering. It should also provide the skills that recipients of physics degrees have listed as among the most important in obtaining their current positions, including problem solving ability, computer skills, mathematical skills, and laboratory skills, as well as knowledge of physics. The undergraduate program has the following educational objectives:

1. **Competitiveness.** Graduates are competitive in internationally recognized academic, government and industrial environments.
2. **Adaptability.** Graduates exhibit success in solving complex technical problems in a broad range of disciplines subject to quality engineering processes.
3. **Collaboration/Teamwork and Leadership.** Graduates have a proven ability to function as part of and/or lead interdisciplinary teams.

Further information about the department may be found on the web at phys.nmsu.edu (https://phys.nmsu.edu). All incoming (new or transfer) students must schedule an orientation meeting with the department head and/or the undergraduate program head before their first semester at NMSU. All students will be assigned a faculty advisor in the physics department to discuss course selection, career resources, internships and coops, and other topics.

Graduate Program Information

The Department of Physics offers programs in many areas of emphasis leading to the MS and Ph.D. degrees. Admission to these programs is competitive and selection of applicants is based on undergraduate and/or previous graduate grade-point averages, performance on the general and subject Graduate Record Examination, other evidence of prior academic and research accomplishments submitted by the applicant, and reference letters, as well as, in the case of applicants for the doctoral program, matching of the applicant’s research interests, as described by the student’s statement of purpose, to the Department’s research activities.

All degree-seeking graduate students must satisfy the relevant Graduate School requirements, successfully complete a 3-credit, 500-level laboratory, and demonstrate or develop knowledge of computer programming. All Ph.D. students and non-thesis Master’s students must pass a qualifying examination based on undergraduate physics courses at the 400 level. Additional course requirements are described below; courses taken S/U may not be used to satisfy any of the degree requirements, including the lab requirement for Master’s and Ph.D. students.

The qualifying and comprehensive examination outcomes are decided by vote of the entire faculty, based on the recommendations of the corresponding examination committees. For the qualifying examination, the faculty may decide that

- a student pass at the doctoral level;
- pass at the master's level;
- be requested to retake the exam at the next available opportunity; or
- terminate graduate study.

For the written part of the comprehensive examination, the faculty may decide that

- a student be given an unconditional pass;
- be given a conditional pass, with the requirement that the student produce additional evidence of research accomplishments during the oral part of the exam before being granted admission to candidacy;
- repeat the written part the next time it is offered; or
- terminate graduate study.

In addition, the faculty may decide to discontinue financial support to a student based on the student’s performance on the qualifying or comprehensive examination. Students will receive written notification of the exam’s outcome from the Graduate Physics Program Head within 30 days of the exam. Appeals must be addressed to the Physics Department Head within 30 days of receiving written notification of the exam’s outcome and will be decided by the physics faculty.

A student granted an unconditional or conditional pass on the written part of the comprehensive examination must take the oral part in the same semester that the written part was taken; the student’s Ph.D. committee makes the final decision, following the oral part of the comprehensive examination, on admission of the student to the candidacy to the doctoral degree.

Students may choose areas of emphasis from a variety of experimental, theoretical and computational research programs in the department. The current major research areas of the department include condensed matter physics and materials science, geophysics, optics, particle and nuclear physics, and others. These research projects are supported by multimillion-dollar funding by various federal agencies and two national laboratories within the state of New Mexico: Los Alamos National Laboratory and Sandia National Laboratories. In addition to the in-house research, the department conducts collaborative research programs with

- The Brookhaven National Laboratory,
- The Center for Integrated NanoTechnologies,
- Los Alamos National Laboratory,
- Sandia National Laboratories,
The Thomas Jefferson Laboratory, Fermilab, Air Force Research Laboratory and other national and international laboratories.

The MS in Physics with a concentration in Space Physics program provides students with a strong foundation in physics with an intensive focus on space physics. Graduate study in space physics at the master's level prepares graduates for continued and specialized study toward the doctorate program in space-related fields as well as for challenges they will confront in space industrial and government settings.

The department is housed in a newly-renovated building which contains research laboratories, classrooms, offices and a computational laboratory.

Degrees for the Department

Bachelor Degree(s)
- Physics - Bachelor of Arts (p. 824)
- Physics - Bachelor of Science (p. 826)

Master Degree(s)
- Physics (Space Physics) - Master of Science (p. 161)
- Physics - Master of Science (p. 161)

Doctoral Degree(s)
- Physics - Doctor of Philosophy (p. 203)

Minors for the Department

- Physics - Graduate Minor (p. 225)
- Physics - Undergraduate Minor (p. 829)

Professor, Stefan Zollner, Department Head

Professor, Michael Engelhardt, Undergraduate Program Head

Professor, Vassili Papavassiliou, Graduate Program Head

Professor, Boris Kiefer, Engineering Physics Program Head

Geophysics Courses

GPHY 450. Selected Topics
1-3 Credits
Readings, discussions, lectures or laboratory studies of selected areas of geophysics. May be repeated for a maximum of 12 credits.
Prerequisite: consent of instructor.

GPHY 520. Selected Topics
1-3 Credits
Formal treatment of graduate topics not covered in regular courses. May be repeated for unlimited credit.
Prerequisites: graduate standing, consent of instructor, and selection of a specific topic prior to registration.

GPHY 560. Applied Inverse Theory
3 Credits (3)
Inversion of data with an emphasis on geophysical problems. Curve fitting, tomography, earthquake location, over determined and under determined problems, linear and nonlinear problems. Computing experience desirable. Consent of Instructor required.

GPHY 598. Special Research Problems
1-3 Credits
Individual investigations, either analytical or experimental. May be repeated for unlimited credit.

GPHY 599. Master's Thesis
1-15 Credits (1-15)
Thesis.

GPHY 620. Advanced Topics in Geophysics
3 Credits (3)
Advanced formal treatment of a topic or topics not covered in regular courses. May be repeated for unlimited credit.
Prerequisite: consent of instructor.

GPHY 700. Doctoral Dissertation
1-15 Credits (1-15)
Dissertation.

Physics Courses

PHYS 1111. Introductory Computational Physics
3 Credits (2+2P)
Introduction to computational techniques for the solution of physics-related problems.
Prerequisite(s): a C- or better in MATH 1220G or MATH 1250G or MATH 1511G.

PHYS 1112. Introductory Physics for the Health Sciences
3 Credits (3)
Algebra-level introduction to topics required for the Health Sciences including basic mechanics (including sound, mechanical waves and fluids), heat and thermodynamics, electricity and magnetism, optics and electromagnetic waves, atomic and nuclear physics and applications to medical imaging. Restricted to Community Colleges campuses only.
Prerequisite(s): MATH 1215 or Equivalent.

Learning Outcomes
1. The objective of the course is to familiarize the student with the concepts and methods used in the underlying physics associated with various Health Science disciplines.
2. The course will demonstrate how the basic principles of mechanics, thermodynamics, electricity, magnetism, electromagnetic waves and...
optics can be applied to solve particular problems in Health Sciences applications. Introduces the student to selected topics in modern physics including quantum physics, atomic and nuclear physics.

**PHYS 115G. Survey of Physics with Lab**
4 Credits (3+3P)
Overview of the concepts and basic phenomena of physics. This course provides a largely descriptive and qualitative treatment with a minimum use of elementary mathematics to solve problems. No previous knowledge of physics is assumed. Includes laboratory.

**Learning Outcomes**
1. Apply concepts of classical mechanics (such as velocity, acceleration, force, inertia, momentum, torque, work, energy) to simple static and dynamic systems.
2. Apply concepts of thermodynamics (such as heat, temperature, internal energy, entropy) to simple processes.
3. Apply concepts of electricity and magnetism (such as fields, potential, charge conservation, static and dynamic induction) to simple circuits, motors, and other simple contrivances.
4. Apply simple geometric and wave optics in simple situations.
5. Test ideas using modern laboratory equipment.
7. Use computers to analyze and report laboratory results.
8. Draw appropriate conclusions from quantitative scientific observations.
9. Accurately and clearly communicate the results of scientific experiments.

**PHYS 1125G. Physics of Music**
4 Credits (3+2P)
Introduction for non-science majors to basic concepts, laws, and skills in physics, in the context of a study of sound, acoustics, and music.

**Learning Outcomes**
1. Demonstrate converting units and other aspects of dimensional analysis in the working of numerical problems.
2. Apply the concepts of classical mechanics to static and dynamic fluids, including Archimedes' principle and Bernoulli's principle.
3. Apply the general properties of waves to simple models of musical instruments.
4. Demonstrate knowledge of basic operating principles of wind, string, and percussion instruments.
5. Demonstrate knowledge of how objectively measurable properties of sound waves correspond to the perceptions of pitch, loudness, and timbre.
6. Demonstrate understanding of the description of vibrations and waves in terms of Fourier's Theorem and normal modes.
7. Demonstrate understanding of vocalization in terms of physical principles such as resonance and fluid dynamics.
8. Demonstrate understanding of how the ear works.

**PHYS 1230G. Algebra-Based Physics I**
3 Credits (3)
An algebra-based treatment of Newtonian mechanics. Topics include kinematics and dynamics in one and two dimensions, conservation of energy and momentum, rotational motion, equilibrium, and fluids.

**Learning Outcomes**
1. Demonstrate converting units and other aspects of dimensional analysis in the working of numerical problems.
2. Apply principles of Newtonian mechanics to predict and account for simple phenomena modeled by the motion of particles in one and two dimensions.
3. Apply principles of Newtonian mechanics to predict and account for simple phenomena modeled by the motion of a rigid body in two dimensions.
4. Apply Newton's theory of gravitation to circular orbits and demonstrate understanding of how Kepler's laws of planetary motion provide the empirical foundation for Newton's theory.
5. Apply the mathematics of vectors to the principles of Newtonian mechanics.
6. Apply principles of Newtonian mechanics to the case of static and dynamic incompressible fluids, including Archimedes' and Bernoulli's principles.

**PHYS 1230L. Algebra-Based Physics I Lab**
1 Credit (1)
A series of laboratory experiments associated with the material presented in PHYS 1230G.

**Prerequisite(s)/Corequisite(s):** PHYS 1230G.

**Learning Outcomes**
1. Explain the scientific method.
2. Test ideas using modern laboratory equipment.
4. Use computers to analyze and report laboratory results.
5. Draw appropriate conclusions from quantitative scientific observations.
6. Accurately and clearly communicate the results of scientific experiments.

**PHYS 1240G. Algebra-Based Physics II**
3 Credits (3)
The second half of a two semester algebra-based introduction to Physics. This course covers electricity, magnetism and optics.

**Prerequisite(s):** a C- or better in PHYS 1230G or PHYS 2230G.

**Learning Outcomes**
1. Be able to state Coulomb's Law and Gauss's laws and apply them.
2. Apply the concepts of electric charge, electric field and electric potential to solve problems.
3. Analyze simple DC and AC circuits.
4. Apply the Lorentz force to solve problems.
5. Apply Faraday's law of induction (and Lenz's law) to solve problems.
6. Apply ray optics to practical lens systems such as microscopes and corrective lenses.
7. Apply the wave nature of light to the phenomena of reflection, refraction, and diffraction.

**PHYS 1240L. Algebra-Based Physics II Lab**
1 Credit (1)
A series of laboratory experiments associated with the material presented in PHYS 1240.

**Prerequisite(s)/Corequisite(s):** PHYS 1240G.

**Learning Outcomes**
1. Explain the scientific method.
2. Test ideas using modern laboratory equipment.
4. Use computers to analyze and report laboratory results.
5. Draw appropriate conclusions from quantitative scientific observations.
6. Accurately and clearly communicate the results of scientific experiments.

**PHYS 1310G. Calculus-Based Physics I**

3 Credits (3)

A calculus level treatment of classical mechanics and waves, which is concerned with the physical motion concepts, forces, energy concepts, momentum, rotational motion, angular momentum, gravity, and static equilibrium.

**Prerequisite:** A C- or better in ENGR 190 or MATH 1511G or higher.

**Learning Outcomes**

1. Describe the relationships among position, velocity, and acceleration as functions of time.
2. Use the equations of kinematics to describe motion under constant acceleration.
3. Analyze linear motion using Newton's laws, force, and linear momentum.
4. Analyze rotational motion using torque and angular momentum.
5. Analyze motion using work and energy.

**PHYS 1310L. Calculus-Based Physics I Lab**

1 Credit (3P)

A series of laboratory experiments associated with the material presented in Calculus-Based Physics I. Students will apply the principles and concepts highlighting the main objectives covered in coursework for Calculus-Based Physics I.

**Prerequisite(s)/Corequisite(s):** PHYS 1310G.

**Learning Outcomes**

1. Develop a reasonable hypothesis.
2. Work effectively as part of a team.
3. Take measurements and record measured quantities to the appropriate precision.
4. Estimate error sources in experimental techniques.
5. Apply appropriate methods of analysis to raw data, including using graphical and statistical methods via computer-based tools.
6. Determine whether results and conclusions are reasonable.
7. Present experimental results in written form in appropriate style and depth.
8. Experience the relationship between theory and experiment.

**PHYS 1311. Problems in Calculus-Based Physics I**

0.5-1 Credits (.5-1)

This is a supplemental course for Calculus-Based Physics I. May be repeated up to 1 credits.

**Corequisite(s):** PHYS 1310G.

**PHYS 1320G. Calculus-Based Physics II**

3 Credits (3)

A calculus level treatment of classical electricity and magnetism. It is strongly recommended that this course is taken at the same time as Calculus-Based Physics II laboratory.

**Prerequisite:** A C- or better in (PHYS 2110 or PHYS 1310G) and (ENGR 190 or MATH 1521G or higher).

**Learning Outcomes**

1. Apply the concepts of electric charge, electric field and electric potential to solve problems.
2. Sketch the electric field in the vicinity of point, line, sheet, and spherical distributions of static electric charge.
3. Sketch the magnetic field in the vicinity of line, ring, sheet, and solenoid distributions of steady current.
4. Describe the relationship between electric field and electric potential.
5. Calculate the Lorentz force on a moving charge for simple geometries of the fields and use it to analyze the motion of charged particles.
6. Apply the integral forms of Maxwell's equations.
7. Calculate the energy of electromagnetic fields.
8. Analyze DC circuits.

**PHYS 1320L. Calculus-Based Physics II Lab**

1 Credit (3P)

A series of laboratory experiments associated with the material presented in Calculus-Based Physics II. Students will apply the principles and concepts highlighting the main objectives covered in coursework for Calculus-Based Physics II.

**Prerequisite(s)/Corequisite(s):** PHYS 1320G. Prerequisite(s): A C- or better in PHYS 2110L or PHYS 1310L.

**Learning Outcomes**

1. Develop a reasonable hypothesis.
2. Work effectively as part of a team.
3. Take measurements and record measured quantities to the appropriate precision.
4. Estimate error sources in experimental techniques.
5. Apply appropriate methods of analysis to raw data, including using graphical and statistical methods via computer-based tools.
6. Determine whether results and conclusions are reasonable.
7. Present experimental results in written form in appropriate style and depth.
8. Experience the relationship between theory and experiment.

**PHYS 1321. Problems in Calculus-Based Physics II**

0.5-1 Credits (.5-1)

This is a supplemental course for Calculus-Based Physics II.

**Corequisite(s):** PHYS 1320G.

**PHYS 2110. Mechanics**

3 Credits (3)

Newtonian mechanics.

**Prerequisite(s)/Corequisite(s):** MATH 1511G or higher.

**PHYS 2110L. Experimental Mechanics**

1 Credit (3P)

Laboratory experiments associated with the material presented in PHYS 2110. Science majors.

**Prerequisite(s)/Corequisite(s):** PHYS 2110.

**PHYS 2111. Supplemental Instruction to PHYS 2110**

1 Credit (1)

This Optional workshop as a supplement to PHYS 2110. The tutorial sessions focus on reasoning and hands-on problem solving. May be repeated up to 1 credit.

**Corequisite:** PHYS 2110.

**Learning Outcomes**

1. Analyze real world phenomena by constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain a phenomena or function.
2. Use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
3. In the contexts of concepts and physical laws discussed in PHYS 2110, apply quantitative analysis to solve problems, including the use of scientific notation, unit conversion and vector algebra.
4. Self-check reasonableness of assumptions and solutions, making use of limiting cases or symmetry arguments.
5. Develop learning strategies and use metacognition to promote thinking in the discipline.

**PHYS 2120. Heat, Light, and Sound**
**3 Credits (3)**
Calculus-level treatment of thermodynamics, geometrical and physical optics, and sound. May be repeated up to 3 credits.
**Prerequisite(s):** a C- or better in PHYS 2110 or PHYS 1310G, and MATH 1511G or higher.

**PHYS 2120L. Heat, Light, and Sound Laboratory**
**1 Credit (3P)**
Laboratory experiments associated with the material presented in PHYS 2120. Science majors.
**Prerequisite: a C- or better in PHYS 2110L or PHYS 1310L.**
**Prerequisite/Corequisite: PHYS 2120.**

**Learning Outcomes**
1. Develop a reasonable hypothesis.
2. Work effectively as part of a team.
3. Take measurements and record measured quantities to the appropriate precision.
4. Estimate error sources in experimental techniques.
5. Apply appropriate methods of analysis to raw data, including using graphical and statistical methods via computer-based tools.
6. Determine whether results and conclusions are reasonable.
7. Present experimental results in written form in appropriate style and depth.
8. Understand the relationship between theory and experiment.

**PHYS 2121. Supplemental Instruction to PHYS 2120**
**1 Credit (1)**
This optional workshop supplements PHYS 2120 "Heat, Light, and Sound". Students actively apply concepts and methods introduced in PHYS 2120 to problem solving and quantitative analysis. May be repeated up to 1 credit.
**Corequisite: PHYS 2120.**

**Learning Outcomes**
1. Analyze real world phenomena by constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain a phenomenon or function.
2. Use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
3. In the contexts of concepts and physical laws discussed in PHYS 2121, apply quantitative analysis to solve problems involving wave propagation and interference, geometric optics, heat transfer and thermodynamics.
4. Self-check reasonableness of assumptions and solutions, making use of limiting cases or symmetry arguments.
5. Develop learning strategies and use metacognition to promote thinking in the discipline.

**PHYS 2140. Electricity and Magnetism**
**3 Credits (3)**
Charges and matter, the electric field, Gauss law, the electric potential, the magnetic field, Ampere's law, Faraday’s law, electric circuits, alternating currents, Maxwell's equations, and electromagnetic waves. May be repeated up to 3 credits.

**Prerequisite(s)/Corequisite(s):** MATH 1521G. Prerequisite(s): a C- or better in PHYS 2110 or PHYS 1310G, and MATH 1511G or higher.

**PHYS 2140L. Electricity & Magnetism Laboratory**
**1 Credit (3P)**
Laboratory experiments associated with the material presented in PHYS 2140.
**Prerequisite: a C- or better in PHYS 2110 or PHYS 1310G.**
**Prerequisite/Corequisite: PHYS 2140.**

**Learning Outcomes**
1. Develop a reasonable hypothesis.
2. Work effectively as part of a team.
3. Take measurements and record measured quantities to the appropriate precision.
4. Estimate error sources in experimental techniques.
5. Apply appropriate methods of analysis to raw data, including using graphical and statistical methods via computer-based tools.
6. Determine whether results and conclusions are reasonable.
7. Present experimental results in written form in appropriate style and depth.
8. Understand the relationship between theory and experiment.

**PHYS 2141. Supplemental Instruction to PHYS 2140**
**1 Credit (1)**
Optional workshop as a supplement to PHYS 2140. The tutorial sessions focus on reasoning and hands-on problem solving.
**Corequisite: PHYS 2140.**

**Learning Outcomes**
1. Analyze real-world phenomena by constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain a phenomenon or function.
2. Use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
3. In the contexts of concepts and physical laws discussed in PHYS 2140, apply quantitative analysis to solve problems, including the use of symmetry to study electric and magnetic fields. Practice concepts of calculus applied to charge and current distributions.
4. Self-check reasonableness of assumptions and solutions, making use of limiting cases or symmetry arguments.
5. Develop learning strategies and use metacognition to promote thinking in the discipline.

**PHYS 2230G. General Physics for Life Science I**
**3 Credits (3)**
This algebra-based introduction to general physics covers mechanics, waves, sound, and heat. Special emphasis is given to applications in the life sciences. This course is recommended for students in the life sciences and those preparing for the physics part of the MCAT.
**Prerequisite: A C- or better in MATH 1220G or higher.**

**Learning Outcomes**
1. Modeling: analyze real-world phenomena by deciding what information is relevant and constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain phenomena or function; use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text; critique assumptions and determine how to test the validity of a model and use the comparison of experimental data and prediction to refine the model.
2. Conceptual understanding: describe the motion of any object in terms of displacement, velocity, and acceleration; analyze external forces acting on an object and determine if a system is in equilibrium or relate the net force to changes in motion; predict or analyze motion using conservation laws for energy and momentum; analyze forces and torques for a rigid object in static equilibrium; for a static fluid determine pressure and the buoyant force; apply idealized models of fluid flow to the circulatory system; describe the properties of pressure waves known as sound, apply the model of standing waves to musical instruments and discuss how sound is used to sense the environment; predict qualitative changes in the internal energy of a thermodynamic system when energy has been transferred due to work or heat and justify those predictions using conservation of energy (First law of thermodynamics). Identify which heat transfer processes occur in a described situation.

3. Quantitative reasoning: use a physics problem-solving strategy (Identify relevant concepts; Introduce and study simplified models; Use symmetry arguments; Establish the relation between known and unknown quantities; Calculate a quantitative result using appropriate mathematical methods; Self-check reasonableness of assumptions and solutions); use scientific notation accurately and convert units if necessary.

4. Communicating scientific information: interpret or generate graphs or other visual representations and be able to switch between various representations including text, mathematical description, or diagrams.

PHYS 2230L. Laboratory to General Physics for Life Science I
1 Credit (1)
Laboratory experiments in topics associated with material presented in PHYS 2230G.
Prerequisite(s)/Corequisite(s): PHYS 2230G. Restricted to Las Cruces campus only.

PHYS 2231. Supplemental Instruction to General Physics for Life Sciences I
1 Credit (1)
This optional workshop supplements Physics for Life Sciences I. The tutorial sessions focus on reasoning and hands-on problem solving.
Corequisite: PHYS 2230G.
Learning Outcomes
1. analyze real world phenomena by constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain a phenomena or function.
2. use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
3. in the contexts of concepts and physical laws discussed in PHYS 2230, apply quantitative analysis to solve problems, including the use of scientific notation, unit conversion and vector algebra.
4. self-check reasonableness of assumptions and solutions, making use of limiting cases or symmetry arguments.
5. develop learning strategies and use metacognition to promote thinking in the discipline.

PHYS 2240G. General Physics for Life Science II
3 Credits (3)
This algebra-based course covers electricity, magnetism, light, atomic physics, and radioactivity. Special emphasis is given to applications in the life sciences. This course is recommended for students in the life sciences and those preparing for the physics part of the MCAT.
Prerequisite: a C- or better in PHYS 1230G or PHYS 2230G, and MATH 1220G or higher.

PHYS 2240L. Laboratory to General Physics for Life Science II
1 Credit (1)
Laboratory experiments in topics associated with material presented in PHYS 2240.
Prerequisite(s)/Corequisite(s): PHYS 2240G. Restricted to Las Cruces campus only.

PHYS 2241. Supplemental Instruction to General Physics for Life Sciences II
1 Credit (1)
This optional workshop is a supplement to Physics for Life Science II. The tutorial sessions focus on reasoning and hands-on problem solving. May be repeated up to 1 credits.
Corequisite(s): PHYS 2240G.
Learning Outcomes
1. analyze real world phenomena by constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain a phenomena or function.
2. use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
3. in the contexts of concepts and physical laws discussed in PHYS 2240, apply quantitative analysis to solve problems, including the use of scientific notation, unit conversion and vector algebra.
4. self-check reasonableness of assumptions and solutions, making use of limiting cases or symmetry arguments.
5. develop learning strategies and use metacognition to promote thinking in the discipline.

PHYS 2996. Special Topics
1-3 Credits
Topics to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

**Learning Outcomes**
1. Varies

**PHYS 2997. Independent Study**
1-3 Credits
Individual analytical or laboratory studies directed by a faculty member. May be repeated for a maximum of 6 credits.
Prerequisite: consent of instructor.

**Learning Outcomes**
1. Varies

**PHYS 303V. Energy and Society in the New Millennium**
3 Credits (3)
Traditional and alternative sources of energy. Contemporary areas of concern such as the state of depletion of fossil fuels; nuclear energy, solar energy, and other energy sources; environmental effects; nuclear weapons; and health effects of radiation. Discussion of physical principles and impact on society. Focus on scientific questions involved in making decisions in these areas. No physics background required.

**PHYS 304. Forensic Physics**
4 Credits (3+3P)
Theories, laboratory, and field techniques in the area of forensic physics.

**PHYS 305V. The Search for Water in the Solar System**
3 Credits (3)
Examines the formation, abundance and ubiquity of water in our Solar System stemming from comets, Martian and Lunar poles, Earth’s interior and into the outer reaches of the Solar System. Topics will include nuclear synthesis, Solar System formation, remote sensing, as well as past, present and future NASA missions for water.

**PHYS 315. Modern Physics**
3 Credits (3)
An introduction to relativity and quantum mechanics, with applications to atoms molecules, solids, nuclei, and elementary particles.
Prerequisite: a C- or better in MATH 2530G and PHYS 2140 or PHYS 1320L.

**Learning Outcomes**
1. Communication: an ability to communicate effectively with a range of audiences.
2. Ethical and Professional Responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
3. Ability to learn on your own: an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

**PHYS 316. Supplemental Instructions to PHYS 315**
1 Credit (1)
This optional workshop supplements PHYS 315 "Modern Physics".

**PHYS 325. Intermediate Experimental Physics**
3 Credits (1+6P)
An exploration of a variety of experimental techniques in physics with an emphasis on the proper determination of statistical and systematic uncertainties. Students will work in teams and prepare professional written and oral reports of their work. This course cannot be used to replace M E 345 for students majoring in engineering.

Prerequisite(s)/Corequisite(s): PHYS 315. Prerequisite(s): a C- or better in PHYS 2140L or PHYS 1320L.

**Learning Outcomes**
1. Design within constraints: an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
2. Communication: an ability to communicate effectively with a range of audiences.
3. Ethical and Professional Responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
4. Teamwork: an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
5. Collect, Analyze, and Interpret Data: an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

**PHYS 340. Special Topics**
1-3 Credits
Lectures, demonstrations, and discussions on such topics as lasers and holography, energy sources, clouds, and biophysics. May be repeated for a maximum of 12 credits under different subtitles.

**PHYS 380. Individual Study**
1-3 Credits
Individual analytical or laboratory studies directed by a faculty member.
Prerequisite: consent of instructor.

**PHYS 395. Intermediate Mathematical Methods of Physics**
3 Credits (3)
Introduction to the mathematics used in intermediate-level physics courses. Topics include vector calculus, curvilinear coordinates, matrices, linear algebra, function spaces, partial differential equations, and special functions. This course cannot be used to replace M E 228 or M E 328 for students majoring in engineering. May be repeated up to 3 credits.

**Learning Outcomes**
1. Problem solving: an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. Ability to learn on your own: an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

**PHYS 400. Undergraduate Research**
1-3 Credits
May be repeated for a maximum of 6 credits.
Prerequisite: consent of instructor.

**PHYS 420. Capstone Project I**
3 Credits (3P)
Application of engineering physics principles to a significant design project. Includes teamwork, written and oral communication and realistic technical, economic and public safety requirements.
PHYS 421. Capstone Project II
3 Credits (3P)
Continuation of PHYS 420.

PHYS 450. Selected Topics
1-3 Credits
Readings, lectures or laboratory studies in selected areas of physics. May be repeated for a maximum of 12 credits.

PHYS 451. Intermediate Mechanics I
3 Credits (3)
Newtonian mechanics, including an introduction to the Lagrangian formulation. Topics include central force motion, rigid body motion, noninertial reference frames, oscillating systems, and classical scattering.
Prerequisite(s)/Corequisite(s): MATH 392. Prerequisite(s): a C- or better in PHYS 2110 or PHYS 1310G, and MATH 2530G.

Learning Outcomes
1. Set up equations of motion for classical mechanical systems and solve them.
2. Identify conserved quantities and understand the circumstances under which they arise (symmetries); in particular, know how to use conservation of energy, momentum, angular momentum to solve problems.
3. Fluently use three-dimensional calculus as a language to do the above; be able to use spherical and cylindrical coordinates.
4. Understand the paradigmatic examples of the harmonic oscillator, central force (in particular, gravitational) motion and rigid body motion, which serve as starting points for investigating more complicated realistic problems.

PHYS 454. Intermediate Modern Physics I
3 Credits (3)
Introduction to quantum mechanics, focusing on the role of angular momentum and symmetries, with application to many atomic and subatomic systems. Specific topics include intrinsic spin, matrix representation of wave functions and observables, time evolution, and motion in one dimension.
Prerequisite: a C- or better in PHYS 315.
Prerequisite/Corequisite: MATH 392 and PHYS 395.

Learning Outcomes
1. Problem solving: an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. Ability to learn on your own: an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

PHYS 455. Intermediate Modern Physics II
3 Credits (3)
Continuation of subject matter of PHYS 454. Specific topics include rotation and translation in three dimensions, solution of central potential problems, perturbation theory, physics of identical particles, scattering theory, and the interaction between photons and atoms.
Prerequisite: a C- or better in PHYS 454, MATH 392, and PHYS 395.

Learning Outcomes
1. Problem solving: an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. Ability to learn on your own: an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

PHYS 461. Intermediate Electricity and Magnetism I
3 Credits (3)
The first part of a two-course sequence in classical electrodynamics. Covered topics include static electric and magnetic fields, Laplace's and Poisson's equations, electromagnetic work and energy, Lorentz force, Gauss's, Biot-Savart, and Ampere's laws, Maxwell's equations, as well as electric and magnetic fields in matter.
Prerequisite: a C- or better in PHYS 2140 or PHYS 1320G or equivalent and a C- or better in MATH 2530G.
Prerequisite/Corequisite: MATH 392 and PHYS 395.

Learning Outcomes
1. Problem solving: an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. Ability to learn on your own: an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

PHYS 462. Intermediate Electricity and Magnetism II
3 Credits (3)
Continuation of subject matter of PHYS 461. Covered topics include Maxwell's equations and their applications, electromagnetic waves, reflection, refraction, dispersion, radiating systems, interference and diffraction, as well as Lorentz transformations and relativistic electrodynamics.
Prerequisite: a C- or better in PHYS 461, MATH 392, and PHYS 395.

Learning Outcomes
1. Problem solving: an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. Ability to learn on your own: an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

PHYS 468. Intermediate X-ray Diffraction
3 Credits (3)
Introduction to x-ray diffraction and reflectivity spectra. Topics include X-ray sources and detectors, atomic spectra, characteristic x-rays, thermionic emission, synchrotron radiation, instrument components, and beam conditioners. Prerequisite(s): a C- or better in PHYS 315 and PHYS 325.

Learning Outcomes
1. Knowledge of structural properties of materials
2. Experimental x-ray characterization techniques
3. Presentation and writing skills in the discipline
4. Ethics, teamwork, and career opportunities

PHYS 471. Modern Experimental Optics
3 Credits (1+6P)
Cumulative experience course in experimental optics.
Prerequisite: a C- or better in PHYS 315 and PHYS 325.

Learning Outcomes
1. Design within constraints: an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
2. Communication: an ability to communicate effectively with a range of audiences.
3. Ethical and professional responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
4. Teamwork: an ability to function effectively on a team whose members together provide leadership, create a collaborative learning environment, and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
and inclusive environment, establish goals, plan tasks, and meet objectives.

5. Collect, analyze, and interpret data: an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

**PHYS 475. Advanced Laboratory Practices for Materials**
**3 Credits (1+6P)**
Cumulative experience course in advanced laboratory practices involving experiments in atomic, molecular, and condensed matter physics.
**Prerequisite:** a C- or better in PHYS 315 and PHYS 325.

**Learning Outcomes**
1. Design within constraints: an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
2. Communication: an ability to communicate effectively with a range of audiences.
3. Ethical and Professional Responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
4. Teamwork: an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
5. Collect, Analyze, and Interpret Data: an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

**PHYS 476. Computational Physics**
**3 Credits (3)**
Scientific visualization, numerical differentiation and interpolation, numerical integration, root finding, linear algebra, eigensystems, ODE’s, Boundary value problems, PDE’s, Monte-Carlo calculations, data description and analysis, Fast Fourier Transforms, and applications to advanced physics problems. Recommended is the knowledge of a programming language.
**Prerequisite(s):** a C- or better in PHYS 1111 or equivalent and MATH 392.

**Learning Outcomes**
1. learn how to use computers for solving problems in the physical sciences,
2. obtain skills to implement numerical simulation and modeling strategies,
3. learn how to monitor and analyze data graphically, during and after computation,
4. obtain workflow organization skills needed for the solution of complicated systems.

**PHYS 480. Thermodynamics**
**3 Credits (3)**
Thermodynamics and statistical mechanics. Basic concepts of temperature, heat, entropy, equilibrium, reversible and irreversible processes. Applications to solids, liquids, and gases.
**Prerequisite:** a C- or better in PHYS 2120, PHYS 315, and MATH 2530G.

**Learning Outcomes**
1. Problem solving: an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. Ability to learn on your own: an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

**PHYS 485. Independent Study**
**1-3 Credits**
Individual analytical or laboratory studies directed by a faculty member. May be repeated for a maximum of 6 credits.
**Prerequisite:** consent of instructor.

**PHYS 488. Introduction to Condensed Matter Physics**
**3 Credits (3)**
Crystal structure, X-ray diffraction, energy band theory, phonons, cohesive energy, conductivities, specific heats, p-n junctions, defects, surfaces, and magnetic, optical, and low-temperature properties.
**Prerequisite:** a C- or better in PHYS 315.

**Learning Outcomes**
1. Learn the fundamental concepts of solid-state physics: classification of solids, crystal structure, band structure of solids, lattice vibrations, optical and magnetic properties of solids.
2. Develop an ability to formulate and solve complex problems in solid state physics by applying the fundamental principles of physics and mathematics.
3. Develop and ability to acquire and apply new knowledge using appropriate learning strategies.

**PHYS 489. Introduction to Modern Materials**
**3 Credits (3)**
Structure and mechanical, thermal, electric, and magnetic properties of materials. Modern experimental techniques for the study of material properties.
**Prerequisite:** a C- or better in PHYS 315.

**Learning Outcomes**
1. Learn the fundamental concepts of the physics of modern materials, such as crystal structure, properties of materials, and experimental techniques.
2. Develop an ability to formulate and solve complex problems in the area of physics of modern materials by applying the principles of physics and mathematics.
3. Develop an ability to acquire and apply new knowledge using appropriate learning strategies.

**PHYS 493. Experimental Nuclear Physics**
**3 Credits (1+6P)**
Cumulative experience course in nuclear physics such as measurement of radioactivity, absorption of radiation, nuclear spectrometry.
**Prerequisite:** a C- or better in PHYS 315 and PHYS 325.

**Learning Outcomes**
1. Design within constraints: an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
2. Communications: an ability to communicate effectively with a range of audiences.
3. Ethical and professional responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
4. Teamwork: an ability to function effectively on a team whose members together provide leadership, create a collaborative
and inclusive environment, establish goals, plan tasks, and meet objectives.

5. Collect, analyze, and interpret data: an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

PHYS 495. Mathematical Methods of Physics I
3 Credits (3)
Applications of mathematics to experimental and theoretical physics. Topics include vector analysis, Fourier series and transforms, Green's functions, special functions, complex variables, tensor algebra and analysis.
Prerequisite(s): a C- or better in MATH 392 and PHYS 395.

Learning Outcomes
1. Deploy the tools of vector analysis and expansion into complete sets of functions to treat problems arising, e.g., in electrodynamics.
2. Understand the elements of functional analysis underpinning, e.g., quantum mechanics, such as representations, operators and their inverses and spectra.
3. Evaluate integrals of analytic functions using the calculus of residues.
4. Take advantage of the transformation behavior, under symmetry operations, of representations of physical quantities, by casting physical relations in tensor language.

PHYS 500. Special Topics Seminar
1-2 Credits
Treatment of topics not covered by regular courses. Graded S/U. May be repeated.

PHYS 511. Mathematical Methods of Physics I
3 Credits (3)
Applications of mathematics to experimental and theoretical physics. Topics include vector analysis, Fourier series and transforms, Green's functions, special functions, complex variables, tensor algebra and analysis.

Learning Outcomes
1. Deploy the tools of vector analysis and expansion into complete sets of functions to treat problems arising, e.g., in electrodynamics.
2. Understand the elements of functional analysis underpinning, e.g., quantum mechanics, such as representations, operators and their inverses and spectra.
3. Evaluate integrals of analytic functions using the calculus of residues.
4. Take advantage of the transformation behavior, under symmetry operations, of representations of physical quantities, by casting physical relations in tensor language.

PHYS 520. Selected Topics
1-3 Credits
This is a lecture/laboratory course designed to present the basic concepts, the techniques and the tools to synthesize and characterize nanometer scale materials, and the latest achievements in current and future nanotechnology applications in engineering, materials, physics, chemistry, biology, electronics and energy. It is intended for a multidisciplinary audience with a variety of backgrounds. This course should be suitable for graduate students as well as advanced undergraduates. Topics covered will include: nanoscience and nanotechnology, nanofabrication, self-assembly, colloidal chemistry, sol-gel, carbon nanotubes, graphene, thin film, lithography, physical vapor deposition, chemical vapor deposition, quantum dots, lithium batteries, X-ray diffraction, scanning electron microscopy, transmission electron microscopy, nanoelectronics, nanophotonics and nanomagnetics, etc. Students must also have completed (EH&S Safety training to include the courses: (1) Employee & Hazard Communication Safety (HazCom); (2) Hazardous Waste Management; and (3) Laboratory Standard) trainings to enroll. Crosslisted with: CHME 467. May be repeated up to 3 credits.
Prerequisite(s): a C- or better in MATH 392 and PHYS 395.

PHYS 521. Individual Study
1-3 Credits
Individual analytical or laboratory studies directed by a faculty member. May be repeated for a maximum of 6 credits.
Prerequisites: graduate standing, consent of instructor, and selection of a specific topic prior to registration.

PHYS 528. Fundamentals of Photonics
4 Credits (3+3P)
Ray, wave and guided optics, lasers and thermal sources, radiometry, photon detection and signal-to-noise ratio. Elements of photonic crystals, polarization, acousto-optics, electro-optics, and optical nanostructures. Recommended foundation (PHYS 1320G or PHYS 5210) and (E E 473 or PHYS 473), Taught with E E 478. Crosslisted with E E 528.

Learning Outcomes
1. Describe the fundamental properties of light.
2. Formulate the concepts of ray, wave, and photon optics mathematically.
3. Represent and incorporate basic elements of an optical system.
4. Perform an analysis of a simple photonic/optical system mathematically by hand and with computer tools such as MATLAB.
5. Discuss ethical, societal, and professional issues related to photonics and optics.

PHYS 551. Classical Mechanics
3 Credits (3)
Lagrangian and Hamiltonian formulation of dynamics. Advanced treatments of most topics listed under PHYS 451, plus canonical transformations and Hamilton-Jacobi theory. PHYS 451 strongly recommended.

PHYS 554. Quantum Mechanics I
3 Credits (3)

PHYS 555. Quantum Mechanics II
3 Credits (3)
Continuation of topics in PHYS 554.
Prerequisites: PHYS 554 or consent of instructor.

PHYS 561. Electromagnetic Theory I
3 Credits (3)
Detailed advanced treatments of most topics listed under PHYS 461, PHYS 462, plus multipole radiation, collisions of charged particles and bremsstrahlung, scattering, and radiation reaction. PHYS 461 and PHYS 462 strongly recommended.

PHYS 562. Electromagnetic Theory II
3 Credits (3)
Continuation of topics in PHYS 561.
Prerequisites: PHYS 561 or consent of instructor.

PHYS 568. Elements of X-ray Diffraction
3 Credits (3)
Same as PHYS 468, but additional work required. Crosslisted with: CHME 588.

**PHYS 571. Advanced Experimental Optics**  
3 Credits (1+6P)  
Taught with PHYS 471 with additional work required at the graduate level.  
**Learning Outcomes**  
1. Design within constraints: an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.  
2. Communication: an ability to communicate effectively with a range of audiences.  
3. Ethical and professional responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.  
4. Teamwork: an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.  
5. Collect, analyze, and interpret data: an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

**PHYS 575. Advanced Physics Laboratory**  
3 Credits (1+6P)  
Selected experiments in atomic, molecular, nuclear and condensed-matter physics.  
**Learning Outcomes**  
1. Design within constraints: an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.  
2. Communication: an ability to communicate effectively with a range of audiences.  
3. Ethical and Professional Responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.  
4. Teamwork: an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.  
5. Collect, analyze, and interpret data: an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

**PHYS 576. Advanced Computational Physics I**  
3 Credits (3)  
Advanced treatment of topics listed under PHYS 476 plus additional work. Applications of numerical methods to advanced physics problems. Recommended is the knowledge of a programming language.  
**Learning Outcomes**  
1. learn to numerically solve problems that require higher mathematical and theoretical analysis,  
2. experience how graduate research will be advanced and accelerated by the use of scientific computing skills.

**PHYS 584. Statistical Mechanics**  
3 Credits (3)  

**PHYS 589. Modern Materials**  
3 Credits (3)  
Same as PHYS 489 with differentiated assignments for graduate students. PHYS 554 recommended.  
**Learning Outcomes**  
1. Learn the fundamental concepts of the physics of modern materials, such as crystal structure, properties of materials, and experimental techniques.  
2. Develop an ability to formulate and solve complex problems in the area of physics of modern materials by applying the principles of physics and mathematics.  
3. Develop an ability to acquire and apply new knowledge using appropriate learning strategies.

**PHYS 591. Advanced High-Energy Physics I**  
3 Credits (3)  
Taught with PHYS 491 with additional work required at the graduate level.  
**Prerequisite(s):** PHYS 555 or consent of instructor.

**PHYS 593. Advanced Experimental Nuclear Physics**  
3 Credits (1+6P)  
Advanced experimental investigation of topics such as measurement of radioactivity, absorption of radiation, and nuclear spectrometry.  
**Learning Outcomes**  
1. Design within constraints: an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.  
2. Communication: an ability to communicate effectively with a range of audiences.  
3. Ethical and Professional Responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.  
4. Teamwork: an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.  
5. Collect, analyze, and interpret data: an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

**PHYS 597. Space Plasma Physics**  
3 Credits (3)  
Same as PHYS 497 but with added requirements.

**PHYS 599. Master’s Thesis**  
1-15 Credits (1-15)  
Thesis.

**PHYS 600. Research**  
1-15 Credits  
Doctoral research. May be repeated.

**PHYS 620. Advanced Topics in Physics**  
1-3 Credits
Advanced formal treatment of topics not covered in regular courses. May be repeated for a maximum of 9 credits.

**Prerequisite:** consent of instructor.

**PHYS 650. General Relativity I**
3 Credits (3)
Basic foundations and principles of general relativity, derivation of the Einstein field equations and their consequences, the linearized theory, the Bel-Petrov classification of the curvature tensor, derivation of the Schwarzschild solution and the four basic tests of general relativity.

**Prerequisite(s):** PHYS 511 or PHYS 561 or consent of instructor.

**PHYS 680. Independent Study**
1-3 Credits
Individual analytical or laboratory studies directed by a faculty member. May be repeated for a maximum of 6 credits.

**Prerequisite:** graduate standing or consent of instructor.

**PHYS 688. Advanced Condensed Matter Physics**
3 Credits (3)
Continuation of the advanced condensed matter physics presented in PHYS 588. Topics include electronic structure methods, optical, magnetic, and transport properties of solids, semiconductors, crystalline defects, nanostructures, and noncrystalline solids. PHYS 588 strongly recommended.

**Learning Outcomes**
1. Learn the fundamental concepts of advanced condensed state physics: band theory of solids, electronic structure methods, optical and magnetic properties of solids, bulk semiconductors, and properties of nano-structured materials.
2. Develop an ability to formulate and solve complex problems in advanced condensed matter physics.
3. Develop an ability to study independently and acquire new knowledge using appropriate learning strategies.

**PHYS 689. Advanced Modern Materials**
3 Credits (3)
Advanced topics in the physics of modern materials, such as crystalline, amorphous, polymeric, nanocrystalline, layered, and composite materials and their surfaces and interfaces. PHYS 555, PHYS 588, and PHYS 589 recommended.

**Learning Outcomes**
1. Learn the fundamental concepts of the physics of modern materials, such as crystalline, amorphous, polymeric, nanostructured, layered, and composite materials.
2. Develop an ability to formulate and solve complex problems in the area of advanced physics of modern materials.
3. Develop an ability to study independently and acquire new knowledge using appropriate learning strategies.

**PHYS 691. Quantum Field Theory I**
3 Credits (3)
Path integrals, gauge invariance, relativistic quantum mechanics, canonical quantization, relativistic quantum field theory, introduction to QED.

**Prerequisites:** PHYS 555 and PHYS 562, or consent of instructor.

**PHYS 692. Quantum Field Theory II**
3 Credits (3)
QED, running coupling constant, QCD, electroweak theory, asymptotic freedom, deep inelastic scattering, basic QCD phenomenology, path integrals in quantum field theory, lattice QCD.

**Prerequisite:** PHYS 691 or consent of instructor.

**PHYS 700. Doctoral Dissertation**
1-15 Credits (1-15)
Dissertation.

**Phone:** (575) 646-3831
**Website:** https://phys.nmsu.edu/ (https://phys.nmsu.edu)

**Physics - Bachelor of Arts**

The curriculum for the Bachelor of Arts degree is designed for students who would like to have a firm foundation in physics combined with study in another area and greater flexibility in choosing elective courses. The program requires a minor in a second field of study chosen by the student in consultation with an advisor. A second major may be used to satisfy the program requirement for a minor.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Second Language Requirement

For the Bachelor of Arts in Physics there is a one year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement.

Option 1:

<table>
<thead>
<tr>
<th>Prefix</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>FREN 1110</td>
<td>French I</td>
<td>8</td>
</tr>
<tr>
<td>&amp; FREN 1120</td>
<td>and French II</td>
<td>8</td>
</tr>
<tr>
<td>GRMN 1110</td>
<td>German I</td>
<td>8</td>
</tr>
<tr>
<td>&amp; GRMN 1120</td>
<td>and German II</td>
<td>8</td>
</tr>
<tr>
<td>JAPN 1110</td>
<td>Japanese I</td>
<td>8</td>
</tr>
<tr>
<td>&amp; JAPN 1120</td>
<td>and Japanese II</td>
<td>8</td>
</tr>
<tr>
<td>SPAN 1110</td>
<td>Spanish I</td>
<td>8</td>
</tr>
<tr>
<td>&amp; SPAN 1120</td>
<td>and Spanish II</td>
<td>8</td>
</tr>
</tbody>
</table>

For Heritage Speakers:

<table>
<thead>
<tr>
<th>Prefix</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>SPAN 1220</td>
<td>Spanish for Heritage Learners II</td>
<td>3</td>
</tr>
<tr>
<td>or SPAN 2210</td>
<td>Spanish for Heritage Learners III</td>
<td>3</td>
</tr>
<tr>
<td>PORT 1110</td>
<td>Portuguese I</td>
<td>3</td>
</tr>
<tr>
<td>or PORT 1120</td>
<td>Portuguese II</td>
<td>3</td>
</tr>
</tbody>
</table>

Option 2:

<table>
<thead>
<tr>
<th>Prefix</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>SIGN 1110</td>
<td>American Sign Language I</td>
<td>3</td>
</tr>
<tr>
<td>SIGN 1120</td>
<td>American Sign Language II</td>
<td>3</td>
</tr>
</tbody>
</table>

Option 3:

Challenge the 1120 level for the following courses:

<table>
<thead>
<tr>
<th>Prefix</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>FREN 1120</td>
<td>French II</td>
<td>4</td>
</tr>
<tr>
<td>or GRMN 1120</td>
<td>German II</td>
<td>4</td>
</tr>
<tr>
<td>or JAPN 1120</td>
<td>Japanese II</td>
<td>4</td>
</tr>
<tr>
<td>or SPAN 1120</td>
<td>Spanish II</td>
<td>4</td>
</tr>
</tbody>
</table>

OR

Challenge the 1110/1120/1220/2210 level for the following courses:

<table>
<thead>
<tr>
<th>Prefix</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>PORT 1110</td>
<td>Portuguese I</td>
<td>3</td>
</tr>
<tr>
<td>or PORT 1120</td>
<td>Portuguese II</td>
<td>3</td>
</tr>
<tr>
<td>or SPAN 1220</td>
<td>Spanish for Heritage Learners II</td>
<td>3</td>
</tr>
<tr>
<td>or SPAN 2210</td>
<td>Spanish for Heritage Learners III</td>
<td>3</td>
</tr>
</tbody>
</table>

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of two years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

Suggested Minors for the Bachelor of Arts

Physics Major

Astronomy Minor — A Bachelor of Arts in Physics with a minor in Astronomy provides an excellent preparation for students who wish to pursue graduate studies in Astrophysics or Astronomy.

Pre-Medicine Studies Minor — Students wishing to attend a medical or dental post-graduate school are strongly encouraged to obtain a minor in a life science field such as biochemistry, biology, human biology or microbiology.

Prelaw Minor — Students wishing to attend a post-graduate law school should obtain a minor in a law-related field, such as government, accounting, finance, or international business.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or
change. Full-time students are usually required to take at least 15 credits per semester.

### First Year
#### Semester 1
- **ENGL 110G**: Composition I 1 3
- **MATH 1511G**: Calculus and Analytic Geometry I 1 4
- **PHYS 1111**: Introductory Computational Physics 1 3
- **PHYS 2110**: Mechanics 4
- **PHYS 2110L**: and Experimental Mechanics 1
- **PHYS 2111**: Supplemental Instruction to PHYS 2110 1

**Credits**: 16

#### Semester 2
- **ENGL 2210G**: Professional and Technical Communication Honors 1 3
- **MATH 1521G** or **MATH 1521H**: Calculus and Analytic Geometry II 1 4
- **PHYS 2140**: Electricity and Magnetism 4
- **PHYS 2140L**: and Electricity & Magnetism Laboratory 1
- **PHYS 2141**: Supplemental Instruction to PHYS 2140 1
- **Area V: Humanities Course**: 2 3

**Credits**: 15

### Second Year
#### Semester 1
- **MATH 2530G**: Calculus III 1 3
- **PHYS 2120**: Heat, Light, and Sound 4
- **PHYS 2120L**: and Heat, Light, and Sound Laboratory 1
- **PHYS 2121**: Supplemental Instruction to PHYS 2120 1
- **Area VI: Creative and Fine Arts Course**: 2 3
- **Minor (or Elective) Course**: 3

**Credits**: 14

#### Semester 2
- **MATH 3160**: Introduction to Ordinary Differential Equations 1 3
- **PHYS 315**: Modern Physics 1 3
- **PHYS 316**: Supplemental Instructions to PHYS 315 1
- **PHYS 325**: Intermediate Experimental Physics 1 3
- **COMM 1115G**: Introduction to Communication 3
- **Minor (or Elective) Course**: 3

**Credits**: 16

### Third Year
#### Semester 1
- **PHYS 395**: Intermediate Mathematical Methods of Physics 1 3
- **PHYS 451**: Intermediate Mechanics I 1 3
- **PHYS 461**: Intermediate Electricity and Magnetism I 1 3
- **VWW: Viewing a Wider World Course**: 3
- **First Course in Second Language Series**: 3-4

**Credits**: 15-16

#### Semester 2
- **PHYS 462**: Intermediate Electricity and Magnetism II 1 3
- **PHYS 480**: Thermodynamics 1 3
- **VWW: Viewing a Wider World Course**: 3
- **Area IV: Social and Behavioral Science Course**: 2 3
- **Next Course in Second Language Series**: 1 3-4

**Credits**: 15-16

### Fourth Year
#### Semester 1
- **PHYS 454**: Intermediate Modern Physics I 1 3
- **Minor (or Elective) Course**: 3
- **Minor (or Elective) Course**: 3
- **Minor (or Elective) Course**: 3
- **Elective Course**: 3

**Credits**: 15

#### Semester 2
- **PHYS 455**: Intermediate Modern Physics II 1 3
- **Minor (or Elective) Course**: 3
- **Minor (or Elective) Course**: 3
- **Elective Course**: 3
- **Elective Course**: 2

**Credits**: 14-12

**Total Credits**: 120

---

1. These courses may have prerequisites and/or co-requisites, and it is the students responsibility for checking and fulfilling all those requirements.
2. See the General Education (p. 227) section of the catalog for a full list of courses.
3. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

## Physics - Bachelor of Science

A Bachelor of Science degree in physics at NMSU prepares a student well for graduate study in physics, geophysics, or engineering or for a variety of careers in research and teaching. Students who plan to seek employment at the B.S. level are advised to take the concentration area curricula as part of their electives in addition to the general and departmental requirements. The program of study should be chosen by the student in consultation with an advisor.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework. The Bachelor of Science degree in physics is accredited by the Applied and Natural Science Accreditation Commission (ANSAC) of ABET, Inc.

Total Credits 120

Students who plan to pursue graduate study in physics or geophysics are strongly advised to take one or more senior-level courses in optics, nuclear physics, space physics, condensed matter physics, geophysics, or computational physics. Students who plan to seek employment at the B.S. level are advised to select one of the following emphasis areas: Applied Physics, Computational Physics, Geophysics, Materials Science, or Optics. The program of study should be chosen by the student in consultation with a Physics Advisor. Some recommended courses are listed below.

**Applied Physics:** 12 credits of upper division E E, M E, or C S courses;

**Computational Physics:** C S 111, C S 171G, MATH 1531, and PHYS 476;

**Geophysics:** GEOL 1110G, GPHY 450, and two upper-division GPHY/GEOL courses;

**Materials Science:** 12 credits of upper-division courses selected from CHME 361, PHYS 450, PHYS 471, PHYS 475, PHYS 488, and PHYS 489.

### Second Language Requirement

For the Bachelor of Science in the Physics there is a one year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

</tr>
</tbody>
</table>

1. See the General Education (p. 227) section of the catalog for a full list of courses.
2. MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511N first.
3. See alternatives for meeting General Education requirements.
4. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses
5. May not be taken S/U and must earn a grade of C- or better.
6. Approved physics and technical electives are decided by Physics Advisors.
or PORT 1120 Portuguese II
or SPAN 1220 Spanish for Heritage Learners II
or SPAN 2210 Spanish for Heritage Learners III

Option 4:
Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:
Obtain college certification of completion of two years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:
By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:
By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:
In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

Dual Degree (BS/MS) Program
This program option is designed to provide a means for PHYS undergraduates to obtain both a BS and an MS degree with 138 credits (normally: BS=120 credits, MS=30 credits). Students electing this option will follow the regular undergraduate BS in physics curriculum, except that they take the advanced laboratory course at the 5XX level to meet their BS requirements. They also apply nine other credits of their undergraduate courses numbered 450 and higher towards their MS degree, requiring only an additional 18 credits for the MS. These 18 credits can be obtained in two semesters (and perhaps one summer term to write and defend an MS thesis). Students interested in this dual degree must be admitted to the MS in Physics graduate program and must fulfill all degree requirements for the MS in Physics.

A Suggested Plan of Study for Students
This roadmap assumes student placement in MATH 151G Calculus and Analytic Geometry I and ENGL 110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change. Full-time students are usually required to take at least 15 credits per semester.

Total Credits 18

1 Other courses may be chosen with the approval of the Physics department head.

Psychology
Undergraduate Program Information
Students may take a major in psychology either as an area of emphasis in a liberal arts program or in preparation for further graduate education leading to professional careers in psychology. A major in psychology may be appropriate for the liberal arts student who wishes to pursue a career involving extensive social interaction and requiring solutions to people-related problems. Such careers include law, business, parenting, government, education, and management. Professional careers in psychology generally require some post-baccalaureate education. These careers include provision of clinical and counseling services, conducting research, applying research findings in industrial or government settings, and doing teaching and research in colleges and universities. All students, but especially those planning to apply to graduate school, are encouraged to take PSYC 3110 Experimental Methods and PSYC 3120 Psychological Measurement PSYC 3110 Experimental Methods, no later than the Spring semester of their junior year.

Requirements for the Bachelor of Arts in Psychology are listed here (p. 834). Satisfying these requirements should provide an adequate exposure to psychology for the liberal arts student and a basic foundation for students seeking a career in psychology. Students wishing to prepare for a professional career in psychology are especially encouraged to work closely with an advisor, as early as possible.

Graduate Program Information
Admission
The Department of Psychology offers graduate work leading to the Master of Arts and Doctor of Philosophy degrees. To maximize consideration for admittance, candidates should submit applications by January 15. Note that the Psychology Department does not offer training for achievement in research, scholarship and teaching. The most promising applicants will be accepted. The number of students that the department can successfully accommodate is limited, therefore it will not always be possible to admit all qualified applicants. The admissions committee will consider any material that a candidate for admission wishes to present.

Students with bachelor degrees should apply for admittance to the master's program even if their eventual goal is a Ph.D. Students with a master's degree in psychology-related disciplines or from other institutions may apply directly to the Ph.D. program.

A completed Graduate School admission application (https://apply.nmsu.edu/apply/) (online only) should include all of the following:

1. Complete transcripts of all college work (minimum 3.0 GPA).
2. Three letters of recommendation from professors, employers or others qualified to evaluate your potential for graduate work.
3. A letter explaining your research interests and experience, career goals, and an indication of the faculty member(s) whose work is of particular interest to you.
4. A curriculum vitae or résumé.
5. A writing sample (e.g., a paper you wrote for a course, a senior thesis, or a master's thesis) uploaded through online application system. Ideally, the sample should demonstrate your ability to write clearly about psychological research.
6. GRE scores (optional but highly encouraged)

As per NMSU Graduate School policy, admission to the doctoral program is conditional upon passing a qualifying exam. In Psychology this generally involves giving a presentation about a completed, empirical Masters thesis project to an examining committee. Also, if there are perceived gaps in preparedness, once at NMSU, candidates may be

career involving extensive social interaction and requiring solutions to people-related problems. Such careers include law, business, parenting, government, education, and management. 6. GRE scores (optional but highly encouraged)

As per NMSU Graduate School policy, admission to the doctoral program is conditional upon passing a qualifying exam. In Psychology this generally involves giving a presentation about a completed, empirical Masters thesis project to an examining committee. Also, if there are perceived gaps in preparedness, once at NMSU, candidates may be
asked to complete certain coursework/research projects to address deficiencies.

A number of potential minors are available to interested students, including a minor in statistics (p. 834). Additional information about a minor may be found in the listing of the home department in this catalog.

**Degrees for the Department**

**Bachelor Degree(s)**

- Psychology - Bachelor of Arts (p. 834)
- Psychology - Bachelor of Arts (Online) (https://catalogs.nmsu.edu/global/nmsu-global/psychology-ba-online/)

**Master Degree(s)**

- Experimental Psychology - Master of Arts (p. 146)

**Doctoral Degree(s)**

- Experimental Psychology - Doctor of Philosophy (p. 197)

**Minors for the Department**

- Psychology - Graduate Minor (p. 225)
- Psychology - Undergraduate Minor (p. 837)

**Andrew R. A. Conway, Department Head**

**Professors** Conway, Hout, MacDonald, Madson, Marks, Trafimow; **Associate Professors** Guynn, Ketelaar, Kroger, Simon; **Assistant Professors** Fraune; **Emeritus Faculty** Cowie, Johnston, McDonald, Paap, Schvaneveldt, Stephan, Thompson.

A. R. A. Conway, Ph.D. (South Carolina) - human intelligence, cognitive abilities; M. Fraune, Ph.D. (Indiana) - Human/Robot Interaction; M. J. Guynn, Ph.D. (New Mexico) - human memory; M.C. Hout, Ph.D. (Arizona State) - visual cognition; T. Ketelaar, Ph.D. (Michigan) - social psychology, emotion; J. K. Kroger, Ph.D. (California-Los Angeles) - biopsychology, cognitive neuropsychology; J. Macdonald, Ph.D. (Purdue) - engineering psychology, auditory perception; L.J. Madson, Ph.D. (Iowa State) - scholarship of teaching & learning, gender, sexuality; M.J. Marks, Ph.D. (Illinois, Urbana-Champaign) - social psychology, sexual behaviors, relationships; D.A. Simon, Ph.D. (California-Los Angeles) - cognition, learning and performance; D. Trafimow, Ph.D. (Illinois, Urbana-Champaign) - social cognition.

**Psychology Courses**

**PSYC 1110G. Introduction to Psychology**

*3 Credits (3)*

This course will introduce students to the concepts, theories, significant findings, methodologies, and terminology that apply to the field of psychology.

**Learning Outcomes**

1. Explain how the scientific method and psychological research methodologies are used to study the mind and behavior.
2. Recall key terms, concepts, and theories in the areas of neuroscience, learning, memory, cognition, intelligence, motivation and emotion, development, personality, health, disorders and therapies, and social psychology.
3. Explain how information provided in this course can be applied to life in the real world.
4. Identify the major theoretical schools of thought that exist in psychology as they relate to the self, the culture, and the society.

**PSYC 2110. Social Psychology**

*3 Credits (3)*

This course is an introduction to the scientific study of human social influence and interaction, and explores how an individual's actions, emotions, attitudes and thought processes are influenced by society and other individuals. May be repeated up to 3 credits.

**Prerequisite:** PSYC 1110G, MATH 1215, and ENGL 1110G.

**Learning Outcomes**

1. Identify concepts, theories, scientific methods, and research findings relevant to social psychology.
2. Explain how situational, social, and individual factors influence behavior.
3. Apply social psychological concepts to real-life events, current social issues and problems, and one's own life.

**PSYC 2120. Developmental Psychology**

*3 Credits (3)*

Study of human physical and psychological change and stability from a lifespan development perspective. May be repeated up to 3 credits.

**Prerequisite:** PSYC 1110G, MATH 1215, and ENGL 1110G.

**Learning Outcomes**

1. Explain theories, methods and research findings of lifespan developmental psychology.
2. Describe the interaction between physical, cognitive, and psychosocial development across the lifespan.
3. Compare and contrast major developmental theories and discuss what each brings to or adds to the study of lifespan developmental psychology.
4. Identify factors that influence psychological development across the lifespan.
5. Apply basic principles of developmental psychology to one's own life experiences.
6. Analyze historical and cultural factors that influence development across the lifespan.

**PSYC 2210. Abnormal Psychology**

*3 Credits (3)*

This course provides students with an introduction to the field of abnormal psychology. Subject areas include history, methods, theories, etiologies, classification and treatment of disorders. May be repeated up to 3 credits.

**Prerequisite:** PSYC 1110G, MATH 1215 and ENGL 1110G.

**Learning Outcomes**

1. Recognize terms used within the field of abnormal psychology.
2. Compare various methods for defining abnormal behavior.
3. Evaluate the development of classification systems that define "normal" and "abnormal" from historical, social, and cultural contexts.
4. Critically evaluate the symptoms and etiologies of mental health disorders in the current psychological diagnostic system.
5. Describe treatment modalities for mental health disorders.
6. Identify biological and psychological processes in mental health disorders.

**PSYC 2220. Cognitive Psychology**

*3 Credits (3)*

The course provides an overview of human cognitive processes such as attention, perception, memory, language, categorization, decision-
making, reasoning, and problem solving. Includes methods, theories, and applications. May be repeated up to 3 credits.

**Prerequisite:** PSYC 1110G, MATH 1215, and ENGL 1110G.

**Learning Outcomes**
1. Describe research findings in the major areas of human cognition.
2. Differentiate the research methods used to study the various topics in cognitive psychology.
3. Apply theories of cognition to the results of laboratory research.
4. Apply the research on cognitive psychology to topics in the real world.

**PSYC 2221. Applied Psychology**
3 Credits (3)
Explanation of the psychological principles of everyday living. Emphasizes motivation, learning of intelligent behavior, and applications of psychology to social issues. Community Colleges only.

**Learning Outcomes**
1. The objective of this course is to orient students to the personality characteristics, interpersonal competencies, ethical decision-making skills, and other professional traits associated with pursuing a career in a helping profession.
2. Identify the requirements for becoming a helping professional, characteristics of a skilled helper, and cultural factors that impact helping professionals.
3. Explain your personal strengths and weaknesses as a potential helper.
4. Demonstrate appropriate helping strategies based upon the special characteristics of clients.
5. Compare the capabilities that individual, family, group, community, and online interventions offer you as a future helper.
6. Identify the ethical and legal issues that impact helping professionals.
7. Analyze the potential impact of your future ethical and professional standards as a helping professional.
8. Explain how your role as a helping professional is impacted by your professional affiliation and ethical principles.
9. Analyze how worsening personal problems and increasing stress can impact the kinds and quality of our responses to life and the people around us.

**PSYC 2230. Psychology of Adjustment**
3 Credits (3)
This course focuses on the individual's adjustment to society, and the application of psychological principles to the understanding of adjustment.

**Learning Outcomes**
1. Explain the internal and external factors associated with the psychology of adjustment.
2. Evaluate contributions from psychology to adjustment concepts and processes.
3. Describe the different explanations of how individuals adjust to their environments.
4. Describe how self-identities develop and how they affect relations with others.
5. Identify resources available for assistance with adjustment-related concerns.

**PSYC 2250. Brain and Behavior**
3 Credits (3)
A general survey of the biological foundations of behavior and mental processes. Students will gain an understanding of anatomy, physiology, and chemistry of the nervous system and their relationships to human behavior. May be repeated up to 3 credits.

**Prerequisite:** PSYC 1110G, MATH 1215 and ENGL 1110G.

**Learning Outcomes**
1. Identify and describe basic neuroanatomical structures and functions.
2. Identify and describe chemical processes of the nervous system.
3. Apply course concepts to psychological processes, such as learning, memory, sensation, perception, drive states, sleep, and language.
4. Apply course concepts to psychological disorders, such as schizophrenia and mood and anxiety disorders.
5. Describe the techniques used to study the relationship between brain and behavior.

**PSYC 2311. A Study of Substance Abuse through Learning**
3 Credits (3)
Physiological and psychological impact of drug use on human behavior. Emphasizes practical applications of intervention and prevention in the community. Community Colleges only.

**Learning Outcomes**
1. Through readings and discussions, students will be able to describe the role that gender, ethnicity, and age have in alcohol and drug use.
2. Through readings and discussions, students will be able to learn past and current perspectives of addiction.
3. Through readings, discussions and student presentations, students will be able to distinguish between different types of abuse-able drugs and be able to classify them.
4. Through readings, discussions, lectures and guest speaker's students will be able to describe the role of addiction and criminal behavior.
5. Through readings and discussions, students will be able to discuss the Models and Theories of Drug Dependence and Addiction.
6. Through readings, discussions and evaluation of case studies students will be able to discuss the definitions of Substance Abuse, Dependence, Addiction.
7. Through readings and discussions, students will be able to acquaint themselves with the effects of Addictive Behavior on Family Systems.
8. Through readings discussions, students will be able to Discuss Disorders Co-Occurring with Substance Abuse.
9. Through readings and community service learning outing, students will be able to discuss how important the concepts of Prevention, Intervention and Treatment in drug addiction.
10. Through readings and community service learning outing students will be able to discuss Alcohol/Drug Recovery Treatment Relapse Prevention.
11. Through completion of Service Learning and field assignment students will be able to discuss the role of AA/NA in Recovery Treatment.
12. Through attendance of a Drug Court Hearing students will be knowledgeable of the role of Drug Courts in prevention and treatment of drug addiction.

**PSYC 311. Advanced Research Seminar**
4 Credits (2+4P)
Psychological research in conjunction with designing, conducting, writing, and presenting an independent research project. May also include various computer applications. Will discuss issues regarding application to graduate programs. Course should be taken no later than the first semester of senior year.

**Prerequisite:** PSYC 310.
PSYC 3110. Experimental Methods
4 Credits (2+4P)
The basic skills of literature search, experimental design, research methodology, and research reporting are emphasized; includes laboratory. May be repeated up to 4 credits.
Prerequisite: PSYC 1110G, and either MATH 1350G, MATH 2350G, or A ST 311.

PSYC 3120. Psychological Measurement
3 Credits (3)
The objective of this class is for you to develop broad conceptual knowledge, as well as specific concrete skills, when developing, analyzing and interpreting psychological measures and the data that come from them. We will learn through in-depth discussion and hands-on applications: e.g., exploring the purpose and meaning of measurement, taking a wide range of actual measures, analyzing measurement data in a variety of different ways. Overall, you will learn from this class whether a measure/test is measuring what we think it should, on the basis of reliability, validity, and fairness.
Prerequisite: PSYC 1110G, PSYC 2110, PSYC 2220.
Learning Outcomes
1. Learn how to develop, analyze, and interpret psychological measures.
2. Learn how to determine whether a measure/test is measuring what we think it should, on the basis of reliability, validity, and fairness.

PSYC 315. Emotion
3 Credits (3)
An overview of the past century of research on human emotion from William James to Antonio Damasio. Explores a cognitive science perspective on emotion that includes questions about developmental, physiological, and evolutionary aspects of emotion and an exploration of the proximate and ultimate functions of emotion. Topics range from understanding the feeling component of emotion to understanding the role of facial displays of emotion.
Prerequisite(s): PSYC 1110G, and one of: MATH 1350G, MATH 2350G, or A ST 311G, and PSYC 310 or consent of instructor.

PSYC 320. Learning
3 Credits (3)
Covers: habituation, Pavlovian conditioning, Thorndikian learning, stimulus generalization, transfer of training, and the learning and forgetting of related and unrelated material. May be repeated up to 3 credits.
Prerequisite: PSYC 1110G, and one of: MATH 1350G, MATH 2350G, or A ST 311, and PSYC 310.
Learning Outcomes
1. Recognize and distinguish between various learning situations, especially classical/Pavlovian and Instrumental learning and their many facets and applications.
2. Identify some of the key conditions necessary for learning to take place, and that may prevent learning from taking place – rather more nuanced than most intro psych books suggest.
3. Identify and evaluate different basic situations to suggest how learning might be structured to cause changes in behavior in both humans and other animals.

PSYC 321. Psychology of Personality
3 Credits (3)
Introduces personality theories and supporting research. Psychoanalytic, physiological, and behavioral theories as they apply to personality are examined. Focuses on normal personality functioning.

Prerequisites: PSYC 1110G, and one of: MATH 1350G, MATH 2350G, or A ST 311, and PSYC 310.

PSYC 324. Sexual Behavior
3 Credits (3)
Examines viewpoints of the evolution, control and function of human sexual behavior. Includes human sexuality, reproduction, male-female conflicts and the social implications of sex. Prerequisites: PSYC 1110G, MATH 1215, and ENGL 1101G

PSYC 325. Health Psychology
3 Credits (3)
Life stress, surgical stress, coronary-prone behavior, biofeedback, pain control, psychosocial approaches to geriatrics and cancer, behavioral treatments for addictions, obesity, and interpersonal issues in health care.
Prerequisite: PSYC 1110G.

PSYC 330. Psychology and the Law
3 Credits (3)
Discretionary practices in the judicial system including pretrial procedures, jury selection, jury decision making, eyewitness testimony, insanity, expert witnesses, and probation judgments.
Prerequisite: PSYC 1110G.

PSYC 359. Psychology of Gender
3 Credits (3)
Examines theories and research on the psychological functioning of women and men in North American society, including influential theories of gender in psychology and current controversies in the psychological literature. Topics include those unique to women and unique to men in development across the lifespan, work, physical and mental health, sexuality, victimization, gender stereotypes, gender comparisons in abilities and personality, and biological, social, and cultural influences on behavior. Crosslisted with: GNDR 359.
Prerequisite: PSYC 1110G.

PSYC 370. Special Topics
1-3 Credits
May be taken under different subtitles announced in the Schedule of Classes for unlimited credit. May be repeated for a maximum of 12 credits.
Prerequisite: PSYC 1110G.

PSYC 376. Evolutionary Psychology
3 Credits (3)
This course introduces the student to the science of Evolutionary Psychology. In this class we will explore how evolutionary psychologists think about a variety of topics ranging from our capacity for (and appreciation of) art, emotions, and beauty to an exploration of the "design" of our minds in regards to mating, status striving, social behavior and cultural production.
Prerequisite(s): PSYC 1110G, and one of: MATH 1350G, MATH 2350G, or A ST 311G, and PSYC 310 or consent of instructor.

PSYC 380. Perception
3 Credits (3)
Primary emphasis on vision. Topics include measurement of sensations, development of visual-motor coordination, reading, speech perception, picture perception, illusions, 3-dimensional space, and causes and consequences of visual abnormalities. May be repeated up to 3 credits.
Prerequisite: PSYC 1110G, and one of: MATH 1350G, MATH 2350G, or A ST 311, and PSYC 310.
Learning Outcomes
1. To provide a comprehensive knowledge of topics within sensation and perception, including topics in vision, hearing, smell, taste, and touch.

PSYC 383. Memory
3 Credits (3)
Examines facets of human memory from the information processing viewpoint, including encoding, storage, and retrieval and memory-aiding techniques.
Prerequisites: PSYC 1110G, and one of: MATH 1350G, MATH 2350G, or A ST 311, and PSYC 310 or consent of instructor.

PSYC 400. Research
1-3 Credits
Individual research projects supervised by a department faculty member. May be repeated for a maximum of 6 credits.
Prerequisites: PSYC 310 and consent of instructor.

PSYC 401. Directed Readings
1-3 Credits
May be repeated for a maximum of 6 credits.
Prerequisites: PSYC 1110G and consent of instructor.

PSYC 402. Field Experience
1-3 Credits
Working with preschool, juvenile delinquent, handicapped, aged, convict, or mentally ill. Approximately five hours scheduled work per week per credit. May be repeated to 6 credits.
Prerequisites: 6 psychology credits and consent of instructor.

PSYC 430. Human-Computer Psychology
3 Credits (3)
Theories, methodologies, and data from psychology applicable to interface design, with an emphasis on construction and application of conceptual psychological models.
Prerequisites: PSYC 1110G, and one of: MATH 1350G, MATH 2350G, or A ST 311, and PSYC 310 or consent of instructor.

PSYC 441. History & Systems of Psychology
3 Credits (3)
History of the scientific study of the mind and behavior. Covers the historical origins of philosophical and scientific approaches to Psychology and the development of influential schools of thought in psychology from the Classical Period through the Modern Era.
Prerequisite: PSYC 1110G and PSYC 310.
Learning Outcomes
1. Apply knowledge of important historical events/figures in scientific psychology by demonstrating an ability to explain how past ideas/thinkers/events have shaped current theory and methodology in scientific psychology.
2. Explain key ideas and concepts in contemporary scientific psychology by demonstrating an ability to draw connections between our current understanding and earlier approaches to the study of the mind.
3. Generate sophisticated arguments/opinions regarding contemporary questions in scientific psychology by demonstrating an ability to frame questions that draw upon a sophisticated understanding of the history of scientific psychology, while also being able to distinguish between well-informed and naïve answers to those questions.

PSYC 442. Thinking
3 Credits (3)
Research and theory pertaining to human thinking and problem solving. Effective problem-solving methods and common obstacles to problem solving are analyzed.
Prerequisites: PSYC 1110G and PSYC 310.

PSYC 450. Senior Thesis
3 Credits (3)
A laboratory or field research project conducted under faculty supervision. Requires written research proposal, conduct of research, data analysis, and final written report. May be repeated for a maximum of 6 credits.
Prerequisites: PSYC 310, 6 additional psychology credits, consent of supervising faculty member, and junior or above standing.

PSYC 470. Special Topics
1-3 Credits
Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

PSYC 4999. Senior Capstone Seminar in Psychology
1 Credit (1)
In an architectural context, a capstone is the top-most stone that completes a building. In an academic context, a capstone is the final class that completes a student’s curriculum. Capstone classes provide students with an opportunity “to demonstrate comprehensive learning in their major through some type of product or performance” (Palomba & Banta, 1999, p. 124). In other words, a capstone is a class in which senior psychology majors are required to pull together what they have learned in their previous classes and use this integrating experience to demonstrate they are capable of doing what they should be able to do when they graduate from the program (e.g., think critically and develop a realistic plan to pursue a career in psychology or a psychology-related field).
This process serves a dual purpose. First, it allows psychology majors with a final opportunity to practice and demonstrate the skills they will need to succeed after graduation on the job or in graduate school. Second, it provides the Psychology Department with a final opportunity to assess whether or not it has been successful in its mission to produce competent psychology majors.
Prerequisite: PSYC 1110G, PSYC 3110.
Learning Outcomes
1. Demonstrate critical thinking skills by reading and discussing current topics in Psychology.
2. Demonstrate content knowledge in Psychology by reading and discussing current topics in Psychology.
3. Demonstrate critical thinking skills by performing standardized assessments administered by the Department of Psychology.
4. Demonstrate content knowledge by performing standardized assessments administered by the Department of Psychology.

PSYC 507. Quantitative Methods in Psychology I
3 Credits (3)
Statistical concepts emphasizing distributions and methods most appropriate to the data, models, and theories in psychology. Emphasis on distributions, probability and basic inferential statistics in Psychological research. Includes basics of Analysis of Variance (ANOVA) and Multiple Regression in Psychological research. May be repeated up to 3 credits.
Learning Outcomes
1. Students will be able to recognize appropriate usage of, and be able to implement, basic statistical techniques: Central tendency, variability, z-scores, t-tests, ANOVA, correlation, two predictor regression.
PSYC 508. Quantitative Methods in Psychology II
3 Credits (3)
Statistical concepts emphasizing distributions and methods most appropriate to the data, models, and theories in psychology. Emphasis on advanced ANOVA and Multiple Regression in Psychological research. May be repeated up to 3 credits.
Prerequisite(s): PSYC 507 or equivalent.

Learning Outcomes
1. Students will become familiar with situations and applications of advanced ANOVA techniques and Multiple Regression and Correlation.

PSYC 510. Computer Methodology
3 Credits (3)
Use of computers in psychological research with emphasis on developing experimental control programs.

PSYC 520. Learning
3 Credits (3)
Classical areas of learning, including instrumental and classical conditioning paradigms, habituation, reinforcement variables, stimulus generalization and transfer, and memory.

PSYC 522. Sensation and Perception
3 Credits (3)
Stimulus and decision variables in judging auditory and visual events. Topics include: detection of signals; signal intensity versus perceived strength; size, shape, and movement perception; reading and listening.

PSYC 523. Methods in Cognitive Psychology
3 Credits (3)
Experimental and correlational methodologies appropriate for investigating cognitive psychological theories and problems.
Prerequisite(s): PSYC 524 or consent of instructor.

PSYC 524. Cognitive Psychology
3 Credits (3)
Examines theoretical and empirical work on human cognition. Topics include: information processing theories, pattern recognition, memory, attention, language, problem solving, decision making, and reasoning.

PSYC 527. Social Psychology
3 Credits (3)
Current and traditional theories, research findings, and research methodologies of social psychology.

PSYC 529. Methods in Social Psychology
3 Credits (3)
Experimental, quasi-experimental, and correlational methodologies appropriate for investigating social psychological theories and problems.
Prerequisite(s): Graduate student in psychology or consent of instructor.

PSYC 540. History and Systems of Psychology
3 Credits (3)
History of scientific method emphasizing outstanding methodological problems of contemporary science, especially psychology. Covers recent history of psychology and development of schools of psychology.

PSYC 547. Engineering Psychology
3 Credits (3)
Covers concepts, methods, and findings of human performance. Treats the human as a subsystem that receives, stores and processes information, makes decisions, and acts within a human-machine environment system.

PSYC 550. Teaching of Psychology
3 Credits (3)
This class serves both new and experienced teachers. It will help new teachers design and conduct a successful course and help experienced teachers improve their teaching.

This class serves both new and experienced teachers. It will help new teachers design and conduct a successful course and help experienced teachers improve their teaching.

PSYC 570. Special Topics
1-3 Credits
Specific subjects to be announced in the Schedule of Classes.

PSYC 590. Research Seminar in Psychology
1 Credit (1)
Presentations on research by students, faculty, and guest speakers. May be repeated for credit.

PSYC 598. Special Research Programs
1-3 Credits
Individual investigations either analytical or experimental. May be repeated for credit.

PSYC 599. Master's Thesis
1-15 Credits
Thesis.

PSYC 600. Doctoral Research
1-15 Credits
This course number is used for assigning credit for research performed prior to successful completion of the doctoral qualifying examination.

PSYC 698. Special Research Programs
1-3 Credits
Individual investigations either analytical or experimental. May be repeated for credit.

PSYC 700. Doctoral Dissertation
1-15 Credits
Dissertation.

Psychology - Bachelor of Arts

General Requirements
Students must complete all University degree requirements, which include: General Education requirements (p. 227), Viewing a Wider World requirements (p. 231), and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Students must receive a C- or better in courses.
General Education

Area I: Communications 9-10
English Composition - Level 1
Select one from the following 4
ENGL 1110G Composition I
ENGL 1110H Composition I Honors
English Composition - Level 2
Select one from the following 3
ENGL 2210G Professional and Technical Communication Honors (Recommended)
ENGL 2221G Writing in the Humanities and Social Science
Oral Communication
Select one from the following
ACOM 1130G Effective Leadership and Communication in Agriculture
COMM 1115G Introduction to Communication
COMM 1130G Public Speaking
HNRS 2175G Introduction to Communication Honors

Area II: Mathematics 3
Select one from the following (students may need to complete prerequisites) 1
MATH 1350G Introduction to Statistics
MATH 2350G Statistical Methods

Area III/IV: Laboratory Sciences and Social/Behavioral Sciences 10-11
Select one from the following from Area III: Laboratory Sciences (4 credits)
BIOL 1120G Human Biology
& BIOL 1120L Human Biology Laboratory
BIOL 2110G Principles of Biology: Cellular and Molecular Biology
& BIOL 2110L Principles of Biology: Cellular and Molecular Biology Laboratory
BIOL 2610G Principles of Biology: Biodiversity, Ecology, and Evolution
& BIOL 2610L Principles of Biology: Biodiversity, Ecology, and Evolution Laboratory

Area IV: Social/Behavioral Sciences Course
PSYC 1110G Introduction to Psychology
Either an Area III/IV Laboratory Sciences Course or Social/Behavioral Sciences Course (4 or 3 credits) 2

Area V: Humanities 3
Select any Area V: Humanities course, but one of the following PHIL courses is recommended: 2
PHIL 1145G Philosophy, Law, and Ethics
PHIL 1115G Introduction to Philosophy
PHIL 1140G Philosophy and World Religions
PHIL 2230G Philosophical Thought
PHIL 1120G Logic, Reasoning, & Critical Thinking

Area VI: Creative and Fine Arts 3 3-4
General Education Elective 2

Viewing A Wider World 3
Departmental/College Requirements (additional credits beyond Gen Ed) 21
PSYC 1110G Introduction to Psychology (this course will count towards the Area IV requirement above)

Core Content
PSYC 2110 Social Psychology
PSYC 2120 Developmental Psychology

Non-Departmental Requirements (some overlap with Gen.Ed/VWW)
Philosophy course 300-level or above 6
Statistics Course requirement, can be completed with one of the following (all but A ST 311 will count towards Gen.Ed requirements) 1, 7
A ST 311 Statistical Applications
MATH 1350G Introduction to Statistics
MATH 2350G Statistical Methods
Introductory Biology requirement, can be completed with one of the following (all will count towards Gen.Ed requirements) 8
BIOL 1120G Human Biology
& BIOL 1120L Human Biology Laboratory
BIOL 2610G Principles of Biology: Biodiversity, Ecology, and Evolution
& BIOL 2610L Principles of Biology: Biodiversity, Ecology, and Evolution Laboratory
BIOL 2110G Principles of Biology: Cellular and Molecular Biology
& BIOL 2110L Principles of Biology: Cellular and Molecular Biology Laboratory

Second Language: (required- see below) 9 13-15
Electives, to bring the total credits to 120 10 22

Total Credits 120-125

1 Either MATH 1350G Introduction to Statistics, MATH 2350G Statistical Methods is required for the degree but students may need to take any prerequisites needed to enter MATH 1350G or MATH 2350G first.
2 See the General Education (p. 227) of the catalog for a full list of courses.
3 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
5 Additional electives to bring total credits in psychology to at least 34, with at least 24 of those 34 credits being upper division.
6 PHIL 346 Philosophy of Mind or PHIL 351 Philosophy of Science recommended.
7 Students who are considering graduate study are strongly encouraged to take math classes beyond the minimum statistics course requirement.
8 A course that includes a laboratory is highly recommended, and is required if intended to satisfy Gen Ed Area III.
9 The number of credits needed to complete the Second Language requirement depends on which option the student uses and whether the student is able to begin study at a level beyond the introductory course.
10 Elective credit may vary based on General Education course selection, second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated...
in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Arts in Psychology there is a two year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:  
Prefix | Title | Credits  
--- | --- | ---  
FREN 1110 | French I | 3-14  
& FREN 1120 | and French II |  
& FREN 2110 | and French III |  
& FREN 2120 | and French IV |  
GRMN 1110 | German I | 3-14  
& GRMN 1120 | and German II |  
& GRMN 2110 | and German III |  
& GRMN 2120 | and German IV |  
JAPN 1110 | Japanese I | 3-14  
& JAPN 1120 | and Japanese II |  
& JAPN 2110 | and Japanese III |  
& JAPN 2120 | and Japanese IV |  
SPAN 1110 | Spanish I | 3-14  
& SPAN 1120 | and Spanish II |  
& SPAN 2110 | and Spanish III |  
& SPAN 2120 | and Spanish IV |  
PORT 1110 | Portuguese I | 3-6  
& PORT 1120 | and Portuguese II |  
For Heritage Speakers:  
SPAN 1210 | Elementary Spanish for Heritage Learners I | 3-9  
& SPAN 1220 | and Spanish for Heritage Learners II |  
& SPAN 2210 | and Spanish for Heritage Learners III |  

Option 2:  
Prefix | Title | Credits  
--- | --- | ---  
SIGN 1110 | American Sign Language I | 3  
SIGN 1120 | American Sign Language II | 3  
SIGN 2110 | American Sign Language III | 3  

Option 3:  
Prefix | Title | Credits  
--- | --- | ---  
PORT 1120 | Portuguese II | 3  
or SPAN 2210 | Spanish for Heritage Learners III |  

Option 4: Computer Science Track  
Prefix | Title | Credits  
--- | --- | ---  
C S 153 | Python Programming I | 3  
C S 154 | Python Programming II | 3  
C S 158 | R Programming I | 3  

Under special circumstances, alternative combinations of CS courses may be approved by the Department Head  
Total Credits  
9  

Option 5: Math Track  
Prefix | Title | Credits  
--- | --- | ---  
MATH 1220G | College Algebra | 3  
MATH 1250G | Trigonometry & Pre-Calculus | 4  
MATH 1511G | Calculus and Analytic Geometry I | 4  
MATH 1521G | Calculus and Analytic Geometry II | 4  
Total Credits  
15  

Option 6:  
Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.  

Option 7:  
Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.  

Option 8:  
By obtaining certification of a working knowledge of a Native American language from the American Indian program director.  

Option 9:  
By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.  

Option 10:  
In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.  

A Suggested Plan of Study for Students  
This roadmap assumes student placement in MATH 1350G Introduction to Statistics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.  

| Freshman | Credits |  
|---|---|---  
ENGL 1110G | Composition I  
Choose from one of the following:  
MATH 1350G | Introduction to Statistics | 3  
MATH 2350G | Statistical Methods | 1  
A ST 311 | Statistical Applications | 1  
PSYC 110G | Introduction to Psychology | 3  
| Area V: Humanities Course (recommend one of the following) | 3 | 
| PHIL 1115G | Introduction to Philosophy | 3  
PHIL 2230G | Philosophical Thought | 3  
FYEX 1112 | The Freshman Year Experience | 2  
COMM 1115G | Introduction to Communication | 3  
Choose from one of the following: | 4 |  

Psychology - Undergraduate Minor

A student must pass at least 18 credits in Psychology courses with grades of C- or higher, and at least 9 of those credits must be upper division. A student may not earn both a BA in Psychology and a minor in Psychology.

Theatre Arts

Undergraduate Program Information

With strong emphases in acting, musical theater, new works and design/technical theatre, the program prepares students for graduate study, life in the profession, or a myriad of related job fields. Students gain practical experience through a wide array of courses designed to expose them to the varied aspects and job positions involved in theatrical production. Practical experience is gained via work on our public productions. The faculty is augmented by nationally-renowned guest theatre artists.

A minimum of 62 credits with a grade of C- or higher in theatre arts is required for the major. Theatre Arts does not require a second language.

Students enrolled in this department’s major or minor may count credits in required applied courses toward their degrees beyond the normal maximum of 9 credits allowed in the College of Arts and Sciences. However, if a student changes the major or does not complete the requirements for the minor at the time of graduation, they may only count a maximum of 9 credits of the applied courses toward graduation.

Students preparing to teach in public schools may qualify for certification by completing the Bachelor of Science in Education degree with theatre arts as a teaching field. (See curricula in the College of Health, Education & Social Transformation (https://hest.nmsu.edu/) section).

At any time the Theatre Arts program may be undergoing curriculum changes. For the most up-to-date information about degree requirements please visit https://theatre.nmsu.edu/ or visit the Theatre Arts Department in room 318 in the ASNMSU Center for the Arts Building on University Ave at Espina.

Degrees for the Department

- Theatre Arts (Musical Theatre) - Bachelor of Arts (p. 843)
- Theatre Arts - Bachelor of Arts (p. 842)

Minors for the Department

- Theatre Arts - Undergraduate Minor (p. 845)

Professor, Wil Kilroy, Department Head/Managing Director

Associate Professors: Hamilton, Lury Assistant Professors: Hermanson, Krohn, Striebel College Assistant Professor: Masters Adjunct Professors: Bardy, Fredrickson, Mojica Emeritus: Brunson, Storm Professional Staff: Carruthers, Davila, Wilkinson Office Staff: Perez-Wright

Theatre Arts Courses

THEA 110G. Introduction to Theatre
3 Credits (3)
This course provides an introduction to the study of theatre. Students will examine various components that comprise theatre, such as acting, directing, playwriting, dramaturgy, scenic and costume design, stagecraft, spectatorship, history, theory, and criticism.
THEA 1210G. Acting for Non-Majors
3 Credits (3)
This class gives non-majors experience in the depth and craft of the actor’s art. Students will learn various terms, techniques, and practices of acting and will demonstrate their understanding in class. Through exercises and improvisations, partnered scenes, and group work, students will be better able to appreciate the work of others as they learn techniques of performing. May be repeated up to 3 credits.

Learning Outcomes
1. Develop fundamental physical, vocal, analytical, and imaginative skills for acting for the stage.
2. Apply fundamental techniques of voice and movement for the stage.
3. Apply principles of play text analysis to understand story, character, and meaning.
4. Gain a better understanding of an actor’s approach to goals, tactics, and obstacles.
5. Engage in character creation and development while preparing and performing monologues and scenes.
6. Learn a common vocabulary to help discuss the process of acting.
7. Employ collaborative methods of work with a partner and in groups.
8. Observe and evaluate acting skills of other actors.
9. Increase verbal and physical communication skills which are applicable in any field.
10. Develop personal and social responsibility via group work, research and self-reflection.
11. Increase confidence and self-esteem via continuous presentations with supportive feedback.

THEA 1221. Beginning Acting
3 Credits (3)
Basic understanding of self-expression through a variety of physical exercises, improvisation, and character study, culminating in scene or monologue work. Restricted to: THTR majors.

Learning Outcomes
1. Apply a common vocabulary that serves as a foundation in acting for the theatre major and minor
2. Communicate effectively in front of an audience, applying learned concepts while exercising freedom and control of voice, body, and imagination
3. Analyze the written character and live performance
4. Provide objective feedback to your classmate’s work as well as your own, that supports a greater understanding of our craft while building trust within the collaborative ensemble

THEA 1222. Stage Movement
3 Credits (3)
Physical techniques for the actor to develop kinesthetic awareness and skills in characterization, archetypes, and stage combat. Restricted to: THTR majors.

Learning Outcomes
1. To provide fundamental training in a variety of movement techniques which can be applied to both theatrical performance and physical communication in everyday life.
2. Observation and critical skills will be advanced through class participation and outside assignments
3. Class exercises are aimed at guiding participants to uncover their own creative expression, while working with efficient, healthy body alignment

THEA 1223. The Art of Theatre
3 Credits (3)
This course introduces the variety and scope of theatre professions, the value and goals of the theatre major and an analysis of the art form from script to stage. Restricted to: Required for THTR majors.

Learning Outcomes
1. An overview of the history of theatre in the Western world
2. A general understanding of the artistic roles and functions within the theatre industry (including within NMSU Theatre as a model)
3. A strong preparation for independent in-depth script analysis and theatre critique

THEA 1310. Introduction to Costuming
3 Credits (3)
This course introduces students to basic skills generally used in creating costumes for theatre. During the semester students will be introduced to the costume shop, equipment, supplies, and processes. They will learn the process of sewing a garment and running a stage production.

Prerequisite(s)/Corequisite(s): THEA 1310L. Restricted to: THTR majors.

Learning Outcomes
1. Demonstrate basic hand and machine sewing skills.
2. Use basic costume craft tools and techniques.
3. Analyze fabric selection for the stage.
4. Draft and use patterns.
5. Take body measurements for patterning and construct a costume from those measurements.
6. Combine interpersonal communication skills with costume construction skills.
7. Analyze a script for costume design purposes.
8. Build a garment.

THEA 1310L. Costume Craft Lab
1 Credit (1)
Class members will assist in construction for productions in a studio environment.

Prerequisite(s)/Corequisite(s): THEA 1310.

Learning Outcomes
1. This laboratory class compliments THEA 1310: Costume Crafts.
2. It gives the student an opportunity to put into practice the skills learned in THEA 1310 as well as be introduced to and participate in the day-to-day operations of the Costume Shop.

THEA 1415. Running Crew I
2 Credits (1+2P)
Students learn about backstage and front of house production positions and work on a technical aspect of a product in a rehearsal and performance environment.
Learning Outcomes
1. Students will learn one, or more, of the basic technical elements of theatrical crew work.

THEA 2310. Stagecraft
3 Credits (3)
Student will explore basic skills for scenic designers and techniques of set construction for the stage, including building scenery, rigging, painting and properties.
Prerequisite(s)/Corequisite(s): THEA 2310L.

Learning Outcomes
1. Demonstrate a range of technical skills, which will qualify them to assist in the basic technical production of a play.
2. Demonstrate and apply how to safely and competently use hand tools, power tools, electrical, and electronic stage equipment.
3. Analyze the technical aspects of a play in performance.
4. Read and construct scenery from ground plans, elevations, and drawings.
5. Analyze a script from the perspective of a designer, artistic, and/ or technical director.

THEA 2310L. Stagecraft Laboratory
1 Credit (1)
Class members will assist with construction for productions in a studio environment.
Prerequisite(s)/Corequisite(s): THEA 2310.

Learning Outcomes
1. History of scenic design and the development of present day stage design.
2. How to create and interpret basic scenic ground plans, elevations, and detail drawings.
3. To construct basic scenic structures to include flats and platforms.
4. Various techniques of scenic painting and decorating.
5. The installations of theatre lighting instruments and sound equipment.

THEA 2340. Introduction to Design
3 Credits (3)
Introduction into our visual world via the language of designers, focusing on collaboration, creative thinking and presentation skills. The varied design professions in theatre and the performing arts will be explored. Restricted to: Required of all THTR Majors.

Learning Outcomes
1. Apply design vocabulary and descriptions when speaking about design.
2. Identify design tools and make choices about where to use them.
3. Apply the foundation information in understanding how design tools work.
4. Apply correct terminology in assessing design and script analysis.
5. Read and understand some of the design documents commonly used in the industry.

THEA 2415. Running Crew II
1 Credit (1)
Students learn about backstage and front of house production positions and work on a technical aspect of a product in a rehearsal and performance environment.

Learning Outcomes
1. To provide students with “hands on” experience participating in being a member of a running crew on a theatrical production.
2. Students will learn one, or more, of the basic technical elements of theatrical crew work.

THEA 2421. Vocal Production for the Actor
3 Credits (3)
Exploration and development of the actor’s vocal instrument, including relaxation, projection, diction and articulation.

Learning Outcomes
1. Apply concepts of alignment, relaxation, breath support, resonance, projection, and articulation for your personal and professional benefit.
2. Refine vocal ‘problem solving’ which will carry into your personal and professional life.
3. Apply vocal concepts to a variety of text in order to understand and appreciate your voice and its capabilities, both intellectually and sensorially.
4. Apply the vocal/speech tools consciously and behavior-ally, as an aid in the search for musicality of the voice in conjunction with truth and believability.

THEA 2993. Theatre Workshop I
0.5 Credits (.5)
Required for all freshman and sophomore theatre majors, this course coordinates all processes within Theatre Arts, providing a forum for discussion and feedback. May be repeated up to 4 credits. Restricted to Las Cruces campus only.

Learning Outcomes
1. This lab course is designed to create community via group meetings with your peers while providing a platform for our guest artists to present information regarding our profession.
2. As time allows, group discussions and sharing will further the sense of community and collaboration with your peers.
3. This forum also provides an opportunity to discuss and provide feedback for each production in the ASTC season.

THEA 2996. Theatre Topics
1-3 Credits (1-3)
Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 9 credits.

Learning Outcomes
1. Varies

THEA 300. Theatre Workshop II
0.5 Credits (.5)
Required for all junior and senior theatre majors, this course coordinates all processes within Theatre Arts, providing a forum for discussion and feedback. May be repeated up to 4 credits. Restricted to Las Cruces campus only.

THEA 303. Theatre History I
3 Credits (3)
History of theatre and drama from ancient Greece to the English Renaissance.

THEA 304. Theatre History II
3 Credits (3)
History of theatre and drama from the Restoration to the 20th century. May be repeated up to 3 credits.

THEA 305. Advanced Vocal Production
3 Credits (.3)
Advanced exploration and development of the actor’s vocal instrument. May be repeated up to 3 credits.

Prerequisite(s): THEA 2421.
THEA 306. Script Analysis
3 Credits (3)
This class is designed to give you tools and specific processes to help you read and break down a text, so that you can make it come alive for audiences in the varied genres of theatre, film and animation.

Learning Outcomes
1. Determine the dramatic structure of a script
2. Write an analysis of a script for production
3. Verbally communicate an analysis of a script for production
4. Analyze a script from a specific perspective such as actor, director, designer, animator, etc.

THEA 307V. Society in Style: Fashion, History and Culture
3 Credits (3)
History of clothing for theatrical purposes, origins and evolution of period clothing in relation to social, political, and aesthetic factors of different periods.

THEA 308. Creative Writing: Playwriting
3 Credits (3)
Technique of one-act playwriting, and analysis of dramatic structure. Crosslisted with: ENGL 308
Prerequisite(s): ENGL 110G.

THEA 310. Styles in Acting
3 Credits (3)
Analysis of differing styles of acting through scene work representing various time periods and genres. Consent of Instructor required. May be repeated up to 3 credits.
Prerequisite: THEA 1221 or THEA 1210 with a C- or better.

THEA 311. Acting for Film and Television
3 Credits (3)
Specific techniques of acting for the camera are explored via hands-on experiential learning and an introduction to the business of the TV/Film industry
Prerequisite(s): THEA 1221 or THEA 1210 or permission of instructor.

THEA 313. Improvisation
3 Credits (3)
Long and/or short form improvisation techniques in addition to a variety of exercises exploring terminology, character work and the elements of comedy.
Prerequisite(s): THEA 1210 or THEA 1221.

THEA 315. Theatre in New York City
3 Credits (3)
Students are introduced to the professional world of theatre via productions, speakers, and tours during this travel course. May be repeated up to 6 credits.

Learning Outcomes
1. To gain insight into professional theatre by viewing and reviewing Broadway productions in NYC.
2. To receive information about the business of theatre via guests who are theatre professionals.
3. To become familiar with job opportunities backstage via guided tours of professional theatre spaces in New York.

THEA 317. Musical Theatre
3 Credits (3)
Acting class focused on developing and refining skills necessary for performing in musicals. May be repeated up to 9 credits.
Prerequisite(s): THEA 1221 or THEA 1210 with a C- or better.

THEA 323. American Drama
3 Credits (3)
Masterworks of American drama from the 20th century to the present. Crosslisted with: ENGL 323.

THEA 324. Singing for Musical Theatre
3 Credits (3)
Students will gain an understanding of stronger vocal health, aural skills, and rehearsal practice strategies as they work on musical theatre singing techniques and performances including solos, duets and small groups, and a final public showcase.

Learning Outcomes
1. The ability to practice strong vocal habits in order to independently maintain vocal health.
2. Identify and utilize proper vocal warm-up techniques.
3. Display an improved level of music reading and aural awareness.
4. Analyze and break down a piece of theatrical music into components for focused learning.
5. Perform pieces of musical theatre both individually and in a group with increased ease.

THEA 330. Special Topics: Variable
3 Credits (3)
Specific subjects to be announced in the Schedule of Classes.

Learning Outcomes
1. To gain knowledge and/or skill in a specialty area of theatre

THEA 334. Introduction to Stage Makeup
3 Credits (3)
Basic principles of stage makeup: straight, character, and specialty. Includes study of various products, methods of application, and the effects of lighting on makeup.

THEA 337. Independent Study
1-3 Credits (1-3)
Students propose and design their own course not covered through regular course offerings under the guidance of faculty. Consent of Instructor required. May be repeated up to 6 credits.

THEA 341. Scene Painting
3 Credits (3)
Use of historical painting techniques in a project-driven classroom. Projects include 2-D and 3-D work, color mixing and theory, painting scenery, and the use of paint for effects.
Prerequisite(s): THEA 2310.

THEA 343. Costume Patterning
3 Credits (3)
Basic techniques in the production of flat patterns for modern and period silhouettes including some draping techniques. Consent of Instructor required. May be repeated up to 3 credits.

Learning Outcomes
1. Advanced training in costume design; the ability to create an original pattern in order to be able to make a costume item that is original

THEA 345. Costume Practicum
1 Credit (1)
A practical course intended to provide students additional experience and greater responsibility within the workings of the Costume Shop. May be repeated up to 1 credits.
Prerequisite(s): THEA 1310.

THEA 346. Scenic Practicum
1 Credit (1)
A practical course intended to provide students additional experience and greater responsibility within the workings of the Scene Shop. May be repeated up to 2 credits. Graded: S/U Grading (S/U, Audit).
Prerequisite(s): THEA 2310.

THEA 347. Lighting Practicum
1 Credit (1)
A practical course intended to provide students hands-on experience executing theatrical lighting.

THEA 348. Running Crew III
1 Credit (1)
Students will work on a technical aspect of a production in a rehearsal and performance environment.
Prerequisite(s): THEA 1415.

THEA 349. Running Crew IV
1 Credit
Students will work on a technical aspect of a production in a rehearsal and performance environment.
Prerequisite(s): THEA 1415.

THEA 352. Costume Design
3 Credits (3)
Basic principles of costume design, including script analysis, principles of design, drawing and painting.

THEA 353. Scene Design
3 Credits (3)
Design for the performing arts. Basic design skills and projects to exercise those skills, history of design in the theatre and the designer's role in the production process. Final project includes a finished scene design.
Prerequisite: THEA 2310 or consent of instructor.

THEA 354. Sound Design
3 Credits (3)
Hands-on training in theatrical sound design and implementation.

THEA 355. Lighting Design
3 Credits (3)
Basic aspects of theatre lighting, including electricity, color theory, history, and types of lighting instruments.

THEA 356. Theatre Production
1-3 Credits
Participation in the production of theatrical performances by stage managing, acting, designing, dramaturgy, or directing. May be repeated for a maximum of 6 credits. Graded S/U.

THEA 357. Computer Scenographics
3 Credits (3)
Project-oriented course teaching basic computer modeling skills. Projects focus on the creation of communication tools designers use in the theatrical process. Students will develop portfolios of completed projects. Consent of instructor required.
Prerequisite(s): THEA 352, THEA 353, or THEA 355.

THEA 366. Summer Theatre
1-3 Credits
Experience in professional or academic summer theatre. May be repeated for a maximum of 3 credits. Graded: S/U. Restricted to THTR majors.
Prerequisite(s): Consent of department head.

THEA 384. Stage Management
3 Credits (3)

Study of stage management techniques and their application to play production. A working knowledge of union rules, and the procedure to facilitate these through proper communication skills.

THEA 395. Directing I
3 Credits (3)
Study and application of basic stage directing techniques.
Prerequisite(s): THEA 1210 or THEA 1221.

THEA 408. Shakespeare I
3 Credits (3)
Study in Shakespeare's early poems and plays. Repeatable for up to six credits under different subtitles.

Learning Outcomes
1. Analyze Shakespeare's poetry using the methods of close reading
2. Demonstrate ability to read and develop persuasive literary-critical interpretations of Shakespeare's poems and plays;
3. Demonstrate skill in working with relevant secondary resources and research tools including the MLA bibliography to write a research paper on a topic related to our course material;
4. Work effectively in small groups to interpret a scene through performance

THEA 409. Shakespeare II
3 Credits (3)
Study in Shakespeare's later plays. ENGL 408 is not a prerequisite. Repeatable for up to six credits under different subtitles. Crosslisted with ENGL 409.

Learning Outcomes
1. Analyze Shakespeare's poetry using the methods of close reading;
2. Demonstrate ability to read and develop persuasive literary-critical interpretations of Shakespeare's poems and plays;
3. Demonstrate skill in working with relevant secondary resources and research tools including the MLA bibliography to write a research paper on a topic related to our course material;
4. Work effectively in small groups to interpret a scene through performance.

THEA 410. Advanced Acting: Contemporary Methods
3 Credits (3)
Acting techniques will be explored focusing on current trends in the profession, from Stanislavski, to Hagen to Meisner. May be repeated up to 3 credits. Consent of Instructor required. Restricted to: THTR majors.
Prerequisite(s): THEA 1210 or THEA 1221.

THEA 414. Collaborative Theatre-Making
3 Credits (3)
This course introduces students to the techniques, skills and practice of the collaborative creation of new theatrical material.
Prerequisite(s): THEA 1221.

THEA 417. Musical Theatre II
3 Credits (3)
A continuation of THEA 317, allowing for more advanced musical theatre techniques.
Prerequisite(s): THEA 317.

THEA 430. Special Topics
1-3 Credits
Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 9 credits.

THEA 435. Directed Reading
1-3 Credits
Directed individualized studies. May be repeated for a maximum of 3 credits.

THEA 439. Senior Seminar
3 Credits (3)
Course preparing students for professions in and related to the theatre. Restricted to: THTR majors.

THEA 450. The Michael Chekhov Acting Intensive
3 Credits (3)
An intensive overview of the performance techniques attributed to Michael Chekhov, applied to theatrical scenes and presentations. May be repeated up to 6 credits. Consent of Instructor required.

THEA 535. Directed Study
1-3 Credits (1-3)
For the highly motivated student. Independent projects and individual guidance. Graduate standing and consent of instructor required. May be repeated up to 6 credits.

1. See the General Education (p. 227) section of the catalog for a full list of courses.
2. A Mathematics General Education course is required but students may need to take any prerequisites needed to enter the course selected first.
3. See the Viewing A Wider World (p. 231) section of the catalog for a full list of courses.
4. Theatre majors must enroll in Theatre Workshop each semester. THEA 2993 Theatre Workshop I for freshmen and sophomores and THEA 300 Theatre Workshop II for juniors and seniors, 2 credits total for each course equaling a total of 4 credits.
5. Courses from this category must not duplicate selections above.
6. Elective credit may vary based on General Education course selection, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement
For the Bachelor of Arts in Theatre Arts there is no second language requirement for the degree.

A Suggested Plan of Study
This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for
students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

---

1. Double counting of credits is not permitted.
2. Area I: Communications courses are not counted toward the area credits.
3. Each concentration has its own second language requirement.
4. A Mathematics General Education course is required but students may need to take any prerequisites needed to enter the course selected first.
5. See the General Education (p. 227) section of the catalog for a full list of courses.
6. Elective credit may vary based on General Education course selection, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

## Theatre Arts - Undergraduate Minor

The Department of Theatre Arts has one minor in Theatre Arts. Students must pass a minimum of 18 credits in consultation with a theatre department faculty member. NOTE: 9 credits must be 300 level and above. THEA credits must earn grades of C- or higher to earn the minor. A student cannot earn both a BA in Theatre Arts and a minor in Theatre Arts.

## College of Business

**Dean - Bryan Ashenbaum**

**Associate Dean for Research and Graduate Programs - Carlo Mora**

**Interim Associate Dean for Student Affairs and Curriculum - Daniel James**

**Assistant Dean for Budget and Finance - Lourdes Alvarado-Salas**
Mission of the College of Business

The College of Business transforms lives by providing highly respected programs, instruction and scholarly activities that drive economic, social, educational and community development for New Mexico's diverse population.

Requirements for the Bachelor Degrees

- Successful completion of the New Mexico General Education Requirements and NMSU Viewing a Wider World Courses.
- Successful completion of College of Business Requirements below and major requirements. For the Bachelor of Arts in Economics, see the Economics and International Business (p. 861) section for specific requirements.
- A minimum cumulative grade point average (GPA) of 2.0 in all courses taken at NMSU to meet lower and upper division business core and major requirements.
- All majors except Economics and International Business require a minimum cumulative GPA of 2.0 in all courses taken to meet the requirements of the major. For Economics and International Business majors, a minimum cumulative GPA of 2.5 is required for courses taken to meet the requirements for the major.
- A minimum of 50% of business credits required for a Bachelor of Accountancy or Bachelor of Business Administration degree or 18 business credits required for a Bachelor of Arts in Economics degree must be completed in the College of Business and a minimum of 12 credits required in the major must be completed in the College. See sections below for major-specific transfer criteria. A total of no more than six credits of courses designated as 300E may be used to satisfy the required upper division business elective, the ECON/A ST elective, and electives in the major.

The only courses that may be taken on an S/U option by students in the College of Business are those designated S/U only, general electives outside the college, and up to 9 credits of HNRS courses used to fulfill General Education requirements.

Before taking upper-division courses (numbered 300 or above) offered by the College of Business, students must complete all lower-division course requirements with the required minimum grades or better.

Upper division business course credits completed more than ten years prior to the degree application will be reviewed by the course department head and dean (or a designee) to determine their continued suitability to satisfy current degree, major and minor requirements and learning objectives.

</table>
Students may be required to take MATH 1215 Intermediate Algebra, depending on their math placement. MATH 1220G College Algebra or MATH 1430G Applications of Calculus I or MATH 1350G Introduction to Statistics fulfills the general education requirement in math.

See the General Education (p. 227) section of the catalog for a full list of courses.

A description of the requirement and a listing of approved VWW courses can be found in this catalog under Required Courses (p. 227).

All Foundation Requirement Courses must be taken, or satisfied with transfer credits, regardless of which Mathematics or Statistics course satisfies the Area II General Education course: MATH 1220G, MATH 1430G and MATH 1350G or A ST 311 must be completed.

Management - Project Supply Change majors may not use MGMT 470 Project Management in Organizations to satisfy this requirement since it is a requirement in the major; Accounting majors must take BCIS 485 Enterprise Resource Planning.

Major course credits and Elective credits vary based on the major chosen. Please see the departmental/major pages for specifics on the number of major and elective credits required: Economics (Bachelor of Arts) (p. 869); Accounting (p. 854); Economics (p. 871); Finance (p. 882); General Business (p. 894); Information Systems (p. 856); International Business (p. 875); Management (p. 891); Marketing (https://business.nmsu.edu/strategic-marketing/).

Associate in Prebusiness Degree
To complete the associate degree, 60 credits are required, including the General Education Requirements, College of Business Foundation and Business Core (lower division) requirements.

A minimum cumulative grade point average of 2.0 is also required. The last 15 credits towards the degree must be earned through the NMSU system.

Minors in Business
Minors are available in

- accounting
- advertising
- banking and financial planning
- business administration
- business law
- economics
- enterprise systems
- entrepreneurship and innovation
- finance
- information systems
- international business
- management
- marketing
- professional selling
- risk management and insurance

Students pursuing the Bachelor of Individualized Studies or the Bachelor of Applied Studies are not eligible for minors from the College of Business other than the minor in business administration. At least 12 credits of the minor must be completed at the NMSU College of Business.

Preprofessional Programs
NMSU offers a number of programs designed for transfer to professional schools through its undergraduate colleges. The programs that are administered by the College of Business is Prelaw, it is also administered through the College of Arts and Sciences.

Prelaw Students
Law schools will accept undergraduates who have earned bachelor’s degrees in any major. Many prelaw students take some law courses in their undergraduate program. The College of Arts and Sciences supervises a Supplementary Major in Law and Society, which includes courses from a number of departments and several colleges. It is described under “Government” in the Arts and Sciences chapter. The College of Business offers a number of Business Law courses which can be found under the prefix BLAW in the course description chapter later in this catalog. The Department of Philosophy in the College of Arts and Sciences offers both a major and a minor in Justice, Political Philosophy, and Law that cultivates a reasoned understanding of law and legal institutions, as well as the moral theories that support the value and justice of these institutions. The description of this major is found under the description “Philosophy.”

Because the practice of law often involves business-related problems, the majors in the college provide an excellent preparation for the prelaw student. The college has attorneys on the faculty who are available as advisors. Please contact the Finance Department for more information.

Transferring Business Courses
The Transfer Course Equivalency Search tool found at https://miniapps.nmsu.edu/transfer/ serves as a general guide in evaluation of transfer courses. However, transferability and applicability to an NMSU business or accounting degree or minor is not guaranteed until review and approval by the College of Business. Generally, for an upper division business course taken elsewhere to fulfill the requirements of an upper division business “equivalent” course at NMSU, the transferring school must have been accredited by AACSB at the time the course was taken, or, if not, have been regionally accredited and the course’s content and rigor comparable to the “equivalent” course offered at NMSU. Transfer students are encouraged to contact the Associate Academic Dean in the College of Business for content and rigor review of potential upper division transfer courses prior to or shortly after enrollment at NMSU.

Accreditation

New Mexico State University has been accredited since 1926 by the Higher Learning Commission of the North Central Association of Colleges and Secondary Schools as a degree-granting institution. The university was accredited in 1954 by the American Association of University Women.

The baccalaureate and graduate degree programs in business and accounting offered in the College of Business are accredited by AACSB International—The Association to Advance Collegiate Schools of Business.

Prebusiness - Associate in Prebusiness

Students must complete all University degree requirements, which include: General Education requirements and elective credits to total at least 60 credits. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

1 MATH 1220G College Algebra is required for the degree but students may need to take any prerequisites needed to enter MATH 1220G first.
2 A grade of C- or better is required.
3 See the General Education Section (p. 227) of the catalog for a full list of courses.
4 Elective credit may vary based on General Education course selection, second language requirements, prerequisites, dual credit, A credit, double majors and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 60 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
5 Although only 60 credits, excluding developmental coursework, are required for the degree, depending on required developmental coursework and electives taken, total credits actually earned may exceed 60.

Business Administration - Undergraduate Minor

This minor is available to all bachelors degree seeking students, except those seeking the Bachelor of Accountancy and the Bachelor of Business Administration degrees. It is the only minor in Business open to students in the Bachelor of Applied Studies and the Bachelor of Individualized Studies. At least 12 of the credits for the minor must be completed in the NMSU College of Business.
Minor Requirements

Choose 18 credits of coursework from these business core courses: Nine of the credits must be at the upper division level.

1 Courses satisfy background knowledge requirements for the MBA program when completed with a B- grade or better.
2 Only one course may be applied to this minor.

Notes: A minimum GPA of 2.0 is required in the coursework for the minor.

Several courses listed above have prerequisites. It is the responsibility of the student to determine course prerequisites and other registration requirements.

Accounting and Information Systems

Undergraduate Program Information

The Bachelor of Accountancy degree is available to students choosing accounting as a major. The curriculum is designed to prepare you for the excellent opportunities that exist in public accounting practice and in business, government and nonprofit organizations. It is also appropriate for those who may choose to seek either the Master of Accountancy or the Master of Business Administration degree after graduation.

The Information Systems program students for a variety of administrative and technical positions in a wide range of organizations. Potential employers include information system service organizations, public accounting/consulting firms, manufacturing and merchandising business, banks and other financial institutions, government and others that rely on information systems to support their business.

Graduate Program Information

The major objective of the Master of Accountancy (MAcc) program is to provide students with an increased depth of knowledge of accounting to prepare students more adequately for careers as professional accountants in financial institutions, government, not-for-profit organizations and public practice. The program is designed to provide a technical and theoretical foundation in accountancy at the advanced level and yet allow the student to take courses to accommodate individual needs. The Master of Accountancy also provides students a path to satisfy the 150 credits necessary to become a Certified Public Accountant.

Kevin Melendrez, Ph.D., Department Head

Professors Mora-Monge; Associate Professors Clemons, Ewing, Joo, Melendrez, Zhang; Assistant Professors Arslan, Fuqua, Park, Peters; College Assistant Professor Hamilton, Mitchell, Shindi; Emeritus Professor Billiot, Foster, Mills, Oliver, Scribner, Seipel, Tunnell

Accounting Courses

ACCT 200. A Survey of Accounting
3 Credits (3)

Emphasis on financial statement interpretation and development of accounting information for management. For engineering, computer science, and other non business majors. Community Colleges only.

Prerequisite: one C S course or consent of instructor.

ACCT 2110. Principles of Accounting I
3 Credits (3)

An introduction to financial accounting concepts emphasizing the analysis of business transactions in accordance with generally accepted accounting principles (GAAP), the effect of these transactions on the financial statements, financial analysis, and the interrelationships of the financial statements.
Learning Outcomes
1. Analyze business transactions, their effects on the financial statements and the interrelationships of the financial statements involving the following: Cash transactions; Receivables and Net Realizable Value; Operational Assets and Depreciation; Inventory; Current Liabilities; Long-term Liabilities
2. Define, identify and demonstrate the impact of adjusting entries on financial statements.
3. Explain and demonstrate the differences between cash and accrual basis accounting.
4. Define and identify generally accepted accounting principles.

ACCT 2120. Principles of Accounting II
3 Credits (3)
An introduction to the use of accounting information in the management decision making processes of planning, implementing, and controlling business activities. In addition, the course will discuss the accumulation and classification of costs as well as demonstrate the difference between costing systems.
Prerequisite(s): ACCT 2110.

Learning Outcomes
1. Identify the differences between financial and managerial accounting.
2. Illustrate the accumulation of costs in cost accounting systems.
3. Describe the basic elements of the budgeting process, its objectives and budget preparation.
4. Define and classify cost behavior.
5. Perform cost-volume-profit analysis for decision-making.
6. Perform differential (incremental) analysis for business decision making.
7. Explain the cause of the variance and its effect on the income statement.
8. Explain and demonstrate the difference between traditional costing and activity-based costing.

ACCT 301. Financial Accounting I
3 Credits (3)
Concepts, principles, and practices of financial accounting, stressing the determination of income and financial position. A student who does not pass the class within three attempts will not be allowed to take class for a fourth.
Prerequisite(s): C or better in ACCT 2110 or (OATS 120 and OATS 121) and ACCT 2120.

ACCT 302. Financial Accounting II
3 Credits (3)
A continuation of ACCT 301.
Prerequisite(s): C or better in ACCT 301.

ACCT 351. Accounting Systems
3 Credits (3)
Covers accounting information systems as processors of data for financial reporting and control of economic organizations.
Prerequisite(s): C or better in ACCT 2110 or (OATS 120 and OATS 121) and ACCT 2120.

ACCT 353. Cost Accounting
3 Credits (3)
The development and use of cost accounting information for inventory valuation, income determination, and cost control. A student who does not pass the class within three attempts will not be allowed to take class for a fourth.

Prerequisite(s): C or better in ACCT 2110 or (OATS 120 and OATS 121) and ACCT 2120.

ACCT 403. Federal Taxation I
3 Credits (3)
Basic federal income tax laws; emphasis on determination of taxable income of individuals. A student who does not pass the class within three attempts will not be allowed to take class for a fourth.
Prerequisite(s): C or better in ACCT 2110 or (OATS 120 and OATS 121) and ACCT 2120.

ACCT 451. Auditing Theory and Practices
3 Credits (3)
Auditing standards, audit evidence, auditors reports and opinions, and professional responsibilities.
Prerequisite(s): ACCT 351 and C or better in ACCT 302.

ACCT 455. Federal Taxation II
3 Credits (3)
Federal income tax laws applicable to partnerships, corporations, fiduciaries, tax research, tax planning.
Prerequisite(s): C or better in ACCT 403 or consent of instructor.

ACCT 456. Accounting for Nonprofit Organizations
3 Credits (3)
Control and reporting problems unique to governmental units and other nonprofit organizations. Fund accounting principles, procedures, and reports.
Prerequisite(s): C or better in ACCT 302.

ACCT 458. Accounting Data Analytics
3 Credits (3)
Data Analytics in financial and managerial accounting and auditing. Restricted to: Accounting majors.
Prerequisite(s): C or Better in ACCT 301, ACCT 302, and ACCT 351.

ACCT 490. Selected Topics
1-3 Credits
Current topics in accounting. Prerequisites vary according to the seminar offered. May be repeated for a maximum of 12 credits under different subtitles.

ACCT 498. Independent Study
1-3 Credits
Individual studies directed by consenting faculty with the prior approval of the department head. May be repeated up to 3 credits. Consent of Instructor required.
Prerequisite(s): Consent of instructor.

ACCT 500. Concepts in Accounting
1 Credit (1)
Development, interpretation, and use of accounting information for financing, investing, operating, and managerial decision making.
Prerequisite(s): Admitted to MBA program.

ACCT 503. Accounting for Managers
3 Credits (3)
Concepts and principles of financial and managerial accounting. Presents techniques used to measure business transactions, prepare financial statements, techniques for management decision-making, planning, and control. Not open to MAcc students.
Prerequisite(s): B or better in both ACCT 2110 or (OATS 120 and OATS 121) and ACCT 2120.

ACCT 510. Technical and Professional Communication for Accountants
3 Credits (3)
Effective writing strategies for professional communications. Students will learn to write with a professional style and proper English usage.
and to work with a variety of technical and lay audiences. Emphasis on
initiation, planning, composition, and evaluation of business and
accounting workplace scenarios to develop communication skills used in
a business environment. Restricted to: Master of Accountancy majors.

ACCT 530. Advanced Accounting
3 Credits (3)
This course is designed to provide in-depth study of current financial
accounting concepts related to business combinations, financial
statement consolidations, and foreign currency transactions and
translations. Restricted to: Master of Accountancy majors.
Prerequisite(s): ACCT 302 with a grade of C or better.

ACCT 544. Financial Statement Analysis and Valuation
3 Credits (3)
Valuation of firms using financial information, financial statement
analysis, and the valuation of individual assets and liabilities. Restricted
to: Master of Accountancy majors.
Prerequisite(s): Acct 302; Graduate students only.

ACCT 550. Special Topics
3 Credits (3)
Seminars in current topics in various areas of accounting including
financial, managerial, auditing, taxation, systems, and fund accounting.
Prerequisites vary according to topic being offered.

ACCT 551. Advanced Auditing Theory and Practice
3 Credits (3)
Understanding and evaluating internal control in an EDP environment.
Statistical sampling applications and current issues in auditing.
Restricted to: Master of Accountancy majors.
Prerequisite(s): ACCT 451.

ACCT 555. Federal Tax Research
3 Credits (3)
Tax research methodology including case materials, critical judicial
decisions, journal articles, and research services. Emphasis on tax
planning. Restricted to: Master of Accountancy majors.
Prerequisite(s): ACCT 403.

ACCT 559. Ethics and Professionalism in Accounting
3 Credits (3)
Introduction to ethical reasoning, integrity, objectivity, independence,
and professional accounting issues. Students will apply the concepts
and theories to accounting-specific cases. Restricted to: Master of
Accountancy majors.
Prerequisite(s): C or better in ACCT 451.

ACCT 560. Taxation of Corporations and Shareholders Advanced
3 Credits (3)
Effects of taxation on the organization, operation, and reorganization
of corporations and on their shareholders. Restricted to: Master of
Accountancy majors.
Prerequisite(s): ACCT 403.

ACCT 564. Financial Accounting Research
3 Credits (3)
Interpretation and application of accounting principles to financial
reporting issues of business and nonbusiness organizations. Consent of
Instructor required. Restricted to: Master of Accountancy majors.
Prerequisite(s): ACCT 302.

ACCT 580. Professional Accountancy
3 Credits (3)
Prepares students for the accounting profession and professional
certification through study of a wide range of topics similar to those a
student might encounter in their first year of employment. Restricted to:
Master of Accountancy majors.

ACCT 598. Independent Study
1-3 Credits
Individual studies directed by consenting faculty with prior approval of
the department head. A maximum of 3 credits may be earned.
Prerequisite: consent of instructor.

ACCT 599. Master's Thesis
15 Credits
Thesis.

Business Computer Systems

BCIS 1110. Introduction to Information Systems
3 Credits (3)
Examination of information systems and their impact on commerce,
education, and personal activities. Utilization of productivity tools for
communications, data analysis, information management and decision-

Learning Outcomes
1. Describe the social impact of information literacy and systems in
relation to commerce, education, and personal activities.
2. Explain how to use the information resources legally, safely, and
responsible in relation to ethical, security, and privacy issues.
3. Evaluate bias, accuracy and relevance of information and its sources.
4. Use productivity tools for communications, data analysis, information
management and decision-making.
5. Describe and use current information systems and technologies

BCIS 312. Introduction to Software Development and Programming
3 Credits (3)
Computer algorithm development and programming logic in the
context of business information systems using current programming
environments. Includes program design, data types, data structures,
control structures, arrays, and principles of object oriented programming.
Prerequisite(s): C- or better in BCIS 1110; and MATH 1215.

BCIS 338. Business Information Systems I
3 Credits (3)
Application, design and use of computerized information systems in
business environment.
Prerequisite(s): BCIS 1110 or consent of instructor.

BCIS 350. Information Systems Analysis and Design
3 Credits (3)
An introduction to the analysis and design of secure information
systems.
Prerequisite(s): Concurrently with BCIS 338 or consent of instructor.

BCIS 461. Business Analytics I
3 Credits (3)
This course provides an understanding of how organizations can utilize
technology to successfully collect, organize, manipulate, use, and
present data. The course blends the use of current technology with the
managerial practices involving business analytics. The emphasis of the
course will be on data management practices and the production of
descriptive analytics. Crosslisted with: BCIS 561.
Prerequisite(s): BCIS 338 or consent of instructor.

BCIS 466. Business Analytics II
3 Credits (3)
This course provides an understanding of how organizations can build
and test predictive models, utilizing business-related data to estimate
model parameters. The emphasis of the course will be on utilizing data management systems to produce useful predictive analytics. Crosslisted with: BCIS 566.

**Prerequisite(s):** BCIS 461 or consent of the instructor.

**BCIS 475. Database Management Systems**

**3 Credits (3)**

Design, development, and use of database management systems in the business environment.

**Prerequisite(s):** BCIS 338 or consent of instructor.

**BCIS 480. E-Commerce Security**

**3 Credits (3)**

Introduction to securing network-based applications from internal and external threats. Fundamentals of network security, including TCP/IP, firewalls, intrusion detection, and vulnerability.

**Prerequisite(s):** BCIS 338 or consent of instructor.

**BCIS 482. Management of Information Security**

**3 Credits (3)**

Provides management overview of information security and thorough examination of administration of information security. Surveys field of information security including planning, policy and programs, protection and people relative to information security.

**Prerequisite(s):** BCIS 338 or consent of instructor.

**BCIS 485. Enterprise Resource Planning**

**3 Credits (3)**

This course covers concepts in enterprise resource planning (ERP). Topics include how ERP integrates business processes across functional areas—such as the procurement process and the sales order process—and how businesses use ERP information systems in day-to-day operations as well as for performance monitoring. SAP R/3 software will be used in several hands-on examples of ERP software as a real-world example of an ERP system.

**Prerequisite(s):** C- or better in BCIS 338 or BCIS 350 or ACCT 351.

**BCIS 490. Selected Topics**

**1-3 Credits**

Current topics in business systems analysis. Consent of Instructor required.

**BCIS 498. Independent Study**

**1-3 Credits**

Individual studies directed by consenting faculty with prior approval of the department head. May be repeated for a maximum of 3 credits.

**Prerequisites:** junior or above standing and consent of instructor.

**BCIS 502. Business Information Systems**

**3 Credits (3)**

Analysis of information systems as integral parts of business organizations, including the responsibility of management to understand their capabilities and uses in handling the organization's information flow and providing appropriate information for decision making.

**Prerequisite:** graduate students only.

**BCIS 550. Information Systems Analysis and Design**

**3 Credits (3)**

Information systems development methodologies and the system life cycle. Justifying and managing systems development projects. Not open to students who have taken BCIS 350. Students must be Graduate Students to enroll. May be repeated up to 3 credits.

**Learning Outcomes**

1. Describe foundations of systems development.
2. Explain systems development life cycle and key methodologies.
3. Depict how to conduct planning in systems development.
4. Determine and structure system requirements.
5. Apply principles and guidelines to design interfaces, forms and databases.
6. Understand the major issues in the systems implementation and maintenance.

**BCIS 561. Business Analytics I**

**3 Credits (3)**

This course provides an understanding of how organizations can utilize technology to successfully collect, organize, manipulate, use, and present data. The course blends the use of current technology with the managerial practices involving business analytics. The emphasis of the course will be on data management practices and the production of descriptive analytics. Not open to students who have taken BCIS 461. No S/U or audit option.

**Prerequisite:** BCIS 338.

**Learning Outcomes**

1. Identify the reasons for and the evolution of computerized support in managerial decision making.
2. Describe the business intelligence (BI) methodology and concepts.
3. Identify and explain various types of analytics.
4. Explain the nature of data in the context of BI and Business Analytics.
5. Describe statistical modeling and its relationship to business analytics.
6. Apply descriptive and inferential statistics techniques.
7. Explain the importance of data/information visualization and apply different types of visualization techniques.
8. Explain the basic concepts of data warehousing.
9. Explain data integration and the extraction, transformation, and load (ETL) processes.
10. Describe the essence of business performance management (BPM).
11. Describe balanced scorecard and Six Sigma as performance measurement systems.
12. Explain the objectives and benefits of data mining.
13. Learn the standardized data mining process.
14. Enhance your communication (presentation and report writing), creative thinking, problem-solving, and analytical skills.

**BCIS 566. Business Analytics II**

**3 Credits (3)**

This course provides an understanding of how organizations can build and test predictive models, utilizing business-related data to estimate model parameters. The emphasis of the course will be on utilizing data management systems to produce useful predictive analytics. Not open to students who have taken BCIS 466. No S/U or audit option.

**Prerequisite:** BCIS 561.

**Learning Outcomes**

1. Identify and explain various types of analytics.
2. Define data mining as an enabling technology for business analytics.
3. Learn the standardized data mining processes and the different methods and algorithms of data mining.
4. Build working knowledge of the existing data mining software tools.
5. Describe text analytics and understand the need for text mining.
6. Learn the process of carrying out a text mining project and the common methods for sentiment analysis.

**BCIS 575. Database Management Systems**

**3 Credits (3)**
Design, development, and use of database management systems in the business environment. Not open to students who have taken BCIS 475. May be repeated up to 3 credits.

Prerequisite: BCIS 350.

Learning Outcomes
1. Describe fundamental database terminology and explain the primary features of database management systems. (Cognitive Level: Understand)
2. Explain relational database concepts, such as primary key and referential integrity, normalization, and triggers. (Cognitive Level: Understand)
3. Explain what a data model is. (Cognitive Level: Understand)
4. Write SQL—the standard language of relational databases—at an advanced level. (Cognitive Level: Apply)
5. Design a data model and code/implement it as a database solution using SQL. (Cognitive Level: Create)
6. Describe the fundamental concepts of Data Warehouses. (Cognitive Level: Understand)
7. Design and build data warehouses. (Cognitive Level: Create)
8. Describe emergent database topics such as graph databases, big data, data lakes, NoSQL. (Cognitive Level: Understand)
9. Demonstrate how a database can be used with Python programming language and MSExcel. (Cognitive Level: Apply)

BCIS 580. E-Commerce Security
3 Credits (3)
Introduction to securing network-based applications from both internal and external threats. Fundamentals of network security including TCP/IP; firewalls, intrusion detection and vulnerability discussed. Not open to students who have taken BCIS 480. No S/U or audit option. May be repeated up to 3 credits.

Prerequisite: Communication or BCIS 460 or consent of instructor.

Learning Outcomes
1. Communication (COMM): Students are effective communicators; a) Students can write effectively. (write); b) Students can make effective oral presentations. (oral)
2. Diversity (DIVERSITY): Students can demonstrate knowledge of diversity; a) Students can identify stereotypes; b) Students can discern between helpful and detrimental stereotypes. c) Students can identify individual characteristics that affect social perception and strategies that counter negative influence on social perception.
3. Information Technology (TECH): Students are effective users of information technology; a) Students can acquire information using relevant information technologies; b) Students can use information technology to manipulate information into a form usable in business decision making; c) Students can use information technology to disseminate information to others.
4. Critical Thinking: Students can solve problems and think critically; a) Students can solve problems. (PROB SOLV); b) Students can think critically. (THINK)
5. Legal and Ethical: Students can recognize legal and ethical issues; a) Students can recognize legal issues. (LEGAL); b) Students can recognize ethical issues. (ETHICS)

BCIS 582. Management of Information Security
3 Credits (3)
Provides management overview of information security and thorough examination of administration of information security. Surveys field of information security including planning, policy and programs, protection and people relative to information security. Not open to students who have taken BCIS 482. May be repeated up to 3 credits.

Prerequisite: BCIS 1110 or equivalent.

Learning Outcomes
1. Explain the fundamental concepts of the management of information security within the context of organizations.
2. Describe commonly used information systems (IS) security standards and guidelines.
3. Create IS security management and policy as well as risk management plans.
4. Explain the behavioral aspects of IS security and discuss the development of security culture within organizations.
5. Explain the technical aspects of IS security, including issues related to cryptography and network security.
6. Describe and evaluate the regulatory aspects of information system security (primarily within the United States and European Union context).

BCIS 590. Special Topics
1-3 Credits (1-3)
Seminars in selected current topics in business computer systems. May be repeated up to 3 credits.

Prerequisite(s): Vary according to topic being offered.

BCIS 598. Independent Study
1-3 Credits
Individual studies directed by consenting faculty with prior approval of department head. A maximum of 3 credits may be earned.

Prerequisite: consent of instructor.

1 MATH 1220G College Algebra is required for the degree but students may need to take any prerequisites needed to enter MATH 1220G.
2 All Foundation Requirement Courses must be taken, or satisfied with transfer credits, regardless of which Mathematics or Statistics course satisfies the Area II: General Education course or the General Education Elective requirements: MATH 1220G, MATH 1430G and MATH 1350G or A ST 311 must be completed.
3 See the General Education (p. 227) section of the catalog for a full list of courses.
4 See the Viewing a Wider World section of the catalog for a full list of courses and how to fulfill this requirement.
5 A student who does not pass ACCT 301 Financial Accounting I, ACCT 353 Cost Accounting, or ACCT 403 Federal Taxation I within three attempts will not be allowed to take the class for a fourth.
6 Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, or/and minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Choose one from the following: 4
Information Systems - Bachelor of Business Administration

Every candidate for this major must fulfill the following requirements in addition to the general education common core, College of Business foundation and business core (p. 845), Viewing a Wider World requirements and general electives.

Please note that some of the courses listed may have a prerequisite which would require a student to take an additional course. Substitutions for some of these courses may be considered if a student makes this request to the department.

Note: The Information Systems major is also offered through an Online Distance Education Degree Completion Program. Program requirements may vary.
Course Requirements

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

### Prefix | Title | Credits
--- | --- | ---
**General Education**
Grades of C- or better are required in general education communications courses.

*Area I: Communications*

**English Composition - Level 1**
Choose one from the following:
- ENGL 110G Composition I
- ENGL 1110H Composition I Honors
- ENGL 1110M Composition I

**English Composition - Level 2**
ENGL 2210G Professional and Technical Communication Honors

**Oral Communication**
Choose one from the following:
- ACOM 1130G Effective Leadership and Communication in Agriculture
- COMM 1115G Introduction to Communication
- COMM 1130G Public Speaking
- HNRS 2175G Introduction to Communication Honors

*Area II: Mathematics*

**MATH 1220G** College Algebra (Foundation Requirement) ³

*Area III/IV: Laboratory Sciences and Social/Behavioral Sciences*

**ECON 2110G** Macroeconomic Principles (Credits are counted in Business Core)

**ECON 2120G** Principles of Microeconomics (Credits are counted in Business Core)

**Area III: Laboratory Sciences Course (4 credits)²**

**Area V: Humanities²**

**Area VI: Creative and Fine Arts²**

**General Education Elective**

**MATH 1430G** Applications of Calculus I (Foundation Requirement)

**Viewing a Wider World³**

**Departmental/College Requirements**

**Foundation Requirements⁴**
Choose one from the following:

- If MATH 1350G is taken before MATH 1220G then the Statistics course will satisfy the Area II Requirement and MATH 1220G must be taken as a foundation requirement.
- MATH 1350G Introduction to Statistics (Foundation Requirement)
- A ST 311 Statistical Applications (Foundation Requirement - doesn’t count as Gen.Ed.)

**Business Core: Lower Division (minimum grades of C- required)**

**Second Language: (not required)**

**Electives, to bring the total credits to 120⁵**

Total Credits 120

---

¹ Students may be required to take MATH 1215 Intermediate Algebra, depending on their math placement. MATH 1220G College Algebra or MATH 1430G Applications of Calculus I or MATH 1350G Introduction to Statistics fulfills the general education requirement in math.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses and how to fulfill this requirement.

⁴ All Foundation Requirement Courses must be taken, or satisfied with transfer credits, regardless of which Mathematics or Statistics course satisfies the Area II General Education course: MATH 1220G, MATH 1430G and MATH 1350G or A ST 311 must be completed.

⁵ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis.
A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

 Credits 12

Total Credits 120

1 These courses have prerequisites and it is the student's responsibility for checking and fulfilling all course prerequisites listed for these courses.

2 See the General Education (p. 227) section of the catalog for a full list of courses.

3 Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

4 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

5 Information Systems Elective Courses:
   - BCIS 466 Business Analytics II, BCIS 480 Introduction to Cybersecurity: Exploring Computer, Network, and Data Security Principles, BCIS 490 Selected Topics
Accounting - Undergraduate Minor

To obtain a minor in Accounting, a student must complete 18 or more credit hours of approved course work in Accounting (ACCT), of which at least 12 hours are in courses numbered 300, or higher. All courses for the minor must be completed with a grade of C- or better. At least 12 credits must be completed at NMSU.

This minor is not open to majors in the Bachelor of Individualized Studies and the Bachelor of Applied Studies.

Total Credits 18

Of the 12 hours of upper-division Accounting classes required for the minor, a minimum of 6 must be taken at NMSU. At least 12 credit hours must be completed at the NMSU College of Business. To count toward the minor, upper-division transfer courses must have been taken at an institution with AACSB Accounting accreditation.

Enterprise Systems - Undergraduate Minor

To obtain a minor in Enterprise Systems, a student must complete 18 or more credit hours of approved course work. A cumulative grade point average of at least 2.0 over the 18 hours must be earned. At least 12 credits must be completed at NMSU. This minor is not open to majors in the Bachelor of Individualized Studies and the Bachelor of Applied Studies.

Business Administration Graduate Program Information

The business and accounting programs at NMSU, including the MBA program, are accredited by AACSB International - The Association to Advance Collegiate Schools of Business.

The Master of Business Administration (MBA) program is a professional program designed to provide students with a solid background in business practices and the problem-solving and people skills needed to become successful leaders in the global business environment. Program graduates are prepared for administrative or managerial positions in a wide variety of organizations, both private and governmental. The MBA program is offered in a traditional classroom with some online delivery and in a cohort-based distance program with a synchronous online component. Details are available at [https://business.nmsu.edu/mba/](https://business.nmsu.edu/mba/).

The Ph.D. program in Business Administration offers the opportunity to specialize in either Marketing or Management.

Rahman, Ph.D. (Texas El Paso) - personal financial planning, financial analysis and markets; G. A. Rosile, Ph.D. (Emeritus); H. Sankaran, Ph.D. (Houston) – corporate finance, investments; E. T. Sautter, Ph.D. (Emeritus); E. A. Scribner, Ph.D. (Emeritus); C. Sokka, Ph.D. (Ohio State) – count data models; R. L. Steiner, Ph.D. (Oklahoma State) – likelihood methods, discrete distributions; J. E. Teich, Ph.D. (Emeritus); D. M. VanLeeuwen, Ph.D. (Oregon State) – statistics; B. Widner, Ph.D. (Colorado State) – urban/ regional, public finance, development; C. Yildirim, Ph.D. (Texas Tech) – retirement planning investment choices, behavioral finance; Y. You, Ph.D. (Wisconsin) – linguistic framing, anthropomorphism; Y. Zhang, Ph.D. (Texas Tech) – financial accounting; J. Zhu (Iowa) – marketing analytics, machine learning.

Business Administration Courses

B A 105. Special Topics
3 Credits
Current topics in business and economics.

B A 291. Business Administration and Economics Internship and Cooperative Education I
1-3 Credits
Introduction and applications of the principles of business administration and economics. Registration in one course allowed per co-op work phase; a minimum of 12 work weeks is required. Open only to students in the College of Business. Option of S/U or a grade. The amount of academic credit (1-3 cr.) will be determined by the academic experience, and not by the work experience.

B A 305. Leadership Training for COB Ambassadors
1 Credit (1)
Leadership development for volunteers serving as COB student ambassadors, focusing on COB undergraduate business degree programs, NMSU student services, public speaking and public relations.

B A 391. Business Administration and Economics Internship and Cooperative Education II
1-3 Credits
Applications of the principles of business administration and economics. Registration in one course allowed per co-op work phase; a minimum of 12 work weeks is required. Open only to students in the College of Business. Option of S/U or a grade. The amount of academic credit (1-3 cr.) will be determined by the academic experience and not by the work experience.

B A 490. Selected Topics
3 Credits (3)
Prerequisites vary according to the seminar being offered.

B A 498. Independent Study
1-3 Credits
Individual studies directed by consenting faculty with the prior approval of the department head. A maximum of 3 credits may be earned.
Prerequisite: junior or above standing and consent of instructor.

B A 500. Macroeconomic Essentials
1 Credit (1)
Macroeconomic theory and public policy, national income concepts, unemployment, inflation, economic growth and international payment problems. Restricted to: MBA Major majors majors.

B A 501. Quantitative Tools for the MBA
1 Credit (1)
An overview of critical topics in math and statistics that will provide a quantitative foundation for students entering the Master of Business Administration program. Admission to the MBA program.

B A 545. Business Ethics
3 Credits (3)
Understanding of business ethics, social responsibilities of business organizations, and personal codes of conduct. Complexities of moral reasoning and principles of ethical behavior.

B A 550. Special Topics
3 Credits (3)
Interdisciplinary seminar in selected current business topics.
Prerequisite(s): Prerequisites vary according to the seminar being offered.

B A 590. Professional Paper/Presentation
3 Credits (3)
Paper written in close coordination with sponsoring professor and presented near the end of the student’s final semester in the M.B.A. program. The paper will consist of a professional business report, a case study of a business or organization or a research report. Restricted to: MBA majors.

Prerequisite(s): Minimum of 3.0 average in: ACCT 503, BLAW 502, BFIN 503, and MKTG 503 or AEAB 551.

B A 598. Special Research Programs
1-3 Credits
Individual investigations either analytical or experimental. A maximum of 3 credits may be earned.

Prerequisite: consent of instructor.

B A 599. Master’s Thesis
15 Credits
Thesis.

Economics, Applied Statistics, and International Business

Undergraduate Program Information
The Department of Economics, Applied Statistics, and International Business (EASIB) offers undergraduate degrees in two majors in the bachelor of business administration – one in economics and one in international business. The Department also offers a bachelor of arts in economics. Economics majors work in business, government, and the non-profit sector. The economics major is also a good choice for students who plan to attend graduate school in economics, law, business, and other areas. International business is a good major for those interested in working in the international operations of a business or interested in working outside the United States. International Business graduates often obtain jobs in areas such as management or marketing then work in areas related to international aspects of the business.

Graduate Program Information
Graduate Study in Economics
EASIB cooperates with the Department of Agricultural Economics and Agricultural Business (AEAB) in offering graduate programs in economics, agricultural economics and economic development. The programs are jointly administered by faculty from the two departments. The objective of the master’s program is to prepare students for professional positions in business, government, or research institutions. Our master’s degrees also are good preparation for those considering applying to a Ph.D. program. EASIB offers a Master of Arts in economics. There are three concentrations: regulatory economics, policy analysis, and econometrics. For more information on the Master of Science degree in agricultural economics, refer to the Agricultural Economics (p. 297) section in this catalog. The Doctor of Economic Development, also jointly administered by the EASIB and AEAB, is a unique program that provides advanced training in applied economic development. Graduates find jobs in industry and government.

Graduate Study in Applied Statistics
A graduate degree administered directly by EASIB is the Master of Applied Statistics. This degree is designed to produce graduates proficient in current practices in statistics and able to enter directly into positions in industry, government or private business. After completing this degree, a person will have the skills needed to execute data analyses, design experiments, and design and analyze surveys.

Graduate Study in Business Administration
The Department of Economics, Applied Statistics, and International Business cooperates with other departments of the College of Business to offer a Master of Business Administration and a Ph.D. in Business Administration. Within the Ph.D. program, the department offers a minor area of study and provides statistics courses to support the doctoral program. More information about these programs is available in this catalog under the College of Business (https://catalogs.nmsu.edu/nmsu/business/#text).

Degrees for the Department
Bachelor Degree(s)
- Economics (Energy Economics) - Bachelor of Business Administration (p. 873)

- Public Utility Regulation and Economics - Graduate Certificate (Online) (https://catalogs.nmsu.edu/global/nmsu-global/public-utility-regulation-economics-gr-certificate-online/)

Department Head: Y. F. Lee, Ph.D. (Southern Illinois-Carbondale)-international finance and trade, international monetary system, economic development;

Professors
- L. Blank, Ph.D. (Tennessee, Knoxville)-microeconomic theory, managerial economics, and regulatory economics; C. Erickson, Ph.D. (Arizona State)-regional (Latin American) economic growth and development; money and banking; R. L. Steiner, Ph.D. (Oklahoma State)-likelihood methods, discrete distributions, and exact tests; B. Widner, Ph.D. (Colorado State)-urban/regional development, managerial economics, and public finance; D. M. VanLeeuwen, Ph.D. (Oregon State)-statistics

Associate Professors
- J. Caldwell Ph.D. (Illinois)-energy economics, utility rate design, climate policy; C. Gard, Ph.D. (Washington)-biostatistics, and breast cancer risk prediction; L. LaPleue (Tennessee)-international and environmental economics; M. Li, Ph.D.(Pennsylvania State)-labor, urban, and agricultural economics; J. Mamkhezri, Ph.D. (New Mexico)-energy, natural resources, environmental and health economics; C. Sroka (Ohio State)-count data models, and health economics

Assistant Professors

College Assistant, Associate, and Full Professors:
- B. Bai, MS (New Mexico State)-applied statistics, behavioral science; (College Assistant Prof.) C. Blume, Master of Accountancy (New Mexico State); (College Full Prof.) M. Downes, Ph.D. (New Mexico)-environmental and natural resources economics, econometrics and quantitative economics; (College Associate Prof.) F. Pallares, DED (New Mexico State)-economic development; (College Full Prof.) L. Vargas, DED (New Mexico State)-international development, institutional economics, and border economics.

Emeritus Faculty
- R. V. Adkisson, Ph.D. (Nebraska)-international, public finance, economic development; K. Brook, Ph.D. (Texas-Austin)-macroeconomic theory, monetary policy; D.L. Clason, Ph.D. (Kansas State); D. L. Daniel, Ph.D. (Southern Methodist)-nonparametric, statistical computing, and environmental research; C. Enomoto, Ph.D. (Texas A&M)-econometrics, economic theory; M. Ellis, Ph.D. (California-Riverside)-economic development; D. A. Gex, Ph.D. (Wyoming)-public utility economics, industrial organization; W. R. Gould, Ph.D. (North Carolina State)-biological sampling, wildlife and fisheries estimation. B. N. Matta, Ph.D. (Texas-Austin); J. T. McGuckin, Ph.D. (Wisconsin-Madison); J. T. Peach, Ph.D. (Texas-Austin)-quantitative economics, border studies, economic development; A.V. Popp, Ph.D., (Northern Illinois); D.B. Smith, Ph.D., E. S. Willman, Ph.D. (Indiana).

Applied Statistics Courses
A ST 311. Statistical Applications
3 Credits (3)

Techniques for describing and analyzing economic and biological data; estimation, hypothesis testing, regression and correlation; basic concepts of statistical inference. May be repeated up to 3 credits.

Prerequisite: MATH 1215 or higher.

Learning Outcomes
1. Describe a data set with graphical tools and computed measures.
2. Explain the relationship between two numerical variables using correlation and regression.
3. Understand how probability and sampling methods are used to make statistical inferences.
4. Draw inference from a sample to a population using confidence intervals and hypothesis tests.
5. Understand the relationship between population parameters and sample statistics.
6. Understand the basic procedure of data production with sampling and experimental design.

A ST 450. Special Topics
1-4 Credits
Specific subjects and credits announced in the Schedule of Classes. Maximum of 4 credits per semester and a grand total of 9 credits.

A ST 465. Statistical Analysis I
3 Credits (3)
An analytic introduction to the theory and methods of statistical inference. Sampling, frequency distributions (z, t, x2, F), estimation, testing, and simulation. Crosslisted with: A ST 565.

Prerequisite(s): MATH 2530G or consent of instructor.

A ST 466. Statistical Analysis II
3 Credits (2+2P)
Continuation of A ST 465. An analytic introduction to the theory and methods of statistical inference. Sampling, frequency distributions (z, t, x2, F), estimation, testing, and simulation. Crosslisted with: A ST 566.

Prerequisite(s): A ST 465 or consent of instructor.

A ST 498. Independent Study
1-3 Credits
Individual studies directed by consenting faculty with prior approval of the department head. Maximum of 3 credits per semester and a grand total of 3 credits.

A ST 503. SAS Basics
3 Credits (2+2P)
An introduction to the statistical software package, SAS, and its utilization in an interactive computing environment, primarily PC/SAS. Provides a fundamental understanding of the structure of SAS, its data management capabilities, and how to invoke a variety of descriptive and simple statistical SAS procedures.

Corequisite(s): A ST 505.

A ST 504. Statistical Software Applications
1 Credit (1)
Optional Computing course to accompany A ST 506. Computer analysis of topics covered in A ST 505 and A ST 506.

Prerequisite(s): A ST 503.

Corequisite(s): A ST 506.

A ST 505. Statistical Inference I
4 Credits (3+2P)
A qualitative introduction to the concepts and methods of statistical inference. Sampling, frequency distributions (z, t, x2, F), estimation, and testing. One-way analysis of variance. Simple linear regression.

Prerequisite: consent of the instructor.
A ST 506. Statistical Inference II
3 Credits (2+2P)
Introduction to multiple regression; the analysis of variance for balanced studies; multiple comparisons, contrasts, factorials, experimental designs through split plots. May be repeated up to 3 credits.
Prerequisite: A ST 505 and the ability to use a standard computer package such as SAS (may be satisfied by A ST 503) or consent of instructor.
Learning Outcomes
1. Formulate models, construct ANOVA tables for balanced designs, and conduct complete analyses accounting for factorial treatment structures, and standard experimental design structures, including the completely randomized design, the randomized complete block design, completely randomized design with subsampling, the completely randomized design with a covariate, and the split-plot design.
2. Assess model adequacy including assessing constancy of variance and normality assumptions.
3. Choose an appropriate multiple comparisons procedure to control the experiment wise or family wise Type I error rate.
4. Use contrasts to conduct pre-planned comparisons.
5. Identify the experimental unit(s) in an experiment; formulate a model and conduct an analysis appropriately accounting for the experimental unit(s).
6. Conduct a complete analysis of data from a designed experiment and interpret findings.

A ST 507. Advanced Regression
3 Credits (3)
Examination of multiple regression; residual analysis, collinearity, variable selection, weighted least squares, polynomial models, and nonlinear regression: linearizable and intrinsically nonlinear models. May be repeated up to 3 credits.
Prerequisite: A ST 503 and A ST 505 or consent of instructor.
Learning Outcomes
1. Understand the fundamental philosophy behind regression.
2. Conduct a proper regression analysis, including making inferences and predictions.
3. Address common pitfalls in regression, including model assumption and collinearity issues.
4. Use the R language to perform regression analysis.

A ST 509. Statistical Models for Complex Data Structures
3 Credits (3)
Statistical models for data that are not normally distributed or data with correlated observations. Covers generalized linear models for discrete and mixed models for correlated data structures. Analysis of data with unbalanced and missing cells.
Prerequisite: A ST 506 with a grade of B or higher, or A ST 507 with a grade of B or higher.
Learning Outcomes
1. Analyze data using classical regression and generalized linear models.
2. Derive quantities of interest from fitted models.
3. Formulate the appropriate hierarchical model for different analytical goals and data structures.
4. Use statistical software to fit hierarchical models and assess the adequacy of the model.
5. Interpret summaries of fitted hierarchical models.

A ST 511. Statistical Methods for Data Analytics
3 Credits (3)
Statistics fundamentals, with an emphasis on inferential methods, linear regression, and practical applications to data analytics. A ST majors should not take this course if they have already completed A ST 505.
Learning Outcomes
1. Understand descriptive and inferential methods commonly used in data analytics
2. Formulate linear regression models and fit models using statistical software
3. Properly interpret the results of statistical analyses
4. Effectively communicate statistical methods and results orally and in writing

A ST 512. Quantitative Analysis for Business Decisions
3 Credits (3)
Identification, collection, and analysis of an organization’s data both internal and external, and use of the resultant information in managerial decision making. Crosslisted with: MGMT 512.
Learning Outcomes
1. Understand statistical methods commonly used in business.
2. Identify statistical considerations in the design of studies.
3. Properly interpret the results of statistical analyses and use results to make decisions regarding business problems.
4. Effectively communicate business decisions orally and in writing, using statistics to defend decisions, as appropriate.

A ST 515. Statistical Analysis with R
3 Credits (3)
Introduction to R data types, basic calculations and programming, data input and manipulation, one and two sample tests, ANOVA, regression, diagnostics, graphics, probability distributions, and basic simulations in the R software environment.
Prerequisite(s): A ST 505 or equivalent with consent of instructor.

A ST 540. Predictive Analytics
3 Credits (3)
This course covers data analytic techniques that can be used to predict and classify observations outside of the original data. Material includes linear and nonlinear regression models, linear and nonlinear classification models, and classification and regression trees. Students will gain hands-on experience using modern software packages to build predictive models and quantify the accuracy of these models.
Prerequisite(s): A ST 507 or consent of instructor.

A ST 550. Special Topics
1-4 Credits
Specific subjects to be announced in the Schedule of Classes. Maximum of 4 credits per semester. No more than 9 credits toward a degree.

A ST 554. Practicum in Statistics
3 Credits (3)
Practical experience in data analysis and the reporting of results; selecting and using statistical methods to analyze and interpret real-world problems; written and oral communication of findings
Prerequisite: A ST 503, A ST 506, A ST 507, and A ST 566.
Learning Outcomes
1. Work with real data to gain substantial experience in data analysis, writing, and presentation.
2. Research and apply a variety of statistical methods, some of which students may not have encountered in prior coursework.
3. Apply knowledge and skills gained throughout the program of study, integrating content from across the MS in A ST curriculum.

A ST 555. Applied Multivariate Analysis  
3 Credits (3)  
Multivariate analysis of linear statistical models, including MANOVA and repeated measures. Analysis of correlation and covariance structures, including principal components, factor analysis, and canonical correlation. Classification and discrimination techniques. May be repeated up to 3 credits. 
Prerequisite: A ST 506 and A ST 504. 
Learning Outcomes  
1. Understand the details of various multivariate techniques, emphasizing connections to univariate techniques where applicable.  
2. Select appropriate multivariate techniques for a given data set and problem.  
3. Use statistical software to perform multivariate analyses.  
4. Correctly interpret, write about, and present the results of multivariate analyses. 

A ST 565. Statistical Analysis I  
3 Credits (3)  
An analytic introduction to the theory and methods of statistical inference. Sampling, frequency distributions (z, t, x², F), estimation, testing, and simulation. Crosslisted with: A ST 465. 
Prerequisite(s): MATH 2530G or consent of instructor. 

A ST 566. Statistical Analysis II  
3 Credits (2+2P)  
Continuation of A ST 565. Crosslisted with: A ST 466. 
Prerequisite(s): A ST 565 or consent of instructor. 

A ST 568. Applied Linear Models II  
3 Credits (3)  
The relation of full to less-than-full rank linear models; complex data structures, including messy data, empty cells, and components of variance: extensions to categorical data analysis and nonparametric methods. Continues some emphasis on computational aspects. 
Prerequisite: A ST 567. 

A ST 596. Independent Study  
1-3 Credits  
Individual studies directed by consenting faculty with prior approval by department head. May be repeated for a maximum of 3 credits. 
Prerequisite: consent of instructor. 

A ST 598. Special Research Problems  
1-6 Credits  
Individual analytical or experimental projects. Restricted to majors. Graded S/U. 

A ST 599. Master's Thesis  
1-6 Credits  
Thesis. 

A ST 609. Linear Model Theory  
3 Credits (3)  
Theoretical treatment of linear models. Covers fixed effects and mixed effects models; models that are full rank, less than full rank, and over-parametrized. Some computational aspects are discussed in relation to statistical packages. Prior to enrollment students should have a basic understanding of undergraduate-level matrix algebra. 
Prerequisite: A ST 565, A ST 566, and A ST 509. 

Learning Outcomes  
1. Derive estimators of model parameters using design matrices, including models that are full rank, less than full rank, and over-parameterized 
2. Derive the expectation vector and variance matrix of a linear transformation of a random data vector 
3. Derive common test statistics and their distributions for fixed effects and mixed effects models with a balanced design 
4. Understand the mathematical properties of variance-covariance matrices and their implications for model estimation and inference 
5. Derive and interpret diagnostics for linear models 

A ST 616. Computational Statistics  
3 Credits (3)  
An introduction to topics in computational statistics including: methods for generating random variables, large scale hypothesis testing, resampling, bootstrapping, permutation tests, the Expectation-Maximization algorithm, Markov chain Monte Carlo methods, and computational approaches in Bayesian inference. Includes some applications of computational statistics in the sciences. Previous experience with programming, while helpful, is not required. 
Prerequisite: A ST 505 and A ST 566. 
Learning Outcomes  
1. Conduct large-scale hypothesis testing 
2. Generate random numbers and random variables 
3. Implement Markov chain Monte Carlo methods for conducting Bayesian inference 
4. Import and manipulate data using R 
5. Employ bootstrap methods for making inferences and conduct statistical hypothesis testing using permutation tests 

A ST 645. Time Series Methods  
3 Credits (3)  
Theory and methods for analyzing, modeling, and forecasting time series. Covers ARIMA models, spectral analysis, filtering, and state-space models. Previous experience using the R programming language is helpful but not required. Students should have a basic understanding of undergraduate-level matrix algebra and trigonometry. 
Prerequisite: A ST 565 and A ST 507. 
Learning Outcomes  
1. Explore time series datasets for autocorrelation, cross-correlation, and stationarity 
2. Select appropriate models for analyzing and forecasting time series data 
3. Identify regular patterns and frequencies in time series data 
4. Fit time series models using statistical software 
5. Understand mathematical theory underlying time series models 

A ST 665. Bayesian Theory  
3 Credits (3)  
Provides an overview of theory underlying Bayesian inference. Topics include Likelihood and Sufficiency Principles, concepts from decision theory, construction of prior distributions, Bayesian point estimation, tests and confidence regions. 
Prerequisite: A ST 565 and A ST 566. 
Learning Outcomes  
1. Understand the theoretical justification for using Bayesian methods as a means of statistical inference 
2. Apply decision-theoretic principles to evaluate estimators under different loss functions
Economics Courses

ECON 1110G. Survey of Economics
3 Credits (3)
This course will develop students’ economics literacy and teaches students how economics relates to the everyday life of individuals, businesses and society in general. The course will also introduce students to the roles different levels of governments play in influencing the economy. At the conclusion of the course, students will be able to identify economic causes for various political and social problems at national and international levels, and have a better understanding of everyday economic issues that are reported in media and public forums.

Learning Outcomes
1. Gain and demonstrate a contextual understanding of economic terms and concepts.
2. Recognize and analyze common economic issues which relate to individual markets and the aggregate economy.
3. Learn basic economic principles that influence global trading and challenges relating to globalization.
4. Outline the implications of various economic policies on individuals and on economies.
5. Demonstrate ability to use diagrams and graphs to explain economic principles, policies and their applications.
6. Appreciate and understand how individual decisions and actions, as a member of society, affect economies locally, nationally and internationally.
7. Explain the roles of governments in influencing buyer and seller behavior in the market and how government failure occurs when intervention fails to improve or actually worsens economic outcomes.
8. Be able to apply course concepts to interpret, evaluate and think critically about economic events and policies, especially as regularly reported in the media and other public forums.

ECON 2110G. Macroeconomic Principles
3 Credits (3)
Macroeconomics is the study of national and global economies. Topics include output, unemployment and inflation; and how they are affected by financial systems, fiscal and monetary policies.

Learning Outcomes
1. Explain the concepts of opportunity cost, comparative advantage and exchange.
2. Demonstrate knowledge of the laws of supply and demand and equilibrium and use supply and demand curves to analyze responses of markets to external events.
3. Explain the circular flow model and use the concepts of aggregate demand and aggregate supply to analyze the response of the economy to disturbances.
4. Explain the concepts of gross domestic product, inflation and unemployment and how they are measured.
5. Describe the determinants of the demand for money, the supply of money and interest rates and the role of financial institutions in the economy.
6. Define fiscal policy and monetary policies and how these affect the economy.
7. Students will be able to identify the causes of prosperity, growth, and economic change over time and explain the mechanisms through which these causes operate in the economy.

ECON 2120G. Microeconomics Principles
3 Credits (3)
This course will provide a broad overview of microeconomics. Microeconomics is the study of issues specific to households, firms, or industries with an emphasis on the role of markets. Topics discussed will include household and firm behavior, demand and supply, government intervention, market structures, and the efficient allocation of resources.

Learning Outcomes
1. Explain the concept of opportunity cost.
2. Demonstrate knowledge of the laws of supply and demand and equilibrium.
3. Use supply and demand curves to analyze responses of markets to external events.
4. Use supply and demand analysis to examine the impact of government intervention.
5. Explain and calculate price elasticity of demand and other elasticities.
6. Demonstrate an understanding of producer choice, including cost and break-even analysis.
7. Compare and contrast the following market structures: perfect competition, monopoly, monopolistic competition, and oligopoly.

ECON 2120H. Principles of Microeconomics Honors
3 Credits (3)
Microeconomic theory and public policy; supply and demand, theory of the firm, market allocation of resources, income distribution, competition and monopoly, governmental regulation of businesses and unions. Must be a Crimson Scholar.

Prerequisite(s): MATH 1220G.

Learning Outcomes
1. Explain the concept of opportunity cost.
2. Demonstrate knowledge of the laws of supply and demand and equilibrium.
3. Use supply and demand curves to analyze responses of markets to external events.
4. Use supply and demand analysis to examine the impact of government intervention.
5. Explain and calculate price elasticity of demand and other elasticities.
6. Demonstrate an understanding of producer choice, including cost and break-even analysis.
7. Compare and contrast the following market structures: perfect competition, monopoly, monopolistic competition, and oligopoly.
ECON 304. Money and Banking
3 Credits (3)
Income measurement and determination, monetary and fiscal policies.
Prerequisite(s): ECON 2110G or ECON 2110H or equivalent.

ECON 311. Intermediate Macroeconomic Theory
3 Credits (3)
Analysis of gross domestic product, the Classical, Keynesian, and Neo-Keynesian theories of income, employment, inflation and growth.
Prerequisite: ECON 2110G or ECON 2110H.
Learning Outcomes
1. Learn the uses and abuses of macroeconomic data
2. Learn the role of economic theory in understanding economic issues and forecasting economic behavior
3. Learn the causes and consequences of short-run economic fluctuations and long-run economic growth
4. Learn the role of government in the macroeconomy
5. By the end of the class, you should be able to describe the state of the macroeconomy and analyze the consequences of economic policy actions from several perspectives

ECON 312. Intermediate Microeconomic Theory
3 Credits (3)
Contemporary economic theory with emphasis upon value and distribution.
Prerequisite: ECON 2120G or ECON 2120H or equivalent.
Learning Outcomes
1. Gain an understanding of the language of Intermediate Microeconomics.
2. Know the underlying structure of economic models such as supply and demand, consumer theory, producer theory and market structure.
3. Understand the assumptions of economic models.
4. Be able to solve a supply and demand model.
5. Demonstrate critical thinking skills by applying economic models to a wide variety of policy questions.

ECON 324V. Developing Nations
3 Credits (3)
Economic analysis of problems related to development of developing nations. Issues such as growth, industrialization, poverty, population, international trade, foreign debt, and international economic relations.

ECON 325V. Economic Development of Latin America
3 Credits (3)
Economic analysis of problems related to development in Latin America, including the agrarian problem, debt and austerity programs, industrialization, inflation and unemployment, the drug trade, U.S.-Latin American relations, development strategies. Also individual countries problems. May be repeated up to 3 credits.
Learning Outcomes
1. Identify the basic components of economic growth and development
2. Understand how Latin America fell behind other regions in terms of economic development
3. Compare various policies implemented to support economic development in Latin America, as well as the successes and failures of these policies
4. Gain a basic understanding of how to conduct independent research to be demonstrated by the completion of a term paper addressing an issue related to economic development in a nation or region of Latin America

ECON 332. Public Finance
3 Credits (3)
This course will examine the roles of government in modern, market-oriented, mixed economies. It will examine justifications for government participation in resource allocation, income distribution, and economic stabilization focusing primarily on the fiscal functions of government, taxation and public expenditure. Students will apply basic microeconomic analysis to analyze the impacts of public taxation and expenditures on economic decisions made elsewhere in the economy. In this course the emphasis will be on understanding the workings of public finance in fiscal federalist systems like the United States, but the principles taught will be applicable across other economic systems. Prerequisites: ECON 2120G or ECON 2120H

ECON 335V. Business and Government
3 Credits (3)
Relation of government to business through regulation; political, legal, and social implications. Crosslisted with: MGMT 335G

ECON 337V. Natural Resource Economics
3 Credits (3)
Gain insight into important natural resource problems of our time. Apply economic principles to problems in the preservation, use, and development of agricultural, range, mineral, water, forestry, fishery, and environmental resources. Understand the use of cost-benefit analysis for government natural-resource projects, policies, and programs. Same as AEEC 337V.
Prerequisite: ECON 1110G or ECON 2120G or ECON 2120H.

ECON 345. Energy Economics
3 Credits (3)
Examines the economics of energy production including oil, coal, natural gas, renewables, and conservation as a substitute for energy production. Emphasis is on federal and state regulatory framework, and resulting public policy issues from a regional and national perspective.
Prerequisite(s): (ECON 2110G or ECON 2110H), (ECON 2120G or ECON 2120H).

ECON 384V. Water Resource Economics
3 Credits (3)
Use of economic principles to evaluate current and emerging issues in water resources. Applications focus on use of economic methods of analysis to current policy decisions surrounding agricultural, municipal, industrial, and environmental uses of water. Same as AEEC 384V.
Prerequisite: AECE 1110 or ECON 2120G or ECON 2120H.

ECON 405. Introductory Econometrics
3 Credits (3)
Multiple regression and correlation applied to economics and business; inference techniques; significance tests; simultaneous equations, estimation, and problems.
Prerequisite: MATH 1350G or A ST 311 (or equivalent).
Learning Outcomes
1. Demonstrate knowledge of probability and statistics and basic expected value theory.
2. Define the relationship between population statistics and sample statistics.
3. Explain the method of ordinary least squares.
4. Understand multiple regression, correlation, inference techniques, and significance tests.
5. Interpret basic econometric results.

ECON 445. Oil and Natural Gas Economics
3 Credits (3)
Examines the economics of oil and gas production. Topics covered include transportation, refining, federal and state regulatory framework, and resulting public policy issues from a regional and national perspective. **Prerequisite:** (ECON 2110G or ECON 2110H), (ECON 2120G or ECON 2120H).

**Learning Outcomes**
1. Oil and Natural Gas Production
2. Oil and Natural Gas Transportation and Storage
3. Advanced oil and gas market analysis
4. Economic analysis of government energy policy and regulation

ECON 449. Open Economy Macroeconomics
3 Credits (3)
This course studies theoretical and empirical macroeconomics in international dimension. It covers from the fundamental concepts of national income and growth, monetary/fiscal and exchange rate policies; foreign exchange markets, international trade and finance, and regionalization/economic integration to the impact analysis of these macroeconomic fundamentals in the open economy. Crosslisted with: I B 449.
**Prerequisite(s):** BFIN 341 OR ECON 311.

ECON 450. International Economics
3 Credits (3)
Trade and capital flows between countries, international payments, government policy in balance-of-payments and tariff matters, and international organizations. Crosslisted with: I B 450
**Prerequisite(s):** ECON 2110G or ECON 2110H and ECON 2120G or ECON 2120H.

ECON 457. Mathematical Economics
3 Credits (3)
Application of mathematical tools, especially the calculus, to economic theory.
**Prerequisite(s):** MATH 1430G or equivalent.

ECON 471. Electricity Economics
3 Credits (3)
Regulatory policy and economic analysis related to the Electric Industry. Topics include characteristics of a utility and legal justification for regulation; characteristics and functions of a regulatory commission; history and structure of the industry; technology and network design; revenue requirements; cost allocation; and basic retail rate design. Crosslisted with: ECON 571.
**Prerequisite(s):** ECON 345.

ECON 489. Senior Economics Seminar
3 Credits (3)
Seminar primarily for economics majors in their final semester. Provides an opportunity to apply economic theory to a broad variety of topics.
**Prerequisite(s):** ECON 311 or ECON 312.

ECON 490. Selected Topics
1-3 Credits
Current topics in economics. Subject matter to be designated for each semester.

ECON 498. Independent Study
1-3 Credits
Individual studies directed by consenting faculty with the prior approval of the department head. May be repeated for a maximum of 3 credits.
**Prerequisite:** junior or above standing and consent of instructor.

ECON 503. Managerial Economics
3 Credits (3)
Theory and application of microeconomics to the management of organizations.
**Prerequisite(s):** MATH 1350G or A ST 311 or equivalent with B or better.

ECON 545. Econometrics II
3 Credits (3)
Application of statistical techniques to estimation of economic relationships: demand functions, production and cost functions, and macroeconomic equations.
**Prerequisite(s):** ECON 457 and AEEC 540.

ECON 550. Special Topics
1-3 Credits
Seminars in selected current topics in the various areas of economics. Prerequisites vary according to the topic being offered.

ECON 571. Regulatory Policy and Industry Analysis: Electricity I
3 Credits (3)
Regulatory policy and economic analysis related to the Electric Industry. Topics include: characteristics of a utility and legal justification for regulation; characteristics and functions of a regulatory commission; history and structure of the industry; technology and network design; revenue requirements; cost allocation; and basic retail rate design.

ECON 572. Regulatory Policy and Industry Analysis: Water and Natural Gas
3 Credits (3)
Regulatory policy and economic analysis related to the Natural Gas and Water industries. Topics include: history and structure of the industry; technology and network design; revenue requirements; cost allocation; and retail rate design.

ECON 573. Regulatory Policy and Industry Analysis: Electricity II
3 Credits (3)
Regulatory policy and economic analysis related to the Electric industry. Topics include: optimal generation mix; ancillary services; environmental policies; rate case procedures and strategies for effective testimony; advanced retail rate design; wholesale exchanges; unbundled transmission tariffs; market institutions and how different markets function; state and federal deregulation policies; Federal Energy Regulatory Commission orders and policies; demand-side management; and regulatory treatment of non-traditional retail services. Consent of instructor required.
**Prerequisite(s):** ECON 571 or consent of instructor.

ECON 574. Advanced Seminar Regulatory Policy and Industry Analysis
3 Credits (3)
Advanced seminar and writing course specializing in regulatory policy and regulatory casework. Topics include: special policy & regulatory issues in telecommunications, electricity, natural gas, and water; preparation of written testimony; expert witness effectiveness including cross-examination; and contested case management. This course involves extensive reading and writing assignments. Consent of instructor required.
**Prerequisite(s):** ECON 571 or consent of instructor.

ECON 596. Independent Study
3 Credits (3)
Individual study program. Each offering will cover a subtitle. Maximum of 3 credits in a semester and 6 credits in a program. Consent of instructor required.

**Economic Development Courses**

ECDV 550. Introduction to Local and Regional Development
3 Credits (3)
Serves as the introductory course in the Doctor of Economic Development program. Overview of the economic development field.

**ECDV 590. Special Topics**
1-3 Credits (1-3)
Selected topics in the area of Economic Development. Subtitle reflects content. May be repeated up to 9 credits. Consent of instructor required.

**ECDV 596. Individual Study**
1-3 Credits (1-3)
Individual studies directed by consenting faculty with the prior approval of the Department Head. May be repeated up to 6 credits.

**ECDV 602. Microeconomics II**
3 Credits (3)
This course covers advanced microeconomics, including decision-making under uncertainty, the role of information, game theory, general equilibrium, market power and market failures. May be repeated up to 3 credits.

**Prerequisite:** AEEC 502.

**Learning Outcomes**
1. Understand the complications that arise when decisions involve uncertainty.
2. Be able to demonstrate an understanding of the properties and application of the theories of information and information asymmetries.
3. Be able to demonstrate an understanding of the basics of game theoretic applications to microeconomics.
4. Be able to demonstrate an understanding of the implications of market failures as a result of externalities and potential corrective policies.
5. Be able to demonstrate an ability to extend partial equilibrium analysis to a general equilibrium framework.

**ECDV 661. Regional Economic Modeling**
3 Credits (3)
Introduction to the tools and methods of regional economic development analysis. May be repeated up to 3 credits. Restricted to: ECDV majors.

**Prerequisite(s):** AEEC 501, AEEC 502, and AEEC 540.

**ECDV 664. Population Economics**
3 Credits (3)
Examines the causes and consequences of demographic change. Examines theories of basic demographic processes, population projection and estimation. Consent of instructor required.

**ECDV 668. Economic Development Finance**
3 Credits (3)
Focuses on the tools and methods of economic development finance.

**ECDV 670. Research in Economic Development**
3 Credits (3)
Intense examination of the academic literature on economic development at all levels.

**Prerequisites:** ECDV 651, ECDV 661 and ECDV 662.

**ECDV 671. Sustainable Economic Development**
3 Credits (3)
Focuses on the interconnections between economic development and the environment. Provides a broad set of tools and ideas related to the impacts of human activities on the environment.

**Prerequisites:** AEEC 501, AEEC 502 and AEEC 540.

**ECDV 673. Research Methods**
3 Credits (3)
An overview of alternative research methods and tools. Students explore quantitative and qualitative research methods as alternatives and complements to statistical methods. Research design, ethics, and presentation are emphasized.

**Prerequisites:** AEEC 501, AEEC 502 and AEEC 540.

**ECDV 681. Urban Economic Development**
3 Credits (3)
Examines causes and consequences of economic change in urban and metropolitan areas. Covers both theory and tools for analysis.

**Prerequisites:** ECDV 651, ECDV 661 and ECDV 662.

**ECDV 682. Rural Development**
3 Credits (3)
Examines causes and consequences of economic change in rural areas, communities and small, open economies. Covers both theory and tools for analysis.

**Prerequisites:** ECDV 651, ECDV 661 and ECDV 662.

**ECDV 683. Seminar in National Economic Development**
3 Credits (3)
Explores specific examples and cases of rural and urban economic development. Involves applied analysis of specific rural and/or urban economic issues/projects.

**Prerequisites:** ECDV 681 and ECDV 682.

**ECDV 692. Seminar in Economic Development**
3 Credits (3)
Seminars in selected topics in economic development. Subtitle reflects content. May be repeated up to 9 credits.

**Prerequisite:** Completion of at least nine semester hours of ECDV courses.

**ECDV 694. Internship**
1-9 Credits (1-9)

**Prerequisite(s):** Completion of core requirements of Doctor of Economic Development.

**ECDV 699. Doctoral Project**
1-9 Credits (1-9)
Doctoral Project. May be repeated up to 9 credits. Completion of all DED coursework and successful completion of comprehensive exams.

**International Business Courses**

**I B 317. International Marketing**
3 Credits (3)
Focuses on decisions relating to entering markets, market segmentation, marketing strategies, and tactics in the international arena. Same as MKTG 317.

**Learning Outcomes**
1. Develop understanding about what is involved in making international marketing decisions, including product, price, promotion, and place decisions to create a marketing mix.
2. Acquire an overview on the contemporary issues in global marketing and the unique challenges faced by marketing managers in the dynamic global environment.
3. Develop insights into how differences in global economic, cultural, social, political, and legal environments can affect marketing decisions.
4. Develop strategic thinking in the context of complex problems and challenges faced by the contemporary global executives and managers.
5. Develop ability to integrate the important global societal dimensions of diversity, environmental concerns, ethics, and technological change into their thinking.
6. Develop knowledge and skills to analyze cross-cultural variables and their impact on international marketing.
7. Discover sources of information for researching and evaluating international markets.
8. Communicate effectively about marketing issues in group discussions, oral presentations and written reports.
9. Work effectively as a team member in analyzing marketing issues.
10. Develop leadership skills necessary to deal with the uncertainty and changes faced by today's global marketers.

**I B 351. International Business**  
3 Credits (3)  
The various aspects of international business, and identification and analysis of problems encountered by multinational companies.  
**Prerequisite:** junior standing or consent of instructor.

**I B 398. International Business and Economic Environments**  
3 Credits (3)  
Description and analysis of various world regions, e.g., Pacific Rim, Eastern Europe, South Asia. Region will vary from semester to semester.

**I B 449. Open Economy Macroeconomics**  
3 Credits (3)  
This course studies theoretical and empirical macroeconomics in international dimension. It covers from the fundamental concepts of national income and growth, monetary/fiscal and exchange rate policies, foreign exchange markets, international trade and finance, and regionalization/economic integration to the impact analysis of these macroeconomic fundamentals in the open economy. Crosslisted with: ECON 449.  
**Prerequisite(s):** BFIN 341 OR ECON 311.

**I B 450. International Economics**  
3 Credits (3)  
Trade and capital flows between countries, international payments, government policy in balance-of-payments and tariff matters, international organizations. Crosslisted with: ECON 450G.  
**Prerequisite(s):** ECON 2110G or ECON 2110H and ECON 2120G or ECON 2120H.

**I B 475. International Finance**  
3 Credits (3)  
International aspects of financial transactions, decision-making, banking and financial markets. Crosslisted with: BFIN 475 and BFIN 575.  
**Prerequisite:** BFIN 341.

**I B 489. Senior Seminar in International Business**  
3 Credits (3)  
Capstone class for I B majors. Integration of previous classwork via the examination of case studies and completion of a major project.  
**Prerequisite:** I B core.

Office Location: Department of Economics, Applied Statistics, and International Business (EASIB), Business Complex (BC), Room 234  
Phone: Main Office (575) 646-7211

### Economics - Bachelor of Arts in Economics

The Bachelor of Arts major in Economics is the only bachelor of arts degree offered through the College of Business. It has the advantage of including a large number of general electives. This feature provides great flexibility to the student who, in addition to completing the courses for a major in economics, may wish to take a double major or take courses from a wide variety of other subjects of his or her own choosing. This program is suitable for, among others, students who plan to go to graduate school in economics, law, business, the social sciences or other areas.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

First Year

<table>
<thead>
<tr>
<th>Fall</th>
<th>Credits</th>

<tr>
<td>Choose one from the following:</td>
<td>4</td>
</tr>
<tr>
<td>ENGL 1110G Composition I (C- or better)(^1)</td>
<td></td>
</tr>
</tbody>
</table>

1 Students may be required to take MATH 1215 Intermediate Algebra, depending on their math placement. MATH 1220G College Algebra or MATH 1430G Applications of Calculus I or MATH 1350G Introduction to Statistics fulfills the general education requirement in math.

Economics majors must earn a minimum cumulative GPA of 2.5 in the 27 credits of departmental requirements.

Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Economics - Bachelor of Business Administration

This program is especially suitable for students who find economics interesting and who intend, perhaps without additional formal education beyond the Bachelor degree, to take jobs in business or government. This degree prepares you for a wide variety of jobs including those leading eventually to positions of executive responsibility. It is also appropriate for those who may choose to seek a Master of Business Administration degree after graduation. It is also a great degree for someone interested in pursuing a career as a lawyer.

In addition to completing general education, (p. 227) College of Business foundation and business core (p. 845), Viewing a Wider World (p. 231) requirements, and general electives (see above), every candidate for the bachelor of business administration in economics must complete each of these courses with a grade of C- or better.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

ECON Upper-Division Elective Course 5 3
MGMT 449 Strategic Management 1 3
Any Business Upper-Division Elective Course (excluding A ST 311) 3 3

Credits 12

Total Credits 120

1 Prerequisites are required, students are responsible for checking and fulfilling course prerequisites listed in the catalog.
2 See the General Education (p. 227) section of the catalog for a full list of courses.
3 Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
4 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
5 Upper Division ECON electives are typically only offered during certain semesters, so students must plan accordingly.

International Business Double Majors: Students may not receive credit for both ECON 489 Senior Economics Seminar and I B 489 Senior Seminar in International Business For this reason, students majoring in both Economics and International Business must consult with the Department Head to arrange a suitable substitution.

Economics (Energy Economics) - Bachelor of Business Administration

This program is especially suitable for students interested in a career in the energy sector. This degree prepares you for jobs in the energy sector, including those in administration, and those leading eventually to positions of executive responsibility.

the concentration in energy economics must complete the following: ECON 345 (https://catalogs.nmsu.edu/search/?P=ECON%20345) Energy Economics (3 cr.), ECON 353V (https://catalogs.nmsu.edu/search/?P=ECON%20353) Business and Government (3 cr.), ECON 445 (https://catalogs.nmsu.edu/search/?P=ECON%20445) Oil and Natural Gas Economics (3 cr.), and ECON 471 (https://catalogs.nmsu.edu/search/?P=ECON%20471) Electricity Economics (3 cr.).

In addition to completing general education, (p. 227) College of Business foundation and business core (p. 845), Viewing a Wider World (p. 231) requirements, and general electives (see above), every candidate for the bachelor of business administration in economics must complete each of these courses with a grade of C- or better.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

International Business - Bachelor of Business Administration

The Bachelor of Business Administration in International Business is intended for those who plan to work for businesses with operations abroad or between the United States and foreign countries. The program prepares you for positions requiring knowledge of international payments, foreign exchange markets, global marketing, export and import procedures, and international investments.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World, and elective credits. The amount indicated is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may need to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Upper Division ECON electives are typically only offered during certain semesters, so students must plan accordingly. Fall: ECON 337V Natural Resource Economics, ECON 449 Open Economy Macroeconomics Fall/Summer: ECON 457 Mathematical Economics

International Business Double Majors: Students may not receive credit for both ECON 489 Senior Economics Seminar and I B 489 Senior Seminar in International Business. For this reason, students majoring in both Economics and International Business must consult with the Department Head to arrange a suitable substitution.

In addition to the course work indicated below, students must satisfy the following two requirements:

1. **Second language:** Students must demonstrate oral and written proficiency at the intermediate mid-level according to ACTFL (American Council on the Teaching of Foreign Languages) proficiency guidelines.

2. **International experience requirement:** Students must engage in an international experience equivalent to a semester abroad in a university where the language of instruction is not English. The department will determine the appropriateness of international experience. Study abroad programs must be pre-approved by IB advisors and the Department Head.

Grades of C- or better are required in general education communications courses.
### Area I: Communications

---

1. Students must be required to take MATH 1215 Intermediate Algebra, depending on their math placement. MATH 1220G College Algebra or MATH 1340G Applications of Calculus I or MATH 1350G Introduction to Statistics fulfills the general education requirement in math.
2. See the General Education (p. 227) section of the catalog for a full list of courses.
3. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses and how to fulfill this requirement.
4. All Foundation Requirement Courses must be taken, or satisfied with transfer credits, regardless of which Mathematics or Statistics course satisfies the Area II General Education course: MATH 1220G, MATH 1430G and MATH 1350G or a ST 311 must be completed.
5. Candidates must earn a minimum cumulative GPA of 2.5 in all major course requirements. At least 12 of the 15 credit hours counted toward the international business major courses must be earned at NMSU. No more than 3 of the 15 required major credits may be earned while studying abroad.
6. At least 9 of the 15 credit hours counted toward the international business functional area must be earned at NMSU. No more than 6 of the 15 required business functional area credits may be earned while studying abroad.
7. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

### A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may
vary from fall to spring semester and may be subject to modification or change.

**Credits 12**

**Total Credits 120**

---

1 Prerequisites are required, students are responsible for checking and fulfilling course prerequisites listed in the catalog.

2 See the General Education (p. 227) section of the catalog for a full list of courses.

3 Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

4 See the View a Wider World (p. 231) section of the catalog for a full list of courses.

5 Upper Division ECON electives are typically only offered during certain semesters, so students must plan accordingly.

6 Students are required to take the following in order to meet the requirements for the degree:

   - I B 450 International Economics or ECON 450 International Economics

7 **International Business Double Majors:** Students may not receive credit for both ECON 489 Senior Economics Seminar and I B 489 Senior Seminar in International Business For this reason, students majoring in both Economics and International Business must consult with the Department Head to arrange a suitable substitution.
Other Requirements for the Major

Foreign language: Students must demonstrate oral and written proficiency at the intermediate mid-level according to ACTFL (American Council on the Teaching of Foreign Languages) proficiency guidelines. (Process for demonstrating proficiency to be coordinated with the NMSU Department of Languages and Linguistics. Any costs associated with proficiency demonstration will be paid by the student.)

International experience requirement: Students must partake of an international experience equivalent to a semester abroad in a university where the language of instruction is not English. The department will determine appropriateness of international experience. Study abroad programs must be pre-approved by IB advisors and Department Head.

Economics - Undergraduate Minor

The undergraduate minor in economics is appropriate for those who seek a better understanding of how micro- and macro-economic forces influence individuals, business and government decision making. Students thinking of a career in banking and finance, government service, or law will find the minor helpful.

A minor in economics consists of 18 or more credit hours of approved course work in economics (ECON), of which at least 12 are numbered 300 or higher, all completed with a grade of C- or higher. At least 12 credits must be completed at NMSU. This minor is not open to majors in the Bachelor of Individualized Studies and the Bachelor of Applied Studies.

<table>

</tr>
</tbody>
</table>

1 ECON 1110G Survey of Economics may be substituted for one of Econ 251G Principals of Macroeconomics or Econ 252G Principals of Microeconomics with the approval of the Head of the Department of Economics, Applied Statistics, and International Business.

International Business - Undergraduate Minor

A minor in international business provides the student with a background in international business that can be useful in many settings given the increasing intensity of globalization. Especially those who wish to find work with large companies with an international presence or for those who may want to own their own business dealing internationally, the minor in international business can help lay the groundwork for a successful career.

A minor consists of 18 or more credit hours of approved course work in the International Business core, all completed with a grade of C- or higher. At least 12 credits must be completed at NMSU. This minor is not open to majors in the Bachelor of Individualized Studies and the Bachelor of Applied Studies.

</tr>
</tbody>
</table>

In addition, I B minors must meet the foreign language proficiency requirement described below.

Students must demonstrate oral and written proficiency in a foreign language at the intermediate mid-level according to the ACTFL (American Council on the Teaching of Foreign Languages) proficiency guidelines. (Process for demonstrating proficiency to be coordinated with the NMSU Department of Languages and Linguistics. Any costs associated with proficiency demonstration will be paid by the student.)

Finance

Undergraduate Program Information

Finance is the management of money and cash flow for business organizations, government and individuals. The study of finance involves examining the theory and techniques of managing money, including analysis and management of risk. Finance students learn to apply tools and concepts from mathematics, statistics, economics and accounting to financial decision-making. With this knowledge, finance graduates are in high demand by employers and command some of the highest salaries for college graduates. Depending upon their career goals and interests, finance majors may use the electives in the major to focus their program of study on financial management, personal financial planning, investments, banking, entrepreneurial finance, and/or risk management and insurance.

Degrees for the Department

- Finance (Banking and Financial Planning) - Bachelor of Business Administration (p. 884)
- Finance (Entrepreneurial Finance) - Bachelor of Business Administration (p. 885)
- Finance (Financial Analyst) - Bachelor of Business Administration (p. 886)
- Finance (Risk Management and Insurance) - Bachelor of Business Administration (p. 888)
- Finance - Bachelor of Business Administration (p. 882)

Minors

Entrepreneurship and Innovation, Finance, and Risk Management & Insurance minors, can only be earned by non-finance majors. The Business Law minor is open to all majors.

- Business Law - Undergraduate Minor (p. 889)
- Entrepreneurship and Innovation (Business Cluster) - Undergraduate Minor (p. 890)
Business Finance Courses

BFIN 2110. Introduction to Finance  
3 Credits (3)  
Introduces tools and techniques of financial management. Includes time value of money; financial planning, diversification and risk; and financial statement analysis.  
Prerequisite(s): OATS 106 or higher; OATS 120 or ACCT 2110; ECON 1110G or ECON 2110G.  
Learning Outcomes  
1. Explain the time value of money and its application in decision-making, including calculating present and future values of single payment and series of payments.  
2. Identify the major sources of external long-term financing for corporations.  
3. Explain risk-return tradeoff as it relates to diversification.  
4. Differentiate the role of finance from other related disciplines such as accounting and economics.  
5. Demonstrate knowledge of capital markets and securities (debt and equity).  
6. Describe basic types of financial ratios and their uses.  
7. Demonstrate the ability to prepare cash flows and make qualitative judgments on the relevance of the changes from one time frame to another.

BFIN 303V. Personal Financial Planning and Investing in a Global Economy  
3 Credits (3)  
Provides a framework for successful personal financial planning within an individual's career and income. Covers personal money management, federal and state taxation, the mathematics of finance and credit, housing, inflation, insurance, savings, and investments. Majors and minors may not use this course to satisfy their finance requirements.

BFIN 311. Financial Futures Markets  
3 Credits (3)  
Same as AEEC 311.

BFIN 322. Principles of Insurance  
3 Credits (3)  
Theory and practice of insurance and its economics and social significance; review of the major lines of insurance including life, health, and property liability insurance.

BFIN 323. Life/Health/Employee Benefits  
3 Credits (3)  
Approaches to problems of employee security from the perspective of businesses. Topics including pensions, profit-sharing plans, 401(k) plans, group life and health plans, and flexible benefit programs. The course also addresses individual life, health, and annuity contracts within a financial planning context. May be repeated up to 3 credits.

BFIN 324. Property and Liability Insurance  
3 Credits (3)  
Analysis of property and liability insurance with emphasis on handling of commercial exposures. Review of property and liability company operations including rate making and insurance accounting. May be repeated up to 3 credits.  
Prerequisite/Corequisite: BFIN 322.  
Learning Outcomes  
1. Determine if an insurance policy covers an insurance claim.  
2. Calculate the amount payable for an insurance claim.  
3. Choose the insurance needed for a given situation.  
4. Define frequently used insurance terms and acronyms.  
5. Explain the responsibility of the various insurance functions.

BFIN 325. Real Estate Principles and Law I  
3 Credits (3)  
Real estate law and the fundamental aspects of the real estate purchase transaction and the real estate lease agreement. Topics include real estate brokerage, marketing of real estate, fundamental legal aspects of real estate, present and future interests, air and water rights, methods of transfer, basics of financing and liens, and real estate leases. Same as BLAW 325.

BFIN 326. Business Risk Management  
3 Credits (3)  
The operational risks faced by firms and the study of various methods of handling these risks, including loss prevention, risk retention, self-insurance, corporate insurance programs, and capital markets. May be repeated up to 3 credits.  
Prerequisite/Corequisite: BFIN 322.  
Learning Outcomes  
1. Develop an understanding of risk management and its basic concepts.  
2. Discuss alternative approaches to risk management and develop the knowledge to analyze the features and benefits of enterprise risk management.  
3. Gain knowledge regarding risk assessments and the fundamental requirements for a successful risk management program through risk classification and risk analysis tools and techniques.  
4. Apply risk control techniques to the identified risks and learn the importance of insurance and risk transfer.  
5. Explore the importance of risk management strategy and risk management policy while understanding the techniques to implement a successful risk management program.  
6. Develop knowledge about creating a risk-aware culture and understanding an organization's risk appetite.  
7. Understand risk governance and how corporate governance requirements impact an organization's risks.
8. Learn risk assurance and risk reporting within an organization to expand their knowledge regarding internal control and corporate social responsibility.

BFIN 341. Financial Analysis and Markets
3 Credits (3)
Financial analysis for business financing and investing decisions. Prerequisites ACCT 2110, ECON 2110G, ECON 2120G, MATH 1220G, A ST 311 or MATH 1350G.

BFIN 355. Investments
3 Credits (3)
Analysis of investment risks and rewards and of the problems of portfolio selection and management. Operation of the securities market. Prerequisite(s): BFIN 341 with a grade of C- or better.

BFIN 360. Financial Information Technology
3 Credits (3)
Integrated use of electronic financial information resources with spreadsheet and word processing applications in investigating financial issues and solving financial problems. Prerequisite(s): a grade of C- or better in BFIN 341 or consent of instructor.

BFIN 385. Analysis of Financial Markets and Institutions
3 Credits (3)
Analysis of the financial system, emphasizing its institutions and instruments. Prerequisite(s): BFIN 341 with a grade of C- or better.

BFIN 391. Finance Internship and Cooperative Education I
1-3 Credits
Introduction and application of finance principles in a work environment. Open only to students in the finance major or minor who will be working with an approved employer in a finance related position, over a period of 12 weeks or at least 300 work hours. Consent of instructor required.

BFIN 392. Insurance Internship and Cooperative Education I
1-3 Credits (1-3)
Introduction and application of insurance principles in a work environment. Open only to students in the finance major or insurance minor who will be working with an approved employer in an insurance related position, over a period of 12 weeks or at least 300 work hours. Consent of instructor required. Restricted to Finance majors.

BFIN 393. Banking Internship and Cooperative Education I
1-3 Credits (1-3)
Professional banking experience with opportunities to engage in business analysis and to observe application of business principles in the management of a banking entity or a regulatory agency with banking oversight. Open only to students in the finance major or banking minor who will be working with an approved employer in a banking related position, over a period of 12 weeks or at least 300 work hours. May be repeated up to 3 credits. Consent of Instructor required.

BFIN 406. Theory of Financial Decisions
3 Credits (3)
Contemporary financial theory. Firm valuation, investments and financing decisions, risk analysis. Prerequisite(s): BFIN 341 with a grade of C- or better.

BFIN 421. Personal Financial Planning for Professionals
3 Credits (3)
Introduction to personal financial planning, including goal setting and fact finding, cash management, credit, housing, retirement planning, taxation and estate planning. This course is intended for those planning careers in personal financial advising in one of the various financial services environments. Prerequisite(s): BFIN 341, or consent of Instructor.

BFIN 435. Investment Analysis
3 Credits (3)
Efficiency of capital markets, modern portfolio management, special topics of current interest to investment analysts. Prerequisite: BFIN 355.

BFIN 445. Fixed Income Markets, Instruments and Derivatives
3 Credits (3)
Course provides a broad introduction to treasury, corporate, municipal, mortgage backed and asset backed bond markets. The analytical techniques for valuing bonds, quantifying their exposure to changes in interest rate and credit risk exposures and investment decision-making are explored. Prerequisite(s): BFIN 341.

BFIN 455. Derivative Markets and Securities
3 Credits (3)
Institutional aspects of derivative markets and the arbitrage based pricing of derivative instruments such as stock options, interest rate options, future contracts and swaps. The applied component of the course demonstrates use of these instruments as hedge and/or investment vehicles. Prerequisite(s): BFIN 355.

BFIN 470. Real Estate Appraisal
3 Credits (2+2P)
This course addresses issues influencing the value of real estate with some emphasis upon rural properties. Topics include courthouse records, property taxes, appraisal methodology, expert courtroom testimony, condemnation, and legal issues. Students will take field trips and write appraisals. Course material is relevant to student in Finance, Accounting, and Pre-Law, as well as Agriculture. Accredited for hours to apply to both pre-licensing and continuing education requirements of the New Mexico Real Estate Commission for both Appraisers and Real Estate Brokers. May be repeated up to 3 credits.

Learning Outcomes
2. Identify market abstracted influences on value.
3. Apply proper appraisal methodology.
4. Demonstrate appraisal knowledge by writing a residential appraisal and a farm appraisal.

BFIN 475. International Managerial Finance
3 Credits (3)
International aspects of financial transactions, decision-making, banking and financial markets. Crosslisted with: I B 475 and BFIN 575.

BFIN 480. Management of Financial Institutions
3 Credits (3)
Asset and liability management of financial institutions; emphasis on commercial bank management. Prerequisite: BFIN 385 or consent of instructor.

BFIN 490. Selected Topics
1-3 Credits
Current topics in finance.
Prerequisites: vary according to the seminar being offered.

BFIN 498. Independent Study
1-3 Credits
Individual studies directed by consenting faculty with the prior approval of the department head. A maximum of 3 credits may be earned.

**Prerequisites**: junior or above standing and consent of instructor.

**BFIN 500. Concepts in Finance**

1 Credit (1)

An overview of fundamental principles of finance necessary for prospective MBA students who do not have an undergraduate background in finance. Includes: Time value of money concepts and calculations; risk and calculation of return given appropriate risk measures; bond risk characteristics and calculation of the value of a bond; calculation of the value of common stock (determination as to whether a stock is over-valued or under-valued); and calculation of the costs of capital and capital budgeting problems using the cost of capital.

**Prerequisite(s)**: admitted to MBA Program or consent of course department.

**BFIN 503. Financial Management**

3 Credits (3)

Theory and application of financial analysis to asset management, project evaluation, capital structure, and dividend policy. Interrelationships among financial and other organizational decisions.

**Prerequisite(s)**: BFIN 341 with a grade of B or better.

**BFIN 511. Financial Derivative Markets**

3 Credits (3)

This course examines advanced futures and options strategies for income generation and risk management. Coverage includes a variety of markets, e.g., interest rates, stock indexes, metals, currencies, livestock, and grains. Both technical and fundamental trading strategies are identified and discussed. Same as AEEC 3220/BFIN 311 with additional coursework required at the graduate level. Cannot receive credit for both AEEC 3220/BFIN 311 and AEEC 3220/BFIN 311. Taught with AEEC 5220.

**Learning Outcomes**

1. Define risk and identify methods of managing risk.
2. Demonstrate understanding of vocabulary associated with derivatives and derivative markets.
3. Identify the role that derivative markets play in reducing risk.
4. Demonstrate a basic understanding of derivative markets including their use in risk management and income generation.

**BFIN 521. Personal Financial Planning for Professionals**

3 Credits (3)

Introduction to personal financial planning, including goal setting and fact finding, cash management, credit, housing, retirement planning, taxation and estate planning. This course is intended for those planning careers in personal financial advising in one of the various financial services environments. For Graduate students only

**Learning Outcomes**

1. Describe the financial planning process, assess the external environment, use goals to establish financial direction, and analyze a client’s present financial position.
2. Estimate the impacts of income tax planning strategies, apply the basic process for retirement planning, and define the considerations for estate planning.
3. Evaluate the roles of various insurance products in managing risks, and recognize the professional and ethical aspects of financial planning.

**BFIN 535. Investment Concepts**

3 Credits (3)

Investments in common stocks and other securities. Risk and return, securities markets, portfolio theory and management. For Graduate students only

**Learning Outcomes**

1. Model forecasted financial statements using Microsoft Excel.
2. Build financial models in Excel to estimate risk and return for individual stock.
4. Make decisions regarding investments for the Wetherbe Student-Managed Investment Fund.

**BFIN 545. Fixed Income Markets, Instruments and Derivatives**

3 Credits (3)

Course provides a broad introduction to treasury, corporate, municipal, mortgage backed and asset backed bond markets. The analytical techniques for valuing bonds, quantifying their exposure to changes in interest rate and credit risk exposures and investment decision-making are explored. Assignments and exams will be differentiated from the undergraduate cross-listed course. In addition, graduate students are expected to complete a project. For Graduate students only.

**Learning Outcomes**

1. Describe basic features of a fixed-income security.
2. Describe mechanisms available for issuing bonds in primary markets.
3. Analyze repurchase agreements (repos) and the risks associated with them.
5. Compute PVBV, duration and convexity of a bond, duration of a portfolio of bonds.
6. Construct the term-structure of interest rates, Yield curve strategies.
7. Describe the process of calibrating a binomial interest rate tree to match a specific term structure.
8. Explain the principles underlying, and factors that influence, the market’s pricing of CDS.
9. Explain and execute interest rate swaps.

**BFIN 555. Derivative Markets and Securities**

3 Credits (3)

Institutional aspects of derivative markets and the arbitrage based pricing of derivative instruments such as stock options, interest rate options, future contracts and swaps. The applied component of the course demonstrates use of these instruments as hedge and/or investment vehicles. Same as BFIN 455 with differentiated assignments for graduated students. For Graduate students only.

**Learning Outcomes**

1. Define forward contracts, futures contracts, options (call and puts), swaps, and credit derivatives and compare their basic characteristics.
2. Determine the value at expiration and profit from a long or a short position in a call or put option, or combinations such as straddles, covered calls, spreads, put-call parity etc.
3. Explain how the concepts of arbitrage, replication, and risk neutrality are used in pricing derivatives.
4. Explain how the value of an option is determined using a multiperiod-period binomial model.
5. Describe how the Black-Scholes-Merton model is used to value European options on equities.
6. Interpret each of the option Greeks.
7. Describe how a delta hedge is executed.
8. Define implied volatility and explain how it is used in options trading.
9. Describe a futures contract: long and short positions, hedging, basis risk, and hedge ratios

**BFIN 575. International Managerial Finance**  
3 Credits (3)  
International aspects of financial transactions, decision-making, banking and financial markets. For Graduate students only.  
**Learning Outcomes**  
1. Explain and evaluate how the globalization process moves a business from a purely domestic focus in its financial relationships and composition to one truly global in scope.  
2. Describe what three major corporate currency exposure arises from multinational business.  
3. Define and explain the terms that are used in reference to exchange rates and currency regimes in addition to analyzing the characteristics of an ideal currency.  
4. Explain how nations measure their own level of international economic activity and how that is measured by the balance of payments.  
5. Show how interest rates and inflation affect each country and currency.  
6. Identify the forms of currency quotations used by currency dealers, financial institutions, and agents of all kinds when conducting foreign exchange transactions.  
7. Distinguish between spot, forward, swaps, and other types of foreign exchange financial instruments as well as foreign currency futures and options contracts.  
8. Demonstrate how both the diversifiable and non-diversifiable risks of an investor’s portfolio may be reduced through international diversification.  
9. Evaluate the various internal and external sources of funds available for the financing of foreign subsidiaries.

**BFIN 581. Management of Financial Institutions**  
3 Credits (3)  
Asset and liability management of financial institutions; emphasis on commercial bank management. For Graduate students only.  
**Learning Outcomes**  
1. Describe the Financial System and Competing Financial Service Institutions.  
2. Describe the impact of government policy and regulation on the banking industry.  
3. Explain the array of organizational structures in Banking: Unit, Branch, Holding, Company and Electronic Services.  
4. Analyze the Balance Sheets and Income Statements of Banks.  
5. Measure and evaluate the performance of Banks and their principal competitors.  
6. Apply different liquidity management strategies.

**BFIN 590. Selected Topics**  
1-3 Credits (1-3)  
Current topics in finance. Taught with BFIN 490 with differentiated assignments for graduate students. Consent of instructor required.

**BFIN 598. Special Research Programs**  
1-3 Credits  
Directed individual reading or research.  
**Prerequisite:** consent of instructor.
MATH 1220G College Algebra 3 3
Area III/IV: Laboratory Sciences and Social/Behavioral Sciences
Area III: Laboratory Sciences 2 4
Grades of C- or better are required in ECON 2110G and ECON 2120G.

Twelve credits from: 12
A declared concentration 4
or
Four courses from any BFIN prefix above BFIN 310 or from
any concentration below, for students not wishing to declare a
concentration
Second Language: (not required)
Electives, to bring the total credits to 120 5 13
Total Credits 120

1 Students may be required to take MATH 1215 Intermediate Algebra,
depending on their math placement. MATH 1220G College Algebra or
MATH 1430G Applications of Calculus I or MATH 1350G Introduction to
Statistics fulfills the general education requirement in math.
2 See the General Education (p. 227) section of the catalog for a full list
of courses.
3 See the Viewing A Wider World (p. 231) section of the catalog for a full
list of courses.
4 For more information on concentrations see the pages below:
   • Banking and Financial Planning (p. 884)
   • Entrepreneurial Finance (p. 885)
   • Financial Analyst (p. 886)
   • Risk Management and Insurance (p. 888)
5 Elective credit may vary based on prerequisites, dual credit, AP credit,
double majors, and/or minor coursework. The amount indicated in
the requirements list is the amount needed to bring the total to 120
credits and may appear in variable form based on the degree. However
students may end up needing to complete more or less on a case-by-
case basis and students should discuss elective requirements with
their advisor.

Every candidate for this major must fulfill the general education common
core (p. 227), College of Business foundation and business core
(p. 845), Viewing a Wider World (p. 227) requirements and general
electives, in addition to the requirement for the major. Given below is
a suggested study plan for a student pursuing a Finance major. If a
student chooses to pursue one or more than one concentration, they
should choose the electives that pertain to the concentration. If students
choose not to pursue a concentration, they may take courses from any
concentration or from any BFIN prefix above BFIN 310.

Finance is the crossroads of economics, strategy and accounting, and the study of how firms and individuals allocate resources over time and under uncertain conditions. The finance curriculum provides a core foundation in corporate finance, investments, and financial institutions. The theory and concepts are then applied to problem-solving in a variety of areas including financial markets and institutions, corporate finance, international financial management, stock valuation and portfolio allocation, fixed-income markets, derivatives, risk management and insurance, and entrepreneurial finance.

Courses in the BBA in Finance are organized into four concentrations: Financial Analyst, Banking and Financial Planning, Risk Management and Insurance, and Entrepreneurial Finance. Students may pursue one or more concentrations. If a student chooses not to pursue a concentration, they may select four courses from any concentration or any BFIN prefix above BFIN 310.

**Requirements**

Completion of the courses listed below (including any prerequisites) with a minimum cumulative GPA of 2.0 in these courses. At least twelve of the credits for the major must be completed at NMSU.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Total Credits 120

1. Students may be required to take MATH 1215 Intermediate Algebra depending on their math placement. MATH 1220G College Algebra or MATH 1430G Applications of Calculus I or MATH 1350G Introduction to Statistics fulfills the general education requirement in math.

2. See the General Education (p. 227) section of the catalog for a full list of courses.

3. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

4. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Every candidate for this major must fulfill the general education (p. 227), College of Business foundation and business core (p. 845), Viewing a Wider World (p. 231) requirements and general electives, in addition to the requirement for the major. Given below is a suggested study plan for a student pursuing a Finance major. If a student chooses to pursue one or more than one concentration, they should choose the electives that pertain to the concentration. If students choose not to pursue a concentration, they may take courses from any concentration or from any BFIN prefix above BFIN 310.
MATH 1430G Applications of Calculus I 3
Choose one from the following (grade of C- or better required):
If MATH 1350G is taken before MATH 1220G then the Statistics course will Satisfy the Area II Requirement for Gen.Ed and MATH 1220G must be taken as a foundation requirement
MATH 1350G Introduction to Statistics 3
A ST 311 Statistical Applications 3
Business Core: Lower Division (minimum grades of C- required)
ACCT 2110 Principles of Accounting I 3
ACCT 2120 Principles of Accounting II 3
BCIS 1110 Introduction to Information Systems 3
BUSA 1110 Intro to Business 3
Business Core: Upper Division
BCIS 338 Business Information Systems I 3
BLAW 316 Legal Environment of Business 3
BFIN 341 Financial Analysis and Markets 3
MGMT 309 Human Behavior in Organizations 3
MGMT 449 Strategic Management 3
MKTG 303 Principles of Marketing 3
Choose one of the following: 3
BCIS 485 Enterprise Resource Planning 3
MGMT 344 Production and Operations Management 3
MGMT 470 Project Management in Organizations 3
Upper division Economics or Applied Statistics elective from the following prefixes: A ST (excluding A ST 311), ECON 3
Upper Division Business Elective from the following prefixes: A ST, ACCT, B A, BCIS, BLAW, ECON, ENTR, BFIN, I B, MGMT, MKTG (excluding A ST 311) 3
Major Courses
BFIN 355 Investments 3
BFIN 360 Financial Information Technology 3
BFIN 385 Analysis of Financial Markets and Institutions 3
BFIN 341 Financial Analysis and Markets 3
BFIN 406 Theory of Financial Decisions 3
Twelve credits from: 12
Entrepreneurial Finance Concentration (12 credits from the following)
ENTR 331 Business Creation and Valuation 3
BLAW 330 Entrepreneurial Law 3
BFIN 391 Finance Internship and Cooperative Education I 3
BFIN 498 Independent Study 3
or
Four courses from any BFIN prefix above BFIN 310 or from any concentration below, for students not wishing to declare a concentration
Electives, to bring the total credits to 120 4 13
Second Language: (not required)
Total Credits 120

Every candidate for this major must fulfill the general education common core (p. 227), College of Business foundation and business core (p. 845), View a Wider World (p. 227) requirements and general electives, in addition to the requirement for the major. Below given is a suggested study plan for a student pursuing a Finance major. If a student chooses to pursue one or more than one concentration, they should choose the electives that pertain to the concentration. If students choose not to pursue a concentration, they may take courses from any concentration or from any BFIN prefix above BFIN 310.

Finance (Financial Analyst) - Bachelor of Business Administration

Finance is the crossroads of economics, strategy and accounting, and the study of how firms and individuals allocate resources over time and under uncertain conditions. The finance curriculum provides a core foundation in corporate finance, investments, and financial institutions. The theory and concepts are then applied to problem-solving in a variety of areas including financial markets and institutions, corporate finance, international financial management, stock valuation and portfolio allocation, fixed-income markets, derivatives, risk management and insurance, and entrepreneurial finance.

Courses in the BBA in Finance are organized into four concentrations: Financial Analyst, Banking and Financial Planning, Risk Management and Insurance, and Entrepreneurial Finance. Students may pursue one or more concentrations. If a student chooses not to pursue a concentration, they may select four courses from any concentration or any BFIN prefix above BFIN 310.
Requirements

Completion of the courses listed below (including any prerequisites) with a minimum cumulative GPA of 2.0 in these courses. At least twelve of the credits for the major must be completed at NMSU.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

### Business Law - Undergraduate Minor

In a world that is increasingly subject to laws and regulations, every business needs employees who are savvy about the laws that affect their business. The Business Law minor is comprised of a series of courses designed to provide a strong background in a wide range of laws that business needs to be aware of, and provide students with the ability to recognize and avoid legal pitfalls. Additionally, the Business Law minor will provide students with a clear understanding of how legal disputes are resolved and the ability to appreciate the cost and complexity of disputes, and enable students to reduce the costs and complexities by being able to communicate clearly with lawyers about the legal issues.

#### Requirements

Completion of the courses listed below (including any prerequisites) with a minimum cumulative GPA of 2.0 in these courses. At least twelve of the credits for the minor must be completed in the NMSU College of Business. This minor is not open to majors in the Bachelor of Individualized Studies and the Bachelor of Applied Studies. Students interested in pursuing this minor should contact the Finance Department Head in BC 221 (https://map.nmsu.edu/?ct/).

---

1. Students may be required to take MATH 1215 Intermediate Algebra, depending on their math placement MATH 1220G College Algebra or MATH 1340G Applications of Calculus I or MATH 1350G Introduction to Statistics fulfills the general education requirement in math.

2. See the General Education (p. 227) section of the catalog for a full list of courses.

3. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

4. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Every candidate for this major must fulfill the general education common core (p. 227), College of Business foundation and business core (p. 845), Viewing a Wider World (p. 227) requirements and general electives, in addition to the requirement for the major. Given below is a suggested study plan for a student pursuing a Finance major. If a student chooses to pursue one or more than one concentration, they should choose the electives that pertain to the concentration. If students choose not to pursue a concentration, they may take courses from any concentration or from any FIN prefix above FIN 310.
Entrepreneurship and Innovation (Business Cluster) - Undergraduate Minor

The Entrepreneurship and Innovation minor is designed to promote entrepreneurship to students across the NMSU campus. This minor will appeal to creative and ambitious students who envision launching and managing their own business or entering innovation-driven fields. The flexible design allows students to complete a designated, approved cluster of related courses that provide a discipline-specific entrepreneurial flavor. Such clusters are under development.

Requirements

Completion of the courses listed below (including any prerequisites) with a minimum cumulative GPA of 2.0 in these courses. At least twelve of the credits for the minor must be completed in the NMSU College of Business. This minor is not open to students in the Bachelor of Individualized Studies and the Bachelor of Applied Studies.

Total Credits: 18

Finance - Undergraduate Minor

The minor in Finance, available to students in most majors (business and non-business), affords students the opportunity to select their minor courses to provide a focus on any one of several sub-specialties within the field of Finance. Faculty advisors in the department can assist students in selecting their Finance electives to provide a focus in financial management, financial planning, or investments. (This minor is not open to majors in the Bachelor of Individualized Studies and the Bachelor of Applied Studies.)

Requirements

Completion of the courses listed below (including any prerequisites) with a minimum cumulative GPA of 2.0 in the BFIN courses. At least twelve credits for the minor must be completed in the NMSU College of Business.

Total Credits: 18

1 Upper division Finance courses must have a number greater than 310.

Risk Management and Insurance - Undergraduate Minor

The minor in Insurance, available to students in most majors (business and non-business), affords students the opportunity to supplement their major field of study with specialized expertise in the field of risk management and insurance.

Requirements

Completion of the courses listed below (including any prerequisites) with a minimum cumulative GPA of 2.0 in these courses. At least twelve of the credits for the minor must be completed in the NMSU College of Business. The minor is not available to students in the Bachelor of Individualized Studies or the Bachelor of Applied Studies.

Total Credits: 18

1 BFIN 421 Personal Financial Planning for Professionals cannot be taken if BFIN 303V Personal Financial Planning and Investing in a Global Economy is applied toward the minor.

Management

Undergraduate Program Information

The major in general business is based on a broad range of course options rather than a narrow focus on a single discipline. Graduates find careers in large and small businesses, in government agencies and in the nonprofit sector. The general business major is well suited to the part-time and working student because it allows the student to select courses that will better meet their individual schedule. The entrepreneurship concentration is ideal for a student interested in starting or acquiring a small business or entering a family business upon graduation. The curriculum provides a focus on small and new enterprises, thus reflecting the entrepreneurial nature of contemporary business in the U.S.

The Department of Management invites you to consider a major in management. Do you like to work with people? Need help solving
Management Courses

MGMT 2110. Principles of Management
3 Credits (3)
An introduction to the basic theory of management including the functions of planning, organizing, staffing, leading, and controlling; while considering management's ethical and social responsibilities.

Learning Outcomes
1. Explain the major functions of management including planning, organizing, communications, controlling, motivating, leading, and staffing.
2. Recognize major developments in the history of management thought.
3. Describe the basic managerial processes including decision-making and other key skills necessary for managers to perform their roles.
4. Identify an organization's stakeholders and the importance of social and ethical responsibility of managers.
5. Explain the formulation and implementation of strategic planning, including the relationship between goals, plans, vision statements, and mission statements.
6. Describe the strategies managers use to help organizations adapt to changing internal and external environments.
7. Explain organizational change, forces for change, sources of resistance to change, and the techniques managers can use to implement and facilitate change.

MGMT 309. Human Behavior in Organizations
3 Credits (3)
Interpersonal and organizational behavior, motivation, communication, team building, leadership, diversity management, legal and ethical issues, and politics in organizations. Credit may not be earned for both MGMT 309 and MGMT 315V.

MGMT 310V. Entrepreneurial Mindset
3 Credits (3)
This course provides the opportunity to learn to think like an entrepreneur in the broader context of social entrepreneurship, intrapreneurship, creative problem solving, opportunity recognition, and innovation.

MGMT 332. Human Resources Management
3 Credits (3)
Survey course in human resources management. Includes recruitment, selection, equal employment opportunity, performance appraisal, training, compensation, safety, and union-management relations.

MGMT 333. Training and Development
3 Credits (3)
Training and development of human resources, including training needs assessment, training approaches and techniques, and evaluation of training effectiveness.

MGMT 335V. Business and Government
3 Credits (3)
Crosslisted with: ECON 335G

MGMT 344. Production and Operations Management
3 Credits (3)
Management of physical and human resources; management information systems in operations; applications in various organizations. Prerequisite: MATH 1350G or A ST 311; and BCIS 338 or BCIS 350.

MGMT 345V. Quality and Competitiveness: An International Perspective
3 Credits (3)
Quality management and competitiveness are studied in manufacturing, services, and the public sector with an international perspective.
Topics include: global history of quality, foreign competition and its impact on quality and productivity, quality management and continuous improvement, international operations management, quality assessment, and a review of the emergence of quality and competitiveness in government, education and health care. May be repeated up to 3 credits.

**Learning Outcomes**
1. Developing critical thinking skills through challenging material and assignments.
2. Foster intelligent inquiry through assignments, participative lectures, team projects.
3. Develop an integration and synthesis of knowledge through applications to case studies and individual assignments.
4. Promote a breadth of knowledge on international developments in quality and competitiveness with a holistic view of quality and its impact on businesses, organizations, nations and individuals.

**MGMT 347. Management Functions and Processes**
3 Credits (3)
Planning, organizing, directing, and controlling operating units in an organization. Applications to a variety of types of organizations.

**MGMT 351. Supply Chain Management**
3 Credits (3)
Acquisition and control and delivery of materials, parts, equipment, and services for end use in the organization. Applications to service and manufacturing industries, nonprofit, and governmental institutions.

**MGMT 361. Small Business Management**
3 Credits (3)
Principles and practice of managing a small enterprise with emphasis on growth and performance.

**MGMT 388V. Leadership and Ethics**
3 Credits (3)
Exploration of the multifaceted nature of leadership and principal-based ethics in modern society through readings and seminar discussion. May be repeated up to 3 credits.

**MGMT 391. Management Internship and Cooperative Education I**
1-3 Credits
Application of management skills to the work environment. Open only to students majoring or minoring in management. The amount of academic credit (1-3 cr.) will be determined by the academic experience and not by the work experience. May be repeated for a maximum of 3 credits. Restricted to majors and minors.

**Prerequisites:** MGMT 309 and consent of instructor.

**MGMT 448. Small Business Consulting**
3 Credits (3)
Study analysis and presentation of recommendations for solving significant problems confronting small businesses.

**Prerequisite(s):** Senior standing or consent of instructor.

**MGMT 449. Strategic Management**
3 Credits (3)
Integrative approach to envisioning the future and shaping strategies for business success.

**Prerequisite(s):** BCIS 338 or BCIS 350; BLAW 316; BFIN 341; MGMT 309; MKTG 303; and one of the following: MGMT 344 or MGMT 470 or BCIS 485.

**MGMT 451. Selection, Placement, and Performance Evaluation**
3 Credits (3)
Staffing processes for organizations and the evaluation of employee performance. Use of selection methods and measurement of work behavior.

**MGMT 458. Comparative International Management**
3 Credits (3)
Cultural influences on management are examined in a global business environment with a particular emphasis on human behavior in multinational organizations and the management of human resources. Same as I B 458.

**MGMT 460. Compensation Management**
3 Credits (3)
An overview of wage and salary administration, including job evaluation, wage and salary surveys, program administration, legal aspects of pay systems, and benefits administration.

**Prerequisite(s):** MGMT 332 or consent of instructor.

**MGMT 461. Seminar in Entrepreneurship**
3 Credits (3)
For students interested in owning and operating their own business; students desiring hands-on, real-time experience in helping start up a business. Crosslisted with: MKTG 461.

**Prerequisite(s):** Senior standing or consent of instructor.

**MGMT 465. Contemporary Issues in Human Resources Management**
3 Credits (3)
Integrative course in human resources management, emphasizing the application of advanced concepts to complex personnel cases.

**Prerequisite:** MGMT 332.

**MGMT 470. Project Management in Organizations**
3 Credits (3)
Roles, responsibilities, and techniques of project managers in managing projects effectively. Preparation for professional certification.

**MGMT 490. Selected Topics**
1-18 Credits (1-18)
Seminars in selected current topics in the various areas of management and administration. Prerequisites vary according to the seminar being offered.

**MGMT 491. Management Internship and Cooperative Education II**
1-3 Credits
Covers the application of management skills to the work environment. The amount of academic credit (1-3 cr.) will be determined by the academic experience and not by the work experience. May be repeated for a maximum of 3 credits. Restricted to majors and minors.

**Prerequisite:** MGMT 309 and consent of instructor.

**MGMT 498. Independent Study**
1-3 Credits
Individual studies directed by consenting faculty with the prior approval of the department head. A maximum of 3 credits may be earned.

**Prerequisite(s):** Junior or above standing and consent of instructor.

**MGMT 502. Operations Management**
3 Credits (3)
Systems and specialized models applied to the management of production facilities and service operations, including physical and human resources.

**Prerequisite(s):** Graduate students only.

**MGMT 503. Organizational Behavior and Management Processes**
3 Credits (3)
Covers the theory and practice related to the successful management of human resources in organizations operating within a dynamic global environment. Course goals include developing alternative frameworks for
analyzing issues related to human behavior, management science, and organizational structure and theory.

Prerequisite: graduate students only.

MGMT 512. Quantitative Analysis for Business Decisions
3 Credits (3)
Identification, collection, and analysis of an organization's data both internal and external, and use of the resultant information in managerial decision making.

Prerequisite: graduate students only.

MGMT 548. Small Business Consulting
3 Credits (3)
Study, analysis, and presentation of recommendations for solving significant problems confronting small businesses. Same as MGMT 448 with differentiated assignments for graduate students.

Prerequisite(s): Graduate standing.

MGMT 590. Strategic Management
3 Credits (3)
Covers the integration of functional, human, technological, and environmental aspects of business within the framework of management policy and strategy formulation. Formulate, implement, evaluate and control the various functions from the organization from a systems perspective. Understand the external environment and its impact on the organization. Restricted to majors.

Prerequisite: M.B.A. student in his or her final semester.

MGMT 591. Seminar in Entrepreneurship
3 Credits (3)
For students interested in owning and operating their own business; students desiring hands-on, real-time experience in helping start up a business. Same as MGT 461 with differentiated assignments for graduate students. Crosslisted with: MKTG 591.

Prerequisite(s): Graduate standing.

MGMT 598. Special Research Programs
1-3 Credits
Individual investigations either analytical or experimental. A maximum of 6 credits may be earned.

Prerequisite: consent of instructor.

MGMT 600. Doctoral Research
1-15 Credits (1-15)
This course number is used for assigning credit for research performed prior to successful completion of the doctoral qualifying examination. Restricted to management majors. May be repeated up to 88 credits.

MGMT 601. Research in Management
1 Credit (1)
Ph.D. course provides opportunities for significant interaction between Management faculty and Management Ph.D. students. The course also provides opportunities for development of professional scholarly standards, ethics, and critiques, as well as insight into current research areas and topics supported by the Management Department and other relevant disciplinary areas. May be repeated for a maximum of 6 credits. Restricted to Ph.D. students. Graded S/U.

MGMT 645. Seminar in Human Resources Management
3 Credits (3)
Seminar will address current issues in human resources management. Focus on research related to the selection, development, and effective use of human resources. Restricted to doctoral students. May be repeated up to 3 credits.

MGMT 650. Seminar in Organizational Behavior
3 Credits (3)
Seminar will include specific organizational behavior topics; motivation, leadership, group and inter-group relations, and attitude theory. Focus on current research and theory. Restricted to doctoral students. May be repeated up to 3 credits.

Learning Outcomes
1. Varies

MGMT 655. Seminar in Organizational Systems and Theory
3 Credits (3)
Analysis of organizations from a macro perspective. Topics include organizational theory, organizational design, organizational environment, and sociotechnical systems. Restricted to doctoral students. May be repeated up to 3 credits.

MGMT 660. Research Design and Methodology
3 Credits (3)
Topics will include philosophy of science, theory building, and research methods applicable to the study of organizational behavior. Restricted to doctoral students. May be repeated up to 3 credits.

Learning Outcomes
1. Varies

MGMT 661. Qualitative Research Methods
3 Credits (3)
In-depth coverage of selected topics in research methodology, including theory and logic of scientific investigation, grounded theory, action research, and ethnomethodology. Restricted to doctoral students. May be repeated up to 3 credits.

MGMT 670. Seminar in Operations Management
3 Credits (3)
Seminar examines the major problem areas, research findings, and research methodologies of operations management. Focus on the critical evaluation of current theory and methodology. Restricted to Doctoral students. May be repeated up to 3 credits.

MGMT 675. Seminar in Strategic Management
3 Credits (3)
Survey of current and classical readings in strategy. Introduces the doctoral level student to strategic issues, strategic topics for research, and publication venues. Restricted to doctoral students. May be repeated up to 3 credits.

MGMT 685. Story Consulting to Organizations
3 Credits (3)
Apply various qualitative story and narrative research methods (plot analysis, script analysis, life history, and restoring) to action research consulting project. Students will conduct story assessment and (propose or enact) intervention with a local consenting organization. Restricted to doctoral students.

MGMT 698. Special Topics
3 Credits (3)
Seminars in selected current topics in the various areas of management. May be repeated for unlimited credit. Restricted to doctoral students. Prerequisite(s): Vary according to seminar being offered.

MGMT 699. Special Topics
1-3 Credits
Prerequisite: consent of instructor.

MGMT 700. Doctoral Dissertation
1-15 Credits (1-15)
May be repeated up to 88 credits.

Prerequisite: advancement to candidacy.

• Marketing (MKTG)

## General Business (Entrepreneurship) - Bachelor of Business Administration

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.
## General Business (Entrepreneurship) - Bachelor of Business Administration

### Major requirements (upper division)

- MGMT 448
- MGMT 361
- MGMT 332

### Major Courses

- A ST 311

### AST, BA, BCIS, BLAW, ECON, BFIN, IB, MGMT, MKTG (excluding Upper Division Business elective from the following prefixes: A ST, ECON, BCIS)

### Business Core: Upper Division

- BCIS 485
- MKTG 303
- MGMT 449
- MGMT 309
- BFIN 341
- BLAW 316
- BCIS 338

### Business Core: Lower Division (minimum grades of C- required)

- BUSA 1110
- BCIS 1110
- ACCT 2120
- ACCT 2110

### Departmental/College Requirements

#### Viewing A Wider World

- General Education Elective
  - Area I: Communications
  - Area II: Mathematics
  - Area III: Laboratory Sciences Course (4 credits)
  - Area IV: Social/Behavioral Sciences
  - Area V: Humanities
  - Area VI: Creative and Fine Arts

#### General Business (Entrepreneurship) - Bachelor of Business Administration

- MATH 1220G College Algebra
- ACCT 2110 Principles of Accounting I
- ACCT 2120 Principles of Accounting II
- BUSA 1110 Intro to Business
- BCIS 338 Business Information Systems I
- BLAW 316 Legal Environment of Business
- BFIN 341 Financial Analysis and Markets
- MGMT 309 Human Behavior in Organizations
- MGMT 449 Strategic Management
- MKTG 303 Principles of Marketing
- BCIS 485 Enterprise Resource Planning or MGMT 344 Production and Operations Management or MGMT 470 Project Management in Organizations

### Upper Division Economics or Applied Statistics elective from the following prefixes (excluding A ST 311)

- ECON
- BFIN
- MGMT
- MKTG

### Upper Division Business elective from the following prefixes: A ST, ACCT, B A, BCIS, BLAW, ECON, BFIN, I B, MGMT, MKTG (excluding A ST 311)

### Non-Departmental Requirements (in addition to Gen.Ed/VWW)

Choose one from the following (grade of C- or better required):

- MATH 1350G Introduction to Statistics
- A ST 311 Statistical Applications

### Second Language: (not required)

Electives, to bring the total credits to 120

### Total Credits

120

- Students may be required to take MATH 1215 Intermediate Algebra, depending on their math placement. MATH 1220G College Algebra or MATH 1430G Applications of Calculus I or MATH 1350G Introduction to Statistics fulfills the general education requirement in math.
- See the General Education (p. 227) Section of the catalog for a full list of courses
- See the Viewing a Wider World (p. 231) Section of the catalog for a full list of courses
- Of the remaining 12 credits for the entrepreneurship concentration, no more than 9 credits may be taken in any one prefix
  - Accounting (ACCT)
  - Business Administration (B A)
  - Business Computer Information Systems (BCIS)
  - Business Law (BLAW)
  - Economics (ECON)
  - Entrepreneurship (ENTR)
  - Finance (FIN)
  - International Business (I B)
  - Management (MGT)
  - Marketing (MKTG)

### A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

#### First Year

Choose from one of the following:

- ENGL 1110G Composition I (C- or better)
- ENGL 1110H Composition I Honors (C- or better)
- ENGL 1110M Composition I (C- or better)
Management (Human Resource Management) - Bachelor of Business Administration

Every candidate for this major must fulfill the following requirements in addition to the general education common core, College of Business foundation and the business core, Viewing a Wider World requirements and general electives. Students will choose one or more of the four options that follow.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

1. These courses have prerequisites and it is the student's responsibility for checking and fulfilling all course prerequisites listed for these courses.
2. See the General Education (p. 227) section of the catalog for a full list of courses.
3. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
4. Of the remaining 12 credits for the entrepreneurship concentration, no more than 9 credits may be taken in any one prefix
   - Accounting (ACCT)
   - Business Administration (B A)
   - Business Computer Information Systems (BCIS)
   - Business Law (BLAW)
   - Economics (ECON)
   - Entrepreneurship (ENTR)
   - Finance (FIN)
   - International Business (IB)
   - Management (MGT)
   - Marketing (MKTG)
Oral Communication
Choose one from the following: 3

ACOM 1130G Effective Leadership and Communication in Agriculture 3
COMM 1115G Introduction to Communication
COMM 1130G Public Speaking
HNRS 2175G Introduction to Communication Honors

Area II: Mathematics
MATH 1220G College Algebra (Foundation Requirement) 3
Area III/IV: Laboratory Sciences and Social/Behavioral Sciences 10

ECON 2110G Macroeconomic Principles (C- or better)
ECON 2120G Principles of Microeconomics (C- or better)

Area III: Laboratory Sciences Course (4 credits) 3

Area III: Laboratory Sciences Course (4 credits) 3

Area V: Humanities 3
Area VI: Creative and Fine Arts 3

General Education Elective
MATH 1430G Applications of Calculus I (Foundation Requirement) 3

Viewing A Wider World 3

Departmental/College Requirements
Foundation Requirements 4

Choose one from the following (grade of C- or better required): 3
If MATH 1350G is taken before MATH 1220G then the Statistics course will satisfy the Area II Requirement and MATH 1220G must be taken as a foundation requirement 1

MATH 1350G Introduction to Statistics (Foundation Requirement)

A ST 311 Statistical Applications (Foundation Requirement - doesn't count as Gen.Ed )

Business Core: Lower Division (minimum grades of C- required)
ACCT 2110 Principles of Accounting I (not recommended for freshman year) 3
ACCT 2120 Principles of Accounting II
BCIS 1110 Introduction to Information Systems 3
BUSA 1110 Intro to Business 3

Business Core: Upper Division
BCIS 338 Business Information Systems I 3
BLAW 316 Legal Environment of Business 3
BFIN 341 Financial Analysis and Markets 3
MGMT 309 Human Behavior in Organizations 3
MGMT 449 Strategic Management 3
MKTG 303 Principles of Marketing 3
BCIS 485 Enterprise Resource Planning 3
or MGMT 344 Production and Operations Management 3
or MGMT 470 Project Management in Organizations 3

Upper division Economics or Applied Statistics elective from the following prefixes: A ST (excluding A ST 311), ECON 3

Upper Division Business elective from the following prefixes: A ST, ACCT, B A, BCIS, BLAW, ECON, ENTR, BFIN, I B, MGMT, MKTG (excluding A ST 311) 3

Major Courses
MGMT 332 Human Resources Management 3
MGMT 333 Training and Development 3
MGMT 451 Selection, Placement, and Performance Evaluation 3
MGMT 460 Compensation Management 3
BCIS 461 Business Analytics I 3

Second Language: (not required)
Electives, to bring the total credits to 120 5

Total Credits 120

1 Students may be required to take MATH 1215 Intermediate Algebra, depending on their math placement. MATH 1220G College Algebra or MATH 1430G Applications of Calculus I or MATH 1350G Introduction to Statistics fulfills the general education requirement in math.
2 See the General Education (p. 227) section of the catalog for a full list of courses.
3 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses and how to fulfill this requirement.
4 All Foundation Requirement Courses must be taken, or satisfied with transfer credits, regardless of which Mathematics or Statistics course satisfies the Area II General Education course: MATH 1220G, MATH 1430G and MATH 1350G or A ST 311 must be completed.
5 Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

A Suggested Plan of Study for Students
This roadmap assumes student placement in MATH 1220G Intermediate Algebra and ENGL 1110G Rhetoric and Composition. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

First Year

Fall Credits
MATH 1220G College Algebra (C- or better) 1 3
BCIS 1110 Introduction to Information Systems 3
Choose one from the following: 4
ENGL 1110G Composition I (C- or better) 1 3
ENGL 1110H Composition I Honors (C- or better) 1 3
ENGL 1110M Composition I (C- or better) 1 3
Area V: Humanities Course 2 3
Elective Course 3 3

Credits 16

Spring

MATH 1430G Applications of Calculus I 1 3
BUSA 1110 Intro to Business 3
Choose one from the following: 3
ACOM 1130G Effective Leadership and Communication in Agriculture (C- or better)
COMM 1115G Introduction to Communication (C- or better)
COMM 1130G Public Speaking (C- or better)
HNRS 2175G Introduction to Communication Honors (C- or better)
Area III: Laboratory Science Course 2 4
Area VI: Creative and Fine Arts Course 2 3
Credits 16

Notes:
1. Students may be required to take MATH 1215 Intermediate Algebra, depending on their math placement. MATH 1220G College Algebra or MATH 1430G Applications of Calculus I or MATH 1350G Introduction to Statistics fulfills the general education requirement in math.
2. See the General Education (p. 227) section of the catalog for a full list of courses.
3. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses and how to fulfill this requirement.
4. All Foundation Requirement Courses must be taken, or satisfied with transfer credits, regardless of which Mathematics or Statistics course satisfies the Area II General Education course: MATH 1220G, MATH 1430G and MATH 1350G or A ST 311 must be completed.
5. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
Management (Project & Supply Chain Management) - Bachelor of Business Administration

Every candidate for this major must fulfill the following requirements in addition to the general education common core, College of Business foundation and the business core, Viewing a Wider World requirements and general electives. Students will choose one or more of the four options that follow.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

**A Suggested Plan of Study for Students**

This roadmap assumes student placement in MATH 1220G Intermediate Algebra and ENGL 1110G Rhetoric and Composition. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

1 One 3-credit upper division course in the College of Business may substitute for one of the required five management courses.

At least 12 credits for the minor must be completed at NMSU. This minor is not open to majors in the Bachelor of Individualized Studies and the Bachelor of Applied Studies.

To obtain a Management minor, a grade of C- or better must be attained in the courses required.

## Marketing

### Undergraduate Program Information

Marketing majors learn skills and knowledge relevant to the co-creation of goods, services, and ideas that uniquely meet the needs and wants of global customer markets and society at large. Career opportunities exist in marketing management, advertising, market research, promotion management, sales and sales management, social media, distribution management, and retailing. The major is designed to allow a great deal of choice so students may emphasize any combinations of these areas.

Most marketing majors enter into careers in business firms, although some find job opportunities in governmental and other nonprofit organizations. Still others become involved in owning and managing their own companies. Opportunities in entrepreneurship and small business are expanding at a rapid pace.

### Graduate Program Information

The College offers a program leading to a Ph.D. degree (Doctor of Philosophy in Business Administration) (p. 184). The faculty of the Ph.D. Program in Business Administration is committed to training researchers and educators who will shape business scholarship, practice, and pedagogy. The program emphasizes preparing candidates to understand the complexities of modern business while they develop a specialized area of expertise in marketing or management. The Ph.D. in Business Administration provides graduates with the opportunity to pursue a variety of career paths within academia and within industry. Currently a concentration is offered in marketing.

### Degrees for the Department

#### Bachelor Degree(s)

- Marketing (Advertising) - Bachelor of Business Administration (p. 910)
- Marketing (PGA Golf Management) - Bachelor of Business Administration (p. 912)
- Marketing (Professional Selling) - Bachelor of Business Administration (p. 914)
- Marketing (Strategic Marketing) - Bachelor of Business Administration (p. 916)

---

1 These courses have prerequisites and it is the students responsibility for checking and fulfilling all course prerequisites listed for these courses.

2 See the General Education (p. 227) section of the catalog for a full list of courses.

3 Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

4 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

---

### Management - Undergraduate Minor

The management minor requires 18 upper-division credits in management. Business majors must take any six upper-division credits in management. The management minor for non-business majors consists of:

Marketing Courses

MKTG 1210. Advertising
3 Credits (3)
A survey of currently available advertising media. A psychological approach to consumer persuasion; applied techniques in media selection, layout mechanics, production methods, and campaign structures.
Prerequisite: MKTG 2110.
Learning Outcomes
1. Define advertising and the relevant application of psychology in delivering the message.
2. Explain the importance of various advertising media in the marketing mix.
3. Identify and explain the social, ethical and legal issues advertisers must consider.
4. Describe the significance of the marketing function in business.
5. Explain the importance of advertising and other marketing communication tools.
6. Demonstrate application of the planning process as it applies to marketing and advertising.
7. Describe the factors that are weighted when considering the use of radio and television in the creative advertising mix.
8. Describe the relationship between market segment, consumer behavior and selection of advertising campaign types.
9. List the alternative means of reaching a target market and the technical challenges of each.

MKTG 1220. Small Business Marketing
3 Credits (3)
An overview of public relations principles, practices and purposes as applied to small business. Topics include basics of news release writing, media awareness, development and maintenance of a positive public image, branding, ethical marketing, and the relationships of public relations with advertising and marketing. Methods and practices used in small business are explored.
Prerequisite: MKTG 2110.
Learning Outcomes
1. Explain the importance of creating and sustaining a positive public awareness and image.
2. Identify public relations practices as they relate to the management and marketing processes.
3. Define branding and discuss its importance for small business.
4. Describe the value of business event management and promotion for small business.
5. Discuss how media relations, public relations, advertising and marketing efforts are interrelated and the importance of each.

MKTG 180. Level 1, PGA's PGM Education Program (Part 1)
3 Credits (3)
Level 1 Part 1 of the PGA PGM Education Program. Introduction to the Policies and Procedures of the PGA Golf Mgt. Program and the PGA of America. Students will complete the PGA Qualifying Level Management 1A (Tournament Ops A, Rules of Golf B, and Career Enhancement B), and the corresponding Work Experience Activities. Additional course fee required. Consent of Instructor required. Restricted to: MKTG majors.

MKTG 181. Level 1, PGA's PGM Education Program (Part 2)
3 Credits (3)
Level 1 Part 2 of the PGA PGM Education Program. This class will focus on Teaching and Coaching 1, the corresponding PGA Work Experience Activities, and PGA Teaching Seminars. Additional course fee required. Consent of Instructor required. Restricted to: MKTG majors.
Learning Outcomes
1. Know how students learn and process golf knowledge and skills, and identify the implications for teaching.
2. Know how to define and distinguish between learning and performance.
3. Understand how juniors learn golf knowledge and skills, and identify implications for teaching.
4. Conduct a physical evaluation of a junior golfer and create developmentally appropriate exercise and training programs.
5. Establish student/teacher relationships that promote greater student learning and enjoyment.
6. Develop a communication style that fits the student and increases instructional effectiveness.
7. Analyze student’s instructional needs and set clear, purposeful learning and practice goals.
8. Know the format for an effective golf lesson.
9. Deliver effective explanations and demonstrations during a golf lesson.
11. Recognize the appropriate clubhead path and clubface position information to improve a golfer’s performance.
12. Conduct appropriate assessments to determine the short game skill level of the golfer.
13. Gain understanding of the short game elements to help lower scores and improve the player.
14. Define club performance terms and specifications, including lie angle and clubface angle or position, and describe their effect on ball flight and player performance. Define what information is required to properly assess a player’s golf equipment.
15. Define club performance terms and specifications, including lie angle and clubface angle or position, and describe their effect on ball flight and player performance. Observe a player’s swinging motion, ball flight, and equipment to evaluate the effectiveness of their equipment.

MKTG 2110. Principles of Marketing
3 Credits (3)
Survey of modern marketing concepts and practices focusing on the marketing mix: product, pricing, promotion, and distribution strategies. Topics include: the marketing environment, consumer behavior, marketing.
research, target marketing, and the ethical and social responsibilities of marketers. May be repeated up to 6 credits.

**Prerequisite:** BUSA 1110.

**Learning Outcomes**
1. Describe the professional, ethical, and social responsibilities of marketers.
2. Explain the role of the product in the marketing mix, including the product life cycle, the relevance of product innovation, and product classifications.
3. Illustrate the role of promotion in the marketing mix, including the communication process and the promotional mix.
4. Explain the role of price in the marketing mix, including pricing objectives, pricing policies, and pricing methods.
5. Describe the operation of channels of distribution and supply chains, including functions of intermediaries and degrees of coverage.
6. Define the concepts of target markets and market segmentation with respect to elements of the marketing mix.
7. Explain the importance of market research and information systems in supporting marketing decision making.
8. Describe the dynamic environment(s) in which marketing decisions must be made.

**MKTG 2220. Digital Marketing**

3 Credits (3)

This course focuses on planning to create and market a website. Internal marketing topics such as registering with search engines, increasing traffic, segmenting and targeting markets, establishing an online presence, developing a marketing plan and reshaping business for the Web market are covered.

**Prerequisite:** MKTG 2110.

**Learning Outcomes**
1. Describe how search engines work. (Use knowledge to make recommendations to a website on how it can improve its organic search rankings - perform search engine optimization).
2. Describe the various methods of online display advertising.
3. Determine the appropriate key performance indicators (KPIs) for any type of website.
4. Describe and implement best practices in marketing to a database of current and potential customers via email.
5. Utilize knowledge of social media tactics to design an effective social media campaign.
6. Implement online reputation management tactics to improve the online reputation of a brand.
7. Develop and present a digital marketing plan for a small, local business.

**MKTG 280. Level 1, PGA's PGM Education Program (Part 3)**

3 Credits (3)

Level 1 Part 3 of the PGA PGM Education Program. This class will focus on Facility Management 1B (Business Planning A, Customer Relations A, Golf Car A, Merchandising A, Turfgrass A), Level 1 Checkpoint Exams, and the corresponding PGA Work Experience Activities. Students will also be required to provide an internship evaluation report. Additional course fee required. Consent of Instructor required. Restricted to: MKTG majors.

**MKTG 281. Level 2, PGA's PGM Education Program (Part 1)**

3 Credits (3)

Level 2 Part 1 of the PGA PGM Education Program. This class will focus on Teaching and Coaching 2, Teaching and Coaching Seminars, and the corresponding PGA Work Experience Activities. Additional course fee required. Consent of Instructor required. Restricted to: MKTG majors.

**Learning Outcomes**
1. Explain how students learn golf knowledge and skills, and identify the implications for teaching
2. Explain how students process information when learning golf skills
3. Identify and explain the principles of effective practice
4. Explain how juniors learn golf knowledge and skills, and identify the implications for teaching
5. Structure an effective golf lesson
6. Analyze student’s instructional needs and set clear, purposeful learning and practice goals
7. Deliver effective explanations and demonstrations during a golf lesson
8. Engage in self-assessment of teaching skills and competencies
9. Recognize and apply the appropriate clubhead path and clubface position information to improve a golfer’s performance
10. Conduct appropriate assessments to determine the skill level of the golfer
11. Demonstrate basic knowledge of anatomy and physiology, and conduct a physical observation to identify movement capabilities and limitations that may affect a golfer’s performance
12. Define club performance terms and specifications, and describe their effect on ball flight and player performance

**MKTG 303. Principles of Marketing**

3 Credits (3)

Process, functions, and principles in the current marketing system.

**Learning Outcomes**
1. Understand primary and changing perspectives on marketing and strategic management.
2. Understand the fundamental principles and theories of marketing.
3. Develop the capacity to obtain and process relevant information and analytical skills.
4. Evaluate the impact of interactive media on marketing management.
5. Apply relevant marketing concepts and analytical tools, identify viable alternatives, make informed choices, and recommend marketing implementation plans.
6. Develop skills in organizing more effective strategic marketing and in implementing the market planning process.
7. Develop, evaluate, and implement marketing management strategies in complex environments through recent, popular case study analyses.
8. Formulate marketing management strategies on critical issues, problems, and business opportunities.

**MKTG 305. Marketing and Food Agricultural Products**

3 Credits (3)

This course provides a review of marketing principles and techniques used throughout the food and fiber supply chain. The course introduces a broad variety of marketing topics including marketing strategy, consumer behavior, market segmentation, market research, competitive analysis, and the marketing mix. The course serves as a foundation for advanced courses in agricultural marketing. May be repeated up to 3 credits.

**Prerequisite:** ECON 1110G or ECON 2120G.
Learning Outcomes
1. Articulate how agricultural commodities move through the food and fiber supply chain.
2. Understand the importance of strategic marketing and how organizations within the food and fiber supply chain identify consumers and their preferences.
3. Understand key marketing concepts used by agribusiness marketers, including SWOT analysis, the marketing mix, advertising and public relations.
4. Know the basic outline and components of a marketing plan.

MKTG 310. Marketing Research
3 Credits (3)
Design, collection analysis, and presentation of research data.
Prerequisite: MATH 1350G or A ST 311 and C- or better in MKTG 303, or consent of instructor.
Learning Outcomes
1. Translate a marketing problem into a feasible research question.
2. Recognize marketing research as a process that involves a sequence of activities, each compatible with the preceding activities.
3. Compare and contrast alternative research designs.
4. Identify the sources of marketing information and the various means for gathering such information.
5. Recognize the biases and limitations of marketing data and basic data analysis.
6. Interpret univariate and basic bivariate data analysis techniques (i.e., should be able to decide when a technique is appropriate and recognize the managerial implications of analytical results).
7. Design and execute a basic survey research project.
8. Assess ethical issues associated with various research approaches.

MKTG 311V. Consumer Behavior
3 Credits (3)
The different aspects of consumer behavior and the variables affecting consumer decisions. Analysis of current concepts and models.
Learning Outcomes
1. Know the consumer behavior concepts by integrating and adapting theories developed in disciplines such as psychology, sociology, anthropology, and economics.
2. Use specific tools to tackle and analyze customer issues.
3. Develop the ability to apply consumer behavior concepts from the perspective of marketing managers and public policy makers.
4. Increase the awareness of and enhance the ability to make ethical decisions in consumer-related issues.

MKTG 312. Personal Selling
3 Credits (3)
Implementation of the promotion process through interpersonal communications between salesperson and prospects. Serving customers by sales representatives.
Learning Outcomes
1. Demonstrate how personal selling can strategically enhance interpersonal communication skills, career management, personal productivity.
2. Identify key issues and trends such as opportunities or threats, for evolving emerging sales approaches platforms.

MKTG 313. Retail Management
3 Credits (3)
Investigates retail business operations and focuses on the strategic profit model, store location, layout, display, merchandising, operations, and personnel.
Learning Outcomes
1. Analyze the role of retailing in society and basic retailing principles, ideas, and concepts as they relate to an understanding of our market-driven system.
2. Compare and contrast segmentation and target market selection relative to a specific population product/service for different markets and retailing opportunities.
3. Apply the concepts of the marketing mix to the formulation and evaluation of retailing strategies relative to particular target markets, environments (economic, technological and competitive), and desired positions in market places (both local and global).
4. Areas to be addressed include communication strategy, branding, packaging, pricing, product/service design, methods of delivery and the product life cycle.
5. Relate the concepts of marketing and retailing research, consumer behavior and strategy and their interrelationships.
6. Compare and contrast analysis techniques and judgment that are useful to managers in acting with integrity to make decisions and taking action.

MKTG 314. Advertising Strategy
3 Credits (3)
Utilization of advertising as a business administration function; communication with consumers as a means of attaining marketing goals.
Learning Outcomes
1. Analyze advertising from a consumer perspective.
2. Compare advertising strategy theories and concepts.
3. Evaluate advertising critically and creatively.

MKTG 317. International Marketing
3 Credits (3)
Focuses on decisions relating to entering markets, market segmentation, marketing strategies, and tactics in the international arena. Same as I B 317.
Learning Outcomes
1. Develop understanding about what is involved in making international marketing decisions, including product, price, promotion, and place decisions to create a marketing mix.
2. Acquire an overview on the contemporary issues in global marketing and the unique challenges faced by marketing managers in the dynamic global environment.
3. Develop insights into how differences in global economic, cultural, social, political, and legal environments can affect marketing decisions.
4. Develop strategic thinking in the context of complex problems and challenges faced by the contemporary global executives and managers.
5. Develop ability to integrate the important global societal dimensions of diversity, environmental concerns, ethics, and technological change into their thinking.
6. Develop knowledge and skills to analyze cross-cultural variables and their impact on international marketing.
7. Discover sources of information for researching and evaluating international markets.
8. Communicate effectively about marketing issues in group discussions, oral presentations and written reports.
9. Work effectively as a team member in analyzing marketing issues.
10. Develop leadership skills necessary to deal with the uncertainty and changes faced by today's global marketers.

MKTG 324. Product/Service Development
3 Credits (3)
Covers product innovation, development, commercialization and resource recovery, price determination and administration strategies, and complementing planning processes.

Learning Outcomes
1. Understand the product/service development process.
2. Identify market opportunities for new products.
3. Use structured methods to evaluate and test product concepts.
4. Apply tools learned in class to develop new products/services.
5. Plan the launch of a product and evaluate its impact on the market.
6. Efficiently work with and communicate ideas to team members.

MKTG 354. Sports Marketing
3 Credits (3)
The application of marketing concepts to the sports industry. Topics include fans/customers, products, and promotions across a range of sports.

Learning Outcomes
1. Discuss the domain of sports marketing
2. Apply basic marketing tools (e.g., research, segmentation) to sports marketing contexts
3. Recognize, evaluate, and accommodate the perspectives of participants and spectators as sports consumers
4. Identify appropriate marketing mix options for sports products
5. Appraise recent sports marketing trends
6. Plan a career in sports marketing

MKTG 357. Internet and Social Media Marketing
3 Credits (3)
Focuses on the consumer psychology and marketing strategies at work in advertising and selling brands via the Internet and social media networks.

Learning Outcomes
1. Apply the concepts of the marketing mix to the formulation/evaluation of marketing strategies relative to Social Media policies that combine business objectives with appropriate use of Social Media channels and content.
2. Compare and contrast the history of Social Media and recognize the various platforms of Social Media.
3. Select/defend segmentation and target market selection relative to a specific population product/service that engages target audiences with a marketing message.
4. Analyze business objectives and connect to appropriate Social Media tactics.
5. Evaluate Social Media marketing content to shape the way we connect to and build relationships with users, consumers and businesses.
6. Relate the concepts of marketing research to establish metrics for measuring Social Media marketing success.

MKTG 380. Level 2, PGA's PGM Education Program (Part 2)
3 Credits (3)
Level 2 Part 2 of the PGA PGM Education Program. This class will focus on Facility Management 2 and the corresponding PGA Work Experience Activities. Students will also be required to provide an internship evaluation report. Additional course fee required. Consent of Instructor required. Restricted to: MKTG/PGA Golf Management majors.

Learning Outcomes
1. Define the business at the facility level in terms of vision, core values, facility characteristics and mission.
2. Utilize the four Interaction Strategies in a variety of routine and challenging customer situations.
3. Identify core business areas that support a customer-focused environment.
4. Know the characteristics of a merchandising operation that align with a facility's business plan.
5. Understand how to define, assess, and develop tournament business at a facility.

MKTG 381. Level 3, PGA's PGM Education Program (Part 1)
3 Credits (3)
Level 3 Part 1 of the PGA's PGM Education Program. This class will focus on Teaching and Coaching 3, Teaching and Coaching Seminars, and the corresponding PGA Work Experience Activities. Additional course fee required. Consent of Instructor required. Restricted to: MKTG/PGA Golf Management majors.

Learning Outcomes
1. Explain how various types of feedback function to influence learning.
2. Define the major variables that influence learning and explain how they operate with implications for practice, learning, and teaching.
3. Provide effective instructional feedback after students' practice and performance.
4. Explain how the form, precision, timing, frequency, and regulation of augmented feedback influence learning with implications for teaching and practice conditions.
5. Explain how the key practice factors influence learning with implication for designing practice conditions.
6. Establish relationships that promote greater student learning and enjoyment.
7. Plan long-term developmental programs for beginning and intermediate players.
8. Communicate effectively with students.
9. Develop a communication style that increases instructional effectiveness.
10. Effectively determine and design an appropriate practice routine to the benefit of the golfer.
11. Effectively determine and assign the appropriate drill or drill with an aid to improve the swing shape of the golfer.
12. Use relevant technology to promote student learning.
13. Effectively demonstrate and apply the appropriate specialty shot information to the benefit of the golfer.
14. Demonstrate basic knowledge of current swing methodologies of noted instructors.
15. Physical development of junior golfers.
16. Assess the physical capabilities of adult golfer, describe implications for performance, and provide potential physical adjustments.
17. Describe how to use bench skills, tools, and technologies for measuring and altering club performance.
18. Perform analyses and make appropriate alterations to change ball flight, players performance, and teacher effectiveness.
MKTG 400. Marketing Internship/Field Experience
3 Credits (3)
Internship of field experience in application of marketing principles. The student must accept an internship before being allowed to enroll in the course. Consent of instructor required. Restricted to MKTG majors.

MKTG 440. Sales, Negotiations, and Customer Relationship Management
3 Credits (3)
This course focuses on addressing the issues, processes and strategies related to professional selling and sales management. This is a comprehensive course in the art of selling, focusing on relationship building, negotiating, and sales management. Various techniques will be explored, including prospecting, lead management, product introduction, negotiation, closing strategies, and relationship management.

Learning Outcomes
1. Understand concepts and frameworks that help you analyze each negotiation situation.
2. Develop a strategic plan and preparation documents in advance of each negotiation.
3. Master a toolkit of useful negotiation skills, strategies and tactics.
4. Improve your ability to predict and understand the other party's behavior during negotiations.
5. Gain valuable experience and confidence in your own negotiating skills.
6. Improve future outcomes whenever you enter into a negotiation or are engaged in a dispute.

MKTG 449. Promotion Management
3 Credits (3)
Covers concepts and problems in the use of advertising, internet marketing, social media marketing, personal selling, publicity, and other forms of promotion; planning, coordination, control, and evaluation of effectiveness.

Learning Outcomes
1. Analyze the role of advertising and promotion in society and basic marketing principles, ideas, and concepts as they relate to an understanding of our market-driven system.
2. Compare and contrast segmentation and target market selection relative to a specific population product/service for different markets and promotional opportunities.
3. Apply the concepts of the marketing mix to the formulation and evaluation of promotional strategies relative to particular target markets, environments (economic, technological and competitive), and desired positions in market places (both local and global).
4. Areas to be addressed include communication strategy, branding, pricing, product/service design, and e-commerce.
5. Relate the concepts of marketing and advertising research, consumer behavior and strategy and their interrelationships.
6. Compare and contrast analysis techniques and judgment that are useful to managers in acting with integrity to make decisions and taking action in the promotional environment.

MKTG 451. Food and Agribusiness Market Assessment
3 Credits (3)
This course is an application course in which self-managed teams develop and present marketing plans for agribusiness firms. Emphasis on integrating the marketing mix, particularly promotional elements. May be repeated up to 3 credits. Crosslisted with: AEEC 4510.

Prerequisite(s): AECC 3210 or MKTG 305 or consent of instructor.

Learning Outcomes
1. Identify, organize and conduct market research specific to the project.
2. Develop an understanding of primary and secondary research collection and analysis.
3. Exhibit enhanced relationship management, communication skills, and team building.
4. Develop written communication with final deliverable for implementation into the business world.

MKTG 453. Sales Management
3 Credits (3)
The nature of the sales management function in industry. Focuses on intra and interdepartmental sales management activities.

Prerequisite: MKTG 312.

Learning Outcomes
1. Examined the linkage between personal selling, as a basket of activities, and the management of those marketing personnel who do selling (i.e., salespeople).
2. Examined the role of the sales force in the achievement of a firm's marketing objectives.
3. Undertaken numerous case-based analyses of typical sales management issues, including the hiring, firing, training, motivation, compensation, deployment, and evaluation of the firm's sales personnel.
4. Developed decision-making skills and analytic capabilities in the development and management of both sales programs and salespeople.

MKTG 461. Seminar in Entrepreneurship
3 Credits (3)
For students interested in owning and operating their own business; students desiring hands-on, real-time experience in helping start up a business. Crosslisted with: MGMT 461.

Prerequisite(s): Senior standing or consent of instructor.

MKTG 462. Advanced Sales
3 Credits (3)
Advanced instruction and skill development in interpersonal communication skills to broaden understanding of the professional sales role (especially in team selling situation), career management, personal productivity, negotiation, and coordination with other functional areas.

Prerequisite: MKTG 312.

Learning Outcomes
1. Students will learn “how” to sell (i.e., the behaviors and planning associated with selling today).
2. Analyze the concept of what/how is perhaps equally important but not nearly as obvious, how and why buyers “buy”.
3. The course focus will be particularly on so-called “business-to-business” (B2B) sales jobs, as that is where many of the most interesting – and lucrative – sales positions reside.

MKTG 480. Level 3, PGA's PGM Education Program (Part 2)
3 Credits (3)
Level 3 Part 2 of the PGA's PGM Education Program. This class will focus on Facility Management 3, the Business Simulation Seminars, and the corresponding PGA Work Experience Activities. Students will also be required to provide an internship evaluation report. Additional course fee required. Consent of Instructor required. Restricted to: MKTG/PGA Golf Management Majors.
Learning Outcomes
1. Assess the current state of the business by conducting a SWOT Analysis
2. Describe the golf industry job market and the knowledge and skills required to succeed
3. Identify areas where food services and golf operations should coordinate efforts
4. Determine golf car needs in order to acquire a fleet that supports the facility's mission, customers, and physical characteristics
5. Describe the organizational structure, key departments, reporting relationships, and job descriptions of a facility
6. Utilize industry-proven pricing strategies to meet business objectives
7. Describe the Performance System for supervising and delegating
8. Describe practices that improve the golf course and protect the environment

MKTG 481. PGA Golf Management Final Experience
1 Credit (1)
The following are requirements for successful completion of this senior level PGA Golf Management capstone course: 16 months of internship, completion of the Qualifying Level, Level 1, Level 2, and Level 3 of the PGA's PGM Education Program and successful completion of the PGA's Playing Ability Test. Consent of Instructor required. Restricted to: MKTG/PGA Golf Management majors.

Learning Outcomes
1. Describe the golf industry job market and the knowledge and skills required to succeed
2. Access PGA employment resources and participate in professional growth and development

MKTG 489. Strategy and Policy
3 Credits (3)
Techniques and analysis of marketing strategy and policy planning and formulation. Restricted registration to senior standing or by consent of instructor.
Prerequisite: C- or better in MKTG 310.

Learning Outcomes
1. Relate marketing strategy to the environmental constraints and opportunities with which managers must deal.
2. Compare marketing strategy theories and concepts.
3. Evaluate appropriate strategic marketing decisions in various situations.

MKTG 490. Selected Topics
1-18 Credits (1-18)
Covers materials and subjects not offered in regular Marketing courses. Students can take 18 credit hours of MKTG 490 if each class is a different subtitle. A maximum of 18 credit hours can be earned through MKTG 490.

MKTG 498. Independent Study
1-3 Credits
Individual studies directed by consenting faculty with the prior approval of the department head. A maximum of 3 credits may be earned.
Prerequisites: junior or above standing and consent of instructor.

MKTG 503. Marketing Management
3 Credits (3)
Analysis of marketing problems and the integration of organizational resources as well as behavioral and quantitative techniques into the development and implementation of solutions.

Learning Outcomes
1. Identify the fundamental principles and theories of marketing strategy
2. Outline primary and changing perspectives on marketing and strategic management
3. Apply relevant marketing concepts and analytical tools
4. Develop capacity to obtain and process relevant information with enhanced analytical skills
5. Identify viable alternative to make informed choices and recommend marketing implementation plans
6. Evaluate the impact of interactive media on marketing management
7. Develop skills in organizing more effective strategic marketing and implementing the market planning process
8. Practice implementing marketing management strategies in complex environments through case study analyses
9. Formulate marketing management strategies on critical issues, problems, and business opportunities
10. Synthesize perspectives of ethics and social responsibility in adapting to changing environments

MKTG 591. Seminar in Entrepreneurship
3 Credits (3)
For students interested in owning and operating their own business; students desiring hands-on, real-time experience in helping start up a business. Same as MKTG 461 with differentiated assignments for graduate students. Crosslisted with: MGMT 591.
Prerequisite(s): Graduate standing.

MKTG 601. Marketing Management
3 Credits (3)
Covers the conceptual foundations of contemporary marketing management research, concepts, and literature. Fundamental to the understanding of contemporary marketing and the breadth of the field of marketing study.

Learning Outcomes
1. Identify the contemporary principles and theories of marketing strategy research
2. Outline primary guidelines and trendy directions of marketing strategic research
3. Improve theoretical foundation for research development in marketing strategy
4. Develop capacity of analytical and quantitative skills required for empirics
5. Apply relevant marketing theories, concepts and analytical methodology in research development
6. Formulate research ideas pertinent to marketing strategies on critical issues, problems, and phenomena
7. Practice complex research design, theoretical development and empirical operationalization
8. Synthesize perspectives of ethics and social responsibility in scholarly research

MKTG 620. Contemporary Marketing Readings
3 Credits (3)
Theoretical and methodological issues involved in translating a theory into a research study. Prepares Ph.D. students to undertake dissertation research. Consent of instructor required. May be repeated up to 3 credits.

Learning Outcomes
1. Students will be able to apply theory that they have learned to the process of doing research.
MKTG 625. Consumer Behavior
3 Credits (3)
Extensive reading of seminal and contemporary articles on consumer behavior and developing original research to explore cross-disciplinary issues relevant to the study of marketing. May be repeated up to 3 credits.

Learning Outcomes
1. Students will be able to develop theories and frameworks.
2. Students will be able to discuss the latest research topics related to consumer behavior.
3. Students will be able to generate research ideas (interesting questions about consumer behavior and research hypotheses).
4. Students will be able to design experiments to test their research ideas and hypotheses.

MKTG 640. Measurement and Structural Equation Modeling
3 Credits (3)
Explores theories of measurement that underlie all quantitative analysis, including the use of structural equation models. Contrasts classical test theory with item response theory and generalizability theory. Covers PRELIS and LISREL, and critiquing structural equation models by other researchers. May be repeated up to 3 credits.

Prerequisite(s): A ST 505.

MKTG 670. Marketing Theory
3 Credits (3)
The evolution, development, construction, and evaluation of the major theoretical perspectives of marketing. Fundamental to the understanding of contemporary marketing and preparation for investigations into the nature and role of theory in marketing. May be repeated up to 3 credits.

Learning Outcomes
1. Students will be able to identify the contemporary principles and theories of marketing strategy research.
2. Students will be able to outline primary guidelines and trendy directions of marketing strategic research.
3. Students will be able to improve theoretical foundation for research development in marketing strategy.
4. Students will be able to develop capacity of analytical and quantitative skills required for empirics.
5. Students will be able to apply relevant marketing theories, concepts and analytical methodology in research development.
6. Students will be able to formulate research ideas pertinent to marketing strategies on critical issues, problems, and phenomena.
7. Students will be able to implement complex research design, theoretical development, and empirical operationalization.
8. Students will be able to synthesize perspectives of ethics and social responsibility in scholarly research.

MKTG 690. Special Topics in Marketing
3 Credits (3)
A seminar on special topics in marketing. The topic of the course will vary according to the needs of the students in the program and the instructor. Ph.D. students may repeat this course up to three times for a maximum total of 9 credits.

MKTG 698. Selected Topics
1-9 Credits (1-9)
Materials and subjects not offered in regular marketing courses. May be repeated for a maximum of 18 credits under different subtitles.

MKTG 700. Doctoral Dissertation
1-15 Credits (1-15)
May be repeated up to 88 credits.

Prerequisite: advancement to candidacy.

Department/College Requirements
### Foundation Requirements

Choose one from the following:
- MATH 1350G Introduction to Statistics (3 credits)
- A ST 311 Statistical Applications (3 credits)

**Business Core: Lower Division (minimum grade of C- required)**
- ACCT 2110 Principles of Accounting I (3 credits)
- ACCT 2120 Principles of Accounting II (3 credits)
- BCIS 1110 Intro to Business (3 credits)
- BUSA 1110 Intro to Business (3 credits)

**Business Core: Upper Division**
- BCIS 338 Business Information Systems I (3 credits)
- BLAW 316 Legal Environment of Business (3 credits)
- BFIN 341 Financial Analysis and Markets (3 credits)
- MGMT 309 Human Behavior in Organizations (3 credits)
- MGMT 449 Strategic Management (3 credits)

**Major Core Classes (minimum grade of C- required)**
- MKTG 310 Principles of Marketing (3 credits)

**Concentration Courses**
- BCIS 485 Enterprise Resource Planning (3 credits)
- MGMT 344 Production and Operations Management (3 credits)
- MGMT 470 Project Management in Organizations (3 credits)

Upper division Economics or Applied Statistics elective from the following prefixes: A ST, ECON (3 credits)

Upper Division Business elective from the following prefixes: A ST, ACCT, BLAW, ECON, ENTR, BFIN, I B, MGMT, MKTG (excluding A ST 311) (3 credits)

**Major Courses**

**Major Core Classes (minimum grade of C- required)**
- MKTG 310 Marketing Research (3 credits)
- MKTG 489 Strategic and Policy Management (3 credits)

**Concentration Courses**
- MKTG 311V Consumer Behavior (3 credits)
- MKTG 314 Advertising Strategy (3 credits)
- MKTG 357 Internet and Social Media Marketing (3 credits)
- MKTG 449 Promotion Management (3 credits)

**Major electives**

Choose two from the following:
- MKTG 313 Retail Management (3 credits)
- MKTG 317 International Marketing (3 credits)
- MKTG 324 Product/Service Development (3 credits)
- MKTG 354 Sports Marketing (3 credits)

**Electives, to bring the total credits to 120**

**Total Credits**

### Credits

- **First Year**
  - Semester 1
    - ENGL 1110G Composition I (C- or better) (4 credits)
    - MATH 1220G College Algebra (C- or better) (3 credits)
    - BCIS 1110 Intro to Business (3 credits)
    - Area V: Humanities Course (3 credits)
    - Elective Course (3 credits)
  - Credits: 16
  - Semester 2
    - COMM 1150G Introduction to Communication (C- or better) (3 credits)
    - BUSA 1110 Intro to Business (C- or better) (3 credits)
    - MATH 1430G Applications of Calculus I (3 credits)
    - Area III: Laboratory Science Course (4 credits)
    - Area VI: Creative and Fine Arts Course (3 credits)
    - Credits: 16

- **Second Year**
  - Semester 1
    - ENGL 2210G Professional and Technical Communication Honors (C- or better) (3 credits)
    - ECON 2110G Macroeconomic Principles (C- or better) (3 credits)
    - MATH 1350G Introduction to Statistics (C- or better) (1 credit)
    - ACCT 2110 Principles of Accounting I (C- or better) (3 credits)
    - Elective Course (3 credits)
    - Credits: 15
  - Semester 2
    - ECON 2120G Principles of Microeconomics (C- or better) (3 credits)
    - ACCT 2120 Principles of Accounting II (C- or better) (3 credits)
    - MKTG 303 Principles of Marketing (3 credits)
    - MGMT 309 Human Behavior in Organizations (3 credits)
    - VWW: Viewing a Wider World Course (excluding MKTG 311V) (3 credits)
    - Credits: 15

- **Third Year**
  - Semester 1
    - MKTG 311V Consumer Behavior (3 credits)
    - MKTG Upper-Division Elective (3 credits)
    - BCIS 338 Business Information Systems I (3 credits)
    - BLAW 316 Legal Environment of Business (3 credits)
    - BFIN 341 Financial Analysis and Markets (3 credits)
    - Credits: 15

1. See the General Education (p. 227) of the catalog for a full list of courses.
2. MATH 1220G College Algebra is required for the degree but students may need to take any prerequisites needed to enter MATH 1220G first.
3. All Foundation Requirement Courses must be taken, or satisfied with transfer credits, regardless of which Mathematics or Statistics course satisfies the Area II Education course: MATH 1220G College Algebra, MATH 1350G Applications of Calculus I, and either MATH 1350G Introduction to Statistics or A ST 311 Statistical Applications must be completed.
4. See the Viewing a Wider World (p. 231) of the catalog for a full list of courses.
5. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

### A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in Mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from Fall to Spring semesters and is subject to modification or change. Online availability and enrollment may be limited.

1. The contents and order of the catalog for a full list of courses.
2. The requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
Marketing (PGA Golf Management) - Bachelor of Business Administration

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120.5 credits with 58.5 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Note: Students must apply separately to the PGA Golf Management Program for acceptance. Acceptance is limited to the fall of every year.

1 These courses have prerequisites and it is the students responsibility for checking and fulfilling all course prerequisites listed for these courses.

2 See the General Education (p. 227) section of the catalog for a full list of courses.

3 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

4 Most, but not all, upper-division MKTG courses are offered online. However, most MKTG courses that are offered online are only offered once per year. Most online courses that are available for on-campus majors to take (i.e., not through the NMSU-O campus) have substantially limited enrollment – please plan accordingly.

5 While this course can currently be substituted for by other upper-division MKTG courses, it is likely to be required in future catalogs and taking it is strongly encouraged.
Online availability and enrollment may be limited from Fall to Spring semesters and is subject to modification or change. Students and is not intended as a contract. Course availability may vary depending on initial student placement in Algebra. This roadmap assumes student placement in Algebra and English. It is only a suggested plan of study for students, and is not intended as a contract.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in Mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from Fall to Spring semesters and is subject to modification or change. Online availability and enrollment may be limited.

¹ See the General Education (p. 227) of the catalog for a full list of courses.
² MATH 1220G College Algebra is required for the degree but students may need to take any prerequisites needed to enter MATH 1220G first.
³ All Foundation Requirement Courses must be taken, or satisfied with transfer credits, regardless of which Mathematics or Statistics course satisfies the Area II General Education course: MATH 1220G College Algebra, MATH 1430G Applications of Calculus I, and either MATH 1350G Introduction to Statistics or A ST 311 Statistical Applications must be completed.
⁴ See the Viewing a World (p. 231) of the catalog for a full list of courses.
⁵ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120.5 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Total Credits 120

1. These courses have prerequisites and it is the students responsibility for checking and fulfilling all course prerequisites listed for these courses.
2. See the General Education (p. 227) section of the catalog for a full list of courses.
3. See the Viewing A Wider World (p. 231) section of the catalog for a full list of courses.
4. Most, but not all, upper-division MKTG courses are offered online. However, most MKTG courses that are offered online are only offered once per year. Most online courses that are available for on-campus majors to take (i.e., not through the NMSU-O campus) have substantially limited enrollment – please plan accordingly.
5. While this course can currently be substituted for by other upper-division MKTG courses, it is likely to be required in future catalogs and taking it is strongly encouraged.

Marketing (Strategic Marketing) - Bachelor of Business Administration

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Note: A more general marketing major is offered through an Online Distance Education Degree Completion Program. Program information is available on the College of Business website: https://business.nmsu.edu/undergraduate-programs/

While this course can currently be substituted for by other upper-division MKTG courses, it is likely to be required in future catalogs and taking it is strongly encouraged.

Advertising - Undergraduate Minor

If you are considering the Minor in Advertising, please visit the Department of Marketing, Business Complex, room 209 to arrange a consultation with a Marketing Faculty member for guidance and a suggested Plan of Study for the minor, etc. Students must have a cumulative grade point average of 2.0 in the 18 credits in order to earn the Minor in Advertising. Also, at least twelve credits for the minor must be completed at NMSU.

This minor is not open to majors in the Bachelor of Individualized Studies and the Bachelor of Applied Studies.

Requirements: 18 or more Credit Hours in an approved plan of study.

College of Engineering

Dean - Lakshmi Reddi, Ph.D., P.E.

Associate Dean (Academic Programs) - David Jauregui, Ph.D., P.E.

Associate Dean (Research) - Satyajayant Misra, Ph.D.

Associate Dean (Outreach and Recruitment) - Patricia Sullivan, Ph.D.

Assistant Dean (Student Success and Experiential Learning) - Gabe Garcia, Ph.D.

College Chief of Staff - Linda Fresques

The College of Engineering comprises six departments:

- Chemical Engineering (p. 924);
- Civil Engineering (p. 938);
- Electrical and Computer Engineering (p. 951);
- Engineering Technology and Surveying Engineering (p. 1005);
- Industrial Engineering (p. 1053); and
- Mechanical and Aerospace Engineering (p. 1062).

Mission of the College of Engineering

The College of Engineering will uphold the land grant mission of NMSU through nationally recognized programs in education, research and professional and public service.

With respect to our undergraduate programs, we will accomplish our mission by focusing on the following goals:

1. To be nationally and internationally recognized for academic and research programs in engineering and engineering technology.
2. Provide world-class engineers and engineering technologists for industrial, government, and academic constituents of the College of Engineering.
3. To be the University of Choice for undergraduate engineering and engineering technology education in the region.
4. To serve as an engine for economic development in New Mexico through the advancement of engineering and technology.

Furthermore, graduates receiving baccalaureate degrees will demonstrate:

- an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- an ability to communicate effectively with a range of audiences
- an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
- an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
- an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

**Undergraduate Student Advisement**

Starting with the fall 2017 semester, students entering the College of Engineering will be advised by the Center for Academic Advising and Student Support (CAASS) located in Educational Services, Suite 200. Students may also change majors at the CAASS. Students uncertain about choosing a major may list themselves as undeclared in the College of Engineering and be advised by the CAASS. Undeclared students will be asked to choose a major after two semesters in the college. Students are encouraged to consult with departmental mentors on subjects related to course offerings, student organizations, internships, research opportunities, graduate education, and career options. Students must have a declared major in order to graduate.

**Undergraduate General Education**

With the exception of math and science, the college accepts all coursework approved for inclusion in the New Mexico General Education Common Core. Calculus I, General Chemistry I and Engineering Physics I are required to satisfy areas II and III of the common core.

**S/U Coursework**

The college requires most degree requirements to be taken with traditional grading. Students may take selected humanities and social science courses under the S/U option. Other exceptions are specifically noted in the program descriptions later in this catalog.

**Undergraduate Math Placement**

Entering freshmen are placed into an appropriate math course based upon the results of the Math Placement Exam administered regularly by the NMSU mathematics department. Students with advanced placement or transfer credit for mathematics will be placed accordingly.

### Minors

Minors are available from most departments within the College of Engineering, and they are outlined in the individual program descriptions.

### Undergraduate Cooperative Education

After two semesters of satisfactory academic work (2.5 GPA or higher), an engineering student may go on a work phase with one of the many companies or governmental agencies with which the university has co-op agreements. The experience obtained through alternating periods of academic and field work greatly contributes to the preparation of a student for professional life. Work phases are considered to be a vital part of the educational process, and students are counseled in the selection of co-op positions that will lead to progressive learning experiences. Earnings while on work phase provide a source of financial assistance to meet educational expenses.

A significant number of undergraduate engineering students are in the cooperative education program. Students may, with the approval of their Department Head, earn credit while participating in a co-op work phase. Co-op credits do not normally count toward the degree requirements, but are displayed on the transcript.

### Undergraduate General Academic Requirements

For regular admission to the university and the College of Engineering, incoming freshman and transfer applicants must meet the university’s qualifications for regular admission as stated in the undergraduate catalog in effect at the time of application. Students admitted to the College of Engineering will be classified by the college as a PRE-[major] until the standard requirements described below for admission to the program major are met.

PRE-[major] students will be admitted into their respective programs once they have earned a minimum grade of C- in all of the following courses:

<table>
<thead>
<tr>
<th>Prefix</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 1215G</td>
<td>General Chemistry I Lecture and Laboratory for STEM Majors</td>
<td>4</td>
</tr>
<tr>
<td>or CHEM 1120G (engineering technology)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>ENGL 1110G/1110H/1110M</td>
<td>Composition I</td>
<td>4</td>
</tr>
<tr>
<td>MATH 1511G</td>
<td>Calculus and Analytic Geometry I</td>
<td>4</td>
</tr>
<tr>
<td>or MATH 1430G (engineering technology)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>PHYS 1310G</td>
<td>Calculus-Based Physics I</td>
<td>3</td>
</tr>
<tr>
<td>or PHYS 1230G (engineering technology)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Any of the above courses with earned AP credit (minimum score of 3) is exempt from the list. Transfer students may meet this criteria with determined passing credit of equivalent courses. PRE-[major] students will be advised by their EG-[major] department.

NMSU College of Engineering reserves the right to independently test any student’s English proficiency upon arrival, including those who have earned scores satisfying minimum admission criteria. If the demonstrated level of English proficiency is not sufficient for academic success as determined by university regulations, support classes may be required to improve proficiency.

Students must earn a minimum cumulative GPA of 2.0 before enrolling in engineering courses numbered 300 or above. Students seeking to continue in engineering upper division courses with a GPA below 2.0 need
to meet with the Associate Dean of Academics to create a course plan designed to increase their GPA and meet this criteria.

Students must earn a grade of C- or better in all engineering, technology, math and science courses (including associated prerequisite courses) required for the degree and also courses taken to satisfy the general education requirements for Area I-Communications, Area II-Mathematics, and Area III-Laboratory Sciences. If a grade lower than C- is earned in any of these courses, the student is required to retake the course immediately the next semester it is offered. Students who earn a grade less than a C- the first time will be contacted by the department and/or academic advising center and advised about this policy and resources to help in their academic success. If the student fails to achieve a C- or better in any of these courses a second time, then the student must submit a written request to the Associate Dean of Academics in the College of Engineering to enroll in the course a third time. The student should explain the circumstances impacting their grade and the actions planned to improve their performance.

Digital Badges
Learning a knowledge-based skill by spending a concentrated, short period of time can lead to the awarding of a competency in the form of a digital badge. Digital badges can be combined or a longer skill-based instructional path can be used to secure a micro-credential which may lead to college credit. Skills leading to digital badges and micro-credentials can be acquired in various ways including workshops, online classes, and focused courses through NMSU OnDemand or outside of NMSU.

The College of Engineering encourages students to engage in experiential and focused learning that leads to knowledge-based skills relevant in industry including specific software, project management, leadership, quality, entrepreneurship, and critical thinking. Digital badge and micro-credential earners can also benefit by having the ability to combine classroom knowledge with acquired skills, especially in design classes.

Other benefits of digital badges include: being able to choose what knowledge-based skills you want to develop; strategically combining several badges to form an overarching micro-credential; and sharing your achievements online with others including prospective employers.

Badges and micro-credentials recognized by the College of Engineering are those that are validated by assessment, supported by evidence, and relevant to the practice of engineering.

Students in the College of Engineering have been earning digital badges and micro-credentials independently or through sponsored projects. Starting with this catalog, the College of Engineering degree programs are providing recommendations to students on what skills can enhance their learning and when in the curricular path would digital badges and overarching micro-credential be most beneficial. Specific information on digital badges and micro-credentials can be found on the degree program pages of the catalog.

Engineering Transfer Policy
NMSU Administrative Rules and Procedures, Section 4.61, Transfer Credit states the following: PART 3A, Student. "It is the student’s responsibility to provide the necessary materials for consideration by Departmental Faculty of their requests for transfer credit" and PART 3B, Departmental Faculty. "Departmental Faculty review and decide requests for transfer credit". Policy for engineering majors enrolling in courses at other institutions to meet College of Engineering Departmental Core Requirements includes:

1. NMSU main campus engineering majors may take core classes at other institutions of higher education to meet NMSU College of Engineering Departmental Core in the following situations: (1) if the NMSU core course cannot accommodate any more eligible students and (2) the course is not offered during a given semester of the academic year.

2. The following conditions and restrictions apply to any course not taken on the NMSU main campus.
   • The department must approve the course prior to enrollment (student shall provide a corresponding course syllabus and any other documentation required to Department Head).
   • The course must be a class in a program that is accredited by an accreditation commission of ABET, Inc. and cannot be graded in the S/U grade mode.
   • The course must be substantially the same as the equivalent NMSU class and the student must have satisfied all NMSU prerequisite requirements.
   • The student shall provide a corresponding course syllabus and any other documentation required.
   • If NMSU prerequisite requirements are not satisfied, credit will be denied regardless of a passing grade for the course at the other institution.

In addition to 2 above, the following conditions apply to any on-line course not taken from the NMSU main campus.
   • Scheduled exams, if any, shall be proctored.
   • If NMSU prerequisite requirements are not satisfied, credit will be denied regardless of a passing grade for the course at the other institution.

Requirements for Graduation
The minimum requirements for undergraduate degrees are:

1. Satisfaction of the university requirements as previously outlined in the Regulations (p. 31) section of this catalog.
2. Satisfaction of the college requirements as outlined under General Academic Requirements, above.
3. Satisfaction of the departmental rules and course requirements as outlined in the individual program descriptions.

NOTE: In order to maintain quality, remain current, and satisfy changes in accreditation criteria, requirements which have been published may be changed. Any such changes will be announced and will not be retroactive. Always consult an academic advisor from your department before registering for classes.

For more information about transferring to New Mexico State University from another accredited institution, visit the NMSU Transfer Center.
Master’s Accelerated Program

Students who have a minimum GPA of 3.0 are eligible for the Masters Accelerated Program (MAP) in engineering. The MAP allows a student to earn both a bachelor’s and master’s degree in as little as five years.

A master’s degree is increasingly becoming the professional degree of choice for engineering practice. Many employers encourage, or even require, their employees to seek the degree during their early career, and master’s holders often experience increased upward mobility and earn substantially greater salaries as a result.

General requirements:

• It takes 30 to 32 credit hours to complete a master’s degree.
• Up to 12 credits of your undergraduate coursework 450 and above may be counted toward the master’s degree.
• It’s possible to complete the master’s degree in 2-3 semesters after graduation with a bachelor’s degree.

Visit the Master’s Accelerated Program (MAP) (https://honors.nmsu.edu/for-students/masters-accelerated-program-map.html) page for more information.

Graduate Degrees
Graduate study is available in

• Aerospace Engineering (p. 1063),
• Chemical Engineering (p. 925),
• Civil Engineering (p. 939),
• Electrical Engineering (p. 953),
• Environmental Engineering (p. 939),
• Industrial Engineering (p. 1054),
• Information Technology (https://catalogs.nmsu.edu/nmsu/engineering/engineering-technology-surveying/#degreestext), and
• Mechanical Engineering (p. 1063).

A multi-disciplinary graduate degree with concentration in Advanced Manufacturing (p. 922) is also available. See individual program descriptions for graduate degree requirements.

Bachelor Degrees

A
• Aerospace Engineering - Bachelor of Science in Aerospace Engineering (p. 1070)

C
• Chemical Engineering - Bachelor of Science in Chemical Engineering (p. 934)
• Civil Engineering - Bachelor of Science in Civil Engineering (p. 947)
• Civil Engineering Technology (Renewable Energy Technologies) - Bachelor of Science in Engineering Technology (p. 1029)
• Civil Engineering Technology (Transportation Technology) - Bachelor of Science in Engineering Technology (p. 1031)
• Civil Engineering Technology - Bachelor of Science in Engineering Technology (p. 1027)
• Computer Engineering - Bachelor of Science in Computer Engineering (p. 966)

E
• Electrical Engineering (Artificial Intelligence, Machine Learning, & Data Science) - Bachelor of Science in Electrical Engineering (p. 971)
• Electrical Engineering (Communications and Signal Processing) - Bachelor of Science in Electrical Engineering (p. 973)
• Electrical Engineering (Computers and Microelectronics) - Bachelor of Science in Electrical Engineering (p. 975)
• Electrical Engineering (Controls & Robotics) - Bachelor of Science in Electrical Engineering (p. 978)
• Electrical Engineering (Electromagnetics and Photonics) - Bachelor of Science in Electrical Engineering (p. 980)
• Electrical Engineering (Power) - Bachelor of Science in Electrical Engineering (p. 982)
• Electrical Engineering (Space Systems Engineering) - Bachelor of Science in Electrical Engineering (p. 985)
• Electrical Engineering - Bachelor of Science in Electrical Engineering (p. 968)
• Electronics and Computer Engineering Technology - Bachelor of Science in Engineering Technology (p. 1032)
• Engineering Physics (Aerospace Engineering) - Bachelor of Science in Engineering Physics (p. 998)
• Engineering Physics (Chemical Engineering) - Bachelor of Science in Engineering Physics (p. 1000)
• Engineering Physics (Electrical Engineering) - Bachelor of Science in Engineering Physics (p. 1002)
• Engineering Physics (Mechanical Engineering) - Bachelor of Science in Engineering Physics (p. 1003)

G
• Geomatics - Bachelor of Science in Geomatics (p. 1034)
• Geomatics - Bachelor of Science in Geomatics (Online) (https://catalogs.nmsu.edu/global/nmsu-global/geomatics-bs-geomatics-online/)

I
• Industrial Engineering - Bachelor of Science in Industrial Engineering (p. 1059)
• Information and Communication Technology (Cyber Defense) - Bachelor of Information and Communication Technology (p. 1040)
• Information and Communication Technology (Cyber Defense) - Bachelor of Information and Communication Technology (Online) (https://catalogs.nmsu.edu/global/nmsu-global/information-communication-technology-cyber-defense-bict-online/)
• Information and Communication Technology (Network Technologies) - Bachelor of Information and Communication Technology (p. 1043)
• Information and Communication Technology (Network Technologies) - Bachelor of Information and Communication Technology (Online) (https://catalogs.nmsu.edu/global/nmsu-global/information-communication-technology-network-technologies-bict-online/)
• Information and Communication Technology (Software Development) - Bachelor of Information and Communication Technology (p. 1046)
• Information and Communication Technology (Software Development) - Bachelor of Information and Communication Technology (Online) (https://catalogs.nmsu.edu/global/nmsu-global/information-communication-technology-software-development-bict-online/)
• Information and Communication Technology - Bachelor of Information and Communication Technology (p. 1036)
• Information and Communication Technology - Bachelor of Information and Communication Technology (Online) (https://catalogs.nmsu.edu/global/nmsu-global/information-communication-technology-bict-online/)

M
• Mechanical Engineering - Bachelor of Science in Mechanical Engineering (p. 1072)
• Mechanical Engineering Technology - Bachelor of Science in Engineering Technology (p. 1049)

Masters Degrees
The College of Engineering offers three types of Master’s curriculum: thesis, project or coursework-only. Students interested in research and a career in R&D may prefer the M.S. thesis option, while students who select the M.E. or M-IT degrees may be more interested in acquiring knowledge and applying it in their professional workplace.

• The Master of Science (M.S.) degree is completed either with a thesis or a project.
• The Master of Engineering (M.E.) degree is completed without the preparation of a formal research thesis or project and is based only on coursework.
• The Master of Information Technology (M-IT) degree is completed without the preparation of a formal research thesis or project and is based only on coursework.

A
• Aerospace Engineering - Master of Engineering in Aerospace Engineering (p. 92)
• Aerospace Engineering - Master of Science (p. 93)

C
• Chemical Engineering - Master of Engineering in Chemical Engineering (p. 120)
• Chemical Engineering - Master of Engineering in Chemical Engineering (Online) (https://catalogs.nmsu.edu/global/nmsu-global/chemical-engineering-master-engineering-chemical-engineering-online/)
• Chemical Engineering - Master of Science in Chemical Engineering (p. 120)
• Civil Engineering - Master of Engineering in Civil Engineering (p. 121)
• Civil Engineering - Master of Engineering in Civil Engineering (Online) (https://catalogs.nmsu.edu/global/nmsu-global/civil-engineering-meie-online/)
• Civil Engineering - Master of Science in Civil Engineering (p. 123)

E
• Electrical Engineering - Master of Engineering in Electrical Engineering (p. 139)
• Electrical Engineering - Master of Engineering in Electrical Engineering (Online) (https://catalogs.nmsu.edu/global/nmsu-global/electrical-engineering-mee-mtst-online/)
• Electrical Engineering - Master of Science in Electrical Engineering (p. 141)
• Electrical Engineering - Master of Science in Electrical Engineering (Online) (https://catalogs.nmsu.edu/global/nmsu-global/electrical-engineering-msee-online/)
• Environmental Engineering - Master of Science in Environmental Engineering (p. 145)

I
• Industrial Engineering - Master of Engineering in Industrial Engineering (p. 154)
• Industrial Engineering - Master of Engineering in Industrial Engineering (Online) (https://catalogs.nmsu.edu/global/nmsu-global/industrial-engineering-meie-online/)
• Industrial Engineering - Master of Science in Industrial Engineering (p. 155)
• Industrial Engineering - Master of Science in Industrial Engineering (Online) (https://catalogs.nmsu.edu/global/nmsu-global/industrial-engineering-msie-online/)
• Information Technology - Master of Information Technology (Online) (https://catalogs.nmsu.edu/global/nmsu-global/information-technology-mit-online/)

M
• Mechanical Engineering - Master of Engineering in Mechanical Engineering (p. 158)
• Mechanical Engineering - Master of Science in Mechanical Engineering (p. 159)

Advanced Manufacturing - Concentration
The graduate concentration in advanced manufacturing educates students and creates a skilled workforce for the growing needs of new technologies and advanced products in the 21st century. The program provides hands-on experience on designing, adapting, and building parts using advanced materials by including new processes, changing the supply chain, and adapting business models. It also includes the design optimization, materials selection and characterization, process parameter mapping, data analytics, software development, and final part inspection among other concepts. This concentration is maintained by the College of Engineering but is open to any Master’s level major/degree.

5 Electives (Select 500 Level Courses from EE, CHME, IE, CE, or MAB) 1 15

Total Credits 30

1 With Approval of the advisor and instructor

Selection of Advisor
Newly admitted graduate students will be assigned a temporary advisor for the first semester, but they must select a degree option and permanent advisor before registering for the second semester.

In considering a decision about option and advisor, the student should arrange to meet with several members of the graduate faculty during the first six weeks of study to discuss specific educational objectives. The student can use these meetings to become familiar with faculty interests and research projects currently in progress. The faculty member must agree (in writing) to serve as the student's advisor.

Although there is no oral exam, students will be required to complete an exit-interview with one of Advanced Manufacturing concentration and one graduate faculty member from the master of engineering they select to study.

**Doctoral Degree**

A

- Aerospace Engineering - Doctor of Philosophy (p. 177)

E

- Engineering (Chemical Engineering) - Doctor of Philosophy (p. 192)
- Engineering (Civil Engineering) - Doctor of Philosophy (p. 193)
- Engineering (Electrical Engineering) - Doctor of Philosophy (p. 194)
- Engineering (Industrial Engineering) - Doctor of Philosophy (p. 196)
- Engineering (Mechanical Engineering) - Doctor of Philosophy (p. 197)

**Graduate Certificates**

- Digital Communications - Graduate Certificate (https://catalogs.nmsu.edu/nmsu/graduate-school/digital-communications-graduate-certificate/)
- Digital Communications - Graduate Certificate (Online) (https://catalogs.nmsu.edu/global/nmsu-global/digital-communications-graduate-certificate-online/)
- Digital Signal Processing - Graduate Certificate (https://catalogs.nmsu.edu/nmsu/graduate-school/digital-signal-processing-graduate-certificate/)
- Digital Signal Processing - Graduate Certificate (Online) (https://catalogs.nmsu.edu/global/nmsu-global/digital-signal-processing-graduate-certificate-online/)
- Electric Energy Systems - Graduate Certificate (https://catalogs.nmsu.edu/nmsu/graduate-school/electric-energy-systems-graduate-certificate/)
- Electric Energy Systems - Graduate Certificate (Online) (https://catalogs.nmsu.edu/global/nmsu-global/electric-energy-systems-graduate-certificate-online/)

- Telemetry - Graduate Certificate (Online) (https://catalogs.nmsu.edu/global/nmsu-global/telemetry-graduate-certificate-online/)

**Undergraduate Minors**

- Aerospace Engineering - Undergraduate Minor (p. 1073)
- Agricultural Engineering - Undergraduate Minor (p. 949)
- Biomedical Engineering - Undergraduate Minor (p. 936)
- Brewery Engineering - Undergraduate Minor (p. 936)
- Computational Engineering - Undergraduate Minor (p. 937)
- Computer Engineering - Undergraduate Minor (p. 987)
- Digital Electronic Applications - Undergraduate Minor (p. 1052)
- Digital Forensics - Undergraduate Minor (p. 1052)
- Electrical Engineering - Undergraduate Minor (p. 987)
- Entrepreneurship - Undergraduate Minor (p. 1060)
- Environmental Engineering - Undergraduate Minor (p. 949)
- Geomatics - Undergraduate Minor (p. 1052)
- Geotechnical Engineering - Undergraduate Minor (p. 949)
- Information Security Technology - Undergraduate Minor (p. 1052)
- Lean Manufacturing and Analytics - Undergraduate Minor (p. 1060)
- Manufacturing - Undergraduate Minor (p. 1053)
- Materials Engineering - Undergraduate Minor (p. 937)
- Mechanical Engineering - Undergraduate Minor (p. 1074)
- Nuclear Chemical Engineering - Undergraduate Minor (p. 937)
- Pre-Law in Intellectual Property - Undergraduate Minor (p. 937)
- Pre-Medicine Studies - Undergraduate Minor (p. 937)
- Renewable Energy Technologies - Undergraduate Minor (p. 1053)
- Structural Engineering - Undergraduate Minor (p. 950)
- Supply Chain and Operations Research Analytics - Undergraduate Minor (p. 1061)
- Systems Engineering - Undergraduate Minor (p. 1062)
- Water Resource Engineering - Undergraduate Minor (p. 950)

**Graduate Minor**

- Advanced Manufacturing - Graduate Minor (p. 219)
- Materials Engineering - Graduate Minor (p. 224)

**Accreditation**

The following programs are accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org/.

- Aerospace Engineering
- Chemical Engineering
- Civil Engineering
- Electrical Engineering
- Engineering Physics
- Industrial Engineering
- Mechanical Engineering

The following programs are accredited by the Engineering Technology Accreditation Commission of ABET, https://www.abet.org/.

- Engineering Technology – Civil
- Engineering Technology – Electronics and Computer
- Engineering Technology – Information
- Engineering Technology – Mechanical
The following program is accredited by the Applied and Natural Science Accreditation Commission of ABET, https://www.abet.org/.

- Geomatics

The college is a member of the American Society for Engineering Education (ASEE).

Other programs under the College of Engineering, such as Information and Communications Technology, are accredited under the Higher Learning Commission (HLC) institutional accreditation.

New Mexico State University has been accredited by The Higher Learning Commission (HLC) since 1926. The HLC may be contacted at:

The Higher Learning Commission
230 North LaSalle St., Suite 7-500
Chicago, IL 60604-1411
Phone: (800) 621-7440

Chemical & Materials Engineering

Mission

The New Mexico State University Chemical & Materials Engineering (CHME) Department strives to prepare Chemical Engineering Bachelor of Science graduates to successfully and safely practice the chemical engineering profession, to engage in lifelong personal and professional development, and to contribute to the betterment of their community and society. The undergraduate chemical engineering program of the CHME Department is accredited by the Engineering Accreditation Commission of ABET, Inc. Completion of an ABET accredited degree is required for licensure in New Mexico.

Undergraduate Program Information

Chemical engineers solve problems by combining the fundamentals of physical sciences (chemistry and physics) and life sciences (biology, microbiology, biochemistry) with the principles of engineering analysis, mathematics, and economics. The curriculum of study leading to the BSCHE continuously builds on prerequisite knowledge. The capstone course requires completion of a series of seven prerequisite courses, each having its own prerequisites. In this manner, the BSCHE produces graduates with highly developed problem-solving capabilities, strong communication and interpersonal skills, and an ability to seek out and assimilate knowledge beyond the classroom. Graduates apply these competencies to solve problems across a wide range of industries in the private and public sectors.

The work of a chemical engineer typically leads to the development of processes that convert raw materials (chemicals) into more useful or valuable products. Chemical engineers are pioneers of modern materials and associated processes that are essential to the fields of:

- nanotechnology;
- fuel cells;
- computer chip manufacture;
- environmental restoration and pollution prevention;
- biomedical, biotechnology and bioengineering;
- pharmaceutical manufacturing;
- food production;
- transportation (automotive and aerospace);
- advanced materials;
- petrochemical and refining;
- chemical synthesis and production; and
- power & energy (including the nuclear industry).

Graduates are also well-prepared to continue the study of law, medicine or advanced engineering topics at the graduate level.

Undergraduate Program Educational Objectives

The Chemical & Materials Engineering Department at New Mexico State University strives to produce undergraduates who will:

1. apply their problem-solving and communication skills to chemical engineering industries, government research labs, academia, and related fields;
2. implement safety practices in their work;
3. be on the path to leadership; and
4. build new skills sets through continuing education and professional development.

These Program Educational Objectives (PEOs), which are modified based on input from our constituencies, are consistent with the missions of NMSU, the College of Engineering and the Department of Chemical & Materials Engineering.

Graduate Program Information

The Department of Chemical and Materials Engineering offers graduate study leading to the M.E., M.S. and Ph.D. degrees with an emphasis in chemical engineering. Admission to the program is in accord with the general regulations of the Graduate School. The Graduate Record Examination (GRE) General Test is required for applicants for the M.S. and Ph.D. programs. All graduate students are required to pass all graduate engineering courses with a minimum grade of B-.

All M.S. and Ph.D. graduate students must select a thesis or dissertation advisor by the end of their first semester in the chemical engineering graduate program. In addition, doctoral students must complete their Program of Study and Committee form by the end of their first semester. Masters students must complete their Program of Study form by the end of their first semester. Thesis/dissertation may be pursued in absentia at various industrial sites by special arrangement.

Graduate teaching and research assistantships, fellowships and traineeships are available. For consideration for financial assistance, completed applicants must be received by March 1. All support is contingent upon availability, eligibility and satisfactory progress toward the degree.

Each student admitted to the CHME grad program who has an undergraduate degree in a discipline other than chemical engineering must schedule a meeting with the CHME Department Head to identify undergraduate course deficiencies that the student must take to obtain a graduate degree in chemical engineering.

Graduate Program Educational Objectives

Chemical & Materials Engineering graduate students must:

1. demonstrate skills in the (1) design of experiments or simulations, (2) collection of experimental/simulated data, (3) development of appropriate models, and (4) make appropriate use of those models;
2. complete an independent research project, resulting in at least a thesis/dissertation and peer-reviewed journal article(s);
3. defend original research in front of a panel of peers and experts;
4. be knowledgeable of the contemporary issues that are relevant to their chosen area of research.

Degrees for the Department

Bachelor Degree(s)
- Chemical Engineering - Bachelor of Science in Chemical Engineering (p. 934)

Master Degree(s)
- Chemical Engineering - Master of Engineering in Chemical Engineering (p. 120)
- Chemical Engineering - Master of Engineering in Chemical Engineering (Online) (https://catalogs.nmsu.edu/global/nmsu-global/chemical-engineering-master-engineering-chemical-engineering-online/)

Doctoral Degree(s)
- Engineering (Chemical Engineering) - Doctor of Philosophy (p. 192)

Minors for the Department
- Biomedical Engineering - Undergraduate Minor (p. 936)
- Brewery Engineering- Undergraduate Minor (p. 936)
- Computational Engineering- Undergraduate Minor (p. 937)
- Materials Engineering - Graduate Minor (p. 224)
- Materials Engineering - Undergraduate Minor (p. 937)
- Nuclear Chemical Engineering - Undergraduate Minor (p. 937)
- Pre-Law in Intellectual Property - Undergraduate Minor (p. 937)
- Pre-Medicine Studies- Undergraduate Minor (p. 937)

Department Head: Joseph H. Holles

Associate Department Head: Paul K. Andersen

Professors Holles, Houston, Luo, Associate Professors Andersen, Brewer, Manz, Martinez-Monteagudo Assistant Professors Zhou Emeritus Professors Bhada, Ghassemi, Johnson, Mitchell, Patton, Rockstraw, Professors of Practice DeLeon, Taylor

Research Interests:

PK. Andersen (Ph.D., University of California, Berkeley) physicochemical hydrodynamics, nuclear chemical engineering, modeling and simulation, education and training; C.E. Brewer (Ph.D., Iowa State) biomass thermochemical processing, sustainable agriculture, biorenewable resources, brewery engineering; J.E. DeLeon (Ph.D., Iowa State) polymer material composites; J.H. Holles (Ph.D., Virginia) heterogeneous catalysis, structure/property relationships in catalysis, pseudomorphic overlayer bimetallic catalysts, research preparation for undergraduate and graduate students; J. P. Houston (Ph.D., Texas A&M) biomedical engineering, biophotonics, flow cytometry; H. Luo (Ph.D., Tulane) nanomaterials, thin films, photovoltaics, batteries, electrocatalysts, photocatalysts; T.A. Manz (Ph.D., Purdue) quantum chemistry simulations of materials, catalysis, and space physics; S. Martinez-Monteagudo (Ph.D., University of Alberta, Canada) food engineering, valorization of byproduct streams, synthesis of sweeteners, and green extraction methods; S. Taylor (Ph.D., Clemson) synthesis and characterization of materials, brewing, food processing; M. Zhou (Ph.D., New Mexico State) hydrogen production, CO2 reduction, fuel cell and solar cell.

1 Registered Professional Engineer

Chemical Engineering Courses

CHME 101. Introduction to Chemical Engineering Calculations
2 Credits (2)
Introduction to the discipline of chemical engineering, including: an overview of the curriculum; career opportunities; units and conversions; process variables; basic data treatments; and computing techniques including use of spreadsheets.
Prerequisite/Corequisite: MATH 1220G, or MATH 1250G, or MATH 1511G.
Learning Outcomes
1. Describe career opportunities available to holders of a BSCHENG degree.
2. Find and use learning and advising resources within CHME and Engineering.
3. Create a course registration plan for future semesters that meets the degree and prerequisite requirements for the BSCHENG in the timeliest manner.
4. Diagram a process with unit operations and material and energy flows.
5. Perform unit analysis and unit conversions accurately and efficiently.
6. Validate calculated results using estimation techniques.
7. Apply the concept of significant figures to numerical answers.
8. Identify and describe process variable measurements using engineering vocabulary.
9. Express and convert concentrations using mass, mole, and volume bases.
10. Convert between absolute and relative pressure and temperature scales.
12. Generate 2-D plots of data and functions in Excel.
13. Perform a regression of data to a mathematical model.

CHME 102. Material Balances
2 Credits (2)
Perform material balances in single- and multi-phase, reacting and non-reacting systems under isothermal conditions.
Prerequisite: MATH 1220G, or MATH 1250G, or MATH 1511G.
Learning Outcomes
1. Analyze data using trendlines. Linearize when necessary.
2. Use unit conversions when solving problems.
3. Turn a verbal or written problem statement into a diagram and a mathematical form.
4. Write and solve material balances on single and multi-unit processes, for both nonreactive and reactive processes.
5. Identify what phase a substance is in and then be able to use the correct equations to relate volume to mass and moles.
6. Use Raoult’s and Henry’s law when solving mass balances.

CHME 201. Energy Balances & Basic Thermodynamics
3 Credits (3)
Chemical Engineering energy balances; combined energy and material balances including those with chemical reaction, purge and recycle;
thermochemistry; application to unit operations. Introduction to the first and second laws of thermodynamics and their applications. May be repeated up to 3 credits.

**Prerequisite:** CHME 102 and MATH 1250G or MATH 1511G.

**Prerequisite/Corequisite:** CHEM 1216 or CHEM 1215G.

**Learning Outcomes**
1. Correctly implement unit conversions (outcome a) an ability to apply knowledge of mathematics, science, and engineering.
2. Analyze and solve elementary material balances on single and multi-unit process, for both nonreactive and reactive processes.
3. Apply the first law of thermodynamics to batch and flow processes.
4. Locate thermophysical property data in the literature and estimate properties when data are not available.
5. Conduct combined material and energy balances around continuous multi-unit processes with and without chemical reaction.
6. Perform process calculations using psychrometric charts, enthalpy concentration diagrams and steam tables.
7. Derive and solve differential equations for transient heat and material balances on dynamic systems.
8. Determine individual learning style and describe how learners of that style can help themselves.
9. Use modern engineering tools (example, Excel) to solve material and energy balance problems.

**CHME 303. Chemical Engineering Thermodynamics**
4 Credits (4)
Applications of the First Law and Second Law to chemical process systems, especially phase and chemical equilibria and the behavior of real fluids. Development of fundamental thermodynamic property relations and complete energy and entropy balances. Modeling of physical properties for use in energy and entropy balances, heat and mass transfer, separations, reactor design, and process control.

**Prerequisite:** CHME 201.

**Prerequisite/Corequisite:** MATH 1511G.

**Learning Outcomes**
1. Use an engineering approach to solve a problem (identify scope, create diagram, determine knowns and unknowns, apply appropriate equations, calculate solutions and evaluate reasonableness of the solution)
2. Solve engineering problems using material, energy and entropy balances
3. Compile appropriate property data for chemical compounds and mixtures
4. Choose and solve appropriate equations of state
5. Use equilibrium relationships to solve chemical engineering problems
6. Acquire and apply new knowledge as needed, using appropriate learning strategies (maps to ABET Student Outcome seven) by analyzing a current environmental issue in chemical engineering

**CHME 305. Transport Operations I: Fluid Flow**
3 Credits (3)
Theory of momentum transport. Unified treatment via equations of change. Shell balance solution to 1-D problems in viscous flow. Analysis of chemical engineering unit operations involving fluid flow. General design and operation of fluid flow equipment and piping networks. May be repeated up to 3 credits.

**Prerequisite:** CHME 201.

**Prerequisite/Corequisite:** MATH 1521G.

**Learning Outcomes**
1. Mathematical Solutions: solve applied math problems involving linear ordinary differential equations with boundary conditions; solve partial differential equations that can be analytically solved with boundary conditions; identify how coordinate systems are used with ODEs and PDEs; simplify second order PDEs with assumptions; identify when an analytical solution to a PDE is possible and when numerical methods are required.
2. Basic Fluid Concepts and Calculations: identify the properties of fluids, calculate problems that involve pressure measurements, fluid statics, and fluid kinematics; describe physical phenomena of fluid flow; define and explain viscosity, density, specific gravity, surface forces, velocity fields, Newtonian vs. Non-Newtonian, laminar flow, turbulent flow, Reynolds's number, and other fluid motion topics.
3. Bernoulli and Energy Equations: apply the Bernoulli equation to sets of fluid problems; solve energy balances in the context of fluids and fluid motion, distinguish between approximations of and appropriate models for Bernoulli’s Equation (i.e friction losses, x, pumps, compressors, turbines, surface forces, gas-liquid flow, non-Newtonian fluids, and the Moody diagram).
4. Momentum Analysis: apply momentum balances using the governing equations of momentum to solve one dimensional velocity profile problems of external or internal viscous fluid flow; interpret the different approximations of the momentum balance; classify differential vs. integral forms of momentum analysis; and calculate problems using the Navier Stoke's Equations.
5. Special topics: identify different turbo- and fluid-machinery; explain why computational fluid dynamics is important; solve problems using external flow with applications: boundary layers, lift, drag; and calculate problems with dimensional analysis methods.

4 Credits (4)

**Prerequisite:** CHME 305.

**Prerequisite/Corequisite:** MATH 392.

**Learning Outcomes**
1. Adopt a systematic problem solving approach, consistently and effectively.
2. Diagram heat flows for conductive, convective, and radiative processes.
3. Find and use material property values.
4. Convert and use appropriate units of energy, power, flux, etc.
5. Write conservation equations for planar, cylindrical, and spherical systems.
6. Apply assumptions such as steady state, number of dimensions, order of magnitude, and/or constant properties to simplify conservation equations.
7. Solve the energy conservation equation for the temperature distribution using appropriate boundary and/or temporal conditions.
8. Calculate heat fluxes into and out of a control volume.
9. Draw resistance circuits and calculate the overall heat transfer coefficient, U, for compound systems.
10. Calculate the temperature distribution, heat flux, efficiency, and effectiveness of extended surfaces such as fins.
11. Use lumped capacitance and exact solution models to solve transient heat transfer problems. 1
12. Calculate transport dimensionless numbers and explain what they represent. 1
13. Use fluid velocity profiles to calculate boundary layer shapes and thicknesses. 1
14. Calculate convection heat transfer coefficient, h, for external and internal flows using formulas and graphs of experimental results. 1
15. Explain the causes and relative magnitudes of free convection. 1
16. Calculate free convection coefficients using equations and experimental results. 1
17. Label key regimes and heat transfer features of boiling and condensation curves. 1
18. Compare and contrast parallel, cross, and countercurrent flow in heat exchangers. 1
19. Determine the needed surface areas and/or fluid flow rates for heat exchangers given unit operation or process energy needs. 2
20. Calculate and explain heat exchanger efficiency. 2
21. Predict likelihood and account for consequences of fouling. 2
22. Define radiation terminology such as blackbody, grey surface, emissivity, etc. 2
23. Relate surface temperature to radiation wavelength and energy. 2
24. Calculate the view factor between two surfaces and use it to calculate heat transfer. 2
25. Write and solve the mass and molar forms of the one-D mass conservation equations. 2
26. Calculate absolute and relative species velocities and fluxes. 2
27. Use heat transfer relationships and analogous equations to solve diffusion and advection mass transfer problems. 2
28. Predict which kind(s) of heat transfer will be relevant for a given situation. 2
29. Describe implications of problem solutions and perform additional "what if" calculations to understand patterns in the bigger picture.

3 Credits (3)
Theory of mass transport. Mass transfer coefficients. Analysis of chemical engineering unit operations involving mass transfer and separations. Equilibrium stage concept. General design and operation of mass-transfer equipment and separation sequences. Restricted to Chemical Engineering Majors. May be repeated up to 3 credits.

Prerequisite: CHME 303, CHME 306.
Prerequisite/Corequisite: CHEM 313.

Learning Outcomes
1. Determine which kind of separation (e.g., distillation, adsorption, membrane, etc.) is best suited to separate a particular mixture.
2. Design various kinds of separation units to achieve a target flow rate and purity.
3. Evaluate the cost effectiveness and energy requirements of a separation.
4. Perform McCabe-Thiele analysis.
5. Include efficiencies and mass transfer effects in the design of separation units.

CHME 323 L. Transport Operations and Instrumentation Laboratory
2 Credits (6P)
Laboratory experiments demonstrate the principles of process measurement and instrumentation through the determination of thermodynamic properties, transport phenomena properties, heat transfer, and material physical properties. Treatment of data includes regression techniques, analysis of error, and statistical analysis. Restricted to: Chemical Engineering majors. May be repeated up to 1 credit.

Prerequisite: I E 311.
Prerequisite/Corequisite: CHME 306.

Learning Outcomes
1. Introduce students to practical skills needed to be able to apply the scientific and engineering concepts acquired in earlier coursework and to achieve the following.
2. Organize and carry out experimental design and actual hands-on experiments.
3. Understand safety regulations and safe operation procedures in the Chemical Engineering laboratory.
4. Be able to analyze and interpret experimental data with theories learned in previous courses.
5. Write organized and cohesive technical and reports.
6. Organize and prepare standard operating procedures.
7. Work effectively in a team environment.
8. Prepare and present technical works and answer questions.

CHME 341. Chemical Kinetics and Reactor Engineering
3 Credits (3)
Analysis and interpretation of kinetic data and catalytic phenomena. Applied reaction kinetics; ideal reactor modeling; non-ideal flow models. Mass transfer accompanied by chemical reaction. Application of basic engineering principles to design, operation, and analysis of industrial reactors. Restricted to: CHME, CMGE, CH E majors. May be repeated up to 3 credits.

Prerequisite: CHME 303, CHME 306.

Learning Outcomes
1. Perform mole balances in systems involving reactions.
2. Calculate conversion in batch and flow systems.
3. Size single and staged continuous-stirred tank, and plug flow reactors.
4. Develop rate laws from mechanisms and experimental data.
5. Calculate pressure drops and the effect on kinetics in packed-bed PFRs.
6. Apply the differential and integral methods of kinetic data analysis.
7. Maximize product selectivity for systems involving multiple reactions.
8. Understand effects of non-isothermal operation and unsteady-state behavior.
9. Apply rate limiting step and quantify performance in catalytic systems. 1
10. Quantify mass transfer limitations on heterogeneous systems. 1
11. Understand the idea of a residence time distribution, and the effect on reactor ideality.

CHME 352 L. Simulation of Unit Operations
2 Credits (2P)
Definition, specification, and convergence of basic unit operations in a process simulator. Course will cover how to access variables, define and converge design specifications and converge tear/recycle streams. Restricted to: CHME majors. May be repeated up to 2 credits.

Prerequisite/Corequisite: CHME 307, CHME 341.

Learning Outcomes
1. Apply Aspen Plus programming solutions to specify and converge unit operations involving: non-rigorous balance units (RSTOIC, SEP,
MIX, FSPLIT, SPLIT_DUPL); pressure changers (PUMP, COMPR, VALVE); pipe networks (PIPE, PIPELINE); heat exchangers (HEATER, HEATX); reactors and kinetic models (RPLUG, RCSTR, BATCH, REQUL, RGIBBS); flash drums and decanters (FLASHII, DECANTER); distillation columns (DSTWU, intro to RADFRAC)

CHME 361. Engineering Materials
3 Credits (3)
Bonding and crystal structure of simple materials. Electrical and mechanical properties of materials. Phase diagrams and heat treatment. Corrosion and environmental effects. Application of concepts to metal alloys, ceramics, polymers, and composites. Selection of materials for engineering design. May be repeated up to 3 credits.

Prerequisite: CHEM 1215G or CHEM 1216.

Learning Outcomes
1. Explain the effects of composition, bonding, structure, and defects on material properties.
2. Compute the response of materials to external influences.
3. Predict rates of materials failures.
4. Select materials for applications.

CHME 391. Industrial Employment
1-3 Credits (1-3)
Employment in chemical, petroleum, food, biotechnology, materials, environmental, pharmaceutical, or other industry relevant to the discipline, with opportunity for professional experience and training in chemical engineering. Requires written report covering work period approved by employer. Consent of Instructor required. May be repeated up to 6 credits.

Learning Outcomes
1. Gain educational and work experiences that are directly related to the BSCH program and the student's career goals.
2. Develop an understanding of the demands, responsibilities, and opportunities of professional employment.
3. Be provided an opportunity to apply principles and techniques learned in the CHME curriculum to real life problem-solving situations.
4. Gain a better understanding of decision-making and implementation processes.
5. Criterion three Student Outcomes specifically addressed by this course are found in a mapping of outcomes against all CHME courses in the curriculum.

CHME 392. Numerical Methods in Engineering
3 Credits (3)
Study and application of numerical methods in solving problems commonly encountered in engineering. MATLAB will be used as the working environment for implementing and performing the numerical methods in computers.

Prerequisite/Corequisite: MATH 1521G.

Learning Outcomes
1. Use MATLAB as a tool to solve chemical engineering problems;
2. Import and graph data using MATLAB;
3. Write and use script M-files and function M-files;
4. Understand the differences between script M-files and function M-files and why they are used in different situations;
5. Be able to translate algebraic equations into matrices, and use MATLAB to solve systems of linear algebraic equations;
6. Fit equations to data, obtain parameters, and determine the goodness of fit;
7. Linearize non-linear equations and obtain parameters for the nonlinear equations;
8. Use MATLAB to symbolically and numerically integrate one-dimensional integrals;
9. Solve systems of ordinary differential equations analytically (by hand); 1
10. Solve systems of ordinary differential equations numerically and analytically using MATLAB. 1
11. Criterion three Student Outcomes specifically addressed by this course are found in a mapping of outcomes against all CHME courses in the curriculum.

CHME 395V. Brewing Science and Society
3 Credits (3)
An overview of the science of brewing and the interrelationships between society, technology, business, and the evolution of the current beer market. Topics covered are history of brewing and the interrelationships between societal attitudes, technology, and cultural preferences; beer styles and evaluation techniques; production and characteristics of ingredients used in brewing; brewing unit operations; biochemical processes of malting, mashing, and fermentation; engineering in the brewery; homebrewing; and societal and health issues related to beer and alcohol. Students must be at least 21 years of age by the first day of instruction of the semester to enroll in this course.

CHME 412. Process Dynamics and Control
3 Credits (3)

Prerequisite: CHME 341.

Learning Outcomes
1. Mathematical Solutions: solve applied math problems involving linear ordinary differential equations, integration by parts, perform partial fraction expansion; use the Laplace Transform to solve differential equations; Laplace Transform look-up tables, solve inverse Laplace Transform problems.
2. Model-based Control: use MATLAB, Simulink, and/or visual basic simulator to computationally model process control, to make simple mathematical calculations, to solve differential equations, to take the Laplace Transform of a function, to plot curves representing response of a control loop, and to implement other simulation-based actions covered in class.
3. Basic Process Control Concepts and Calculations: draw and use block diagrams of open and closed-loop transfer functions for control problems; identify control system instrumentation (sensors, transmitters, transducer, final control elements); use process control techniques to address safety concerns; use process control vocabulary appropriately; choose a control strategy for a process; formulate control objectives; identify, formulate, and solve linear chemical process dynamics problems; formulate and solve an approximate linear model to a nonlinear process; analyze the stability of a dynamic system.
4. PID Control Concepts: tune a P, PI, or PID controller using control theory; choose the appropriate control action (P, PI, PID) for a particular process,
5. Other topics: develop process models of non-steady-state process dynamics, Identify appropriate loop pairings for multivariable control;
identify and implement feedforward and feedback control strategies; implement single-variable controllers (temperature, pressure, concentration, flow, level); and identify advanced control strategies and apply them in appropriate situations (cascade, ratio, pH).

CHME 423 L. Unit Operations Laboratory
2 Credits (6P)
Experiments with chemical engineering unit operations including the use of computer data acquisition. Covers control systems with closed-loop process control, instrumentation and development of empirical models from process data. Includes written and oral reports. May be repeated up to 1 credit.
Prerequisite: CHME 307, CHME 341.
Corequisite: CHME 412.
Learning Outcomes
1. Understand and apply engineering experimentation techniques and safety procedures common to the chemical industry.
2. Apply principles developed in chemical engineering courses to the analysis of chemical engineering processes and unit operations.
3. Know the materials characterization methods.
4. Improve skills necessary for group work—interpersonal skills, coordination of the efforts of several persons, leader and subordinate roles, etc. Introduce students to practical skills needed to be able to apply the scientific and engineering concepts acquired in earlier coursework.

CHME 448. Industrial Safety
3 Credits (3)
An introduction to the fundamentals of chemical process safety, including toxicology, industrial hygiene, source models, fires and explosions, relief systems, hazard identification, risk assessment, environmental fate and transport, hazardous waste generation, pollution prevention, and regulatory requirements. May be repeated up to 3 credits.
Corequisite: CHME 323 L.
Learning Outcomes
1. Demonstrate a knowledge and understanding of the elements of process safety management.
2. Be able to pro-actively identify and analyze safety hazards.
3. Demonstrate knowledge and understanding of risk management tools, programs and processes associated with process safety.
4. Understand the OSHA PSM requirements.
5. Understand and appreciate the need for professional integrity and ethical decision making in the professional practice of engineering.
6. Demonstrate an understanding of issues encountered including business, environmental, health, safety and public interest issues.

CHME 451. Intellectual Property for Engineers and Scientists
3 Credits (3)
An overview of intellectual property with an emphasis on patents. Terminology, patentability requirements, invention disclosures, inventorship, scope of claims, patent application content and the patent prosecution process, and post-allowance matters including infringement and enforcement. May be repeated up to 3 credits.
Learning Outcomes
1. Assess what kind of protection – patent, trade secret, copyright, trademark – is appropriate for particular intellectual property.
2. Describe relevant subject matter and standards for protection under patent, trade secret, copyright, and trademark.
3. Differentiate inventorship, authorship and ownership in an intellectual property context.
4. Devise search strategies to assess ‘prior art’ and public information that may affect availability of intellectual property protection.
5. Generate sample content for a patent application (including claims) and a trademark application.
6. Analyze office actions and propose solutions for issues raised during patent prosecution and trademark prosecution.
7. Compare and contrast the procedures for obtaining a patent, securing a trademark, registering a copyright and establishing trade secret protection.
8. Describe basic considerations relating to enforcement and infringement of intellectual property.

CHME 452. Chemical Process Design & Economic Evaluation
3 Credits (3)
Concepts in chemical engineering process design, including: capital and manufacturing cost estimation; discounted cash flows; interest; taxes; depreciation; profitability analysis; project specifications. May be repeated up to 3 credits.
Prerequisite: CHME 307, CHME 341.
Learning Outcomes
1. Write and explain the meanings of the basic equations related to engineering economic analysis.
2. Formulate mathematical models and solve problems involving process design and economic analysis.
3. Discuss the environmental, social, and economic implications of process design.
4. Criterion three Student Outcomes specifically addressed by this course are found in a mapping of outcomes against all CHME courses in the curriculum.

CHME 455. Chemical Plant Design
3 Credits (3)
Design and analysis of integrated process plants. Consideration given to optimizing performance, operability, reliability, safety, control, energy integration, and cost effectiveness. Requires written report covering solution of a capstone design problem. May be repeated up to 3 credits. Restricted to: CHME majors.
Prerequisite: CHME 452.
Corequisite: CHME 455 L.
Learning Outcomes
1. Understand government regulation of chemical processes.
2. Be knowledgeable of process safety analysis procedures.
3. Understand “normal” process conditions vs. those of concern.
4. Be able to perform a process optimization (topological vs. parametric).
5. Be able to perform a heat integration analysis through pinch technology.
6. Use heuristics to confirm the suitability of a process design.
7. Understand how to perform a base case analysis.
8. Be able to complete an analysis of a chemical plant design that includes: base case development and justification; process simulation; topological and parametric optimizations; societal impact assessment; and economic evaluation; including making recommendations based on their findings.

CHME 455 L. Chemical Plant Simulation
1 Credit (1P)
Construction, convergence, and optimization of chemical processes in a process simulator. Dynamic process simulation and control. May be repeated up to 1 credit.
Prerequisite: CHME 412, CHME 352 L.
Corequisite: CHME 455.

Learning Outcomes
1. Understand how to input from the Aspen Plus Graphical User Interface (GUI).
2. How to specify unit operations in Aspen Plus.
3. Be able to perform a sensitivity analysis and an optimization.
4. Understand how to apply a design specification in Aspen Plus.
5. Understand how to use Calculator Blocks such as Fortran or Excel.
6. Be able to specify a catalytic reactor with LH kinetics.
7. Be able to optimize a RADFRAC distillation column on an economic basis.
8. Be able to converge complex multicomponent RADFRAC distillations.
9. Be able to use the economics analyzer package in conjunction with a simulation.

CHME 461. Calculation of Material and Molecular Properties
3 Credits (3)
The aim is to describe and apply techniques for computing common properties of materials and molecules: optimized geometries, transition states, vibrational spectra, energies (electronic, internal energy, enthalpy, and Gibbs free energy), heat capacities, net atomic charges, atomic spin moments, and effective bond orders. These techniques allow one to estimate the thermodynamic properties of a chemical, as well as to compute the mechanisms and energy barriers for chemical reactions and catalytic processes, and to quantify the electronic, magnetic, and chemical ordering in materials. The theory behind these techniques will be described and students will perform hands-on computer exercises using common computational chemistry programs. Taught with CHME 561. May be repeated up to 3 credits.

Prerequisite: CHEM 1216 or CHEM 1226, MATH 1521G or MATH 1521H, (PHYS 2140 or PHYS 1320G).

Learning Outcomes
1. Basic concepts of computational chemistry.
2. Calculating the energies and geometries of reactants and products for chemical reactions.
3. Finding the transition state of a chemical reaction: determining the reaction pathway, transition state geometry, and the energy barrier. Meaning of the energetic span for a catalytic cycle.
4. Quantifying whether the transition state is closer to the reactant (early transition state) or closer to the product (late transition state). Postulates related to transition state lateness.
5. Computing vibrational spectra.
6. Using the harmonic approximation to estimate thermodynamics properties: internal energy, enthalpy, Gibbs free energy, and heat capacities.
7. Computing net atomic charges, atomic spin moments, and effective bond orders to determine the electronic, magnetic, and chemical ordering of materials.

CHME 464. Polymer Science & Engineering
3 Credits (3)
This course covers concepts in science and engineering of macromolecules, such as synthesis and chemistry, characterization of molecular weight, morphology, rheology, and mechanical behavior, structure and property relationships, and polymer processing. Taught with CHME 564. May be repeated up to 3 credits.

Prerequisite: CHEM 313 or CHEM 2115.

Learning Outcomes
1. Describe the fundamental concepts in polymer science and engineering;
2. Analyze the microstructure and molecular weight of polymers;
3. Discuss the chemistry, importance and applications of natural polymers;
4. Interpret different synthesis methods of polymers;
5. Analyze the kinetics of polymerization;
6. Discuss the polymer rheology and viscoelastic behavior of polymers;
7. Explain the characterization and processing of polymers; and
8. Argue the selection of polymer and/or design a specific polymer for specific applications (through final project).
9. Criterion three Student Outcomes specifically addressed by this course are found in a mapping of outcomes against all CHME courses in the curriculum.

CHME 467. Nanoscience and Nanotechnology
3 Credits (3)
This is a lecture/laboratory course designed to present the basic concepts, the techniques and the tools to synthesize and characterize nanometer scale materials, and the latest achievements in current and future nanotechnology applications in engineering, materials, physics, chemistry, biology, electronics and energy. It is intended for a multidisciplinary audience with a variety of backgrounds. This course should be suitable for graduate students as well as advanced undergraduates. Topics covered will include: nanoscience and nanotechnology, nanofabrication, self-assembly, colloidal chemistry, sol-gel, carbon nanotubes, graphene, thin film, lithography, physical vapor deposition, chemical vapor deposition, quantum dots, lithium batteries, X-ray diffraction, scanning electron microscopy, transmission electron microscopy, nanoelectronics, nanophotonics and nanomagnetics, etc. Students must also have completed (EH&S Safety training to include the courses: (1) Employee & Hazard Communication Safety (HazCom); (2) Hazardous Waste Management; and (3) Laboratory Standard) trainings to enroll. Crosslisted with: PHYS 520. May be repeated up to 3 credits.

Prerequisite: (CHEM 1216 or CHEM 1226), (PHYS 1230G or PHYS 1310G).

Learning Outcomes
1. Understand the basic and state-of-art synthesis methods and applications in nanoscience and nanotechnology (Student outcome (a) an ability to apply knowledge of mathematics, science, and engineering).
2. Do lab work to use tools and analyze data (Student outcome (b) an ability to design and conduct experiments, as well as to analyze and interpret data).
3. Form a team for lab work and lab report (Student outcome (d) an ability to function on multidisciplinary teams).
4. Present literature review and ask questions (Student outcome (g) an ability to communicate effectively).

CHME 470. Introduction to Nuclear Energy
3 Credits (3)
Atomic and nuclear structure, nuclear stability and radioactivity, nuclear reactions, detection and measurement of radiation, interaction of radiation with matter, radiation doses and hazard assessment, principles of nuclear reactors, and applications of nuclear technology. May be repeated up to 3 credits.

Prerequisite: CHEM 1215G or CHEM 1225G, MATH 1521G or MATH 1521H.
Learning Outcomes
1. Basic Concepts. Write and explain the meanings of the basic balances and equations of nuclear science and engineering.
2. Problem Solving. Solve problems involving radioactive decay rates, radiation interactions, rates of nuclear reactions, energies of nuclear transformations, and applications.
3. Model Building. Given a verbal or pictorial description, create useful mathematical models of nuclear engineering systems, such as radiation shields, radiation detectors, nuclear reactors, and energy converters.
4. Social and Economic Effects. Discuss the global environmental, social, and economic effects of nuclear technology.

CHME 471. Health Physics
3 Credits (3)
Introduction to radiation protection, radiation/radioactivity, radioactive decay/fission, interactions of radiation and matter, biological effects of radiation, radiation measurement and statistics, sampling for radiation protection, radiation dosimetry, environmental transport, radiation protection guidance, external and internal radiation protection, and hazards analysis.
Prerequisite(s): MATH 1521G or MATH 1521H, CHME 470.

CHME 476. Nuclear Fuel Cycles
3 Credits (3)
Physical and chemical processes in the conventional nuclear fuel cycle: uranium mining and milling, conversion, enrichment, fuel fabrication, reactor operations, interim storage, reprocessing and recycling, waste treatment and disposal. Alternative fuel cycles and future prospects. Consent of Instructor required.
Prerequisite(s): CHME 470.

CHME 478. Electrochemistry: Basics & Applications
3 Credits (3)
Theory and application of electrochemical devices. Topical information related to electrochemistry are concepts, principles, and examples of energy storage, mechanisms responsible for electrochemical devices, and current progress and problems. Relevant devices covered include the lithium ion battery, supercapacitor, fuel cell, solar cell and electrolyzer.
Learning Outcomes
1. Understand the mechanisms responsible for electrochemical device.
2. Realize the current progress in electrochemistry.
3. Identify the problems and hurdles for electrochemical device practical applications.

CHME 479. Corrosion and Degradation of Materials
3 Credits (3)
Failure of engineering materials in aggressive environments. Chemical and electrochemical mechanisms of corrosion. Influence of chemical composition and microstructure on corrosion behavior. Types of corrosion and chemical attack, including uniform corrosion, galvanic corrosion, pitting and other forms of localized corrosion, stress corrosion cracking, and corrosion fatigue. Methods of corrosion mitigation including cathodic protection, coatings, passivation, and corrosion inhibitors. Corrosion in nuclear reactors and nuclear waste repositories.
Prerequisite(s): CHME 361.

CHME 481. Biomedical Engineering and Engineering Healthcare
3 Credits (3)
Orientation to solving human and world health issues with biological engineering systems, tools, and analysis methods. Introduces general concepts including applied biology for engineers, biophotonics, biosensing, bioinstrumentation, tissue and biomaterials engineering, biomedical engineering research practices, and physical bioanalytical methods. May be repeated up to 3 credits.
Prerequisite: CHEM 1216 or CHEM 1226.
Learning Outcomes
1. Solve problems related to the design of biomedical instruments.
2. Apply basic mathematics, biology concepts, and laws of physics and chemistry to solve biomedical engineering type problems.
3. Explain differences in biomedical research and industries.
4. Identify the current challenges in the field of biomedical engineering and predict what investigators and industries are doing to tackle such problems.
5. Critique biomedical engineering research through interpretation of peer-reviewed literature, formal presentations and formal reports.
6. Design a solution to a current biomedical engineering problem by computational modeling, experimental design, and/or researching a specific subject in biomedical engineering (i.e. reading peer-reviewed research articles/manuscripts/textbooks).
7. Engage in hands-on learning of biomedical devices such as the building of a simple flow-cytometer.

CHME 486. Biofuels
3 Credits (3)
Introduction to the fundamentals and applications of biofuels and bioenergy production; biomass resources and their composition; types of biofuels; conversion technologies (thermochemical and biochemical conversion processes); biodiesel production, algae to biofuels; economic and environmental assessments; term paper of selected topics relevant to biofuels. May be repeated up to 3 credits.
Prerequisite: CHEM 313 or consent of instructor.
Learning Outcomes
1. Understand basic concepts about biomass derived energy;
2. Identify potential biomass feedstocks including energy crops;
3. Understand the concept of 1st generation, 2nd generation and advance biofuels;
4. Understand terminologies related to biomass conversion and biofuel production;
5. Have an understanding of the existing and emerging biomass to energy technologies;
6. Understand and apply mass and energy balances in biomass conversion;
7. Apply engineering thermodynamics, organic chemistry, chemistry of plant materials;
8. Familiarize with characterization of biomass feedstocks;
9. Understand the unit processes/ unit operations involved in biofuel/ bioenergy production; 1
10. Be able to do the basic engineering calculations related to biofuel production; 1
11. Understand the concept of a biorefinery system and be able to develop major unit operations of an integrated biorefinery; 1
12. Describe techno-economic analyses of biofuel conversion technologies; 1
13. Have an understanding of environmental implications; and 1
14. Apply biomass-derived energy in different applications.

CHME 490. Senior Seminar
1 Credit (1)
Research seminar attended by graduate students is open to CHME undergraduates who are research active. May be repeated up to 2 credits. Students must be in Senior Standing to enroll in this course.
Prerequisite(s)/Corequisite(s): CHME 498. Restricted to: CHME CH majors.

CHME 491. Undergraduate Special Topics
3 Credits (3)
Lecture and/or laboratory instruction on special topics in chemical engineering. May be repeated up to 6 credits.

Learning Outcomes
1. Gain exposure to, knowledge of, and practice solving problems in a variety of CHME topics that are directly related to broadening the BSCH curriculum and the student’s career goals.
2. Topics will vary by years and section depending on current topics of interest in CHME and availability of instructors.
3. Be provided an opportunity to apply principles and techniques learned in the CHME curriculum to real life problem-solving situations in specialized topics.

CHME 495. Brewing Science & Engineering
3 Credits (3)
Details of beer production, fermentation science, brewery operation, and process design & economics. Engineering considerations including process safety, fermentation kinetics, unit operations, and economies of scale. Beer styles, recipe formulation, water treatment, wort preparation, fermentation, waste disposal, and packaging.

Corequisite(s): CHME 495.

CHME 495 L. Brewing Science & Technology Lab
1 Credit (3P)
Brewing and brewing operations in a one-barrel brewery. Topics addressed will include brewery safety, characteristics and handling of brewing ingredients, recipe formulation, water treatment, wort preparation, fermentation, waste disposal, and packaging.

Corequisite(s): CHME 495.

CHME 497. Undergraduate Special Projects
1-3 Credits (1-3)
Provides an opportunity for undergraduate students to work on special projects under the direction of a faculty member. Written report covering work is required. May be repeated up to 6 credits.

Learning Outcomes
1. Prepare a written project report conforming to the format of the CHME writing standard.
2. Articulate a clear project question or problem.
3. Define, articulate, and use appropriate terminology and concepts.
4. Use library and other tools to search for existing body of information relevant to their project.
5. Identify and practice appropriate engineering ethics.
6. Know and apply problem solving skills to constructively address setbacks.
7. Work collaboratively with others, using listening and communication skills.
8. Work autonomously in an effective manner, setting and meeting deadlines.
9. Reflect on own research, identifying lessons learned, strengths, and ways to improve.
10. Communicate confidently and constructively with students, faculty, and project sponsor (as required).
11. Explain project to others in the field and to broader audiences through presentations.
12. Articulate the relevance of their project to their coursework and professional future, synthesizing their project, academic, and professional interests and goals.

CHME 498. Undergraduate Research
1-3 Credits (1-3P)
Provides an opportunity for undergraduate students to work in research studies under the direction of a faculty member. Consent of Instructor required. May be repeated up to 6 credits.

Learning Outcomes
1. Prepare a written research report conforming to the format of the CHME writing standard.
2. Articulate a clear research question or problem and formulate a hypothesis.
3. Identify and demonstrate appropriate research methodologies.
4. Define, articulate, and use appropriate terminology, concepts, and theory.
5. Use library and other tools to search for existing body of research relevant to their topic.
6. Know existing body of research relevant to their topic and explain how their project fits.
7. Identify and practice research ethics and responsible conduct in research.
8. Know and apply problem solving skills to constructively address research setbacks.
9. Work collaboratively with other researchers, using listening and communication skills.
10. Work autonomously in an effective manner, setting and meeting deadlines.
11. Reflect on own research, identifying lessons learned, strengths, and ways to improve.
12. Communicate confidently and constructively with graduate students, other researchers, and faculty.
13. Explain research to others in the field and to broader audiences through presentations.
14. Articulate the relevance of their research to their coursework and professional future, synthesizing their research, academic, and professional interests and goals.
15. Criterion Three Student Outcomes specifically addressed by this course are NOT found in a mapping of outcomes against all CHME courses in the curriculum as this is a technical elective, not a required core course.

CHME 501. Graduate Thermodynamics for Chemical Engineers
3 Credits (3)
Advanced applications of the first and second law to chemical process systems. The calculus of thermodynamics, equilibrium and stability criteria. Properties relationships for real fluids, both pure materials and mixtures. An introduction to molecular thermodynamics and statistical mechanics. Restricted to: CHME CH majors.

CHME 506. Graduate Transport Phenomena(s)
3 Credits (3)
CHME 516. Graduate Numerical Methods in Chemical Engineering  
3 Credits (3)  
Survey of numerical methods for solving problems commonly encountered in heat and mass transfer, fluid mechanics, and chemical reaction engineering.

CHME 542. Graduate Reactor Analysis and Design (s)  
3 Credits (3)  
Application and analysis of equations of continuity to multicomponent reaction systems. Introduction to homogeneous and heterogeneous catalysis, single-phase combustion, and shock reaction systems.

CHME 548. Industrial Safety  
3 Credits (3)  
Same as CHME 448 with graduate-level projects.  
Prerequisite(s): CHEM 1216 or CHEM 1215G.

CHME 564. Polymer Science & Engineering  
3 Credits (3)  
Synthesis, structure, property relationships of synthetic polymers. Taught with CHME 464. May be repeated up to 3 credits.  
Prerequisite(s): CHEM 201, CHEM 314.

CHME 565. Rheology and Viscoelasticity  
3 Credits (3)  
This course is an introduction to rheology and viscoelasticity. In particular, the flow behavior of Non-Newtonian Fluids and Viscoelastic Fluids will be covered. Rheometry, the technique for characterization of fluids, will be discussed. Most of the course is quantitative and uses mathematical modeling. Taught with CHME 465.  
Prerequisite(s): CHME 306.

CHME 567. Nanoscience and Nanotechnology  
3 Credits (3)  
This is a lecture/laboratory course designed to present the basic concepts, the techniques and the tools to synthesize and characterize nanometer scale materials, and the latest achievements in current and future nanotechnology applications in engineering, materials, physics, chemistry, biology, electronics and energy. It is intended for a multidisciplinary audience with a variety of backgrounds. This course should be suitable for graduate students as well as advanced undergraduates. Topics covered will include: nanoscience and nanotechnology, nanofabrication, self-assembly, colloidal chemistry, sol-gel, carbon nanotubes, graphene, thin film, lithography, physical vapor deposition, chemical vapor deposition, quantum dots, lithium batteries, X-ray diffraction, scanning electron microscopy, transmission electron microscopy, nanoelectronics, nanophotonics and nanomagnetics, etc. Taught with CHME 467.  
Prerequisite(s): (CHEM 1225G or CHEM 1226) and (PHYS 1230G or PHYS 1310G).

CHME 578. Electrochemistry: Basics & Applications  
3 Credits (3)  
Theory and application of electrochemical devices. Topical information related to electrochemistry are concepts, principles, and examples of energy storage, mechanisms responsible for electrochemical devices, and current progress and problems. Relevant devices covered include the lithium ion battery, supercapacitor, fuel cell, solar cell and electrolyzer.  
Prerequisite: CHEM 1215G or CHEM 1216.

Learning Outcomes  
1. Understand the mechanisms responsible for electrochemical devices, realize the current progress and identify the problems that challenge the practical applications.

CHME 590. Graduate Seminar  
1 Credit (1)  
Presentations on topics of professional interest in chemical engineering. Includes seminars by faculty, graduate students, and invited speakers from academia, government, and industry. May be repeated up to 6 credits. Restricted to: CHME majors.

CHME 591. Graduate Special Topics  
1-3 Credits (1-3)  
Lecture and/or laboratory instruction on special topics in chemical engineering. May be repeated up to 12 credits.  
Learning Outcomes  
1. Gain exposure to, knowledge of, and practice solving problems in a variety of CHME topics that are directly related to broadening the MSCHE, MECPI, and PHDCHE curriculum and the student’s career goals.  
2. Topics will vary by years and section depending on current topics of interest in CHME and availability of instructors.  
3. Be provided an opportunity to apply principles and techniques learned in the CHME curriculum to real life problem-solving situations in specialized topics.

CHME 593. Graduate Special Projects  
1-3 Credits (1-3)  
Provides an opportunity for graduate students to work on special projects under the direction of a faculty member. Written report covering work is required. May be repeated up to 6 credits.  
Learning Outcomes  
1. Prepare a written project report conforming to the format of the CHME writing standard.  
2. Articulate a clear project question or problem.  
3. Define, articulate, and use appropriate terminology and concepts.  
4. Use library and other tools to search for existing body of information relevant to their project.  
5. Identify and practice appropriate engineering ethics.  
6. Know and apply problem solving skills to constructively address setbacks.  
7. Work collaboratively with others, using listening and communication skills.  
8. Work autonomously in an effective manner, setting and meeting deadlines.  
9. Reflect on own project outcomes, identifying lessons learned, strengths, and ways to improve.  
10. Communicate confidently and constructively with students, faculty, and project sponsor (as required).  
11. Explain project to others in the field and to broader audiences through presentations.  
12. Articulate the relevance of their project to their coursework and professional future, synthesizing their project, academic, and professional interests and goals.

CHME 594. Professional Communication in Chemical Engineering  
2 Credits (2)  
Connections between interpersonal relationships and the effective communication of information. Strategies for formal and informal written and verbal communication in the context of presentations, interviews, reports and publications. Factors affecting non-verbal communication. Special focus will be given to understanding and adapting to the audience's perspective. 2 credits. Open to chemical engineering graduate students or by permission of instructor. This class will prepare you to communicate technical information effectively within a variety of contexts and to a variety of audiences. Class assignments will be
Learning Outcomes
1. Describe why and how interpersonal relationships affect communication of information, even within technical contexts.
2. Describe and implement methods for improving interpersonal relationships; introduce themselves to others, implement strategies for dealing with conflicts.
3. Assess the rhetorical situation for a given communication.
4. Display evidence and reasoning as well as convey credibility.
5. Understand different stakeholder audiences, and how to communicate with them differently.
6. Analyze the consequences of actions and ethical principles.
7. Design documents for users, including dividing content into manageable units.
8. Write a manuscript for the research community, including appropriate citations; manage time to allow for revisions and peer evaluation, provide useful feedback to peers during the revision process, find, understand and follow directions for manuscript and proposal preparation, locate relevant peer-reviewed journal articles using library and web resources.
9. Choose precise, accurate and concise language, and eliminate jargon, prepare effective graphs, illustrations, tables and equations.
10. Prepare, rehearse and deliver a research presentation.

CHME 595. Chemical Process Design and Business Analysis
3 Credits (3)
Graduate chemical process design principles, emphasizing literature review, patent search, heuristics application, process simulation assistance to process creation, synthesis of reactor and separator trains, second-law analysis, heat and power integration, process equipment mechanical design specifications, process design optimization, cost accounting and capital estimation, annual costs, earnings, and profitability analysis.
Prerequisite(s)/Corequisite(s): CHME 506, CHME 516, CHME 542.
Prerequisite(s): CHME 452, CHME 455 L or equivalent.

CHME 596. Chemical Process Industries Research
1 Credit (1)
Independent graduate-level chemical process design project development, literature search, and proposal/defense.
Prerequisite(s): CHME 595.

CHME 597. Advanced Chemical Process Industry Analysis
2 Credits (2)
In-depth analysis and defense of a timely commercially-relevant chemical process design.
Prerequisite: CHME 596.

CHME 599. Master’s Thesis
1-15 Credits (1-15)
Thesis.

CHME 690. Graduate Seminar
1 Credit (1)
Presentations on topics of professional interest in chemical engineering. Includes seminars by faculty, graduate students, and invited speakers from academia, government, and industry. Required each semester for every Ph.D. student. All candidates for graduate degrees required to give seminar. May be repeated up to 8 credits. Restricted to: CHME majors.

Requirements (Total Credits 124)
In addition to satisfying the requirements of New Mexico State University and the College of Engineering, CHME majors must pass departmental courses with a grade of C- or better.

CHME majors must have completed CHME 201 Energy Balances & Basic Thermodynamics prior to taking any 400-level CHME elective courses.

Degree requirements can also be found summarized in flow diagrams found on the CHME website (https://chme.nmsu.edu/academics/undergrad/chme-flow-diagrams/).

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 124 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

### A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

### Biomedical Engineering - Undergraduate Minor

The Biomedical Engineering minor-of-study is a 20-credit hour program of study designed to accomplish two objectives:

1. Require courses in basic biology, anatomy, physiology to provide students a basic understanding of life and the design and mechanics/dynamics of the human body. Also required is the only biomedical engineering course taught on the NMSU campus.
2. Permit students to select from a wide range of elective courses (https://chme.nmsu.edu/academics/minors/biomedical-engineering/) (https://chme.nmsu.edu/academics/minors/biomedical-engineering/) numbered above 400 that emphasize engineering topics with application to the design and development of medical devices.

### Brewery Engineering- Undergraduate Minor

It has long been recognized that the study of chemical engineering is appropriate to the understanding of a vast range of concepts associated with the brewing industry. In 1935, an article by M. B. Donald described many of the fundamental process steps for which the BS degree in Chemical Engineering prepares a student to begin work in the industry. The following 18 credit hour minor of study is designed to prepare CHME students for careers in the brewing industry or as a craft brew entrepreneur as per the 4-year curriculum suggestions by the Master Brewer’s Association of the Americas. Elective courses are to be selected from the lists and guidelines maintained on the Brewery Engineering minor of study webpage (https://chme.nmsu.edu/academics/minors/brewery-engineering/).

---

1. MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G Calculus and Analytic Geometry I first.
2. See the General Education (p. 227) section of the catalog for a full list of courses. For Area IV, and VI courses, students may take them at any time their schedule allows.
3. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses
   Also see the 9-credit hour rule at the bottom of the page. CHMEs meet the 9-credit hour rule through the sequence CHEM 313/314/433, and thus only need to complete 3 credits of VWW.
4. chme.nmsu.edu/academics/syllabi/#CHME_Elective_Courses
5. CHME 323L and CHME 423L are generally offered fall and spring semesters. Students can take them either semester.
Computational Engineering-Undergraduate Minor

The minor in Computational Engineering is designed to provide students with a concentration in the broad spectrum of computations in engineering, including experience with an object-oriented programming language, a background in computational math techniques, and a number of courses that develop or apply engineering software across a broad base of engineering design problems.

Electives must be taken from the list maintained on the Computational Engineering minor webpage (https://chme.nmsu.edu/academics/minors/computational-engineering/)

Materials Engineering - Undergraduate Minor

The Materials Engineering minor at New Mexico State University is part of a materials education program that addresses the growing demand for engineers and scientists with understanding of the wide range of materials, their properties and means of characterization. A student must pass 18 credits of courses with a grade C- or better. The minor elective courses are chosen from list available on the Chemical and Materials Engineering website (http://chme.nmsu.edu/academics/minors/materials-engineering/). No courses may be taken S/U. All prerequisites for the classes must be met or consent of the instructor obtained before enrolling in class.

Nuclear Chemical Engineering - Undergraduate Minor

The Nuclear Chemical Engineering minor at New Mexico State University is part of a nuclear education program that addresses the growing demand for engineers and scientists with background in the nuclear industry. A student must pass 18 credits of elective courses with a grade C- or better. The courses are upper division courses. Three elective courses must be selected from the list maintained on the CHME website (http://chme.nmsu.edu/academics/minors/nuclear-chemeng/). No courses may be taken S/U. All prerequisites for the classes must be met or consent of the instructor obtained before enrolling in class.

Pre-Law in Intellectual Property - Undergraduate Minor

The Pre-Law Intellectual Property minor at New Mexico State University is part of a pre-law education program that addresses the growing demand for lawyers with a strong understanding of a broad cross-section of STEM subjects. A student must pass 18 credits of courses with a grade C- or better chosen from Pre-Law Intellectual Property minor page available on the Chemical and Materials Engineering website. No courses may be taken S/U. All prerequisites for the classes must be met or consent of the instructor obtained before enrolling in class.

Pre-Medicine Studies-Undergraduate Minor

The Pre-Medical School minor at New Mexico State University is part of a pre-medicine education program that addresses the growing demand for doctors, surgeons, and biomedical researchers with a strong understanding of a broad cross-section of STEM subjects and who model the human body as a series of interacting chemical process units. This minor of study is designed for students seeking a strong pre-med background (for both MCAT prep and program entry prereq completion) or who may be targeting a graduate degree in biomedical engineering. A student must pass 22 credits of courses with a grade C- or better. The minor includes 19 credit hours of required courses, and 3 credit hours
of elective courses. No courses may be taken S/U. All prerequisites for the classes must be met or consent of the instructor obtained before enrolling in class.

**Civil Engineering**

**Undergraduate Program Information**

**Mission Statement**

The mission of the Civil Engineering Department for the undergraduate program is to offer a high-quality accredited Bachelor of Science (B.S.) degree that prepares our graduates for professional licensure leading to successful civil engineering careers in the industry and government, and for success in graduate education. Toward this end, the Civil Engineering Department will recruit and retain qualified and diverse faculty that are committed to student learning and development, and serve as role models to the undergraduate students.

Continued excellence in our undergraduate program is paramount to our mission by providing a strong technical foundation to our graduates for engineering design and problem solving; preparing quality graduates for licensure and professional careers in civil engineering; implementing modern and effective learning methods; maintaining close student-faculty learning interactions; and instilling life-long learning skills and goals for professional growth after graduation.

**Program Educational Objectives**

Through NMSU’s high-quality accredited civil engineering program, graduates will:

1. Be successfully employed in civil engineering or related careers and will become independent thinkers, ethical leaders, effective communicators, and collaborative professionals.
2. Be prepared to pursue professional licensure, appropriate certifications, graduate degrees, and/or professional development activities by fostering life-long learning skills and strategies.
3. Be competitive with graduates from programs across the world through their experience interacting with recognized faculty and industry professionals, and excelling in intercollegiate activities.
4. Build on fundamental knowledge and apply technical skills across disciplines in civil engineering and related fields to make data-driven decisions using engineering judgement.

**Program Criteria**

The Civil Engineering curriculum is developed based on the program criteria established collaboratively by the Engineering Accreditation Commission (EAC) of ABET Inc. and the American Society of Civil Engineers (ASCE). The curriculum specifically prepares civil engineering students at the baccalaureate level to graduate with the ability to:

1. **Apply:**
   a. mathematics through differential equations, probability and statistics, calculus-based physics, chemistry, and either computer science, data science, or an additional area of basic science.
   b. engineering mechanics, materials science, and numerical methods relevant to civil engineering.
   c. principals of sustainability, risk, resilience, diversity, equity, and inclusion to civil engineering problems.
   d. the engineering design process in at least two civil engineering contexts.
   e. an engineering code of ethics to ethical dilemmas.

2. **Solve complex engineering problems in at least four specialty areas appropriate to civil engineering.**

3. **Conduct experiments in at least two civil engineering contexts, as well as analyze and interpret the collected data and report the results.**

4. **Explain:**
   a. concepts and principles in project management and engineering economics.
   b. professional attitudes and responsibilities of a civil engineer, including licensure and safety.

In accordance with the program criteria of ABET and ASCE, the Civil Engineering faculty responsible for teaching design-oriented courses are qualified in their respective professional areas by means of professional licensure, or a combination of education and design experience. Furthermore, the faculty are given responsibility and sufficient authority to define, revise, implement, and achieve program objectives.

**Graduate Program Information**

**Mission Statement**

The mission of the Civil Engineering Department regarding graduate education is to provide research-based and practice-oriented post-baccalaureate programs leading to Master of Science (M.S.), Master of Engineering (M.E.), and PhD degrees for students in the areas of environmental, geotechnical, structural, transportation, and water resources engineering. Toward this end, the Civil Engineering Department will recruit and retain qualified and diverse faculty that are committed to student learning and development, scholastic and research excellence, and professional service.

Continued excellence in our graduate program is paramount to our mission by providing advanced academic and technical foundations to our graduates; providing interdisciplinary and collaborative research opportunities and teaching experiences; implementing learning methods that promote critical-thinking and problem-solving; seeking external funding to support innovative research and graduate assistantships; and fostering an intellectual and creative environment that values diversity (of people, research and interests) and research ethics.

The Civil Engineering Department offers excellent opportunities for advanced study and professional training in several fields leading to the M.E. in Civil Engineering, M.S. in Civil Engineering, M.S. in Environmental Engineering, and Ph.D. degrees. Students work closely with the faculty
on contemporary issues including, but not limited to, applications of machine / deep learning, biogeotechnologies, evapotranspiration monitoring of crops and riparian vegetation, ground stabilization, groundwater recharge, high performance materials, non-destructive testing and evaluation, remote sensing, renewable energy, resilient infrastructure, reservoir evaporation monitoring, riparian rehabilitation, structural health monitoring, sustainable construction, and water treatment and reuse.

The department has excellent facilities for teaching and research purposes including laboratories for mechanical, chemical and biological research. In addition, the department conducts research at various field sites located throughout New Mexico in collaboration with local, state, and federal agencies. Noteworthy features of the graduate programs are the energetic, highly motivated faculty and the low student-faculty ratio. The department regularly has several ongoing research projects of various size and scope employing graduate and undergraduate students. Teaching and research assistantships are available to qualified students and office space is normally provided to M.S. thesis and PhD students.

Students enrolling for graduate studies in civil engineering must have received a bachelor's degree in engineering or one of the allied fields. A candidate for the M.S. in Civil Engineering or M.S. in Environmental Engineering degree may choose either a thesis or a non-thesis track. The M.E. in Civil Engineering degree requires only coursework. When a student enrolls for the Ph.D. program, a doctoral committee is formed to assist the student in planning a program appropriate to the student's background and goals and to administer the required examinations. All Ph.D. candidates in civil engineering must have a demonstrated proficiency in English and two research tools. Mutual understanding between the Ph.D. candidate and his or her doctoral committee on the final nature of these two research tools will be on an individual basis.

**Master's Accelerated Program**

The Master's Accelerated Program (MAP) option provides students the opportunity to complete a B.S. in Civil Engineering and a master’s degree (M.E. in Civil Engineering, M.S. in Civil Engineering or M.S. in Environmental Engineering) with 144 to 150 credit hours; the non-accelerated path requires 156 credit hours (B.S. requires 126 credit hours plus the M.E. or M.S. which require 30 credit hours each). Students accepted into this program will follow the normal path of the Civil Engineering undergraduate curriculum, of which up to 12 credit hours comprised of senior-level (> 450) and/or graduate-level (> 500) courses will be counted towards the master’s degree; the MAP courses must be approved by the department head and completed with a grade of B or better. When students receive their bachelor’s degree in Civil Engineering, there are 18 to 24 credit hours left for the master’s degree which can be completed in 2 to 3 semesters for full-time students. Students must apply for admission during the final semester of their junior year and obtain prior approval by the department head to pursue the MAP option.

**Degrees for the Department**

**Bachelor Degree(s)**

- Civil Engineering - Bachelor of Science in Civil Engineering (p. 947)

**Master Degree(s)**

- Civil Engineering - Master of Science in Civil Engineering (p. 121)
- Civil Engineering - Master of Science in Civil Engineering (p. 123)
- Environmental Engineering - Master of Science in Environmental Engineering (p. 145)

**Doctoral Degree(s)**

- Engineering (Civil Engineering) - Doctor of Philosophy (p. 193)

**Minors for the Department**

- Agricultural Engineering - Undergraduate Minor (p. 949)
- Environmental Engineering - Undergraduate Minor (p. 949)
- Geotechnical Engineering - Undergraduate Minor (p. 949)
- Structural Engineering - Undergraduate Minor (p. 950)
- Water Resource Engineering - Undergraduate Minor (p. 950)

**Department Faculty Members**

**Professors** Bandini\(^1\), Jáuregui\(^1\) (Associate Dean of Academics), Khandan\(^1\), Newton (Department Head), Papelis (Director of Carlsbad Environmental Monitoring & Research Center), Reddi\(^1\) (Dean of College of Engineering), White\(^1\) (Emeritus), Xu; **Associate Professors** Bawazir (Assoc. Department Head), Cho\(^1\), Cortes, Wang, Y. Zhang\(^2\), **Assistant Professors** Choe\(^1\), Ingol Blanco, Li, Q. Zhang; **Professors of Practice** Al Aqtash

\(^1\)Professional Engineer (PE) in United States

\(^2\)Professional Engineer (PEng) in Canada

**Agricultural Engineering Courses**

**A EN 459. Groundwater, Wells & Pumps**

3 Credits (3)

Occurrence and movement of groundwater; design of water wells; selection and specification of pumps and power units. May be repeated up to 3 credits.

**Prerequisite:** C- or better grade in C E 382 or consent of instructor.

**Learning Outcomes**

1. Understand the occurrence and movement of groundwater in aquifers, and extraction of it.
2. Ability to interpret pump specifications and data.
3. Select and detail power units for pumping systems.

**A EN 478. Irrigation and Drainage Engineering**

3 Credits (2+3P)

Design and operation of surface and sprinkler irrigation systems; pumping and conveyances; introduction to principles and practices of drainage systems and wells. May be repeated up to 3 credits.

**Prerequisite:** C- or better grade in C E 382 or consent of instructor.
Learning Outcomes
1. Students will be able to analyze and design irrigation systems.

A EN 498. Special Topics
1-3 Credits
May be repeated for a maximum of 6 credits.
Prerequisite: consent of instructor.

Civil Engineering Courses

C E 109. Computer Drafting Fundamentals
3 Credits (2+2P)
Introduction to principles and fundamentals of drafting using both manual drawing techniques and computer-aided drafting (CAD) applications. Crosslisted with: DRFT 109 and E T 109. May be repeated up to 3 credits.

Learning Outcomes
1. Describe related career options/pathways.
2. Explain and apply common drafting terms, concepts, and conventions.
3. Utilize various AutoCAD commands and Coordinate Entry methods to produce accurate and precise Two-Dimensional drawings.
4. Setup AutoCAD working environment, drawings, styles, and applicable settings.
5. Navigate the AutoCAD user interface efficiently.
6. Apply different drafting methods, strategies, and processes.
7. Utilize AutoCAD to produce basic 2D CAD working drawings.
8. Measure utilizing scales accurately.
9. Create drawings with different scales and units.
10. Plot drawings produced in AutoCAD at various scales and on various sheet sizes.
11. Utilize the two Drawing Environments: Paper Space and Model Space.
12. Manage AutoCAD drawing files.

C E 151. Introduction to Civil Engineering
3 Credits (3)
Problem solving and use of computer software for civil engineering applications. May be repeated up to 3 credits.
Prerequisite(s)/Corequisite(s): MATH 1220G.

C E 198. Special Topics
1-3 Credits
May be repeated for a maximum of 6 credits.
Prerequisite: consent of department head.

C E 233. Mechanics-Statics
3 Credits (3)
Engineering mechanics using vector methods. May be repeated up to 3 credits.
Prerequisite: C- or better grade in MATH 1521G or MATH 1521H, C- or better grade in PHYS 1310G and cumulative GPA of 2.0.

Learning Outcomes
1. Student will be able to apply concepts of equilibrium.

C E 234. Mechanics-Dynamics
3 Credits (3)
Kinematics and dynamic behavior of solid bodies utilizing vector methods. May be repeated up to 3 credits.
Prerequisite: A grade of C- or better grade in the following: C E 233 and PHYS 1310G and MATH 1521G or MATH 1521H.

Learning Outcomes
1. Student will be able to apply concepts of kinematics and accelerated motion.

C E 256. Environmental Engineering and Science
3 Credits (3)
Principles in environmental engineering and science: physical chemical systems and biological processes as applied to pollution control. Crosslisted with: ENVS 2111
Prerequisite: CHEM 1215G and MATH 1511G or ENGR 190.

Learning Outcomes
1. To understand the nature of water quality parameters in the context of Civil Engineering and Environmental Science (Water Treatment/Wastewater Treatment/Environmental Science)
2. To learn to apply engineering and scientific solutions to water quality problems
3. To understand environmental regulations and their consequences on the design of pollution control systems

C E 256 L. Environmental Science Laboratory
1 Credit (1P)
Laboratory experiments associated with the material presented in C E 256. Same as ENVS 2111L.
Corequisite(s): C E 256.

C E 298. Special Topics
1-3 Credits
May be repeated for a maximum of 6 credits.
Prerequisite: consent of department head.

C E 301. Mechanics of Materials
3 Credits (3)
Stress, strain, and elasticity of materials. May be repeated up to 3 credits.
Prerequisite: C- or better grade in ENGR 233.

Learning Outcomes
1. Calculate deformations, stresses, and strains of various types of members under loading.
2. Calculate principal stresses and strains.
3. Perform two-dimensional stress and strain transformation.
4. Analyze statically indeterminate structures using the method of consistent deformations.
5. Construct shear and moment diagrams for beam type structures.
6. Calculate beam deflections and rotations using various methods.
7. Determine buckling loads for elastic columns.

C E 311. Civil Engineering Materials
3 Credits (2+3P)
Introduction to the structure, physical properties, testing and mechanical behavior of civil engineering materials and components made from these materials. May be repeated up to 3 credits.
Prerequisite: C- or better grade in C E 301.

Learning Outcomes
1. Students will understand the structure, properties, and roles of materials in civil engineering.

C E 315. Structural Analysis
4 Credits (3+3P)
Classical analysis of determinate and indeterminate structures; introduction to modern methods of structural analysis using computer programs. May be repeated up to 4 credits.
Prerequisite: C- or better grade in C E 301.
Learning Outcomes
1. Students will be able to compute deflections for trusses, beams, and frames.

C E 331. Fluid Mechanics and Hydraulics
3 Credits (3)
Prerequisite: C- or better grade in PHYS 1310G, C- or better grade in ENGR 233 or C E 233.
Learning Outcomes
1. Students learn how to read and interpret problem statements related to fluid mechanics and hydraulics, how to work in teams as well as apply critical thinking skills to solve problems.
2. Students develop an understanding of the theories and principles of hydraulics to understand hydraulic engineering components and subsystems.

C E 357. Soil Mechanics
3 Credits (2+3P)
Engineering properties of soils, consolidation settlement, compaction, water flow through soils, geostatic stresses, soil shear strength, lateral earth pressure, and soil laboratory testing.
Prerequisite: GEOL 1110G and C E 301.
Learning Outcomes
1. The course covers the basic principles governing the mechanical behavior of soils.
2. Students will develop an understanding of soil mechanics, flow through porous media, and mass-volume relationships, as well as the laboratory methods for measuring the mechanical and index properties of soils.
3. Students will be able to interpret and use the laboratory test results for soil classification and for solving simple geotechnical engineering problems.

C E 382. Hydraulic and Hydrologic Engineering
3 Credits (3)
Analysis and design of hydraulic systems, including pipe networks, open channels, regulating structures, and pumping systems. Surface water and groundwater hydrology, analysis and design. May be repeated up to 3 credits.
Prerequisite: C- or better grade in C E 331, C E 331 L.
Learning Outcomes
1. Student will be analyze hydraulic systems.

C E 398. Special Topics
1-3 Credits
May be repeated for a maximum of 6 credits.
Prerequisite: consent of department head.

C E 435. Technical Communication for Engineers
3 Credits (3)
The course addresses the fundamentals of communicating technical information that is clear, concise, and concrete to a wide variety of stakeholder types.
Learning Outcomes
1. Ability to write in a way that is clear.
2. Ability to write in a way that is concise.
3. Ability to write in a way that is concrete.

C E 444. Elements of Steel Design
3 Credits (3)
Analysis and design of tension members, beams, columns, and bolted and welded connections. May be repeated up to 3 credits.
Prerequisite: C- or better grade in C E 315.
Prerequisite/Corequisite: C E 311.
Learning Outcomes
1. Students will be able to design structural steel elements and connections.

C E 445. Reinforced Concrete Design
3 Credits (3)
Design and mechanics of structural reinforced concrete members. May be repeated up to 3 credits.
Prerequisite: C- or better grade in C E 315.
Prerequisite/Corequisite: C E 311.
Learning Outcomes
1. Students will be able to design reinforced concrete structural elements subjected to loads.

C E 452. Geohydrology
3-4 Credits (3+1P)
Origin, occurrence, and movement of fluids in porous media and assessment of aquifer characteristics. Development and conservation of ground water resources, design of well fields. Crosslisted with: ENVS 452 and GEOL 452.
Prerequisite(s): Junior or Senior.

C E 455. Masonry Design
3 Credits (3)
Theory and design of wood structural members and systems subjected to gravity and lateral loads. Taught every other year, alternates with C E 455, Masonry Design. May be repeated up to 3 credits.
Prerequisite: C- or better grade in C E 315.
Prerequisite/Corequisite: C E 311.
Learning Outcomes
1. Students will be able to design wood structural members and components.
Theory and design of masonry structural members and systems subjected to gravity and lateral loads. Taught every other year, alternates with C E 454.

**Prerequisite:** C- or better grade in C E 315.

**Prerequisite/Corequisite:** C E 311.

### Learning Outcomes
1. Students will understand the elements of design for municipal and hazardous waste landfills.

**C E 471. Transportation Engineering**

3 Credits (3)

Highway and traffic design and systems. Students must be in junior or senior standing to enroll. May be repeated up to 3 credits.

**Prerequisite:** C- or better in MATH 1521G.

### Learning Outcomes
1. Provide understanding of the principles of transportation engineering with a focus on highway engineering and traffic analysis.
2. Provide basic skill set that will allow a student to address most of the transportation problems that are likely to appear in professional practice and on the Fundamentals of Engineering exam (FE) and the Principles and Practice of Engineering exam (PE).
3. Provide foundation for future coursework in transportation should a student wish to pursue further coursework in the fields.

**C E 477. Engineering Economics and Construction Management**

3 Credits (3)

Engineering economics, construction and project management. May be repeated up to 3 credits.

**Prerequisite/Corequisite:** C- or better grade in C E 357.

### Learning Outcomes
1. Understand time value of money and be able to perform economic analyses on engineering problems to determine whether a given project is worthwhile or to prioritize multiple alternatives based on present worth.
2. Understand the mathematical and ethical implications of benefit/cost and internal rate of return analyses.
3. Estimate durations and requirements of individual construction tasks.
5. Understand the legal and ethical concerns involved in economic analysis and construction engineering.

**C E 479. Pavement Analysis and Design**

3 Credits (3)

Covers stresses and deflections in pavement layers, material characterization, flexible and rigid pavement design by AASHTO, and rehabilitation concepts. May be repeated up to 3 credits.

**Prerequisite:** C- or better grade in C E 357.

### Learning Outcomes
1. Students will be able to analyze and design flexible and rigid pavements.

**C E 481. Civil Engineering Capstone Design**

3 Credits (3)

Culminating multidisciplinary project-oriented capstone design. Ethics, professional development, global issues. May be repeated up to 3 credits.

**Prerequisite:** C- or better grade in C E 356, C- or better grade in C E 382, and a C- or better grade in either C E 444 or C E 445.

**Prerequisite/Corequisite:** C E 457, C E 471, C E 477.

### Learning Outcomes
1. Provide foundation for future coursework in transportation should a student wish to pursue further coursework in the fields.

**C E 482. Hydraulic Structures**

3 Credits (3)

Engineering design of water-regulating structures. Capstone design course. May be repeated up to 3 credits.
Prerequisite: C- or better grade in C E 382.
Prerequisite/Corequisite: C E 477.

Learning Outcomes
1. Students will understand the scope of interdisciplinary civil engineering design projects.

C E 483. Surface Water Hydrology
3 Credits (3)
Hydrologic cycle and relationships between rainfall and surface water runoff. May be repeated up to 3 credits.
Prerequisite: C- or better grade in C E 331 or consent of instructor.

Learning Outcomes
1. Students will understand the hydrologic cycle and basic principles of hydrology.

C E 485. Design of Earth Dams
3 Credits (3)
Engineering design applied to site selection, foundation inspection and treatment, hydrology and hydraulics, stability, and seepage analysis. Economic and environmental factors.
Prerequisite: C E 357, C E 382.

Learning Outcomes
1. Course introduces the students to small earthen dam siting, design and construction based on the knowledge and skills acquired in earlier coursework.
2. Course incorporates engineering standards and realistic constraints and prepares students for entry-level work.
3. Students work in teams to design a small earthen dam.

C E 490. Introduction to Artificial Intelligence for Civil Engineers
3 Credits (3)
Introduces various machine learning methods for solving various civil engineering problems. Topics include: supervised & unsupervised machine learning; classification and linear regressions; K-nearest neighbor; decision tree, bagging, & boosting; random forest; and support-vector machines.
Prerequisite: C- or better grade in STAT 371.

Learning Outcomes
1. Identify appropriate data analysis methods for various civil engineering problems.
2. Perform various Machine Learning (ML) analyses to solve civil engineering problems.
3. Evaluate various forms of Machine Learning (ML) analysis results.

C E 497. Senior Seminar
1 Credit (1)
Selected topics on the civil engineering profession and orientation for professional practice. Preparation for the FE exam. Students must be able to submit their application for degree while enrolled in this course.

Learning Outcomes
1. Prepare students for professional and ethical aspects of employment or graduate studies.

C E 498. Special Topics
1-3 Credits
May be repeated for a maximum of 9 credits.
Prerequisite: consent of department head.

C E 501. Advanced Mechanics of Materials
3 Credits (3)
Study of stress and strain in two and three dimensions, theories of failure, stress concentrations, unsymmetrical bending, curved beams, beams on elastic foundations, column theories, torsion, thick-wall cylinders. Same as M E 501.
Prerequisites: C E 301, MATH 392.

C E 502. Advanced Mechanics of Steel Structures
3 Credits (3)
Advanced structural mechanics applicable to steel structures. Includes inelastic behavior, plastic analysis, column and frame stability and torsion.
Prerequisite: C E 444.

Learning Outcomes
1. Introduce students to advanced topics in structural mechanics of steel structures that are commonly encountered in structural engineering
2. Provide the background needed to understand the code requirements applicable to problems in plastic design of steel structures

C E 503. Special Design and Analysis Program
3-6 Credits
Design and analysis covering subject matter of an approved 450 undergraduate departmental course plus an additional report or project. Course may be subtitled in the Schedule of Classes. May be repeated once for a total of 6 credits.
Prerequisite: consent of instructor/committee.

C E 504. Advanced Engineering Design
3 Credits (3)
Advanced engineering design covering subject matter of a selected capstone undergraduate design course plus an additional report or project. May be subtitled.
Prerequisite: consent of instructor/committee.

C E 507. Design of Earth Retaining Structures
3 Credits (3)
Lateral earth pressure theory, soil-reinforcement interaction, and analysis and design of rigid and flexible earth retaining structures for support of fills and excavations, including retaining walls, mechanically stabilized earth (MSE) walls, sheet pile walls, anchored walls, tiebacks and soil nailing.
Prerequisite(s): C E 357.
Prerequisite(s)/Corequisite(s): C E 457.

C E 508. Advanced Soil Behavior
3 Credits (3)
The course covers particle-scale phenomena that govern the macro-scale behavior of soils. Topics covered in the class include classical concepts as well as contemporary advances in soil mechanics. The students will develop a fundamental understanding of soil-water interaction, theories of contact level deformation, and mass and energy transport through granular media. Consent of Instructor required.
Prerequisite(s): C E 357 or Instructor Consent.

C E 509. Deep Foundations
3 Credits (3)
Behavior, analysis and design of pile and pier foundations subjected to axial and lateral loads.
Prerequisite: C E 457 or consent of instructor.

C E 510. Introduction to Nondestructive Testing
3 Credits (3)
This course explores the application of different Nondestructive Testing (NDT) methods in material characterization and product qualification.
Prerequisite(s): C E 311 or CHME 361 or Consent of Instructor.

C E 514. Numerical Methods in Civil Engineering
3 Credits (3)
Mathematical, numerical, and programming foundations of applied numerical methods with a focus on Civil and Environmental Engineering applications using MATLAB.

Learning Outcomes

1. To provide necessary background and skills to use MATLAB as a programming language for engineering problem solving.
2. To introduce classical and some modern methods for civil engineering numerical problem solving.
3. Develop numerical algorithms and programs for solving civil engineering problems involving: (1) multi-dimensional integration, (2) multivariate differentiation, (3) ordinary differential equations, (4) partial differential equations, (5) optimization (6) parameter estimation methods such as linear and nonlinear least square methods.

C E 515. Finite Element Methods
3 Credits (3)
Introduces the finite element method. Topics may include beam, frame, plane stress, plane strain, axisymmetric, and 3-D stress elements. Includes static and dynamic analysis. Uses readily available finite-element software.
Prerequisite: graduate standing or consent of instructor.

C E 531. Open Channel Hydraulics
3 Credits (3)
Theoretical and applied hydraulics of open channels, with emphasis on nonuniform flow, rapidly varied flow, and wave formation.
Prerequisite: C E 382 or consent of instructor.

C E 535. Technical Communication for Engineers
3 Credits (3)
The course addresses the fundamentals of communicating technical information that is clear, concise, and concrete to a wide variety of stakeholder types. Same as C E 435 with differentiated assignments for graduate students.
Learning Outcomes
1. Ability to write in a way that is clear
2. Ability to write in a way that is concise
3. Ability to write in a way that is concrete

C E 544. Advanced Design of Steel Structures
3 Credits (3)
Connection design; beam-column analysis and design; composite construction; and plate girder design.
Prerequisite: C E 444.
Learning Outcomes
1. Introduce students to advanced topics in steel design that are commonly encountered in structural engineering
2. Provide the background needed to practice structural steel design
3. Provide the background needed to understand the code requirements applicable to difficult problems in structural concrete design

C E 545. Advanced Concrete Design
3 Credits (3)
Advanced topics in ultimate strength design of reinforced concrete that include: concrete footings, retaining structures, short and long columns, torsion members, deep beams and shear walls, two-way slabs, and shear and moment transfer at slab-column connections.
Prerequisite(s): C E 445.
Learning Outcomes
1. Introduce students to advanced topics in reinforced concrete design that are commonly encountered in structural engineering
2. Provide the background needed to practice structural concrete design
3. Provide the background needed to understand the code requirements applicable to difficult problems in structural concrete design

C E 547. Bridge Engineering
3 Credits (3)
Topics related to prestressed concrete, reinforced concrete and steel bridge design according to the AASHTO specifications; bridge analysis and evaluation.
Prerequisite: C E 444 or C E 445.
Learning Outcomes
1. Introduce students to topics in bridge design that are commonly encountered in structural engineering
2. Provide the background needed to understand the code requirements applicable to problems in bridge design

C E 554. Wood Design
3 Credits (3)
Theory and design of wood structural members and systems subjected to gravity and lateral loads. Design project required. Taught every other year, alternates with C E 555 - Masonry Design.

C E 555. Masonry Design
3 Credits (3)
Theory and design of masonry structural members and systems subject to gravity and lateral loads. Design project required. Taught every other year, alternates with C E 554.
Learning Outcomes
1. Introduce students to advanced topics in masonry design that are commonly encountered in structural engineering.
2. Provide the background needed to practice masonry design.
3. Provide the background needed to understand the code requirements applicable to difficult problems in masonry design.

C E 557. Water Resources Development
3 Credits (3)
Students function as members of a consulting panel and prepare reports on major water resources development problems. Political, financial, and social aspects of water resources development are considered as well as scientific and technical details.

C E 571. Structural Dynamics
3 Credits (3)
Response of elastic structure to dynamic loading. Moving load, earthquake and blast loading.
Prerequisite: ENGR 234 and C E 315.
Learning Outcomes
1. Introduce students to topics in structural dynamics that are commonly encountered in structural engineering
2. Provide the background needed to understand the code requirements applicable to problems in seismic and blast-resistant design

C E 579. Ground Improvement
3 Credits (3)
The objective of this course is to introduce common ground improvement techniques, including mechanical (compaction, soil reinforcement, preloading and accelerated consolidation) and chemical (cementing, ion-replacement, polymer bonding) stabilization methods, as well as seepage and dewatering. Emphasis will be placed on developing an understanding of the underlying physical and chemical processes involved in each case.
Prerequisite(s): C E 357.
C E 581. Ground Water Hydrology
3 Credits (3)
Mathematical treatment of water flow in porous media. Emphasis on
hydraulics of water movement, including pumping and recharge wells,
drainage, and water quality.
Prerequisites: MATH 392, G EN 452, and C E 382, or consent of instructor.

C E 582. Statistical Hydrology
3 Credits (3)
Application of statistical techniques to hydrologic data, including
distributions, hypothesis testing, linear models, non-parametrics, and
time-series and stochastic models. May be repeated up to 3 credits.

C E 585. Slope Stability Analysis and Design
3 Credits (3)
Design of earth slopes, causes of instability, limit equilibrium methods,
slope reinforcement (geosynthetics soil nailing, tiebacks), seismic
analysis, rock slope stability. Consent of instructor required.

Learning Outcomes
1. Be familiar with the implications of drainage conditions and pore
   water pressure in the soil as they relate to soil shear strength and
   slope stability.
2. Be able to recognize the differences between short-term and long-
   term analyses (total versus effective stress analyses) applied to slope
   stability.
3. Be able to perform hand calculations of slope stability for very simple
   cases.
4. Be familiar with the set of input data usually required to perform
   stability analyses using software.
5. Be able to design soil slopes with various soil profiles and geometry
   and reinforcement using slope stability software.
6. Recognize and understand the effects of geologic and groundwater
   conditions on the stability of soil slopes.
7. Understand the mechanisms by which the most common methods of
   slope stabilization work (tie-backs, soil nailing, geosynthetics).

C E 590. Advanced Artificial Intelligence for Civil Engineers
3 Credits (3)
Deep learning methods for solving civil engineering problems.
Topics include: introduction, backpropagation, training, regulations,
and techniques of Neural Networks (NN); image processing using
Convolutional Neural Networks (CNN); time-series data analysis
using Recurrent Neural Networks (RNN); Gated Recurrent Units; and
introduction to Transfer Learning.
Prerequisite: STAT 371 and MATH 392.

Learning Outcomes
1. Identify appropriate data analysis methods and utilize mathematical
   formulations of Deep Learning (DL) for various civil engineering
   problems.
2. Perform various Deep Learning (DL) analyses to solve civil
   engineering problems.
3. Evaluate various forms of Deep Learning (DL) analysis results.

C E 596. Special Topics
1-3 Credits
May be repeated for a maximum of 6 credits.
Prerequisite: consent of department head.

C E 598. Special Research Programs
1-3 Credits
Individual investigations either analytical or experimental. May be
subtitled. Maximum of 3 credits per semester.

C E 599. Master’s Thesis
1-15 Credits
Thesis.

C E 600. Doctoral Research
1-15 Credits
Research.

C E 604. Advanced Engineering Topics
3 Credits (3)
In depth study of a topic at the forefront of environmental engineering &
science. Journal papers will be critically reviewed and students will be
asked to write an analysis of the topic and present their thoughts orally.

C E 614. Advanced Numerical Methods in Civil Engineering
3 Credits (3)
Advanced mathematical, numerical, and programming for applied
numerical methods with a focus on Civil and Environmental Engineering
applications using MATLAB. Same as C E 514 with differentiated material
and assignments for C E 614 students.

Learning Outcomes
1. To provide necessary background and skills to use MATLAB as a
   program language for engineering problem solving.
2. To introduce classical and some modern methods for civil
   engineering numerical problem solving.
3. Develop numerical algorithms and programs for solving civil
   engineering problems involving: (1) multi-dimensional integration,
   (2) multivariate differentiation, (3) ordinary differential equations,
   (4) partial differential equations, (5) optimization (6) parameter
   estimation methods such as linear and nonlinear least square
   methods, and (7) time series analysis such as Fourier transform,
   wavelet, and basic filtering.

C E 682. Topics in Hydrodynamics II
3 Credits (3)
Selected topics in hydrometeorology, including the transfer of water and
energy between the land surface and the lower atmosphere.

Learning Outcomes
1. This course helps lay the foundation for theoretical concepts
   useful in measurement, analysis and estimation of evaporation/
   evapotranspiration. Students learn some of the theoretical concepts
   and relationships useful in the phenomenon of evaporation as well
   as gain some field experience on measurement of evapotranspiration
   and open water evaporation.

C E 698. Special Research Programs
1-3 Credits
May be subtitled. May be repeated for a maximum of 9 credits.

C E 700. Doctoral Dissertation
1-15 Credits
Dissertation.

Environmental Engineering Courses
ENVE 450. Aquatic Chemistry
3 Credits (3)
Theoretical aspects of physical chemistry applied to the solution of
environmental engineering problems. Emphasis on acid-base reactions,
precipitation-dissolution reactions, complexation, and redox reactions.
Same as ENVE 550.
Prerequisite: C- or better grade in C E 256.

Learning Outcomes
1. Students will be able to use fundamental principles of physical
   chemistry as applied to acid-base, precipitation-dissolution,
complexation, and redox reactions to determine the composition of waters, including natural waters and waters encountered in water and wastewater treatment processes.

ENVE 451. Unit Processes/Operation of Water Treatment
3 Credits (3)
Theory and applications of unit processes in environmental engineering. Physical and chemical water treatment methods are emphasized. Crosslisted with: ENVE 551.
Prerequisite: C- or better grade in C E 356.
Learning Outcomes
1. Students will be able to use fundamental reactor design principles to design unit operations for water treatment, including sedimentation, coagulation, flocculation, filtration, and disinfection.

ENVE 452. Unit Processes/Operation of Wastewater Treatment
3 Credits (3)
Theory and applications of unit processes in environmental engineering. Biological wastewater treatment methods are emphasized. Crosslisted with: ENVE 552.
Prerequisite: C- or better grade in C E 356.
Learning Outcomes
1. Students will be able to use fundamental reactor design principles to design unit operations for wastewater treatment, including sedimentation, aerobic and anaerobic microbial treatment, and disinfection.

ENVE 456. Environmental Engineering Design
3 Credits (3)
Design of chemical, physical, and biological operations and processes involved in water and wastewater treatment. Student can also be a graduate student to enroll if they have not completed C E 356.
Prerequisite: C- or better grade in C E 356.
Learning Outcomes
1. Students will be able to incorporate knowledge from previously taken engineering design and economics courses to complete an environmental design and solve a real world problem.
2. Students will be able to communicate and explain their solution approach to a variety of audiences using different communication methods.

ENVE 459. Environmental Microbiology
3 Credits (3)
An introduction to the diverse roles of microorganisms in natural and engineered environments. The topics include cellular architecture, energetics, and growth; population and community dynamics; water and soil microbiology; biogeochemical cycling; and microorganisms in biodegradation and bioremediation of contaminants. Students must be a Senior or in Graduate Standing to enroll.
Learning Outcomes
1. Students will be able to demonstrate the significance of microbial processes in natural and engineered processes.

ENVE 487. Air Pollution Control Systems Design
3 Credits (3)
An introduction to sources and nature of air pollution, regulations, and risk analysis. Detailed study of air pollution control technologies and design of air pollution control equipment. Students must be a Senior or in graduate standing to enroll.
Learning Outcomes
1. Students will be able to explain the source and nature of air pollution.
2. Students will be able to relate air pollution to regulations using a risk analysis approach.
3. Students will be able to design air pollution control systems.

ENVE 504. Advanced Environmental Engineering Design
3 Credits (3)
Advanced engineering design covering the subject matter of the Environmental Engineering capstone undergraduate design course plus an additional report or project. May be subtitled. Consent of instructor required.
Learning Outcomes
1. Students will be able to incorporate knowledge from previously taken engineering design and economics courses to complete an environmental design and solve a real world problem.
2. Students will be able to communicate and explain their solution approach to a variety of audiences using different communication methods.

ENVE 550. Aquatic Chemistry
3 Credits (3)
Theoretical aspects of physical chemistry applied to the solution of environmental engineering problems. Emphasis on carbonate equilibria, solubility, buffering and redox conditions. May be repeated up to 3 credits. Consent of instructor required. Crosslisted with: ENVE 450.
Prerequisite(s): C E 256.

ENVE 551. Unit Processes/Operation of Water Treatment
3 Credits (3)
Theory and applications with unit processes in environmental engineering. Physical / chemical treatment methods emphasized. May be repeated up to 3 credits. Crosslisted with: ENVE 451.
Prerequisite(s): C E 356.

ENVE 552. Unit Processes/Operation of Wastewater Treatment
3 Credits (3)
Theory and applications with unit processes in environmental engineering. Biological treatment methods emphasized. May be repeated up to 3 credits. Crosslisted with: ENVE 452.
Prerequisite(s): Consent of instructor.

ENVE 556. Advanced Water Treatment and Reuse
3 Credits (3)
Overview of both the theoretical and practical aspects of advanced water treatment technologies and water reuse applications. Basic design features of the processes are presented, with emphasis on the underlying principles, including why and how a process works, what the significant variables are, and what the limitations of the process are. Problem solving skills and technical communication skills are emphasized.
Prerequisite: ENVE 551.
Learning Outcomes
1. Students will be able to design advanced water treatment processes, including membrane filtration, electrodialysis, ion exchange, advanced oxidation, photolysis, and distillation.
2. Students will gain knowledge in water reuse applications including water quality criteria, regulations, and implementation issues.

ENVE 557. Surface Water Quality Modeling
3 Credits (3)
Modeling the impacts of waste disposal practices on surface waters. Emphasis on fate and transport of bacteria, dissolved oxygen, nutrients,
and toxicants in rivers, lakes, and tidal waters. Students must be in Graduate standing to enroll.

**Learning Outcomes**
1. The students will be able to use mathematical models to model the transport of constituents important for water quality, such as bacteria, viruses, nutrients, contaminants, and oxygen, in aqueous environments.

**ENVE 598. Special Research Programs**
1-3 Credits
Individual investigations either analytical or experimental. May be repeated up to 6 credits.

**ENVE 599. Master's Thesis**
15 Credits
Thesis. May be repeated for a maximum of 6 credits.

**ENVE 630. Fate and Transport of Environmental Contaminants**
3 Credits (3)
Modeling of transport phenomena in natural and engineered systems for predicting the fate of contaminants in the air, soil, sediment, and water compartments of the ecosystem.

**Prerequisite:** ENVE 557.

**Learning Outcomes**
1. The students will be able to use mathematical models to model the transport of contaminants in gas, aqueous, and soil environments.

**Civil Engineering - Bachelor of Science in Civil Engineering**

**Requirements (126 Credits)**

In addition to the university requirements for graduation, all students including transfers must satisfy the requirements contained in the academic policies for the NMSU College of Engineering. Students must have a 2.0 grade-point average in all departmental courses and all prerequisites and co-requisites must be taken as required. If a student takes a class and a co-requisite for that class at the same time and does not achieve a grade of C- or better in the co-requisite, the student may take no further classes for which the course or the co-requisite are prerequisite. A student who completes a class three times without achieving a grade of C- or better will be dismissed from the Civil Engineering program, and not allowed to take any Civil Engineering courses from the department.

Students must complete all University degree requirements, which include the following: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 126 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements or elective credits, but may be needed for enrollment in the necessary English and Mathematics coursework.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

**Total Credits**: 126

1. Courses are typically taught in the Fall semester.
2. Courses are typically taught in the Fall, Spring and Summer semesters.
3. Courses are typically taught in the Fall and Spring semesters.
4. See the View a Wider World (p. 231) section of the catalog to see a full list of courses.
5. Math Placement: MATH 1511G Calculus and Analytic Geometry I is the starting Math course for the degree but students may need to complete any prerequisites prior to enrolling in this course depending on math placement.
6. See the General Education (p. 227) section of the catalog for a full list of courses.
7. Courses are typically taught in the Fall and Summer semesters.
8. See your advisor for more detailed information about selecting elective courses that are approved to fulfill this requirement.
9. Courses are typically taught in the Spring semester.

### Environmental Engineering - Undergraduate Minor

This minor will build upon existing B.S. degree programs at NMSU in engineering and environmental science, and provides further preparation in modern and emerging technologies for upgrading the Nation’s ageing utilities and infrastructure in the water, energy, and environment sectors. It includes 3 required courses (9 credits) from civil and environmental engineering, and 3 elective courses (9-10 credits) from civil engineering, environmental engineering, environmental science, and/or engineering technology.

**Prefer courses (3 courses)**

</tr>
</tbody>
</table>

**Total Credits**: 18-19

1. Cross-listed with ENVS 2111 Environmental Engineering and Science
2. May all be taken in same department or different departments
3. Courses numbered 450 and above may be used to satisfy course requirements for the accelerated master’s degree program (requires department head approval and maximum of 6 credits)
4. Cross-listed with C E 452 Geohydrology

### Geotechnical Engineering - Undergraduate Minor

This minor builds upon existing B.S. degree programs at NMSU in analysis, construction, and design of geotechnical components of civil infrastructure.
# Structural Engineering - Undergraduate Minor

This minor builds upon existing B.S. degree programs at NMSU in analysis, construction, and design of civil, mechanical, and aerospace structures. It includes 3 required courses (10 credits) from civil engineering and 3 elective courses (9-10 credits) from civil engineering, aerospace/mechanical engineering, and/or engineering technology.

Electrical and Computer Engineering
Undergraduate Program Information

Overview
The undergraduate electrical engineering program of the Klipsch School is accredited by the Engineering Accreditation Commission of ABET, Inc., and stresses the development of analytical tools and physical concepts required to prepare students for immediate employment or graduate study. The program is flexible, allowing students to choose elective coursework towards concentrations in:

- artificial intelligence, machine learning, and data science,
- communications and signal processing,
- computers and microelectronics,
- controls and robotics,
- electromagnetics and photonics, or
- power,
- space systems.

Alternatively, students can select "no concentration" for the greatest flexibility in course selection.

Undergraduate Electrical Engineering Program
Educational Objectives
The Klipsch School is dedicated to providing a quality, hands-on, educational experience for our students. Below are the program educational objectives (PEOs) that describe the expected accomplishments of graduates during their first few years after graduation.

1. Our graduates will obtain relevant, productive employment in the private sector, government and/or pursue an advanced degree.
2. Our graduates will be using their engineering foundation to innovate solutions to the problems of the real world.

Related Areas of Study
Electrical and computer engineering students wishing to broaden their educational experience may elect to earn additional bachelor's degrees in

- Engineering Physics
- Computer Science
- Mathematics
- Physics

Klipsch School students may also choose to earn a minor in one or more of the following fields:

- Computer Engineering
- Computer Science
- Mathematics
- Physics

Students must consult with an academic advisor in the offering department for specific requirements related to additional degrees and minors.

Transfer Credit
Credit earned at other institutions is generally accepted; however the following restrictions apply to transfer credits:

- Engineering credit must be earned at an ABET accredited school.
- Physics must be calculus based.
- If the NMSU requirement includes a lab, the transfer credit must include a lab.
- A grade of C-, or better, must have been earned.
- E E Courses numbered 300 or higher, Cornerstone and Capstone courses may not be transferred.
- Transfer credits for courses above 300 level are NOT ACCEPTED.

Master's Accelerated (BS/MS) Program (MAP)
Undergraduate students may apply for acceptance to the Master's Accelerated Program (MAP) after completing 60 semester hours of undergraduate coursework of which a minimum of 25 credit hours must be completed at NMSU. The GPA must be 2.75 or above for admission to the MAP program. The students must meet all other requirements as specified by the BSEE and MSEE programs. The MAP program allows up to 12 credits of NMSU coursework (450 level or higher) taken during the undergraduate years to be counted toward the master's program of study. Students must receive a grade of B or higher in the courses to be counted for the graduate degree. The courses must logically fit into the master's program. EE courses that are approved for the MAP are those EE electives with a corresponding graduate version:

For the most up to date listing of elective courses, please see the course listing in the most recent catalog. More information and the application for the MAP program can be found at: https://honors.nmsu.edu/for-students/masters-accelerated-program-map.html.
Graduate Program Information

Overview
The Klipsch School of Electrical and Computer Engineering offers graduate work leading to the Master of Science and Doctor of Philosophy degrees. Areas of emphasis for masters and doctoral students are:

- communications,
- computer engineering,
- controls,
- digital signal processing,
- electromagnetics,
- electric energy systems,
- photonics, and
- microelectronics/VLSI.

Research in the above areas currently being conducted by the faculty ensures that doctoral candidates will work on the frontier of knowledge in these areas. The graduate programs are intended to provide broad graduate-level training in electrical engineering. In addition, appropriate courses in computer science, industrial engineering, mathematics, physics, business management, and other areas may be integrated into a graduate student's program of study (see the list of permitted course prefixes in program description for EE graduate degrees).

Students desiring to work toward an advanced degree in electrical engineering must have completed undergraduate preparation substantially equivalent to that required for the Bachelor of Science in Electrical Engineering degree at this institution. For students with undergraduate degrees in other disciplines, see below. For further information on the Klipsch School of Electrical and Computer Engineering, please consult the web page http://www.ece.nmsu.edu/ (http://ece.nmsu.edu).

Faculty Research Interests

- **Digital Signal Processing**: Processing and Analysis Of EEG Signals, Time-Frequency Analysis, and Speech Processing.
- **Machine Learning**: Image Processing and Application Of Machine Learning and Deep Learning To Image Analysis, Focusing on Astronomy And Biomedical Image Analysis, Health Care, and Defense.

Support for Graduate Students
A number of teaching assistantships, research assistantships and fellowships are available. Teaching assistants are recommended by individual faculty for selection by the ECE Department's Graduate Studies Committee. International students must pass university screening prior to being eligible for selection as a TA. Nominations for new TAs are made by the advisor after a student is admitted. Research assistants are hired directly by the faculty member who has received a contract or grant for research.

The College of Engineering awards graduate scholarships and fellowships on behalf of Electrical and Computer Engineering. These include:

- the MIT/Lincoln Laboratory Fellowship,
- the Paul and Valerie Klipsch Grad Scholarship,
- the Admiral Paul Arthur Grad Scholarship, and
- the Barry Neil Rappaport Grad Scholarship.

Applications can be completed on-line at https://scholarships.nmsu.edu/ . The priority deadline for the Scholar Dollar$ is March 1st. The Electrical Utility Management Program has a limited number of fellowships for students interested in pursuing master's degrees in electrical energy systems.

Admission
Prospective graduate students for the Master of Science or Doctor of Philosophy in Electrical Engineering must first meet the entrance requirements of the Graduate School. The prospective US graduate student should make formal application to the Graduate Student Services Office (http://gradschool.nmsu.edu/ (http://gradschool.nmsu.edu/)). International graduate students must start with the Admissions Office (https://iss.s.nmsu.edu/#admissions). Official transcripts from all undergraduate and graduate institutions must be sent directly to the Graduate School. International students must also submit their TOEFL (Test of English as a Foreign Language) scores. If the applicant meets the Graduate School's minimum requirements, the application is sent to the Klipsch School's Graduate Studies Committee for review. U.S. residents are given every chance of being successful in the pursuit of a graduate degree. If they do not meet the requirements of the Klipsch School, they can enter the Graduate School as "undeclared" where they must demonstrate competence in two or more graduate-level E E courses before they re-apply.

Requirements for Students Without BSEE Degree or Equivalent
Students without a BSEE degree or equivalent preparation will be expected to take classes covering the core knowledge required in our BSEE program. This includes mathematics through differential equations and basic engineering physics. The student's graduate advisor will prepare an individualized deficiency schedule, based on the student's academic background and work experience.
The following courses from our undergraduate program will be considered deficiencies for students without a BSEE

Degrees for the Department

Bachelor Degree(s)
- Computer Engineering - Bachelor of Science in Computer Engineering (p. 966)
- Electrical Engineering (Artificial Intelligence, Machine Learning, & Data Science) - Bachelor of Science in Electrical Engineering (p. 971)
- Electrical Engineering (Communications and Signal Processing) - Bachelor of Science in Electrical Engineering (p. 973)
- Electrical Engineering (Computers and Microelectronics) - Bachelor of Science in Electrical Engineering (p. 975)
- Electrical Engineering (Controls & Robotics) - Bachelor of Science in Electrical Engineering (p. 978)
- Electrical Engineering (Electromagnetics and Photonics) - Bachelor of Science in Electrical Engineering (p. 980)
- Electrical Engineering (Power) - Bachelor of Science in Electrical Engineering (p. 982)
- Electrical Engineering (Space Systems Engineering) - Bachelor of Science in Electrical Engineering (p. 985)
- Electrical Engineering - Bachelor of Science in Electrical Engineering (p. 968)

Master Degree(s)
- Electrical Engineering - Master of Engineering in Electrical Engineering (p. 139)
- Electrical Engineering - Master of Engineering in Electrical Engineering (Online) (https://catalogs.nmsu.edu/global/nmsu-global/electrical-engineering-meee-online/)
- Electrical Engineering - Master of Science in Electrical Engineering (p. 141)
- Electrical Engineering - Master of Science in Electrical Engineering (Online) (https://catalogs.nmsu.edu/global/nmsu-global/electrical-engineering-msee-online/)

Doctoral Degree(s)
- Engineering (Electrical Engineering) - Doctor of Philosophy (p. 194)

Minors for the Department
- Computer Engineering - Undergraduate Minor (p. 987)
- Electrical Engineering - Undergraduate Minor (p. 987)

Graduate Certificates in the Department
- Digital Communications - Graduate Certificate (https://catalogs.nmsu.edu/nmsu/graduate-school/digital-communications-graduate-certificate/)
- Digital Communications - Graduate Certificate (Online) (https://catalogs.nmsu.edu/global/nmsu-global/digital-communications-graduate-certificate-online/)

- Digital Signal Processing - Graduate Certificate (Online) (https://catalogs.nmsu.edu/global/nmsu-global/digital-signal-processing-graduate-certificate-online/)
- Electric Energy Systems - Graduate Certificate (https://catalogs.nmsu.edu/nmsu/graduate-school/electric-energy-systems-graduate-certificate/)
- Electric Energy Systems - Graduate Certificate (Online) (https://catalogs.nmsu.edu/global/nmsu-global/electric-energy-systems-graduate-certificate-online/)
- Telemetry - Graduate Certificate (https://catalogs.nmsu.edu/nmsu/graduate-school/telemetry-graduate-certificate/)
- Telemetry - Graduate Certificate (Online) (https://catalogs.nmsu.edu/global/nmsu-global/telemetry-graduate-certificate-online/)

Department Head Steve Stochaj
Professors Borah, Boucheron, Creusere, Dawood, Stochaj, Tang, Voelz
Associate Professors Badawy, Garcia Carrillo, Lavrova, Mitchell, Sandoval, Shi
Assistant Professors Wang
Professors of Practice
Emeritus Professors Carden, Castillo, Giles, Sheila Horan, Stephen Horan, Johnson1, Jordan, Kersting, Ludeman, Merrill, Petersen, Ranade, Reinfelds, Smolleck1, Steelman1, Taylor

1 Registered Professional Engineer (NM)

Electrical Engineering Courses

E E 200. Linear Algebra, Probability and Statistics Applications 4 Credits (3+3P)
The theory of linear algebra (vectors and matrices) and probability (random variables and random processes) with application to electrical engineering. Computer programming to solve problems in linear algebra and probability.
Prerequisite: C- or better in ENGR 140 and (MATH 1521G or MATH 1521H or ENGR 190).

Learning Outcomes
1. Perform vector and matrix operations, including matrix inversion, eigen analysis, finding basis and dimension of vector spaces and rank of a matrix, and solving a set of linear equations.
Learning Outcomes

1. Calculate probabilities using probability mass, density, and cumulative distribution functions for single and multiple, discrete and continuous random variables, and relate them to electrical engineering applications.
2. Perform simple parameter estimation, such as finding sample mean and variance, and relate to confidence intervals.
3. Describe random processes in the context of signal processing and communications systems problems.
4. Use MATLAB to solve problems involving linear algebra and probability, including designing and performing simple numerical experiments.

E E 320. Signals and Systems I
3 Credits (3)
Introduction to the modeling and analysis of continuous- and discrete-time signals and systems using time- and frequency-domain methods suitable for both mathematical approaches and computer-aided simulations.
Prerequisite: C- or better in ENGR 190.
Learning Outcomes
1. Understand different types of signals (continuous-time, discrete-time, periodic, etc.) and how these signals are represented mathematically and in a computer.
2. Understand systems representations (e.g., impulse responses), implementations (e.g., convolution and difference/differential equations), and properties (e.g., linearity).
3. Gain insight into transform-domain analysis for signals and systems.
4. Develop the ability to apply transform domain and LTI analysis to simple applications in signal processing, communications, and controls using Matlab.

E E 325. Signals and Systems II
4 Credits (3+3P)
Introduction to communication systems including amplitude and frequency modulation. Introduction to control systems including linear feedback systems, root-locus analysis, and graphical representations. Introduction to digital signal processing including sampling, digital filtering, and spectral analysis.
Prerequisite: C- or better in E E 200 and E E 320.
Learning Outcomes
1. To model, analyze, simulate, and perform calculations with continuous- and discrete-time systems.
2. To develop an understanding of basic modulations in communication systems.
3. To gain insight into the basics of control systems.
4. To develop insight into filtering and analysis of digital signals.
5. To learn how to use MATLAB and SIMULINK to perform analysis, design, and simulation of communication, control, and signal processing systems.

E E 333. AC Circuit Analysis and Introduction to Power Systems
3 Credits (2+3P)
Steady-state analysis of AC circuits, three-phase circuits, and an introduction to power systems.
Prerequisite: C- or better in ENGR 230.
Learning Outcomes
1. To introduce students to the basic structure and requirements of any electric power supply system and the nature of power systems engineering and the profession which will establish background for further studies in power systems.
2. To develop an understanding of components in a power system and to understand the basic electromagnetic and electromechanical principles involved in these components.
3. To develop an understanding of the physical-principles—to-electric-equivalent circuit approach to the analysis and design of components and systems.
4. To develop skills in equivalent circuit based analysis techniques building upon competencies developed in prior coursework.
5. To explore analysis and design principles for the complete power system
6. To understand measurement, analysis, simulation and design techniques, through laboratory exercises involving hardware and software.

**E E 340. Fields and Waves**
4 Credits (3+3P)
Static electromagnetic field. Maxwell's equation and time-varying electromagnetic fields. Generalized plane wave propagation, reflection, transmission, superposition and polarization. Transmission line theory. Extensions to optical wave propagation. Applications including Time Domain Reflectometry (TDR) and fiber optic transmission. Laboratory experience with RF/microwave test equipment and optical apparatus.

**Prerequisite:** C- or better in ENGR 230 and E E 240.

**Learning Outcomes**
1. Students will demonstrate an understanding of the fundamental principles, theories, and equations (such as Maxwell's) governing transmission lines, static and time-varying fields, propagation, reflection and transmission of plane waves, waveguides, and antennas.
2. Students will analyze and solve electromagnetic-related problems by applying fundamental principles, theories, and equations (such as Maxwell's equations).
3. Students will demonstrate effective team work.
4. Students will demonstrate the use of RF/microwave test equipment to perform basic RF circuit measurements.

**E E 362. Introduction to Computer Organization**
4 Credits (3+3P)
Concepts of modern computer organization, CPU control, pipelining, memory hierarchies, memory mapping, hardware-software interface, and operating systems.

**Prerequisite:** C- or better in ENGR 120 and ENGR130 and ENGR140 and MATH 1250G.

**Learning Outcomes**
1. Be conversant with fundamental concepts of computer organization.
2. Compare and contrast organizational features of different computer.
3. Understand the use of microprocessors and peripheral devices in practical applications.

**E E 395. Introduction to Digital Signal Processing**
3 Credits (3)
Undergraduate treatment of sampling/reconstruction, quantization, discrete-time systems, digital filtering, z-transforms, transfer functions, digital filter realizations, discrete Fourier transform (DFT) and fast Fourier transform (FFT), finite impulse response (FIR) and infinite impulse response (IIR) filter design, and digital signal processing (DSP) applications. Laboratory will emphasize practical implementation of signal processing including real-time signal processing.

**Prerequisite(s):** C- or better in E E 325.

**E E 400. Undergraduate Research**
1-3 Credits
Directed undergraduate research. May be repeated for a maximum of 9 credits.

**Prerequisite:** consent of the department head.

**E E 403. Geometric Algebra**
3 Credits (3)
Geometric algebra provides a common mathematical language for many areas of physics (classical and quantum mechanics, electrodynamics, special and general relativity), computer science (graphics, robotics, computer vision), engineering, and other fields. Topics include: the geometric product and multivectors; Euclidean, Lorentzian, Galilean, and Projective Geometries; Complex, Hyperbolic, and Dual Numbers; Quaternions and Rotations. Taught with E E 576.

**Prerequisite:** C- or better in E E 320.

**Learning Outcomes**
1. Formulate and solve problems related to multivectors and the geometric product while building geometric intuition.
2. Formulate and solve problems related to complex, hyperbolic, and dual numbers as well as quaternions.
3. Formulate and solve problems related to non-Euclidean spaces including Lorentzian, Galilean, and projective geometries.

**E E 405. Electricity Markets**
3 Credits (3)
Power systems operation in regulated and competitive environments. Topics include: basics of microeconomics; linear programming, duality, electricity market pricing and settlement; RTO operation. Taught with E E 502.

**Prerequisite:** C- or better in E E 431.

**Learning Outcomes**
1. Understand basic microeconomic principles, basics of market power, Cournot equilibrium
2. Understand basics of linear programming, the primal dual problems, economic interpretation of dual variables, basics of mixed integer programming
3. Understand dispatch optimization problems in the electric energy markets including economic dispatch, unit commitment
4. Understand motivation and objectives of market design, including uniform vs. pay-as-bid pricing, locational marginal prices (LMPs), dual of the DCOPF and the various terms (load payment, congestion rent, etc.), pricing issues in non-convex markets, financial transmission rights, ancillary services market

**E E 406. Quantum Computing**
3 Credits (3)
This course is an introduction to quantum computing (QC), emphasizing the underlying theory. Topics covered include single and multiple qubit systems, state transformations, algorithms, subsystems, and error correction. The course is intended to be accessible to a wide audience of engineers, mathematicians, and scientists; no previous exposure to quantum physics is required. It is highly recommended that students have completed a college-level linear algebra course. Taught concurrently with E E 506.

**Learning Outcomes**
1. Explain the quantum computing paradigm.
2. Apply the principles of quantum mechanics for computation.
3. Analyze quantum algorithms and evaluate possible quantum speedups.
4. Describe the framework of quantum error correction codes.

**E E 407. Introduction to Control Systems**
3 Credits (3)
This course provides an introduction to the analysis of control systems. The main focus will be on techniques in classical control theory. System dynamics and modeling techniques in both the frequency domain and the time domain will be covered. Students will learn how to transform linear dynamical systems between state-space and frequency domains, and evaluate conditions for stability in each domain. Students will analyze and characterize both the transient and steady-state response,
and examine root locus, Bode, and Nyquist plots. Concepts of robust control, including tradeoffs between sensitivity and performance, will be emphasized throughout. Applications will range across electrical, mechanical, chemical, biomedical, and biological systems. Laboratory activities include modeling, analysis and simulation of physical processes.

Prerequisite: C- or better in E E 325 and MATH 392.

Learning Outcomes
1. Obtain mathematical models of electrical and mechanical systems from their idealized elements.
2. Derive the transfer function of a control system.
3. Apply their mathematical knowledge to determine the response of a linear system to various types of inputs.
4. Develop familiarity and confidence with analyzing transient and steady state responses of a linear system.
5. Apply their mathematical knowledge to understand the concept of stability.
6. Develop familiarity and confidence with controller design based on Routh-Hurwitz, Root locus and P, PI, PID modes of control.
7. Develop proficiency in systems simulation using MATLAB and SIMULINK.

E E 408. Noncooperative Game Theory
3 Credits (3)
The purpose of this course is to teach students to formulate problems as mathematical games and provide the basic tools to solve them. The course covers: Static games, starting with two-player zero-sum games and eventually building up to n-player non-zero sum games. Saddle-points and Nash equilibria will be covered. Dynamic optimization (dynamic programming) for discrete and continuous time. Dynamic games, both open and closed-loop policies. The intended audience includes (but is not restricted to) students in engineering and computer science. The class is heavily project-oriented and the students are strongly encouraged to choose a project that is relevant to their own area of research. Taught with E E 553.

Prerequisite: C- or better in E E 200 or ((MATH 2415 or MATH 480) and (STAT 371 or STAT470) and (C S 172 or C S 271)) or equivalent.

Learning Outcomes
1. Comprehend the key principles of noncooperative game theory.
2. Apply the Minimax Theorem and evaluating mixed saddle-point equilibria.
3. Analyze stochastic policies for games in extensive form, and apply them to the existence and computation of saddle-point equilibria.
4. Comprehend games with N-players.
5. Analyze potential games and evaluate Nash equilibria for potential games.
6. Analyze dynamic games: the optimal control of a dynamical system.
7. Evaluate the saddle-point equilibria of zero-sum discrete-time and continuous-time dynamic games in state-feedback policies.

E E 409. Hardware & Software Codesign
3 Credits (3)
This course introduces the concept and techniques of designing electronic systems that integrates both hardware and software components. Topics include nature of hardware and software, dataflow modeling, software and hardware implementations of dataflows, analysis of control flows and dataflows, FSM with Datapath, microprogramming, embedded cores, and trade-offs between hardware and software components, etc. Students gain experience in implementing hardware and software co-design solutions for solving real-world problems through hands-on laboratory/project on a programmable System-on-Chip (SoC) platform that integrates a dual-core ARM Cortex-A9 processor and FPGA fabrics. Students develop a fundamental understanding of state-of-the-art practices in developing codesign solutions to problems that prepare them well for industrial and academic careers in this field. Taught with E E 556.

Prerequisite: C- or better in ENGR 140 and ENGR 130 and (E E 362 or C S 473).

Learning Outcomes
1. Formulate and solve problems related to basic concepts and methodologies in hardware/software co-design.
2. Analyze concurrent specification of an algorithm to be partitioned into software (C code) and hardware (HDL) components.
3. Design and implement both the software and hardware components integration as a solution to real-world problems to achieve optimal performance, power and cost.
4. Describe various types of system architectures regarding their attributes including speed, energy, design complexity, design cost, etc.
5. Experience working with commercially available Computer-Aided Design (CAD) development tools such as Xilinx Vivado
6. Experience working in translation between C code and HDL of practical problems and verify/test the solution on FPGA SoC architecture

E E 412. ASIC Design
3 Credits (3)
This course provides students with experiential knowledge of modern application specific integrated circuits. Topics include ASIC packaging and testing, I/O pads and ESD, Verilog programming and simulation, FPGA verification, Register-transfer level synthesis, timing and area optimization, floorplanning and routing, digital interfaces, full custom and standard cell design, post-layout simulation, and PCB schematics and layout. Taught with E E 512.

Prerequisite: C - or better in E E 480.

Learning Outcomes
1. Cadence ASIC design tools and design flow
2. Verilog programming, simulation, and FPGA verification
3. Padrning, I/O, and ESD for ASIC
4. CMOS standard cell library for large scale digital circuit
5. MOSIS Tapeout options and ASIC package selections
6. Typical digital interfaces
7. Allegro PCB schematic and layout, ASIC testing
8. Digital Signal Processing Circuits implementation in ASIC

E E 431. Power Systems II
3 Credits (3)
Analysis of a power system in the steady-state. Includes the development of models and analysis procedures for major power system components and for power networks. Taught with E E 542.

Prerequisite: C - or better in E E 333.

Learning Outcomes
1. To introduce students to the basic structure and requirements of any electric power supply system and the nature of power systems engineering and the profession. To establish background for further studies in power systems
2. To develop an understanding of components in a power system and to understand the basic electromagnetic and electromechanical principles involved in these components.
3. To develop an understanding of the physical-principles—to-electric-equivalent circuit approach to the analysis and design of components and systems.
4. To develop skills in equivalent circuit based analysis techniques building upon competencies developed in prior coursework.
5. To explore analysis and design principles for the complete power system
6. To convey to the student a thorough understanding of both the theory and the mechanics involved in the modeling and analysis of power system components and networks
7. To study how such modeling and analysis is used in the design/planning of power systems

E E 432. Power Electronics
3 Credits (2+3P)
Basic principles of power electronics and its applications to power supplies, electric machine control, and power systems. Taught with E E 537.
Prerequisite: C- or better in E E 317 and E E 333.
Learning Outcomes
1. To introduce students to the basic structure and requirements of any electric power supply system and the nature of power systems engineering and the profession. To establish background for further studies in power systems
2. To develop an understanding of components in a power system and to understand the basic electromagnetic and electromechanical principles involved in these components.
3. To develop an understanding of the physical-principles—to-electric-equivalent circuit approach to the analysis and design of components and systems.
4. To develop skills in equivalent circuit based analysis techniques building upon competencies developed in prior coursework.
5. To explore analysis and design principles for the complete power system
6. To convey to the student a thorough understanding of both the theory and the mechanics involved in the modeling and analysis of power system components and networks
7. To study how such modeling and analysis is used in the design/planning of power systems

E E 433. Power System Operation
3 Credits (3)
Basics of power system operation; linear programming, economic dispatch, mixed integer programing, power system security and contingency analysis; RTO operation; generation control; renewable integration.
Prerequisite: C- or better in E E 431.
Learning Outcomes
1. Understand basic microeconomic principles, basics of market power, Cournot equilibrium.
2. Understand basics of linear programming and can use software to solve simple linear programming problems.
3. Understand the different between AC and DC power flow. Understand dispatch optimization problems in the electric energy markets including economic dispatch, unit commitment.
4. Understand the control schemes in power system, including governor repose, automatic generation control.
5. Understand the power system security including N-I criteria, contingency analysis, and security constraints.

E E 440. Photovoltaic Devices and Systems
3 Credits (3)
Prerequisite: C- or better in E E 317.
Learning Outcomes
1. Name at least three different types of photovoltaic materials and cells;
2. Derive equations governing operation of photovoltaic cells;
3. Design and create electrical engineering drawings for photovoltaic systems of different nameplate capacity;
4. Describe principles of operation of the “balance of the system” (BOS) components of the photovoltaic system.

E E 443. Mobile Application Development
3 Credits (3)
Introduction to mobile application development. Students will develop applications for iOS devices including iPhone and iPad. Topics include object-oriented programming using Swift, model-view-controller (MVC) pattern, view controllers including tables and navigation, graphical user interface (GUI) design, data persistence, GPS and mapping, camera, and cloud and web services. Taught with E E 593.
Prerequisite: C- or better in C S 151 or C S 152 or C S 172 or C S 271 or C S 451 or C S 452.
Learning Outcomes
1. The objective of this course is to gain an understanding of mobile application development, including Swift, Model-View-Controller (MVC) pattern, Memory management, View controllers, Frameworks: Foundation, CoreGraphics, CoreLocation, MapKit, UIKit, WebKit

E E 444. Advanced Image Processing
3 Credits (3)
Advanced topics in image processing including segmentation, feature extraction, object recognition, image understanding, big data, and applications. Taught with E E 588.
Prerequisite: C- or better in E E 446.
Learning Outcomes
1. Implement and analyze segmentation of color and grayscale images.
2. Implement and analyze morphological analysis of binary images
3. Implement and analyze compression of images
4. Implement and analyze feature extraction and classification of images
5. Implement and analyze convolutional neural networks (CNNs) for classification of images

E E 446. Digital Image Processing
3 Credits (3)
Two-dimensional transform theory, color images, image enhancement, restoration, segmentation, compression and understanding. Taught with E E 596.
Prerequisite: C- or better in E E 325.
Learning Outcomes
1. Analyze human visual perception and the implications to science and society
2. Formulate and analyze problems that utilize the mathematics behind multidimensional image processing
3. Formulate and analyze problems involving multidimensional transformation transform-domain processing
4. Formulate and analyze problems related to color image acquisition, processing, and display
5. Implementing image processing algorithms on computers in Matlab or python

E E 447. Neural Signal Processing
3 Credits (3)
Cross-disciplinary course focused on the acquisition and processing of neural signals. Students in this class will learn about basic brain structure, different brain signal acquisition techniques (fMRI, EEG, MEG, etc.), neural modeling, and EEG signal processing. To perform EEG signal processing, students will learn and use Matlab along with an EEG analysis package. Taught with E E 597.
Prerequisite: C- or better in E E 325.
Learning Outcomes
1. Demonstrate understanding and skill in the Structure and basic operation of the human brain
2. Demonstrate understanding and skill in processing of EEG brain signals using Matlab and EEGLAB
3. Demonstrate understanding and skill in EEG-related neural modeling
4. Demonstrate understanding and skill in brain signal types and acquisition

E E 448. Signal Compression
3 Credits (3)
Prerequisite: C- or better in E E 200.
Learning Outcomes
1. Formulate and analyze problems related to rate-distortion tradeoffs in compression
2. Formulate and analyze problems related to scalar and vector quantization
3. Formulate and analyze problems related to transform coding
4. Formulate and analyze problems related to entropy coding (Huffman arithmetic)
5. Formulate and analyze problems related to standardized codecs, including MPEG, JPEG, MP3
6. Formulate and analyze problems related to compressive sensing/sampling

E E 452. Introduction to Radar
3 Credits (3)
Prerequisite: C- or better in E E 325 and E E 340.
Learning Outcomes
1. Students will demonstrate an understanding of fundamental principles of various types of radar systems and their applications,
2. Students will learn to analyze a given radar system,
3. Students will learn to use simulation techniques to design a radar system that will yield desired characteristics,
4. Students will experience working in groups/teams

E E 453. Microwave Engineering
3 Credits (3)
Techniques for microwave measurements and communication system design, including transmissions lines, waveguides, and components.

Microwave network analysis and active device design. Taught with E E 521.
Prerequisite: C- or better in E E 340.
Learning Outcomes
1. Students will demonstrate an understanding of fundamental principles and theories related to microwave systems, components, and devices
2. Students will analyze and solve microwave engineering-related problems using the fundamental microwave engineering theories and principles
3. Students will demonstrate the use of microwave engineering design tools
4. Students will demonstrate effective team work
5. Students will demonstrate an understanding the impact of engineering solutions in a global, economic, environmental, and societal context
6. Students will demonstrate an understanding of the knowledge of contemporary professional, societal and global issues

E E 454. Antennas and Radiation
4 Credits (3+3P)
Basic antenna analysis and design. Fundamental antenna concepts and radiation integrals. Study of wire antennas, aperture antennas, arrays, reflectors, and broadband antennas. Taught with E E 541.
Prerequisite: C- or better in E E 340.
Learning Outcomes
1. Students will demonstrate an understanding of the fundamental principles, theories, and equations governing antenna radiation, antenna arrays, and matching, etc.
2. Students will analyze and solve the antenna-related radiation problems, antenna structures.
3. Students will demonstrate the use of antenna synthesis techniques and simulation software to solve antenna related problems
4. Students will demonstrate effective team work
5. Students will demonstrate an understanding the impact of engineering solutions in a global, economic, environmental, and societal context
6. Students will demonstrate an understanding of the knowledge of contemporary professional, societal and global issues

E E 458. Hardware Security and Trust
3 Credits (3)
This course introduces and investigates recent technology development for the design and evaluation of secure and trustworthy hardware and embedded systems. Topics include IoT security, cryptography, hardware security primitives, authentication and key generation, invasive and non-invasive attacks and countermeasures, IC piracy and intellectual property protection, hardware trojans, and secure boot. Taught with E E 558.
Prerequisite: C- or better in E E 362.
Learning Outcomes
1. Understand the security goals of information security
2. Understand cryptography basics and their applications
3. Formulate and analyze problems related to security threats in integrated circuits, electronic devices and semiconductor supply chain
4. Formulate and analyze problems related to security countermeasures to the threats of integrated circuits and electronic devices
5. Use metrics to measure and assess the security level of security mechanisms or primitives in hardware security applications
6. Analyze and assess potential security vulnerabilities in hardware and embedded systems
7. Learn state-of-art security mechanisms and research topics in the hardware and embedded security area

E E 460. Space System Mission Design and Analysis
3 Credits (3)
Satellite system design, including development, fabrication, launch, and operations. A systems engineering approach to concepts, methodologies, models, and tools for space systems. Students must be in junior standing to enroll.

Learning Outcomes
1. Apply knowledge from science, math and engineering to satellite design.
2. Experience the "system engineering" of satellite design through the design of a space mission.
3. Understand the professional and ethical responsibilities related to satellite design.
4. Understand the impact of satellite related engineering solutions in a global, economic, environmental, and societal context.
5. Maintain a knowledge of contemporary professional, societal and global issues as they relate to satellites.

E E 462. Computer Systems Architecture
3 Credits (3)
The course covers uniprocessors, caches, memory systems, virtual memory, storage systems, with introduction to multiprocessor and distributed computer architectures; models of parallel computation; processing element and interconnection network structures, and nontraditional architectures. Taught with E E 562.

Prerequisite: C- or better in E E 362.

Learning Outcomes
1. Recognize the basic principles and current practices of computer architectures of processors, memory systems, interconnects, and input/output systems
2. Reason about the issues that influence the architectures of processors, memory systems, interconnects, and input/output systems
3. Evaluate and improve computer system performance through analysis and computer simulation
4. Solve and implement a small research problem in computer architecture.

E E 465. Machine Learning I
3 Credits (3)
An undergraduate-level introduction to machine learning algorithms, including supervised and unsupervised learning methods. Topics covered include clustering, linear regression models, linear discriminant functions, feed-forward neural networks, statistical pattern classification and regression, maximum likelihood, naive Bayes, non-parametric density estimation, mixture models, decision trees, and ensemble learning. Taught with E E 565.

Prerequisite: C- or better in E E 200.

Learning Outcomes
1. Formulate and solve problems related to the basic concepts and mathematical techniques of machine learning.
2. Gain an understanding of machine learning algorithms/methods by solving problems using software.
3. Gain experience doing independent study and research.
5. Gain practical experience through project-based assignments and technical report writing.

E E 467. ARM SOC Design
3 Credits (3)
The course aims to produce students who are capable of developing ARM-based SoCs from high level functional specifications to design, implementation and testing on real FPGA hardware using standard hardware description and software programming languages. Taught with E E 567.

Prerequisite: C- or better in E E 362 and E E 317.

Learning Outcomes
1. Formulate and solve problems requiring knowledge and understanding of ARM processor architectures and ARM-based SoCs
2. Capture the design of ARM-based SoCs in a standard hardware description language
3. Conduct low-level software design for ARM-based SoCs and high-level application development
4. Demonstrate the ability to use and choose between different techniques for digital system design and capture;
5. Evaluate implementation results (e.g. speed, area, power) and correlate them with the corresponding high level design and capture;
6. Demonstrate the ability to use a commercial tools to develop ARM-based SoCs

E E 473. Introduction to Optics
3 Credits (3)
The nature of light, geometrical optics, basic optical instruments, wave optics, aberrations, polarization, and diffraction. Elements of optical radiometry, lasers and fiber optics. Crosslisted with: PHYS 473.

Prerequisite(s): C- or better in PHYS 1320G or PHYS 2120.

E E 475. Control Systems Synthesis
3 Credits (3)
An advanced perspective of linear modern control system analysis and design, including the essential algebraic, structural, and numerical properties of linear dynamical systems. Computer-aided solution of real-world design problems. Taught with E E 551.

Prerequisite: C- or better in E E 407.

Learning Outcomes
1. Understand the concepts of Model Identification and Parameter Estimation (least-square identification of a auto-regressive model; nonparametric identification in the time domain; and nonparametric identification in the frequency domain)
2. Understand Robust Control techniques (Nyquist-plots, small-gain, and passivity)
3. Understand Optimal control techniques (LQR/LQG for state-space systems and time-optimal controller for the positioning of a mass using force actuation)
4. Understand Nonlinear control techniques (Lyapunov's stability method; feedback linearization controller for a fully actuated 2nd order mechanical system; backstepping for triangular nonlinear systems; actuator limitations)

E E 478. Fundamentals of Photonics
4 Credits (3+3P)
Ray, wave and guided optics, lasers and thermal sources, radiometry, photon detection and signal-to-noise ratio. Elements of photonic crystals,

Prerequisite: C- or better in PHYS 1320G or PHYS 2120. 

Learning Outcomes
1. Understand the fundamentals of the different theories of light including ray, wave, electromagnetic (vector) and photon optics, and how these theories are represented mathematically and on a computer.
2. Develop the ability to perform calculations for the different theories (ray tracing, wave interference, polarization calculus, photon detection) to determine the propagation characteristics and describe the manipulation of light.
3. Gain insight and experience with materials and devices for manipulating and detecting light (glass, mirrors, lenses, fiber optics, polarization elements, liquid crystals, semiconductors, and photodiodes).
4. Apply the theoretical, mathematical, and practical understanding of optics to describe real-world applications of light technology with supporting analysis and calculations.

E E 480. Introduction to Analog and Digital VLSI
3 Credits (3)
Introduction to analog and digital VLSI circuits implemented in CMOS technology. Design of differential amplifiers, opamps, CMOS logic, flip-flops, and adders. Introduction to VLSI fabrication process. Taught with E E 510. 

Prerequisite: C- or better in E E 362 and E E 317. 

Learning Outcomes
1. Explain the basic concepts of CMOS VLSI system design
2. Formulate and solve problems related to pseudo ideal operation of MOS transistors as switches and implementation with transistors of basic and complex Boolean functions
3. Use modern software tools to simulate integrated circuits
4. Formulate and solve problems related to operation and design of basic analog building blocks
5. Formulate and solve problems related to operation and design of basic digital building blocks
6. Formulate and solve problems related to key aspects of performance characteristics (speed, power dissipation, Silicon area.) of VLSI systems and how to size transistors in order to achieve desired performance specifications.

E E 485. Analog VLSI Design
3 Credits (2+3P)
Analysis, design, simulation, layout and verification of CMOS analog building blocks, including references, opamps, switches and comparators. Teams implement a complex analog IC. Taught with E E 523. 

Prerequisite: C- or better in E E 320 and E E 480. 

Learning Outcomes
1. Analysis, design, simulation, and layout of current mirrors, current sources, and voltage references
2. Analysis, design, simulation, and layout of differential and operational amplifiers
3. Analysis, design, simulation, and layout of switched-capacitor circuits
4. Using VLSI CAD tools for simulating and laying out analog integrated circuits
5. Writing laboratory reports and project documentation

E E 490. Selected Topics
1-3 Credits
May be repeated for a maximum of 9 credits. Graduate students may not use credits of E E 490 toward an M.S. or Ph.D. in electrical engineering. 

Prerequisite: consent of instructor. 

E E 493. Power Systems III
3 Credits (3)
Analysis of a power system under abnormal operating conditions. Topics include symmetrical three-phase faults, theory of symmetrical components, unsymmetrical faults, system protection, and power system stability. Taught with E E 543. 

Prerequisite: C- or better in E E 431. 

Learning Outcomes
1. To introduce students to the basic structure and requirements of any electric power supply system and the nature of power systems engineering and the profession. To establish background for further studies in power systems.
2. To develop an understanding of components in a power system and to understand the basic electromagnetic and electromechanical principles involved in these components.
3. To develop an understanding of the physical-principles—to-electric-equivalent circuit approach to the analysis and design of components and systems.
4. To develop skills in equivalent circuit based analysis techniques building upon competencies developed in prior coursework.
5. To explore analysis and design principles for the complete power system.
6. To understand measurement, analysis, simulation and design techniques, through laboratory exercises involving hardware and software.

E E 496. Introduction to Communication Systems
3 Credits (3)
Introduction to the analysis of signals in the frequency and time domains. A study of baseband digital transmission systems and digital/analog RF transmission systems. Introduction to telecom systems as well as satellite systems. 

Prerequisite(s): C- or better in E E 325. 

E E 497. Digital Communication Systems I
3 Credits (3)

Prerequisite: C- or better in E E 200 and E E 325. 

Learning Outcomes
1. Analyze bandwidth and error performance of baseband and bandpass signals through mathematical explanations and simulated experimental data.
2. Evaluate channel code structures and their performance.
3. Analyze communication system issues involving link budgets, synchronization and resource allocations.
4. Develop a wider perspective recognizing contemporary technologies, impact of the solutions and professional and ethical responsibilities.
E E 502. Electricity Markets
3 Credits (3)
Power systems operation in regulated and competitive environments. Topics include: basics of microeconomics; linear programming, duality; electricity market pricing and settlement; RTO operation. Recommended foundation: E E 431. Taught with: E E 405.
Learning Outcomes
1. Understand basic microeconomic principles, basics of market power, Cournot equilibrium
2. Understand basics of linear programming, the primal dual problems, economic interpretation of dual variables, basics of mixed integer programming
3. Understand dispatch optimization problems in the electric energy markets including economic dispatch, unit commitment
4. Understand motivation and objectives of market design, including uniform vs. pay-as-bid pricing, locational marginal prices (LMPs), dual of the DCOPF and the various terms (load payment, congestion rent, etc.), pricing issues in non-convex markets, financial transmission rights, ancillary services market

E E 506. Quantum Computing
3 Credits (3)
This course is an introduction to quantum computing (QC), emphasizing the underlying theory. Topics covered include single and multiple qubit systems, state transformations, algorithms, subsystems, and error correction. The course is intended to be accessible to a wide audience of engineers, mathematicians, and scientists; no previous exposure to quantum physics is required. It is highly recommended that students have completed a college-level linear algebra course. Taught with E E 406.
Learning Outcomes
1. Explain the quantum computing paradigm.
2. Apply the principles of quantum mechanics for computation.
3. Analyze quantum algorithms and evaluate possible quantum speedups.
4. Describe the framework of quantum error correction codes.

E E 510. Introduction to Analog and Digital VLSI
3 Credits (3)
Learning Outcomes
1. Explain the basic concepts of CMOS VLSI system design
2. Formulate and solve problems related to pseudo ideal operation of MOS transistors as switches and implementation with transistors of basic and complex Boolean functions
3. Use modern software tools to simulate integrated circuits
4. Formulate and solve problems related to operation and design of basic analog building blocks
5. Formulate and solve problems related to operation and design of basic digital building blocks
6. Formulate and solve problems related to key aspects of performance characteristics (speed, power dissipation, Silicon area..) of VLSI systems and how to size transistors in order to achieve desired performance specifications.

E E 512. ASIC Design
3 Credits (3)
This course provides students with experiential knowledge of modern application specific integrated circuits. Topics include ASIC packaging and testing, I/O pads and ESD, Verilog programming and simulation, FPGA verification, Register-transfer level synthesis, timing and area optimization, floorplanning and routing, digital interfaces, full custom and standard cell design, post-layout simulation, and PCB schematics and layout. Recommended foundation: E E 480. Taught with E E 412.
Learning Outcomes
1. Cadence ASIC design tools and design flow
2. Verilog programming, simulation, and FPGA verification
3. Padrng, I/O, and ESD for ASIC
4. CMOS standard cell library for large scale digital circuit
5. MOSIS Tapeout options and ASIC package selections
6. Typical digital interfaces
7. Allegro PCB schematic and layout, ASIC testing
8. Digital Signal Processing Circuits implementation in ASIC

E E 515. Electromagnetic Theory I
3 Credits (3)

E E 521. Microwave Engineering
3 Credits (3)
Techniques for microwave measurements and communication system design, including transmission lines, waveguides, and components. Microwave network analysis and active device design. Recommended foundation: E E 340. Taught with: E E 453.

E E 523. Analog VLSI Design
3 Credits (2+3P)
Analysis, design, simulation, layout and verification of CMOS analog building blocks, including references, opamps, switches and comparators. Teams implement a complex analog IC. Recommended foundation: E E 320 and E E 480. Taught with: E E 485.
Learning Outcomes
1. Students completing the course with a grade of C or better will perform satisfactorily on analysis, design, simulation, and layout of current mirrors, current sources, and voltage references.
2. Students completing the course with a grade of C or better will perform satisfactorily on analysis, design, simulation, and layout of differential and operational amplifiers.
3. Students completing the course with a grade of C or better will perform satisfactorily on analysis, design, simulation, and layout of switched-capacitor circuits.
4. Students completing the course with a grade of C or better will perform satisfactorily on using VLSI CAD tools for simulating and laying out analog integrated circuits.
5. Students completing the course with a grade of C or better will perform satisfactorily on writing laboratory reports and project documentation.

E E 528. Fundamentals of Photonics
4 Credits (3+3P)
Recommended foundation (PHYS 1320G or PHYS2120) and (E E 473 or PHYS 473), Taught with E E 478. Crosslisted with PHYS 528.

Learning Outcomes
1. Describe the fundamental properties of light.
2. Formulate the concepts of ray, wave, and photon optics mathematically.
3. Represent and incorporate basic elements of an optical system.
4. Perform an analysis of a simple photonic/optical system mathematically by hand and with computer tools such as MATLAB.
5. Discuss ethical, societal, and professional issues related to photonics and optics.

E E 534. Power System Relaying
3 Credits (3)

E E 537. Power Electronics
3 Credits (2+3P)
Basic principles of power electronics and its applications to power supplies, electric machine control, and power systems. Recommended foundation: E E 317 and E E 333. Taught with: E E 432.

Learning Outcomes
1. To introduce students to the basic structure and requirements of any electric power supply system and the nature of power systems engineering and the profession. To establish background for further studies in power systems
2. To develop an understanding of components in a power system and to understand the basic electromagnetic and electromechanical principles involved in these components.
3. To develop an understanding of the physical-principles—to-electric-equivalent circuit approach to the analysis and design of components and systems.
4. To develop skills in equivalent circuit based analysis techniques building upon competencies developed in prior coursework.
5. To explore analysis and design principles for the complete power system
6. To convey to the student a thorough understanding of both the theory and the mechanics involved in the modeling and analysis of power system components and networks
7. To study how such modeling and analysis is used in the design/planning of power systems

E E 540. Photovoltaic Devices and Systems
3 Credits (3)

Learning Outcomes
1. Name at least three different types of photovoltaic materials and cells.
2. Derive equations governing operation of photovoltaic cells.
3. Design and create electrical engineering drawings for photovoltaic systems of different nameplate capacity.
4. Describe principles of operation of the “balance of the system” (BOS) components of the photovoltaic system.

E E 541. Antennas and Radiation
4 Credits (3+3P)

Learning Outcomes
1. Students will demonstrate an understanding of the fundamental principles, theories, and equations governing antenna radiation, antenna arrays, and matching, etc.
2. Students will analyze and solve the antenna-related radiation problems, antenna structures.
3. Students will demonstrate the use of antenna synthesis techniques and simulation software to solve antenna related problems
4. Students will demonstrate effective team work
5. Students will demonstrate an understanding the impact of engineering solutions in a global, economic, environmental, and societal context
6. Students will demonstrate an understanding of the knowledge of contemporary professional, societal and global issues

E E 542. Power Systems II
3 Credits (3)
Analysis of a power system in the steady-state. Includes the development of models and analysis procedures for major power system components and for power networks. Recommended foundation: E E 333. Taught with E E 431.

Learning Outcomes
1. To introduce students to the basic structure and requirements of any electric power supply system and the nature of power systems engineering and the profession. To establish background for further studies in power systems
2. To develop an understanding of components in a power system and to understand the basic electromagnetic and electromechanical principles involved in these components.
3. To develop an understanding of the physical-principles—to-electric-equivalent circuit approach to the analysis and design of components and systems.
4. To develop skills in equivalent circuit based analysis techniques building upon competencies developed in prior coursework.
5. To explore analysis and design principles for the complete power system
6. To convey to the student a thorough understanding of both the theory and the mechanics involved in the modeling and analysis of power system components and networks
7. To study how such modeling and analysis is used in the design/planning of power systems

E E 543. Power Systems III
3 Credits (3)
Analysis of a power system under abnormal operating conditions. Topics include symmetrical three-phase faults, theory of symmetrical components, unsymmetrical faults, system protection, and power system stability. Recommended foundation: E E 431. Taught with: E E 493.

Learning Outcomes
1. To introduce students to the basic structure and requirements of any electric power supply system and the nature of power systems
Engineering and the profession. To establish background for further studies in power systems
2. To develop an understanding of components in a power system and to understand the basic electromagnetic and electromechanical principles involved in these components.
3. To develop an understanding of the physical-principles—to-electric-equivalent circuit approach to the analysis and design of components and systems.
4. To develop skills in equivalent circuit based analysis techniques building upon competencies developed in prior coursework.
5. To explore analysis and design principles for the complete power system
6. To understand measurement, analysis, simulation and design techniques, through laboratory exercises involving hardware and software.

E E 544. Distribution Systems
3 Credits (3)
Concepts and techniques associated with the design and operation of electrical distribution systems. Recommended foundation: E E 542 and E E 543.

E E 545. Digital Signal Processing II
3 Credits (3)
Non-ideal sampling and reconstruction, oversampling and noise shaping in A/D and D/A, finite word length effects, random signals, spectral analysis, multirate filter banks and wavelets, and applications. Recommended foundation: E E 395.

E E 548. Introduction to Radar
3 Credits (3)

Learning Outcomes
1. Students will demonstrate an understanding of fundamental principles of various types of radar systems and their applications.
2. Students will learn to analyze a given radar system.
3. Students will learn to use simulation techniques to design a radar system that will yield desired characteristics.
4. Students will experience working in groups/teams.

E E 549. Smart Antennas
3 Credits (3)

E E 551. Control Systems Synthesis
3 Credits (3)
An advanced perspective of linear modern control system analysis and design, including the essential algebraic, structural, and numerical properties of linear dynamical systems. Computer-aided solution of real-world design problems. Recommended foundation: E E 407 Intro to Control Systems or equivalent. Taught with E E 475.

Learning Outcomes
1. Understand the concepts of Model Identification and Parameter Estimation (least-square identification of a auto-regressive model; nonparametric identification in the time domain; and nonparametric identification in the frequency domain)
2. Understand Robust Control techniques (Nyquist-plots, small-gain, and passivity)
3. Understand Optimal control techniques (LQR/LQG for state-space systems and time-optimal controller for the positioning of a mass using force actuation)
4. Understand Nonlinear control techniques (Lyapunov’s stability method; feedback linearization controller for a fully actuated 2nd order mechanical system; backstepping for triangular nonlinear systems; actuator limitations)

E E 553. Noncooperative Game Theory
3 Credits (3)
The purpose of this course is to teach students to formulate problems as mathematical games and provide the basic tools to solve them. The course covers: Static games, starting with two-player zero-sum games and eventually building up to n-player non-zero sum games. Saddle-points and Nash equilibria will be covered. Dynamic optimization (dynamic programming) for discrete and continuous time. Dynamic games, both open and closed-loop policies. The intended audience includes (but is not restricted to) students in engineering and computer science. The class is heavily project-oriented and the students are strongly encouraged to choose a project that is relevant to their own area of research. Recommended foundation: undergraduate linear algebra and probability. Taught with E E 408.

Learning Outcomes
1. Comprehend the key principles of noncooperative game theory.
2. Apply the Minimax Theorem and evaluating mixed saddle-point equilibria.
3. Analyze stochastic policies for games in extensive form, and apply them to the existence and computation of saddle-point equilibria.
4. Comprehend games with N-players.
5. Analyze potential games and evaluate Nash equilibria for potential games.
6. Analyze dynamic games: the optimal control of a dynamical system.
7. Evaluate the saddle-point equilibria of zero-sum discrete-time and continuous-time dynamic games in state-feedback policies.

E E 556. Hardware & Software Codesign
3 Credits (3)
This course introduces the concept and techniques of designing electronic systems that integrates both hardware and software components. Topics include nature of hardware and software, dataflow modeling, software and hardware implementations of dataflows, analysis of control flows and dataflows, FSM with Datapath, microprogramming, embedded cores, and trade-offs between hardware and software components, etc. Students gain experience in implementing hardware and software co-design solutions for solving real-world problems through hands-on laboratory/project on a programmable System-on-Chip (SoC) platform that integrates a dual-core ARM Cortex-A9 processor and FPGA fabrics. Students develop a fundamental understanding of state-of-the-art practices in developing codesign solutions to problems that prepare them well for industrial and academic careers in this field. Recommended foundation ENGR 140, ENGR 130, (E E 362 or C S 473). Taught with E E 409.

Learning Outcomes
1. Formulate and solve problems related to basic concepts and methodologies in hardware/software co-design.
2. Analyze concurrent specification of an algorithm to be partitioned into software (C code) and hardware (HDL) components.

3. Design and implement both the software and hardware components integration as a solution to real-world problems to achieve optimal performance, power and cost.

4. Describe various types of system architectures regarding their attributes including speed, energy, design complexity, design cost, etc.

5. Experience working with commercially available Computer-Aided Design (CAD) development tools such as Xilinx Vivado.

6. Experience working in translation between C code and HDL of practical problems and verify/test the solution on FPGA SoC architecture.

E E 558. Hardware Security and Trust
3 Credits (3)
This course introduces and investigates recent technology development for the design and evaluation of secure and trustworthy hardware and embedded systems. Topics include IoT security, cryptography, hardware security primitives, authentication and key generation, invasive and non-invasive attacks and countermeasures, IC piracy and intellectual property protection, hardware trojans, and secure boot. Recommended foundation: E E 362. Taught with: E E 458.

Learning Outcomes
1. Students completing the course with a grade of C or better will perform satisfactorily on understanding of security goals of information security.

2. Students completing the course with a grade of C or better will perform satisfactorily on understanding of Cryptography basics and their applications.

3. Students completing the course with a grade of C or better will perform satisfactorily on security threats in integrated circuits, electronic devices and semiconductor supply chain.

4. Students completing the course with a grade of C or better will perform satisfactorily on security countermeasures to the threats of integrated circuits and electronic devices.

5. Students completing the course with a grade of C or better will perform satisfactorily on metrics used to measure and assess the security level of security mechanisms or primitives in hardware security applications.

6. Students completing the course with a grade of C or better will perform satisfactorily on analysis and assessment of potential security vulnerabilities in hardware and embedded systems.

7. Students completing the course with a grade of C or better will perform satisfactorily on state-of-art security mechanisms and research topics in the hardware and embedded security area.

E E 562. Computer Systems Architecture
3 Credits (3)
The course covers uniprocessors, caches, memory systems, virtual memory, storage systems, with introduction to multiprocessor and distributed computer architectures; models of parallel computation; processing element and interconnection network structures, and nontraditional architectures. Recommended foundation is E E 362. Taught with: E E 462.

Learning Outcomes
1. Recognize the basic principles and current practices of computer architectures of processors, memory systems, interconnects, and input/output systems.

2. Reason about the issues that influence the architectures of processors, memory systems, interconnects, and input/output systems.

3. Evaluate and improve computer system performance through analysis and computer simulation.

4. Solve and implement a small research problem in computer architecture.

E E 563. Computer Performance Analysis I
3 Credits (3)
Issues involved and techniques used to analyze performance of a computer system. Topics covered include computer system workloads; statistical analysis techniques such as principal component analysis, confidence interval, and linear regression; design and analysis of experiments; queuing system analysis; computer system simulation; and random number generation. Recommended foundation: E E 200 and E E 462.

E E 565. Machine Learning I
3 Credits (3)
A graduate-level introduction to machine learning algorithms, including supervised and unsupervised learning methods. Topics covered include clustering, linear regression models, linear discriminant functions, feed-forward neural networks, statistical pattern classification and regression, maximum likelihood, naive Bayes, non-parametric density estimation, mixture models, decision trees, and ensemble learning. Recommended foundation: E E 200, E E 571, and MATH 480. Taught with: E E 465.

Learning Outcomes
1. Formulate and solve problems related to the basic concepts and mathematical techniques of machine learning.

2. Gain an understanding of machine learning algorithms/methods by solving problems using software.

3. Gain experience doing independent study and research.

5. Gain practical experience through project-based assignments and technical report writing.

E E 567. ARM SOC Design
3 Credits (3)
The course aims to produce students who are capable of developing ARM-based SoCs from high level functional specifications to design, implementation and testing on real FPGA hardware using standard hardware description and software programming languages. Recommended foundation E E 362 and E E 317. Taught with: E E 467.

Learning Outcomes
1. Formulate and solve problems requiring knowledge and understanding of ARM processor architectures and ARM-based SoCs.

2. Capture the design of ARM-based SoCs in a standard hardware description language.

3. Conduct low-level software design for ARM-based SoCs and high-level application development.

4. Demonstrate the ability to use and choose between different techniques for digital system design and capture.

5. Evaluate implementation results (e.g. speed, area, power) and correlate them with the corresponding high level design and capture.

6. Demonstrate the ability to use a commercial tools to develop ARM-based SoCs.

E E 571. Random Signal Analysis
3 Credits (3)
Application of probability and random variables to problems in communication systems, analysis of random signal and noise in linear and nonlinear systems. Recommended foundation E E 200 and E E 240. May be repeated up to 3 credits.

Learning Outcomes
1. To specify sample space and solve problems requiring probability computations based on axioms of probabilities and basic properties of event probabilities.
2. To characterize discrete and continuous random variables through various functions, example distributions, and moment calculations. To describe and compute probabilities involving multiple random variables in electrical engineering problems.
3. To analyze different notions of convergence, limit theorems, and specify their significance in communication system applications.
4. To describe and characterize random processes relevant to electrical engineering in general, and communications systems in particular. To perform differentiation and integration of random processes and to analyze specific classes of random processes including random walk, Gaussian processes, and AR processes.
5. To relate the significance of random processes to problems in electrical engineering, and solve problems involving power spectral density and transfer functions.

E E 572. Modern Coding Theory
3 Credits (3)
Error control techniques for digital transmission and storage systems. Introduction to basic coding bounds, linear and cyclic block codes, Reed-Solomon codes, convolutional codes, maximum likelihood decoding, maximum a posteriori probability decoding, factor graphs, low density parity check codes, turbo codes, iterative decoding. Applications to data networks, space and satellite transmission, and data modems. Recommended foundation: E E 200 and E E 496.

E E 573. Signal Compression
3 Credits (3)

Learning Outcomes
1. Formulate and analyze problems related to rate-distortion tradeoffs in compression
2. Formulate and analyze problems related to scalar and vector quantization
3. Formulate and analyze problems related to transform coding
4. Formulate and analyze problems related to entropy coding (Huffman arithmetic)
5. Formulate and analyze problems related to standardized codecs, including MPEG, JPEG, MP3
6. Formulate and analyze problems related to compressive sensing/sampling

E E 576. Geometric Algebra
3 Credits (3)
Geometric algebra provides a common mathematical language for many areas of physics (classical and quantum mechanics, electrodynamics, special and general relativity), computer science (graphics, robotics, computer vision), engineering, and other fields. Topics include: the geometric product and multivectors; Euclidean, Lorentzian, Galilean, and Projective Geometries; Complex, Hyperbolic, and Dual Numbers; Quaternions and Rotations. Recommended foundation E E 320. Taught with E E 403.

Learning Outcomes
1. Formulate and solve problems related to multivectors and the geometric product while building geometric intuition.
2. Formulate and solve problems related to complex, hyperbolic, and dual numbers as well as quaternions.
3. Formulate and solve problems related to non-Euclidean spaces including Lorentzian, Galilean, and projective geometries.

E E 577. Fourier Methods in Electro-Optics
3 Credits (3)
Linear systems theory, convolution and Fourier transformation are applied to one-dimensional and two dimensional signals encountered in electro-optical systems. Applications in diffraction, coherent and incoherent imaging, and optical signal processing. Recommended foundation: E E 320 and E E 528. Crosslisted with: PHYS 577.

E E 578. Optical System Design
3 Credits (3)
Optical design software is used to study optical systems involving lenses, mirrors, windows and relay optics. Systems considered include camera lenses, microscopes and telescopes. Recommended foundation: E E/PHYS 473, E E/PHYS 528 and E E/PHYS 577. Crosslisted with: PHYS 578.

E E 581. Digital Communication Systems I
3 Credits (3)

E E 583. Wireless Communication
3 Credits (3)
Cellular networks, wireless channels and channel models, modulation and demodulation, MIMO, diversity and multiplexing, OFDM, wireless standards including LTE and WiMAX. Recommended foundation: E E 571 and E E 325.

E E 586. Information Theory
3 Credits (3)
This class is a study of Shannon's measure of information and discusses mutual information, entropy, and channel capacity, the noiseless source coding theorem, the noisy channel coding theorem, channel coding and random coding bounds, rate-distortion theory, and data compression. Restricted to: Main campus only. Crosslisted with: MATH 509

Prerequisite(s): E E 571 or MATH 515.

E E 587. Deep Learning for Image Processing
3 Credits (3)
Implementation and analysis of deep learning architectures for image processing. Specific projects will be adjusted according to current state-of-the-art research, but may include such topics as networks for: segmentation of images, captioning of images, understanding of images at a human interpretable level, visualization of network behavior, incorporation of temporal information from image sequences.

Prerequisite: E E 446 or E E 596.

Learning Outcomes
1. Read, synthesize, and discuss academic research papers describing deep learning architectures for image processing.
2. Install, run, modify, and analyze results from third-party software (e.g., from github) implementing deep learning architectures for image processing.
3. Present project results orally.
4. Present project results in a written report following the conventions expected of technical writing in engineering disciplines.

E E 588. Advanced Image Processing
3 Credits (3)
Advanced topics in image processing including segmentation, feature extraction, object recognition, image understanding, big data, and applications. Taught with: E E 444.
Prerequisite: E E 446 or E E 596.

E E 590. Selected Topics
1-9 Credits
May be repeated for a maximum of 18 credits.

E E 593. Mobile Application Development
3 Credits (3)
Introduction to mobile application development. Students will develop applications for iOS devices including iPhone and iPad. Topics include object-oriented programming using Swift, model-view-controller (MVC) pattern, view controllers including tables and navigation, graphical user interface (GUI) design, data persistence, GPS and mapping, camera, and cloud and web services. Recommended foundation: C S 151 or C S 152 or C S 172 or C S 271 or C S 451 or C S 452. Taught with: E E 443.
Learning Outcomes
1. The objective of this course is to gain an understanding of mobile application development, including Swift, Model-View-Controller (MVC) pattern, Memory management, View controllers, Frameworks: Foundation, CoreGraphics, CoreLocation, MapKit, UIKit, WebKit

E E 596. Digital Image Processing
3 Credits (3)
Two-dimensional transform theory, color images, image enhancement, restoration, segmentation, compression and understanding. Recommended foundation E E 325. Taught with: E E 446.
Learning Outcomes
1. Analyze human visual perception and the implications to science and society.
2. Formulate and analyze problems that utilize the mathematics behind multidimensional image processing.
3. Formulate and analyze problems involving multidimensional transformation transform-domain processing.
4. Formulate and analyze problems related to color image acquisition, processing, and display.
5. Implementing image processing algorithms on computers in Matlab or python.

E E 597. Neural Signal Processing
3 Credits (3)
Cross-disciplinary course focused on the acquisition and processing of neural signals. Students in this class will learn about basic brain structure, different brain signal acquisition techniques (fMRI, EEG, MEG, etc.), neural modeling, and EEG signal processing. To perform EEG signal processing, students will learn and use Matlab along with an EEG analysis package. Recommended foundation E E 325. Taught with: E E 447.
Learning Outcomes
1. Demonstrate understanding and skill in the Structure and basic operation of the human brain.
2. Demonstrate understanding and skill in processing of EEG brain signals using Matlab and EEGLAB.
3. Demonstrate understanding and skill in EEG-related neural modeling.

4. Demonstrate understanding and skill in brain signal types and acquisition.

E E 598. Master's Technical Report
1-9 Credits (1-9)

E E 599. Master's Thesis
1-15 Credits (1-15)

E E 600. Doctoral Research
1-15 Credits
Research.

E E 615. Computational Electromagnetics
3 Credits (3)
The numerical solution of electromagnetics problems. Topics include differential equation techniques, integral equation methods, hybrid techniques, algorithm development and implementation, and error analysis. Particular algorithms, including FEM, finite differences, direct solvers, and iterative solvers, are studied.

E E 690. Selected Topics
1-9 Credits
May be repeated for a maximum of 9 credits.

E E 700. Doctoral Dissertation
1-15 Credits (1-15)

Name: The Klipsch School of Electrical and Computer Engineering
Office Location: Thomas and Brown Hall, Rm 106
1125 Frenger Mall
Las Cruces, NM 88003
Phone: (575) 646-3115
Website: http://ece.nmsu.edu/ (http://ece.nmsu.edu)

Computer Engineering - Bachelor of Science in Computer Engineering

Overview
The Bachelor of Science in Computer Engineering program of the Klipsch School is accredited by the Engineering Accreditation Commission of ABET, Inc. This particular program gives students the opportunity to explore more deeply the area of computer Engineering.

Electrical Engineering Program Educational Objectives
Below are the program educational objectives (PEOs) that describe the expected accomplishments of graduate during their first few years after graduation.

1. Our graduates will obtain relevant, productive employment in the private sector, government and/or pursue an advanced degree.
2. Our graduates will be using their engineering foundation to innovate solutions to the problems of the real world.
Requirements (124 credits)

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 124 credits with 48 credits in courses numbered 300/3000 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Credits 16
Electrical Engineering - Bachelor of Science in Electrical Engineering

Overview
The Bachelor of Science in Electrical Engineering (B.S. EE) program of the Klipsch School is accredited by the Engineering Accreditation Commission of ABET, Inc. This particular option of the B.S. EE program has "no concentration," giving students the greatest flexibility in course selection.

Electrical Engineering Program Educational Objectives
Below are the program educational objectives (PEOs) that describe the expected accomplishments of graduate during their first few years after graduation.

1. Our graduates will obtain relevant, productive employment in the private sector, government and/or pursue an advanced degree.
2. Our graduates will be using their engineering foundation to innovate solutions to the problems of the real world.

Requirements (123-125 credits)
Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 123 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective...
credits, but may be needed in order to take the necessary English and Mathematics coursework.

BSEE students must earn a grade of C- or better in all engineering, technology, math and science courses (including associated prerequisite courses) required for the degree and also courses taken to satisfy the general education requirements for Area I-Communications, Area II-Mathematics, and Area III-Laboratory Sciences. If a grade lower than C- is earned in any of these courses, the student is required to retake the course immediately the next semester it is offered. Students who earn a grade less than a C- the first time will be contacted by the department and/or academic advising center and advised about this policy and resources to help in their academic success. If the student fails to achieve a C- or better in any of these courses a second time, then the student must submit a written request to the Associate Dean of Academics in the College of Engineering to enroll in the course a third time. The student should explain the circumstances impacting their grade and the actions planned to improve their performance.

2 MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G Calculus and Analytic Geometry I first.

3 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

4 STEM Elective: Course at the 300 level or above from E E that is not used to satisfy any other E E program requirement or courses at the 300 level or above from A E, C E, CHME, I E, M E, ASTR, BIOL, CHEM, C S, MATH, PHYS and STAT. Excluded courses include VWW courses and those which are substantially equivalent to an E E course. Click to view a list of excluded STEM Electives (https://ece.nmsu.edu/undergrad-study/BSEE-STEM-electives.html).

5 The prerequisite for ENGR 401 Engineering Capstone I for BSEE students is E E 300 Cornerstone Design.

6 A single course may count as satisfying one and only one concentration area.

7 Only one of the 100-level xor the 400-level course may be taken to satisfy degree requirements. Students may not take the 100-level of a course to satisfy the programming elective requirement and the 400-level of the same course to satisfy other degree requirements.
Electrical Engineering (Artificial Intelligence, Machine Learning, & Data Science) - Bachelor of Science in Electrical Engineering

Overview
The Bachelor of Science in Electrical Engineering (B.S. EE) program of the Klipsch School is accredited by the Engineering Accreditation Commission of ABET, Inc. This particular concentration in the B.S. EE program gives students the opportunity to explore more deeply the area of communications and signal processing.

Electrical Engineering Program Educational Objectives
Below are the program educational objectives (PEOs) that describe the expected accomplishments of graduate during their first few years after graduation.

1. Our graduates will obtain relevant, productive employment in the private sector, government and/or pursue an advanced degree.
2. Our graduates will be using their engineering foundation to innovate solutions to the problems of the real world.

Requirements (123-124 credits)

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 123 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

BSEE students must earn a grade of C- or better in all engineering, technology, math and science courses (including associated prerequisite courses) required for the degree. A student may attempt any of these courses no more than three times to earn a passing grade of C- or better. Students who earn a grade less than a C- will be contacted by the department head or academic advising center and advised about this policy and resources to help in their academic success. If the student fails to pass any of these courses after three attempts, then the student will not be able to continue as an electrical engineering major and will be counseled on other degree options. Students may request an exception to this policy through written appeal to the Associate Dean for Academics in the College of Engineering.

**Total Credits:** 123-124

1. See the General Education (p. 227) section of the catalog for a full list of courses.
2. MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G Calculus and Analytic Geometry I first.
3. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
4. STEM Elective: Course at the 300 level or above from E E that is not used to satisfy any other E E program requirement or courses at the 300 level or above from A E, C E, CHME, I E, M E, ASTR, BIOL, CHEM, C S, MATH, PHYS and STAT. Excluded courses include VWW courses and those which are substantially equivalent to an E E course. Click to view a list of excluded STEM Electives (https://ece.nmsu.edu/undergrad-study/BSEE-STEM-electives.html).
5. The prerequisite for ENGR 401 Engineering Capstone I for BSEE students is E E 300 Cornerstone Design.
6. Students must take both E E 395 Introduction to Digital Signal Processing and E E 465 Machine Learning I, both of which are offered in the Fall semester.
7. Some of these elective courses may have additional prerequisites.
8. Only one of the 100-level options for the 400-level course may be taken to satisfy degree requirements. Students may not take the 100-level of a course to satisfy the programming elective requirement and the 400-level of the same course to satisfy other degree requirements.

### Electrical Engineering Program Educational Objectives

Below are the program educational objectives (PEOs) that describe the expected accomplishments of graduate during their first two years after graduation.

1. Our graduates will obtain relevant, productive employment in the private sector, government and/or pursue an advanced degree.
2. Our graduates will be using their engineering foundation to innovate solutions to the problems of the real world.

#### Requirements (123-125 credits)

Students must complete all University degree requirements, which include: General Education requirements, View a Wider World requirements, and elective credits to total at least 123 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

BSEE students must earn a grade of C- or better in all engineering, technology, math and science courses (including associated prerequisite courses) required for the degree and also courses taken to satisfy the general education requirements for Area I-Communications, Area II-Mathematics, and Area III-Laboratory Sciences. If a grade lower than C- is earned in any of these courses, the student is required to retake the course immediately the next semester it is offered. Students who earn a grade less than a C- the first time will be contacted by the department and/or academic advising center and advised about this policy and resources to help in their academic success. If the student fails to achieve a C- or better in any of these courses a second time, then the student must submit a written request to the Associate Dean of Academics in the College of Engineering to enroll in the course a third time. The student should explain the circumstances impacting their grade and the actions planned to improve their performance.

1. Depending on availability of specific courses in the fall or spring semester, students may need to reorganize the ECE Electives, STEM electives, and/or Gen Ed/VWW electives in their final year. Students are strongly advised to consult with their ECE Faculty Mentor for assistance in planning their final year.

2. At least one EE Concentration Elective must be from the E E Prefix. See E E Concentration Electives in the Degree Requirements section above.

4. STEM Elective: Course at the 300 level or above from E E that is not used to satisfy any other E E program requirement or courses at the 300 level or above from A E, C E, CHME, I E, M E, ASTR, BIOL, CHEM, C
S, MATH, PHYS and STAT. Excluded courses include VWW courses and those which are substantially equivalent to an E E course. Click to view a list of excluded STEM Electives (https://ece.nmsu.edu/undergrad-study/BSEE-STEM-electives.html).

5 The prerequisite for ENGR 401 Engineering Capstone I for BSEE students is E E 300 Cornerstone Design.

6 Students must take both (E E 462 Computer Systems Architecture or E E 562 Computer Systems Architecture) and (E E 480 Introduction to Analog and Digital VLSI or E E 510 Introduction to Analog and Digital VLSI), both of which are currently offered in the Fall semester.

7 Some of these elective courses may have additional prerequisites.

8 Only one of the 100-level xor the 400-level course may be taken to satisfy degree requirements. Students may not take the 100-level of a course to satisfy the programming elective requirement and the 400-level of the same course to satisfy other degree requirements.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G and ENGL 1110G. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

**Total Credits:** 123-125

1 MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G Calculus and Analytic Geometry I first.

2 See the General Education and Viewing a Wider World (p. 227) section of the catalog for a full list of courses.

3 Students must take both (E E 462 Computer Systems Architecture or E E 562 Computer Systems Architecture) and (E E 480 Introduction to Analog and Digital VLSI or E E 510 Introduction to Analog and Digital VLSI), both of which are currently offered in the Fall semester.

4 STEM Elective: Course at the 300 level or above from E E that is not used to satisfy any other E E program requirement or courses at the 300 level or above from M E, ASTR, BIOL, CHEM, C S, MATH, PHYS and STAT. Excluded courses include VWW courses and those which are substantially equivalent to an E E course. Click to view a list of excluded STEM Electives (https://ece.nmsu.edu/undergrad-study/BSEE-STEM-electives.html).

5 Depending on availability of specific courses in the fall or spring semester, students may need to reorganize the ECE Electives, STEM electives, and/or Gen Ed/VWW electives in their final year. Students are strongly advised to consult with their ECE Faculty Mentor for assistance in planning their final year.
Electrical Engineering (Controls & Robotics) - Bachelor of Science in Electrical Engineering

Overview
The Bachelor of Science in Electrical Engineering (BSEE) program of the Klipsch School is accredited by the Engineering Accreditation Commission of ABET, Inc. This particular concentration in the BSEE program gives students the opportunity to explore more deeply the area of controls and robotics.

Electrical Engineering Program Educational Objectives
Below are the program educational objectives (PEOs) that describe the expected accomplishments of graduate during their first few years after graduation.

1. Our graduates will obtain relevant, productive employment in the private sector, government and/or pursue an advanced degree.
2. Our graduates will be using their engineering foundation to innovate solutions to the problems of the real world.

Requirements (123-124 credits)
Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 123 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

BSEE students must earn a grade of C- or better in all engineering, technology, math and science courses (including associated prerequisite courses) required for the degree. A student may attempt any of these courses no more than three times to earn a passing grade of C- or better. Students who earn a grade less than a C- will be contacted by the department head or academic advising center and advised about this.

If the student fails to pass any of these courses after three attempts, then the student will not be able to continue as an electrical engineering major and will be counseled on other degree options. Students may request an exception to this policy through written appeal to the Associate Dean for Academics in the College of Engineering.

Electrical Engineering (Electromagnetics and Photonics) - Bachelor of Science in Electrical Engineering

**Overview**

The Bachelor of Science in Electrical Engineering (B.S. EE) program of the Klipsch School is accredited by the Engineering Accreditation Commission of ABET, Inc. This particular concentration in the B.S. EE program gives students the opportunity to explore more deeply the area of electromagnetics and photonics.

**Electrical Engineering Program Educational Objectives**

Below are the program educational objectives (PEOs) that describe the expected accomplishments of graduate during their first few years after graduation.

1. Our graduates will obtain relevant, productive employment in the private sector, government and/or pursue an advanced degree.

2. Our graduates will be using their engineering foundation to innovate solutions to the problems of the real world.

**Requirements (123-127 credits)**

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 124 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

BSEE students must earn a grade of C- or better in all engineering, technology, math and science courses (including associated prerequisite courses) required for the degree and also courses taken to satisfy the general education requirements for Area I-Communications, Area II- Mathematics, and Area III-Laboratory Sciences. If a grade lower than C- is earned in any of these courses, the student is required to retake the course immediately the next semester it is offered. Students who earn a grade less than a C- the first time will be contacted by the department and/or academic advising center and advised about this policy and resources to help in their academic success. If the student fails to achieve a C- or better in any of these courses a second time, then the student must submit a written request to the Associate Dean of Academics in the College of Engineering to enroll in the course a third time. The student should explain the circumstances impacting their grade and the actions planned to improve their performance.

1. MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G Calculus and Analytic Geometry I first.
2. STEM Elective: Course at the 300 level or above from E E that is not used to satisfy any other E E program requirement or courses at the 300 level or above from A E, C E, CHME, I E, M E, ASTR, BIOL, CHEM, C S, MATH, PHYS and STAT. Excluded courses include VWW courses and those which are substantially equivalent to an E E course. Click to view a list of excluded STEM Electives (https://ece.nmsu.edu/undergrad-study/BSEE-STEM-electives.html).
3. Depending on availability of specific courses in the fall or spring semester, students may need to reorganize the ECE Electives, STEM electives, and/or Gen Ed/VWW electives in their final year. Students are strongly advised to consult with their ECE Faculty Mentor for assistance in planning their final year.
4. At least one Electromagnetics & Photonics Elective must be from the E E prefix. See E E Concentration Electives in the Degree Requirements section above.
credits, but may be needed in order to take the necessary English and Mathematics coursework.

BSEE students must earn a grade of C- or better in all engineering, technology, math and science courses (including associated prerequisite courses) required for the degree and also courses taken to satisfy the general education requirements for Area I - Communications, Area II - Mathematics, and Area III - Laboratory Sciences. If a grade lower than C- is earned in any of these courses, the student is required to retake the course immediately the next semester it is offered. Students who earn a grade less than a C- the first time will be contacted by the department and/or academic advising center and advised about this policy and resources to help in their academic success. If the student fails to achieve a C- or better in any of these courses a second time, then the student must submit a written request to the Associate Dean of Academics in the College of Engineering to enroll in the course a third time. The student should explain the circumstances impacting their grade and the actions planned to improve their performance.

The student should explain the circumstances impacting their grade and the actions planned to improve their performance.

**Electrical Engineering (Space Systems Engineering) - Bachelor of Science in Electrical Engineering**

**Overview**
The Bachelor of Science in Electrical Engineering (B.S. EE) program of the Klipsch School is accredited by the Engineering Accreditation Commission of ABET, Inc. This particular concentration in the B.S. EE program gives students the opportunity to explore more deeply the area of space systems.

**Electrical Engineering Program Educational Objectives**
Below are the program educational objectives (PEOs) that describe the expected accomplishments of graduate during their first few years after graduation.

1. Our graduates will obtain relevant, productive employment in the private sector, government and/or pursue an advanced degree.
2. Our graduates will be using their engineering foundation to innovate solutions to the problems of the real world.

**Requirements (123-126 credits)**
Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 123 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

BSEE students must earn a grade of C- or better in all engineering, technology, math and science courses (including associated prerequisite courses) required for the degree and also courses taken to satisfy the general education requirements for Area I-Communications, Area II-Mathematics, and Area III-Laboratory Sciences. If a grade lower than C- is earned in any of these courses, the student is required to retake the course immediately the next semester it is offered. Students who earn a grade less than a C- the first time will be contacted by the
Electrical Engineering (Space Systems Engineering) - Bachelor of Science in Electrical Engineering

or ASTR 401
or A 362

Topics in Modern Astrophysics
Orbital Mechanics

EE Concentration Electives: Choose two courses from the following (one must be an EE course): 7

E E 395 Introduction to Digital Signal Processing
E E 454 Antennas and Radiation
or E E 541 Antennas and Radiation
E E 473 Introduction to Optics
E E 478 Fundamentals of Photonics
or E E 528 Fundamentals of Photonics
E E 496 Introduction to Communication Systems
A E 362 Orbital Mechanics 8
ASTR 401 Topics in Modern Astrophysics 8
ASTR 402 Astronomical Observations and Techniques 8

Non-Departmental Requirements (in addition to Gen.Ed/VWW)

Programming Elective
Select one course from the following: 3-4

C S 151 C++ Programming 9
or C S 451 C++ Programming
C S 152 Java Programming 9
or C S 452 Java Programming
C S 153 Python Programming I 9
or C S 453 Python Programming I
C S 154 Python Programming II 9
or C S 452 Java Programming
C S 172 Computer Science I

C S 271 Object Oriented Programming

Second Language: (not required)

Electives, to bring the total credits to 123

Total Credits 123-126

1 See the General Education (p. 227) section of the catalog for a full list of courses.
2 MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G Calculus and Analytic Geometry I first.
3 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
4 STEM Elective: Course at the 300 level or above from E E that is not used to satisfy any other E E program requirement or courses at the 300 level or above from A E, C E, CHME, I E, M E, ASTR, BIOL, CHEM, C S, MATH, PHYS and STAT. Excluded courses include VWW courses and those which are substantially equivalent to an E E course. Click to view a list of excluded STEM Electives (https://ece.nmsu.edu/undergrad-study/BSEE-STEM-electives.html).
5 The prerequisite for ENGR 401 Engineering Capstone I for BSEE students is E E 300 Cornerstone Design.
6 Students must take E E 460 Space System Mission Design and Analysis which is currently offered in the Spring semester and (ASTR 401 Topics in Modern Astrophysics or ASTR 402 Astronomical Observations and Techniques which are currently offered in the Spring semester or A E 362 Orbital Mechanics which is currently offered in the Fall semester).
7 Some of these elective courses may have additional prerequisites.
8 This course can satisfy either an E E Concentration Required Course or an E E Concentration Elective, but not both.
9 Only one of the 100-level or the 400-level course may be taken to satisfy degree requirements. Students may not take the 100-level of a course to satisfy the programming elective requirement and the 400-level of the same course to satisfy other degree requirements.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Intermediate Algebra and ENGL 1110G Rhetoric and Composition. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

First Year

Fall
ENGR 190 Introduction to Engineering Mathematics 4

E E 490 | Selected Topics (Applications of Parallel Computing XSEDE Collaborative Course) | 3

Total Credits: 26-27

1 Some of these electives may have additional prerequisites.
The student must choose one of four concentrations in the Program.

The goals of the program are:

1. **Competitiveness.** Graduates are competitive in internationally recognized academic, government and industrial environments.
2. **Adaptability.** Graduates exhibit success in solving complex technical problems in a broad range of disciplines subject to quality engineering processes.
3. **Collaboration/Teamwork and Leadership.** Graduates have a proven ability to function as part of and/or lead interdisciplinary teams.

The goals of the program are:

1. to give students a strong education in the fundamentals of physics, engineering, applied mathematics and computation;
2. to develop skill in real-world problem solving starting from fundamental physical principles;
3. to improve communication skills; and
4. to develop ability to work in a team.

The student must choose one of four concentrations in

- Aerospace Engineering,
- Chemical Engineering,
- Electrical Engineering, or
- Mechanical Engineering.

### Degrees for the Department

- Engineering Physics (Aerospace Engineering) - Bachelor of Science in Engineering Physics (p. 998)
- Engineering Physics (Chemical Engineering) - Bachelor of Science in Engineering Physics (p. 1000)
- Engineering Physics (Electrical Engineering) - Bachelor of Science in Engineering Physics (p. 1002)
- Engineering Physics (Mechanical Engineering) - Bachelor of Science in Engineering Physics (p. 1003)

**Professor, Stefan Zollner, Department Head**

**Professor, Boris Kiefer, Engineering Physics Program Head**

### Physics Courses

**PHYS 1111. Introductory Computational Physics**
3 Credits (2+2P)
Introduction to computational techniques for the solution of physics-related problems.

**Prerequisite(s):** a C- or better in MATH 1220G or MATH 1250G or MATH 1511G.

**PHYS 1112. Introductory Physics for the Health Sciences**
3 Credits (3)
Algebra-level introduction to topics required for the Health Sciences including basic mechanics (including sound, mechanical waves and fluids), heat and thermodynamics, electricity and magnetism, optics and electromagnetic waves, atomic and nuclear physics and applications to medical imaging. Restricted to Community Colleges campuses only.

**Prerequisite(s):** MATH 1215 or Equivalent.

**Learning Outcomes**

1. The objective of the course is to familiarize the student with the concepts and methods used in the underlying physics associated with various Health Science disciplines.
2. The course will demonstrate how the basic principles of mechanics, thermodynamics, electricity, magnetism, electromagnetic waves and optics can be applied to solve particular problems in Health Sciences applications. Introduces the student to selected topics in modern physics including quantum physics, atomic and nuclear physics.

**PHYS 1115G. Survey of Physics with Lab**
4 Credits (3+3P)
Overview of the concepts and basic phenomena of physics. This course provides a largely descriptive and qualitative treatment with a minimum use of elementary mathematics to solve problems. No previous knowledge of physics is assumed. Includes laboratory.

**Learning Outcomes**

1. Apply concepts of classical mechanics (such as velocity, acceleration, force, inertia, momentum, torque, work, energy) to simple static and dynamic systems.
2. Apply concepts of thermodynamics (such as heat, temperature, internal energy, entropy) to simple processes.
3. Apply concepts of electricity and magnetism (such as fields, potential, charge conservation, static and dynamic induction) to simple circuits, motors, and other simple contrivances.
4. Apply simple geometric and wave optics in simple situations.
5. Test ideas using modern laboratory equipment.
7. Use computers to analyze and report laboratory results.
8. Draw appropriate conclusions from quantitative scientific observations.
9. Accurately and clearly communicate the results of scientific experiments.

PHYS 1125G. Physics of Music
4 Credits (3+2P)
Introduction for non-science majors to basic concepts, laws, and skills in physics, in the context of a study of sound, acoustics, and music.
Learning Outcomes
1. Demonstrate converting units and other aspects of dimensional analysis in the working of numerical problems.
2. Apply the general properties of waves to simple models of musical instruments.
3. Demonstrate knowledge of basic operating principles of wind, string, and percussion instruments.
4. Demonstrate knowledge of how objectively measurable properties of sound waves correspond to the perceptions of pitch, loudness, and timbre.
5. Demonstrate understanding of the description of vibrations and waves in terms of Fourier's Theorem and normal modes.
6. Demonstrate understanding of how the ear works.
7. Apply principles of Newtonian mechanics to predict and account for simple phenomena modeled by the motion of particles in one and two dimensions.
8. Apply principles of Newtonian mechanics to predict and account for simple phenomena modeled by the motion of a rigid body in two dimensions.
9. Apply Newton's theory of gravitation to circular orbits and demonstrate understanding of how Kepler's laws of planetary motion provide the empirical foundation for Newton's theory.
10. Apply the mathematics of vectors to the principles of Newtonian mechanics.
11. Apply principles of Newtonian mechanics to the case of static and dynamic incompressible fluids, including Archimedes' principle and Bernoulli's principle.

PHYS 1230G. Algebra-Based Physics I
3 Credits (3)
An algebra-based treatment of Newtonian mechanics. Topics include kinematics and dynamics in one and two dimensions, conservation of energy and momentum, rotational motion, equilibrium, and fluids.
Learning Outcomes
1. Demonstrate converting units and other aspects of dimensional analysis in the working of numerical problems.
2. Apply basic classical mechanics to static and dynamic fluids, including Archimedes' principle and Bernoulli's principle.
3. Demonstrate understanding of the description of vibrations and waves in terms of Fourier's Theorem and normal modes.
4. Apply the general properties of waves to simple models of musical instruments.
5. Apply principles of Newtonian mechanics to predict and account for simple phenomena modeled by the motion of particles in one and two dimensions.
6. Apply principles of Newtonian mechanics to predict and account for simple phenomena modeled by the motion of a rigid body in two dimensions.
7. Demonstrate knowledge of basic operating principles of wind, string, and percussion instruments.
8. Demonstrate understanding of how objectively measurable properties of sound waves correspond to the perceptions of pitch, loudness, and timbre.
9. Demonstrate understanding of the description of vibrations and waves in terms of Fourier's Theorem and normal modes.
10. Demonstrate understanding of how the ear works.

PHYS 1240G. Calculus-Based Physics I
3 Credits (3)
A calculus level treatment of classical mechanics and waves, which is concerned with the physical motion concepts, forces, energy concepts, momentum, rotational motion, angular momentum, gravity, and static equilibrium.
Prerequisite: a C- or better in ENGR 190 or MATH 1511G or higher.
Learning Outcomes
1. Describe the relationships among position, velocity, and acceleration as functions of time.
2. Use the equations of kinematics to describe motion under constant acceleration.
3. Analyze linear motion using Newton's laws, force, and linear momentum.
4. Analyze rotational motion using torque and angular momentum.
5. Analyze motion using work and energy.
PHYS 1310L. Calculus-Based Physics I Lab
1 Credit (3P)
A series of laboratory experiments associated with the material presented in Calculus-Based Physics I. Students will apply the principles and concepts highlighting the main objectives covered in coursework for Calculus-Based Physics I.
Prerequisite(s)/Corequisite(s): PHYS 1310G.

Learning Outcomes
1. Develop a reasonable hypothesis.
2. Work effectively as part of a team.
3. Take measurements and record measured quantities to the appropriate precision.
4. Estimate error sources in experimental techniques.
5. Apply appropriate methods of analysis to raw data, including using graphical and statistical methods via computer-based tools.
6. Determine whether results and conclusions are reasonable.
7. Present experimental results in written form in appropriate style and depth.
8. Experience the relationship between theory and experiment.

PHYS 1311. Problems in Calculus-Based Physics I
0.5-1 Credits (.5-1)
This is a supplemental course for Calculus-based Physics I. May be repeated up to 1 credit.
Corequisite(s): PHYS 1310G.

PHYS 1320G. Calculus-Based Physics II
3 Credits (3)
A calculus level treatment of classical electricity and magnetism. It is strongly recommended that this course is taken at the same time as Calculus-Based Physics II laboratory.
Prerequisite: A C- or better in ( PHYS 2110 or PHYS 1310G ) and ( ENGR 190 or MATH 1521G or higher ).

Learning Outcomes
1. Apply the concepts of electric charge, electric field and electric potential to solve problems.
2. Sketch the electric field in the vicinity of point, line, sheet, and spherical distributions of static electric charge.
3. Sketch the magnetic field in the vicinity of line, ring, sheet, and solenoid distributions of steady current.
4. Describe the relationship between electric field and electric potential.
5. Calculate the Lorentz force on a moving charge for simple geometries of the fields and use it to analyze the motion of charged particles.
6. Apply the integral forms of Maxwell's equations.
7. Calculate the energy of electromagnetic fields.
8. Analyze DC circuits.

PHYS 1320L. Calculus-Based Physics II Lab
1 Credit (3P)
A series of Laboratory experiments associated with the material presented in Calculus-Based Physics II. Students will apply the principles and concepts highlighting the main objectives covered in coursework for Calculus-Based Physics II.
Prerequisite(s)/Corequisite(s): PHYS 1320G. Prerequisite(s): A C- or better in PHYS 2110L or PHYS 1310L.

Learning Outcomes
1. Develop a reasonable hypothesis.
2. Work effectively as part of a team.
3. Take measurements and record measured quantities to the appropriate precision.
4. Estimate error sources in experimental techniques.
5. Apply appropriate methods of analysis to raw data, including using graphical and statistical methods via computer-based tools.
6. Determine whether results and conclusions are reasonable.
7. Present experimental results in written form in appropriate style and depth.
8. Experience the relationship between theory and experiment.

PHYS 1321. Problems in Calculus-Based Physics II
0.5-1 Credits (.5-1)
This is a supplemental course for Calculus-based Physics II.
Corequisite(s): PHYS 1320G.

PHYS 2110. Mechanics
3 Credits (3)
Newtonian mechanics.
Prerequisite(s)/Corequisite(s): MATH 1511G or higher.

PHYS 2110L. Experimental Mechanics
1 Credit (3P)
Laboratory experiments associated with the material presented in PHYS 2110. Science majors.
Prerequisite(s)/Corequisite(s): PHYS 2110.

PHYS 2111. Supplemental Instruction to PHYS 2110
1 Credit (1)
This Optional workshop as a supplement to PHYS 2110. The tutorial sessions focus on reasoning and hands-on problem solving. May be repeated up to 1 credit.
Corequisite: PHYS 2110.

Learning Outcomes
1. Analyze real world phenomena by constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain a phenomena or function.
2. Use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
3. In the contexts of concepts and physical laws discussed in PHYS 2110, apply quantitative analysis to solve problems, including the use of scientific notation, unit conversion and vector algebra.
4. Self-check reasonableness of assumptions and solutions, making use of limiting cases or symmetry arguments.
5. Develop learning strategies and use metacognition to promote thinking in the discipline.

PHYS 2120. Heat, Light, and Sound
3 Credits (3)
Calculus-level treatment of thermodynamics, geometrical and physical optics, and sound. May be repeated up to 3 credits.
Prerequisite(s): a C- or better in PHYS 2110 or PHYS 1310G, and MATH 1511G or higher.

PHYS 2120L. Heat, Light, and Sound Laboratory
1 Credit (3P)
Laboratory experiments associated with the material presented in PHYS 2120. Science majors.
Prerequisite: a C- or better in PHYS 2110L or PHYS 1310L.
Prerequisite/Corequisite: PHYS 2120.

Learning Outcomes
1. Develop a reasonable hypothesis.
2. Work effectively as part of a team.
3. Take measurements and record measured quantities to the appropriate precision.
PHYS 2120. Heat, Light, and Sound 3 Credits (3)
This algebra-based introduction to general physics covers mechanics, waves, sound, and heat. Special emphasis is given to applications in the life sciences. This course is recommended for students in the life sciences and those preparing for the physics part of the MCAT. Prerequisite(s): a C- or better in MATH 1220G or higher.
Learning Outcomes
1. Model the motion of any object in terms of displacement, velocity, and acceleration; analyze external forces acting on an object and determine if a system is in equilibrium or relate the net force to changes in motion; predict or analyze motion using conservation laws for energy and momentum; analyze forces and torques for a rigid object in static equilibrium; for a static fluid determine pressure and the buoyant force; apply idealized models of fluid flow to the circulatory system; describe the properties of pressure waves known as sound, apply the model of standing waves to musical instruments and discuss how sound is used to sense the environment; predict qualitative changes in the internal energy of a thermodynamic system when energy has been transferred due to work or heat and justify those predictions using conservation of energy (First law of thermodynamics). Identify which heat transfer processes occur in a described situation.
2. Conceptual understanding: describe the motion of any object in terms of displacement, velocity, and acceleration; analyze external forces acting on an object and determine if a system is in equilibrium or relate the net force to changes in motion; predict or analyze motion using conservation laws for energy and momentum; analyze forces and torques for a rigid object in static equilibrium; for a static fluid determine pressure and the buoyant force; apply idealized models of fluid flow to the circulatory system; describe the properties of pressure waves known as sound, apply the model of standing waves to musical instruments and discuss how sound is used to sense the environment; predict qualitative changes in the internal energy of a thermodynamic system when energy has been transferred due to work or heat and justify those predictions using conservation of energy (First law of thermodynamics). Identify which heat transfer processes occur in a described situation.
3. Quantitative reasoning: use a physics problem-solving strategy (identify relevant concepts; introduce and study simplified models; use symmetry arguments; establish the relation between known and unknown quantities; calculate a quantitative result using appropriate mathematical methods; self-check reasonableness of assumptions and solutions); use scientific notation accurately and convert units if necessary.

PHYS 2141. Supplemental Instruction to PHYS 2140 1 Credit (1)
Optional workshop as a supplement to PHYS 2140. The tutorial sessions focus on reasoning and hands-on problem solving. Corequisite: PHYS 2140.
Learning Outcomes
1. Analyze real-world phenomena by constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain a phenomenon or function.
2. Use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
3. In the contexts of concepts and physical laws discussed in PHYS 2140, apply quantitative analysis to solve problems, including the use of symmetry to study electric and magnetic fields. Practice concepts of calculus applied to charge and current distributions.
4. Self-check reasonableness of assumptions and solutions, making use of limiting cases or symmetry arguments.
5. Develop learning strategies and use metacognition to promote thinking in the discipline.

PHYS 2230G. General Physics for Life Science I 3 Credits (3)
This algebra-based introduction to general physics covers mechanics, waves, sound, and heat. Special emphasis is given to applications in the life sciences. This course is recommended for students in the life sciences and those preparing for the physics part of the MCAT. Prerequisite: A C- or better in MATH 1220G or higher.
Learning Outcomes
1. Develop a reasonable hypothesis.
2. Work effectively as part of a team.
3. Take measurements and record measured quantities to the appropriate precision.
4. Estimate error sources in experimental techniques.
5. Apply appropriate methods of analysis to raw data, including using graphical and statistical methods via computer-based tools.
6. Determine whether results and conclusions are reasonable.
7. Present experimental results in written form in appropriate style and depth.
8. Understand the relationship between theory and experiment.
4. Communicating scientific information: interpret or generate graphs or other visual representations and be able to switch between various representations including text, mathematical description, or diagrams.

PHYS 2230L. Laboratory to General Physics for Life Science I 1 Credit (1)
Laboratory experiments in topics associated with material presented in PHYS 2230G.
Prerequisite(s)/Corequisite(s): PHYS 2230G. Restricted to Las Cruces campus only.

PHYS 2231. Supplemental Instruction to General Physics for Life Sciences I 1 Credit (1)
This optional workshop supplements Physics for Life Sciences I. The tutorial sessions focus on reasoning and hands-on problem solving.
Corequisite: PHYS 2230G.

Learning Outcomes
1. analyze real world phenomena by constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain a phenomena or function.
2. use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
3. in the contexts of concepts and physical laws discussed in PHYS 2230, apply quantitative analysis to solve problems, including the use of scientific notation, unit conversion and vector algebra.
4. self-check reasonableness of assumptions and solutions, making use of limiting cases or symmetry arguments.
5. develop learning strategies and use metacognition to promote thinking in the discipline.

PHYS 2240G. General Physics for Life Science II 3 Credits (3)
This algebra-based course covers electricity, magnetism, light, atomic physics, and radioactivity. Special emphasis is given to applications in the life sciences. This course is recommended for students in the life sciences and those preparing for the physics part of the MCAT.
Prerequisite: a C- or better in PHYS 1230G or PHYS 2230G, and MATH 1220G or higher.

Learning Outcomes
1. Modeling: analyze real world phenomena by constructing simplified idealized models (an abstract description) that allow making predictions or explaining a phenomena or function; use multiple representations to build and communicate the model, including sketches, mathematical expressions, diagrams or graphs; decide what information is relevant and critique assumptions and models of others; determine how to test the validity of a model and use comparison of experimental data and prediction to refine the model.
2. Conceptual understanding: electric or magnetic fields can be used to describe interactions of objects that contain charges with their surroundings; changes that occur as a result of interactions are constrained by conservation laws (such as conservation of energy, conservation of charge or conservation of nucleon number); many macroscopic properties of materials can be described using microscopic models or related to their geometry; electromagnetic radiation can be modeled as a wave or as fundamental particles (photons); the direction of propagation of a wave may change when it encounters a boundary surface between two media of different properties (reflection or refraction); the spontaneous radioactive decay of nuclei is described by probability.
3. Quantitative reasoning: apply quantitative analysis and appropriate mathematical reasoning to describe or explain phenomena; use scientific notation accurately and convert units if necessary.
4. Communicating scientific information: interpret or generate graphs or other visual representations (e.g. field lines, equipotential lines) and be able to switch between various representations including text, mathematical description, or diagrams.

PHYS 2240L. Laboratory to General Physics for Life Science II 1 Credit (1)
Laboratory experiments in topics associated with material presented in PHYS 2240.
Prerequisite(s)/Corequisite(s): PHYS 2240G. Restricted to Las Cruces campus only.

PHYS 2241. Supplemental Instruction to General Physics for Life Sciences II 1 Credit (1)
This optional workshop is a supplement to Physics for Life Science II. The tutorial sessions focus on reasoning and hands-on problem solving. May be repeated up to 1 credits.
Corequisite(s): PHYS 2240G.

Learning Outcomes
1. analyze real world phenomena by constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain a phenomena or function.
2. use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
3. in the contexts of concepts and physical laws discussed in PHYS 2240, apply quantitative analysis to solve problems, including the use of scientific notation, unit conversion and vector algebra.
4. self-check reasonableness of assumptions and solutions, making use of limiting cases or symmetry arguments.
5. develop learning strategies and use metacognition to promote thinking in the discipline.

PHYS 2996. Special Topics 1-3 Credits
Topics to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

Learning Outcomes
1. Varies

PHYS 2997. Independent Study 1-3 Credits
Individual analytical or laboratory studies directed by a faculty member. May be repeated for a maximum of 6 credits.

Prerequisite: consent of instructor.

Learning Outcomes
1. Varies

PHYS 303V. Energy and Society in the New Millennium 3 Credits (3)
Traditional and alternative sources of energy. Contemporary areas of concern such as the state of depletion of fossil fuels; nuclear energy, solar energy, and other energy sources; environmental effects; nuclear weapons; and health effects of radiation. Discussion of physical principles and impact on society. Focus on scientific questions involved in making decisions in these areas. No physics background required.

PHYS 304. Forensic Physics 4 Credits (3+3P)
Theories, laboratory, and field techniques in the area of forensic physics.

PHYS 305V. The Search for Water in the Solar System
3 Credits (3)
Examines the formation, abundance and ubiquity of water in our Solar System stemming from comets, Martian and Lunar poles, Earth's interior and into the outer reaches of the Solar System. Topics will include nuclear synthesis, Solar System formation, remote sensing, as well as past, present and future NASA missions for water.

PHYS 315. Modern Physics
3 Credits (3)
An introduction to relativity and quantum mechanics, with applications to atoms molecules, solids, nuclei, and elementary particles.
Prerequisite: a C- or better in MATH 2530G and PHYS 2140 or PHYS 1320G.

Learning Outcomes
1. Communication: an ability to communicate effectively with a range of audiences.
2. Ethical and Professional Responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
3. Ability to learn on your own: an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

PHYS 316. Supplemental Instructions to PHYS 315
1 Credit (1)
This optional workshop supplements PHYS 315 "Modern Physics". Students actively apply concepts and methods introduced in PHYS 315 to problem solving and quantitative analysis.
Corequisite(s): PHYS 315.

PHYS 325. Intermediate Experimental Physics
3 Credits (1+6P)
An exploration of a variety of experimental techniques in physics with an emphasis on the proper determination of statistical and systematic uncertainties. Students will work in teams and prepare professional written and oral reports of their work. This course cannot be used to replace M E 345 for students majoring in engineering.
Prerequisite(s)/Corequisite(s): PHYS 315. Prerequisite(s): a C- or better in PHYS 2140L or PHYS 1320L.

Learning Outcomes
1. Design within constraints: an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
2. Communication: an ability to communicate effectively with a range of audiences.
3. Ethical and Professional Responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
4. Teamwork: an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
5. Collect, Analyze, and Interpret Data: an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

PHYS 350. Special Topics
1-3 Credits
Lectures, demonstrations, and discussions on such topics as lasers and holography, energy sources, clouds, and biophysics. May be repeated for a maximum of 12 credits under different subtitles.

PHYS 380. Individual Study
1-3 Credits
Individual analytical or laboratory studies directed by a faculty member. May be repeated for a maximum of 6 credits.
Prerequisite: consent of instructor.

PHYS 395. Intermediate Mathematical Methods of Physics
3 Credits (3)
Introduction to the mathematics used in intermediate-level physics courses. Topics include vector calculus, curvilinear coordinates, matrices, linear algebra, function spaces, partial differential equations, and special functions. This course cannot be used to replace M E 228 or M E 328 for students majoring in engineering. May be repeated up to 3 credits.
Prerequisite(s)/Corequisite(s): MATH 392. Prerequisite(s): a C- or better in MATH 2530G.

Learning Outcomes
1. Problem solving: an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. Ability to learn on your own: an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

PHYS 400. Undergraduate Research
1-3 Credits
May be repeated for a maximum of 6 credits.
Prerequisite: consent of instructor.

PHYS 420. Capstone Project I
3 Credits (3P)
Application of engineering physics principles to a significant design project. Includes teamwork, written and oral communication and realistic technical, economic and public safety requirements.

PHYS 421. Capstone Project II
3 Credits (3P)
Continuation of PHYS 420.

PHYS 450. Selected Topics
1-3 Credits
Readings, lectures or laboratory studies in selected areas of physics. May be repeated for a maximum of 12 credits.

PHYS 451. Intermediate Mechanics I
3 Credits (3)
Newtonian mechanics, including an introduction to the Lagrangian formulation. Topics include central force motion, rigid body motion, noninertial reference frames, oscillating systems, and classical scattering.
Prerequisite(s)/Corequisite(s): MATH 392. Prerequisite(s): a C- or better in PHYS 2110 or PHYS 1310G, and MATH 2530G.

Learning Outcomes
1. Set up equations of motion for classical mechanical systems and solve them.
2. Identify conserved quantities and understand the circumstances under which they arise (symmetries); in particular, know how to use conservation of energy, momentum, angular momentum to solve problems.
3. Fluently use three-dimensional calculus as a language to do the above; be able to use spherical and cylindrical coordinates.
4. Understand the paradigmatic examples of the harmonic oscillator, central force (in particular, gravitational) motion and rigid body motion, which serve as starting points for investigating more complicated realistic problems.

**PHYS 454. Intermediate Modern Physics I**

**3 Credits (3)**

Introduction to quantum mechanics, focusing on the role of angular momentum and symmetries, with application to many atomic and subatomic systems. Specific topics include intrinsic spin, matrix representation of wave functions and observables, time evolution, and motion in one dimension.

**Prerequisite:** a C- or better in PHYS 315.

**Prerequisite/Corequisite:** MATH 392 and PHYS 395.

**Learning Outcomes**

1. Problem solving: an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. Ability to learn on your own: an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

**PHYS 455. Intermediate Modern Physics II**

**3 Credits (3)**

Continuation of subject matter of PHYS 454. Specific topics include rotation and translation in three dimensions, solution of central potential problems, perturbation theory, physics of identical particles, scattering theory, and the interaction between photons and atoms.

**Prerequisite:** a C- or better in PHYS 454, MATH 392, and PHYS 395.

**Learning Outcomes**

1. Problem solving: an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. Ability to learn on your own: an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

**PHYS 461. Intermediate Electricity and Magnetism I**

**3 Credits (3)**

The first part of a two-course sequence in classical electrodynamics. Covered topics include static electric and magnetic fields, Laplace's and Poisson's equations, electromagnetic work and energy, Lorentz force, Gauss's, Biot-Savart, and Ampère's laws, Maxwell's equations, as well as electric and magnetic fields in matter.

**Prerequisite:** a C- or better in PHYS 2140 or PHYS 1320G or equivalent and a C- or better in MATH 2530G.

**Prerequisite/Corequisite:** MATH 392 and PHYS 395.

**Learning Outcomes**

1. Problem solving: an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. Ability to learn on your own: an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

**PHYS 462. Intermediate Electricity and Magnetism II**

**3 Credits (3)**

Continuation of subject matter of PHYS 461. Covered topics include Maxwell's equations and their applications, electromagnetic waves, reflection, refraction, dispersion, radiating systems, interference and diffraction, as well as Lorentz transformations and relativistic electrodynamics.

**Prerequisite:** a C- or better in PHYS 461, MATH 392, and PHYS 395.

**Learning Outcomes**

1. Problem solving: an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. Ability to learn on your own: an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

**PHYS 468. Intermediate X-ray Diffraction**

**3 Credits (3)**

Introduction to x-ray diffraction and reflectivity spectra. Topics include X-ray sources and detectors, atomic spectra, characteristic x-rays, thermionic emission, synchrotron radiation, instrument components, and beam conditioners. Prerequisite(s): a C- or better in PHYS 315 and PHYS 325

**Learning Outcomes**

1. Knowledge of structural properties of materials
2. Experimental x-ray characterization techniques
3. Presentation and writing skills in the discipline
4. Ethics, teamwork, and career opportunities

**PHYS 471. Modern Experimental Optics**

**3 Credits (1+6P)**

Cumulative experience course in experimental optics.

**Prerequisite:** a C- or better in PHYS 315 and PHYS 325.

**Learning Outcomes**

1. Design within constraints: an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
2. Communication: an ability to communicate effectively with a range of audiences.
3. Ethical and professional responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
4. Teamwork: an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
5. Collect, analyze, and interpret data: an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

**PHYS 475. Advanced Laboratory Practices for Materials**

**3 Credits (1+6P)**

Cumulative experience course in advanced laboratory practices involving experiments in atomic, molecular, and condensed matter physics.

**Prerequisite:** a C- or better in PHYS 315 and PHYS 325.

**Learning Outcomes**

1. Design within constraints: an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
2. Communication: an ability to communicate effectively with a range of audiences.
3. Ethical and Professional Responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact
of engineering solutions in global, economic, environmental, and societal contexts.

4. Teamwork: an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.

5. Collect, Analyze, and Interpret Data: an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

**PHYS 476. Computational Physics**  
3 Credits (3)  
Scientific visualization, numerical differentiation and interpolation, numerical integration, root finding, linear algebra, eigensystems, ODE’s, Boundary value problems, PDE’s, Monte-Carlo calculations, data description and analysis, Fast Fourier Transforms, and applications to advanced physics problems. Recommended is the knowledge of a programming language.  
Prerequisite(s): a C- or better in PHYS 1111 or equivalent and MATH 392.  
Learning Outcomes  
1. learn how to use computers for solving problems in the physical sciences,
2. obtain skills to implement numerical simulation and modeling strategies,
3. learn how to monitor and analyze data graphically, during and after computation,
4. obtain workflow organization skills needed for the solution of complicated systems.

**PHYS 480. Thermodynamics**  
3 Credits (3)  
Thermodynamics and statistical mechanics. Basic concepts of temperature, heat, entropy, equilibrium, reversible and irreversible processes. Applications to solids, liquids, and gases.  
Prerequisite: a C- or better in PHYS 2120, PHYS 315, and MATH 2530G.

**PHYS 485. Independent Study**  
1-3 Credits  
Individual analytical or laboratory studies directed by a faculty member. May be repeated for a maximum of 6 credits.  
Prerequisite: consent of instructor.

**PHYS 488. Introduction to Condensed Matter Physics**  
3 Credits (3)  
Crystal structure, X-ray diffraction, energy band theory, phonons, cohesive energy, conductivities, specific heats, p-n junctions, defects, surfaces, and magnetic, optical, and low-temperature properties.  
Prerequisite: a C- or better in PHYS 315.

**PHYS 489. Introduction to Modern Materials**  
3 Credits (3)  
Structure and mechanical, thermal, electric, and magnetic properties of materials. Modern experimental techniques for the study of material properties.  
Prerequisite: a C- or better in PHYS 315.

**PHYS 493. Experimental Nuclear Physics**  
3 Credits (1+6P)  
Cumulative experience course in nuclear physics such as measurement of radioactivity, absorption of radiation, nuclear spectrometry.  
Prerequisite: a C- or better in PHYS 315 and PHYS 325.

**PHYS 495. Mathematical Methods of Physics I**  
3 Credits (3)  
Applications of mathematics to experimental and theoretical physics. Topics include vector analysis, Fourier series and transforms, Green's functions, special functions, complex variables, tensor algebra and analysis.  
Prerequisite(s): a C- or better in MATH 392 and PHYS 395.

**PHYS 496. Mathematical Methods of Physics II**  
3 Credits (3)  
Applications of mathematics to experimental and theoretical physics. Topics include vector analysis, Fourier series and transforms, Green's functions, special functions, complex variables, tensor algebra and analysis.  
Prerequisite(s): a C- or better in PHYS 495.

3. Develop and ability to acquire and apply new knowledge using appropriate learning strategies.
4. Take advantage of the transformation behavior, under symmetry operations, of representations of physical quantities, by casting physical relations in tensor language.

**PHYS 500. Special Topics Seminar**  
1-2 Credits  
Treatment of topics not covered by regular courses. Graded S/U. May be repeated.

**PHYS 511. Mathematical Methods of Physics I**  
3 Credits (3)  
Applications of mathematics to experimental and theoretical physics. Topics include vector analysis, Fourier series and transforms, Green’s functions, special functions, complex variables, tensor algebra and analysis.

**Learning Outcomes**
1. Deploy the tools of vector analysis and expansion into complete sets of functions to treat problems arising, e.g., in electrodynamics.
2. Understand the elements of functional analysis underpinning, e.g., quantum mechanics, such as representations, operators and their inverses and spectra.
3. Evaluate integrals of analytic functions using the calculus of residues.
4. Take advantage of the transformation behavior, under symmetry operations, of representations of physical quantities, by casting physical relations in tensor language.

**PHYS 520. Selected Topics**  
1-3 Credits  
This is a lecture/laboratory course designed to present the basic concepts, the techniques and the tools to synthesize and characterize nanometer scale materials, and the latest achievements in current and future nanotechnology applications in engineering, materials, physics, chemistry, biology, electronics and energy. It is intended for a multidisciplinary audience with a variety of backgrounds. This course should be suitable for graduate students as well as advanced undergraduates. Topics covered will include: nanoscience and nanotechnology, nanofabrication, self-assembly, colloidal chemistry, solid-gel, carbon nanotubes, graphene, thin film, lithography, physical vapor deposition, chemical vapor deposition, quantum dots, lithium batteries, X-ray diffraction, scanning electron microscopy, transmission electron microscopy, nanoelectronics, nanophotonics and nanomagnetics, etc.

**Prerequisites:** PHYS 462 strongly recommended.

**PHYS 521. Individual Study**  
1-3 Credits  
Individual analytical or laboratory studies directed by a faculty member. May be repeated for a maximum of 6 credits.

**PHYS 522. Fundamentals of Photonics**  
4 Credits (3+3P)  
Ray, wave and guided optics, lasers and thermal sources, radiometry, photon detection and signal-to-noise ratio. Elements of photonic crystals, polarization, acousto-optics, electro-optics, and optical nanostructures. Recommended foundation (PHYS 1320G or PHYS 2120) and (E E 473 or PHYS 473). Taught with E E 478. Crosslisted with E E 528.

**Learning Outcomes**
1. Describe the fundamental properties of light.
2. Formulate the concepts of ray, wave, and photon optics mathematically.
3. Represent and incorporate basic elements of an optical system.
4. Perform an analysis of a simple photonic/optical system mathematically by hand and with computer tools such as MATLAB.
5. Discuss ethical, societal, and professional issues related to photonics and optics.

**PHYS 551. Classical Mechanics**  
3 Credits (3)  
Lagrangian and Hamiltonian formulation of dynamics. Advanced treatments of most topics listed under PHYS 451, plus canonical transformations and Hamilton-Jacobi theory. PHYS 451 strongly recommended.

**PHYS 554. Quantum Mechanics I**  
3 Credits (3)  

**PHYS 555. Quantum Mechanics II**  
3 Credits (3)  
Continuation of topics in PHYS 554.

**Prerequisites:** PHYS 554 or consent of instructor.

**PHYS 561. Electromagnetic Theory I**  
3 Credits (3)  
Detailed advanced treatments of most topics listed under PHYS 461, PHYS 462, plus multipole radiation, collisions of charged particles and bremsstrahlung, scattering, and radiation reaction. PHYS 461 and PHYS 462 strongly recommended.

**PHYS 562. Electromagnetic Theory II**  
3 Credits (3)  
Continuation of topics in PHYS 561.

**Prerequisites:** PHYS 561 or consent of instructor.

**PHYS 568. Elements of X-ray Diffraction**  
3 Credits (3)  
Same as PHYS 468, but additional work required. Crosslisted with: CHME 588.

**PHYS 571. Advanced Experimental Optics**  
3 Credits (1+6P)  
Taught with PHYS 471 with additional work required at the graduate level.

**Learning Outcomes**
1. Design within constraints: an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
2. Communication: an ability to communicate effectively with a range of audiences.
3. Ethical and professional responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
4. Teamwork: an ability to function effectively on a team whose members together provide leadership, create a collaborative environment, and make societal, economic, and environmental judgments.
and inclusive environment, establish goals, plan tasks, and meet objectives.

5. Collect, analyze, and interpret data: an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

**PHYS 575. Advanced Physics Laboratory**  
3 Credits (1+6P)  
Selected experiments in atomic, molecular, nuclear and condensed-matter physics.  

**Learning Outcomes**  
1. Design within constraints: an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
2. Communication: an ability to communicate effectively with a range of audiences.
3. Ethical and Professional Responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
4. Teamwork: an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
5. Collect, analyze, and interpret data: an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

**PHYS 576. Advanced Computational Physics I**  
3 Credits (3)  
Advanced treatment of topics listed under PHYS 476 plus additional work. Applications of numerical methods to advanced physics problems. Recommended is the knowledge of a programming language.  

**Learning Outcomes**  
1. Learn to numerically solve problems that require higher mathematical and theoretical analysis,
2. Experience how graduate research will be advanced and accelerated by the use of scientific computing skills.

**PHYS 584. Statistical Mechanics**  
3 Credits (3)  

**PHYS 589. Modern Materials**  
3 Credits (3)  
Same as PHYS 489 with differentiated assignments for graduate students. PHYS 554 recommended.  

**Learning Outcomes**  
1. Learn the fundamental concepts of the physics of modern materials, such as crystal structure, properties of materials, and experimental techniques.
2. Develop an ability to formulate and solve complex problems in the area of physics of modern materials by applying the principles of physics and mathematics.
3. Develop an ability to acquire and apply new knowledge using appropriate learning strategies.

**PHYS 591. Advanced High-Energy Physics I**  
3 Credits (3)  
Taught with PHYS 491 with additional work required at the graduate level.  

**Prerequisite(s):** PHYS 555 or consent of instructor.

**PHYS 593. Advanced Experimental Nuclear Physics**  
3 Credits (1+6P)  
Advanced experimental investigation of topics such as measurement of radioactivity, absorption of radiation, and nuclear spectrometry.  

**Learning Outcomes**  
1. Design within constraints: an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
2. Communication: an ability to communicate effectively with a range of audiences.
3. Ethical and Professional Responsibilities: an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
4. Teamwork: an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
5. Collect, analyze, and interpret data: an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

**PHYS 597. Space Plasma Physics**  
3 Credits (3)  
Same as PHYS 497 but with added requirements.

**PHYS 599. Master's Thesis**  
1-15 Credits (1-15)  
Thesis.

**PHYS 600. Research**  
1-15 Credits  
Doctoral research. May be repeated.

**PHYS 620. Advanced Topics in Physics**  
1-3 Credits  
Advanced formal treatment of topics not covered in regular courses. May be repeated for a maximum of 9 credits.  

**Prerequisite:** consent of instructor.

**PHYS 650. General Relativity I**  
3 Credits (3)  
Basic foundations and principles of general relativity, derivation of the Einstein field equations and their consequences, the linearized theory, the Bel-Petrov classification of the curvature tensor, derivation of the Schwarzschild solution and the four basic tests of general relativity.  

**Prerequisite(s):** PHYS 511 or PHYS 561 or consent of instructor.

**PHYS 680. Independent Study**  
1-3 Credits  
Individual analytical or laboratory studies directed by a faculty member. May be repeated for a maximum of 6 credits.  

**Prerequisite:** graduate standing or consent of instructor.

**PHYS 688. Advanced Condensed Matter Physics**  
3 Credits (3)  
Continuation of the advanced condensed matter physics presented in PHYS 588. Topics include electronic structure methods, optical, magnetic, and transport properties of solids, semiconductors, crystalline
defects, nanostructures, and noncrystalline solids. PHYS 588 strongly recommended.

**Learning Outcomes**

1. Learn the fundamental concepts of advanced condensed state physics: band theory of solids, electronic structure methods, optical and magnetic properties of solids, bulk semiconductors, and properties of nano-structured materials.
2. Develop an ability to formulate and solve complex problems in advanced condensed matter physics.
3. Develop an ability to study independently and acquire new knowledge using appropriate learning strategies.

**PHYS 689. Advanced Modern Materials**

3 Credits (3)

Advanced topics in the physics of modern materials, such as crystalline, amorphous, polymeric, nanocrystalline, layered, and composite materials and their surfaces and interfaces. PHYS 555, PHYS 588, and PHYS 589 recommended.

**Learning Outcomes**

1. Learn the fundamental concepts of the physics of modern materials, such as crystalline, amorphous, polymeric, nanostructured, layered, and composite materials.
2. Develop an ability to formulate and solve complex problems in the area of advanced physics of modern materials.
3. Develop an ability to study independently and acquire new knowledge using appropriate learning strategies.

**PHYS 691. Quantum Field Theory I**

3 Credits (3)

Path integrals, gauge invariance, relativistic quantum mechanics, canonical quantization, relativistic quantum field theory, introduction to QED.

**Prerequisites:** PHYS 555 and PHYS 562, or consent of instructor.

**PHYS 692. Quantum Field Theory II**

3 Credits (3)

QED, running coupling constant, QCD, electroweak theory, asymptotic freedom, deep inelastic scattering, basic QCD phenomenology, path integrals in quantum field theory, lattice QCD.

**Prerequisite:** PHYS 691 or consent of instructor.

**PHYS 700. Doctoral Dissertation**

1-15 Credits (1-15)

Dissertation.

**Phone:** (575) 646-3831

**Engineering Physics (Aerospace Engineering) - Bachelor of Science in Engineering Physics**

A strong grasp of underlying physical principles behind the development of new technologies is necessary to keep up with new developments in a high-tech world. The Bachelor of Science (B.S.) in Engineering Physics degree program is designed to provide quality education to students for immediate employment with technical jobs in private industries (especially high-tech industries), research laboratories and public sectors. The program trains students with a combination of engineering knowledge, physics principles, mathematical background, problem-solving strategies and effective communication skills. The B.S. in Engineering Physics also provides an excellent preparation for graduate studies in either physics or an engineering discipline.

The requirements for the Aerospace concentration is listed below. Students must earn a C- or better in all required courses.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 121 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.
A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change. Full-time students are usually required to take at least 15 credits per semester. This requirement could be satisfied for example by taking a one-credit supplemental instruction course.

5 Technical electives are approved by the Engineering Physics advisors

Engineering Physics (Mechanical Engineering) - Bachelor of Science in Engineering Physics

A strong grasp of underlying physical principles behind the development of new technologies is necessary to keep up with new developments in a high-tech world. The Bachelor of Science (B.S.) in Engineering Physics program is designed to provide quality education to students for immediate employment with technical jobs in private industries (especially high-tech industries), research laboratories and public sectors. The program trains students with a combination of engineering knowledge, physics principles, mathematical background, problem-solving strategies and effective communication skills. The B.S. in Engineering Physics also provides an excellent preparation for graduate studies in either physics or an engineering discipline.
The requirements for the Mechanical concentration are listed below. Students must earn a C- or better in all required courses.

Students must complete all University degree requirements, which include: General Education requirements, Viewing A Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

**Second Language: (not required)**

Electives, to bring the total credits to 120

Total Credits 120

1. See the General Education (p. 227) section of the catalog for a full list of courses.
2. MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G Calculus and Analytic Geometry I first.
3. PHYS 2110 Mechanics/PHYS 2110L Experimental Mechanics and PHYS 2140 Electricity and Magnetism/PHYS 2140L Electricity & Magnetism Laboratory will not automatically count towards the Area III: Laboratory Science requirement, an exception will be made if students elect to take these courses.
4. For the A Suggested Plan of Study for Students
5. Approved technical electives are decided by Engineering Physics Advisors.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change. Full-time students are usually required to take at least 15 credits per semester. This requirement could be satisfied for example by taking a one-credit supplemental instruction course.

Area III: Laboratory Science requirement, an exception will be made if students elect to take these courses.

These courses may have prerequisites and/or co-requisites, and it is the students responsibility for checking and fulfilling all those requirements

PHYS 2110 Mechanics/PHYS 2110L Experimental Mechanics and PHYS 2140 Electricity and Magnetism/PHYS 2140L Electricity & Magnetism Laboratory will not automatically count towards the Area III: Laboratory Science requirement, an exception will be made if students elect to take these courses.

See the General Education (p. 227) section of the catalog for a full list of courses.

See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Technical electives are approved by Engineering Physics advisors

Engineering Technology and Surveying Engineering

Undergraduate Program Information

Mission Statement

The mission of the Department of Engineering Technology and Survey Engineering (https://et.nmsu.edu/) (ETSE) is to provide a student-centric education through experiential learning to prepare students for a rewarding career. In particular,

• faculty work closely with students and each other to foster a family-like environment;
• unlike traditional engineering, core courses that emphasize real-world applications and hands-on learning experiences; and
• graduates advance to enhanced career opportunities with competitive compensation.

We aim to help students from diverse backgrounds reach their potential and become successful engineers, technologists, and leaders in the region and nationwide.

Programs Overview

Under the motto of “linking theory and application,” the ETSE curriculum emphasizes the practical, hands-on application of engineering principles and methods. ETSE students learn about designing, building, and testing systems through in-class exercises, hands-on laboratory projects, and teamwork. This approach provides ETSE students with a holistic view of their fields and prepares them to be effective real-world problem solvers. A wide variety of majors, concentrations, and minors are offered by the ETSE Department, including:

Bachelor’s Degrees with majors and concentrations in:

• Civil Engineering Technology (CET)
  • Renewable Energy Technologies
  • Transportation Technology
• Electronics and Computer Engineering Technology (ECET)
• Geomatics
• Information and Communication Technology (ICT)
  • Cyber Defense
  • Network Technologies
  • Software Development
• Information Engineering Technology (IET)
• Mechanical Engineering Technology (MET)

The Bachelor of Science curricula are developed based on the program criteria established collaboratively by their ABET accreditation commissions (Engineering Technology Association Commission and the Applied and Natural Science Accreditation Commission, respectively) and the programs' Industrial Advisory Committees (IAC). Visit the ETSE website (https://et.nmsu.edu/) for further information on ABET accreditation and program criteria.

The Geomatics and ICT programs are 100% online while enrolled at the NMSU main campus or the NMSU Online (https://online.nmsu.edu/) campus. The ETSE online programs allow you to complete your undergraduate education from anywhere, interact with faculty virtually, and access online resources anytime.

Graduate Program Information

Mission Statement

The mission of the Engineering Technology and Surveying Engineering Department regarding graduate education is to provide a 100% online, asynchronous, professional post-baccalaureate education focused on providing graduates with advanced knowledge and skills that will augment career opportunities. The ETSE department fosters educational excellence and provides working professionals and traditional technology students opportunities to increase their knowledge and skill sets.

Program Overview

The ETSE Department offers the Professional Masters of Information Technology (M-IT) (https://nmsu-preview.courseleaf.com/global/nmsu-global/information-technology-mit-online/), designed for working IT professionals and students interested in pursuing an advanced technology degree. Topics include system architecture, computer networking, development and application of software tools, cybersecurity, and virtual systems in enterprise IT decision-making.

The M-IT program's vision is to provide an advanced Information Technology education that is contemporary and relevant to recent IT graduates and long-time IT professionals. The program strives to be accessible in delivery and flexible in the curriculum.

The requirements for enrollment into the Professional Master of Information Technology program are as follows:

• Bachelor's degree in Information Technology or a closely related field (must submit transcripts)
• Undergraduate GPA of 3.0/4.0 or higher
• Statement of purpose – One page describing your experiences and background, professional goals, and your reason for applying to the M-IT program
• Contact information for one recommendation
• Applicants with an undergraduate GPA greater than 2.5/4.0 but less than 3.0/4.0 may be accepted provisionally on a case-by-case basis.
• Applicants who do not have a Bachelor's degree in Information Technology or a closely related field but have relevant IT experience may apply. If accepted, the graduate advisor will design a plan of study that may include appropriate leveling courses.
• GRE scores are not required for applicants who have earned their undergraduate degree from an accredited US University.

Master's Accelerated Program

The Master’s Accelerated Program (MAP) option combines some of the baccalaureate degree requirements in IET or ICT and the professional Master of Information Technology. Visit the Masters Accelerated Program (MAP) (https://honors.nmsu.edu/for-students/masters-accelerated-program-map.html) website for further details. This option will add a pre-application process as detailed below.

Pre-Application Process: Students will submit a “pre-application” to the ETSE department to receive approval for the accelerated professional Master’s program. Students interested in completing the MAP must submit the pre-application within approximately 12 credits of earning a Bachelor’s degree in an IET or BICT; the ETSE department website will include an application form. Qualification for the Bachelor + Masters of IT (B+M-IT) program will be based on the cumulative grade point average in courses taken to that point and recommendations by faculty members listed on the departmental application. Students having a grade point average below 3.0 may be admitted on a case-by-case basis, depending on faculty recommendations and evaluations of the individual's academic and professional history. Additional factors might be considered when available (e.g., TOEFL/IELTS scores).

Once the ETSE department has reviewed the pre-application, accepted, and notified the applicant of acceptance in the accelerated program, the applicant must formally apply to the graduate school for formal admission into the M-IT program. Students must apply to the NMSU graduate school for the final semester of their undergraduate program education.

Note: The student must apply to the B+M-IT accelerated program before taking any 450 (and above) level courses.

Degrees for the Department

Bachelor Degree(s)

• Civil Engineering Technology (Renewable Energy Technologies) - Bachelor of Science in Engineering Technology (p. 1029)
• Civil Engineering Technology (Transportation Technology) - Bachelor of Science in Engineering Technology (p. 1031)
• Civil Engineering Technology - Bachelor of Science in Engineering Technology (p. 1027)
• Electronics and Computer Engineering Technology - Bachelor of Science in Engineering Technology (p. 1032)
• Geomatics - Bachelor of Science in Geomatics (p. 1034)
• Geomatics - Bachelor of Science in Geomatics (Online) (https://catalogs.nmsu.edu/global/nmsu-global/geomatics-bs-geomatics-online/)
• Information and Communication Technology (Cyber Defense) - Bachelor of Information and Communication Technology (p. 1040)
• Information and Communication Technology (Cyber Defense) - Bachelor of Information and Communication Technology (Online) (https://catalogs.nmsu.edu/global/nmsu-global/information-communication-technology-cyber-defense-bict-online/)
• Information and Communication Technology (Network Technologies) - Bachelor of Information and Communication Technology (p. 1043)
• Information and Communication Technology (Network Technologies) - Bachelor of Information and Communication Technology (Online) (https://catalogs.nmsu.edu/global/nmsu-global/information-communication-technology-network-technologies-bict-online/)
Learning Outcomes

- Information and Communication Technology (Software Development) - Bachelor of Information and Communication Technology (p. 1046)
- Information and Communication Technology (Software Development) - Bachelor of Information and Communication Technology (Online) (https://catalogs.nmsu.edu/global/nmsu-global/information-communication-technology-software-development-bict-online/)
- Information and Communication Technology - Bachelor of Information and Communication Technology (p. 1036)
- Information and Communication Technology - Bachelor of Information and Communication Technology (Online) (https://catalogs.nmsu.edu/global/nmsu-global/information-communication-technology-bict-online/)
- Mechanical Engineering Technology - Bachelor of Science in Engineering Technology (p. 1049)

Master Degree(s)

- Information Technology - Master of Information Technology (Online) (https://catalogs.nmsu.edu/global/nmsu-global/information-technology-mit-online/)

Minors for the Department

- Digital Electronic Applications - Undergraduate Minor (p. 1052)
- Digital Forensics - Undergraduate Minor (p. 1052)
- Geomatics - Undergraduate Minor (p. 1052)
- Information Security Technology - Undergraduate Minor (p. 1052)
- Manufacturing - Undergraduate Minor (p. 1053)
- Renewable Energy Technologies - Undergraduate Minor (p. 1053)

Department Faculty Members

Associate Professor Gabe Garcia, Ph. D., Department Head

Associate Professor Bárbara Gamallo, Associate Department Head

Professors Elaksher1,2, Furth, Jiang2, Sassenfeld; Associate Professors Ben Ayed, Baker, B. Gamallo, E. Gamallo, Garcia, Nogales, Tapia, Wurm2; Assistant Professors of Practice Kanaan, Lawrence, Schaub; Associate Professors of Practice Villegas Arguelles; Emeritus Faculty Alexander, Burkholder1,2, Cameron, Cooper1, Hyde, Kelly, Reilly1, Ricketts, Rico, Stevens1.

1 Registered Professional Engineer (NM).
2 Licensed Professional Surveyor (NM).

Engineering Technology Courses

E T 101. Introduction to Engineering Technology and Geomatics
1 Credit (1)
An introduction to geomatics and the various engineering technology disciplines, the engineering approach to problem solving, and the design process. Projects emphasize the importance of teamwork, written & oral communication skills, as well as ethical responsibilities.

Learning Outcomes
1. Develop a basic understanding of all programs in the Engineering Technology and Surveying Engineering Department.
2. Create a solid curriculum plan for their degree program.
4. Define and visit campus support programs and student engineering programs.
5. Describe and discuss communication skills in the engineering profession.

E T 104. Soldering Techniques
1 Credit (3P)
Fundamentals of soldering, desoldering, and quality inspection of printed circuit boards.

E T 109. Computer Drafting Fundamentals
3 Credits (2+2P)
Introduction to principles and fundamentals of drafting using both manual drafting techniques and computer-aided drafting (CAD) applications. Crosslisted with: DRFT 109 and C E 109. May be repeated up to 3 credits.

Learning Outcomes
1. Describe related career options/pathways.
2. Explain and apply common drafting terms, concepts, and conventions.
3. Utilize various AutoCAD commands and Coordinate Entry methods to produce accurate and precise Two-Dimensional drawings.
4. Setup AutoCAD working environment, drawings, styles, and applicable settings.
5. Navigate the AutoCAD user interface efficiently.
6. Apply different drafting methods, strategies, and processes.
7. Utilize AutoCAD to produce basic 2D CAD working drawings.
8. Measure utilizing scales accurately.
9. Create drawings with different scales and units.
10. Plot drawings produced in AutoCAD at various scales and on various sheet sizes.
11. Utilize the two Drawing Environments: Paper Space and Model Space.
12. Manage AutoCAD drawing files.

E T 110. Introduction to 3-D Modeling (Solid Works)
3 Credits (2+3P)
Introduction to SolidWorks, a 3-D modeling software. The foundation for designing mechanical parts and assemblies.

E T 120. Computation Software
2-3 Credits (2-3)
The use of spreadsheet software in the field of engineering technology.

E T 125. Introduction to Renewable Energy
3 Credits (3)
Renewable energy systems, including topics in thermal-solar photovoltaic, wind, geothermal systems, and other current topics. Theory, practical applications, safety considerations and the economics of alternative renewable energy systems compared to conventional systems.

E T 143. Civil Drafting Fundamentals
3 Credits (2+2P)
Introduction to drafting in the field of Civil Engineering. Drawings, projects, and terminologies related to topographic, contour drawings, plan and profiles, and street/highway layout. Restricted to Community Colleges only. Taught with DRFT 143 and SUR 143.

Prerequisite: DRFT 109.
Learning Outcomes
1. Use appropriate drafting/technical terminology.
2. Identify the different types of Civil Engineering work drawing plan sets.
3. Understanding and the use of the terminologies used in the industry.
4. Use AutoCAD Civil 3D.
5. Enter appropriate data into AutoCAD software in order to retrieve necessary outcomes.
6. Plot/Print different types of civil engineering working plans.
7. Read, interpret and understand engineering drawings.
8. Define and understand the different types of engineering drawings.

E T 153. Fundamentals of Networking Communications
3 Credits (3)
Introduction to networking basics, including computer hardware and software, electricity, networking terminology, protocols, LANs, WANs, OSI model, IP addressing, and design and documentation of basic network and structure cabling.

Learning Outcomes
1. Students will identify network types/protocols utilizing the OSI reference model and compute numbering system network problems.
2. Students will explain issues related to managing and documenting network environments.
3. Students will list, compare, and discuss industry standards for addressing computers on a network.
4. Students will list and distinguish between computer networking historical milestones.
5. Students will identify, compare, and evaluate networking data transport techniques.
6. Students will identify and compare network transmission media and build/evaluate network cabling.
7. Students will discuss IT industry certifications and summarize current technology trends.

E T 154. Construction Methods and Communications
3 Credits (3)
Blueprint reading, specifications, and introduction to materials used in construction. May be repeated up to 3 credits.

Learning Outcomes
1. Students will develop a basic knowledge of AutoCad Civil Three-Dimensional software as they relate to the civil drafting process.
2. Students will become familiar with a basic understanding of computers, drafting, and trigonometry as required.
3. Use of long-term projects will be utilized to simulate real-world work environments to aid the understanding and applying vocabulary on surveying drafting plans.
4. An ability to apply current knowledge and adapt to emerging applications of mathematics, science, engineering, and technology.

E T 155. Network Operating Systems I
3 Credits (3+1P)
Introduction to a computer network operating system. May not be used as part of an E T degree program on main campus. Restricted to: Community Colleges only.
Prerequisite(s): E T 120 or E T 122.

E T 156. Introduction to Information Security
2 Credits (2)
This course introduces information security terminology, historical evolution of digital security, types of PC and network system vulnerabilities and types of information loss. In addition, methods of information protection and integrity, intrusion detection, and recovery of data are introduced.

Prerequisite(s)/Corequisite(s): E T 120. Restricted to Community Colleges campuses only.

E T 160. Windows Fundamentals for IET
3 Credits (3)
Fundamental review of the Windows operating system including installation and upgrades as well as managing applications, files, folders, devices and maintenance.

Learning Outcomes
1. Properly deploy the Windows OS.
2. Manage Windows OS data and devices.
3. Apply network and connection configurations.
4. Provide Windows OS maintenance.

E T 182. Introduction to Digital Logic
2 Credits (1.5+1.5P)
An introduction to logic design and the basic building blocks of digital systems. Topics include numbering systems, Boolean algebra, digital logic theory, combinational logic, and applications such as adders. Includes hands-on laboratory
Prerequisite: A grade of C- or better in MATH 1220G or higher.

Learning Outcomes
1. Demonstrate ability to convert numerical values to commonly-used digital representations and their use for arithmetic and logical functions.
2. Demonstrate understanding of Boolean logic functions and truth tables.
3. Demonstrate ability to simplify logic expressions.
4. Demonstrate understanding of combinational logic functions, and the ability to build digital circuits using breadboards.

E T 183. Applied DC Circuits
3 Credits (2+2P)
Application of Ohm’s law, Kirchhoff’s laws, Thevenin’s, and Norton’s theorems to the analysis of DC passive circuits. Embedded Lab.
Prerequisite(s)/Corequisite(s): MATH 1220G.

E T 183 L. Applied DC Circuits Lab
1 Credit (2P)
DC applied circuits lab.
Corequisite(s): E T 183.

E T 184. Applied AC Circuits
2-3 Credits (1-2+2P)
Application of circuit laws and theorems to analysis of AC passive circuits. Resonant circuit, polyphase circuit and magnetic circuit topics are introduced. Embedded Lab.
Prerequisite: A grade of C- or better in ENGR 120.

Learning Outcomes
1. Analyze and design AC circuits, including ideal op-amps, using concepts of voltage, current, power, Kirchhoff’s laws, and network theorems.
2. Design simple systems involving AC circuits.

E T 190. Applied Circuits
4 Credits (3+2P)
Application of Ohm’s law, Kirchhoff’s laws, and Thevenin’s theorems to the analysis of AC and DC passive circuits. Electronic circuit topics are introduced. Embedded lab. May be repeated up to 4 credits.
Prerequisite/Corequisite: MATH 1250G or higher.
Learning Outcomes
1. Analyze and design DC and AC circuits, including ideal op-amps, using concepts of voltage, current, power, Kirchhoff’s laws, and network theorems.
2. Design simple systems involving DC and AC circuits.

E T 191. Applied Circuits Laboratory
1 Credit (2P)
Applied Circuits Lab

E T 200. Special Topics
1-3 Credits
Directed study or project. May be repeated for a maximum of 6 credits.
Prerequisite: consent of department head.

E T 210. Intermediate 3-D Modeling (Solid Works)
3 Credits (3)
Intermediate 3-D modeling. Applied modeling of techniques to prepare for SolidWorks certification (CSWA).
Prerequisite: A grade of C- or better in ENGR 110.

Learning Outcomes
1. Properly operate a CAD system in the most efficient manner.
2. Generate and easily update Part models.
3. Ability to create complex assembly models.
4. Create usable production drawings from Three-Dimensional CAD models.
5. Understand the basic fundamentals of available add-in software compatible with SolidWorks (FEA, CAM, PDM).
6. Work in a group and operate effectively on a team.
7. Use creative and technical thinking skills in design.

E T 217. Manufacturing Processes
3 Credits (2+3P)
Introduction to manufacturing and processing, including: casting, forming, and machining. Emphasis on creating products with the appropriate techniques. Crosslisted with: IE 217.
Prerequisite(s): A grade of C- or better in either E T 110 or ENGR 110 and C- or better in MATH 1220G.

Learning Outcomes
1. Identify the different manufacturing processes and their applications.
2. Use, set up, and calibrate measuring tools.
3. Apply geometric tolerances to engineering drawings.
4. Demonstrate basic knowledge of materials and material properties.
5. Demonstrate basic knowledge of GM codes and their application.
6. Proficiently use CAM packages such as SolidWorks CAM.
7. Identify different tooling, their use, and manufacturing application.

E T 217 L. Manufacturing Processes Lab
1 Credit (3P)
Hands-on laboratory in machine shop to apply topics from E T 217, including: casting, forming, and machining.
Corequisite: E T 217.

Learning Outcomes
1. Various

E T 220. Internship
1-6 Credits
Internship requiring an approved number of hours of varied and progressive experience in the field of study. The scope and other requirements of the internship are stated in an individualized syllabus and through a memorandum of understanding between the faculty mentor and the industry partner. May be repeated up to 6 credits. Consent of Instructor required.
Prerequisite(s): E T 283.

E T 240. Applied Statics
3 Credits (3)
Fundamental topics of applied statics, including force system analysis, equilibrium, free body diagrams, methods of joints and sections, distributed loads, friction, centroids, area moments, and shear and moment diagrams.
Prerequisite(s)/Corequisite(s): MATH 1430G or MATH 1511G.
Prerequisite(s): PHYS 1230G or PHYS 1310G.

E T 241. Applied Dynamics
3 Credits (3)
The foundation for understanding particles and bodies in motion and the forces involved, including: projectile motion, Newton’s Laws of Motion, conservation of energy, and impulse and momentum.
Prerequisite: A grade of C- or better in either E T 240 or ENGR 233.
Prerequisite/Corequisite: (MATH 1440 or MATH 1521G or MATH 1521H).

Learning Outcomes
1. Various

E T 246. Electronic Devices I
4 Credits (3+3P)
Solid-state devices including diodes, bipolar-transistors, and field effect transistors. Use of these devices in rectifier circuits, small signal and power amplifiers.
Prerequisite: A grade of C- or better in one of the following: E T 190 or E T 183 or ENGR 120.
Prerequisite/Corequisite: E T 184 or ENGR 230.

Learning Outcomes
1. Describe semiconductor devices and their properties.
2. Apply the characteristics of diodes to analyze diode rectifier and regulator circuits.
3. Apply the characteristics of bipolar junction transistors (BJTs) to analyze BJT amplifier circuits.
4. Apply the characteristics of metal-oxide-semiconductor field-effect transistors (MOSFETs) to analyze MOSFET amplifier circuits.
5. Describe and analyze complementary MOS (CMOS) digital circuits.
6. Learn to solder and layout printed-circuit boards (PCBs).
7. Design, simulate, and test diode and transistor-amplifier circuits.

E T 253. Networking Operating Systems II
3 Credits (3+1P)
Introduction to a computer network operating system. May not be used as part of an E T degree program on main campus. Restricted to Community Colleges campuses only.
Prerequisite: E T 120 and E T 153.

Learning Outcomes
1. Identify Linux utilities and terminology.
2. Use the Linux filesystem.
3. Install, administer, and manage a Linux system.
4. Utilize Linux user/group management.
5. Install software packages.
6. Apply data management skills.

E T 254. Concrete Technology
3 Credits (2+2P)
Fundamentals of aggregates, Portland cement, and asphalt used in design and construction. May be repeated up to 3 credits.
Learning Outcomes
1. Define the fundamentals of aggregates and their use in construction including concrete and asphalt.
2. Define the types of concrete and their uses.
3. Prepare and test concrete mix designs.
4. Executing tests for AASHTO Certification.

E T 255. Linux System Administration
3 Credits (3)
Operating systems applications and interfacing with an introduction to systems administration. Topics include Shell Programming, Programming Tools, Database Management, System Backups, Security, Setup and Maintenance of Linux Servers.

Learning Outcomes
1. Describe the key features of the Linux operating system.
2. Plan the Linux Filesystem to match system requirements.
3. Design BASH scripts to optimize common Linux operations.
4. Interpret Linux performance data to solve hardware and software issues.
5. Students will demonstrate the Core Linux System Administration.
6. Students will be able to link the use of shell commands to managing Linux server daemons and software.
7. Students will apply these concepts to build application servers running Linux, Apache, MySQL, and PHP (LAMP); Tomcat, CUPS print servers; and create backup solutions.
8. Students will apply problem analysis, object-oriented structured logic, and development concepts.
9. Students will demonstrate an understanding of theory and hands-on experience administering a Linux Based server.

E T 256. Networking Operating Systems III
3 Credits (3+1P)
Introduction to a computer network operating system. May not be used as part of an E T degree program on main campus. Restricted to Community Colleges campuses only.
Prerequisite(s): E T 253.

E T 262. Software Technology I
3 Credits (2+2P)
An introduction to computer programming concepts as applied to engineering technology. Includes basic logic design, algorithm development, debugging and documentation. History and use of computers and their impact on society.
Prerequisite/Corequisite: (E T 182 or ENGR 130) or (MATH 1250G or MATH 1430G).

Learning Outcomes
1. Set up and use a rich programming environment for programming with C
2. Analyze existing code
3. Employ effective use of basic programming and basic troubleshooting
4. Write, debug and test code given software requirements
5. Apply testing and documentation best practices
6. Transfer programming knowledge and apply coding knowledge

Prerequisite: A grade of C- or better in E T 246.

E T 273. Advanced Networking Communications
4 Credits (2+4P)
Explores advanced networking communications to include Wireless Networking, Virtualization and Cloud Computing, Subnets and VLANs, Network Risk Management, Network Security Design, Network Performance, and WANS. The course covers the examination objectives and detailed preparation for students to take the CompTIA Network+ exam.
Prerequisite: E T 153.

Learning Outcomes
1. Identify, describe, and apply wireless transmission characteristics and standards.
2. Explain the benefits of cloud virtualization and cloud computing.
3. Explain the purpose of network segmentation and describe how VLANs work and how they are used.
4. Identify basic concepts of network risk management and configure devices for increased security.
5. Identify network design security features and discuss options in network access control.
6. Use tools to evaluate network performance and discuss best practices for incident response and disaster recovery.
7. Explain characteristics of WAN technology and troubleshoot connection methods.

E T 276. Electronic Communications
3 Credits (2+2P)
Antennas, transmission devices, A-M and F-M transmission and detection, pulse systems, microwave systems.
Prerequisite(s): E T 246.

E T 280. Web Design and Multimedia
3 Credits (3)
Introduction to front-end web development including webpage design, structure, layout, positioning, responsiveness, and foundational layers of how the web works. Video, audio, and other digital presentation tools are covered.

Learning Outcomes
1. Create multiple frontend development micro-components.
2. Create single and multi-page websites.
3. Use flexbox, grid, and media queries and different design patterns.
4. Employ effective use of web development and basic troubleshooting.
5. Build small web site projects.

E T 282. Digital Electronics
4 Credits (3+3P)
Applications of digital integrated circuits, multiplexers, counters, arithmetic circuits, and microprocessors.
Learning Outcomes

Prerequisite/Corequisite(s): (E T 190 or E T 184). Prerequisite(s): E T 182.

E T 283. Hardware PC Maintenance
3 Credits (3+1P)
Installing, configuring, troubleshooting, and maintaining personal computer hardware components.
Prerequisite(s): E T 120 or E T 122.

E T 284. Software PC Maintenance
3 Credits (3+1P)
Installing, configuring, troubleshooting, and maintaining personal computer operating systems.
Prerequisite(s): E T 120 or E T 122.

E T 285. Advanced Information Security
3 Credits (3)
The course covers detailed analysis of network security, including security operations and policy adherence; internal and external vulnerabilities; methods of identifying, controlling and managing system access, and the protection of system information.
Prerequisite(s)/Corequisite(s): E T 283. Prerequisite(s): E T 156.

E T 286. Information Security Certification Preparation
4 Credits (4)
The course covers the examination objectives and detailed preparation for a certification in information security.
Prerequisite(s): E T 285.

E T 291. PC Forensics and Investigation
3 Credits (3)
Introduction to computer forensics and investigative fundamentals. Topics include understanding computer forensic and investigation law and requirements, processing crime and incident scenes, and the extraction, preservation, analysis and presentation of computer-related evidence.
Prerequisite(s): E T 285. Prerequisite(s): E T 120 or E T 122.

E T 300. Special Topics
1-3 Credits
Directed study or project. May be repeated for a maximum of 6 credits.
Prerequisite: consent of department head.

E T 305. Introduction to Product Design
3 Credits (2+3P)
The process of designing an innovative product for a real customer. Working through ideas, prototypes, 3-D models, concept validation, and entrepreneurship.
Prerequisite: A grade of C- or better in (COMM 1115G or COMM 1130G or AXED 2120G or HNRS 2175G). Prerequisite(s): E T 120 or E T 122.

E T 305V. Manufacturing: History and Technology
3 Credits (3)
Measurements in fluid statics, dynamics, and hydraulic systems.

E T 308. Fluid Technology
3 Credits (3)
First and second laws, properties of substances, thermodynamic cycles including power generation and refrigeration.
Prerequisite: A grade of C- or better in the following: CHEM 1120G and ENGR 233 and (PHYS 1240G or PHYS 1320G) and (PHYS 1240L or PHYS 1320L).
Corequisite: E T 306 L.
Prerequisite/Corequisite: ENGR 140, and (MATH 1440 or MATH 1521G).

E T 306. Fundamental and Applied Thermodynamics
3 Credits (3)
First and second laws, properties of substances, thermodynamic cycles including power generation and refrigeration.
Prerequisite: A grade of C- or better in the following: CHEM 1120G and ENGR 233 and (PHYS 1240G or PHYS 1320G) and (PHYS 1240L or PHYS 1320L).
Corequisite: E T 306 L.
Prerequisite/Corequisite: ENGR 140, and (MATH 1440 or MATH 1521G).

Learning Outcomes
1. Students will acquire an understanding of the physical concepts and basic principles of fundamental and applied thermodynamics.
2. Students will become acquainted with the problem-solving methods and tools in the field of applied thermodynamics.
3. Students will gain experience through practice in the implementation of systematic, fundamental approaches to solving problems in applied thermodynamics.

E T 306 L. Thermodynamics Lab
1 Credit (3P)
Applications of thermodynamic theory to lab devices. Practice in testing, instrumentation, and data collection.
Corequisite: E T 306.

Learning Outcomes
1. Effectively communicate results of laboratory work and in-class studies in written formal technical reports.
2. Present one lab experiment through a PowerPoint presentation.
3. Find thermodynamic properties through lab experiments.
4. Describe performance indicators of a laboratory refrigeration cycle and a heat engine.
5. Describe power plant operation.

E T 308. Fluid Technology Lab
1 Credit (3P)
Measurements in fluid statics, dynamics, and hydraulic systems.
Corequisite: E T 308.

Learning Outcomes
1. Solve hydrostatic problems.
2. Describe and measure physical properties of a fluid.
3. Describe the motion of fluids.
4. Apply conservation equations.
5. Design pipeline and pump systems.

E T 308 L. Fluid Technology Lab
1 Credit (3P)
Measurements in fluid statics, dynamics, and hydraulic systems.
Corequisite: E T 308.
Learning Outcomes
1. Effectively communicate results of laboratory work and in-class studies in written formal memoranda.
2. Experimentally find properties of fluids.
3. Experiment head losses in pipe flows.
4. Analyze pipeline systems and open channel flows.
5. Analyze flow regimes and equipment selection.

E T 309V. Manufacturing: History and Technology
3 Credits (3)
The history of manufacturing, the technology on which it is based, and its impact on society.

ET 310. Applied Strength of Materials
3 Credits (3)
Application of principles of strength of materials to practical design and analysis problems.
Prerequisite: A grade of C- or better in E T 240 or ENGR 233.
Corequisite: E T 310 L.
Prerequisite/Corequisite: ENGR 190 or MATH 1440 or MATH 1521G or MATH 1521H.
Learning Outcomes
1. To obtain knowledge of basic engineering materials and their use in civil and mechanical construction.
2. To perform basic structural analysis, stress, strain and deformation calculations as they apply to current engineering practices.
3. To conduct appropriate experiments in the laboratory as they apply to straight of materials and be able to interpret the results.
4. To effectively communicate results of laboratory work and in-class studies in written memoranda, business letters, and formal technical reports.
5. To recognize that the field of engineering materials is constantly changing and therefore, needs to be studied throughout one's career.

ET 310 L. Applied Strength of Materials Lab
1 Credit (3P)
Testing and analyzing the physical properties of materials. Cursory review of Excel, PowerPoint, FEA, Instron machine, and testing standards.
Corequisite: E T 310.
Learning Outcomes
1. Effectively communicate results of laboratory work and in-class studies in written formal memoranda.
2. Demonstrate an understanding of the tensile, compressive, shear, torsional and buckling properties of basic materials through hands-on testing per ASTM Standards.
3. Evaluate the results of the hands-on laboratory testing through modeling exercises using SOLIDWORKS simulations.
4. Effectively communicate industry practices through oral presentations of ASTM standards.

ET 314. Communications Systems I
3 Credits (3)
Circuits and devices used for transmission, reception, and processing of RF signals. May be repeated up to 3 credits.
Prerequisite: A grade of C- or better in both, E T 246 and (MATH 1250G or higher).
Learning Outcomes
1. Analyze analog and digital communication systems.
2. Apply the fundamental communication concepts of AM and FM techniques.
3. Build an AM/FM communication system.
4. Apply basic antenna theory and satellite communication theory.

ET 317. Advanced Manufacturing and Design
3 Credits (3)
Advanced 3-D modeling with current engineering design practices. Students will use SolidWorks add-ins such as CAMWorks, Product Data Management (PDM), and Model-Based Definition in conjunction with Geometric Dimensioning and Tolerancing (GD&T) practices. Students will have the opportunity to take the Certification SolidWorks Profesional Exam (CSWP).

ET 318. Kinematics of Machines
3 Credits (2+3P)
Prerequisite: A grade of C- or better in both, E T 210 and (E T 241 or ENGR 234).
Prerequisite/Corequisite: E T 305.
Learning Outcomes
1. Design mechanical device with specific points of motion to solve engineering problem.
2. Develop experience working in a team to solve a design problem.
3. Develop experience presenting technical concepts in writing and orally.
4. Develop understanding of classic four bar mechanisms, including crank-rocker, crank-crank, double-rocker, and crank-slider.
5. Using algebra and trigonometry, analyze points of motion for displacement, velocity, and acceleration.
6. Using SolidWorks Motion Analysis, analyze points of motion for displacement, velocity, and acceleration.
7. Reverse-engineer a Franz Rouleaux mechanism.

E T 332. Applied Design of Structures I
4 Credits (3+3P)
An introduction to structural analysis and design. Use of various building codes for development of allowable and factored loads on structures. Allowable stress and strength design concepts for structural components using concrete and steel. Required use of computer software such as spreadsheets, databases, and self-developed programs and design aids.
**Prerequisite/Corequisite:** A grade of C- or better in both, (E T 310 and (ENGR 190 or MATH 1440 or MATH 1521G or higher).

**Learning Outcomes**
1. Demonstrate mastery of the knowledge, techniques, skills and use of modern tools of their disciplines.
2. Design structural components of a system, component, or process to meet desired needs.
3. Identify, formulate, and solve structural analysis problems.
4. Describe professional and ethical responsibility.
5. Communicate effectively with peers and faculty.

E T 339. Introduction to Digital Forensics and Incident Response
3 Credits (2+3P)
Introduction to the skills required to perform digital forensics and incident response on Windows operating systems. Topics include: live response, evidence acquisition, Windows operating system artifacts, documentation and reporting.
**Prerequisite:** A grade of C- or better in both, E T 255 and E T 160.

**Learning Outcomes**
1. To understand Digital Forensics terms and definitions and why digital forensics is needed.
2. To study what is required and how to perform digital forensics.
3. To become familiar and aware of the hindrances/obstacles that affects effective digital/computer forensic operations.
4. To learn about the tools and procedures for how deleted data is recovered during digital forensic operations.
5. To use forensic tools and procedures to perform digital forensic operations on Windows operating systems, Emails, Mobile devices, and Communication networks (Computer, wireless, cellular networks).
6. To learn about incident response and procedures.

E T 344. Microprocessor Systems
3 Credits (2+3P)
Microcomputer and/or microcontroller systems, applications and architectures with an emphasis on software high-level and assembly programming languages. May be repeated up to 3 credits.
**Prerequisite:** A grade of C- or better in both, (E T 182 or ENGR 130) and (MATH 1250G or higher).
**Prerequisite/Corequisite:** E T 362.

**Learning Outcomes**
1. Compare and contrast microprocessor architectures and their characteristics.
2. Configure a Nios II microprocessor architecture core on an FPGA.
3. Write programs in assembly language targeting the Nios II microprocessor.
4. Write programs in C targeting the Nios II microprocessor.
5. Present, demonstrate and document a team project.

E T 354. Soil and Foundation Technology
4 Credits (3+3P)
Fundamentals of investigation of soil properties and their importance in design, construction, and testing as related to buildings, roads, dams, and other structures. Design of foundations considering slope stability, bearing capacity and settlement.
**Prerequisite:** A grade of C- or better in E T 254.
**Prerequisite/Corequisite:** E T 310.

**Learning Outcomes**
1. Demonstrate an understanding of the basic soil types and the accepted soil classification systems: USCS, AASHTO, USDA.
2. Demonstrate an understanding of the various engineering properties of soils and how they apply to the built environment: compaction, permeability, consolidation, shear strength and stress distribution.
3. Perform advance calculations on lateral earth pressure, retaining structures and slope stability.
4. Perform basic designs of shallow foundations and pile structures.
5. Demonstrate an ability to perform laboratory tests: soil classification, Atterburg Limits, compaction (proctors), permeability, shear strength, and compression. Confirm these abilities through completion of the NMDOT soil testing certification program.

E T 355. Site/Land Development and Layout
3 Credits (3)
Techniques, methods, and takeoffs for infrastructure layout, site plan design, grading, earthwork, utilities, road construction. Students must be in Junior or Senior standing to enroll.
**Prerequisite:** A grade of C- or better in E T 143 or DRFT 143 or DRFT 153.

**Learning Outcomes**
1. Describe the purpose of Land Development and its process.
2. Define Feasibility and Programming (Environmental policy, Environmental Site Feasibility, Engineering Feasibility) for land development.
4. Examine Flood Plain Studies (FEMA) and Preliminary Hydrological Analysis.
5. Compute the TOC/Intensity of rainfall on a property, runoff for pre/post-development, and peak flow.
6. Implement types of Grading - Earthwork (end section method)/ production estimations/Preliminary layout/Grading work Grid Method).
7. Analyze asphalt designs for different types of cross-sections.

E T 356. Applied Power Technologies
3 Credits (2+3P)
Basic elements of modern power systems, energy sources, substation configuration, load cycles, and three-phase circuits. Students will gain experience in power factor correction, transmission line configurations and impedance, voltage regulation of transformers, and the per-unit system. Study of load flow, fault analysis, and economic operations is included. Students must be in junior or senior standing in order to enroll.
**Prerequisite:** A grade of C- or better in the following: (ENGR 190 or MATH 1435 or MATH 1511G) and E T 272 and (PHYS 1240G and PHYS 1240L) or (PHYS 1320 and PHYS 1320L)).

**Learning Outcomes**
1. To apply concepts of electronics, magnetism and induction.
2. To solve single and three phase transformers circuits.
3. To understand different operations of DC machines and generators.
4. To analyze single phase and three phase power circuits in per-unit analysis.
5. To analyze transmission lines for power loss and power efficiency.
6. To understand load flow, fault analysis and economic operations of the power system generation and transmission.
7. To describe modern power systems, energy sources and substation configurations.

E T 360V. Technology in Business and Society
3 Credits (2+2P)
Examination of how technology affects business and society with specific attention to understanding the role of technical personnel and their interaction with nontechnical personnel.

E T 362. Software Technology II
3 Credits (3)
Concepts of modern computer organization, CPU control, pipelining, memory hierarchies, memory mapping, hardware-software interface, and operating systems.
Prerequisite: C- or better in ENGR 120 and ENGR130 and ENGR140 and MATH 1250G.

Learning Outcomes
1. Set up and use a rich programming environment for programming with Python
2. Analyze existing code
3. Employ effective use of basic programming and basic troubleshooting
4. Employ effective use of Object-Oriented Programming (OOP) and troubleshooting
5. Apply testing and documentation best practices

E T 377. Computer Networking I
3 Credits (2+2P)
Topics include the principles and structure of the OSI model, IP addressing, media, LANs, TCP/IP networks, routing protocols (RIPv2, EIGRP, OSPF) and their advanced functionality, as well as VLANs and inter-VLAN communication. This course focuses on the architecture of networks, the configuration of devices, how to identify and resolve common issues, and troubleshooting (from physical to transport layers).
Prerequisite: A grade of C- or better in both, (E T 182 or ENGR 130) and (MATH 1250G or Higher).

Learning Outcomes
1. Define and distinguish the role of a network administrator (from other roles in the IT world)
2. Identify the OSI model, its layers, and relationship to TCP/IP model
3. Identify different cable media and networking devices and their use
4. Design, configure, and troubleshoot basic networks.
5. Identify MAC, IPv4, and IPv6 addressing
6. Apply different techniques for IP allocation and subnet design (IPv4)
7. Use Cisco IOS software for basic switch and router configurations
8. Configure and troubleshoot basic setup for static and dynamic routing protocols

E T 381. Renewable Energy Technologies
3 Credits (3)
Renewable energy systems, including topics in thermal-solar, photovoltaic, wind, geothermal systems, and other current topics. Theory, practical applications, safety considerations and the economics of alternative renewable energy systems compared to conventional systems.

Prerequisite: A grade of C- or better in MATH 1220G or higher.

Learning Outcomes
1. Define renewable energy sources.
2. Understand the current state of the art of renewable energy technologies and performance improvements. This includes solar, wind, hydro, ocean, biomass, and geothermal energies.
3. Understand the benefits and disadvantages of using renewable resources.
4. Research or design a renewable energy system as a class project.

E T 382. Solar Energy Technologies
3 Credits (2+3P)
Solar energy technologies, including topics in passive, solar thermal, and photovoltaic systems. Theory, practical applications, safety considerations and the economics of solar renewable energy systems compared to conventional systems.
Prerequisite: A grade of C- or better in MATH 1220G.

Learning Outcomes
1. Define renewable energy sources.
2. Understand the current state of the art of photovoltaic and solar thermal energy technologies and performance improvements.
3. Evaluate the economics of implementing a solar system.
4. Design and size a PV or solar thermal energy system as a class project.

E T 384. Wind and Water Energy Technologies
3 Credits (3)
Wind and Water energy technologies, including topics in small and large scale systems. Theory, practical applications, safety considerations and the economics of wind and water renewable energy systems compared to conventional systems.
Prerequisite: A grade of C- or better in MATH 1220G or higher.

Learning Outcomes
1. Define renewable energy sources.
2. Understand the current state of the art of wind and water energy technologies and performance improvements.
3. Evaluate the economics of implementing wind or water systems.
4. Design and size a wind or water energy system as a class project.

E T 386. Sustainable Construction and Green Building Design
3 Credits (3)
Sustainable Building materials, methods, and techniques including green architecture and design, codes, standards and specifications.
Prerequisite: A grade of C- or better in MATH 1220G or higher.

Learning Outcomes
1. Demonstrate an understanding of the basic principles of Green Building: sustainability, life-cycle costing, triple bottom line, return periods and unintended consequences.
2. Interpret the various categories present in the LEED certification process and other green certification systems commonly used.
3. Evaluate different "green" technologies as they apply to the student's area of interest.
4. Evaluate energy efficiency scenarios and resulting cost analyses using RETScreen and RESCheck softwares.
5. Navigate the various certification opportunities as they apply to the Green Building industry.

E T 396. Heat Transfer and Applications
3 Credits (2+3P)
Fundamentals of conduction, convection, and radiation heat transfer. Application of heat transfer, thermodynamics, and fluid mechanics principles to thermal system analysis and design.

**Prerequisite/Corequisite:** A grade of C- or better in both E T 306 and E T 308.

**Learning Outcomes**
1. Understand the concepts and basic principles of fundamental and applied heat transfer.
2. Model and solve engineering problems involving one, two, or three heat transfer modes: conduction, convection, and radiation.
3. Analyze the performance of industrial equipment like heat exchangers.
4. Validate theoretical concepts through heat transfer lab experiments.

**E T 398. Digital Systems**
4 Credits (3+3P)
Analysis, design, implementation, and testing of digital systems, including microprocessor blocks, using state machine logic, FPGAs, and hardware description language programming. May be repeated up to 4 credits.

**Prerequisite:** A grade of C- or better in both (E T 282 or ENGR 130) and (MATH 1250G or higher).

**Prerequisite/Corequisite:** E T 362.

**Learning Outcomes**
1. Apply design, synthesis, and analysis methods for digital systems that incorporate programmable logic devices (FPGAs).
2. Utilize CAD tools such as Altera Quarts II to design digital systems.
3. Evaluate and apply methods to analyze the timing behavior and to detect timing hazards in digital circuits.
4. Apply methods for analysis and design of sequential digital circuits with feedback.
5. Design complex circuits using VHDL for programming FGPA systems.

**E T 400. Special Topics**
1-3 Credits
Directed study or project. May be repeated for a maximum of 6 credits.

**Prerequisite:** consent of department head.

**E T 401. Heating and Air-Conditioning Systems**
3 Credits (3)
HVAC system design including heating and cooling load calculations, psychometrics, piping, duct layout, and system control. May be repeated up to 3 credits.

**Prerequisite:** A grade of C- or better in E T 306.

**Prerequisite/Corequisite:** E T 396.

**Learning Outcomes**
1. Master the use of thermodynamics software, EES for this course, and design software, HVAC Calc for this course.
2. Understand the principles of indoor/outdoor psychometrics.
3. Calculate the heating/cooling loads.
4. Design/size an HVAC system for a given building through a class project.

**E T 402. Instrumentation**
3 Credits (2+3P)
Sensors/transducers, signal conditioning and transmission for measurement and control systems. Student project in an area of instrumentation and/or control is required. Students be in Senior level standing to enroll.

**Prerequisite/Corequisite:** E T 396 or E T 398.

**Learning Outcomes**
1. Apply physical concepts, operational principles, and components of basic instrumentation and control in industrial process systems.
2. Learn relevant problem-solving methods and aspects of good practice.
3. Use LabView data acquisition systems, PLC ladder logic, and basic Arduino controllers.
4. Prototype a control system through a class project.

**E T 410. Senior Seminar**
1 Credit (1)
Transition from academics to business and industry. Students must be senior standing in E T majors to enroll. May be repeated up to 1 credit.

**Learning Outcomes**
1. Explain the path to professional licensure (CET, ECET, MET).
2. Implement a plan to test and pass the fundamental exam (CET, ECET, MET).
3. Identify and work towards completing different certifications used in industry, and work towards (IET).

**E T 412. Highway Technology**
3 Credits (3)
Road-vehicle performance, geometric alignment, traffic analysis, highway materials, pavement design, and plan and profile development.

**Prerequisite:** A grade of C- or better in E T 354.

**Learning Outcomes**
1. Design of a roadway including geometric design, materials selection, pavement design, and drainage.
2. Develop an understanding of design criteria based on traffic characteristics.
3. Interpret the purpose of course requirements, gather correct resources, present criteria, study alternatives, and finally develop a design.

**E T 414. Communications Systems**
3 Credits (3)
Circuits and devices used for transmission, reception, and processing of RF signals.

**Prerequisite:** A grade of C- or better in both, E T 246 and (MATH 1250G or higher).

**Learning Outcomes**
1. Analyze analog and digital communication systems.
2. Apply the fundamental communication concepts of AM and FM techniques.
3. Build an AM/FM communication system.
4. Apply basic antenna theory and satellite communication theory.

**E T 418. Applied Hydraulics**
3 Credits (3)
Introduction to hydrology, hydraulic equations, hydraulic cross-sections, control structures, and collection and distribution of water, wastewater, and storm runoff using closed conduit and open channel flow. May be repeated up to 3 credits.

**Prerequisite:** A grade of C- or better in E T 308.

**Learning Outcomes**
1. Perform basic rainfall/runoff calculations using the Rational Method, TR-fifty-five and the Unit Hydrograph method.
2. Design hydraulic conveyance structures using Manning's equation and basic culvert equations, both by hand and various software packages.
3. Perform advanced calculations of pipe flow and head loss, both by hand and various software packages.
4. Evaluate pumping scenarios and pumping design, both by hand and various software packages.
5. Demonstrate an understanding of basic groundwater hydraulics.

E T 420. Senior Internship
1-6 Credits
Internship requiring an approved number of hours of varied and progressive experience in the field of study. The scope and other requirements of the internship are stated in an individualized syllabus and through a memorandum of understanding between the faculty mentor and the industry partner. Taken in the senior year of program.
Prerequisites: Senior standing in E T.

E T 421. Senior Project
3 Credits (3)
Project in an area of civil engineering technology conducted under the direction of civil engineering technology faculty member. Project must be one that can be completed within a semester and of sufficient complexity for 3 credits. Taken last semester of program. May be repeated up to 3 credits.
Learning Outcomes
1. Write a transmittal letter in a format consistent with industry practices.
2. Develop a scheduling table delineating the various project stages.
3. Develop a table of contents to organize all work documents.
4. Use the knowledge learned in CET courses to develop/design a project and prepare a professionally written report.
5. Communicate effectively with the faculty advisor and industry mentor.
6. Develop skills to work independently or in teams on a self-paced project.

E T 426. Analysis and Design of Machine Elements
3 Credits (2+3P)
Analysis and design of power transmission components, including: gears, sprockets, belts, chains, bearings, and shafts. Experiential design project using SolidWorks and Excel modeling.
Prerequisite: A grade of C- or better in both ENGR 234 and E T 310.
Prerequisite/Corequisite: E T 305.
Learning Outcomes
1. Design mechanical device with specific machine elements to solve engineering problem.
2. Develop experience working in a team to solve design problems.
3. Develop experience presenting technical concepts in writing and orally.
4. Apply strength of materials concepts to design machine elements.
5. Learn about various types of machine elements, including shafts, sheaves, gears, sprockets, bearings, fasteners, retaining rings, o-rings, and motors.
6. Analyze the performance of various types of machine elements, including shafts, sheaves, gears, sprockets, and bearings.
7. Using SolidWorks Simulation, design and analyze machine elements and mechanical systems.
8. Conduct FEA simulation and validate results mathematically.

E T 432. Applied Design of Structures II
4 Credits (3+3P)
Continuation of E T 332. Design of structural systems and study of their responses. Wood and masonry systems included.
Prerequisite: A grade of C- or better in E T 332.

Learning Outcomes
1. Demonstrate mastery of the knowledge, techniques, skills and use of modern tools of their disciplines.
2. Design a system, component, or process to meet desired needs.
3. To effectively function as a member of a team while designing, constructing and testing structural scale model.
4. To identify, formulate, and solve engineering problems including material selection and cost analysis.
5. Recognize of professional and ethical responsibility.

E T 435. Senior Project
3 Credits (2+3P)
Capstone course. Practical application of student’s cumulative knowledge to an assigned design projects. Design principles, teamwork, and project management skills are stressed. Demonstration of written and oral communication skills via project documentation and presentation of results. Must be graduating senior. Consent of Instructor required.

Learning Outcomes
1. Demonstrate an ability to apply knowledge, techniques, skills and modern tools of mathematics, science, engineering, and technology to solve broadly-defined engineering problems appropriate to the discipline.
2. Demonstrate an ability to design systems, components, or processes meeting specified needs for broadly-defined engineering problems appropriate to the discipline.
3. Demonstrate an ability to apply written, oral, and graphical communication in broadly-defined technical and non-technical environments; and an ability to identify and use appropriate technical literature.
4. Demonstrate an ability to conduct standard tests, measurements, and experiments and to analyze and interpret the results to improve processes.
5. Demonstrate an ability to function effectively as a member as well as a leader on technical teams.

E T 439. Advanced Digital Forensics and Incident Response
3 Credits (3)
Advanced topics in digital forensics and incident response. Topics include network analysis and advanced cybersecurity concepts.
Prerequisite: A grade of C- or better in both, E T 339 and E T 377.

Learning Outcomes
1. Students will become familiar with tools and processes to analyze and detect memory resident processes that include malware, rootkits, and user recoverable data.
2. Students will also have exposure to methods and processes used by hackers to penetrate and compromise targets.

E T 444. Computer Hardware Senior Design
3 Credits (2+3P)
The design, development, implementation, documentation, and formal demonstration of a computer hardware system. Emphasis on interfacing FPGA to peripheral devices using VHDL. A student project is required. Students must be in senior standing to enroll. May be repeated up to 3 credits.
Prerequisite: A grade of C- or better in both, E T 344 and E T 398.
Learning Outcomes
1. To design, analyze and simplify digital logic circuits for practical problems.
2. To understand basic and complex digital logic circuits, such as memory, registers, and other arithmetic circuits.
3. To design sequential digital circuits using basic digital gates in Moore and Mealy model.
4. To design Finite State Machines and implement them on an FPGA board.
5. To interface different sensors and user inputs in VHDL and implement them on an FPGA board.
6. To complete a design project, working in teams, solving a real-life problem, and demonstrate their practical solution.

E T 455. Cost Estimating and Scheduling
3 Credits (3)
Methods and techniques in construction estimating including final bid preparation, construction planning and scheduling using various network methods and other techniques.
Prerequisite: junior or senior standing in E T.

E T 456. Applied Power Technologies
3 Credits (2+3P)
Basic elements of modern power systems, energy sources, substation configuration, load cycles, and three-phase circuits. Students will gain experience in power factor correction, transmission line configurations and impedance, voltage regulation of transformers, and the per-unit system. Study of load flow, fault analysis, and economic operations is included. Students must be in junior or senior standing in order to enroll.
Prerequisite: A grade of C- or better in the following: (ENGR 190 or MATH 1435 or MATH 1511G) and E T 272 and ((PHYS 1240G and PHYS 1240L) or (PHYS 1320 and PHYS 1320L)).
Learning Outcomes
1. To apply concepts of electronics, magnetism and induction.
2. To solve single and three phase transformers circuits.
3. To understand different operations of DC machines and generators.
4. To analyze single phase and three phase power circuits in per-unit analysis.
5. To analyze transmission lines for power loss and power efficiency.
6. To understand load flow, fault analysis and economic operations of the power system generation and transmission.
7. To describe modern power systems, energy sources and substation configurations.

E T 458. Web Development and Database Applications
3 Credits (3)
Design, planning, and building of interactive and dynamic web applications which are customizable and contain real-time information. Topics include relational databases, object oriented programming, secure-coding practices and web security, user authentication and personalization, as well as front-end and back-end technology integration.
Prerequisite: A grade of C- or better in both, E T 362 and E T 280.
Learning Outcomes
1. Setting up a development server
2. Read, design, and write code for backend web dev.
3. Design, create, and access databases that support web applications.
4. Implement effective security and authentication on Web applications.

E T 459. Construction Technology and Management
3 Credits (3)
This is a Technical Specialty course that builds on topics presented in the construction sequence thus far: E T 154, E T 254, E T 354, and E T 355. The course introduces students to the different civil engineering approach to construction and management, including planning, construction estimating & scheduling, foundations, formwork, concrete work, steel fabrication and erection installation, equipment basics, quality control, and safety. Methods and techniques involved in construction including use of Primavera Project Management® software.
Prerequisite/Corequisite: E T 354 and E T 355.
Learning Outcomes
1. Understand the basic concepts of construction planning, cost estimation, scheduling, and types of project management.
2. Obtain basic knowledge on techniques to construct structures based on site condition.
3. Develop work breakdown system and quantity take-offs.
4. Develop project cost estimation for different construction projects.
5. Prepare work schedule for construction project.
6. Identify and implement the suitable method and equipment to construct various structures.

E T 464. Enterprise Linux Administration
3 Credits (3)
Advanced Linux includes an advanced look at the use of Coding repositories, Linux-based containers, virtual machines, and scripting tools including Dockerfiles, Vagrantfiles, and Ansible.
Prerequisite: A grade of C- or better in both, E T 255 and E T 362.
Learning Outcomes
1. Demonstrate the ability to use Software Versioning systems using Windows and Linux.
2. Apply best practices with versioning repositories when creating software.
3. Deploy single and clustered microservice containers to support a web application.
4. Use script-based code to deploy and configure a full stack web server.
5. Use infrastructure management software to deploy defined roles in multiple environments.

E T 466. Windows Enterprise Administration
3 Credits (3)
Installation, configuration, and maintenance of Windows Enterprise services which includes Active Directory, distributed file systems, SQL Server, Web Server, Authentication Procedures, and enterprise elasticity. Topics covered include: Server Maintenance and Troubleshooting Methodologies.
Prerequisite: A grade of C- or better in E T 160 and (E T 262 or ENGR 140 or C S 172).
Learning Outcomes
1. Set up and use a Windows Enterprise environment with Active Directory.
2. Use best practices to design an organizational Structure and define AD DS Objects.
3. Deploy an AD DS embedded DHCP server with IPVfour and IPVsix.
4. Analyze existing cmd shell and PowerShell code for process automation.
5. Deploy security and user settings using Group Policy.
6. Apply version updates and establish an intra-domain trust relationship.
7. Employ effective use of the WDS service to deploy template images.
E T 471. Transportation Engineering and Technology
3 Credits (3)
Learn the principles of transportation engineering and technology with a focus on highway engineering and traffic analysis. Provide a basic skill set that will allow a student to address most of the transportation problems. Provide a foundation for future coursework in transportation should a student wish to pursue further coursework in the field.
Prerequisite: A grade of C- or better in E T 354.
Learning Outcomes
1. To introduce students to techniques for designing a roadway including geometric design, materials selection, pavement design, and drainage.
2. To help students develop an understanding of design criteria based on traffic characteristics.
3. Asses student's ability to: interpret the purpose of course requirements, gather correct resources, present criteria, study alternatives, and finally develop a design.

E T 472. Intelligent Transportation Systems (ITS)
3 Credits (3)
Traffic flow theory, telecommunication and information technology application in transportation, system architecture and standards, transportation management, incident and emergency management, corridor management, dynamic route guidance, in-vehicle systems, and traffic signal timing. Consent of instructor required. May be repeated up to 3 credits.
Learning Outcomes
1. Demonstrate traffic flow theory, telecommunication, and information technology applications in transportation.
2. Discover Intelligent Transportation System (ITS) architecture and standards, transportation management, incident and emergency management, corridor management, dynamic route guidance and in-vehicle systems, and traffic signal timing.
3. Apply knowledge of the ITS to select traffic engineering as a career path or apply the knowledge in their engineering or technology career.

E T 475. Special Topics in Information Technology
3 Credits (3)
Contemporary topics in Information Technology.
Prerequisite: A grade of C- or better in both, (E T 362 or ICT 362) and (E T 377 or ICT 377)), or Consent of Instructor.
Learning Outcomes
1. Students will learn two way Bluetooth, Wi-Fi, and NFC communication technologies.
2. The student will practice building and programming IOT prototype devices.
3. The student will develop customer value proposition and perform one round of customer discovery.
4. The student will prototype their IOT device.
5. The student will demonstrate their IOT device.
6. The student will learn to integrate IOT devices into IT architecture.

E T 477. Computer Networking II
3 Credits (2+2P)
Advanced concepts in computer network design and applications including managing the campus network infrastructure (LANs and virtual LANs), network services (DNS and DHCP), network security and firewall, network monitoring and forensics, wireless networks, high-speed optical networks and Internet.
Prerequisite: A grade of C- or better in E T 377.

Learning Outcomes
1. Demonstrate an understanding of key fundamental concepts of networking.
2. Apply networking concepts to design networks for real-life application scenarios using applicable software.
3. Configure network hardware such as computers, switches, and routers.
4. Troubleshoot, analyze, and solve network problems with applicable software.

E T 480. Innovation and Product Development
3 Credits (3)
Experiential product design and development. Students will learn about different types of innovation, business models, and methods for developing products. Students will apply the scientific method to develop a product idea of their own. Students will propose ideas, develop hypotheses, test hypotheses, and iterate until they have validated their product idea or identified a need to pivot.
Learning Outcomes
1. The student will be able to apply the scientific method to design a product.
2. The student will be able to develop a plan to learn about the Product-Market-Fit of their innovation.
3. The student will be able to describe the basics of Business Models and Product-Market-Fit.

E T 483. Mobile App Programming and Development
3 Credits (3)
Planning and creation of mobile device applications. Programming tools and technical design considerations. Entrepreneurship and App development.
Prerequisite: A grade of C- or better in both, ICT 152 and (E T 377 or ICT 377)), or Consent of Instructor.
Learning Outcomes
1. The student will learn to create a modern and flexible mobile device User Interface using Java.
2. The student will develop a high functioning prototype their mobile app.
3. The student will implement a business model canvas including development of a customer value proposition and a minimum of one round of customer discovery.
4. The student will implement database and information storage using a mobile device.
5. The student will implement the developer's dashboard for their mobile app.
6. Student will publish and monetize their mobile app.

E T 485. White Hat System Testing
3 Credits (3)
System penetration testing and repair. Review of methods utilized to gain access to unprotected systems. Testing system repairs and fixes for future prevention. Test documentation.
Prerequisite: A grade of C- or better in both, (E T 362 or ICT 362) and (E T 377 or ICT 377)), or Consent of Instructor.
Learning Outcomes
1. The student will practice modern methods for penetration testing.
2. The student will demonstrate advanced ethical hacking methods.
3. The student will evaluate in-place security systems.
4. The student will run-through simulated attacks and system break-ins.
5. The student will learn to prepare detailed reports on system vulnerabilities and weaknesses

**E T 490. Selected Topics**  
1-3 Credits  
Selected topics in engineering technology and related areas.  
Prerequisite: consent of instructor.

**E T 505. Special Topics in Information Technology**  
3 Credits (3)  
Contemporary topics in Information Technology Restricted to: M-IT majors. May be repeated up to 9 credits.  
Learning Outcomes  
1. Various

**E T 539. Advanced Enterprise Security**  
3 Credits (3)  
This course provides the student with an overview of enterprise cybersecurity and a foundation for understanding the critical issues of protecting digital and information assets. Restricted to: M-IT majors.  
Learning Outcomes  
1. Demonstrate an understanding of information security concepts and risk management.  
2. Demonstrate an understanding of Intrusion Detection and Prevention Systems and Other Security Tools.  
3. Demonstrate an understanding of cryptographic techniques.  
4. Demonstrate an understanding of authentication methods.  
5. Demonstrate an understanding of access control systems.  
6. Demonstrate an understanding of various network security controls.  
7. Demonstrate an understanding of the legal, ethical, and professional issues in information security.

**E T 551. Enterprise Architecture I**  
3 Credits (3)  
A study of current enterprise architecture methodologies, tools, and techniques. Restricted to: M-IT majors.  
Learning Outcomes  
1. Demonstrate the ability to utilize and develop architectural enterprise artifacts.  
2. Assess multiple enterprise architecture methodologies.  
3. Demonstrate IT architecture landscaping capability.  
4. Assess integrating IT initiatives utilizing the enterprise architecture processes.

**E T 552. Enterprise Architecture II**  
3 Credits (3)  
Advanced topics in enterprise architecture including availability, access, and architecture map development. Restricted to: M-IT majors.  
Prerequisite: A grade of C- or better in E T 551.  
Learning Outcomes  
1. Demonstrate the differences and similarities in multiple enterprise architectures.  
2. Demonstrate the ability for independent research on enterprise architectures.  
3. Assess architectural artifacts for impact on IT planning and implementation.

**E T 555. Virtualization**  
3 Credits (3)  
An analysis and review of system and IT virtualization techniques. Restricted to: M-IT majors.

**E T 562. Development and Operations**  
3 Credits (3)  
Software development including Python scripting. Operations programming. Restricted to: M-IT majors.  
Learning Outcomes  
1. Demonstrate a basic knowledge of Operations Management and it’s relationship to DevOps.  
2. Demonstrate knowledge in current software used in DevOps.  
3. Apply DevOps practices to a software deployment workflow.  
4. Demonstrate the ability to define a Continuous Integration pipeline with automated testing.  
5. Students will apply the continuous feedback principles to project monitoring.  
6. Apply best practices to build security into DevOp projects.

**E T 577. Advanced Computer Networking**  
3 Credits (3)  
Advanced networking design and analysis. Modernization of infrastructures. Restricted to: M-IT majors.  
Learning Outcomes  
1. The student will be able to explain how course concepts relate to the field of information technology.

**E T 580. IT Innovation and Product Development**  
3 Credits (3)  
Experiential product design and development in information technology. Students will learn about different types of innovation, business models, and methods for developing products. Students will apply the scientific method to develop a product idea of their own related to their field of study. Students will propose ideas, develop hypotheses, test hypotheses, and iterate until they have validated their product idea or identified a need to pivot. Experience in industry and student perspectives are discussed to support the development of their innovations.  
Learning Outcomes  
1. The student will be able to apply the scientific method to design a product, software, or service.  
2. The student will be able to develop a plan to learn about the Product-Market-Fit of their innovation.  
3. The student will be able to describe the basics of Business Models and Product-Market-Fit.  
4. The student will be able to explain how course concepts relate to the field of information technology.

**E T 583. Mobile App Programming and Development**  
3 Credits (3)  
Planning and creation of mobile device applications. Programming tools and technical design considerations. Entrepreneurship and App development. Restricted to: M-IT majors.

**E T 585. White Hat System Testing**  
3 Credits (3)  
System penetration testing and repair. Review of methods utilized to gain access to unprotected systems. Testing system repairs and fixes for future prevention. Test documentation. Restricted to: M-IT majors.  
Learning Outcomes  
1. Describe cryptology.  
2. Identify common information-gathering tools and techniques.  
3. Perform system hacking, and web and database attacks.  
4. Analyze vulnerabilities exploited by hackers.  
5. Identify common types of malware and the threats they pose.  
6. Perform network traffic analysis and sniffing by using appropriate tools.  
7. Identify security controls and defensive technologies.
E T 595. Capstone Projects in Information Technology
3 Credits (3)
Capstone course. Practical application of student's cumulative Information Technology knowledge to an assigned design projects. Project management skills.
Learning Outcomes
1. Demonstrate ability to manage complex work-related IT technical projects.
2. Demonstrate the ability to create an IT engineering project timeline.
3. Demonstrate the ability to self-motivate and organize project timeline.
4. Demonstrate the ability to work in teams and execute project.
5. Demonstrate advanced project goal setting, skills assessment, and weekly updates.

Information and Communication Technology Courses

ICT 141. IT Essentials I: A+ Certification Training Focused on the Hardware Exam
3 Credits (3)
Installing, configuring, troubleshooting, and maintaining personal computer hardware components and will assist in preparation for the CompTIA A+ Hardware certification.
Learning Outcomes
1. Configure and support PC, mobile, and IoT device hardware.
2. Perform basic computer diagnostic and maintenance operations.
3. Implement basic data backup and recovery methods.
4. Apply basic hardware maintenance best practices.
5. Demonstrate baseline security practices for hardware.

ICT 145. Network Essentials: N+ Certification Training
3 Credits (3)
Focuses on the installation and administration of network communication systems and will assist in preparation for the CompTIA N+ Network certification.
Learning Outcomes
1. Explain basic networking concepts including network services, physical connections, topologies, and architecture.
2. Explain security concepts and network attacks in order to harden networks against threats.
3. Explain routing technologies and networking devices; deploy Ethernet solutions and configure wireless technologies.
4. Troubleshoot common cable, connectivity, and software issues related to networking.
5. Monitor and optimize networks to ensure business continuity.

ICT 152. Java Programming
3 Credits (3)
Programming in the Java language.
Learning Outcomes
1. Set up a rich programming environment.
2. Analyze existing code.
3. Create/modify/debug/test programs.
4. Employ software documentation and programming best practices.

ICT 161. IT Essentials II: A+ Certification Training focused on the Software exam
3 Credits (3)
Installing, configuring, troubleshooting, and maintaining personal computer operating systems and will assist in preparation for the CompTIA A+ Software certification.
Prerequisite: A grade of C- or better in ICT 141.
Learning Outcomes
1. Configure device operating systems, including Windows, Mac, Linux, Chrome OS, Android, and iOS.
2. Administer client-based and cloud-based software.
3. Troubleshoot and problem-solve core service and support challenges.
4. Apply best practices for documentation, change management, and scripting.
5. Support basic IT infrastructure and networking.

ICT 220. Discrete Math and Its Relationship to Information Technology
3 Credits (3)
Focuses on developing software coding skills using a programming language and its application to discrete mathematics, the use discrete structures in computer science. Topics included are logic, sets, relations, functions, methods of proof, recursion, combinatorics, graph theory, and algorithms
Prerequisite: A grade of C- or better in MATH 1220G or higher.
Corequisite: ICT 152.
Learning Outcomes
1. Explain the relationship between discrete math sets and coded arrays, finite and infinite, subsets, intersection, unions, and other set operations.
2. Explain binary Trees and know how to use demonstrate them using code.
3. Demonstrate the use of code applied to group and subgroup theory.
4. Demonstrate the use of code to create functions and algorithms.
5. Identify and explain logical operations and their application in coding.
6. Demonstrate the use of Probability Theory in code to predict random outcomes.

ICT 267. Information Security+ Certification Preparation
3 Credits (3)
The course covers the Sec+ exam objectives and detailed preparation for certification in information security.
Prerequisite: A grade of C- or better in both, ICT 141 and ICT 145.
Learning Outcomes
1. The student will select appropriate mitigation and deterrent techniques to address network attacks and vulnerabilities.
2. The student will examine how access control, identity management, and cryptography can secure a network and manage risk.
3. The student will identify privacy and policy issues.
4. The student will apply activities that an Information Systems Security specialist would normally carry out in the performance of his/her duties.

ICT 280. Introduction to Web Development
3 Credits (3)
Introduction to front-end web development including webpage design, structure, layout, positioning, responsiveness, and foundational layers of how the web works.
Learning Outcomes
2. Organize web page contents with Lists, figures, and organizational elements.
3. Develop web page layout templates.
4. Implement style application inline, via style blocks, and using external resources.
5. Develop and apply javascript event-driven programming to web pages.
6. Explain the difference between client and server-side scripting and data processing.

ICT 300. Special Topics
3 Credits (3)
Directed study or project. Students must be in Junior standing and have the consent of department head to enroll. May be repeated up to 3 credits.

Learning Outcomes
1. Various.

ICT 320. Introduction to Internet Protocols
3 Credits (3)
Present a overview of Internet Protocols Applications. Students must be in Junior or Senior standing only.

Learning Outcomes
1. Students will apply an understanding of basic Networking.
2. Students will employ effective use of Packet analysis software to troubleshoot network issues.
3. Explain the RFC process for developing network protocols.
4. Explain network protocol security implications.

ICT 339. Introduction to Digital Forensics and Incident Response
3 Credits (3)
Introduction to the skills required to perform digital forensics and incident response on Windows operating systems. Topics include: live response, evidence acquisition, Windows operating system artifacts, documentation and reporting.

Prerequisite: A grade of C- or better in ICT 161.

Learning Outcomes
1. To understand Digital Forensics terms and definitions and why digital forensics is needed.
2. To study what is required and how to perform digital forensics.
3. To become familiar and aware of the hindrances/obstacles that affects effective digital/computer forensic operations.
4. To learn about the tools and procedures for how deleted data is recovered during digital forensic operations.
5. To use forensic tools and procedures to perform digital forensic operations on Windows operating systems, Emails, Mobile devices, and Communication networks (Computer, wireless, cellular networks).
6. To learn about incident response and procedures.

ICT 350V. Introduction to Personal Computer Security and Privacy
3 Credits (3)
Introduction to Information Security and Privacy – Have you ever wondered what happens to all of your browsing history or data you fill out on websites go? Who has this data? What do they do with this data? How do you stop sharing your private information? This class will answer these questions and provide steps to make your online presence more secure.

Learning Outcomes
1. Classify security issues
2. Classify Privacy protections
3. Evaluate threats and countermeasures based on personal security breaches.
4. Formulate a real-time privacy response
5. Assess international privacy protections through a multicultural focus.

ICT 352. Software Technology I
3 Credits (3)
This course focuses on reading, writing, debugging, testing, and documenting computer programs. May be repeated up to 3 credits.

Learning Outcomes
1. Set up a rich programming environment
2. Analyze existing code
3. Create/modify/debug/test programs
4. Employ software documentation and programming best practices

ICT 355. Linux System Administration
3 Credits (3)
Operating systems applications and interfacing with an introduction to systems administration. Topics include Shell Programming, Programming Tools, Database Management, System Backups, Security, Setup, and Maintenance of Linux Servers.

Learning Outcomes
1. Create a virtual environment on a host system using VirtualBox.
2. Develop single and multiple Linux Operating Systems within The VirtualBox Virtual Environment.
3. Select applications on production Linux Operating systems.
4. Support the operation of the Linux Operating system using System Administration Techniques.

ICT 360. Operating Systems for ICT
3 Credits (3)
Fundamentals of operating systems with Windows and Linux including installation and configuration using the GUI as well as the command line, text editors, file systems, scripting and operating system management.

Learning Outcomes
1. Create a virtual environment on a host system using VirtualBox.
3. Manage error codes in Virtual Machines.

ICT 362. Software Technology II
3 Credits (3)
Topics include problem analysis, object-oriented programming (OOP), structured logic, and development concepts. May be repeated up to 3 credits.

Prerequisite: A grade of C- or better in ICT 152 or ICT 352 or E T 262 or OECS 195 or C S 152 or C S 172.

Learning Outcomes
1. Set up and use a rich programming environment for programming with Python.
2. Analyze existing code.
3. Employ effective use of basic programming and basic troubleshooting.
4. Employ effective use of Object-Oriented Programming (OOP) and troubleshooting.
5. Apply testing and documentation best practices.

ICT 364. Windows Enterprise Administration
3 Credits (3)
Installation, configuration, and maintenance of Windows Enterprise services which includes Active Directory, distributed file systems, SQL
Server, Web Server, Authentication Procedures, and enterprise elasticity. Topics covered include: Server Maintenance and Troubleshooting Methodologies.

**Prerequisite:** A grade of C- or better in ICT 152.

**Learning Outcomes**
1. Set up and use a Windows Enterprise environment with Active Directory.
2. Use best practices to design an organizational Structure and define AD DS Objects.
3. Deploy an AD DS embedded DHCP server with IPvfour and IPvsix.
4. Analyze existing cmd shell and PowerShell code for process automation.
5. Deploy security and user settings using Group Policy.
6. Apply version updates and establish an intra-domain trust relationship.
7. Employ effective use of the WDS service to deploy template images.

**ICT 372. Software Engineering and Design**
3 Credits (3)
Topics include the software development lifecycle, problem analysis, and implementing software testing routines to improve the quality, integrity, and security of code.

**Prerequisite:** A grade of C- or better in ICT 362.

**Learning Outcomes**
1. Identify, explain, and apply the phases of the SDLC.
2. Identify different Agile methodologies and practices for software project management.
3. Use different development tools and apply best practices.
4. Apply best practices in the creation of business objects, data storage and access, testing, and debugging.
5. Configuring, handling, testing, and deploying services.

**ICT 377. Computer Networking I**
3 Credits (3)
Computer network design and applications for LAN, TCP/IP networks, routing and switching technologies, VLANs, and the OSI layers from physical to transport.

**Prerequisite/Corequisite:** A grade of C- or better MATH 1220G or higher.

**Learning Outcomes**
1. Define and distinguish the role of a network administrator (from other roles in the IT world).
2. Identify the OSI model, its layers, and the relationship to the TCP/IP model.
3. Identify different cable media and networking devices and their use.
4. Design, configure and troubleshoot basic networks.
5. Identify MAC, IPvfour, and IPvsix addressing.
6. Apply different techniques for IP allocation and subnet design (IPvfour).
7. Use the Cisco IOS software for basic switch and router configurations.
8. Configure and troubleshoot basic setup for static and dynamic routing protocols.

**ICT 380. Web Design and Multimedia**
3 Credits (3)
Introduction to front-end web development including webpage design, structure, layout, positioning, responsiveness, and foundational layers of how the web works. Video, audio, and other digital presentation tools are covered.

**Learning Outcomes**
1. Create multiple front-end development micro-components.
2. Create single and multi-page websites.
3. Use flexbox, grid, and media queries and different design patterns.
4. Employ effective use of web development and basic troubleshooting.
5. Build small web site projects.

**ICT 400. Special Topics**
1-3 Credits (1-3)
Directed study or project. Students must be in Senior standing and have the consent of department head to enroll. May be repeated up to 6 credits.

**Learning Outcomes**
1. Various.

**ICT 435. Senior Project**
3 Credits (3)
Capstone course. Practical application of student’s cumulative knowledge to an assigned design project. Design principles, teamwork, and project management skills are stressed. Demonstration of written and oral communication skills via project documentation and presentation of results. Must be graduating senior. Consent of Instructor required. Restricted to ICT Majors.

**Prerequisite:** A grade of C- or better in the following: ICT 364 and ICT 377 and (ICT 462 or ICT 355).

**Learning Outcomes**
1. Demonstrate ability to manage a complex technical project.
2. Demonstrate the ability to create an engineering project timeline.
3. Demonstrate the ability to self-motivate and organize project.
4. Demonstrate the ability to work in teams and execute project.
5. Goal setting, skills assessment and portfolio development included.

**ICT 439. Advanced Digital Forensics and Incident Response**
3 Credits (3)
Advanced topics in digital forensics and incident response. Topics include network analysis and advanced cybersecurity concepts.

**Prerequisite:** A grade of C- or better in both, (E T 339 or ICT 339) and (E T 377 or ICT 377).

**Learning Outcomes**
1. Demonstrate the use of forensic tools and procedures to perform digital forensic operations on Windows operating systems, Emails, Mobile devices, and Communication networks (Computer, wireless, cellular networks).
2. Demonstrate proper incident response procedures and proper chain of custody when handling digital evidence.
3. Students will become familiar with tools and processes to analyze and detect memory resident processes that include malware, rootkits, and user recoverable data.
4. Students will also have exposure to methods and processes used by hackers to penetrate and compromise targets.

**ICT 450. Ethical Hacking**
3 Credits (3)
Ethical Hacking and Penetration testing techniques. Students must be in senior standing to enroll.

**Prerequisite:** A grade of C- or better in ICT 350V.

**Learning Outcomes**
1. Analyze networking concepts as they relate to hacking vulnerabilities.
2. Define contract requirements necessary to avoid legal liability during Ethical Hacking.
3. Employ tools and techniques to scan and do reconnaissance on potential targets.
4. Demonstrate use of vulnerability testing tools to identify vulnerabilities and exploits.
5. Identify the role of sniffers and session Hijacking in Ethical Hacking.
6. Demonstrate the use of Social Engineering tools and techniques used in Ethical Hacking.

**ICT 457. Introduction to Information Security Technology**
3 Credits (3)
This course provides an overview of security challenges and strategies of countermeasure in the information systems environment. Topics include definition of terms, concepts, elements, and goals incorporating industry standards and practices with a focus on availability, vulnerability, integrity and confidentiality aspects of information systems.

**Learning Outcomes**
1. Demonstrate an understanding of the information security concepts.
2. Demonstrate an understanding of the diversity of potential attacks against an organization.
3. Demonstrate an understanding of cryptographic techniques.
4. Demonstrate an understanding of authentication methods.
5. Demonstrate an understanding of access control systems.
6. Demonstrate an understanding of various network security controls.
7. Demonstrate an understanding of the legal, ethical, and professional issues in information security.

**ICT 458. Web Development and Database Applications**
3 Credits (3)
Design, plan, and build interactive and dynamic web applications. Topics include relational databases, object-oriented programming, and the application of backend frameworks.

**Prerequisite/Corequisite:** A grade of C- or better in ICT 362.

**Learning Outcomes**
1. Build knowledge of Web Servers.
2. Plan, design, and create code for backend web development.
3. Design, create, and access databases that support web applications.
4. Implement adequate security and authentication for the deployment of Web applications.

**ICT 460. Advanced Software Development Concepts**
3 Credits (3)
This course focuses on advanced software development concepts to help embed security into code, protecting software applications.

**Prerequisite:** A grade of C- or better in ICT 362.

**Learning Outcomes**
1. Application of best practices against software vulnerabilities.
2. Identification of code defects, bugs, and logic flaws.
3. Assessment and testing of code.
4. Utilization of secure code alternatives.
5. Code refactoring to improve design and structure and prevent vulnerabilities.

**ICT 462. Linux System Administration**
3 Credits (3)
Operating system applications and interfacing with an introduction to systems administration. Topics include Shell Programming, Programming Tools, Database Management, System Backups, Security, Setup and Maintenance of Linux Servers.

**Learning Outcomes**
1. Create a virtual environment on a host system using VirtualBox.
2. Develop single and multiple Linux Operating Systems within The VirtualBox Virtual Environment.
3. Select applications on production Linux Operating systems.
4. Support the operation of the Linux Operating system using System Administration Techniques.

**ICT 463. Enterprise Network Administration**
3 Credits (3)
Advanced methods and tools used to deploy, manage, and administer networked devices. May be repeated up to 3 credits.

**Prerequisite:** A grade of C- or better in ICT 377.

**Learning Outcomes**
1. Demonstrate the ability to use Software Versioning systems using Windows and Linux.
2. Apply best practices with versioning repositories when creating software.
3. Deploy single and clustered microservice containers to support a web application.
4. Use script-based code to deploy and configure a full stack web server.
5. Use infrastructure management software to deploy defined roles in multiple environments.

**ICT 467. Communication Network Security**
3 Credits (3)
The course provides a technical perspective on maintaining the security of communication network systems. It covers a wide range of technical issues, including wired, wireless and Internet communication fundamentals, communication network security mechanisms and configuration, standards and protocols, vulnerabilities, attacks and countermeasures.

**Prerequisite:** A grade of C- or better in both, ICT 320 and ICT 377.

**Learning Outcomes**
1. Demonstrate an understanding of key and basic communication network security concepts, terminologies, standards, issues, and policies.
2. Apply the principles of network security techniques such as Cryptography, Cryptanalysis, Biometrics, Watermarking, and Stenography.
3. Implement security techniques with commonly available network security software.
4. Examine the fundamentals of Wired and Wireless communication network systems including Cellular, Bluetooth, Wi-Fi, Internet, Cloud Networking, and the Internet of Things.
5. Explain the TCP/IP security protocols that pertain to communication network systems.
6. Explain the security attacks, threats, risks, mechanisms, and tools associated with and used for securing network devices especially mobile devices.
7. Demonstrate an understanding of the operation and countermeasures against Malwares in network systems and the implementation of intrusion detection and prevention, and firewall technologies.

**ICT 477. Computer Networking II**
3 Credits (3)
Advanced concepts in computer network design and applications including managing the campus network infrastructure (LANs and virtual...
LANs), network services (DNS and DHCP), network security as well as network monitoring.

**Prerequisite:** A grade of C- or better in either ICT 377 or E T 377 or CTEC 285.

**Learning Outcomes**

1. VLSM, Summarization, and the TCP/IP model.
2. Understanding of IPv6 basics
3. Configuration of routing protocols using IPv6
4. Configuration of advanced router configurations
5. Configuration of route redistribution, DHCP, DNS, NAT and PAT
6. Configure network security and Access Control Lists (ACLs)
7. Perform basic analysis of network data traffic
8. Create, test and troubleshoot software simulations (Cisco Packet Tracer)

**ICT 487. Data Security**

3 Credits (3)

This course explores the principles of information assurance, with emphasis on current threats and vulnerabilities to develop an information security plan to mitigate risk. Information security and assurance issues are explored, and a multidisciplinary approach is discussed that examines security policies, models, and mechanisms for confidentiality, integrity, and availability. Technical controls are emphasized.

**Prerequisite:** A grade of C- or better in both, ICT 320 and ICT 360.

**Learning Outcomes**

1. Demonstrate a basic understanding of security risk management.
2. Demonstrate basic cryptographic functionality, including symmetric ciphers, public-key encryption, digital signatures, hash functions, and related concepts.
3. Examine how basic cryptographic building blocks are combined to meet high-level security goals in protocols like SSL and IPsec.
4. Justify the use of particular technologies, settings, and parameters to meet specified security goals.
5. Evaluate the security of systems that use cryptography and secure communication techniques.
6. Explain how privacy issues can impact system design.

### Surveying Engineering (Geomatics) Courses

**SUR 143. Civil Drafting Fundamentals**

3 Credits (2+2P)

Introduction to drafting in the field of Civil Engineering. Drawings, projects, and terminologies related to topographic, contour drawings, plan and profiles, and street/highway layout. Restricted to Community Colleges only. Taught with E T 143 and DRFT 143.

**Prerequisite:** DRFT 109.

**Learning Outcomes**

1. Use appropriate drafting/technical terminology.
2. Identify of the different types of Civil Engineering work drawing plan sets.
3. Understanding and the use of the terminologies used in the industry.
4. Use AutoCAD Civil 3D.
5. Enter appropriate data into AutoCAD software in order to retrieve necessary outcomes.
6. Plot/Print different types of civil engineering working plans.
7. Read, interpret and understand engineering drawings.
8. Define and understand the different types of engineering drawings.

**SUR 222. Introduction to Geomatics**

3 Credits (2+3P)

Theory and practice of geomatics as applied to plane surveying in the areas of linear measurements, angle measurements, area determination, differential and trigonometric leveling, and topographic mapping.

**Prerequisite:** A grade of C- or better in MATH 1250G or higher.

**Learning Outcomes**

1. Perform basic distance and angular measurements.
2. Evaluate the quality of collected measurements.
3. Utilize a measuring tape.
4. Determine a plumb line.
5. Set up a level line.
6. Set up a tripod and total station.
7. Utilize a plumb rod.
8. Understand the role of surveying in civil engineering and construction-related fields.
9. Understand new technologies is surveying.

**SUR 285. Precise Digital Mapping**

3 Credits (3)

Photogrammetric Mapping Principles, digital sensor including optical cameras, terrestrial, surveying control, IMU & GPS integration, stereo photography, analytical triangulation, orthorectification, precision and accuracy of measurement systems, uAS (Small Unmanned Aerial Vehicles) applications to geospatial data collection and practical applications project flight/pre planning, sensor platform, FAA regulations and restrictions, introduction to laser scanning systems. Restricted to Las Cruces campus only.

**Learning Outcomes**

1. Understand the basic principles of photogrammetry.
2. Perform photo measurements and computation.
3. Be able to design aerial surveying projects.
4. Define the basic principles of analytical photogrammetry.
5. Explain the different steps in aerial triangulation.

**SUR 292. Legal Principles and Boundary Law I**

3 Credits (3)

Fundamentals of real property law; principles of land description; survey evidence and procedure in boundary determination, order of importance of conflicting elements; liability, ethical and professional principles in boundary surveying; NM professional practice act; NM Minimum Standards, contemporary issues in boundary determination.

**Prerequisite:** C- or better in SUR 222.

**Learning Outcomes**

1. Demonstrate an understanding of surveying boundary laws.
2. Describe procedures for locating real property boundaries.
3. Read, interpret, and write legal descriptions of real property.
4. Perform legal research of case and statutory law.
5. Communicate research findings through written and oral presentations.

**SUR 312. Public Land Survey System Boundaries**

3 Credits (3)

Fundamentals of the U.S. Public Land Survey System; rules for the survey of the public lands, field surveys; the rectangular system, corners,
monuments, evidence; dependent and independent resurveys, corner restoration; plats and field notes, patents.

**Prerequisite:** A grade of C- or better in SUR 222.

**Learning Outcomes**
1. Understand how the USPLSS was developed and used.
2. Develop the ability to locate and identify USPLSS survey monuments.
3. Recognize the need for restoring lost corners and apply proportionate methods.
4. Perform computations for simple PLSS section subdivisions.
5. Demonstrate an ability to read, write and interpret USPLSS legal descriptions.

**SUR 315. Precise Digital Mapping**
3 Credits (3)
Photogrammetric Mapping Principles, digital sensors including optical cameras, terrestrial, surveying control, IMU & GPS integration, stereo photography, analytical triangulation, orthorectification, precision and accuracy of measurement systems, sUAS (Small Unmanned Aerial Vehicles) applications to geospatial data collection and practical applications project flight/pre-planning, sensor platform, FAA regulations and restrictions, introduction to laser scanning systems.

**Learning Outcomes**
1. Understand the basic principles of photogrammetry.
2. Perform photo measurements and computation.
3. Be able to design aerial surveying projects.
4. Define the basic principles of analytical photogrammetry.
5. Explain the different steps in aerial triangulation.
6. Understand the basics of LiDAR surveys.

**SUR 328. Construction Surveying & Automation Technologies**
3 Credits (2+3P)

**Prerequisite:** A grade of C- or better in both, (SUR 222 or DRFT 222) and (MATH 1435 or MATH 1511G).

**Learning Outcomes**
1. Acquire the ability to answer test questions on professional surveying exams.
2. Develop the ability to appropriately collect, analyze, interpret and apply surveying and surveying-related data.
3. Develop the ability to recognize, analyze, and solve surveying and surveying-related problems.
4. Develop the ability to work on teams.

**SUR 351. Spatial Data Adjustment I**
3 Credits (3)
Theory of random error in observations/measurements. Use of statistics in spatial data analysis, statistical testing, advanced data structures. Emphasis on computer based problem solving and programming to solve spatial data problems.

**Prerequisite:** A grade of C- or better in the following: (SUR 222 or DRFT 222) and (MATH 1435 or MATH 1511G) and (A ST 311G or MATH 1390G).

**Learning Outcomes**
1. Acquire the ability to answer questions on professional surveying exams.
2. Acquire a sound and fundamental understanding of the mathematical principles underlying surveying measurements and computations.
3. Develop the ability to appropriately analyze, interpret, and apply survey and survey-related data.
4. Develop the ability to recognize, analyze, and solve survey and survey-related problems.

**SUR 361. Geodesy/Geodetic Control Surveying**
3 Credits (3)
Horizontal and vertical control network design and consideration. Understand ellipsoid, geoid, horizontal and vertical datum, coordinates, precise leveling, astronomic, establishment of state plane zones, understanding reporting. Transform data between geodetic Latitude/Longitude, state plane, ground data, perform geodetic computations, ability to design GPS networks utilizing CORS stations, network adjustments. Perform a control survey, process data, adjust network, and prepare control report with Meta-data.

**Prerequisite:** A grade of C- or better in the following: (SUR 222 or DRFT 222) and (MATH 1435 or MATH 1511G).

**Learning Outcomes**
1. Define the different coordinate systems and geometric models used to represent the shape of the Earth.
2. Be able to perform surveying computations on the sphere and ellipsoid.
3. Distinguish between the different map projections systems.
4. Explain the effects of gravity in survey measurements, especially in precise leveling.
5. Outline how earth motions affect surveying measurements and the different time systems.
6. Explicitly indicate which of the student outcomes listed in Criterion III or any other outcomes are addressed by the course.

**SUR 401. Ethics and Professionalism in Surveying and Mapping**
3 Credits (3)
Ethics as applied to the surveying profession. Includes case studies and problems. May be repeated up to 3 credits.

**Learning Outcomes**
1. An ability to communicate effectively with a range of audiences.
2. An ability to understand ethical and professional responsibilities and the impact of technical and/or scientific solutions in global, economic, environmental, and societal contexts.

**SUR 412. Advanced Topics in Boundary Surveying**
3 Credits (2+3P)
Advanced land boundary topics including water boundaries, mineral claims, Spanish and Mexican land grants, state and national boundaries. May be repeated up to 3 credits.

**Prerequisite:** A grade of C- or better in SUR 312.

**Learning Outcomes**
1. Identify land boundary topics

**SUR 450. Senior Project**
3 Credits (3)
Research project prepared by student. Includes class presentation. Students will learn how to research after the end of their formal education. Students must be in Senior Standing to enroll.

Learning Outcomes
1. An ability to identify, formulate, and solve broadly defined technical or scientific problems by applying knowledge of mathematics and science and/or technical topics to areas relevant to the discipline.
2. An ability to formulate or design a system, process, procedure or program to meet desired needs.
3. An ability to develop and conduct experiments or test hypotheses, analyze and interpret data and use scientific judgment to draw conclusions.
4. An ability to communicate effectively with a range of audiences.

SUR 451. Spatial Data Adjustment II
3 Credits (3)
Rigorous analysis of the theory of observations as applied to spatial data, application of least squares adjustments, ability to perform statistical analysis to determine accuracy of final product, constrained/free geospatial data integration, error ellipses, and pre-analysis of spatial data acquisition procedures.
Prerequisite: A grade of C- or better in SUR 351.
Learning Outcomes
1. Understand the theory of least squares as applied to survey measurements
2. Understand the relevance of weighting survey observations
3. Be able to adjust vertical, horizontal and 3D networks by least squares
4. Be able to transform coordinates between similar coordinate systems
5. Be able to analyze survey errors and detect survey blunders

SUR 452. Surveying Practicum
3 Credits (3)
Surveying practice under the direction of a licensed, professional land surveyor requiring an approved number of hours. Planned work between the student and the surveyor should be designed to be part of a project that integrates spatial data. An individualized syllabus should be developed collaboratively with the industrial partner and approved by the geomatics faculty. The final deliverable must be certified by the licensed professional land surveyor. A written report by the student is required. Credit is given to past work experience in cases where students can demonstrate that requirements for the practicum are met and should be approved by geomatics faculty.
Learning Outcomes
1. Demonstrate a level of technical competency, based upon completing the requirements of a geomatics technology curriculum.
2. Students are expected to successfully and professionally complete a "real" project. Additionally, student work is employed to assess most of the program's outcomes for program assess.

SUR 461. GNSS Positioning
3 Credits (2+3P)
Logistics of GNSS data collection, the GPS signal, codes and biases, error sources, differences between relative and autonomous GNSS positioning, code phase carrier phase, DGPS static and RTK surveys. Geodetic and GPS standards and specifications GNSS data processing, network adjustments, and evaluation of spatial data accuracy practical applications of GNSS May be repeated up to 3 credits.
Prerequisite: A grade of C- or better in SUR 361.

Learning Outcomes
1. Outline the relationship of geodesy to satellite positioning systems.
2. Describe the procedure of GNSS surveys.
3. Differentiate between different GNSS surveying techniques.
4. Identify GPS standards and specifications.

SUR 464. Legal Principles and Boundary Law II
3 Credits (3)
Advanced boundary determination, evaluation of written and field evidence. Advanced application of PLSS subdivision, special surveys (water, mineral, and reservations), NM Standards, and laws. Preparation of boundary survey plats and reports. ALTA/NSPS Surveys and Standards.
Prerequisite: A grade of C- or better in both, SUR 292 and SUR 312.
Learning Outcomes
1. Application of the rules of evidence as concerning to boundary surveys.
2. Demonstrate understanding between original, resurveys, and retracements.
3. Acquire the ability to perform advanced section subdivisions.
4. Understand the issues of professional liability and ethical practice.

SUR 485. Emerging Techniques in Geospatial Technologies
3 Credits (3)
Hydrographic, Altimetry, Space borne Imaging Systems, Mobile Mapping Systems, Mining and Agriculture Surveying Principles, Ranging technologies and applications such as LiDAR, SAR, and Bathymetry. Principles of terrestrial & airborne laser scanning, point cloud data management & extraction, scan registration and processing, and advanced ranging data acquisition systems. Consent of Instructor required.
Prerequisite(s): Senior standing.
Learning Outcomes
1. Outline the different techniques in mapping seabed.
2. Describe the procedure of LIDAR mapping.
3. Outline the remote sensing technologies used in mapping.
4. Recognize the UAV mapping technologies.
5. Produce surveying products from new technologies in geomatics.

Civil Engineering Technology - Bachelor of Science in Engineering Technology

The Civil Engineering Technology (CET) program at NMSU will prepare graduates with the technical and managerial skills necessary to enter careers in planning, designing, constructing, and operating the built environment and global infrastructure. Graduates with the baccalaureate degree have strengths in their knowledge of design, construction, testing, and operation of buildings and infrastructure with the ability to produce and utilize construction documents, analyze and design systems, specify project methods and materials, perform cost estimates and analyses, and manage technical activities in support of civil projects. Graduates from our ABET-accredited CET program can pursue professional licensure and become professional engineers.

The Civil Engineering Technology program is accredited by the Engineering Technology Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the General Criteria and Program Criteria for Civil Engineering Technology and Similarly Named Programs.

Concentrations

• Renewable Energy Technologies (https://catalogs.nmsu.edu/nmsu/engineering-engineering-technology-surveying/engineering-technology-civil-renewable-energy-tech-bachelor-science-engineering-technology/)
• Transportation Technology (https://catalogs.nmsu.edu/nmsu/engineering-engineering-technology-surveying/engineering-technology-civil-transportation-tech-bachelor-science-engineering-technology/)

Minors

• Renewable energy (p. 1053)
• Geomatics (p. 1052)

Types of jobs that graduates pursue in this field

• Civil Engineer
• Construction Manager
• Project Engineer
• Project Manager
• Design Engineer
• Construction Inspector
• Owner
• Estimator
• Distribution and Sales

Civil Engineering Technology- (No Concentration)

Students must complete all University degree requirements, which include General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 123 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits but may be needed to take the necessary English and Mathematics coursework.

### Second Language: (not required)

| Electives, to bring the total credits to 123 | 0 |

**Total Credits**: 123-125

---

1. Students may need to take any prerequisites needed to enter MATH 1511G Calculus and Analytic Geometry I/MATH 1435 Applications of Calculus I or MATH 1521G Calculus and Analytic Geometry II/MATH 1440 Applications of Calculus II before enrolling in either option of coursework.

*For students wishing to pursue a technical master’s degree, MATH 1511G Calculus and Analytic Geometry I and MATH 1521G Calculus and Analytic Geometry II are recommended and will satisfy both the Area II and General Education Elective requirements. Students who take MATH 1435 Applications of Calculus I and MATH 1440 Applications of Calculus II, will need to have an exception made for their degree audit.*

2. See the General Education (p. 227) section of the catalog for a full list of courses.

3. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

4. Concentrations are "optional" educational sequences that students may choose to focus on particular areas related to CET. Concentrations may often be done without additional credits by judicious use of electives and other optional course requirements.

---

### A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

For students wishing to pursue a technical master's degree, MATH 1511G Calculus and Analytic Geometry I and MATH 1521G Calculus and Analytic Geometry II are recommended and will satisfy both the Area II and General Education Elective requirements.
Students who take MATH 1435 Applications of Calculus I and MATH 1440 Applications of Calculus II, will need to have an exception made for their degree audit.

*For either Mathematics course selection students may need to take any prerequisites needed to enter the class(es) first.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Civil Engineering Technology (Transportation Technology) - Bachelor of Science in Engineering Technology

Students must complete all University degree requirements, which include: General Education requirements, Viewing A Wider World requirements, and elective credits to total at least 123 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Electronics and Computer Engineering Technology - Bachelor of Science in Engineering Technology

The Electronics and Computer Engineering Technology (https://et.nmsu.edu/electronics-and-computer-engineering-technology/) (ECET) program includes the design, building, and testing of a wide range of electronic and computer circuits and systems, including hardware/software digital systems, microprocessor systems, analog circuits, renewable energy technologies, micro-controllers, communications devices, applied power systems, signal processing and filter circuits, instrumentation systems, and computer networks. Our program includes a diverse exposure to programming languages, as well as hardware description languages, such as VHDL.

The Electronics and Computer Engineering Technology program is accredited by the Engineering Technology Accreditation Commission of ABET, https://www.abet.org, under the General Criteria and Program Criteria for Computer Engineering Technology and Similarly Named Programs and Electrical/Electronics Engineering Technology and Similarly Named Programs.

**Engineering Technology - Electronics and Computer (No Concentration)**

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World, credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits but may be needed in order to take the necessary English and Mathematics coursework.

3 Students must select one of the two PHYS course sequences, from the following, in order to meet the 8 credits of the Area III: Laboratory Sciences requirement.

Algebra-Based Sequence
- PHYS 1230G Algebra-Based Physics I
- PHYS 1230L Algebra-Based Physics I Lab

Calculus-Based Sequence
- PHYS 1310G Calculus-Based Physics I
- PHYS 1310L Calculus-Based Physics I Lab

4 Concentrations are "optional" educational sequences that permit students to focus on particular areas related to their major. Concentrations "may" often be done without additional credits by judicious use of electives and other optional course requirements.

Geomatics - Bachelor of Science in Geomatics

Geomatics (https://et.nmsu.edu/academics%20/geomatics-viewing-wider-world/#associatesbachelorsgetext) is a rapidly developing engineering discipline that focuses on acquiring and analyzing precise spatial information. Geomatics engineers use a variety of technologies such as Unmanned Aerial Vehicles, Global Navigation Satellite Systems, High-Definition 3D Laser scanners, High-resolution satellite images, and Geographic Information Systems. They measure terrestrial
and three-dimensional positions of points on, above, and below the earth’s surface and the distance and angles between them at a high level of precision. Geomatics engineers aid in the design of infrastructure including roads, bridges and legal boundaries for ownership. They provide precise data for natural resource managers, subdivision developers, and coastal monitoring systems.

The program is designed to provide cutting-edge industrial needs as well as to meet the educational requirements for registration as a Professional Land Surveyor in different states.

The mission of the Department of ETSE is to provide men and women with the rigorous, fundamental education needed to enter and succeed in the Geomatics and related professions. To accomplish this mission, the department will introduce students to the theory and application of recognized geomatics principles. The Geomatics degree is offered online. Students can start as freshmen or transfer.

**Requirements (120 Credits)**

Students must complete all University degree requirements, which include General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits but may be needed to take the necessary English and Mathematics coursework.

Students must also take the Fundamentals of Surveying examination before graduation.

**Prefix** | **Title** | **Credits**
--- | --- | ---
**General Education** |  | 10
**Area I: Communications** |  | 3-4
English Composition - Level 1 |  | 2
English Composition - Level 2 |  | 2
Oral Communication |  | 2
**Area II: Mathematics** |  | 8
MATH 1511G | Calculus and Analytic Geometry I | 2
or MATH 1435 | Applications of Calculus I | 2

1. See the General Education (p. 227) section of the catalog for a full list of courses. See the Viewing a Wider World (p. 231) section of this catalog for a full list of courses.

2. Mathematics courses require math placement or taking prerequisites before enrollment.

3. Transfer students must complete college-level work that includes General Education Area I, IV, V, and VI (19 credit: see the General Education ([https://catalogs.nmsu.edu/nmsu/general-education-viewing-wider-world/#viewingawiderworldtext](https://catalogs.nmsu.edu/nmsu/general-education-viewing-wider-world/#viewingawiderworldtext) section of this catalog for a full list of courses), Calculus I and II (6-8 credits), Physics I (4 credits), elective science with lab (4 credits), computer drafting (3 credits), statistics (3 credits, 200-level of above), computer programming (3-4 credits), plane surveying (3 credits), introduction to GIS (6-8 credits), surveying/civil drafting (3 credits), and approved electives to bring total transfer credits to 66.

4. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their academic advisor.

**A Suggested Plan of Study for Students**

The contents and order of this roadmap may vary depending on the students’ transfer credits, some courses may need to be completed in addition to the ones listed below. It is only a suggested plan of study for students and is not intended as a contract. Course availability may
vary from fall to spring semester and may be subject to modification or change.

## Information and Communication Technology - Bachelor of Information and Communication Technology

The Bachelor of Information and Communication Technology (https://et.nmsu.edu/academics%20/information-communication-technology.html) degree focuses on designing, implementing, and managing various information systems. The curriculum includes the fundamentals of operating systems, system integration, computer networking, software development, security, cloud technologies, and project management practices. Advanced Information Technology topics are also included and differently emphasized according to the selected degree concentration:

- No Concentration (p. 1036) (this option) - provides the ability to choose from various advanced courses on Cyber Defense, Network Technologies, and Software Development topics.
- Cyber Defense Concentration (https://catalogs.nmsu.edu/nmsu/engineering-engineering-technology-surveying/information-and-communication-technology-cyber-defence-bict/) - focused on cyber security and defense, including ethical hacking and digital forensics;
- Network Technologies Concentration (p. 1043) - focused on computer network design, configuration, and security;
- Software Development Concentration (p. 1046) - focused on the design, application, deployment, and maintenance of software;

The ICT program is a distance education program and does not require on-campus visits. Students who are successful in distance education programs typically are self-motivated, do not rely heavily on face-to-face instruction, work independently, and can remain on schedule. Students must have familiarity with and access to:

- a high-speed Internet connection,
- a sound card, 12G of RAM minimum,
- a microphone/Webcam,
- Microsoft Operating System 8.1 or newer and Office ®.

The ICT program is accredited under NMSU's umbrella accreditation by the Higher Learning Commission (https://accreditation.nmsu.edu/) of the North Central Association of Colleges and Schools. Students must complete all university degree requirements, including General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Requirements may be met with transfer credits from any previous program or institution.

## Pathway: 4-year Bachelor's Degree

This pathway is designed with the traditional student in mind. Students have the flexibility to pursue the degree as a main campus student, or they may choose to complete the degree online.
See the General Education (p. 231) section of the catalog for a complete list of courses. The number of credits provided assumes MATH 1220G College Algebra placement or higher.

The ICT 350V Introduction to Personal Computer Security and Privacy course is part of the required curriculum for the ICT degree. It does not count towards the Viewing a Wider World (p. 231) Requirements (6 credits). Visit the catalog’s Viewing a Wider World (p. 231) section for a complete list of Viewing a Wider World (p. 231) Requirements. These courses will form part of the required 48 upper-level credit hours taken as part of the ICT program at NMSU.

The judicious selection of Technical Electives may lead to an ICT concentration on Cyber Defense, Network Technologies, or Software Development without the need for additional credits. Concentrations are optional educational sequences that students may choose to focus on in IT-related areas. A Technical Electives pre-approved list is provided in this catalog.

Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, or minor coursework. The amount indicated in the requirements list is needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may need to complete more or less on a case-by-case basis, and students should discuss elective requirements with their academic advisor.

### Pathway: 2+2 Bachelor's Completion Degree

1. The provided selection of Technical Electives will lead to an ICT concentration on **Cyber Defense**, one of the three concentration options. See the NMSU Catalog for information on other concentration options. Concentrations are optional educational sequences that students may choose to focus on in IT-related areas. A Technical Electives pre-approved list for each concentration is provided in this catalog.

2. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, or minor coursework. The amount indicated in the requirements list is needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may need to complete more or less on a case-by-case basis, and students should discuss elective requirements with their academic advisor.

3. The provided selection of Technical Electives will lead to an ICT concentration on **Cyber Defense**, one of the three concentration options. 4. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, or minor coursework. The amount indicated in the requirements list is needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may need to complete more or less on a case-by-case basis, and students should discuss elective requirements with their academic advisor.

### A Suggested Plan of Study for Students

These roadmaps assume student placement in MATH 1220G College Algebra or higher. The contents and order of this roadmap may vary depending on initial student placement in mathematics and previous coursework. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring and summer semester and may be subject to modification or change.

All Information and Communication Technology requirements must be completed with a C- or higher grade.

Credits 12

Total Credits 120

1 See the General Education (p. 231) section of the catalog for a complete list of courses. The number of credits provided assumes MATH 1220G College Algebra placement or higher.
2 The ICT 350V Introduction to Personal Computer Security and Privacy course is part of the required curriculum for the ICT degree. It does not count towards the Viewing a Wider World (p. 231) Requirements (6 credits). Visit the catalog’s Viewing a Wider World (p. 231) section for a complete list of Viewing a Wider World (p. 231) Requirements. These courses will form part of the required 48 upper-level credit hours taken as part of the ICT program at NMSU.
3 The provided selection of Technical Electives will lead to an ICT concentration on Cyber Defense, one of the three concentration options. See the NMSU Catalog for information on other concentration options. Concentrations are optional educational sequences that students may choose to focus on in IT-related areas. A Technical Electives pre-approved list for each concentration is provided in this catalog.
4 Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, or minor coursework. The amount indicated in the requirements list is needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may need to complete more or less on a case-by-case basis, and students should discuss elective requirements with their academic advisor.

Information and Communication Technology (Network Technologies) - Bachelor of Information and Communication Technology (120 credits)

The Bachelor of Information and Communication Technology (ICT) (https://et.nmsu.edu/academics%20/information-communication-technology.html) degree focuses on designing, implementing, and managing various information systems. The curriculum includes the fundamentals of operating systems, system integration, computer networking, software development, security, cloud technologies, and project management practices. Advanced Information Technology topics are also included and differently emphasized according to the selected degree concentration:

- No Concentration (p. 1036) - provides the ability to choose from various advanced courses on Cyber Defense, Network Technologies, and Software Development topics.
- Cyber Defense Concentration (https://catalogs.nmsu.edu/nmsu/engineering/engineering-technology-surveying/information-and-
  communication-technology-cyber-defence-bict/) - focused on cyber security and defense, including ethical hacking and digital forensics;
- Network Technologies Concentration (p. 1043) (this option) - focused on computer network design, configuration, and security;
- Software Development Concentration (p. 1046) - focused on the design, application, deployment, and maintenance of software;

The ICT program is a distance education program and does not require on-campus visits. Students who are successful in distance education programs typically are self-motivated, do not rely heavily on face-to-face instruction, work independently, and can remain on schedule. Students must have familiarity with and access to:

- a high-speed Internet connection,
- a sound card, 12G of RAM minimum,
- a microphone/Webcam,
- Microsoft Operating System 8.1 or newer and Office ®.

The ICT program is accredited under NMSU’s umbrella accreditation by the Higher Learning Commission (https://accreditation.nmsu.edu/) of the North Central Association of Colleges and Schools. Students must complete all university degree requirements, including General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Requirements may be met with transfer credits from any previous program or institution.

Pathway: 4-year Bachelor's Degree

This pathway is designed with the traditional student in mind. Students have the flexibility to pursue the degree as a main campus student, or they may choose to complete the degree online.

---

1. See the General Education (p. 231) section of the catalog for a complete list of courses. The number of credits provided assumes MATH 1220G College Algebra placement or higher.

2. The ICT 350V Introduction to Personal Computer Security and Privacy course is part of the required curriculum for the ICT degree. It does not count towards the Viewing a Wider World (p. 231) Requirements (6 credits). Visit the c (p. 231) catalog’s Viewing a Wider World (p. 231) section for a complete list of Viewing a Wider World Requirements.

3. The provided selection of Technical Electives will lead to an ICT concentration on Software Development, one of the three concentration options. See the NMSU Catalog for information on other concentration options. Concentrations are optional educational sequences that students may choose to focus on in IT-related areas. A Technical Electives pre-approved list for each concentration is provided in this catalog.

4. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, or minor coursework. The amount indicated in the requirements list is needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may need to complete more or less on a case-by-case basis, and students should discuss elective requirements with their academic advisor.

Pathway: 4-yr Bachelor's Degree
A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra. The contents and order of this roadmap may vary depending on initial student placement in mathematics and previous English coursework that was transferred in. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

### Mechanical Engineering Technology - Bachelor of Science in Engineering Technology

Mechanical Engineering Technology [link](https://et.nmsu.edu/academics%20/mechanical-engineering-technology.html) MET [link](https://et.nmsu.edu/academics%20/mechanical-engineering-technology.html) majors learn theory and applications in the fields of manufacturing, product design and development, power systems, machinery, and fluid technology. Our students take courses in mechanisms and machines, computer-aided modeling, heat transfer, and instrumentation, to name a few. They find employment in designing and testing tools, engines, machines, and other complex mechanical devices. MET represents one of the broadest engineering technology disciplines. Our MET students also learn by designing and racing mini-baja cars, designing and constructing machines to help our farmers, and even building systems in other countries.

The Mechanical Engineering Technology program is accredited by the Engineering Technology Accreditation Commission of ABET, [link](https://www.abet.org/), under the General Criteria and Program Criteria for Mechanical Engineering Technology and Similarly Named Programs.

1 See the General Education (p. 227) section of the catalog for a full list of courses. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
2 Students may need to take any prerequisites needed to enter MATH 1511G Calculus and Analytic Geometry I/MATH 1435 Applications of Calculus I or MATH 1521G Calculus and Analytic Geometry II/MATH 1440 Applications of Calculus II before enrolling in either option of coursework.
3 For students wishing to pursue a technical master’s degree, MATH 1511G Calculus and Analytic Geometry I and MATH 1521G Calculus and Analytic Geometry II are recommended and will satisfy both the Area II and General Education Elective requirements. Students who take MATH 1435 Applications of Calculus I and MATH 1440 Applications of Calculus II, will need to have an exception made for their degree audit.
4 Concentrations and Minors are ‘optional’ educational sequences that students may choose to focus in particular areas related to their major. Concentrations and Minors may often be done without additional credits by judicious use of electives and other optional course requirements.
A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

First Year
Fall
ET 101 Introduction to Engineering Technology and Geomatics 1
ENGL 1110G Composition I (Area I) 1 4
ENGR 110 Introduction to Engineering Design 3
ENGR 120 DC Circuit Analysis 4
ENGR 190 Introduction to Engineering Mathematics 4

Credits 16

Spring
Area IV: Social/Behavioral Sciences (see recommended list) 1 3
CHEM 1120G Introduction to Chemistry Lecture and Laboratory (non majors) 4
COMM 1115G Introduction to Communication (Area I) 3
ET 182 Introduction to Digital Logic 2
MATH 1435 Applications of Calculus I 2 or Calculus and Analytic Geometry I 3 - 4
or MATH 1511G

Credits 15 - 16

Second Year
Fall
ENGR 140 Introduction to Programming and Embedded Systems 4
ENGR 233 Engineering Mechanics I 3
MATH 1440 or MATH 1521G Applications of Calculus II or Calculus and Analytic Geometry II 3 - 4
PHYS 1230G Algebra-Based Physics I 4
& PHYS 1230L or PHYS 1310G and PHYS 1310L

Credits 14 - 15

Spring
ET 184 Applied AC Circuits 2
ET 210 Advanced 3-D Modeling (Solid Works) 3
ET 217 Manufacturing Processes & 217 L and Manufacturing Processes Lab 4
ENGR 234 Engineering Mechanics II 3
PHYS 1240G Algebra-Based Physics II 4
& PHYS 1240L or PHYS 1320G and PHYS 1320L

Credits 16

Third Year
Fall
Area V: Humanities (see recommended list) 1 3
AST 311 Statistical Applications 3
ET 306 Fundamental and Applied Thermodynamics and Thermodynamics Lab 4
ET 308 Fluid Technology and Fluid Technology Lab 4

Credits 16

Fourth Year
Fall
Area VI: Creative and Fine Arts (see recommended list) 1 3
ET 426 Analysis and Design of Machine Elements 3
ENGR 401 Engineering Capstone I 3
IE 451 Engineering Economy 3
Technical Elective (from pre-approved list) 4 3

Credits 15

Spring
ET 402 Instrumentation 3
ET 410 Senior Seminar 1
ENGR 402 Engineering Capstone II 3
Technical Elective (from pre-approved list) 4 3
Viewing a Wider World (See recommended list) 1 3

Credits 13

Total Credits 122 - 124

1 See the General Education (p. 227) section of this catalog for a full list of courses. See the Viewing a Wider World (p. 231) section of this catalog for a full list of courses.
2 Students may need to take any prerequisites needed to enter MATH 1511G Calculus and Analytic Geometry I/MATH 1435 Applications of Calculus I or MATH 1521G Calculus and Analytic Geometry II/MATH 1440 Applications of Calculus II before enrolling in either option of coursework.
*For students wishing to pursue a technical master’s degree, MATH 1511G Calculus and Analytic Geometry I and MATH 1521G Calculus and Analytic Geometry II are recommended and will satisfy both the Area II and General Education Elective requirements. Students who take MATH 1435 Applications of Calculus I and MATH 1440 Applications of Calculus II, will need to have an exception made for their degree audit.
3 Elective credit may vary based on Math course selection, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
4 Concentrations and Minors are ‘optional’ educational sequences that students may choose to focus in particular areas related to their major. Concentrations and Minors may often be done without additional credits by judicious use of electives and other optional course requirements.
Digital Electronic Applications - Undergraduate Minor

This minor is intended for non-ECET majors.

1. A grade of C- or better is required in each course (may not be taken S/U).
2. Listed courses may have additional prerequisites. Non-majors may contact the instructor to request a prerequisite waiver. Prerequisites waiver(s) may or may not be granted by the instructor.
3. Engineering Technology students can meet most of the requirements for this minor by judicious selection of their electives. Consult with a faculty advisor.

Geomatics - Undergraduate Minor

Geomatics involves the application of knowledge to the analysis, design and execution of mapping, geomatics, geospatial information systems, and surveying. When performing this work, professionals must have an understanding of: the science of geomatic measurement and analysis; the legal principles of boundary location; the laws related to boundaries and land use; and applicable mathematical and computational theories and principles. Geomatics is made up of positional accuracy, land planning and development concepts pertinent to subdivision science. Geomatics professionals work for private surveying or engineering firms, for City, County, State or Federal Highway Departments, for State Lands Commissions, for the US Forest Service and for the US Bureau of Land Management, among others.

The mission of the Department of ETSE is to provide students with the rigorous, fundamental education needed to enter and succeed in the Geomatics and related professions. To accomplish this mission, the department will introduce students to the theory and application of recognized geomatics principles.

A grade of C- or better is required in each course (may not be taken S/U).

2. Listed courses may have additional prerequisites. Non-majors may contact the instructor to request a prerequisite waiver. Prerequisites waiver(s) may or may not be granted by the instructor.

3. Engineering Technology students can meet most of the requirements for this minor by judicious selection of their electives. Consult with a faculty advisor.

Manufacturing - Undergraduate Minor

The Manufacturing Minor provides students with an augmenting skillset to better facilitate entry-level employment in manufacturing related industries. Students completing the Minor also acquire specialized knowledge needed for successful pursuit of a career in the manufacturing sector.

Typical skills gained from Manufacturing Minor coursework include: management and coordination of manufacturing processes, design for manufacturing, fabrication and assembly, product design and development, product specification, operations planning, scheduling, material handling, quality control, testing, evaluation and product validation.

A grade of C- or better is required in each course (may not be taken S/U). All prerequisites must be met before enrolling in a course. Engineering Technology students can meet most of the requirements for this minor by judicious selection of their electives.

Prefix | Title | Credits
--- | --- | ---
Required Courses: Select one manufacturing course with any accompanying/embedded lab from the following:
ET 217 | Manufacturing Processes | 3-4
E 217 L | Manufacturing Processes Lab |
IE 217 | Manufacturing Processes |
Select one from the following:
MGMT 335V | Business and Government | 3
MGMT 344 | Production and Operations Management |
ET 305 | Introduction to Product Design | 3
ET 317 | Advanced Manufacturing and Design | 3
ET 480 | Innovation and Product Development | 3
IE 424 | Manufacturing Systems |
Total Credits | 18-19

1. Not available for ECET majors as a required course. Select from other choices
2. Must be related to a renewable energy field and preapproved by faculty advisor.
3. If the selected class is outside the student’s college it may also satisfy a Viewing a Wider World requirement.

Industrial Engineering Undergraduate Program Information

Industrial engineers design, develop, install, and improve integrated systems. Integrated systems can involve people, equipment, information, financial resources, software, materials, or energy. Industrial engineers work in a variety of manufacturing, health care, utility, retail, government, and research settings, therefore the tools and methods of the industrial engineer are both varied and broad. Industrial Engineers use knowledge and skills in engineering, mathematics, and physical and social sciences. They also use principles and methods of engineering analysis and design to monitor and improve systems. New Mexico State University’s undergraduate degree program in Industrial Engineering prepares
students to join the workforce or pursue graduate education while setting the foundation for lifelong learning.

Specifically, within 2-3 years of graduation, graduates of the program will have:

- successfully applied various industrial Engineering techniques in an integrated fashion to solve real-world problems in process design and/or improvement;
- been engaged in a successful career sustained by life-long learning experiences

In addition, the Engineering Accreditation Commission of ABET, Inc. criteria in conjunction with the Institute of Industrial Engineers, requires that:

- baccalaureate degree graduates will be able to demonstrate the ability to design, develop, implement, and improve integrated systems that include people, materials, information, equipment, and energy;
- industrial engineering curricula include in-depth instruction allowing students to accomplish the integration of systems using appropriate analytical, computational, and experimental practices; and
- that faculty teaching in industrial engineering departments shows evidence of understanding professional practice and staying current in their respective professional areas. Program faculty must have a responsibility and sufficient authority to define, revise, implement, and achieve program objectives.

**Master’s Accelerated Program:** The Master’s Accelerated Program (MAP) option provides excellent opportunities for academically qualified undergraduate students to begin working on a master’s degree during their junior year and senior year. The student must obtain prior approval from the department head before starting the MAP. Note that the MAP is only applicable if the student has not yet completed a bachelor’s degree.

**Graduate Program Information**

The Department of Industrial Engineering offers graduate work leading to the degrees of Master of Engineering in Industrial Engineering (MEIE), Master of Science in Industrial Engineering (MSIE), and Doctor of Philosophy (Ph.D.) with a specialization in industrial engineering. Areas of emphasis include

- operations research and simulation analytics,
- manufacturing systems,
- quality and reliability engineering,
- engineering management and systems engineering.

Departmental admission requirements in addition to those of the Graduate School must be considered on an individual basis because of the diversity of backgrounds of applicants in the program. An applicant should meet or correspond directly with the department as a first step in determining his or her specific admission status. Applicants should present mathematics preparation equivalent to 9 credits of calculus for engineers, 3 credits of differential equations, and 3 credits of calculus-based probability and statistics.

The MEIE is a Professional Master’s degree targeting a working professional who wants to pursue a Master’s degree in Industrial Engineering. The minimum credit-hour requirements for the MEIE degree may be met in the following way:

- 30-semester credits of approved coursework.

The MSIE is a research-oriented degree. The minimum credit-hour requirements for the MSIE degree may be met in any of the following ways:

- 24-semester credits approved course work and 6-semester credits of thesis (IE 599 Master’s Thesis) for a total of 30-semester credits or
- 27-semester credits approved course work and 3-semester credits of project (IE 598 Special Research Programs) for a total of 30-semester credits.

Approved coursework must meet all requirements of the Graduate School, represent a consistent master’s program in relation to a student’s graduate study goals as determined through consultation with the graduate program adviser, and be approved by a program committee of the graduate faculty of the department. Programs in the focus areas of operations research and simulation analytics, manufacturing systems, quality and reliability engineering, or engineering management and systems engineering can be developed with the aid of a faculty advisor.

Departmental facilities and equipment are available to support the research efforts of graduate students, including computer terminals and laboratories. In addition to departmental facilities, supporting facilities such as the Aggie Innovation Space (AIS) and interdisciplinary research clusters are available for research work.

The Ph.D. program is research-oriented with the final product being the dissertation. The general information (p. 31) chapter in this catalog describes the Ph.D. degree program. The Ph.D. in Industrial Engineering also includes the following requirements:

- the coursework must include at least 12 credits at the 500 level in a related field,
- 6 credits of 600-level research courses covering two areas, and
- 18 credits of 700-level courses following successful completion of the comprehensive examination.

The department does not have any foreign language or research tool requirements. Interested individuals should correspond directly with the department to determine eligibility for admission.

**Degrees for the Department**

**Bachelor Degree(s)**

- Industrial Engineering - Bachelor of Science in Industrial Engineering (p. 1059)

**Master Degree(s)**

The Master of Science in Industrial Engineering degree is a research-oriented degree. If you are interested in pursuing an advanced degree for a career in the engineering sciences or in preparation for a Ph.D., our MS degree is for you. The Master of Engineering in Industrial Engineering is the coursework-only degree. It is a **Professional Master's degree** targeting a working professional who wants to pursue a Master’s degree in Industrial Engineering at New Mexico State University.

- Industrial Engineering - Master of Engineering in Industrial Engineering (p. 154)
- Industrial Engineering - Master of Engineering in Industrial Engineering (Online) ([https://catalogs.nmsu.edu/global/nmsu-global/industrial-engineering-meie-online/](https://catalogs.nmsu.edu/global/nmsu-global/industrial-engineering-meie-online/))

Hansuk Sohn, Department Head

**Professors**

**Associate Professors** Hansuk Sohn (Department Head), John Mullen, Raja Jayaraman

**Assistant Professors** Chaitanya Mahajan

**Professor of Practices** Manuel Ivan Rodriguez Borbon, Salvador Rodriguez, Edward Kennedy

**Professor Emeritus** Ed Pines

H. Sohn, Department Head, Ph.D. (University of Iowa) – Combinatorial optimization, Operations Research applications in logistics, transportation, and health systems; J. Mullen, Ph.D. (Iowa State) – Stochastic processes, quality, improvement, production system design; R. Jayaraman, Ph.D. (Texas Tech) – Digital supply chain, applied Operations Research, healthcare systems engineering; C. Mahajan, Ph.D. (Rochester Institute of Technology) – Additive manufacturing, computer integrated manufacturing, manufacturing systems; M. I. Rodriguez Borbon, Ph.D. (NMSU) – Experimental statistics, reliability, degradation analysis, survival analysis, lifecycle analysis; Salvador “Sal” Rodriguez, MS (NMSU) – Conceptual, Developmental and Operational Test & Evaluation, and Project Management; Edward “Eddie” Kennedy, Ph.D. (NMSU) – Machine learning, data analytics, supply chain management; E. Pines, Ph.D. (Penn State) – Quality and continuous improvement, technology policy;

**Industrial Engineering Courses**

**I E 151. Computational Methods in Industrial Engineering**
3 Credits (3)
History, social implications, and application of computers and an introduction to computer programming, word processing, and database management systems. Satisfies General Education computer science requirement.

**Prerequisite:** MATH 1220G.

**I E 200. Special Problems-Sophomore**
1-3 Credits
Directed individual projects. May be repeated for a total of 3 credits.

**Prerequisite:** consent of faculty member.

**I E 217. Manufacturing Processes**
3 Credits (2+3P)
Introduction to manufacturing and processing, including: casting, forming, and machining. Emphasis on creating products with the appropriate techniques. Crosslisted with: E T 217.

**Prerequisite(s):** A grade of C- or better in either E T 110 or ENGR 110 and C- or better in MATH 1220G.

**Learning Outcomes**
1. Identify the different manufacturing processes and their applications.
2. Use, set up, and calibrate measuring tools.
3. Apply geometric tolerances to engineering drawings.
4. Demonstrate basic knowledge of materials and material properties.
5. Demonstrate basic knowledge of GM codes and their application.
6. Proficiently use CAM packages such as SolidWorks CAM.
7. Identify different tooling, their use, and manufacturing application.

**I E 300. Special Problems-Junior**
1-3 Credits
Directed individual projects. May be repeated for a total of 3 credits.

**Prerequisite:** consent of faculty member.

**I E 311. Engineering Data Analysis**
3 Credits (3)
Methodology and techniques associated with identifying and analyzing industrial data.

**Prerequisite:** C- or better in MATH 1521G or MATH 1521H or ENGR 190.

**Learning Outcomes**
1. Ability to correctly interpret statistical reports
2. Ability to correctly identify and solve problems involving continuous and discrete probability and random variables.
3. Ability to correctly analyze random samples using methods that include: point estimates, confidence intervals, tests of hypothesis, analysis of variance (ANOVA), and linear regression.

**I E 316. Methods Engineering**
3 Credits (2+3P)
Methods analysis and design. Work measurement techniques. Job evaluation and wage incentive methods. May be repeated up to 3 credits.

**Prerequisite(s):** I E 217, ENGR 110.

**Corequisite:** I E 311.

**Learning Outcomes**
1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
5. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

**I E 351. Applied Problem Solving in Industrial Engineering**
3 Credits (3)
Application of computational techniques to engineering problems including the use of commercial programs in statistics and applied mathematics. Restricted to majors.

Corequisite(s): I E 311.

I E 365. Quality Control
3 Credits (3)
Statistical analysis of quality in manufacturing. Acceptance sampling and control charts.

Prerequisite: I E 311 or equivalent.

I E 375. Manufacturing Processes II
3 Credits (3)
Review of basic manufacturing processes. Advanced topics in casting, forming, machining and joining; major process parameters; economics of processes.

Prerequisite: I E 217 or E T 217.

I E 400. Undergraduate Research
1-3 Credits
May be repeated for a maximum of 6 credits.

Prerequisite: consent of faculty member.

I E 411. Occupational Safety
3 Credits (3)
Practical methods to improve safety in the workplace. Topics include OSHA and other regulations, hazard recognition, assessment and control, industry standards, risk assessment and safety management. Material is applicable to a variety of workplace settings. This course is intended for College of Engineering students who have completed their lower-division requirements in mathematics, engineering, technology, and basic science. Same as I E 561 with differential assignments. Prerequisite: Junior standing

I E 412. Design for Manufacturing and Assembly
3 Credits (3)
Engineering methodology focusing on reducing time-to-market and total production costs by prioritizing both the ease of manufacture for the product's parts and the simplified assembly of those parts into the final product.

Prerequisite: (ENGR 217 or I E 217) and I E 316.

Learning Outcomes
1. The ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. The ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
3. The ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
4. The ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

I E 413. Engineering Operations Research I
3 Credits (3)
Deterministic operations research modeling including linear and integer programming.

Prerequisite: MATH 1521G or MATH 1521H or ENGR 190.

Corequisite: MATH 480 or MATH 2415.

Learning Outcomes
1. Ability to model optimization problems that can be solved by linear optimization.
2. Ability to solve linear optimization problems
3. Ability to interpret solutions of linear optimization problems in the context of the larger problem.

I E 423. Engineering Operations Research II
3 Credits (3)
Probabilistic operations research modeling, including queuing systems and their optimization; Markov chains. May be repeated up to 3 credits.

Prerequisite(s): I E 311.

Corequisite(s): MATH 392.

I E 424. Manufacturing Systems
3 Credits (3)
Organization and functions of manufacturing planning and control systems including forecasting, MRP, capacity planning, JIT systems, scheduling, and inventory control.

Prerequisite: I E 311.

I E 425. Supply Chain Modeling and Analysis
3 Credits (3)
This course introduces supply chain and logistics concepts integrating theory and its application. The course emphasis is on understanding the role of supply chains for competitive advantage, when and how these concepts are applied to improve the distribution of goods and services, as well as in using mathematical programming and optimization methods for their adequate implementation.

Prerequisite: MATH 1521G or MATH 1521H or ENGR 190.

Corequisite: MATH 2415.

Learning Outcomes
1. Define and understand different structures and the importance of the supply chain.
2. Identify the main drivers of supply chain performance and measure them using precise metrics.
3. Integrate production operations management topics in the context of the supply chain.
4. Develop the ability to formulate quantitative decision models for supply chain and logistics management.
5. Study inventory planning decisions, Economic Order Quantity (EOQ), and its variants.

I E 451. Engineering Economy
3 Credits (3)
Discounted cash flows, economics of project, contract and specifications as related to engineering design.

I E 456. Large Scale Systems Engineering
3 Credits (3)
Systems engineering approaches to large-scale complex technological and societal problems. Concepts of interaction and structural graphs, matrices, delta, and Gantt charts. The hall matrix approach, structural concepts, reachability matrices, and cross impact-analysis, modeling and decision making. May be repeated up to 3 credits.

Learning Outcomes
1. Ability to describe the systems engineering standards and best practices
2. Ability to characterize the limitations of the way that current systems engineering is practiced in terms of dealing with lifecycle uncertainty.

I E 459. Systems Thinking and Decision Making
3 Credits (3)
A general introduction to systems engineering. Topics include General Systems Theory, Systems Thinking and emerging concepts, Systems Dynamics approaches for modelling and analyzing non-linear feedback mechanisms in complex systems, and Complexity science and complex adaptive systems. May be repeated up to 3 credits.

**Learning Outcomes**

1. Ability to understand the complexities of engineering systems, and the implications of change on system behavior
2. Ability to understand the nature of complex systems in respect to people, processes, the environment and development organization
3. Ability to understand Systems Thinking’s role and value within organizations
4. Ability to recognize the advantages, as well as the flaws of our present predominant way of thinking (Cartesian), while looking at the changes that would enable us to deal with complex issues in daily practice (Systems Thinking)
5. Ability to recognize the value and limitations of modeling and simulation as well as how to construct and interpret various models to support decision making.

**I E 460. Evaluation of Engineering Data**

3 Credits (3)
Analysis of engineering systems possessing variability, employing regression, analysis of variance, distribution theory, and experimental design methods.
**Prerequisite:** I E 311 or equivalent.

**I E 466. Reliability**

3 Credits (3)
Application of statistical theory to engineering reliability estimation, reliability improvement, and the analysis of reliability test data.
**Prerequisite:** I E 311 or equivalent.

**I E 467. Discrete-Event Simulation Modeling**

3 Credits (3)
Basic modeling concepts, organizations of simulations, input data analysis, random variate generation, simulation design and analysis, model validation, output analysis, and management of simulations. Differentiated graduate assignments. May be repeated up to 3 credits.
**Prerequisite(s):** I E 311 or equivalent.

**I E 468. Advanced Discrete-Event Simulation Applications**

3 Credits (3)
Semester long project involving development and application of advanced simulation skills. May be repeated up to 3 credits.
**Prerequisite:** I E 467.

**Learning Outcomes**

1. Ability to understand the techniques of computer simulation modeling in the context of hierarchy of knowledge about a system and develop the capability to apply the same to study systems through available computer simulation software

**I E 478. Facilities Planning and Design**

3 Credits (3)
Plant location methods, total process analysis, process integration, materials handling analysis, and traditional and computerized plant layout methodologies.
**Prerequisite(s):** I E 316.
**Prerequisite(s)/Corequisite(s):** I E 424.

**I E 490. Selected Topics**

1-3 Credits
May be repeated for a maximum of 9 credits.
**Prerequisite:** consent of the head of the department.

**I E 505. Directed Readings**

1-3 Credits
May be repeated for a maximum total of 6 credits.
**Prerequisite:** consent of the head of the department.

**I E 511. Survey of Industrial Engineering**

3 Credits (3)
A project-based course covering methods of engineering, plant layout, production and inventory control, economic analysis, etc. May be repeated up to 3 credits.

**Learning Outcomes**

1. Ability to apply the various techniques of Industrial Engineering to solve real-life problems

**I E 515. Stochastic Processes Modeling**

3 Credits (3)
Introduction to the use of stochastic processes in the modeling of physical and natural systems. Use of generating functions, conditional probability and expectation, Poisson processes, random walk models, Markov chains, branching processes, Markov processes, and queuing processes in an applied setting.
**Prerequisites:** I E 311 or equivalent; and MATH 392 or equivalent.

**I E 522. Queuing Systems**

3 Credits (3)
Elements and classification of queueing systems, single server models, multi-server models, cost analysis and applications.

**Learning Outcomes**

1. Ability to model, analyze, and apply solutions to problems involving queueing systems
2. Ability to read and understand literature in the queueing system analysis field.

**I E 523. Advanced Engineering Economy**

3 Credits (3)
Theoretical basis for engineering economy methods, problems of cost estimation, replacement, nonmonetary factors, and feasibility studies. Same as C E 523.

**I E 524. Advanced Production and Inventory Control**

3 Credits (3)
Organization and functions of manufacturing planning and control systems including forecasting, MRP, capacity planning, JIT systems, scheduling and inventory control. Same as I E 424 with differentiated assignments.

**I E 525. Systems Synthesis and Design**

3 Credits (3)
Examination of the production management complex in terms of its components and the synthesis of these components into an effective operating unit. Development of input-output models representing the basis structure of all production activities.

**I E 530. Environmental Management Seminar**

1 Credit (1)
Survey of practical and new developments in hazardous and radioactive waste management provided through a series of guest lectures and reports of ongoing research. Same as C E 530, E E 530, CHME 530.

**I E 533. Linear Programming**

3 Credits (3)
Linear programming problem formulation, simplex algorithm, theory of linear programming, duality, revised simplex algorithm, and sensitivity analysis.
IE 534. Nonlinear Programming
3 Credits (3)
Theoretical and computational methods to solve optimization problems in engineering, statistics, economics, and operations research. Topics include convexity, optimality conditions, Newton's method, Lagrange multipliers, search algorithms for unconstrained and constrained problems, as well as barrier and penalty methods.

Learning Outcomes
1. Ability to model situations which may be solved by nonlinear optimization and to interpret the results in the context of the larger problem
2. Ability to employ several computer tools to correctly solve nonlinear optimization problems.
3. Ability to read and understand literature in the field of nonlinear optimization
4. Ability to select appropriate methods and algorithms from a core representative set of methods and tools to solve nonlinear optimization problems

IE 535. Discrete Optimization
3 Credits (3)
Combinatorial Optimization problems using both integer programming and graph theoretic approaches. Emphasis on modeling and computational algorithms.

IE 537. Large Scale Systems Engineering
3 Credits (3)
Systems engineering approaches to large-scale complex technological and societal problems. Concepts of interaction and structural graphs, matrices, delta, and Gantt charts. The hall matrix approach, structural concepts, reachability matrices, and cross impact-analysis, modeling and decision making.

IE 545. Characterizing Time-Dependent Engineering Data
3 Credits (3)
Theory and techniques employed in the characterization of stochastic processes commonly found in engineering applications. Distribution models include exponential, gamma, Weibull, and extreme value. Design and analysis of experiments involving complete and censored data and elevated stress. Analytical techniques include parametric, nonparametric, and graphical approaches with emphasis on modern computer tools. Exact and approximate maximum-likelihood techniques are stressed.

Learning Outcomes
1. Ability to characterize a process, based on data that is time-dependent or sequential in nature.

IE 561. Advanced Safety Engineering
3 Credits (3)
Regulation as well as qualitative, and quantitative methods to achieve and maintain safety in the workplace. Includes liability, worker's compensation, OSHA, hazard control, safety assessment, cost justification, and system analysis.
Prerequisite: graduate status in engineering.

IE 563. Topics in Engineering Administration
3 Credits (3)
Study of qualitative and quantitative aspects. Consideration given to philosophical, psychological, political and social implications of engineering administrative decisions.

IE 567. Design and Implementation of Discrete-Event Simulation
3 Credits (3)
Basic modeling concepts, organizations of simulations, input data analysis, random variate generation, simulation design and analysis, model validation, output analysis, and management of simulations. Taught with IE 467 with differentiated assignments for graduate students.

IE 571. Advanced Quality Control
3 Credits (3)
Advanced topics in quality control and design of experiments for improvement of quality.
Prerequisite: IE 311 or equivalent.

IE 575. Advanced Manufacturing Processes
3 Credits (3)
Covers major process parameters in casting, forming, machining, and joining. Process economics and selection of processes design and interactions.
Prerequisite: graduate standing.

IE 590. Selected Topics
1-3 Credits
May be repeated for a maximum of 9 credits.
Prerequisite: consent of the head of the department.

IE 598. Special Research Programs
1-3 Credits
Individual analytical or experimental investigations. May be repeated for a maximum total of 6 credits.
Prerequisite: consent of instructor.

IE 599. Master's Thesis
1-15 Credits
Thesis.

IE 610. Topics in Operations Research
3 Credits (3)
Selected topics of current interest, to be designated by subtitle. May be repeated for a maximum of 6 credits.

IE 620. Topics in Computer Modeling
3 Credits (3)
Selected topics of current interest, to be designated by subtitle. May be repeated for a maximum of 6 credits.

IE 630. Topics in Engineering Management
3 Credits (3)
Selected topics of current interest, to be designated by subtitle. May be repeated for a maximum of 6 credits.

IE 690. Selected Topics
1-15 Credits
May be repeated.
Prerequisite: consent of department head.

IE 700. Doctoral Dissertation
15 Credits
Dissertation.

Office Location: 201 Foreman Engineering Complex

**Industrial Engineering - Bachelor of Science in Industrial Engineering Requirements (121 credits)**

In addition to the university requirements for graduation, a student must have at least a 2.0 grade-point average in all departmental courses.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 121 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

**Total Credits**: 121-122

---

1. MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.
2. See the General Education (p. 227) section of the catalog for a full list of courses.
3. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
4. Students are required to see the advisor for more detailed information about selecting the Industrial Engineering Topics Elective Courses that are approved to fulfill this requirement.

---

**A Suggested Plan of Study for Students**

This roadmap is a semester-by-semester planning guide for Industrial Engineering major. It assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in Mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from semester to semester and may be subject to modification or change. Roadmaps should be reviewed in consultation with your advisor.

1. MATH 1511G Calculus and Analytic Geometry I is the starting Math course for the degree but students may need to complete any prerequisites prior to enrolling in this course depending on math placement.
2. See the General Education (p. 227) Section of the catalog for a full list of courses.
3. See your adviser for more detailed information about selecting the Industrial Engineering Topics Elective Course that is approved to fulfill this requirement.
4. See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Entrepreneurship - Undergraduate Minor

The Entrepreneurship Minor is designed to promote entrepreneurship to students across the NMSU campus. The Department of Industrial Engineering coordinates an engineering cluster of electives to support the three required classes offered by the College of Business.

Mechanical Engineering and Aerospace Engineering

Undergraduate Program Information

The mission of the Mechanical and Aerospace Engineering Department at New Mexico State University is threefold:

- to educate those who will advance knowledge and become the future leaders of industry and academia;
- to conduct both basic and applied research in mechanical and aerospace engineering and related interdisciplinary areas; and
- to provide service to the profession, to the State of New Mexico, to the country, and to the future development of engineering worldwide.

A critical focus within the department is to afford undergraduates of varying backgrounds and abilities every opportunity for achieving success in the mechanical and aerospace engineering professions.

Our graduates will advance in their level of workplace responsibility.

Graduate Program Information

Graduate programs of study are available leading to the degrees of

- Doctor of Philosophy in Aerospace Engineering
- Doctor of Philosophy in Engineering with a concentration in Mechanical Engineering.
- Master of Science in Aerospace Engineering,
- Master of Science in Mechanical Engineering,
- Master of Engineering in Aerospace Engineering,
- Master of Engineering in Mechanical Engineering.

Areas of active research in mechanical engineering include the following:

- Computational fluid dynamics,
- Hypersonics,
- Vortex dynamics,
- Energy systems and components,
- Thermal management,
- Surface engineering,
- Computational mechanics with application to material properties,
• Composite materials and nanomaterials,
• Structural damage diagnosis and prognosis,
• Nonlinear dynamics and vibration,
• Reduced order modeling in multibody dynamics,
• Fluid-structure interactions,
• Renewable energy / energy harvesting,
• Bio-inspired and bio-mimetic robotics,
• Advanced manufacturing and medical device.

Areas of active research in aerospace engineering include the following:
• Computational, theoretical, and experimental fluid dynamics,
• Hypersonics,
• Flow control,
• Aero-optics,
• Multi-phase, multi-scale, and reacting flows,
• Rarefied gas dynamics,
• Propulsion,
• Aeroelasticity,
• Structural health monitoring / damage detection,
• Guidance, navigation, and control of space systems,
• Small satellite missions,
• Unmanned aerial systems.

Laboratory facilities supporting graduate research include a large low-speed wind tunnel facility; a shock tunnel facility for hypersonics; computational fluid dynamics lab; robotics, unmanned vehicles, and intelligent systems control lab; autonomous systems lab; mechanical design and advanced materials & structures lab; nonlinear dynamics & energy harvesting lab; computational mechanics of materials and structures lab; non-destructive evaluation lab; medical device & microfabrication research lab; surface-environment interaction research lab; and renewable energy and thermal systems lab. A mechanical testing lab is also available in the College of Engineering.

In addition to fulfilling the basic requirements for admission to the Graduate School, applicants are expected to have an undergraduate degree equivalent to a BS in mechanical or aerospace engineering from a university accredited by ABET. Graduate students whose BS degree is in a discipline other than A E or M E will normally be required to take undergraduate courses in M E or A E in order to prepare for graduate course work; such undergraduate preparatory work will be determined by the graduate coordinator on a case by case basis. A candidate for the master’s degree can choose one of two options: a thesis option or a course-only option. Both options require a minimum of 30 credits of graduate study.

Doctoral candidates must complete a program of study determined by the student and his or her advisory committee. The student must successfully pass a written qualifying examination (administered during the student’s first year of full-time study) and an oral comprehensive examination administered after approximately 80 percent of the course work is completed. The student must submit and defend an acceptable dissertation based on independent investigation in a field of study approved by the advisory committee. The requirements for the MS and Ph.D. degrees are stated below.

Degrees for the Department

Bachelor Degree(s)
• Aerospace Engineering - Bachelor of Science in Aerospace Engineering (p. 1070)
• Mechanical Engineering - Bachelor of Science in Mechanical Engineering (p. 1072)

Master Degree(s)
• Aerospace Engineering - Master of Engineering in Aerospace Engineering (p. 92)
• Aerospace Engineering - Master of Science (p. 93)
• Mechanical Engineering - Master of Engineering in Mechanical Engineering (p. 158)
• Mechanical Engineering - Master of Science in Mechanical Engineering (p. 159)

Doctoral Degree(s)
• Aerospace Engineering - Doctor of Philosophy (p. 177)
• Engineering (Mechanical Engineering) - Doctor of Philosophy (p. 197)

Minors for the Department

• Aerospace Engineering - Undergraduate Minor (p. 1073)
• Mechanical Engineering - Undergraduate Minor (p. 1074)

Department Head: Jay Frankel, Ph. D.
Associate Department Head: Young Lee, Ph. D.

Professors
Abdelkefi, Chaitanya, Frankel, Y. Park; Associate
Professors
Drach, Garcia, Gross, Kota, Kuravi, Lee, Shashikanth, Shu, Sun; Assistant Professors
Alaie, Haghshenas-Jaryani, Liu, Wang; Professors of Practice
Waller, Choo

A. Abdelkefi, Ph.D. (Virginia Tech) – Nonlinear dynamics, energy harvesting, aeroelasticity, fluid-structure interaction, vibration and controls; S. Alaie, Ph.D. (UNM) – Implantable microsensors, advanced manufacturing and medical devices; V. Chaitanya, Ph.D. (Johns Hopkins) – Materials characterization, materials degradation, corrosion, electrochemistry, failure analysis, energy, bioengineering, additive manufacturing, food-energy-water nexus; V. Choo (Liverpool)-Composite materials, computer applications; B. Drach, Ph.D. (New Hampshire) – Composite materials, additive manufacturing, biomechanics; J. Frankel, Department head, Ph.D. (Virginia Tech) – Heat transfer, hypersonics; G. Garcia, Ph.D. (Texas A&M) – Damage detection, experimental mechanics, vibration; A. Gross, DEng. (Aachen) – Computational fluid dynamics, fluid mechanics, aircraft design and propulsion, unmanned aerial systems, wind energy; M. Haghsenas-Jaryani, Ph.D. (UT Arlington) – Soft robotics, bio-inspired and bio-mimetic robotics, dynamics and control; K. Kota, Ph.D. (Central Florida) – Heat transfer, functional surfaces, surface-environment interactions, thermal management, space transportation, engineering in public health and medicine; S. Kuravi, Ph.D. (Central Florida) – Renewable energy, thermal systems, concentrating solar power, thermal desalination, energy storage; Y. Lee, Associate Department Head, Ph.D. (Illinois Urbana-Champaign)–Nonlinear dynamics, fluid-structure interactions; Q. Liu, Ph.D. (Universidad Politecnica de Madrid, Spain)– Computational fluid mechanics, modal analysis, data science, rarefied gas dynamics and multiphase flow; Y. Park, Ph.D. (Iowa)– Design optimization, computational solid mechanics, atomistic and molecular simulations; B. Shashikanth, Ph.D. (Southern California)– Fluid mechanics, dynamical systems, controls; F. Shu, Ph.D. (Purdue) – Experimental fluid dynamics,
biofluidics, microfluidics, flow control, and hypersonics; L. Sun, Ph.D.
(Brigham Young)– Unmanned systems, towed cable systems, sensor network,
cooperative estimation and control, optimal control; J. Waller, Ph.D. (U Akron)
- Nondestructive evaluation, additive manufacturing and materials; Y. Wang,
Ph.D. (Penn State)– Computational fluid dynamics, multi-phase & reacting
flows, aerospace propulsion, bio/micro-Fluidics.

Aerospace Engineering Courses

A E 339. Aerodynamics I
3 Credits (3)
Fluid properties, conservation equations, incompressible 2-dimensional
flow; Bernoulli's equation; similarity parameters; subsonic aerodynamics:
lift and drag, analysis and design of airfoils. May be repeated up to 3
credits.
Prerequisite: C- or better grades in ENGR 234 and (M E 228 or MATH
392).
Learning Outcomes
1. Ability to apply knowledge of mathematics, science, and engineering;
2. Ability to design and conduct experiments, as well as to analyze and
interpret data;
3. Ability to design a system, component or process to meet desired
needs within realistic constraints;
4. Ability to identify, formulate, and solve engineering problems.

A E 362. Orbital Mechanics
3 Credits (3)
Dynamics of exoatmospheric flight of orbiting and non-orbiting bodies;
2-body orbital dynamics and Kepler's laws; orbits in 3 dimensions;
orbit determination; orbit design and orbital maneuvers; lunar and
interplanetary trajectories. May be repeated up to 3 credits.
Prerequisite: C- or better grades in (M E 228 or MATH 392), ENGR 234,
and M E 261.
Learning Outcomes
1. Ability to apply knowledge of mathematics, science, and engineering;
2. Ability to identify, formulate, and solve engineering problems;
3. Ability to use the techniques, skills and modern tools necessary for
engineering practice.

A E 363. Aerospace Structures
3 Credits (3)
Advanced concepts of stress and strain, introduction to the analysis of
aero structures, complex bending and torsion, thin walled sections and
shells, computational techniques. May be repeated up to 3 credits.
Prerequisite: C- or better grades in C E 301.
Learning Outcomes
1. An ability to identify, formulate, and solve complex engineering
problems by applying principles of engineering, science, and
mathematics

A E 364. Flight Dynamics and Controls
3 Credits (3)
Fundamentals of airplane flight dynamics, static trim, and stability;
spacecraft and missile six degree of freedom dynamics; attitude control
of spacecraft. May be repeated up to 3 credits.
Prerequisite: C- or better grades in (M E 228 or MATH 392), ENGR 234,
and M E 261.
Learning Outcomes
1. Ability to apply knowledge of mathematics, science, and engineering;
2. Ability to identify, formulate, and solve engineering problems;
3. Ability to use the techniques, skills and modern tools necessary for
engineering practice.

A E 400. Undergraduate Research
1-3 Credits (1-3)
Performed with the direction of a department faculty member. May be
repeated for a maximum of 6 credits.
Prerequisite(s): Consent of faculty member.

A E 405. Special Topics
3 Credits (3)
Topics of modern interest to be offered by the departmental staff.
Consent of instructor required.

A E 419. Propulsion
3 Credits (3)
Propulsion systems, thermodynamic cycles, combustion, specific
impulse; principles of gas turbines, jet engines, and rocket propulsion
systems. May be repeated up to 3 credits.
Prerequisite: C- or better grades in A E 439.
Learning Outcomes
1. An ability to identify, formulate, and solve complex engineering
problems by applying principles of engineering, science, and
mathematics

A E 424. Aerospace Systems Engineering
3 Credits (3)
Basic principles of top down systems engineering and current practice;
preliminary and detailed design of aircraft and space vehicles, including
requirement, subsystem interaction, and integration, tradeoffs,
constraints and non-technical aspects. May be repeated up to 3 credits.
Prerequisite: C- or better grades in A E 362.
Learning Outcomes
1. An ability to apply engineering design to produce solutions that
meet specified needs with consideration of public health, safety,
and welfare, as well as global, cultural, social, environmental, and
economic factors
2. An ability to communicate effectively with a range of audiences
3. An ability to recognize ethical and professional responsibilities in
engineering situations and make informed judgments, which must
consider the impact of engineering solutions in global, economic,
environmental, and societal contexts
4. An ability to function effectively on a team whose members together
provide leadership, create a collaborative and inclusive environment,
establish goals, plan tasks, and meet objectives

A E 428. Aerospace Capstone Design
3 Credits (3+2P)
Team Project-analysis, design, hands-on build test, evaluate.
Prerequisite(s)/Corequisite(s): A E 447. Prerequisite(s): A E 363 and
A E 424.

A E 439. Aerodynamics II
3 Credits (3)
Principles of compressible flow, momentum and energy conservation;
thermal properties of fluids; supersonic flow and shock waves; basics of
supersonic aerodynamics. May be repeated up to 3 credits.
Prerequisite: C- or better grades in (A E 339 or M E 338), M E 240, and
(M E 328 or PHYS 395).
Learning Outcomes
1. An ability to identify, formulate, and solve complex engineering
problems by applying principles of engineering, science, and
mathematics.
A E 447. Aerofluids Laboratory
3 Credits (2+3P)
Use of subsonic wind tunnels and other flow to study basic flow phenomena and methods of fluid measurement and visualization. May be repeated up to 3 credits.
Prerequisite: M E 345 or PHYS 325.
Prerequisite/Corequisite: A E 439.
Learning Outcomes
1. Students will be able to write technical reports about aerodynamic experiments and make oral presentations, being familiar with data acquisition, processing and visualization.

A E 451. Aircraft Design
3 Credits (3)
Conceptual design of aircraft based on existing designs, empirical relationships, and theory. Dimensioning, structural design, and performance analysis of major subcomponents such as fuselage, wing, and propulsion system. Static stability and control analysis.
Prerequisite(s): A E 339 and A E 363.

A E 452. Control System Design
3 Credits (3)
Introduction to the control of dynamical systems, with a focus on mechanical and aerospace systems, including basic systems theory, controllability / observability, feedback and stabilization, PID controls, root-locus plot, and Bode diagram. May be repeated up to 3 credits.
Prerequisite: M E 261, M E 328 and ENGR 234.
Learning Outcomes
1. Construct a block diagram to find a transfer function for a dynamical system;
2. Analyze control systems by utilizing various linear control theories such as root-locus design method, bode / Nyquist plots, and lead / lag compensation techniques;
3. Design and simulate automatic control systems for mechanical and aerospace engineering applications.

A E 464. Advanced Flight Dynamics and Controls
3 Credits (3)
Advanced airplane flight dynamics and stability control system design, longitudinal and lateral autopilots, missile / rocket control systems, and guidance systems.
Prerequisite(s): A E 364 or consent of instructor.

A E 509. Individualized Study
3 Credits (3)
Individualized study covering specialized topics in aerospace engineering. Consent of instructor required. Restricted to A E & M E majors.

A E 510. Special Topics
1-6 Credits (1-6)
Topics in aerospace engineering. May be repeated for a maximum of 6 credits. Consent of instructor required.

A E 527. Linear Systems Theory
3 Credits (3)
Introduction to control of linear multi-input-multi-output (MIMO) systems. Topics include representation of system dynamics using the state-space model, linearization, internal and input-to-output stability, controllability, observability, optimal control, linear quadratic regulator, and observer. May be repeated up to 3 credits.

Learning Outcomes
1. Students are able to design linear multi-input-multi-output (MIMO) control systems.

3 Credits (3)
Numerical methods for solving differential equations (initial and boundary value problems, eigenvalue problems) with focus on fluid mechanics and heat transfer problems. Concepts such as stability, accuracy, consistency, and systematic errors (phase/amplitude error). Implement and test algorithms for the solution of ordinary and partial differential equations. May be repeated up to 3 credits.
Prerequisite: M E 341.
Learning Outcomes
1. An ability to apply computational approaches to fluid dynamic and heat transfer problems and to understand limitations with respect to stability, accuracy, and error.

A E 564. Advanced Flight Dynamics and Controls
3 Credits (3)
Advanced airplane flight dynamics and stability control system design, longitudinal and lateral autopilots, missile / rocket control systems, and guidance systems. May be repeated up to 3 credits.
Prerequisite(s): A E 364 or consent of instructor.

A E 598. Special Research Programs
1-3 Credits (1-3)
Individual investigations, either analytical or experimental. May be repeated for a maximum of 6 credits. Restricted to A E & M E majors.

A E 599. Master's Thesis
1-15 Credits (1-15)

A E 600. Doctoral Research
1-15 Credits (1-15)
This course number is used for assigning credit for research performed prior to successful completion of the doctoral qualifying examination. Graded: Thesis/Dissertation.

A E 700. Doctoral Dissertation
15 Credits (15)

Mechanical Engineering Courses

M E 210. Electronics and System Engineering
3 Credits (2+3P)
Introduction to microcontrollers, measurement systems, motion actuators, sensors, electric circuits, and electronic devices and interfacing. Students required to work individually and in teams to design and test simple electromechanical systems. Restricted to Las Cruces campus only. May be repeated up to 3 credits.
Prerequisite: C- or better grade in MATH 1521G or MATH 1521H or ENGR 190.
Learning Outcomes
1. Ability to apply knowledge if mathematics, science, and engineering;
2. Ability to design and conduct experiments, as well as to analyze and interpret data;
3. Ability to design a system, component or process to meet desired needs within realistic constraints;
4. Ability to identify, formulate, and solve engineering problems;
5. Ability to use the techniques, skills and modern tools necessary for engineering practice.
M E 228. Engineering Analysis I
3 Credits (3)
Introduction to engineering analysis with emphasis on engineering applications. Topics include ordinary differential equations, linear algebra, and vector calculus with focus on analytical methods. May be repeated up to 3 credits.
Prerequisite: C- or better grades in MATH 2530G.
Learning Outcomes
1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.

M E 234. Mechanics-Dynamics
3 Credits (3)
Kinematics and dynamic behavior of solid bodies utilizing vector methods. May be repeated up to 3 credits.
Prerequisite: A grade of C- or better grade in the following: C E 233 and PHYS 1310G and MATH 1521G or MATH 1521H.
Learning Outcomes
1. Student will be able to apply concepts of kinematics and accelerated motion.

M E 240. Thermodynamics
3 Credits (3)
First and second laws of thermodynamics, irreversibility and availability, applications to pure substances and ideal gases. May be repeated up to 3 credits.
Prerequisite: C- or better grades in PHYS 1310G.
Learning Outcomes
1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.

M E 261. Numerical Methods
3 Credits (2+3P)
Introduction to programming syntax, logic, and structure. Numerical techniques for root finding, solution of linear and nonlinear systems of equations, integration, differentiation, and solution of ordinary differential equations will be covered. Multi function computer algorithms will be developed to solve engineering problems. May be repeated up to 3 credits.
Prerequisite: C- or better grades in MATH 1521G or MATH 1521H or ENGR 190.
Learning Outcomes
1. Ability to apply knowledge of mathematics, science, and engineering.
2. Ability to identify, formulate, and solve engineering problems.
3. Ability to use the techniques, skills and modern tools necessary for engineering practice.

M E 262. Mechanical Design
3 Credits (3)
Kinematics and dynamics of machinery, analytical and computer-aided design of kinematics, mechanism synthesis involving linkages, cam and gear design, and motion analysis and balancing of forces. Project-based learning of multi-mechanism system design, analysis, fabrication, and evaluation. May be repeated up to 3 credits.
Prerequisite: C- or better in ENGR 234 and C E 301.
Learning Outcomes
1. An ability to perform motion analysis of mechanisms involving various mechanical components such as linkages, cams, and gears.
2. An ability to analyze and balance dynamic forces in machines.
3. Knowledge of how to design mechanism synthesis that can function as required in machines.
4. Understanding of ethics and professional responsibilities in engineering design.

M E 328. Engineering Analysis II
3 Credits (3)
Advanced engineering analysis with emphasis on engineering applications. Topics include systems of ordinary differential equations, Fourier analysis, partial differential equations, and functions of complex variable with focus on analytical methods. May be repeated up to 3 credits.
Prerequisite: C- or better grades in M E 228.
Learning Outcomes
1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.

M E 331. Intermediate Strength of Materials
3 Credits (3)
Covers stress and strain, theories of failure, curved flexural members, flat plates, pressure vessels, buckling, and composites. May be repeated up to 3 credits.
Prerequisite(s): C E 301 and M E 328.

M E 332. Vibrations
3 Credits (3)
Vibration of single and n-degree of freedom systems considering free, forced, and damped motion. Lagrange s equations. Dynamic stability. Controls. Matrix iteration. May be repeated up to 3 credits.
Prerequisite: M E 328, ENGR 234, and M E 261.
Learning Outcomes
1. An ability to analyze free and forced vibrations of a single degree-of-freedom (DOF) to multi-DOF systems; and an ability to perform modal analysis for engineering structures to understand mechanical vibrations in terms of normal modes.

M E 333. Intermediate Dynamics
3 Credits (3)
Three dimensional kinematics and kinetics, orbital motion, Lagrange s equations, dynamic stability, and controls. May be repeated up to 3 credits.
Prerequisite: M E 328 and ENGR 234.
Learning Outcomes
1. An ability to derive and solve equations of motion for a dynamical system by means of analytical mechanics approach.

M E 338. Fluid Mechanics
3 Credits (3)
Properties of fluids. Fluid statics and fluid dynamics. Applications of the conservation equations continuity, energy, and momentum to fluid systems. May be repeated up to 3 credits.
Prerequisite: C- or better grade in ENGR 234 and in (M E 228 or MATH 392).
Learning Outcomes
1. Ability to apply knowledge of mathematics, science, and engineering;
2. Ability to design and conduct experiments, as well as to analyze and interpret data;
3. Ability to design a system, component or process to meet desired needs within realistic constraints;
4. Ability to identify, formulate, and solve engineering problems.
M E 340. Applied Thermodynamics
3 Credits (3)
Thermodynamic cycles, Maxwell relations, Gibbs and Helmholtz functions, mixtures, psychrometrics, chemical reactions, chemical equilibrium. May be repeated up to 3 credits.
Prerequisite: C- or better grades in M E 240.
Learning Outcomes
1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.

M E 341. Heat Transfer
3 Credits (3)
Fundamentals of conduction, convection, and radiation. Design of heat transfer systems. May be repeated up to 3 credits.
Prerequisite: C- or better grades in M E 240 and in (M E 338 or A E 339).
Learning Outcomes
1. Students have the ability to apply knowledge of mathematics, science, and engineering;
2. Students have the ability to identify, formulate, and solve engineering problems.

M E 345. Experimental Methods I
3 Credits (2+3P)
Emphasis on experimental techniques, basic instrumentation, data acquisition and analysis, and written presentation of results. Includes experiments in dynamics and deformable body mechanics. May be repeated up to 3 credits.
Prerequisite: C- or better grades in (M E 228 or MATH 392), in (M E 210 or PHYS 2140), and in ENGR 234.
Prerequisite/Corequisite: C E 301.
Learning Outcomes
1. Ability to design and conduct experiments, as well as to analyze and interpret data;
2. Ability to communicate effectively;
3. Ability to use the techniques, skills and modern tools necessary for engineering practice.

M E 349. MAE Career Seminar
1 Credit (1)
Seminar course covering topics relevant to mechanical and aerospace engineering juniors (job placement, interviewing techniques, resume preparation, etc.). May be repeated up to 3 credits. Restricted to: M E and A E majors.
Prerequisite: Sophomore Standing.
Learning Outcomes
1. Students will learn how to prepare for their future career by learning job placement, resume preparation, interview skills, and others.

M E 400. Undergraduate Research
1-3 Credits
Performed with the direction of a department faculty member. May be repeated for a maximum of 6 credits.
Prerequisite: consent of faculty member.

M E 401. Heating and Air-Conditioning Systems
3 Credits (3)
HVAC system design including heating and cooling load calculations, psychrometrics, piping, duct layout, and system control. May be repeated up to 3 credits.
Prerequisite: A grade of C- or better in E T 306.
Prerequisite/Corequisite: E T 396.

Learning Outcomes
1. Master the use of thermodynamics software, EES for this course, and design software, HVAC Calc for this course.
2. Understand the principles of indoor/outdoor psychrometrics.
3. Calculate the heating/cooling loads.
4. Design/size an HVAC system for a given building through a case project.

M E 405. Special Topics
3 Credits (3)
Topics of modern interest to be offered by the departmental staff. May be repeated up to 12 credits.
Prerequisite(s): Senior standing.

M E 425. Design of Machine Elements
3 Credits (3)
Design and analysis of machinery for load-bearing and power transmission by considering material failure modes such as yielding, fracture, and fatigue. Design and selection of machine elements including threaded fasteners, springs, rolling-element bearings, cams, gears and friction drives. May be repeated up to 3 credits.
Prerequisite: C- or better grades in M E 326.
Learning Outcomes
1. An ability to incorporate analysis and design methods for designing and prototyping machine elements.
2. An ability to recognize the design process, to breakdown this complex process into a series of simple tasks, and to carry out those tasks to achieve the desired design.
3. Knowledges of how to apply the industrial specifications and requirements regarding the design of machine elements.
4. Implementation of these knowledge and experiences to real-world engineering projects with finite element method.

M E 445. Experimental Methods II
3 Credits (2+3P)
Emphasis on experimental techniques, instrumentation and data acquisition in fluid mechanics, heat transfer, and thermodynamics. Laboratory results will be presented in written and verbal formats. May be repeated up to 3 credits.
Prerequisite: C- or better grades in (M E 338 or A E 339), M E 340, M E 341, and M E 345.
Learning Outcomes
1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. An ability to communicate effectively with a range of audiences
3. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
4. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions

M E 452. Control System Design
3 Credits (3)
Introduction to the control of dynamical systems, with a focus on mechanical and aerospace systems, including basic systems theory, controllability / observability, feedback and stabilization, PID controls, root-locus plot, and Bode diagram. May be repeated up to 3 credits.
Prerequisite: M E 261, M E 328 and ENGR 234.
Learning Outcomes
1. Construct a block diagram to find a transfer function for a dynamical system;
2. Analyze control systems by utilizing various linear control theories such as root-locus design method, bode / Nyquist plots, and lead / lag compensation techniques;
3. Design and simulate automatic control systems for mechanical and aerospace engineering applications.

M E 456. Experimental Modal Analysis
3 Credits (3)
Emphasis on hands-on techniques for structural vibration tests for practical applications. Interpretation of experimental results by means of advanced signal processing tools, basic system identification methodology, and reduced-order modeling procedures. May be repeated up to 3 credits.
Prerequisite: M E 328 and M E 261.
Learning Outcomes
1. An ability to experimentally perform modal analysis for multi-degree-of-freedom systems, which can be extended to continuous systems and actual engineering structures.

M E 457. Engineering Failure Analysis
3 Credits (3)
Introduction to failure theories and causes. Topics include general procedures for failure analysis, ductile and brittle modes of failure, elements of fracture mechanics, fractography, and failures in various engineering applications due to fatigue, wear, corrosion, design or processing defects. May be repeated up to 3 credits.
Learning Outcomes
1. Students will learn how to systematically conduct failure analysis, identify cause(s) of failure, suggest remedial steps to prevent failures and/or improve performance for a variety of engineering applications involving metals, polymers, ceramics and composites.

M E 458. Properties and Mechanical Behavior of Materials
3 Credits (3)
Learning Outcomes
1. Students will learn how to correlate mechanical behavior of materials with their microstructure, processing history and composition.
2. As practicing engineers, they will be able to recognize impact of operating conditions, predict life span, and design materials to improve reliability and efficiency.
3. They will be able to select appropriate materials for a given application from class of materials such as metals, polymers, ceramics and composites.

M E 460. Applied Finite Elements
3 Credits (3)
Introduction to the practical aspects of structural finite element modeling. Course focuses on providing a working knowledge of how to effectively incorporate finite element techniques into the design process. May be repeated up to 3 credits.
Prerequisite(s): M E 425.

M E 481. Alternative and Renewable Energy
3 Credits (3)
Current and future energy needs of the United States and the world will be considered primarily from the standpoint of renewable energy sources such as solar, wind, ocean, and biomass. Technical, economic, and environmental aspects of each technology will be addressed. May be repeated up to 3 credits.
Prerequisite: M E 431.
Learning Outcomes
1. Understanding of current and future energy needs of the United States and the whole world from the standpoint of renewable energy sources such as solar, wind, ocean, and biomass.

M E 486. Introduction to Robotics
3 Credits (3)
This course provides students with an introduction to the theories and methods for analysis, design, and control of robotic manipulators. This course is devoted to understanding the spatial descriptions and transformations, kinematics, and dynamics of these mechanisms and how to practically implement these concepts into actual robotic manipulators. May be repeated up to 3 credits.
Prerequisite: M E 328 and ENGR 234.
Learning Outcomes
1. Model and analyze the kinematics and dynamics of robotic manipulators;
2. Program and control these robotic platforms;
3. Apply the theoretical methods into industrial robots;
4. Implement the knowledge and experiences in real-world engineering projects.

M E 487. Mechatronics
3 Credits (2+3P)
Introduction to the analysis and design of computer-controlled electromechanical systems, including data acquisition and conversion, force and motion sensors, actuators, mechanisms, feedback control, and robotic devices. Students required to work in teams to construct and test simple robotic systems. May be repeated up to 3 credits.
Prerequisite(s): M E 210 and M E 345.

M E 502. Elasticity I
3 Credits (3)
Introduction to the theory of elastic media with emphasis on understanding the fundamental principles and solution methods used in the analysis of elastic solids and structures. Cartesian tensors are introduced for formulations of general deformations and states of stress. May be repeated up to 3 credits.
Learning Outcomes
1. An ability to understand the fundamental principles and solution methods used in the analysis of elastic solids and structures.
2. Use of cartesian tensors for formulations of general deformations and states of stress.

M E 503. Thermodynamics
3 Credits (3)
A comprehensive study of the first and second laws of thermodynamics, nonequilibrium processes, equations of state, and statistical thermodynamics.

M E 504. Continuum Mechanics
3 Credits (3)
Introduction to the fundamentals of the mechanics for continuous media. This covers the concepts and general principles common to all branches of mechanics to facilitate further study in various fields such as elasticity, plasticity, fluid, and continuum damage mechanics. Computational aspects of the theory are also discussed. May be repeated up to 3 credits.
Learning Outcomes
1. An ability to understand the fundamentals of the continuum mechanics, which covers the concepts and general principles common to all branches of mechanics to facilitate further study in various fields such as elasticity, plasticity, fluid, and continuum damage mechanics.

M E 509. Individualized Study
3 Credits (3)
Individualized study covering specialized topics in mechanical and aerospace engineering. Consent of instructor required.

M E 510. Special Topics
1-6 Credits
Topics in mechanical engineering. May be repeated for a maximum of 6 credits.
Prerequisite: consent of the department head.

M E 511. Dynamics
3 Credits (3)
An advanced study of the dynamical behavior of systems of particles and rigid bodies, with emphasis on the theoretical background of dynamics.

M E 512. Vibrations
3 Credits (3)
Free and forced vibrations for discrete and continuous systems with single or multiple degrees of freedom. Introduction to nonlinear and random vibration and solution techniques for such systems.

M E 517. Nonlinear Dynamics and Chaos
3 Credits (3)
Singular points, periodic solutions, stability, and local bifurcations for ODEs and maps; phase space methods, invariant manifolds, and Poincaré maps; nonsmooth, periodic, time-delay, and Hamiltonian systems; perturbation, averaging, and harmonic balance methods; center manifold reduction and normal forms; strange attractors, Liapunov exponents, attractor dimension; dissipative and Hamiltonian chaos

M E 518. Finite Element Analysis
3 Credits (3)
Introduction to finite element method. Topics include mathematical modeling, variational formulation, shape functions, truss, beam, solid, and shell elements. Includes static, dynamic, and nonlinear analysis. May be repeated up to 3 credits. Crosslisted with: M E 460.

M E 527. Linear Systems Theory
3 Credits (3)
Introduction to control of linear multi-input-multi-output (MIMO) systems. Topics include representation of system dynamics using the state-space model, linearization, internal and input-to-output stability, controllability, observability, optimal control, linear quadratic regulator, and observer. May be repeated up to 3 credits.

Learning Outcomes
1. Students are able to design linear multi-input-multi-output (MIMO) control systems.

M E 530. Intermediate Fluid Mechanics
3 Credits (3)
Application of exact and empirical solutions to fundamental flow problems, including viscous and inviscid behavior. These applications establish a theoretical basis for the origin and physical role of common terms in the governing equations.

3 Credits (3)
Numerical methods for solving differential equations (initial and boundary value problems, eigenvalue problems) with focus on fluid mechanics and heat transfer problems. Concepts such as stability, accuracy, consistency, and systematic errors (phase/amplitude error). Implement and test algorithms for the solution of ordinary and partial differential equations. May be repeated up to 3 credits.
Prerequisite: M E 341.

Learning Outcomes
1. An ability to apply computational approaches to fluid dynamic and heat transfer problems and to understand limitations with respect to stability, accuracy, and error.

M E 536. Hydrodynamic Stability and Turbulence
3 Credits (3)
Introduction to fundamentals of hydrodynamic stability, classical linear stability analysis of parallel shear flows and rotating flows, nonlinear stability, basic concepts in turbulence theory. May be repeated up to 3 credits.
Prerequisite: ME 530.

Learning Outcomes
1. An ability to understand fundamentals of hydrodynamic stability, classical linear stability analysis of parallel shear flows and rotating flows, nonlinear stability, basic concepts in turbulence theory.

M E 540. Intermediate Heat Transfer
3 Credits (3)
Fundamentals of conduction, convection, and radiation heat transfer. Emphasis on the application of combined heat transfer to the solution of problems not accessible at the undergraduate level.

M E 557. Engineering Failure Analysis
3 Credits (3)
Introduction to failure theories and causes. Topics include general procedures for failure analysis, ductile and brittle modes of failure, elements of fracture mechanics, fractography, and failures in various engineering applications due to fatigue, wear, corrosion, design or processing defects. May be repeated up to 3 credits.

M E 558. Properties and Mechanical Behavior of Materials
3 Credits (3)
Understanding the microstructure of engineering materials and their influence on mechanical behavior. Topics include Material Structure and Physical Properties, Thermodynamics and Kinetics of Materials, Mechanical Properties, Strengthening Mechanisms, Time and Temperature Dependent Behavior, Degradation, Fatigue, and Fracture. May be repeated up to 3 credits.
Prerequisite: CHME 361.

M E 570. Engineering Analysis I
3 Credits (3)
Introduction to engineering analysis with emphasis on engineering applications. Topics include linear algebra, linear ordinary differential equations, and linear partial differential equations with focus on analytical methods.

M E 586. Introduction to Robotics
3 Credits (3)
This course provides students with an introduction to the theories and methods for analysis, design, and control of robotic manipulators. This course is devoted to understanding the spatial descriptions and transformations, kinematics, and dynamics of these mechanisms and how to practically implement these concepts into actual robotic manipulators. May be repeated up to 3 credits.
Prerequisite: M E 328 and ENGR 234 or consent of instructor.

Learning Outcomes
1. Students will be able to model and analyze the kinematics and dynamics of robotic manipulators.
Aerospace Engineering - Bachelor of Science in Aerospace Engineering

The aerospace engineering program prepares students for a range of professional engineering careers in aerospace and related professions. The aerospace engineering curriculum covers the important classical areas of low and high speed aerodynamics, propulsion, orbital mechanics, flight mechanics and control, aerospace structures and laboratory practice. In addition, the principles of systems engineering and design that are necessary to conceive, design, analyze and troubleshoot complex engineering systems are covered extensively and are considered to be especially important in the overall educational experience. Students will also be encouraged to participate in significant non-classroom experiences, including:

- co-ops and internships;
- industrial and laboratory field trips;
- guest speakers from outside NMSU;
- the New Mexico Space Grant Program;
- special seminar programs on current topics in aerospace.

Aerospace engineers find employment in areas of launch vehicles, space vehicles and missions, aircraft systems design, land and sea vehicle design, robotics and automated manufacturing, safety and other areas. The aerospace engineering background also allows graduates to pursue careers in non-aerospace fields of engineering. Graduates of the aerospace engineering program will be prepared to apply the following skills to problems of interest either in the industry or research and development:

- engineering sciences,
- mathematics,
- computational methods,
- modern experimental methods,
- effective communication skills and
- systems engineering principles.

The aerospace engineering program is also intended to prepare students to pursue graduate study, which can be of significant benefit in the aerospace profession. The general goals of the aerospace engineering program, as well as the program educational objectives, are the same as those stated above for the mechanical engineering program.

Requirements (122 Credits)

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 122 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

In addition to the NMSU and College of Engineering requirements for graduation, a student must obtain a minimum grade of C- in all math, science, and engineering courses applied toward their B.S. in AE and/or ME minor.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

1. See General Education (p. 227) section in this catalog for a full list of courses.
2. MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.
3. See the Viewing a Wider World (p. 231) section in this catalog for a full list of courses.
4. Courses subject to once per year rotation.
Mechanical Engineering - Bachelor of Science in Mechanical Engineering

The mechanical engineering program prepares students for a wide range of professional engineering careers in such areas as: research and development; design; facilities operation and maintenance; management; and production. Graduates of the program will be prepared to apply engineering sciences, mathematics, computational methods, modern experimental methods, and effective communication skills to problems of interest in industry as well as government or scholarly topics. Employment opportunities for graduates are extensive. These opportunities include: energy and utility; manufacturing; automotive; aerospace; defense and space; research and development; and many others. The emphasis in the curriculum is on engineering sciences (solid mechanics, thermal sciences, fluid mechanics and materials science); mathematics; engineering analysis; engineering design; general sciences; and communication balanced with general education topics and electives. Graduates of the program will also be prepared for graduate studies (subject to grade-point and standardized test qualifications). Students will be prepared to take the fundamentals of engineering examination (and are encouraged to do so) as a step towards professional registration.

Requirements (122 Credits)

In addition to the NMSU and College of Engineering requirements for graduation, a student must obtain a minimum grade of C- in all math, science and engineering courses applied toward their B.S in ME and/or AE minor.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 122 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

#### General Education
- **State of New Mexico Common Core**
  - **Area I: Communications**
    - ENGL 1110G Composition I 4
  - **Area II: Mathematics**
    - MATH 1511G Calculus and Analytic Geometry I 3
  - **Area III/IV: Laboratory Sciences and Social Behavioral Sciences**
    - CHEM 1215G General Chemistry I Lecture and Laboratory for STEM Majors 4
    - PHYS 1310G & PHYS 1310L Calculus-Based Physics I and Calculus-Based Physics I Lab 4
  - **Area V: Humanities**
    - Area VI: Creative and Fine Arts 3
  - **Area VI: Creative and Fine Arts**
    - Area I: Communications 3
    - Area II: Mathematics 4
    - Area III/IV: Laboratory Sciences and Social Behavioral Sciences 11
  - **Viewing A Wider World**
    - MATH 1511G Calculus and Analytic Geometry II 3

#### Departmental/College Requirements

**Mechanical Engineering**
- ENGR 110 Introduction to Engineering Design 3
- M E 210 Electronics and System Engineering 3
- ENGR 217 Manufacturing Processes 3
- ENGR 217 L Manufacturing Processes Lab 1
- M E 228 Engineering Analysis I 3
- ENGR 233 Engineering Mechanics I 3
- ENGR 234 Engineering Mechanics II 3
- M E 240 Thermodynamics 3
- M E 261 Numerical Methods 3
- M E 326 Mechanical Design 3
- M E 328 Engineering Analysis II 3
- M E 338 Fluid Mechanics 3
- M E 340 Applied Thermodynamics 3
- M E 341 Heat Transfer 3
- M E 345 Experimental Methods I 3
- M E 349 MAE Career Seminar 3
- M E 425 Design of Machine Elements 3
- M E 445 Experimental Methods II 3
- Select one Mechanics Elective from the following: 3
  - M E 331 Intermediate Strength of Materials
  - M E 332 Vibrations
  - M E 333 Intermediate Dynamics

**Mathematics**
- Select one Mathematics Elective from the following: 3
  - M E 340 Applied Thermodynamics
  - M E 345 Experimental Methods I
  - M E 349 MAE Career Seminar

**Non-Departmental Requirements**

**Area I: Communications**
- ENGL 1110G Composition I 4
**Area II: Mathematics**
- MATH 1511G Calculus and Analytic Geometry I 3
**Area III/IV: Laboratory Sciences and Social Behavioral Sciences**
- CHEM 1215G General Chemistry I Lecture and Laboratory for STEM Majors 4
**Area V: Humanities**
- Area VI: Creative and Fine Arts 3
**Area VI: Creative and Fine Arts**
- Area I: Communications 3
- Area II: Mathematics 4
- Area III/IV: Laboratory Sciences and Social Behavioral Sciences 11
**Viewing A Wider World**
- MATH 1511G Calculus and Analytic Geometry II 3
A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

College of Health, Education and Social Transformation

Dean - Yoshitaka Iwasaki

Associate Dean for Academic Affairs - Phillip Post
Associate Dean for Research - Michael Hout
Director of Research Operations - Juanita Hannan
Director of Finance - Aida Lopez
Coordinator, Educational Support and Resource Center - Margo Trevino-Torres
Student Program Coordinator - Sapphira Garner
Communication Specialist - Amanda Adame

The College of Health, Education, and Social Transformation (HEST) was established in 2021 to serve students, faculty, and staff whose efforts aim to improve individual, societal, and policy outcomes. The college was formed by combining the previous College of Education, College of Health and Social Services, and the Department of Sociology from the College of Arts & Sciences. In the Spring of 2023, the college added the Borderlands and Ethnic Studies Department. We offer stackable credentials, certificates, minors, and degrees in the following areas: borderlands and ethnic studies; communication disorders; counseling and educational psychology; kinesiology; nursing; public health; social work; sociology; and teacher preparation, administration, and leadership (TPAL).

General Undergraduate Requirements

1. Complete at least 120 - 132 acceptable credits, including a minimum of 48 credits in courses numbered 300 or above. NMSU Viewing the Wider World (VWW) classes are included in the 48-credit hour requirement.

2. The minimum GPA varies per degree program. Please refer to your department/school for application, admission, or program GPA requirements. Each department has information about minimum GPA, program prerequisites, and program-specific testing requirements. Application to a HEST program does not automatically end in acceptance.

3. Satisfy New Mexico general education requirements. The HEST Undergraduate Resource Center and the Center for Academic Advising and Support Services (CAASS) have detailed degree maps, program information, and curricula.

4. All students, including transfer students, must complete the last 30 semester credits required for the baccalaureate degree within the New Mexico State University system. Students in the four-year Servicemen’s Opportunity College Program are not exempt from this regulation.

5. Students interested in teacher preparation (including secondary education minors), nursing, social work, and public health programs must apply and be accepted into these programs based on a set of prerequisites and a competitive admission process. For information about these application and admission processes, please refer to each department’s information in this catalog.

6. In addition, if department faculty determine that a student is performing below expected program standards in a particular skill, that department may require that a remediation plan be developed to promote student success.
General Education Requirements (non-teacher education programs)
1. Ten credits in General Education Area I: Communication
2. Three to four credits in General Education Area II: Mathematics
3. Ten to eleven credits in General Education Area III/IV: Laboratory Science and Social/Behavioral Sciences
4. Three credits in General Education Area V: Humanities
5. Three credits in General Education Area VI: Creative and Fine Arts
6. Three to four additional credits from a General Education Elective

General Education Requirements (teacher education programs)
1. Ten credits in General Education Area I: Communication
2. Three credits in General Education Area II: Mathematics
3. Eleven credits in General Education Area III/IV: Laboratory Science and Social/Behavioral Sciences
4. Three credits in General Education Area V: Humanities
5. Three credits in General Education Area VI: Creative and Fine Arts
6. Three additional credits from a General Education Elective (HIST 1110G United States History I or HIST 1120G United States History II)

HEST programs may require more credit hours or additional courses specific to the major. Check the departmental pages for degree requirements in each program of study.

While the ultimate responsibility for planning an academic program in compliance with university, college, and departmental requirements rests with the student, the College recognizes the importance of sound and accessible advising for academic programs. Students formally admitted to a HEST major are provided academic advising within the department of that major. Students not formally admitted to a professional studies program are advised by CAASS.

Transferring Undergraduate Courses
Certain courses within the curricula offered by HEST programs have been identified as transferable from NMSU to other public two-year and four-year institutions in New Mexico. The equivalent course at other institutions can be identified using the common course number. Similarly, students from other institutions can use the common course number to identify education courses that can be transferred to NMSU.

The School of Nursing offers the New Mexico Nursing Education Consortium (NMNEC) state-wide.

Pre-professional Programs
NMSU offers several programs for students to transfer into professional schools throughout the university. The pre-professional programs administered by the HEST are pre-nursing, pre-social work, and pre-public health sciences. Students new to NMSU or working on completing their departmental prerequisites can declare a pre-professional major in HEST.

Once prerequisites have been satisfied, an application process specific to each major is required. Application details and requirements are available through the “Academic Departments” link on the HEST website (https://hest.nmsu.edu/) and the Central Advising Center (CAASS).

Graduate Work
HEST offers curricula leading to the degrees of:
- Master of Arts
- Master of Science
- Specialist in Education
- Doctor of Education
- Doctorate of Nursing Practice
- Doctor of Philosophy.

Those interested in pursuing graduate degrees should consult the Graduate Catalog for full information at https://catalogs.nmsu.edu/nmsu/graduate-school/.

Undergraduate Minors

- Borderland and Ethnic Studies - Undergraduate Minor (p. 1086)
- Chicana/o Studies - Undergraduate Minor (p. 1086)
- Counseling and Education Psychology - Undergraduate Minor (p. 1110)
- Dance - Undergraduate Minor (p. 1151)
- Exercise Science - Undergraduate Minor (p. 1151)
- Gerontology - Undergraduate Minor (p. 1191)
- Native American Studies - Undergraduate Minor (p. 1087)
- Pre-Health - Undergraduate Minor (p. 1078)
- Public Health - Undergraduate Minor (p. 1191)
- Sociology - Undergraduate Minor (p. 1301)
- U.S.-Mexico Border Health Issues - Undergraduate Minor (p. 1191)

Graduate Minors

- Educational Administration (Doctoral) - Graduate Minor (p. 220)
- Educational Administration (Higher Ed.) - Graduate Minor (p. 220)
- Educational Administration (Pk-12) - Graduate Minor (p. 221)
- Gerontology - Graduate Minor (p. 222)
- Integrated Behavioral Health Care - Graduate Minor (p. 223)
Pre-Health - Undergraduate Minor

The Pre-Health minor is designed to be useful for undergraduate students interested in attending health-related professional schools (i.e., medical, dental, physical therapy, etc.). The courses selected for the minor represent content that will help prepare students to apply and attended health-related professional schools.

Requirements

A minor in Pre-Health must include 22 credits from the listed courses work below.

Accreditation

The programs offered by HEST provide undergraduate students with a broad general education with an emphasis on professional preparation in various disciplines. These programs are nationally accredited, while some require approval by the State of New Mexico. These programs include:

- **Teacher Preparation:** The university’s teacher preparation program, which involves several colleges and is directed by the College Health, Education, and Social Transformation, was re-accredited in 2018 by the Council for the Accreditation of Education Preparation Programs (CAEP). The undergraduate and graduate programs that prepare individuals for licensure to work in public and private schools in New Mexico have been approved by the New Mexico State Public Education Department.

- **Counseling and Educational Psychology:** The Master of Arts (MA) in Clinical Mental Health Counseling, accredited by the Council for Accreditation of Counseling and Related Educational Programs (CACREP); the Specialist in Education (Ed.S.) in school psychology, accredited by the National Association of School Psychologists (NASP) and the doctoral (Ph.D.) program in counseling psychology accredited by the American Psychological Association (APA). The post-doctoral program in Clinical Psychopharmacology holds APA designation.

- **Health and Social Services:** The baccalaureate degree program in the School of Nursing is accredited by the Commission of Collegiate Nursing Education (CCNE). The New Mexico Board approves the undergraduate program in Nursing of Nursing.

Health and Social Services: The baccalaureate degree program in the School of Nursing is accredited by the Commission on Collegiate Nursing Education (CCNE). The New Mexico Board approves the undergraduate program in Nursing of Nursing.

The baccalaureate degree program in the School of Social Work is accredited by the Council on Social Work Education (CSWE). The Bachelor of Public Health and Masters of Public Health degree programs in the Department of Public Health Sciences is accredited by the Council on Education for Public Health (CEPH).

The Communication Disorders master's program in Speech-Language Pathology is accredited by the American Speech-Language-Hearing Association (CAATE).

The Athletic Training Degree in the Department of Kinesiology is accredited by the Commission on Accreditation of Athletic Training (CAATE).

Pre-Health - Undergraduate Minor

The Pre-Health minor is designed to be useful for undergraduate students interested in attending health-related professional schools (i.e., medical, dental, physical therapy, etc.). The courses selected for the minor represent content that will help prepare students to apply and attend health-related professional schools.

Requirements

A minor in Pre-Health must include 22 credits from the listed courses work below.

Total Credits 22-23

---

1. Any prerequisites for courses on the list must be satisfied before taking listed courses.
2. PHYS 2230G General Physics for Life Science I/PHYS 2230L Laboratory to General Physics for Life Science I should be taken in the fall semester before taking PHYS 2240G General Physics for Life Science II.
Recommendations for VWW courses (not required):

- PHLS 3130V Global Environmental Health Issues
- PHLS 4620V Cross-Cultural Aspects of Health
- ANTH 357V Medical Anthropology
- GNDR 381V Women’s Health Issues/PHLS 3120V Women’s Health Issues (cross-listed class)
- GNDR 433V Sex, Gender and Culture
- SOCI 3245V Comparative Family Systems

Borderlands and Ethnic Studies

The Borderlands and Ethnic Studies Department offers courses in the following areas: Borderlands and Ethnic Studies (BEST), Chicana/o Studies (CCST), Native American Studies (NATV), Palestine Studies, and Decolonial Methodologies.

Program Information

The Borderlands and Ethnic Studies Department offers an Undergraduate Minor in Borderlands and Ethnic Studies, an Undergraduate Minor in Chicana/o Studies, an Undergraduate Minor in Native American Studies, a Graduate Minor in Native American Studies, and a Graduate Certificate in Borderlands and Ethnic Studies.

The interdisciplinary faculty in BEST outline and analyze the history, cultural production, politics, and consequences of racialization and identity formation from a diasporic and transnational/transborder approach that remains rooted in a place-based, Borderlands imperative.

Degrees for the Department

- Borderlands and Ethnic Studies - Graduate Certificate (p. 213)

Minor for the Department

- Borderland and Ethnic Studies - Undergraduate Minor (p. 1086)
- Chicana/o Studies - Undergraduate Minor (p. 1086)
- Native American Studies - Undergraduate Minor (p. 1087)
- Native American Studies - Graduate Minor (p. 224)

Professor, Dulcinea Lara, Department Head

Professors Hamzeh, Lara; Associate Professor Garay; Assistant Professor Badoni.

G. Badoni, Ph.D. (U of Arizona) – Native American Studies, Native American visual culture, Native American education; R. J. Garay, Ph.D. (Arizona State) – Latina/o/e/x and African American Literatures; M. Hamzeh, Ph.D. (New Mexico State) – Decolonial methodologies, Palestine Studies; D. Lara, Department Head, Ph.D. (Berkeley) – Relational Ethnic Studies, Chicana/o Studies, Chicana/o History

Borderlands and Ethnic Studies

BEST 1110G. Introduction to Borderlands and Ethnic Studies

3 Credits (3)

The field of Ethnic Studies is about 1) critical knowing and 2) unapologetic imagining and creation of a better, more just world. This course explores the roots, logics, and administrations of racism within the U.S. context, locally along the border, and framed within a larger global and historical context. The past few decades have borne witness to increasing global diversity and cross-border migrations, which has led many in the U.S. to imagine the nation as “post-racial.” Simultaneously, increasing clashes that can only be described as “racist” have led people to wonder about the dark racist underpinnings of a society that believes it has achieved the goals put forth by the distinct and intersecting Civil Rights Movements of the 1960s. Perhaps, now, more than any other time in history, there is an earnest desire to talk about race and racism and unpack these constructs/activities/outcomes. This course is designed to inform us about how colonization, racism, and hegemony function. Secondly, it is designed for self and collective exploration of these somewhat broad and abstract concepts in an applied manner. Finally, it is designed for us to arrive at a shared understanding of the decolonial turn, or a re-humanization imperative. How do we understand, apply, and heal as these activities each relate to coloniality of power

Learning Outcomes

1. Learn and understand broad histories of social struggles, social movements, and ensuing human relationships.
2. Meaningfully engage classical and new materials from the Borderlands and Ethnic Studies “canon.”
3. Articulate observations using key terms, theories, and concepts in Borderlands and Ethnic Studies.
4. Apply key concepts in “everyday life” via course activities.
5. Gain a better understanding of your own worldviews and opinions towards issues of race, class, gender, nationalism, migration, borders, social movements, and resistance.
6. Learn mindful and constructive ways to engage peers about sometimes “difficult” topics like race, power, and privilege.

BEST 300. History and Theories in Borderlands and Ethnic Studies

3 Credits (3)

This course provides a basic understanding of the history and theoretical foundations of Borderlands and Ethnic Studies. It engages in an in-depth analysis of the concepts and history that resulted in reshaping the way we understand race, national borders, immigration, education, and the law. It examines borderlands theorizing to critically engage the border not simply as a physical barrier meant to regulate migration, but the economic, cultural, spatial, and metaphorical borderlands that informs us on larger processes of membership, belonging, identity, politics, and dehumanization linked to social structures and institutions. It explores the history of social movements in the U.S. that sought to illuminate social inequalities and social justice issues and investigates the underlying causes and sources of these social movements as they relate to reconceptualizing race and the borderlands and their overall impact on society at large. Throughout the course we will ask the following questions: How does the idea of race permeate our everyday lives? How does education reinforce our understandings of race? How do historical struggles over economic resources and political power illuminate the formation and development of the borderlands? How does law relate to power relations and mechanisms of social control?

Learning Outcomes

1. Explain how race and ethnicity has been historically socially constructed in the U.S.
2. Understand how the social construction of race and ethnicity is related to issues of social control.
3. Understand how the idea of race helps to reinforce existing power arrangement.
4. Connect historical struggles for justice and equality in the U.S. to current social and political issues dealing with the Borderlands.
5. Explain hegemony and its link to shifting borders and nationalism.
6. Identify how racial beliefs are tied to laws, policies, and practices of social institutions and organizations.
7. Understand how race relates to the development of the border.
8. Analyze the ways race, class, and gender serve as interlocking systems of oppression.
9. Gain a better understanding of your own worldviews and opinions towards issues of race, class, gender, nationalism, migration, borders, social movements, and resistance.
10. Critically engage and "think outside the box" when discussing the conceptualization and history of the idea of race.

BEST 400. Capstone in Borderlands and Ethnic Studies
3 Credits (3)
This seminar is designed to culminate the undergraduate minor by summarizing knowledge and experience garnered in pre-courses: Intro to Borderlands & Ethnic Studies, History & Theories of Ethnic Studies, as well as the chosen gender course, the chosen race, history & education course, and the chosen elective course. Students will be asked to write a reflective essay at the start of the course that highlights 1) materials and ideas that have most impacted the student throughout the core courses, 2) discuss how the elective course complemented and expanded materials and ideas from BEST core classes, 3) what materials and ideas remain challenging to grasp, and 4) what kind of culminating project the student would like to complete. This essay will be the foundational document to carry the student through the semester, along with close guidance provided by the instructor as well as peer feedback.

Prerequisite/Corequisite: BEST 1110G, BEST 300, and either (AFST 2140G, CCST 3120V, or NATV 4110) and either (AFST 4110, CCST 3110, or NATV 4210).

Learning Outcomes
1. Design and develop a semester-long project that draws upon all previous BEST in collaboration with instruction and peers.
2. Re-explain vis-a-vis previous courses how race and ethnicity has been historically socially constructed in the U.S.
3. Critically engage and "think outside the box" when discussing the conceptualization and history of the idea of race.
4. Work with a community organization, agency, or other group to collaborate on the final project.
5. Present project to class as a final product.

BEST 450. Special Topics in Borderlands and Ethnic Studies
3 Credits (3)
This course is a focused and intensive study of particular historical, aesthetic, cultural, political, or social issues and contexts within the discipline of Borderlands and Ethnic Studies. Repeatable under different subtitles. May be repeated up to 9 credits.

Learning Outcomes
1. Define and articulate the fundamental characteristics and issues related to the topic of focus.
2. Contextualize the topic of focus within the broader field of Ethnic Studies, Chicana Studies, Africana Studies, and/or Native American Studies.

3. Develop compelling and logical arguments for class discussion, individual and group presentations and writing assignments, based on course readings and discussions.
4. Interpret, understand, and engage texts within cultural, social and historical contexts.
5. Gather, analyze, and evaluate information from a variety of sources.
6. Compose texts in a variety of media formats.

BEST 455. Borderlands Representations
3 Credits (3)
In this course, we will explore contemporary portrayals of border spaces and peoples in literature, film, visual art, and theory. We will engage an interdisciplinary and cross-genre exploration to examine the flexibility, tensions, and range of border-focused textual/artistic production. The Mexico-U.S. border will be the foundation and we will extend from this most familiar border to borders globally, with particular attention to the Canada-U.S. border, the Haitian-Dominican border, the Palestine/Israel nation states. Questions that will guide the course: How do representations of the Mexico-U.S. border reflect/converse with historical and contemporary political tensions? How do the perspectives and vantage points of Mexican, Chicano, and U.S. Anglo producers of cultural artifacts, including literature, diverge, collide, and coalesce? And, finally, how do perceptions and portrayals of geopolitical borders converse with understandings of the Mexico-U.S. border, what can we bring from our border-knowing to global borders, and what are specificities of particular border spaces?

Learning Outcomes
1. Express knowledge of major economic, political, social and cultural realities of multiple global borderlands.
2. Explain the multidisciplinary diversity and intellectual rigor that compose cultural productions of these borderlands.
3. Develop compelling and logical arguments for class discussion, individual and group presentations and writing assignments, based on course readings and discussions.
4. Interpret, understand, and engage texts within cultural, social and historical contexts.
5. Gather, analyze, and evaluate information from a variety of sources.
6. Compose texts in a variety of media formats.

BEST 470. Literary Explorations of Race & Justice
3 Credits (3)
While this course is, as the title suggests, a survey of literary texts emphasizing race and justice, an exploration like this one poses an argument about which works of a literary tradition are most important, most fundamental, and, especially, how works that are deemed "political" feature in literary traditions. How have some authors and their texts become popularized, for whom, and what are some of the consequences (both positive and negative) of how the processes (both organic and inorganic) of popularization (canonicity, if you will) establish the parameters of ethnic literary traditions? We will work with these questions as you read and respond in discussion and in writing to some of what I, and others, consider a handful of the most prominent U.S. writers of color, their works, and their representations of race and justice. Other questions that will help us explore the multiplicity and richness of these literary texts: How do these texts converse with broader traditions of literatures? What are the conversations between and tensions within these texts and among its writers? How do aesthetics, politics, and community intersect? How do issues, including race and justice, ethnicity, gender, sexuality, and self-representation manifest within texts? What histories impact literary production and publication of these texts? How are these literary explorations of race and justice evolving and
what does the future hold? The course will be writing-intensive, reading-intensive, and genre-inclusive, as we connect the "creative" realm of textual representation in fiction, poetry, and nonfiction to the "theoretical" realm of criticism and scholarship that provides ways for us to see and read textual representation critically, imaginatively, differently. The course promises to incite provocative discussions, as it engages the relevance of a rapidly changing U.S. population.

**Learning Outcomes**

1. Summarize the major economic, political, social and cultural forces influencing the composition, publication, and reception of literary texts focusing upon race and justice.
2. Explain the multidisciplinary diversity and intellectual rigor that compose these texts.
3. Develop compelling and logical arguments for class discussion, individual and group presentations and writing assignments, based on course readings and discussions.
4. Interpret, understand, and engage texts within cultural, social and historical contexts.
5. Gather, analyze, and evaluate information from a variety of sources.
6. Compose texts in a variety of media formats.

**BEST 480V. Narratives and Representations of Palestinians: Media, Music, Film, and Art**

3 Credits (3)

This course is an undergraduate (that fulfills requirements for VWW) and graduate Palestine Studies course that draws on Palestine, settler-colonial studies, and decolonial Arab feminisms as an intersectional set of knowledges, methodologies, and practices. It also draws on various examples of contemporary Palestinian arts—paintings, fashion, land-based ceremonies/rituals, music, and film. The course is structured to connect the themes addressed throughout the semester with their iterations in world media, Palestinian art creation, and representation. The course aims to help the learners address 1) how Palestinian art creation is a resistance tool to the erasures imposed by the Zionist settler-colonial state of Israel on Palestinians and 2) how art creation in all its forms act to counter the Zionist's narratives and agenda about Palestinian history, heritage, identity and right to their land. It also introduces and engages liberatory and decolonial visions of art/knowledge creation, as well as, global resistance and solidarity with Palestinian artists.

**Learning Outcomes**

1. How Palestinian art creation is a resistance tool to the erasures imposed by the Zionist settler-colonial state of Israel on Palestinians.
2. How art creation in all its forms act to counter the Zionist's narratives and propaganda about Palestinian history, heritage, identity and right to their land. It also introduces and engages liberatory and decolonial visions of art/knowledge creation, as well as, global resistance and solidarity with Palestinian artists.

**BEST 510. Foundations in Borderlands & Ethnic Studies**

3 Credits (3)

This seminar explores the roots, logics, and administrations of racism within the U.S. context, locally along the border, and framed within a larger global and historical context. In addition to race, other social locations such as gender, class, and sexual orientation are explored as intersectional. The course uses traditional lecture format, multi-media, guest lecturers, and engaging activities inside and outside the classroom to apply materials in tangible and impactful ways. May be repeated up to 6 credits.

**Learning Outcomes**

1. Identify, compare and contrast broad histories of social struggles, social movements, and ensuing human relationships.
2. Meaningfully engage classical and new materials from the Borderlands and Ethnic Studies "canon."
3. Articulate observations using key terms, theories, and concepts in Borderlands and Ethnic Studies.
4. Apply key concepts in "everyday life" via course activities.
5. Demonstrate mindful and constructive ways to engage peers about sometimes "difficult" topics like race, power, and privilege.

**BEST 511. Methodologies in Borderlands and Ethnic Studies**

3 Credits (3)

This seminar introduces the practice of indigenizing research methods by looking beyond the canon of Eurocentric methodologies that have often trapped marginalized communities outside of normative time frames. Through the deconstruction of colonial apparatuses and their influence on research methods, the class explores key concepts in decolonizing research to move us to new understandings of communities according to indigenous traditions that privilege ancestral ways of knowing. May be repeated up to 6 credits.

**Learning Outcomes**

1. Explain how producing research is connected to producing knowledge.
2. Identify and describe the impact of colonialism and imperialism on disrupting ways of knowing.
3. Recognize political and cultural implications of the world seen as a colonial, constructed narrative
4. Describe how a social reality can have set political and ideological conditions.
5. Distinguish how indigenous methodologies relate to decolonizing methods.
6. Describe how decolonizing methods are a different approach to research.
7. Identify decolonizing methods that have been used in research.
8. Critically engage with research lenses stemming from a decolonizing standpoint.

**BEST 512. Theories in Borderlands and Ethnic Studies**

3 Credits (3)

This seminar provides a basic understanding of theoretical foundations of Borderlands and Ethnic Studies. It also examines borderlands theorizing to critically engage the border not simply as a physical barrier meant to regulate migration, but the economic, cultural, spatial, and metaphorical borders that informs us on larger processes of membership, belonging, identity, politics, and dehumanization linked to social structures and institutions. Social movements in the U.S. that sought to illuminate social inequalities and social justice issues are explored. The course investigates the underlying causes and sources of these social movements as they relate to reconceptualizing race and the borderlands and their overall impact on society at large. May be repeated up to 6 credits.

**Learning Outcomes**

1. Explain how race and ethnicity has been socially constructed in the U.S.
2. Recognize how the social construction of race and ethnicity is related to issues of social control
3. Describe how the idea of race helps to reinforce existing power arrangements
4. Connect historical struggles for justice and equality in the U.S. to current social and political issues dealing with the borderlands
5. Explain hegemony and its link to shifting borders and nationalism
6. Identify how racial beliefs are tied to laws, policies, and practices of social institutions and organizations.
7. Distinguish how biopolitics relates to the development of the border.
8. Analyze the ways race, class, and gender serve as interlocking systems of oppression.
9. Gain an understanding of and be able to evaluate your own worldviews and opinions towards issues of race, class, gender, nationalism, migration, borders, social movements, and resistance.
10. Critically engage and "think outside the box" when discussing the conceptualization and development of the idea of race.

BEST 513. Capstone in Borderlands and Ethnic Studies
3 Credits (3)
This seminar is designed to culminate the graduate certificate by summarizing knowledge and experience garnered in pre-courses: BEST 510, 511, 512. Students will be asked to write a reflective essay at the start of the course that highlights 1) materials and ideas that have most impacted the student throughout the core courses, 2) discuss how the elective course complemented and expanded materials and ideas from BEST core classes, 3) what materials and ideas remain challenging to grasp, and 4) what kind of culminating project the student would like to complete. This essay will be the foundational document to carry the student through the semester, along with close guidance provided by the instructor as well as peer feedback. May be repeated up to 6 credits.
Prerequisite: BEST 510; BEST 511; BEST 512.

Learning Outcomes
1. Summarize, concisely, key concepts and frameworks learned in BEST seminars.
2. Express, reflectively, what these concepts and frameworks mean in the context of historical and contemporary social issues related to power dynamics created and exacerbated by hierarchies associated with racial, gender, class, sexual orientation and other positionalities.
3. Design a culminating project that encapsulates a nuanced understanding of Borderlands and Ethnic Studies, ensuring its impact on a broader audience.
4. Generously evaluate cohort mates’ projects as they progress during semester.
5. Receive feedback about one’s own project and apply those comments and critiques in useful ways and in collaboration with instructor.
6. Create/generate a culminating project that aligns with rubrics in the most effective manner possible.
7. Present work to cohort and instructor in an effective way.

BEST 550. Advanced Special Topics in Borderlands and Ethnic Studies
3 Credits (3)
This course is a focused and intensive study of particular historical, aesthetic, cultural, political, or social issues and contexts within the discipline of Borderlands and Ethnic Studies. Repeatable under different subtitles. May be repeated up to 9 credits.

Learning Outcomes
1. Define and articulate the fundamental characteristics and issues related to the topic of focus.
2. Contextualize the topic of focus within the broader field of Ethnic Studies, Chicanx Studies, Africana Studies, and/or Native American Studies.
3. Develop compelling and logical arguments for class discussion, individual and group presentations and writing assignments, based on course readings and discussions.
4. Interpret, understand, and engage texts within cultural, social and historical contexts.
5. Gather, analyze, and evaluate information from a variety of sources.
6. Compose texts in a variety of media formats.

Chicana and Chicano Studies
CCST 2110G. Introduction to Chicana and Chicano Studies
3 Credits (3)
An introductory survey of the Mexican American experience in the United States, with special reference to New Mexico. The course includes exploration of historical, political, social and cultural dimensions. NMSU Specific It seeks to review the historical causes and consequences of the formation of the Chicano identity and to understand its relation to the development of the Chicano experience as a distinct culture. The course explores the social and political impact that Chicana/o thought and theory has had on the United States over time, specifically developing concepts related to identity, community, social movements, and social justice. Ultimately, the course will facilitate understanding the historical ways in which Chicana/os have negotiated the pressures of their surroundings and in the process shaped or redefined American conceptions of identity, race, gender, sexuality, ethnicity, education, protest, and resistance.

Learning Outcomes
1. Apply various transdisciplinary perspectives and processes to understand humanist expressions through a variety of creative productions.
2. Assess and apply social, historical, economic and cultural perspectives as they impact diverse populations over a period of time.
3. Explain the ways in which narratives help people understand one another more clearly and profoundly across ethnic and cultural groups.
4. Design projects that foster and increase a full understanding of a subject in order to promote change in their own and listeners’ attitudes, values, beliefs, or behaviors.
5. Apply qualitative and numerical data to explain diverse human actions in an everyday context of life.

CCST 3110. Chicana/o History
3 Credits (3)
This course is an exploration and discuss the history of Mexican Americans in the U.S., with emphasis on their contributions to society and the political, economic and cultural forces that exemplify their experiences as a population. Beginning in 1492, at the onset of European “contact” with indigenous people living in what is now called Mexico, students will study the early beginnings of Mexicans as a mestizo (mixed) race and follow this group on a rough timeline through the present. Films, music, images and poetry are included to supplement lecture material. With special attention to New Mexico and the borderlands specifically, students will endeavor to make relevant, contemporary connections to the material. Additionally, the course will contextualize this history of a population and experiences within the establishment of Chicana/o Studies as an evolving discipline.

Learning Outcomes
1. Summarize the major economic, political, social and cultural histories defining and effected by the Mexican American population.
2. Gain understanding of how these histories evolved in political solidarity with other minority populations in the United States.
3. Understand the multidisciplinary diversity and intellectual rigor that effected and currently compose Chicana/o Studies as an academic discipline.
4. Develop compelling and logical arguments for class discussion, individual and group presentations and writing assignments, based on course readings and discussions.
5. Interpret, understand, and engage texts within cultural, social and historical contexts.
6. Gather, analyze, and evaluate information from a variety of sources.
7. Compose texts in a variety of media formats.

**CCST 3120V. Chicana/o Genders and Sexualities**
3 Credits (3)

This survey course introduces students to Chicana genders and sexual identities and representations as socially and culturally constructed in transnational Latinx communities and contexts. Through a lens of Chicana feminist and queer theories, students will gain familiarity with gender- and sexuality-related stereotypes and cultural expectations, as well as the histories of individual and group resistance to these norms. Course materials will highlight the revolutionary challenges to limitations and contributions to social, political, and cultural change made by queer Chicana individuals and groups, women, and men resisting confining constructions of masculinity. This course will be both reading and writing intensive.

**Learning Outcomes**
1. Explain the multidisciplinary diversity and intellectual rigor that compose Chicana feminist and queer theoretical traditions
2. Develop compelling and logical arguments for class discussion, individual and group presentations and writing assignments, based on course readings and discussions
3. Interpret, understand, and engage texts within cultural, social and historical contexts
4. Gather, analyze, and evaluate information from a variety of sources
5. Compose texts in a variety of media formats.

**CCST 3130. Chicana/o Education**
3 Credits (3)

This course deconstructs the history of education through the lens of culture and race. Using a framework of intersectionality, the creation of public education, and the impact of historical shifts within the law concerning education will be examined. Special emphasis is placed on the role of ethnicity in the development of the United States and its education system. Includes an overview of multicultural/ multilingual curricula with a special focus on culturally / linguistically responsive instruction and assessment practices. This course provides a critical examination of race and culture using multicultural theoretical frameworks to analyze the conditions of education today. Additionally, this course will particularly foreground Latinx and Chicana experiences and revolution in the realm of education and what this history and activism teaches us about our own identity, worldviews, environment, and ways of understanding in the contexts of both informal and formal processes and experiences of education.

**Learning Outcomes**
1. Analyze and interpret the historical, philosophical, economic, and sociocultural elements of education as it relates to race and culture.
2. Evaluate and interpret the ways in which education policies influence and are influenced by equity issues.
3. Describe multicultural education initiatives and assumptions about teaching, learning, and knowing.
4. Understand how cultural groups and students' cultural identities affect language learning and education overall, especially for Latinx and Chicana students.
5. Explain and provide examples of anti-bias teaching strategies and education practices.

**Native American Studies**

**NATV 1150G. Introduction to Native American Studies**
3 Credits

This course surveys the significance of Native American Studies through an inter-disciplinary approach to two areas of academic concentration: Indigenous Learning Communities, and Leadership and Building Native Nations.

**Learning Outcomes**
1. Students will develop a general understanding of the various concentration areas in Native American Studies throughout the United States.
2. Students will identify the contributions of various academic disciplines to Native American Studies.
3. Students will understand the intricacies and intersections of Indigenous scholarship in Native American Studies.
4. Students will articulate the importance of Native American Studies as a stand-alone discipline in academia.
5. Students will be able to connect community issues in both Native and Non-Native America to concepts taught in Native American Studies.

**NATV 2120. Native American Experience**
3 Credits (3)

Introductory survey of Native American History, culture an contemporary issues. Students read literature by and about Native Americans covering a variety of topics including tribal sovereignty, federal policy, activism, economic development, education and community life.

**Learning Outcomes**
1. Apply cultural and historical context to text about Native Americans (by Natives and non-Natives).
2. Analyze texts about Native Americans in relation to tribal sovereignty, federal policy, activism, economic development, education and community life.
3. Evaluate texts by and about Native Americans from an NAS perspective.

**NATV 3120. An Indigenous Peoples History of the United States**
3 Credits (3)

This course is a history of United States as experienced by the Indigenous people. It delineates the Indigenous experience as reflected in Native American scholarship and research. The Indigenized and decolonized Native perspective provides an educative authenticity of Indigenous knowledge comprehensible to all, particularly the non-Indian.

**Learning Outcomes**
1. The student can identify and describe significant historic periods as experienced by the Indigenous inhabitants of United States.
2. The student is able to identify and differentiate aspects of the Native American historic experience in relationship to the standard linear chronicle timeline as reflected in U.S. history.
3. The student it able to compose a brief summary review of the Native American historic periods as evidenced in scholarship and research.

**NATV 4110. Native American Women**
3 Credits (3)

Students investigate the status, experience, and contributions of Native American women from pre-contact to contemporary times. Identifying the contribution of Native American women to societies, communities, and
Nations as keepers of knowledge, teachings, and traditions. Crosslisted with: ANTH 553.

Learning Outcomes
1. Explore and examine the roles of American Indian women within a tribal society and analyze the impact of colonization and decolonization upon their place/roles over time.
2. Evaluate historical and contemporary issues of importance to American Indian women and their communities.
3. Assess a topic, book or issue of importance to Native women through a research paper, case study, or exam demonstrating in-depth knowledge and understanding.
4. Demonstrate in-depth knowledge and understanding of Native American women histories and contemporary issues.
5. Formulate a paper on Native woman/tribal women from historical or contemporary sources and share with class (undergraduates).
6. Demonstrate in-depth knowledge and understanding of Native American women through an exam/final (undergraduates).

NATV 4120V. Native American Visual Culture
3 Credits (3)
This course examines the various theoretical and methodological challenges inherent to the study of indigenous art, including the issues of identity, sovereignty, gender, cultural critique, and the role of the artist.

Learning Outcomes
1. Identify NA / Indigenous, film/video writers and directors.
2. Locate NA / Indigenous nations with their geo-physical location.
4. Apply "colonizing" / "decolonizing" methodologies.
5. To practice writing short analytical journal entries.
6. To learn effective group discussion techniques

NATV 4130. Indigenous Ways of Knowing
3 Credits (3)
This course examines Indigenous knowledge and ways of knowing to gain an appreciation of an epistemology and ontology that may be outside the boundaries of Eurocentric theory, concepts, and principles. The course explores and analyzes the nature and ways that Native Americans' develop knowledge as well as the concepts and composition of metaphysics and cosmology. Students analyze knowledge development through mythology and storytelling by emphasizing the nature of difference rather than comparative analysis.

Learning Outcomes
1. By the end of the semester, through dialogue and interaction, reading, writing, exercises, out of classroom experiences, auto/visual aids and computer technologies, the student is able to describe and explain characters and ways that Native Americans' develop knowledge (epistemology); as measured by reports, critiques, reflective summaries, learning logs, analysis techniques and assessments.
2. By the end of the semester, through dialogue and interaction, reading, writing, exercises, out of classroom experiences, auto/visual aids and computer technologies, the student is able to describe and explain concepts and composition of the metaphysics and cosmology (ontology) of Native American knowledge; as measured by reports, critiques, reflective summaries, learning logs, analysis techniques, and assessments.

NATV 4210. Native American Education
3 Credits (3)
This is a survey course that explores the education of Natives from multiple perspectives; the perspectives of Native theories and practices, the colonizers'-imposed education theories and practices, U.S. federal educational policies and practices, tribal systems of education, and responses from those experiencing the education. Starting with traditional education, the course will examine colonial education, federal and tribal efforts, contemporary models of Indian education including issues and challenges, and the educational sovereignty of tribes.

Learning Outcomes
1. Describe (verbally and written) traditional methods of education used by Native Americans.
2. Discuss and interpret (verbally and written) the theories and practices of educating Natives in different eras.
3. Compare (verbally and written) the different systems of education for Native Americans.
4. Articulate (verbally and written) contemporary Native American educational issues and challenges.
5. Be able to articulate (verbally and written) support for educational sovereignty of tribes.
6. Research, analyze and orally present a written paper about an American Indian boarding school and its legacy.

NATV 4220. Federal Indian Policy
3 Credits (3)
This course provides a basic historic overview of federal Indian policy. As preexisting sovereign nations, the U. S. Constitution acknowledges only states, foreign nations, and Indian tribes as sovereign governments. The purpose is to provide a fundamental understanding of the unique position Indian tribes occupy in this country. It examines impacts and effects on culture and contemporary livelihood.

Learning Outcomes
1. The student can recall and identity fundamental laws, policies, and court actions affecting Indian tribes.
2. The student can describe and explain the effects of federal Indian policy on activities and interactions between Native American and the overall society.
3. The student can analyze and interpret the impacts and effects of federal Indian policy on culture and contemporary lives of Native Americans.

NATV 4310. Indigenizing Methodologies in Native American Studies
3 Credits (3)
This course utilizes decolonizing (indigenizing) methodologies and praxis to gain insight into the complex effects of oppression and colonization. The course uses critical and indigenous concepts to identify and analyze hegemonic, ethnocentric, historic and contemporary human rights and social justice issues of indigenous people. Emphasis includes research theory and methodology, such as community participatory action research, that is collaborative, inclusive, and pragmatic to ethics, intellectual property, and cultural boundaries of indigenous people. Crosslisted with: ANTH 541.

Learning Outcomes
1. The student is able to describe and explain some of the complex effects of oppression and colonization on indigenous peoples.
2. The student is able to identify historic and contemporary issues that have influenced and affected the study and research of indigenous peoples.
3. The student is able to convey particular research theory and methodology that is collaborative, inclusive, and pragmatic to ethics and cultural boundaries of indigenous people.
NATV 5110. Advanced Indigenizing Methodologies in Native American Studies
3 Credits (3)
This course utilizes indigenizing methodologies and praxis to gain insight into the complex effects of oppression and colonization. Critical and indigenous concepts are used to identify and analyze hegemonic, ethnocentric, historic and contemporary human rights and social justice issues of indigenous people. Research theory and methodology such as community participatory action research that is collaborative, inclusive, and pragmatic to ethics, intellectual property, and cultural boundaries of indigenous people is emphasized.

**Learning Outcomes**
1. Explain how producing research is connected to producing knowledge.
2. Identify and describe the impact of colonialism and imperialism on disrupting ways of knowing.
3. Recognize political and cultural implications of the world seen as a colonial, constructed narrative.
4. Describe how a social reality can have set political and ideological conditions.
5. Distinguish how indigenous methodologies relate to decolonizing methods.
6. Describe how decolonizing methods are a different approach to research.
7. Identify decolonizing methods that have been used in research.
8. Critically engage with research lenses stemming from a decolonizing standpoint.

NATV 5120. Advanced Indigenous Peoples History of the United States
3 Credits (3)
This course is a history of United States as experienced by the Indigenous people. It delineates the Indigenous experience as reflected in Native American scholarship and research. The Indigenized and decolonized Native perspective provides an educative authenticity of Indigenous knowledge comprehensible to all, particularly the non-Indian.

**Learning Outcomes**
1. The student can identify and describe significant historic periods as experienced by the Indigenous inhabitants in United States
2. The student is able to identify and differentiate aspects of the Native American historic experience in relationship to the standard linear chronicle timeline as reflected in U.S. history.
3. The student it able to compose a brief summary review of the Native American historic periods as evidenced in scholarship and research.

NATV 5210. Advanced Native American Education
3 Credits (3)
This is a survey course that explores the education of Natives from multiple perspectives; the perspectives of Native theories and practices, the colonizers' imposed education theories and practices, U.S. federal educational policies and practices, tribal systems of education, and responses from those experiencing the education. Starting with traditional education, the course will examine colonial education, federal and tribal efforts, contemporary models of Indian education including issues and challenges, and the educational sovereignty of tribes.

**Learning Outcomes**
1. Describe (verbally and written) traditional methods of education used by Native Americans.
2. Discuss and interpret (verbally and written) the theories and practices of educating Natives in different eras.
3. Compare (verbally and written) the different systems of education for Native Americans.
4. Articulate (verbally and written) contemporary Native American educational issues and challenges.
5. Be able to articulate (verbally and written) support for educational sovereignty of tribes.
6. Research, analyze and orally present a written a paper about an American Indian boarding school and its legacy.

NATV 5220. Advanced Native American Visual Cultures
3 Credits (3)
This course examines the various theoretical and methodological challenges inherent to the study of indigenous art, including the issues of identity, sovereignty, gender, cultural critique, and the role of the artist.

**Learning Outcomes**
1. Identify NA/Indigenous, film/video writers and directors.
2. Locate NA/Indigenous nations with their geo-physical locations.
3. Consider issues of identity concerning Indigenous populations.
4. Apply "colonizing"/"decolonizing" methodologies.
5. To Practice writing short analytical journal entries.
6. To learn effective group discussion techniques.

NATV 5520. Advanced Native American Women
3 Credits (3)
Students investigate the status, experience, and contributions of Native American women from pre-contact to contemporary times. Identifying the contribution of Native American women histories and contemporary issues.

**Learning Outcomes**
1. Explore and examine the roles of American Indian women within a tribal society and analyze the impact of colonization and decolonization upon their place / roles over time.
2. Evaluate historical and contemporary issues of importance to American Indian women and their communities.
3. Assess a topic, book or issue of importance to Native women through a research paper, case study, or exam demonstrating in-depth knowledge and understanding.
4. Demonstrate in-depth knowledge and understanding of Native American women histories and contemporary issues.
5. Formulate a paper on Native woman/tribal women from historical or contemporary sources and share with class (undergraduates).
6. Demonstrate in-depth knowledge and understanding of Native American women through an exam/final (undergraduates).

Borderland and Ethnic Studies - Undergraduate Minor

Students must pass a total of 18 credits of which at least 9 must be upper division. There are three required courses for the minor: BEST 1110G: Introduction to Borderlands and Ethnic Studies, BEST 300: History and Theories in Borderlands and Ethnic Studies, and BEST 400: Capstone in Borderlands and Ethnic Studies. A grade of C- or better must be obtained for each course. Students may count S grades only in courses in which all grades are S/U, and no more than 6 hours of S credit can be accepted. Please contact Dr. Dulcinea Lara (dulcinea@nmsu.edu) regarding the minor.

Total Credits: 18

1 Course substitutions require approval of the Director of the Native American Studies minor, Dr. Georgina Badoni gbadoni@nmsu.edu.

2 9 credits of the overall 18 credits must be upper division.

---

**Counseling and Education Psychology**

### Undergraduate Program Information

The Bachelor of Science (B.S.) in Counseling and Community Psychology (CCP) prepares students to work at the bachelor’s level, focusing on interpersonal skills, case management, awareness of mental health issues, understanding human behavior, and multicultural awareness. Alternatively, the CCP undergraduate major prepares students for graduate school to become practitioners in the field of psychology with an additional focus on research and professional psychology practice opportunities.
Graduate Program Information

The major thrust of the Counseling and Educational Psychology (CEP) Department is the preparation of personnel for work in counseling, school psychology, counseling psychology and related areas. Five graduate degrees are available:

1. Masters of Arts (M.A.) in Clinical Mental Health Counseling
2. Specialist in Education (Ed.S.) in School Psychology
3. Doctor of Philosophy (Ph.D.) in Counseling Psychology
4. Doctor of Philosophy (Ph.D.) in School Psychology
5. Postdoctoral Masters of Science (M.S.) in Clinical Psychopharmacology

Departmental Graduate Admission Requirements

Admission requirements and procedures are specific to each degree program in the CEP department. Applicants must meet the basic admission requirements of the Graduate School before they are considered for admission to CEP graduate programs. To be considered for admission to CEP Graduate Programs, application requirements may include, but are not limited to, the following:

1. Completion and submission of NMSU online graduate application form and fee.
2. Unofficial transcript from every college or university you have attended. If the program decides to recommend you for admission, official transcripts must be submitted to the Graduate School. You will not be considered admitted until after the Graduate School has reviewed these materials and made a final decision.
3. Letters of recommendation from persons familiar with the applicant’s academic and/or professional record (please check with the degree program to determine the number needed).
4. Curriculum vitae or resume that includes a list of completed upper-division and/or graduate coursework related to counseling, school psychology, counseling psychology, or related professions.
5. Letter of intent and/or statement of purpose (please check with the degree program to determine what the content should include).
6. Writing Sample (please check with the degree program to determine what type of writing sample is needed).
7. Interviews are required as a part of the selection process.

For more information about the CEP Department, contact the department office or visit the departmental website. For questions related to degree programs admission procedures and requirements, please contact the Program Director and/or Program Admissions Director, program websites indicate contact information for these individuals.

CEP Departmental Policy on Enrollment Restrictions for Graduate Courses

Restricted Enrollment:

Due to student demand, limited university resources and the nature of graduate training programs which lead to licensure in the helping professions, enrollment in CEP graduate level courses is restricted to those graduate students who have been admitted to both the Graduate School, as well as to the particular academic program.

This restriction also applies to persons who may wish to audit a course. It is anticipated that certain situations may warrant an exception from the general rule limiting enrollment. The process to obtain an exception is provided in the following section.

Exception Criteria and Process:

The department head may grant exceptions to this policy, provided a screening process similar and equally rigorous to that required for admission to the program is performed. An exception must be requested before enrollment and shall include the following:

1. Consideration and validation of the reason provided by the individual requesting to enroll, which must include academic and professional qualifications relevant to the professional level of study. For example, active licensure as a psychologist is required to audit or register for courses in the postdoctoral program in Psychopharmacology.
2. Agreement from the individual that they will comply with all program requirements imposed for those who are admitted to the program, such as a background check.
3. Examples of justifications that will be considered sufficient to warrant an exception and permit students to register for graduate courses in CEP include:
   a. Previous admission by NMSU for purposes of a graduate minor in the helping professions. For example, the Minor in Integrated Behavioral Healthcare, which is also open to graduate students previously admitted to Social Work, Public Health, Nursing, and Marriage and Family Therapy programs.
   b. Licensed graduates of the Postdoctoral MS of Clinical Psychopharmacology program who need continuing education credits to maintain competency.
4. Written, including electronic, approval from the:
   a. Course Instructor,
   b. Program Director, and
   c. CEP Department Head.

Degrees for the Department

Bachelor Degree(s)

• Counseling and Community Psychology - Bachelor of Science (p. 1107)
• Counseling and Community Psychology - Bachelor of Science (Online) (https://catalogs.nmsu.edu/global/nmsu-global/counseling-community-psychology-bs-online/)

Master Degree(s)

• Clinical Mental Health Counseling - Master of Arts (p. 126)
• Clinical Psychopharmacology - (Postdoctoral) - Master of Science (Online) (https://catalogs.nmsu.edu/global/nmsu-global/clinical-psychopharmacology-postdoctoral-ms-online/)
• Counseling and Guidance (Educational Diagnostics) - Master of Arts (p. 129)

Specialist Degree(s)

• School Psychology - Specialist in Education (p. 212)

Doctoral Degree(s)

• Counseling Psychology - Doctor of Philosophy (p. 186)
• School Psychology - Doctor of Philosophy (p. 205)

Minors for the Department

• Counseling and Education Psychology - Undergraduate Minor (p. 1110)
• Integrated Behavioral Health Care - Graduate Minor (p. 223)
• Spanish Counseling - Graduate Minor (p. 225)

Associate Professor Elsa C. Arroyos, Interim Department Head

Professor: M. Kalkbrenner; College Professor: C. McDougall; Associate Professors: E. Arroyos, G. De Necochea, & A. Lopez; Assistant Professors: J. Lopez-Harder, L. Peterson, S. Ramos, W. Stem, & J. Wang; Emeritus Professors: E. Adams, E. Vázquez, & L. Vázquez

E. Adams, Ph.D. (Ohio State University)-multiculturalism & diversity, mindfulness, supervision; E. Arroyos, Ph.D. (University of Iowa)- school psychology and multicultural training and competence, mentoring, and women in academia; G. De Necochea, Ph.D. (University of California, Santa Barbara)-outreach, access, persistence/retention, and leadership development of diverse populations of students, staff and faculty in higher education; M. Kalkbrenner, Ph.D. (Old Dominion University)-college student mental health, reducing barriers to help seeking behaviors among mental health professionals, and experiential learning; A. Lopez, Ph.D. (University of Texas-San Antonio)-multicultural counseling, social justice, immigration, bilingual counseling/supervision, eating disorders and body image; J. López-Harder, Ph.D. (New Mexico State University)-intersectionality, culturally responsive healthcare/mental healthcare services, integrated behavioral health; C. McDougall, Ph.D. (University of North Dakota)-clinical psychopharmacology, cross-cultural psychology; L. Peterson, Ph.D. (Texas A&M University)- bilingual and multicultural school psychology, school-based mental health, professional issues in school psychology; Sarah Ramos, Ph.D. (New Mexico State University)-Latinas in academia, Latinx psychology, bilingual (Spanish) therapy, bilingual (Spanish) clinical training; W. Stem, Ph.D. (New Mexico State University)-cyberpsychology, mindfulness-based interventions, graduate student wellness/concerns, LGBTQ+ populations/concerns, men's issues, ACT/RCT approaches, clinical supervision and training; E. Vázquez, Ph.D. (University of Iowa)- school psychology, assessment, psychoeducational interventions, acculturation, ethnic and linguistic diversity; L. Vázquez, Ph.D. (University of Iowa)- counseling psychology, multicultural curriculum development and counseling, bilingual therapy, acculturation, identity development, and phenotype research; J. Wang, Ph.D. (North Carolina State University)-intervention implementation fidelity and multicultural graduate training

Counseling and Educational Psychology Courses

CEPY 1120G. Human Growth and Behavior
3 Credits (3)
Introduction to the principles of human growth and development throughout the life span. May be repeated up to 3 credits.

Learning Outcomes
1. Students will demonstrate an understanding of the scientific study of processes of change and stability throughout the human lifespan (i.e. Human Development).
2. Students will demonstrate a familiarity with the generally recognized stages of human development from conception to death.
3. Students will be able to demonstrate understanding of the normal and exceptional patterns of human development.
4. Students will be able to demonstrate understanding of recent research development regarding the identified stages of human development as they relate to gender and multicultural issues

CEPY 1150. Career Excellence
1 Credit (1)
Professional career curriculum to assist students in developing an understanding and ability to articulate who they are as emerging professionals through personal assessment activities. The focus will be on providing students with tools and strategies for reflection, planning, and goal-setting. Course does not count toward CEP minor. Spring only course offering. Restricted to College of HEST Majors only.

Learning Outcomes
1. Demonstrate an understanding of the relationship between academic and professional career success.
2. Express a familiarity with professionalism and career culture and communicate a comprehension of various professional career skills.
3. Apply material learned to other aspects to professional excellence.
4. Develop a career life plan that will highlight goals, taking into account life circumstances.
5. Become competent in appropriate professional communication.

CEPY 1160. Academic Excellence
1 Credit (1)
The course is designed to provide you students with a foundation in their personal academic process. The course will assist students in developing an understanding and ability to articulate who they are as beginning college students through personal assessment activities. The focus will be on providing students with tools and strategies for reflection, planning, and goal-setting. Topics discussed will include time management, study skills, test taking skills, stress management, motivational and academic discipline skills, interpersonal skills and college survival skills. We intend for this to be a supportive, respectful and collaborative environment where everyone can learn and grow. Fall only course offering. Restricted to College of HEST majors.

Learning Outcomes
1. Students will be able to demonstrate an understanding of the relationship between time management and academic success.
2. Students will be able to express a familiarity with college culture.
3. Students will be able to communicate a comprehension of study skills and test taking strategies.
4. Students will be able to apply material learned to other aspects to enhance academic excellence.
5. Students will be able to develop an academic life plan that will highlight goals, taking into account life circumstances.
6. Become competent in appropriate academic communication.

CEPY 2110. Learning in the Classroom
3 Credits (3)
This class introduces you to the basic principles of learning, including cognition, motivation, and assessment. You will examine the relationships between theory, research, and practice in learning, memory, child development, motivation, and educational assessment for the school setting. This course will provide the student with concepts and principles of educational psychology that will form a framework for thinking about learning and instruction and how theories of learning are connected to classroom situations. May be repeated up to 3 credits.

Learning Outcomes
1. Define learning and compare and contrast the factors that cognitive, behavioral, and humanistic theories believed to influence the learning process, giving specific examples of how these principles could be used in the classroom.
2. Observe and reflect upon the teaching learning processes in economically, socially, culturally and educationally diverse classroom populations in order to develop a current understanding of students and families in public and private school.
3. Discuss how theories of information processing and cognitive theories of learning can impact memory, study strategies, and how certain teaching techniques can help students learn.
4. Compare teacher-centered and student-centered approaches to learning, and to identify a positive learning environment.
5. Identify various methods to motivate students and create effective learning environments.
6. Use major concepts of child and adolescent development, human learning, and social and cultural influences in planning and implementing classroom instruction, strategies, and management.
7. Evaluate the best means of accommodating instruction to meet individual needs and differences.
8. Students will examine how learning style, cultural and social issues and learning disabilities impact the learner's effectiveness in the classroom setting.
9. Explain different types of assessment used to assess learning and provide examples of effective assessment practices. 
10. Discuss the relationship between motivation and classroom management.

CEPY 2120. The Preschool Child
3 Credits (3)
Survey of psychological development from conception to age five. May be repeated up to 3 credits.

Learning Outcomes
1. Demonstrate an understanding of major theories of early childhood development
2. Demonstrate an understanding of recognized stages of human development from prenatal to preschool years
3. Explore cultural influences that may create variability in human development
4. Apply major theories to themselves and reflect on their early childhood development.

CEPY 2130. Adolescence - School Setting
3 Credits (3)
This course is designed to present the student with an introduction to the area of adolescent development with an emphasis on the positive aspects of this life stage. Students will be encouraged to be reflective on the topics presented in class that will include issues on diversity, culture, health, and well-being, emerging adulthood and suggestions for improving the lives of adolescents. May be repeated up to 3 credits.

Learning Outcomes
1. Students will become knowledgeable about the historical background of adolescent development.
2. Students will become knowledgeable about the major theories related to adolescence.
3. Students will evaluate different developmental theories and their fit across cultures as you reflect on your personal experiences through discussions and videos you will watch.
4. Students will identify key developmental milestones, conflicts, and concepts of each chapter presented by utilizing critical thinking skills as you complete summary questions.
5. Students will define relevant terms, ideas, and concepts in the study of adolescent development through quizzes and homework assignments.

CEPY 2140. Explorations of Counseling & Community Psychology
3 Credits (3)
An introduction and exploration of various career options and functions within the mental health disciplines to aid in professional development. Emphasis will be placed on depth and scope of the choices available including research, teaching, community work, public policy, and clinical work and prevention (e.g. counseling, psychotherapy, assessment, consultation). May be repeated up to 6 credits.

Learning Outcomes
1. Acquire knowledge of historical and contemporary issues which affect the provision of mental health services by members of diverse mental health disciplines including clinical, counseling, school, and community psychologists, clinical mental health counselors, and others.
2. Acquire knowledge pertaining to education and training requirements for various disciplines.
4. Acquire survey-level knowledge of various inquiry approaches applicable to research pertaining to mental health and well-being—both at the individual and community level.
5. Understand the mental health recovery model and explore the lived experiences of individuals with mental health problems in contemporary society.
6. Understand the principles of sensitivity and respect for diverse populations as integral to professional practice in diverse mental health disciplines and settings, including practice in educational and community settings.

CEPY 2140H. Exploration of CCP
3 Credits (3)
An exploration of careers, activities, & techniques in counseling, school, and community psychology. Taught with CEPY 2140 with differentiated instruction and/or independent project to be determined. Restricted to Las Cruces campus only.

Learning Outcomes
1. Demonstrating knowledge of the basic functions of careers in counseling, community and school psychology.
2. Establishing a familiarity with the educational requirements necessary for a career in counseling, community, and school psychology.
3. Acknowledging and enhancing sensitivity and respect for diverse populations in various counseling areas; including educational and community settings.
4. Beginning to develop the interpersonal skills needed to succeed in the counseling, community and school psychology professions.

CEPY 3110. Sex Roles in Education
3 Credits (3)
Physiological, psychological, and political aspects of sex role socialization and the effects of these factors on personal development. May be repeated up to 3 credits.

Learning Outcomes
1. Increase awareness of gender issues insect with other identities.
2. Increase knowledge about feminism and masculinity from a multicultural and systems perspective.
3. Increase knowledge about gender issues among people of color, geographic regions, and differing socioeconomic status.
4. Gain an understanding of intentional and unintentional sexist behavior and the consequences of such behavior.
5. Prepare students to work with diverse populations by emphasizing differences in values based on gender roles.
6. Practice interpersonal and team-building skills.
7. Practice critical thinking skills in evaluating research evidence.
8. Increase knowledge of how gender influences education.
9. Understanding systemic influences on gender issues and learning how to take action for social justice.

CEPY 3210V. Human Relations Training
3 Credits (3)
Gain skills, knowledge, and sensitivity for living and working with others. May be repeated up to 3 credits.

Learning Outcomes
1. Critically evaluate academic literature regarding human relations.
2. Be familiar with theories of human relations.
3. Integrate and apply these theories to understand the dynamics of interpersonal and organizational relationships.
4. Demonstrate an increased understanding of human relations as they apply to one’s family systems.
5. Demonstrate an increased understanding of the impact of culture on human relations.
6. Translate knowledge of human relations into attitudes, skills, and techniques that will result in favorable learning experiences for students.

CEPY 4110V. Introduction to Counseling
3 Credits (3)
Principles of counseling for nonmajors. May be repeated up to 3 credits.

CEPY 4120. Introduction of Mindfulness Practice
3 Credits (3)
Students will learn about contemplative practices through learning and participation in various mindfulness practices. Engages students in a practice or experience that leads to reflection and, thus, acquired knowledge about themselves, others, and group functioning. May be repeated up to 3 credits.

Learning Outcomes
1. To learn about mindfulness practices for self-care.
2. To incorporate mindfulness practices into daily life.
3. To learn how mindfulness practices may increase well-being.
4. To increase students’ knowledge of mindfulness theory and research.
5. To learn about the philosophical underpinnings of mindfulness.

CEPY 4130. Addictions Prevention and Recovery
3 Credits (3)
Understanding addictions process, prevention, and recovery, including biological, interpersonal and sociological influences, and intervention strategies. May be repeated up to 3 credits.

Learning Outcomes
1. To introduce students to the basic categories and processes of different addictions.
2. To introduce students to psychopharmacology and assist them to obtain an understanding of drug classification, specific drugs, and the etiology of drug addiction.
3. To foster students’ awareness of the most prominent approaches to prevention in the development of addictions.
4. To foster students’ awareness of the most prominent theories and approaches for conceptualizing clients presenting with addictions (i.e., transtheoretical, motivational interviewing, cognitive behavioral).
5. To assist students to better understand how different cultural groups (i.e., gender, race/ethnicity, sexual orientation, etc.) use and abuse drugs and recover from various addictions.
6. To assist students to gain awareness of ethical issues of particular importance to addictions treatment.

CEPY 4140. Family Guidance
3 Credits (3)
Systems based guidance procedures for enhancing family strengths and development, and application of family guidance procedures for prevention and remediation of problems. May be repeated up to 3 credits. Prerequisite: CEPY 1120G.

CEPY 4150. Psychology, Multiculturalism and Counseling
3 Credits (3)
Understanding social identities such as race, ethnicity, sexual orientation, age, social class and spirituality as it relates to psychosocial development, academic achievement and counseling.

Learning Outcomes
1. Demonstrate a multicultural, global, and multiple perspectives approach to cultural differences.
2. Demonstrate increased cultural awareness, sensitivity, and empathy toward marginalized groups.
3. Identify subjective perceptions, biases, and the role culture plays in social interactions.
4. Examine societal institutions for privileges and barriers encountered by various groups.
5. Demonstrate increased flexibility, knowledge, and skills related to becoming multicultural.
6. Recognize that intersecting identities affect appropriate treatment and education.

CEPY 4150H. Psych., Multiculturalism & Counseling
3 Credits (3)
Understanding social identities such as race, ethnicity, sexual orientation, age, social class and spirituality as it relates to psychosocial development, academic achievement and counseling. Taught with CEPY 4150. Differentiated instruction/independent project to be determined.

CEPY 4997. Independent Study
1-6 Credits (1-6)
Individual study directed by consenting faculty. May be repeated up to 6 credits.

CEPY 4998. Internship in Counseling & Community Psychology
1-6 Credits (1-6)
Students will explore in more depth the fields of counseling, community, and school psychology professions by completing an internship. Through the completion of the internship students will gain hands on work experience, enhance sensitivity for respect with working with diverse populations, and hone their interpersonal skills needed to succeed in the counseling, community, and school psychology professions. May be repeated up to 6 credits.

Learning Outcomes
1. Varies by internship placement.

CEPY 5110. Introduction to Counseling
3 Credits (3)
Overview of counseling theory, techniques, ethics, and professional issues. Same as CEPY 4110V. This course is open to all majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. May be repeated up to 3 credits.

CEPY 5120. Human Development
3 Credits (3)
Theory and research regarding cognitive, social, and emotional development across the lifespan with emphasis on enhancing human development. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

**Learning Outcomes**

1. Students will understand and be able to apply the major theories and research that attempt to explain chronological constancy and change in human beings, with emphasis on practical applications and implications.
2. Students will build a foundational knowledge of human development for adaptation to the professional fields of education, counseling, and psychology.
3. Students will explore the universality and cultural variations in human development from conception to death.
4. Students will learn about the factors which facilitate and impede healthy physical, cognitive, social, and affective/emotional development.

**CEPY 5130. Multicultural Counseling**

*3 Credits (3)*

Understanding age, gender, ethnicity, socioeconomic status and culture in relation to human development, education, and counseling. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. May be repeated up to 3 credits.

**Learning Outcomes**

1. Awareness will be accomplished by assisting students in the exploration and identification of students’ individual cultural assumptions (i.e. WORLDVIEW) in relation to people diverse from themselves. This will be accomplished via modeling, observations, readings, group processing and other experiential exercises.
2. Knowledge will be accomplished by exploring the question, “What is Multiculturalism” in its many forms, roles, and relationships. It will begin with the examination of the psychology of multiculturalism and the requirements of cultural competency in intercultural communications. In addition, a review of various theories of diversity (i.e. identity development, acculturation, worldview, bilingualism, and disability, to name a few) will be embedded in readings, assignments, and class discussion. Exploration of various diverse populations will also be integrated into this course.
3. Skills will focus on “How to” of multicultural competency and its practical applications to everyday interactions. Students will learn about basic issues related to assumptions that are used in communication intra-cultural and intercultural interactions.

**CEPY 5140. The Art & Science of Mindfulness for Helping Professionals**

*1-3 Credits (1-3)*

In this course students will learn about contemplative practices by learning about and participating in various mindfulness practices for self-care and to increase well-being. Students will learn about psychological theories and research that support the use of mindfulness in helping others increase their well-being. Students will learn how to teach mindfulness to others. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

**Learning Outcomes**

1. To learn about mindfulness practices for self-care.
2. To incorporate mindfulness practices into daily life.
3. To learn how mindfulness practices may increase well-being.
4. To increase students’ knowledge of mindfulness theory and research.
5. To develop skills to teach mindfulness to others.

**CEPY 5160. Organization and Administration of School Counseling Services**

*3 Credits (3)*

Procedures for establishing and maintaining counseling programs in the schools. Professional and ethical issues in school counseling and group laboratory experience to enhance self-awareness and interpersonal skills for effective professional relationships. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

**Learning Outcomes**

1. Students will learn about the history of school guidance/counseling and apply that knowledge to assess current trends and the quality of services provided in counseling programs with respect to the changing needs of today's diverse systems.
2. Students will learn to develop and administer a school guidance/counseling program according to professional and ethical standards developed by The American School Counseling Association’s (ASCA) National Model of School Counseling.
3. Students will be introduced to a variety of technology-based career development applications, educational resources and research to promote academic advancement and social-emotional well-being. Additionally, students will explore the use of technology designed to implement, monitor, and evaluate a comprehensive school counseling program.
4. Students will gain an understanding of effective teamwork within a school setting including theories, models, and processes of consultation and change with teachers, administrators, and other school personnel. Students will explore strategies and methods of advocacy with families and communities designed to empower them to address issues of social justice within an educational system.
5. Students will build a framework for facilitating school-level individual and group counseling services. They will analyze and interpret trends in academic achievement by understanding the cultural context of the school environment as it relates to groups of students and to institutional functioning.

**CEPY 5170. Professional Issues in Mental Health Counseling**

*3 Credits (3)*

History, roles, organizational structures, settings, ethics, standards, laws, and credentialing related to mental health counseling. Group laboratory experience to enhance self-awareness and interpersonal skills for effective professional relationships. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

**Learning Outcomes**

1. Students should understand and demonstrate ethical decision-making processes and resources.
2. Students should demonstrate understanding of the expectations and requirements of their new professional identity.
3. Students should demonstrate knowledge of history and philosophy of the counseling profession and its specialty areas.
4. Students should demonstrate understanding of the multiple professional roles and functions of counselors across specialty areas, and their relationships with human service and integrated behavioral health care systems, including inter-agency and inter-organizational collaboration and consultation.
5. Students should demonstrate knowledge and understanding of counselors’ roles and responsibilities as members of interdisciplinary community outreach and emergency management response teams.
6. Students should demonstrate knowledge and understanding of the role and process of the professional counselor advocating on behalf of the profession; advocacy processes needed to address institutional and social barriers that impede access, equity, and success for clients.

CEPY 5180. Addictions Counseling
3 Credits (3)
Emphasis on alcohol and other psychoactive substance abuse. Also includes eating disorders, gambling, and other addictive behaviors. Covers review of psychopharmacology, assessment, and diagnosis with the major focus on treatment and professional issues. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Recognize the potential for substance use disorders to mimic and coexist with a variety of medical and psychological disorders.
2. Know the disease concept and etiology of addiction and co-occurring disorders.
3. Identify standard screening and assessment instruments for substance use disorders and process addictions.

CEPY 5210. Research Methods
3 Credits (3)
Develop research and program evaluation including critical literature review, generating questions, quantitative and qualitative methodology, analysis, and writing proposals. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Students will understand how to critically evaluate research relevant to the practice of clinical mental health counseling.
2. Become knowledgeable of models of program evaluation for clinical mental health programs.
3. Demonstrate knowledge of evidence-based treatments and basic strategies for evaluating counseling outcomes in clinical mental health counseling.
4. Apply relevant research findings to inform the practice of clinical mental health counseling.
5. Develop measurable outcomes for clinical mental health counseling programs, interventions, and treatments.
6. Analyze and use data to increase the effectiveness of clinical mental health counseling interventions and programs.

CEPY 5220. Testing, Assessment, and Psychometric Theory
3 Credits (3)
Selection, administration, and interpretation of tests and other assessment methods. Topics include reliability, validity, norms, cultural factors, and ethics related to appraisal. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Basic concepts of standardized and non-standardized testing and other assessment techniques, including norm-referenced and criterion-referenced assessment, environmental assessment, performance assessment, individual and group test and inventory methods, psychological testing, and behavioral observations (II-G-seven-b)
2. Statistical concepts, including scales of measurement, measures of central tendency, indices of variability, shapes and types of distributions, and correlations (II-G-seven-c).
3. Reliability (i.e., theory of measurement error, models of reliability, and the use of reliability information) (II-G-seven-d).
5. Social and cultural factors related to the assessment and evaluation of individuals, groups, and specific populations (II-G-seven-f).
6. Ethical strategies for selecting, administering, and interpreting assessment and evaluation instruments and techniques in counseling (II-G-seven-g).

CEPY 5230. Counseling Theory and Technique
3 Credits (3)
Major theories of counseling with an emphasis on development of the ability to offer theory-based counseling and consultation. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Students will demonstrate the ability to foster counseling and helping relationships that are based on studies of the counseling process in a multicultural society and include an orientation to wellness and prevention as desired counseling goals.
2. Students will be able to apply theories and models of counseling, including a systems approach, to conceptualize clients, help select appropriate counseling interventions, and so the student begins to develop a personal model of counseling based on current professional research and practice with the aid of processes provided in this course.
3. Students will demonstrate the ability to foster counseling and helping relationships that include essential interviewing, counseling, and case conceptualization skills as well as developing the ability to provide professional feedback in consultation with other trainees.
4. Students will demonstrate the ability to foster counseling and helping relationships that include developmentally relevant counseling treatment or intervention plans, the development of measurable outcomes for clients, and evidence-based counseling strategies and techniques for prevention and intervention.
5. Students will be able to demonstrate counselor characteristics and behaviors that influence helping processes.
6. Students will demonstrate knowledge and ability to provide suicide prevention, crisis intervention, trauma-informed, and community-based strategies, such as Psychological First Aid.

CEPY 5235. Counseling Theory and Techniques for School Psychologists
3 Credits (3)
Major theories of counseling with an emphasis on development of the ability to offer theory-based counseling and consultation. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

**Learning Outcomes**
1. The student will demonstrate an understanding of their psychosocial and cultural context and how such phenomena influence their values, beliefs, and, therefore, theoretical orientation.
2. The student will demonstrate the ability to examine and apply critical perspectives related to counseling theory and techniques.
3. The student will be able to compare and contrast various theoretical perspectives in the area of counseling children and adolescents in school settings.
4. The student will demonstrate the development of skills leading toward becoming a culturally responsive practitioner in the area of counseling with individuals from a variety of diverse backgrounds.
5. The student will be able to identify, describe, and apply legal and ethical issues relevant to practice in the area of counseling children and adolescents in the schools.
6. The student will be able to collaborate with others in the process of developing a competent school psychologist in providing counseling services in the schools.

**CEPY 5240. Child and Adolescent Counseling Theory and Technique**

3 Credits (3)

Counseling theory and technique applied to children and adolescents from a developmental perspective in school and mental health settings. Restricted to CEP graduate students. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

**Learning Outcomes**
1. Students will demonstrate understanding of their psychosocial and cultural context and how such phenomena influence their values, beliefs, and, therefore, theoretical orientation to counsel children and adolescents.
2. Students will examine and apply critical perspectives related to counseling children and adolescents.
3. Students will compare and contrast various theoretical perspectives in the area of counseling children and adolescents.
4. Students will develop a knowledge base leading toward becoming a culturally responsive practitioner in the area of counseling with individuals from a variety of diverse backgrounds.
5. Students will identify, describe, and apply legal and ethical issues relevant to practice in the area of counseling children and adolescents in various settings.
6. Students will collaborate with others in the process of developing relevant treatment plans and providing counseling services to children and adolescents in diverse settings.

**CEPY 5250. Family Therapy Theory and Technique**

3 Credits (3)

Major theories of family therapy and associated assessment, intervention and evaluation techniques. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

**Learning Outcomes**
1. Students will be able to explain a systems perspective and differentiate family and other systems theories and major models of family and related interventions.
2. Students will be able to demonstrate and apply an understanding of the family life cycle and impact on family and individual functioning.
3. Students will be able to prepare and utilize various forms of assessment for families and couples, including observation, collection of collateral information, and interviewing.
4. Students will be able to illustrate awareness of and skill in the use of formal and informal assessment measures used in family and couple counseling.
5. Students will be able to summarize evidence-based interventions and treatments for family and couple counseling.
6. Students will be able to analyze multicultural counseling theories and techniques for diverse family types and apply multicultural and family theories to one’s own experience.
7. Students will be able to demonstrate an ability to communicate and relate effectively with families and couples.
8. Students will be able to describe ethical issues related to counseling families and couples and be able to identify a process to make sound judgments.

**CEPY 5260. Group Work Theory and Technique**

3 Credits (3)

Didactic and experiential learning in group theory and practice, which involves experiences in group participation and leadership. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

**Learning Outcomes**
1. Provide students with an intellectual understanding of group work theory and technique.
2. Provide students with an experiential understanding of group work.
3. To help students develop specific group facilitation competencies

**CEPY 5270. Diagnosis and Treatment Planning**

3 Credits (3)

Appraisal and conceptualization of mental disorders and other problems through diagnostic interviewing using the DSM. Treatment planning for counseling with children, adolescents, and adults. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

**Learning Outcomes**
1. Students will know the etiology, the diagnostic process and nomenclature, treatment, referral, and prevention of mental and emotional disorders.
2. Students will know the principles, models, and documentation formats of biopsychosocial case conceptualization and treatment planning.
3. Students will understand current literature that outlines theories, approaches, strategies, and techniques shown to be effective when working with specific populations of clients with mental and emotional disorders.
4. Students will understand the basic classifications, indications, and contraindications of commonly prescribed psychopharmacological medications so that appropriate referrals can be made for medication
evaluations and so that the side effects of such medications can be identified.
5. Students will know the principles of the diagnostic process, including differential diagnosis, and the use of current diagnostic tools, such as the current edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM).
6. Students will understand the established diagnostic criteria for mental and emotional disorders, and describes treatment modalities and placement criteria within the continuum of care.
7. Students will know the impact of co-occurring substance use disorders on medical and psychological disorders.
8. Students will understand the relevance and potential biases of commonly used diagnostic tools with multicultural populations.
9. Students will understand appropriate use of diagnosis during a crisis, disaster, or other trauma-causing event.
10. Students will be able to differentiate between diagnoses and developmentally appropriate reactions during crises, disasters, and other trauma-causing events.

CEPY 5280. Primary Care Psychology
3 Credits (3)
Didactic and experiential learning in primary care psychology issues. Through this course students will learn about the cultural necessity of the integration of mental and physical health issues and multidisciplinary collaboration. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Students will demonstrate the following primary care psychology competency within the context of addressing integrated behavioral health care: Biologic bases of behavior as related to health/illness and coping
2. Students will demonstrate the following primary care psychology competency within the context of addressing integrated behavioral health care: Psychological bases of behavior as related to health/illness and coping
3. Students will demonstrate the following primary care psychology competency within the context of addressing integrated behavioral health care: Sociocultural bases of behavior as related to health/illness and coping
4. Students will demonstrate the following primary care psychology competency within the context of addressing integrated behavioral health care: Understanding and application of inter-professional collaboration
5. Students will demonstrate the following primary care psychology competency within the context of addressing integrated behavioral health care: A knowledge of substance use disorders, particularly opioid use disorder and treatment in a primary care setting
6. Students will demonstrate the following primary care psychology competency within the context of addressing integrated behavioral health care: How to utilize telemedicine effectively

CEPY 5310. Appraisal of Psychoeducational Achievement in a Diverse Society
3 Credits (3)
Advanced theory and use of norm and criterion referenced instruments in the classroom: planning of prescriptive and educational programs. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. Restricted to CEP graduate majors. May be repeated up to 3 credits.

Learning Outcomes
1. Define assessment and describe the steps in the assessment process. Practitioner
2. Describe a flowchart for the screening/referral/evaluation process according to New Mexico regulations. Research, Pedagogy
3. Describe the uses of criterion and norm-referenced instruments as well as alternative forms of assessment (observation, curriculum based assessment and informal techniques). Practitioner, Effectiveness
4. Identify and discuss instruments/assessment procedures appropriate for use in identifying academic achievement, learning aptitude, vocational aptitude, performance in specific areas, and social emotional functioning. Effectiveness
5. Identify appropriate instruments/assessment procedures required for the exceptionality recognized under New Mexico regulations. Effectiveness
6. Administer and score twenty-four instruments in reading, math, written language and processing and to utilize these results in completing test interpretations and psycho-educational reports. Effectiveness
7. Interpret, report, and utilize assessment date in special education programming. Reflection, Pedagogy
8. Determine the assessment needs of students who are speakers of languages other than English. Diversity
9. Evaluate a test, write a review, and demonstrate and explain it in class. Practitioners
10. Synthesize information gathered through comprehensive assessment procedures into a practical whole. Assessment, Evaluation

CEPY 5320. Career/Life Planning and Vocational Assessment
3 Credits (3)
Vocational choice theories, relationship between career choice and life style, sources of occupational and educational information, and approaches to decision making and values clarification. Laboratory involves supervised interpretation of vocational assessment. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean.

Learning Outcomes
1. Career development theories and decision-making models.
2. Career, vocational, educational, occupational and labor market information resources, and career information systems.
3. Career development program planning, organization, implementation, administration, and evaluation.
4. Interrelationships among and between work, family, and other life roles and factors, including the role of multicultural issues in career development.
5. Career and educational planning, placement, follow-up, and evaluation.
6. Assessment instruments and techniques relevant to career planning and decision making.
7. Career counseling processes, techniques, and resources, including those applicable to specific populations in a global economy.

CEPY 5985. Counseling Practicum
1-6 Credits (1-6P)
Supervised experience of counseling and consultation. Weekly individual and group supervision involves review of audio, video, and/or live sessions and case presentations. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 6 credits.

**Prerequisite:** CEPO 5230.

**Learning Outcomes**

1. Understands ethical and legal considerations specifically related to the practice of clinical mental health counseling.
2. Understands a variety of models and theories related to clinical mental health counseling, including the methods, models, and principles of clinical supervision.
3. Understands the management of mental health services and programs, including areas such as administration, finance, and accountability.
4. Demonstrates the ability to apply and adhere to ethical and legal standards in clinical mental health counseling.
5. Recognizes the importance of family, social networks, and community systems in the treatment of mental and emotional disorders.
6. Uses the principles and practices of diagnosis, treatment, referral, and prevention of mental and emotional disorders to initiate, maintain, and terminate counseling.
7. Applies multicultural competencies to clinical mental health counseling involving case conceptualization, diagnosis, treatment, referral, and prevention of mental and emotional disorders.
8. Applies effective strategies to promote client understanding of and access to a variety of community resources.
9. Demonstrates appropriate use of culturally responsive individual, couple, family, group, and systems modalities for initiating, maintaining, and terminating counseling.
10. Demonstrates the ability to use procedures for assessing and managing suicide risk.
11. Applies current record-keeping standards related to clinical mental health counseling.
12. Provides appropriate counseling strategies when working with clients with addiction and co-occurring disorders.
13. Demonstrates the ability to recognize his or her own limitations as a clinical mental health counselor and to seek supervision or refer clients when appropriate.
14. Maintains information regarding community resources to make appropriate referrals.
15. Advocates for policies, programs, and services that are equitable and responsive to the unique needs of clients.
16. Demonstrates the ability to modify counseling systems, theories, techniques, and interventions to make them culturally appropriate for diverse populations.
17. Knows the principles and models of assessment, case conceptualization, theories of human development, and concepts of normalcy and psychopathology leading to diagnoses and appropriate counseling treatment plans.
18. Understands various models and approaches to clinical evaluation and their appropriate uses, including diagnostic interviews, mental status examinations, symptom inventories, and psychoeducational and personality assessments.
19. Demonstrates skill in conducting an intake interview, a mental status evaluation, a biopsychosocial history, a mental health history, and a psychological assessment for treatment planning and caseload management.
20. Demonstrates appropriate use of diagnostic tools, including the current edition of the DSM, to describe the symptoms and clinical presentation of clients with mental and emotional impairments.
21. Demonstrates the ability to conceptualize an accurate multi-axial diagnosis of disorders presented by a client and discuss the differential diagnosis with collaborating professionals.

**CEPY 5990. Advanced Counseling Practicum**

**3-6 Credits (3-6P)**

Supervised experience of appraisal and individual, family, and/or group counseling and consultation serving child, adolescent, and/or adult clients. Weekly individual and group supervision involves review of counseling sessions and case presentations. This course will carry a subtitle to reflect the practicum setting. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. Restricted to CEP graduate majors. May be repeated up to 6 credits.

**Prerequisite:** CEPY 5985 or consent of instructor.

**Learning Outcomes**

1. Obtain a minimum of one-hundred and fifty clinical hours including sixty hours of direct service (face-to-face) with clients appropriate to the program. For students enrolled in only six credits, this translates to three-hundred clinical hours, including one-hundred and twenty hours of direct service.
2. Obtain one hour a week of individual supervision with the on-site supervisor and a minimum of one and a half hours per week of group supervision with a program faculty member.
3. Students will have the opportunity to become familiar with a variety of professional activities in addition to direct service such as record keeping, information and referral, in-service, and staff meeting.
4. Students will have an opportunity to gain supervised experience in the use of a variety of professional resources such as assessment instruments, technologies, professional literature, and research.
5. Students receive a formal evaluation by site supervisor and program faculty member.
6. Students will have opportunity to work with clients who represent the ethnic and demographic diversity of their community.
7. Students will formally evaluate their supervisors and learning experience at the end of their internship experiences.
8. Students will be covered by professional liability insurance while enrolled in this course.
9. Students will adhere to ethical standards of ACA and related entities, and applications of ethical and legal considerations in professional counseling.
10. Students will have an opportunity to apply concepts of mental health education, consultation, collaboration, outreach and prevention strategies, and community mental health advocacy.

**CEPY 5997. Special Research Programs**

**1-6 Credits (1-6)**

Individual investigations either analytical or experimental. Maximum of 6 credits per semester and total of 9 credits overall. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. May be repeated up to 9 credits.
Learning Outcomes
1. Learning outcomes will vary depending on course content.

CEPY 5998. Counseling Internship
3-12 Credits (3-12)
Supervised experience in a professional counselor role in a school or agency. Students perform all counselor functions including appraisal, individual/family/group counseling, consultation, administration, program development, research, and/or evaluation. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 12 credits.
Prerequisite: CEPY 5990.

Learning Outcomes
1. Obtain a minimum of six-hundred clinical hours including two-hundred and forty hours of direct service (face-to-face) with clients appropriate to the program. For students enrolled in only six credits, this translates to three-hundred clinical hours, including one-hundred and twenty hours of direct service.
2. Obtain one hour a week of individual supervision with the on-site supervisor and a minimum of one and a half hours per week of group supervision with a program faculty member.
3. The student has the opportunity to become familiar with a variety of professional activities in addition to direct service such as record keeping, information and referral, in-service, and staff meeting.
4. The student has an opportunity to gain supervised experience in the use of a variety of professional resources such as assessment instruments, technologies, professional literature, and research.
5. Students receive a formal evaluation by site supervisor and program faculty member.
6. Students will have opportunity to counsel clients who represent the ethnic and demographic diversity of their community.
7. Students will formally evaluate their supervisors and learning experience at the end of their internship experiences.
8. Students will be covered by professional liability insurance while enrolled in internship.
9. Students will adhere to ethical standards of ACA and related entities, and applications of ethical and legal considerations in professional counseling.
10. Students will have an opportunity to apply concepts of mental health education, consultation, collaboration, outreach and prevention strategies, and community mental health advocacy.

CEPY 5999. Master's Thesis
1-15 Credits (1-15)
Thesis. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. May be repeated up to 88 credits.

Learning Outcomes
1. To develop and complete master’s research thesis.

CEPY 6120. Human Development
3 Credits (3)
Same as CEPY 5120 with differentiated assignments for Ed.S and Ph.D. students. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Students will understand and be able to apply the major theories and research that attempt to explain chronological constancy and change in human beings, with emphasis on practical applications and implications.
2. Students will build a foundational knowledge of human development for adaptation to the professional fields of education, counseling, and psychology.
3. Students will explore the universality and cultural variations in human development from conception to death.
4. Students will learn about the factors which facilitate and impede healthy physical, cognitive, social, and affective/emotional development.

CEPY 6130. Psychology of Multiculturalism
3 Credits (3)
In this advanced course for post-master’s graduate students in applied fields of psychology, students will apply psychological concepts related to multiculturalism as well as critical race theories, feminist theories, queer theories, and liberation theories to understand intersecting social identities. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. Restricted to: SPSY, CEP majors.

Learning Outcomes
1. Students will understand and apply multicultural and pluralistic characteristics within and among diverse groups nationally and internationally.
2. Students will understand and apply theories and models of multicultural counseling, cultural identity development, and social justice and advocacy.
3. Students will understand and apply multicultural counseling competencies.
4. Students will understand and apply the impact of heritage, attitudes, beliefs, understandings, and acculturative experiences on an individual’s views of others.
5. Students will understand and apply the effects of power and privilege for counselors and clients.
6. Students will understand and apply help-seeking behaviors of diverse clients.
7. Students will understand the impact of spiritual beliefs on clients’ and counselors’ worldviews.
8. Students will understand and apply strategies for identifying and eliminating barriers, prejudices, and processes of intentional and unintentional oppression and discrimination.

CEPY 6140. Cognitive & Affective Basis of Behavior
3 Credits (3)
This course provides an overview of cognitive and affective bases of behavior as well as the integration of cognition and affect in psychological processes. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, program director, department head, and graduate school dean. Restricted to CEP graduate majors. May be repeated up to 3 credits.

Learning Outcomes
1. Students will be able to identify key concepts of cognition such as memory, attention and learning.
2. Students will identify the functions and roles of affect and emotional expression.
3. Students will understand the connection between cognition and affect and how these two areas of human function influence each other.
4. Students will be able to integrate and apply research findings and implications in the study of cognition and affect to practical experiences.
5. Students will apply models and theories of cognition and affect to understanding and predicting behavior.

CEPY 6150. Social Psychology
3 Credits (3)
Theory, research and practice from feminist and multicultural perspectives will examine the integration of social identities such as gender, sexual orientation, race, ethnicity, age, social class, spirituality, and ability in relation to counseling psychology. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. Restricted to: CEP graduate majors. May be repeated up to 3 credits.

Learning Outcomes
1. Heighten the student's awareness of multiple social identities, worldview beliefs, and other within-group variables.
2. Aid the student in developing a knowledge base in the realms of social psychology and multicultural research, culturally-responsive interventions and professional practice.
3. Provide experiences for the application of this awareness and knowledge as a means of developing the skills necessary for being a reflective decision-maker, creative problem solver, and responsive service provider for diverse individuals in a variety practice settings and intervention modalities.

CEPY 6160. History and Systems of Psychology
3 Credits (3)
History and systems of psychology related to contemporary applied psychology. This course will focus largely on the history of modern psychology and on the major systems (or schools) of psychology. Restricted to CEP graduate majors.

Learning Outcomes
1. Effectively discuss historical and philosophical antecedents and contexts of psychology and compare and contrast multiple perspectives on important issues in this field.
2. Apply global awareness to this topic (e.g., intersecting identities; how interlocking oppressions vary by epoch, continent, nation, cultural group, region, organizational system; etc.)
3. Develop professional arguments; support opinions with reason and personal experience; and demonstrate higher order thinking and creative engagement (for definitions of terms like analyze, synthesize, evaluate, and create).
4. Develop thoughtful inquiries that inspire scholarly discourse and further investigation; consider which types of evidence are needed to find answers; and effectively facilitate respectful, thought-provoking discussions of controversies and debatable topics.

CEPY 6170. Psychology of Poverty
3 Credits (3)
This course is designed to examine the nature, extent and impact of poverty on Southwestern populations and across the United States in relation to assessment and interventions and its impact on the education and psychological well-being of children and families. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. Restricted to: CEP graduate majors.

Learning Outcomes
1. Students will learn how views of poverty have evolved in history.
2. Students will be aware and demonstrate the skills of the different methods used to measure and understand poverty.
3. Students will identify and apply relevant issues from education, health disparities, and criminal justice related to the psychology of poverty.
4. Students will evaluate and present their own self-awareness and understanding of their worldview of poverty, along with its impact of how they view others in poverty.
5. Students will conduct self-assessments regarding their range of liberalism/conservatism; implicit bias and how it impacts their interpretation of information of poverty.
6. Students will understand and lead discussions as to why poverty remains so prevalent in U.S. society.
7. Students will be able to articulate the within group differences and similarities of racial and ethnic backgrounds or family types that are susceptible to poverty.
8. Students will learn successful interventions in working with children, adolescents and families impacted by the psychology of poverty.

CEPY 6180. Clinical Psychopharmacology
3 Credits (3)
Basic biological aspects of psychopharmacology with applications to clinical populations and treatment implications. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Students will be able to understand and apply concepts related basic neuroanatomy, neurochemistry, and neurophysiology.
2. Students will be able to understand and apply basic knowledge related basic biological basis of the interdependence between behavior, cognition, and emotion.
3. Students will understand the pharmacology and pharmacodynamics of major drug groups used in the treatment of CNS diagnoses; including, but no limited to, antidepressants, antipsychotics, anxiolytics, anticonvulsants, and natural remedies or herbal supplementation.
4. Students will recognize the strengths and weaknesses of a wide range of research methodologies to screen compounds and test the mechanisms of action of drugs.
5. Students will understand the drug development process from target identification to FDA approval and ongoing safety surveillance.
6. Students will appreciate how pharmacological investigation informs the understanding of the underlying pathology of the illness.
7. Students will access, critique, and assimilate evidence from scientific studies as it relates to translational neuroscience and the search for promising targets for psychotropic drugs.
8. Students will become familiar with to the indication, contraindication, therapeutic drug monitoring, and effectiveness of medications across DSM-V classifications. As well as psychotropic drug tapering or switching. The implications of patient characteristic and medical comorbidities are addressed.
9. Students will share informed opinions about advances and challenges in experimental (off-label) psychopharmacology; and of their opinions of integrated psychotherapy or combined medicine.  
10. Students will work effectively with peers and Instructor, as part of multidisciplinary learning environment.

CEPY 6185. Ethics, Law & Professional Issues in School Psychology  
3 Credits (3)  
This course provides an introduction and overview of the profession of school psychology with emphasis on the roles, functions, and competencies of the school psychologist within the context of legal and ethical practice. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean.

Learning Outcomes  
1. Students will demonstrate an understanding of various professional issues, role functions, and historical contexts related to the field of school psychology.  
2. Students will demonstrate the ability to examine and apply critical perspectives related to various professional issues, role functions, and the historical contexts associated with the field of school psychology.  
3. Students will explore best practices issues associated with school psychology role functions and practices.  
4. Students will demonstrate the development of skills leading her or him toward becoming a culturally responsive practitioner in the field of school psychology.  
5. Students will obtain knowledge of the National Association of School Psychologists (NASP) Principles of Professional Ethics (2020) and the American Psychological Association’s Ethical Principles of Psychologists and Code of Conduct (2010; 2016 amendments) and learn to apply these principles to specific areas of practice such as assessment, direct and indirect intervention, consultation, and research.  
6. Students will understand complexities of ethical and legal issues occurring in school settings and will develop ethical decision-making skills.  
7. Students will demonstrate knowledge of the provisions of state and federal statutes such as the Individuals with Disabilities Education Improvement Act (2004), Every Student Succeeds Act (2017) and Section 504 of the Rehabilitation Act of 1973 as well as other case laws related to the practice of school psychology and learn how to apply these mandates to the practice of school psychology.  
8. Students will understand the importance of developing awareness of the legal and ethical issues affecting their professional identity and the need to remain current on these issues throughout their careers as school psychologists.  
9. Students will continue to emerge as critical thinkers, reflective decision-makers, and creative problem-solvers, in general.

CEPY 6190. Ethical/Professional Issues in Counseling Psychology  
3 Credits (3)  
History of counseling psychology, scientist-practitioner model, American Psychological Associations Ethical Principles of Psychologists and Code of Conduct. Focus on current ethical, professional, and scientific issues. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. Restricted to: CEP majors. May be repeated up to 3 credits.

Learning Outcomes  
1. Students will be knowledgeable of and act in accordance with the current version of the APA Ethical Principles of Psychologists and Code of Conduct, relevant laws, regulations, rules, and policies governing health service psychology at the organizational, local, state, regional, and federal levels, and relevant professional standards and guidelines; Recognize ethical dilemmas as they arise, and apply ethical decision-making processes in order to resolve the dilemmas; Conduct self in an ethical manner in all professional activities.  
2. Students will develop an understanding of how their own personal/cultural history, attitudes, and biases may affect how they understand and interact with people different from themselves; Apply knowledge of the current theoretical and empirical knowledge base as it relates to addressing diversity in all professional activities including research, training, supervision/consultation, and service.  
3. Students will be expected to behave in ways that reflect the values and attitudes of psychology, including integrity, department, professional identity, accountability, lifelong learning, and concern for the welfare of others; Engage in self-reflection regarding one’s personal and professional functioning and engage in activities to maintain and improve performance, well-being, and professional effectiveness.  
4. Students will be expected to produce and comprehend oral, nonverbal, and written communications that are informative and well-integrated; demonstrate a thorough grasp of professional language and concepts; Demonstrate effective interpersonal skills and the ability to manage difficult communication well.

CEPY 6210. School Psychology Research and Program Evaluation  
3 Credits (3)  
Survey and analysis of research and program evaluation procedures in school psychology. Critical review of literature, formulating questions, quantitative and qualitative methodology, and data analysis as foundations for reading research literature and generating research, program evaluation, and/or grant proposals. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes  
1. Students will advance their foundational knowledge of research methodology and research design.  
2. Students will develop skills and knowledge to conduct comprehensive literature reviews.  
3. Students will critique scientific research studies by applying attained knowledge in research methodology and design.  
4. Students will produce a research proposal they will conduct in their areas of interest within the field of school psychology.  
5. Students will present a research proposal that will conduct within the field of school psychology.  
6. Students will demonstrate skills and knowledge for program evaluation by developing a program evaluation plan.  
7. Students will demonstrate knowledge and skills necessary to conduct single-subject design studies.

CEPY 6220. Spanish for Mental Health Professionals  
3 Credits (3)  
This course emphasizes the vocabulary for Mental Health Professionals to include academic, psychological and medical terminology. Students will incorporate Spanish terms in assessment and treatment plans.
Learning Outcomes
1. Students will be able to demonstrate brief, basic conversation in Spanish using mental health and health-care related expressions and terminology.
2. Students will be able to understand and respond to relevant cultural and linguistic client concerns related to presenting issues.
3. Students will be able to increase their Spanish speaking capabilities when engaged in their professional roles (e.g. conducting clinical interviews, gathering mental health histories, conducting assessments and delivering interventions using various theoretical frameworks).
4. Students will understand cultural and social factors that influence the practitioner-client relationship and communication with Latinx clients.
5. Students will be able to engage effectively in role play situations involving application of concepts learned.

CEPY 6240. Child and Adolescent Counseling Theory and Technique
3 Credits (3)
Taught with CEPY 5240 with differentiated assignments for Ed.S and Ph.D. students. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Students will be able to demonstrate an understanding of their psychosocial and cultural context and how such phenomena influence their values, beliefs and, therefore, theoretical orientation to counsel children and adolescents.
2. Students will be able to demonstrate the ability to examine and apply critical perspectives related to counseling children and adolescents.
3. Students will be able to compare and contrast various theoretical perspectives in the area of counseling children and adolescents.
4. Students will be able to demonstrate the development of a knowledge base leading toward becoming a culturally responsive practitioner in the area of counseling with individuals from a variety of diverse backgrounds.
5. Students will be able to identify, describe, and apply legal and ethical issues relevant to practice in the area of counseling children and adolescents in various settings.
6. Students will be able to collaborate with others in the process of developing relevant treatment plans and providing counseling services to children and adolescents in diverse settings.

CEPY 6250. Family Therapy Theory and Technique
3 Credits (3)
Taught with CEPY 5250 with differentiated assignments for Ed.S and Ph.D students. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Students will demonstrate their comprehension of a systems perspective that provides an understanding of family and other systems theories and major models of family and related interventions.
2. Students will demonstrate an understanding of the family life cycle and impact on family and individual functioning.
3. Students will demonstrate an awareness of and develop skills with various forms of assessment for families and couples, including observation, collection of collateral information, and interviewing.
4. Students will demonstrate an awareness of and develop skills in using formal and informal assessment measures used in family and couple counseling.
5. Students will develop conceptual skills that demonstrate an understanding of theory and implementation of interventions.
6. Students will demonstrate knowledge about evidenced-based interventions and treatments for family and couple counseling.
7. Students will demonstrate their understanding of multicultural counseling theories and techniques for family and marital counseling.
8. Students will be able to apply multicultural and family theories to their own experience in an effort to improve your counseling work.
9. Students will demonstrate will demonstrate an ability to communicate and relate effectively to families and couples.
10. Students will be able to design and implement outreach and psychoeducational interventions to families and couples.
11. Students will demonstrate their knowledge related to ethical issues surrounding counseling families and couples and be able to make sound judgments.

CEPY 6260. Consultation
3 Credits (3)
Didactic and experimental trainings in theory-based consultation. Supervision provided by faculty involves audio, video, and/or live observation consultation activities and case presentations. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

CEPY 6265. Diagnostic Class
3 Credits (3)
Emphasis on developing the knowledge, skills, and necessary application abilities related to diagnosis and associated interventions related to mental health and psychopathology issues that impact a student’s ability to navigate the education setting. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Students will be expected to demonstrate the knowledge of the etiology, the diagnostic process and nomenclature, treatment, referral, and prevention of mental and emotional disorders.
2. Students will be expected to demonstrate knowledge of the principles, models, and documentation formats of biopsychosocial case conceptualization and treatment planning.
3. Students will be expected to demonstrate understanding of current literature that outlines theories, approaches, strategies, and techniques shown to be effective when working with specific populations of clients with mental and emotional disorders.
4. Students will be expected to demonstrate understanding of basic classifications, indications, and contraindications of commonly prescribed psychopharmacological medications so that appropriate
referrals can be made for medication evaluations and so that the side
effects of such medications can be identified
5. Students will be expected to demonstrate knowledge of the principles
of the diagnostic process, including differential diagnosis, and the
use of current diagnostic tools, such as the current edition of the
Diagnostic and Statistical Manual of Mental Disorders (DSM)
6. Students will be expected to demonstrate understanding of the
established diagnostic criteria for mental and emotional disorders,
and describes treatment modalities and placement criteria within the
continuum of care.
7. Students will be expected to demonstrate knowledge of the the
impact of co-occurring substance use disorders on medical and
psychological disorders.
8. Students will be expected to demonstrate understanding of the
relevance and potential biases of commonly used diagnostic tools
with multicultural populations.
9. Students will be expected to demonstrate understanding of the
appropriate use of diagnosis during a crisis, disaster, or other trauma-
causing events.
10. Students will be expected to differentiate between diagnosis and
developmentally appropriate reactions during crises, disasters, and
other trauma-causing events.

CEPY 6270. Diagnosis and Treatment Planning
3 Credits (3)
Taught with CEPY 5270 with differentiated assignments for Ph.D.
students. Restricted to CEP graduate majors. Non-majors may be
permitted to enroll in this course under limited circumstances with the
permission of the course instructor, program director, department head,
and graduate school dean. May be repeated up to 3 credits.
Learning Outcomes
1. Students will be expected to demonstrate knowledge of the etiology,
the diagnostic process and nomenclature, treatment, referral, and
prevention of mental and emotional disorders.
2. Students will be expected to demonstrate knowledge of the
principles, models, and documentation formats of biopsychosocial
case conceptualization and treatment planning.
3. Students will be expected to demonstrate practice of using the DSM
5 to create differential diagnoses.
4. Students will be expected to construct an initial treatment plan based
upon a systemic and differential diagnosis.
5. Students will be expected to formulate a culturally relevant diagnosis
and treatment plan.
6. Students will be expected to discuss the barriers to assessment and
treatment, as it relates to mental illness stigma.

CEPY 6275. Professional Preparation Seminar
3 Credits (3)
This seminar course provides academic support for students enrolled
in the Specialist in Education (Ed.S.) School Psychology Program in
preparation for capstone experiences (i.e., internship and culminating
exams) in addition to continued development of students’ professional
identity as School Psychologists.
Learning Outcomes
1. Students will reflect on the growth of their knowledge, experiences,
and skills gained in the School Psychology Program (SPP).
2. Students will reflect on how to expand their knowledge and skills
during their internship.
3. Students will prepare for securing an internship position.
4. Students will develop and articulate a professional philosophy of
counseling within school psychology.
5. Students will demonstrate skill in oral and written presentations.
6. Students will understand the role of mentoring and supervision in
personal and professional.

CEPY 6320. Career/Life Planning and Vocational Assessment
3 Credits (3)
Taught with CEPY 5320 with differentiated assignments for Ed.S and
Ph.D. students. Restricted to CEP graduate students. Non-majors may be
permitted to enroll in this course under limited circumstances with the
permission of the course instructor, program director, department head,
and graduate school dean. May be repeated up to 3 credits.
Learning Outcomes
1. Knowledge and understanding of career development theories and
decision-making models.
2. Knowledge and understanding of career, vocational, educational,
occupational and labor market information resources, and career
information systems.
3. Knowledge and understanding of career development program
planning, organization, implementation, administration, and
evaluation.
4. Knowledge and understanding of interrelationships among and
between work, family, and other life roles and factors, including the
role of multicultural issues in career development.
5. Knowledge and understanding of career and educational planning,
placement, follow-up, and evaluation.
6. Knowledge and understanding of assessment instruments and
techniques relevant to career planning and decision making.
7. Knowledge and understanding of career counseling processes,
techniques, and resources, including those applicable to specific
populations in a global economy.

CEPY 6330. Academic & Behavioral Assessment & Intervention
3 Credits (3)
This course introduces basic concepts, methods, and applications of
academic and behavior assessment and intervention. Students will
learn how to conduct functional/informal assessments of academic
and behavior and how to write behavior and academic plans. Methods
appropriate for assessment and intervention of school-age children will
be emphasized. Non-majors may be permitted to enroll in this course
under limited circumstances with the permission of the course instructor,
department head, and graduate school dean. Restricted to: CEP graduate
majors.
Learning Outcomes
1. Students will gain and demonstrate knowledge on how behavior
assessment fits within psychological/psycho-educational
assessment.
2. Students will demonstrate the ability to examine and apply critical
perspectives related to educational assessment.
3. Students will learn the rational, defining features and theoretical
underpinnings of behavioral assessment.
4. Students will learn how to conduct and complete functional
assessments of behavior.
5. Students will learn how to develop and evaluate a satisfactory
positive behavior intervention plan.
6. Students will develop and/or learn techniques of behavioral
observation.
Learning Outcomes

7. Students will learn how to integrate behavioral observation findings with other assessment methods.

CEPY 6340. Appraisal of Cognitive Functioning
3 Credits (3)
Selection, administration, scoring, interpretation, and report writing using individual tests of intelligence. Moderator variables, such as acculturation, ethnic identity development, and world view are also incorporated. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Students will become knowledgeable about the historical background of intelligence testing.
2. Students will become knowledgeable about the major theories of intelligence.
3. Students will be able to discuss orally and in writing the pros and cons of intelligence testing and will be able to support the discussion with specific facts and research.
4. Students will be able to select "appropriate" intellectual assessment instruments for children, adolescents, and adults.
5. Students will be able to state pertinent information relative to these major intelligence tests such as age range, standardization, reliability, and validity.
6. Students will demonstrate mastery of administration, scoring, and interpretation of various norm-referenced cognitive assessment instruments while taking into consideration the cultural context of the individual.
7. The student will be able to demonstrate the ability to integrate information into meaningful written reports.

CEPY 6350. Appraisal of Personality
3 Credits (3)
Selection, administration, scoring, interpretation, and report writing using major objective and projective tests of personality. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Knowledge of the current theoretical and empirical knowledge base as it relates to addressing diversity in all professional activities including research, training, supervision, consultation, and service.
2. Produce and comprehend oral, nonverbal, and written communications that are informative and well-integrated; demonstrate a thorough grasp of professional language and concepts.
3. Demonstrate current knowledge of diagnostic classification systems, functional and dysfunctional behaviors, including consideration of client strengths and psychopathology.
4. Demonstrate understanding of human behavior within its context (e.g., family, social, societal and cultural).
5. Demonstrate the ability to apply the knowledge of functional and dysfunctional behaviors including context to the assessment and/or diagnostic process.
6. Select and apply assessment methods that draw from the best available empirical literature and that reflect the science of measurement and psychometrics; collect relevant data using multiple sources and methods appropriate to the identified goals and questions of the assessment as well as relevant diversity characteristics of the service recipient.
7. Interpret assessment results, following current research and professional standards and guidelines, to inform case conceptualization, classification, and recommendations, while guarding against decision-making biases, distinguishing the aspects of assessment that are subjective from those that are objective.
8. Communicate orally and in written documents the findings and implications of the assessment in an accurate and effective manner sensitive to a range of audiences.

CEPY 6410. Introduction to Qualitative Research
3 Credits (3)
This course is intended to be an introduction to qualitative research methods for persons wishing to understand, apply, and conduct qualitative studies with human subjects in the fields of counseling and psychology. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Students will understand the importance of applying and conducting culture-centered and ethical psychological research among persons from ethnic, linguistic, and racial minority backgrounds.
2. Students will understand the shift that has taken place in the past century from ignoring cultural variables to that of valuing the vast amounts of uncharted knowledge that is contained therein.
3. Students will gain a deeper understanding of the qualitative paradigm that informs research and the way we conduct and consume it.
4. Students will understand the components that make up good qualitative research considering carefully the variables that inform the proposed outcome of the study.
5. Students will assess the benefit of research to the entities, individuals and communities being studied.
6. Students will learn to be grounded in the empirical and conceptual literature on the ways that culture influences the variables under investigation, as well as psychological and social science research traditions and skills.
7. Students will be aware of their cultural assumptions on which their research questions are based (Egharevb, 2001).
8. Students will learn to be aware of, and if appropriate, to apply indigenous theories when conceptualizing research studies. They are encouraged to include members of cultural communities when conceptualizing research, with particular concern for the benefits of the research to the community (Fontes, 1998; LaFromboise, 1988).
9. Students will learn to consider the psychological (rather than demographic) contextual factors of race, ethnicity, language, gender, sexual orientation, socio-economic status, and other social dimensions of personal experience in conceptualizing their research design (Fouad Brown, 2000; Quintana et al., 2001).
10. Students will strive to recognize and incorporate research methods that most effectively complement the worldview and lifestyles of persons who come from a specific cultural and linguistic population; e.g., quantitative and qualitative research strategies (Hoshmand, 1989; Marin Marin, 1991; Ponterotto Casas, 1991).
11. Students will learn to consider culturally sensitive assessment techniques and data-generating procedures.
CEPY 6420. Psychometrics
3 Credits (3)
An introduction to psychometrics, including topics such as theory and techniques of psychological measurement, scale and inventory construction, reliability, validity, evaluation of measurement quality, classical and contemporary measurement theory, and standardization. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean.

Learning Outcomes
1. Students will acquire knowledge and skills in psychometrics.
2. Students will understand and apply psychometric theory through the completion of instrument evaluation, instrument development, and factor analysis projects.

CEPY 6425. Counseling Psychology Research
3 Credits (3)
Survey and analysis of research and program evaluation procedures in counseling psychology. Critical review of literature, formulating questions, quantitative and qualitative methodology, and data analysis are covered as a foundation for reading research literature and generating research, program evaluation, and/or grant proposals. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Students refine their foundational knowledge of research methods.
2. Students learn how to conduct comprehensive literature reviews in counseling psychology.
3. Students learn about sampling procedures and their limitations.
4. Students refine their knowledge about measurement applied to research (including the reliability, validity, norms and cultural relevance of measurement procedures).
5. Students refine their knowledge of statistics and the application of statistics to deriving conclusions from research data.
6. Students learn about ethical issues related to conducting research.
7. Students apply knowledge and skills in the areas described above to the critique of counseling psychology research.
8. Students apply knowledge and skills in the areas described above to the development of a draft proposal for research they can conduct in their area of interest within counseling psychology.
9. Students present and defend a proposal for research in counseling psychology.

CEPY 6430. Advanced Statistics
3 Credits (3)
An intermediate course focusing on more advanced theories and techniques of inferential statistics as applied to education and psychology. Includes ANOVA, planned contrasts, ANCOVA, simple regression, and non-parametrics. Both hand calculation and computer packages will be employed. Open to all College of HEST majors. May be repeated up to 3 credits.

Learning Outcomes
1. Students will understand how to describe procedural steps to submit proposals to the IRB at NMSU.
2. Students will be able to create data files and use SPSS to clean and examine datasets to assess data quality.
3. Students will be understand how to plan a research question, identify appropriate statistical tests and variables.
4. Students will be able to use SPSS to run statistical analyses to examine differences in means or relationships between two variables.
5. Students will understand how to assess assumptions and interpret findings of these analyses.
6. Students will understand key concepts, such as statistical significance, error, effect size, sample size, and statistical power of analytic approaches, findings, and interpretations of the data.
7. Students will be able to effectively communicate using scientific writing and accurate portrayal of the data in terms.

CEPY 6440. Multivariate Statistics
3 Credits (3)
Theories and techniques of multivariate statistics as applied to education and psychology. Includes multiple regression, logistic regression, MANOVA, factor analysis, and structural equation modeling. Computer packages will be the primary tool for data analysis. Open to all majors of the College of HEST. May be repeated up to 3 credits.

Learning Outcomes
1. To be able to construct statistical models, both non-multivariate (e.g., multiple regression) and multivariate (e.g., MANOVA, MANCOVA), and carry out the analysis using statistical software (e.g., SPSS, R).
2. To be able to interpret results of both non-multivariate and multivariate analyses, in the context of the data.
3. To be able to generate original research questions that can be answered with quantitative methods discussed in this course.
4. To be able to carry out a quantitative method discussed in this course to answer a research question(s), and to be able to appropriately interpret the results.
5. To be able to read published research in your field of study that makes use of multivariate methods, and critically interpret the results based on the claims and evidence provided.

CEPY 6450. Educational Experimentation
3 Credits (3)
Same as ELAD 6910. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes
1. Reflect on abilities to identify and effectively manage strengths and potential barriers that may impact progress on dissertation by thoroughly analyzing strengths and barriers and developing an action plan.
2. Conceptualize a dissertation topic that is germane to the field of Counseling Psychology and provide a convincing argument supporting the need for such research.
3. Conduct extensive and systematic literature searches for previous research and theory relevant to dissertation topic.
4. Write a comprehensive outline and annotated bibliography of the literature that incorporates the most relevant research and theoretical work associated with dissertation topic to inform literature review.

5. Clearly state research questions and hypotheses that will be examined in dissertation.

6. Create a detailed and comprehensive action plan that adheres to APA ethical guidelines for research that a reader can use to replicate dissertation study (i.e., method section).

7. Demonstrate understanding of the importance of having a diverse sample.

8. Present dissertation research to the class in a simulated proposal meeting.

9. Become more adept at providing support and challenge to student peers during weekly seminars and simulated proposal meetings.

10. Identify strategies for choosing and working with your dissertation committee effectively.

11. Demonstrate your knowledge of APA writing style.

CEPY 6510. Practicum in School Psychology: Psychoeducational
1-6 Credits (1-6)
Supervised practicum in psychological and educational evaluation. Skill development in ecological assessment, including interviewing, observations micro-counseling, acculturation, world view, and ethnic identity formation. Graded: S/U Grading (S/U, Audit). Restricted to CEP graduate majors. May be repeated up to 6 credits. Prerequisite: CEPY 6340, CEPY 5310.

Learning Outcomes
1. Students will demonstrate sound diagnostic reasoning and data-based decision-making through the formulation of possible preliminary hypotheses and testing of hypotheses via use of appropriate assessment methods.

2. Students will demonstrate skills in planning appropriate assessments, taking into consideration contextual factors, referral concerns, and background information; and will select appropriate evaluation methods.

3. Students will demonstrate skills related to devising and implementing evidence-based academic interventions for students in need.

4. Students will demonstrate sensitivity in regards to cultural diversity and diversity of values, as well as begin the process of being culturally responsive in their professional practices.

5. Students will become familiar with and practice in accordance with best practices and relevant standards of the profession.

6. Students will demonstrate effective interpersonal skills with clients and colleagues.

CEPY 6530. Practicum in School Psychology: Psychological
1-6 Credits (1-6)
School-based supervised experience for the advanced student. Provides experiences in various roles and models of service delivery (group, multifactored, integrative, family assessments) expected of school psychologists. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. Restricted to: CEP graduate majors. May be repeated up to 6 credits. Prerequisite: CEPY 6350 and CEPY 5235.

Learning Outcomes
1. Enhance the knowledge and skill students already possess and aid in the development of new knowledge and skills (related to psychological, behavioral needs of students).

2. Provide students with the opportunity to respond to supervision and use supervision in a constructive manner.

3. Provide students with the opportunity to share experiences as school psychologists in training in a supportive environment.

4. Provide the students with the opportunity to engage in learning activities that will assist them in functioning independently as school psychologists (i.e., data-based decision-making and accountability).

5. Provide the instructor with the opportunity to observe the student’s ability to plan and execute successful interventions and demonstrate diagnostic skills.

6. Students will be able to establish a counseling relationship with students’ clients through the provision of individual and/or group counseling as stated on their IEP’s.
7. Students will be exposed to current issues, theories, and practices in the field of school psychology.
8. Students will be able to integrate theory/research and practice via case presentations.
9. Students will be able to demonstrate knowledge and integration of technology in their practice as school psychologist.
10. Students will refine their skills in working with culturally and linguistically diverse students, families, educators, and other professionals.

CEPY 6540. Advanced Multicultural School Psychology Field Experience
3 Credits (3)
Supervised school psychology field experience including appraisal diagnosis, case conceptualization, treatment planning, theory-based counseling and evaluation from a multicultural perspective with diverse populations. Supervision provided by doctoral psychologist faculty involves audio, video, and/or live observation of sessions and case presentations. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. Restricted to CEP graduate majors.
Prerequisite: CEPY 6510, CEPY 6530.
Learning Outcomes
1. Students will enhance the knowledge and skill they already possess and aid in the development of new knowledge and skills (related to psychological, behavioral needs of students).
2. Students will respond to supervision and use supervision in a constructive manner.
3. Students will share experiences as school psychologists in training in a supportive environment.
4. Students will engage in learning activities that will assist them in functioning independently as doctoral-level school psychologists (i.e., data-based decision-making and accountability).

CEPY 6550. Counseling Psychology Theory/Practicum
1-6 Credits (1-6)
Theories of counseling and psychotherapy and their application during supervised counseling with clients. Supervision provided by doctoral psychologist faculty involves audio, video, and/or live observation of counseling sessions and case presentations. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 6 credits.
Prerequisite: CEPY 6510, CEPY 6530.
Learning Outcomes
1. Students will refine their understanding of counseling theory and hone counseling skills through readings, lecture, demonstration, case presentation, and supervised counseling experiences.
2. Students will learn about and employ a variety of evidence-based approaches to counseling and psychotherapy that have historically been used by counseling psychologists.
3. Students will reflect on their development of an approach to counseling that is effective, theoretically sensible, and personally congruent.

CEPY 6560. Group Work Theory/Practicum
1-6 Credits (1-6)
Application of theory in group work with clients and in supervising group leaders in training. Supervision provided by doctoral psychologist faculty involves audio, video, and/or live observation of counseling sessions and case presentations. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. Restricted to: CEP majors. May be repeated up to 6 credits.
Prerequisite: CEPY 6550.
Learning Outcomes
1. Apply the basic elements of group theory to small groups, including principles of group dynamics, group process components, developmental stage theories, group member roles and behaviors, and therapeutic factors.
2. Demonstrate effective leadership skills and intervention strategies in simulated class discussions to actual group sessions in the community.
3. Possess knowledge of ethical and professional issues encountered by group leaders.
4. Develop awareness of the relative advantages of group work for clients and counselors, as well as other practical advantages; discern when group may not be the preferred modality for clients.
5. Distinguish characteristics of various group theories and approaches.
6. Identify relevant socio-cultural factors and multicultural considerations in group work and its impact on theory, process, and group leadership skills.
7. Communicate how they have improved their skill development relative to self-awareness and group leadership.
8. Have knowledge of professional group organization, certifications (Certified Group Psychotherapist), and be able to effectively market group skills in preparation for the pre-doctoral internship year.

CEPY 6570. Advanced Counseling Psychology Practicum
1-6 Credits (1-6P)
Supervised counseling psychology experience including appraisal, diagnosis, case conceptualization, treatment planning, theory-based counseling and evaluation. Supervision provided by doctoral psychologist faculty involves audio, video, and/or live observation of counseling sessions and case presentations. Restricted to CEP graduate majors. Graded: S/U Grading (S/U, Audit). May be repeated up to 12 credits.
Prerequisite: CEPY 6560.
Learning Outcomes
1. To increase skill level in clinical work with individual/group/couple therapy and initial intakes through practice, formal supervision, and group case discussion.
2. To integrate one’s theoretical orientation into a brief practice therapy model and to improve treatment planning ability.
3. To improve treatment planning ability by increasing knowledge and integration of empirically supported interventions.
4. To increase exposure and use of assessment procedures and tools in clinical work.
5. To be cognizant of cultural/diversity issues with clients and develop enough self-awareness to respond effectively to a wide range of clients.
6. To examine professional identity concerns as they arise and increase one’s knowledge base about specific areas of clinical interest.
7. To adhere to APA’s Ethical Principles of Psychologists and Code of Conduct and Specialty Guidelines for the Delivery of Service by Counseling Psychologists and Guidelines for Providers of Psychological Services to Ethnic, Linguistic, and Culturally Diverse Populations, and to develop a more applied understanding of them.
8. To increase one’s knowledge of relevant Mental Health Statutes and the Board of Psychologist Examiners Rules and Regulations for the state in which you are practicing (NM or TX).
9. To demonstrate self-awareness and self-reflection through ongoing self-evaluation of counseling skills. 1
10. To learn how to design and implement outreach presentations and to gain experience in consulting with interdisciplinary staff. 1
11. To become familiar with and acquire practice with career counseling and the use of career inventories.

CEPY 6580. Supervision Theory and Practicum
1-6 Credits (1-6)
Didactic and experimental training in theory-based supervision. Supervision provided by doctoral psychologist faculty involves audio, video, and/or live observation of supervision sessions and case presentations. Restricted to CEP graduate majors. May be repeated up to 6 credits.
Prerequisite: CEPY 6530 or CEPY 6570.
Learning Outcomes
1. Students will be able to conceptualize the counseling supervision process.
2. Students will be able to understand the differences between various models of counseling supervision in order to develop a clearly conceptualized supervision theory/style.
3. Students will be able to establish an effective supervisory relationship.
4. Students will be able to demonstrate a variety of appropriately used supervision interventions.
5. Students will be able to demonstrate self-awareness through ongoing self-assessment of supervisory skills and self-reflection of your experience.
6. Students will be able to accurately assess your supervisee's abilities and developmental level.
7. Students will be able to cognizant of cultural/diversity issues with supervisees and develop enough self-awareness to respond effectively to such issues in both supervision and counseling.
8. Students will be able to provide clear and timely feedback to your supervisee based on your on-going assessment.
9. Students will be able to demonstrate the ability to write accurate and timely supervision process and progress notes. 1
10. Students will be able to understand the differences between various models of consultation. 1
11. Students will be able to understand the major issues in consulting and its place within the counseling profession, including orienting students to their professional identities. 1
12. Students will be able to understand how to orient students to their professional identities (school psychology, counseling psychology, or counseling). In addition, this course also provides supervisors an orientation to the counseling profession, including its history, counseling professional associations (e.g., the American Counseling Association), counseling licensure, roles counselors full in the community, and the difference between counseling and other related professions.

CEPY 6590. Behavioral Health Practicum
1-6 Credits (1-6)
An intensive supervised experience in providing behavioral health services at an on or off campus interdisciplinary health setting. Supervision provided by doctoral level psychologist faculty in collaboration with other team disciplines' supervising faculty involves audio, video, and/or live observation of counseling sessions and team interventions and case presentations. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 6 credits.
Learning Outcomes
1. Students will be able to apply a Biopsychosocial model of health and illness to case conceptualizations, treatment plans, and interventions at individual, group, and systemic levels.
2. Students will learn and use motivational interviewing to support patient behavior change
3. Students will learn strategies to employ telehealth services
4. Students will learn behavioral strategies for Opiate Use Disorder
5. Students will learn and perform a functional assessment of patient problems
6. Students will learn and apply evidence-based brief behavior change interventions (e.g. goal setting, self-monitoring, stimulus control, positive reinforcement, guided imagery, progressive muscle relaxation, mindfulness social support)
7. Students will describe and demonstrate behavioral health consultation skills
8. Students will demonstrate understanding of health disparities and social justice issues relevant to health care setting, patient population, and service delivery models.
9. Students will learn about ethical considerations for psychologists in health care settings

CEPY 6610. Internship in School Psychology
1-12 Credits (1-12)
Supervised experience in school psychology. Restricted to CEP graduate majors. May be repeated up to 12 credits.
Prerequisite: CEPY 6510 , CEPY 6530.
Learning Outcomes
1. Student will complete 1200 clock hour internship experience an approved site.

CEPY 6620. Internship in Counseling Psychology I
1-18 Credits (1-18)
Full-time equivalent of one-half calendar year of internship preferably in an APA-approved or APA-equivalent site. Available to Ph.D. students who have successfully completed their comprehensive exams. Restricted to CEP graduate majors. May be repeated up to 18 credits.
Learning Outcomes
1. Students will complete the full-time equivalent of one calendar year internship at a site accredited by the American Psychological Association (APA) that has been matched with the student through the APPIC process.

CEPY 6630. Internship in Counseling Psychology II
1-18 Credits (1-18)
Full-time equivalent of one-half calendar year of internship preferably in an APA-approved or APA-equivalent site. Available to Ph.D. students who have successfully complete their comprehensive exams. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 18 credits.
Learning Outcomes
1. Varies by site.

CEPY 6640. Doctoral Internship in School Psychology
6-12 Credits (6-12)
Supervised doctoral internship experience in school psychology. 1800 to 2000 clock hours are completed on a full-time basis. Non-majors may
be permitted to enroll in this course under limited circumstances with
the permission of the course instructor, department head, and graduate
school dean. Restricted to CEP graduate majors. May be repeated up to
12 credits.

**Prerequisite:** CEPY 6510, CEPY 6530, CEPY 6540.

**Learning Outcomes**
1. Varies by site.

**CEPY 6996. Selected Topics**

1-6 Credits (1-6)

Offered under various subtitles which indicate the subject matter
covered. A maximum of 6 credits in any one semester and a total of 18
credits overall. Non-majors may be permitted to enroll in this course
under limited circumstances with the permission of the course instructor,
department head, and graduate school dean. May be repeated up to 18
credits.

**Learning Outcomes**
1. Varies

**CEPY 6999. Ed.S. Thesis**

1-15 Credits (1-15)

Study and research at the Specialist in Education level. Each problem to
be designated by a qualifying subtitle. Non-majors may be permitted to
enroll in this course under limited circumstances with the permission of
the course instructor, department head, and graduate school dean. May be repeated up to 88
credits.

**Learning Outcomes**
1. Varies

**CEPY 7000. Doctoral Dissertation**

1-15 Credits (1-15)

Dissertation. Non-majors may be permitted to enroll in this course under
limited circumstances with the permission of the course instructor,
department head, and graduate school dean. May be repeated up to 88
credits.

**Learning Outcomes**
1. Varies

---

**Counseling and Community Psychology - Bachelor of Science**

Students must complete all University degree requirements, which
include: General Education requirements, Viewing a Wider World
requirements, and elective credits to total at least 120 credits with 48
credits in courses numbered 3000 or above. Developmental coursework
will not count towards the degree requirements and/or elective
credits, but may be needed in order to take the necessary English and
Mathematics coursework. This face-to-face program requires in-person
attendance in classes, especially in internship courses. Attendance is
mandatory in the Internship, which is 6 credits.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Notes:

1. A grade of C- or better is required for all CCP core courses.
2. MATH 1220G College Algebra (or any MATH higher math course, excluding MATH 1130G Survey of Mathematics) is required for the degree but students may need to take any prerequisites needed to enter either MATH 1220G College Algebra or higher (excluding MATH 1130G Survey of Mathematics) first.
3. CEPY 3210V Human Relations Training and CEPY 4110V Introduction to Counseling may not be used as a VWW.
4. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor. 
5. Electives for CCP program are selected from list of approved electives.
Counseling and Education Psychology - Undergraduate Minor

A minor in Counseling and Educational Psychology (CEP) is available to the student receiving a bachelor’s degree from another department in the university. The minor in CEP is designed to be useful to the undergraduate who is preparing to enter one of the helping professions such as psychology, education, social work, criminal justice or nursing. A total of 18 credits is required to obtain the CEP minor, of which, at least 9 credits must be at 300 level or above.

Students must earn a B- or better in all CEP minor courses.

Contact the CEP office for more information on the minor application process or see CEP Minor website: (https://cep.nmsu.edu/academic-programs/minor-in-counseling-and-educational-psychology.html)

1 These courses may have prerequisites and/or co-requisites, and it is the students responsibility for checking and fulfilling all those requirements.
2 See the General Education (p. 227) section of the catalog for a full list of courses.
3 See the Non-Departmental Requirements (p. 1107) section of the Requirements tab for the program.
4 Select from approved CEP Department list (https://cep.nmsu.edu/academic-programs/counseling-and-community-psychology (https://cep.nmsu.edu/academic-programs/counseling-and-community-psychology.html)).
5 See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Communication Disorders

General Information

The NMSU Department of Communication Disorders offers in-person and online undergraduate programs leading to a Bachelor of Science degree and an in-person graduate program leading to a Master’s degree in Speech-Language Pathology. The Master’s degree in Speech-Language Pathology satisfies the educational requirements to obtain state licensure and national certification in Speech-Language Pathology.

Further information regarding the fields of Audiology and Speech-Language Pathology may be obtained on the American Speech-Language-Hearing Association (http://www.asha.org) website. Information about the NM license requirements can be found on the New Mexico Regulations & Licensing Department (http://www.rld.state.nm.us/boards/speech_language_pathology_audiology_and_hearing_aid DISPENSING_practices.aspx) website.

Undergraduate Information

The NMSU undergraduate program in Communication Disorders offers a pre-professional Bachelor of Science degree that prepares students for graduate work in Speech-Language Pathology or Audiology. Students who complete a Bachelor’s degree in Communication Disorders may either go on to complete a Master’s degree in Speech-Language Pathology, complete a doctoral degree in Audiology, or complete additional supervised clinical hours to become a Speech-Language Pathology Assistant (SLP-A) or Apprentice of Speech-Language Pathology (ASL). The State of New Mexico does not license Speech-Language Pathology Assistants, but it may do so in the future.

Students who have declared a major in Communication Disorders are required to successfully complete a minimum of 120 credits for the Bachelor of Science degree in Communication Disorders. This includes a minimum of 48 upper-division credits and a minimum of 9 credits from an approved list of electives.

Graduate Information

The Department of Communication Disorders at NMSU offers a Master’s degree in Speech-Language Pathology, which meets the educational requirements for certification by the American Speech-Language-Hearing Association (ASHA) (https://www.asha.org/) as well as the educational requirements for state licensure in all states within the U.S. Students entering the graduate program with
an undergraduate major in Communication Disorders can expect to complete the program in two years (including the summer between the two years) and be awarded a Masters of Arts in Communication Disorders with a specialization in Speech-Language Pathology. To complete this course of study, each student is expected to meet the program's academic and clinical competency criteria aligned with the requirements of state and national certifying bodies for licensure and clinical certification. The graduate program for students without a background in Communication Disorders is generally one year longer because one year of leveling coursework is required.

Information for Prospective Students

The Master of Arts (M.A.) residential education program in speech-language pathology at New Mexico State University is accredited by the Council on Academic Accreditation in Audiology and Speech-Language Pathology of the American Speech-Language-Hearing Association (ASHA) (http://www.asha.org/). The deadline for applications is February 1st of each year.

Please apply to our graduate program in Speech-Language Pathology via CSDCAS (https://csdcas.liaisoncas.com/applicant-ux/#/login). The deadline for applications is February 1st of each year.

Interim Department Head: Dr. Heike Lehnert-LeHouillier

Professors: Dr. Boutsen; Associate Professors: Dr. Lehnert-LeHouillier; Assistant Professors: Dr. Rafferty, Dr. Shivabasappa, Dr. Wilson; College Assistant Professors: Mrs. Borrego, Mrs. Ogaz, Emeritus Professors: Dr. Farmer, Dr. Valdez

Dr. Boutsen, Ph.D. (Southern Illinois University): motor speech disorders, voice disorders, fluency disorders, anatomy and physiology of speech mechanisms;

Mrs. Borrego, M.A., (University of Northern Colorado): adult and pediatric dysphagia, medical speech-language pathology;

Dr. Lehnert-Lehouillier, Ph.D. (State University of New York at Buffalo): speech science, speech sound disorders, autism spectrum disorders, voice disorders;

Mrs. Ogaz, M.A., (New Mexico State University): pediatric speech and language disorders, early intervention, autism spectrum disorders;

Dr. Rafferty, Ph.D. (University of Tennessee Health Science Center): adult neurogenic language disorders, EEG;

Dr. Shivabasappa, Ph.D. (All India Institute of Speech and Hearing, University of Mysore): pediatric language disorders, bilingualism, literacy;

Dr. Wilson, Ph.D. (University of New Mexico): pediatric language disorders, transcranial direct current stimulation, autism spectrum disorders;

Sign Language Courses

SIGN 1110. American Sign Language I
3 Credits (3)
American Sign Language I is an introductory level language course in the language of the American Deaf Culture. Content includes ASL vocabulary and conversational skills; linguistic features of ASL; and skills in narrative/storytelling. In-class activities, comprehension and expressive examinations, narrative and storytelling assignments in addition to semester projects are venues for students to demonstrate their learning. In addition, Deaf Culture and Deaf Community issues are addressed. May be repeated up to 3 credits.

Learning Outcomes
1. Engage in basic conversations using ASL, such as introducing oneself, exchanging personnel information, and talking about one's surroundings.
2. Demonstrate the use of grammatical structures, including spatial referencing, use of classifiers, role shifting, ASL syntax, and non-manual signals (NMS).
3. Demonstrate clear sign production using an understanding of sign parameters: handshapes, movement, location, palm orientation, and NMS in targeted lexicon.
4. Demonstrate the use of basic ASL vocabulary and expressions necessary for conversations about real-life situations.
5. Evaluate and provide feedback concerning peers' and one's own uses of ASL.
6. Develop culturally-appropriate behaviors and conversation strategies within a variety of contexts for interacting with people who are Deaf.
7. Demonstrate effective use of comprehension and expressive ASL skills through narrative and/or storytelling activities.
8. Describe issues of the American Deaf community and Culture.

SIGN 1120. American Sign Language II
3 Credits (3)
American Sign Language II is a continuation course that builds on concepts and skills developed in American Sign Language I. Students gain further exposure to ASL structure and grammar, and Deaf Culture and the Deaf community. Emphasis is on increasing students' ability to comprehend other signers and express themselves with more elaboration when conversing or presenting in ASL. May be repeated up to 3 credits.

Prerequisite: SIGN 1110 or consent of instructor.

Learning Outcomes
1. Further develop basic conversational skills in ASL, taking on more complicated topics.
2. Apply knowledge of ASL grammar, including classifiers, spatial referencing and agreement, role shifting, and non-manual markers.
3. Develop ASL vocabulary, fingerspelling, number, narrative and storytelling skills.
4. Evaluate and provide feedback concerning peers' and one's own uses of ASL.
5. Demonstrate effective use of comprehension and expressive ASL skills through conversation, discussion, narrative and/or storytelling activities.
6. Demonstrate knowledge and appreciation of the American Deaf community and ASL.
7. Through first-hand experience in the American Deaf community and ASL, relate and reflect on perspectives of the community.

SIGN 2110. American Sign Language III
3 Credits (3)
This is an intermediate level course in American Sign Language (ASL). Expected areas of intermediate skill and knowledge development include: language comprehension and production, conversational use, narratives, ASL language features and further knowledge of and interaction with Deaf culture and the Deaf community. May be repeated up to 3 credits.

**Prerequisite:** SIGN 1120.

**Learning Outcomes**
1. Demonstrate intermediate ASL vocabulary, conversation and narrative/storytelling skills.
2. Demonstrate fundamental ASL features including visual/spatial orientation, constructed dialogue and action, spatial referencing, classifiers, non-manual behaviors and syntax/word order.
3. Demonstrate appropriate use of cultural behaviors and conversational strategies.
4. Translate written and spoken English to ASL and vice versa.
5. Self-evaluate and provide feedback to peers concerning ASL usage.
6. Examine the culture of the American Deaf community through engaging in community activities and its language.

---

**Speech & Hearing Science Courses**

**SPHS 2110. Introduction to Communication Disorders**
3 Credits (3)
This introductory course provides an overview of common speech, language, and hearing disorders in children and adults including etiologies, characteristics, prevention, identification, assessment and intervention. The course provides an overview of the field of speech-language pathology and audiology. May be repeated up to 3 credits.

**Learning Outcomes**
1. Describe normal human communication anatomy and processes as they relate to speech and language production.
2. Describe the nature of speech, language, and hearing disorders and differences.
3. Describe the principles of prevention, assessment and intervention of communication disorders.
4. List requirements for licensure, certification, and other relevant professional credentials.
5. Exhibit basic knowledge of contemporary professional issues in speech-language pathology.
6. List possible psychosocial implications of various communication disorders.
7. Identify cultural, educational, legal, and ethical issues related to communication disorders.
8. Describe the scope of practice of speech-language pathologists and audiologists.

**SPHS 4510. Phonetics**
3 Credits (3)
The science of phonetics, including work with the International Phonetic Alphabet. May be repeated up to 3 credits.

**Prerequisite:** C- or better in SPHS 2110; Cumulative GPA of 3.2 or higher.

**Learning Outcomes**
1. Students will learn and be able to describe the linguistic and articular parameters tongue height, tongue advancement, and lip rounding during vowel production in order to be able to understand the acoustics of vowels and diphthong acoustics.
2. Students will learn the acoustic properties of English consonants including stops, fricatives, affricates, liquids, glides, and nasals.
3. Students will learn the acoustic properties of English consonants including stops, fricatives, affricates, liquids, glides, and nasals.
4. Students will learn about speech perception, including categorical perception, theories of speech perception as well as some basic psychosocial properties such as the decibel scale.

**SPHS 4520. Audiology**
3 Credits (3)
Anatomy and physiology of the auditory system, bases of auditory disorders, and basic audiometric procedures. Restricted to: C DS, C D majors. May be repeated up to 3 credits.

**Prerequisite:** B or better in SPHS 2110, and a minimum of 3.2 GPA.

**Learning Outcomes**
1. Describe the properties of sound.
2. Define the terms used to describe hearing and hearing loss.
3. Describe the anatomy and physiology of the auditory system at an introductory level.
4. Identify basic audiometric procedures.
5. Interpret basic audiometric test findings.
6. Recognize common auditory (and related) disorders.
7. Discuss basic approaches to managing auditory (and related) disorders.

**SPHS 4610. Language Acquisition**
3 Credits (3)
This course introduces students to the study of the development of language, speech, and communication. Includes language sampling. May be repeated up to 3 credits.

**Prerequisite:** C- or better in SPHS 2110; Cumulative GPA of 3.2 or higher.

**Learning Outcomes**
1. Describe the development of phonology, semantics, morphology, syntax, and pragmatics.
2. Describe biological, cognitive, social aspects of language acquisition.
3. Describe the current methods for studying language acquisition and critically evaluate their contributions to our understanding of how children learn language.
4. Describe and critically evaluate current theories of language acquisition in relation to the available data and to each other.
5. Apply basic observational methods to draw conclusions about a child’s level of language knowledge.

**SPHS 4620. Speech and Hearing Science**
3 Credits (3)
Basic concepts and theories in acoustics, speech production and speech perception. Includes laboratory experience with instrumental measurement and analysis of speech systems. May be repeated up to 3 credits.

**Prerequisite:** C- or better in SPHS 2110, SPHS 4510, SPHS 4520; and minimum 3.2 GPA.

**Learning Outcomes**
1. Students will learn basic acoustic physics and be able to describe simple harmonic motion, complex waveforms, and resonances.
2. Students will learn about the acoustic consequences of the three articulatory parameters tongue height, tongue advancement, and lip rounding during vowel production in order to be able to understand the acoustics of vowels and diphthong acoustics.
3. Students will learn the acoustic properties of English consonants including stops, fricatives, affricates, liquids, glides, and nasals.
4. Students will learn about speech perception, including categorical perception, theories of speech perception as well as some basic psychoacoustic properties such as the decibel scale.

**SPHS 4710. Speech Disorders Across the Lifespan**
3 Credits (3)
Bases, symptoms, etiologies, and clinical management of issues related to disorders of articulation, phonology, voice and resonance, and fluency. Restricted to: CD majors. May be repeated up to 3 credits.
Prerequisite: SPHS 2110, SPHS 4510, SPHS 4520, SPHS 4620, and SPHS 4610; and minimum 3.2 GPA.

Learning Outcomes
1. Describe diverse etiologies of speech disorders and compare/contrast assessment procedures (ASHA Standard III-B).
2. Define and compare/contrast the classification for a variety of speech disorders. (ASHA Standard III-C)
3. Differentiate between a speech disorder vs a difference that can be attributed to culturally and linguistically different groups. (ASHA Standard III-D)
4. Describe evidence-based treatment; evaluate treatment-efficacy evidence for a variety of speech disorders. (ASHA Standard III-D)

SPHS 4715. Language Disorders Across the Life Span
3 Credits (3)
Bases, symptoms, etiologies, and treatment of language disorders. Includes review of normal language acquisition. May be repeated up to 9 credits.
Prerequisite: SPHS 2110, SPHS 4510, SPHS 4520, SPHS 4610, SPHS 4620, 3.2 cumulative GPA.

Learning Outcomes
1. Describe diverse etiologies of language disorders and compare/contrast assessment procedures (ASHA Standard III-B).
2. Define and compare/contrast the classification for a variety of language disorders. (ASHA Standard III-C).
3. Differentiate between a disorder vs a difference that can be attributed to culturally and linguistically different groups. (ASHA Standard III-D).
4. Describe evidence-based treatment; evaluate treatment-efficacy evidence for a variety of language disorders. (ASHA Standard III-D).

SPHS 4720. Anatomy and Physiology of Speech Mechanisms
3 Credits (3)
Structure and function of systems underlying human speech sound production and processing, including respiratory, phonatory, and articulatory components. May be repeated up to 3 credits.
Prerequisite: C- or better in SPHS 2110, SPHS 4510, SPHS 4520, SPHS 4620, and SPHS 4610; and minimum 3.2 GPA.

Learning Outcomes
1. Students will learn and be able to identify respiratory anatomy important for speech production.
2. Students will be able to identify, recall and extrapolate information about respiratory physiology.
3. Students will learn and be able to identify laryngeal anatomy important for speech production.
4. Students will be able to identify, recall and name important physiological mechanisms for controlling vocal function.
5. Students will learn and be able to identify supraglottal anatomy important for speech production.
6. Students will be able to identify, recall and name physiologic events about resonance and articulation.

SPHS 4810. Clinical Methods and Procedures
3 Credits (3)
Guidelines and procedures associated with the clinical and supervisory processes. Provide opportunities to complete the supervised clinical observation requirement for participation in clinical practicum. Restricted to: C DS,C D majors. May be repeated up to 3 credits.
Prerequisite: B or better in SPHS 2110, SPHS 4510, SPHS 4520, SPHS 4620, SPHS 4610; and minimum 3.2 GPA.

Learning Outcomes
1. Demonstrate basic use of professional terminology in the area of Speech-Language Pathology
2. Demonstrate knowledge of principles and techniques of the observation of nonverbal and verbal behavior of clients and clinicians using oral and written reporting, as well as in-class discussions.
3. Complete twenty-five clock hours of supervised clinical observation of speech, language, and hearing services.

SPHS 4820. Neural Bases of Communication Disorders
3 Credits (3)
Study of the neuroanatomy and neurophysiology of communication and communication disorders. Includes review of the central nervous system and peripheral nervous system relationship to speech motor control, language, and hearing. Restricted to: C DS,C D majors. May be repeated up to 3 credits.
Prerequisite: B or better in SPHS 2110, SPHS 4610, SPHS 4510, SPHS 4520, SPHS 4620, SPHS 4710, SPHS 4720, 3.0 GPA or better.

Learning Outcomes
1. Demonstrate knowledge of the gross anatomy and physiology of the central, peripheral, autonomic nervous systems.
2. Understand the clinical manifestations associated with injury/disease to a given regions/systems within the nervous system.

SPHS 4830. Aural Rehabilitation
3 Credits (3)
Overview of hearing aids and amplification devices including cochlear implants. Review of the bases and psychosocial aspects of hearing loss. Clinical management of hearing loss consistent with ASHA’s scope of practice for SLPs. Restricted to: C DS,C D majors. May be repeated up to 3 credits.
Prerequisite: B or better in SPHS 2110, SPHS 4510, SPHS 4520, SPHS 4620, SPHS 4610, SPHS 4710, SPHS 4720; and 3.2 GPA or higher.

Learning Outcomes
1. Define and use the appropriate terminology when discussing hard of hearing and deafness.
2. Describe and explain the effects of hearing impairment on speech-language acquisition and auditory/speech perception.
3. Describe the effects of hearing impairment on various aspects of life (e.g., cognitive, educational, occupational, and psycho-social aspects in all age ranges).
4. Identify the communication needs and develop a basic understanding of common intervention options including communication strategies, auditory training, speech reading, hearing aids, assistive devices, and cochlear implantation.
5. Be acquainted with the relevant public laws.

SPHS 5110. Research Methods
3 Credits (3)
Introduction to basic qualitative, quantitative, and single subject research methodology in speech-language pathology and audiology. Restricted to CD,CDS majors. May be repeated up to 3 credits.
Prerequisite: a course grade of B- or higher in all graduate courses and an overall GPA of 3.0 or higher.

Learning Outcomes
1. Demonstrate knowledge of the concepts of research ethics and integrity including protection of human subjects.
2. Demonstrate comprehension of concepts of evidence-based practice.
3. Locate, use, and critically evaluate library and online sources that support the investigation of research questions pertinent to speech-language and hearing science.
4. Interpret basic single variable and two-variable statistical procedures appropriate for single and group designs.
5. Read, abstract, and critically evaluate pertinent research.

SPHS 5120. Assessment of Communication Disorders
3 Credits (3)
Diagnostic theories and management of communication disorders using standardized and descriptive methodology. Includes the practice of interviewing, testing, and oral and written reporting. Restricted to: C DS,C D majors. May be repeated up to 3 credits.
Prerequisite: A course grade of B or higher in all graduate courses and an overall GPA of 3.0 or higher.

Learning Outcomes
1. Demonstrate knowledge of testing statistics and basic concepts in psychometric assessment.
2. Formulate, implement and summarize one complete successful and efficient assessments: including pre-planning meeting, interview design and implementation, administration of instruments, analysis and integration of results and report writing.
3. Review, summarize and critique one assessment tool for design, use, interpretation and cultural/linguistic inclusivity to classmates.
4. Given case study information, students will be able to: choose an appropriate instrument from assessment tools reviewed; develop an assessment plan for a client; write a report and develop treatment goals.

SPHS 5130. Pediatric Language and Disorders
3 Credits (3)
Normal communication development of neonates, infants, toddlers, and preschoolers; etiologies, and treatment of cognitive, linguistic and social elements of communication problems in family systems. Restricted to: C DS,C D majors. May be repeated up to 3 credits.
Prerequisite: Minimum grade of B and an overall GPA of 3.0 or higher.

Learning Outcomes
1. Demonstrate a working knowledge of the major theories of language acquisition and theoretical perspectives of disorders.
2. Demonstrate an understanding of the aspects related to dialect and second language acquisition of English.
3. Demonstrate knowledge of the core principles of language assessment for the pediatric population (zero-five year old).
4. Summarize and interpret content material relating to pediatric language development/disorders.

SPHS 5140. Speech Sound Disorders
3 Credits (3)
Advanced study of the symptoms, etiologies, assessment, and clinical management of speech sound disorders including those due to cleft palate and disorders of resonance. May be repeated up to 3 credits.
Prerequisite: A minimum grade of B in all graduate courses and a minimum overall GPA of 3.0 is required.

Learning Outcomes
1. Course Goals – Fulfillment of the following Standards of the American Speech-Language-Hearing Association (ASHA): IV-B, IV-C, IB-D, and IV-F: Students will be able to explain the classification of speech sounds based on different phonological theories, and they will be able to phonetically transcribe standard and non-standard speech. Summative Assessment: Test I (IV-B, IV-C)
2. Students will be able to describe the impact of anatomical, motor, sensory, cognitive-linguistic, and social factors in speech development, and developmental profiles associated with developmental and syndromic conditions. Summative Assessment: Test 2 (IV-C)
3. Students will be able to identify appropriate assessment tools and practice their use for the diagnosis of speech sound disorders. Formative Assessment: Project 1 (IV-D)
4. Students will learn to research different treatment approaches for the successful remediation of speech sound disorders and to integrate research into evidence-based clinical practice. Formative Assessment: Research Article Presentation Treatment Presentation (IV-F)
5. Students will familiarize themselves with current research in the area of speech sound disorders as well as foundational original research papers in the field. Formative Assessment: Research Article Presentation (IV-F)

SPHS 5210. School Age Language and Disorders
3 Credits (3)
Normal communication-learning development of elementary, secondary, and postsecondary students; etiologies, diagnosis, and treatment of interpersonal communication and language-based academic disorders. Restricted to: C DS,C D majors. May be repeated up to 3 credits.
Prerequisite: A minimum grade of B in all graduate courses and an overall GPA of 3.0 or higher.

Learning Outcomes
1. Demonstrate a working knowledge of legislation governing service provision in the schools (IDEIA, NCLB) and implementation practices (IEP five-hundred-four plan, RtI).
2. Demonstrate knowledge of normal language development of school-age children.
3. Demonstrate understanding of language disorders relevant to school-age children.

SPHS 5220. Adult Neurogenic Language Disorders
3 Credits (3)
Etiologies, diagnosis, assessment, and treatment of adult neurogenic language disorders, especially aphasia due to stroke and traumatic brain injuries. Restricted to: C DS,C D majors. May be repeated up to 6 credits.
Prerequisite: A course grade of B or higher in all graduate courses and an overall GPA of 3.0 or higher.

Learning Outcomes
1. Characterize aphasia and its sub-types based on lesion data and behavioral profiles.
2. Specify standardized and non-standardized measures to evaluate clients with aphasia.
3. Describe principles and techniques to maximize linguistic recovery in individuals with aphasia.
4. Describe the etiology and patterns of recovery associated with aphasia and right-hemisphere disorder.
5. Describe cognitive processes and systems, including language, attention, memory, and executive function, and their relationship to adult neurogenic language disorders.
6. Apply theoretical perspectives of language, cognition, and neurological function as they relate to adult neurogenic language disorders.

SPHS 5230. Fluency Disorders
2-3 Credits (2-3)
Speech fluency development and the disorders of stuttering, cluttering, and neurogenic dysfluency. Restricted to: C DS,C D majors.

**Prerequisite:** Graduate GPA of 3.0 or higher.

**Learning Outcomes**
1. Define/describe terminology and nomenclature associated with the study of human fluency disorders.
2. Identify constitutional and environmental conditions that contribute to fluency disorders.
3. Propose methods of assessing and treating the affective, behavioral and cognitive aspects of fluency disorders across the lifespan, including the use of augmentative devices for fluency.
4. Be able to explain the role of counseling in treating fluency disorders and how that role changes with the age of the client.
5. Be able to explain the role of counseling in treating fluency disorders and how that role changes with the age of the client.

**SPHS 5310. Introduction to Augmentative and Alternate Communication**

**3 Credits (3)**
Assessment and intervention for children and adults with developmental disabilities; Alternative communication strategies and systems for individuals with severe speech and/or language impairments. Restricted to: C DS,C D majors. May be repeated up to 3 credits.

**Prerequisite:** Graduate standing; overall GPA of 3.0.

**Learning Outcomes**
1. Understand and consider physical and psycho-social, linguistic, and cognitive characteristics of AAC users.
2. Describe assessment methods to determine the best fit of AAC systems to meet the needs of AAC users.
3. Understand how to provide training in the use of various AAC systems for AAC users, their families, and caregivers and educators.

**SPHS 5320. Cognitive Communication Disorders**

**3 Credits (2,3)**
Topics include attention, memory, executive function, and underlying neuropathologies, with emphasis on assessment, diagnosis, prognosis, treatment and recovery processes in cognitive communication disorders related to dementia and traumatic brain injury. Restricted to: C DS,C D majors. May be repeated up to 6 credits.

**Prerequisite:** 3.0 Graduate GPA.

**Learning Outcomes**
1. Describe dementing diseases and how they affect cognitive-communicative functioning.
2. Specify standardized and non-standardized measures to evaluate clients with dementia.
3. Describe principles and techniques to maximize communicative functioning of individuals with dementia.
4. Describe the epidemiology and etiology of traumatic brain injury.
5. Specify the relationships between the mechanisms of traumatic brain injury and the nature and severity of cognitive-communicative impairments.
6. Specify appropriate diagnostic and treatment methods for individuals with different severity levels of traumatic brain injury.
7. Describe cognitive processes and systems, including attention, memory, and executive function, and their relationship to cognitive communication disorders.

**SPHS 5330. Dysphagia**

**3 Credits (3)**
Study of the anatomy and physiology of swallowing and upper aerodigestive systems. Review of the bases and etiologies of child and adult swallowing disorders, including diagnosis, assessment, and treatment. Restricted to: C DS,C D majors. May be repeated up to 3 credits.

**Prerequisite:** A course grade of B- or higher in all graduate courses and an overall GPA of 3.0 or higher.

**Learning Outcomes**
1. Define the anatomy and physiology of normal swallowing and causes of abnormal swallow in the pediatric to geriatric age ranges.
2. Define dysphagia team components.
3. Describe protocol for clinical and instrumental dysphagia evaluation.

**SPHS 5335. Swallowing and its Disorders in the Pediatric Population**

**2 Credits**
This class is an introduction to swallowing disorders, normal and abnormal swallow function for the pediatric population. The primary focus of instruction will include normal and impaired swallow function, evaluation and treatment. Your instruction will include lecture, videos, small group discussion, and occasional labs. Of note, this is an introductory course to build a strong foundation of pediatric dysphagia. Your internships, fellowships and professional careers will help build upon this foundation. May be repeated up to 2 credits.

**Prerequisite/Corequisite:** SPHS 5330.

**Learning Outcomes**
1. Students will be able to define the anatomy and physiology of normal swallowing and causes of abnormal swallow in the pediatric population.
2. Students will be able to define dysphagia team components and describe protocol for clinical dysphagia evaluation in infants and children.
3. Students will demonstrate knowledge of dysphagia diagnosis and treatment as well as demonstrate ability to document diagnostic findings for the pediatric population.
4. Students will be able to explain indications and methods of non-oral nutrition and ethical considerations when working with pediatric clients from different cultural backgrounds.

**SPHS 5340. Motor Speech Disorders**

**3 Credits (3)**
Advanced studies of dysfunction of the nervous system that affect speech. Includes evaluation, diagnosis, and treatment of speech apraxias and dysarthrias. Restricted to: C DS,C D majors. May be repeated up to 3 credits.

**Prerequisite:** A course grade of B or higher in all graduate courses and an overall GPA of 3.0 or higher.

**Learning Outcomes**
1. Recognize evaluate motor speech disorders - differentiating between flaccid, spastic, unilateral upper motor neuron, ataxic, hypokinetic, hyperkinetic, mixed dysarthria, as well as apraxia.
2. Identify the etiology of the various motor speech disorders.
3. Demonstrate knowledge of methods to assess the various subsystems (resonance, articulation, phonation, and respiration) and determine relative contribution of each system to the motor speech disorder.
4. Demonstrate knowledge of various interventions for clients with various motor speech disorders.

**SPHS 5350. Voice Disorders/Head and Neck Anomalies**

**3 Credits (3)**
Advanced studies of anatomy and physiology of the vocal tract with emphasis on diagnosis, assessment, and treatment of voice disorders, laryngectomy, cleft palate, and other oral-facial anomalies. Restricted to: C DS,C D majors. May be repeated up to 3 credits.

**Prerequisite:** A course grade of B or higher in all graduate courses and an overall GPA of 3.0 or higher.

**Learning Outcomes**

1. Recognize and describe relevant anatomy and physiology of normal voice production, including laryngeal and respiratory anatomy and physiology.
2. Identify and discuss structural, neurologically-based, and functional voice disorders.
3. Demonstrate knowledge of approaches to assess voice disorders, including objective and subjective measures.
4. Explain and demonstrate selected intervention techniques for voice disorders.

**SPHS 5360. Communication Disorders in Neurodiverse Populations**

3 Credits (3)

This course is primarily aimed at providing meaningful foundations for the application of evidence-based intervention designs that enhance the development of communication skills for individuals with Autism Spectrum Disorders across the lifespan. May be repeated up to 6 credits.

**Learning Outcomes**

1. Identify and implement evidence-based interventions for individuals with ASD across a range of ages and abilities.
2. Evaluate several evidence-based interventions and determine the best fit based on a client scenario.
3. Discuss key features of evidence-based interventions for individuals with ASD.
4. Implement evidenced communication interventions with individuals with ASD.

**SPHS 5410. Professional Issues and Multicultural Practices in Communication Disorders**

3 Credits (3)

This course includes a range of topics pertinent to students entering professional practice as speech-language pathologists including current legal, cultural, ethical, and clinical service provision issues. Restricted to: C DS,C D majors. May be repeated up to 3 credits.

**Prerequisite:** Minimum of 3.0 GPA.

**Learning Outcomes**

1. Describe current issues in professionalism, ethics, and liability in the profession of Speech-Language Pathology.
2. Understand setting-specific employment issues, including working with culturally and linguistically diverse populations.
3. Understand the procedures necessary for obtaining licensure and certification by state and national agencies, as well as maintenance requirements for licensure and certification in Speech-Language Pathology.

**SPHS 5510. Advanced Spanish Morpho-Syntax for Education Professionals**

3 Credits (3)

This class has been designed for Heritage Speakers of Spanish who work in educational settings. It will cover the essential linguistic theory and fundamental structures of the Spanish language. This includes, but is not limited to, verb morphology, morphosyntactic and syntactic structures. The main goal of this course is to determine what usages fall within the norms of an individual’s speech community, or if there are elements that fall outside those norms. Students have to be fluent in Spanish as course will be conducted in Spanish.

**SPHS 5520. Best Practices in Bilingual/Multicultural Assessment for Practitioners**

3 Credits (3)

The purpose of this course is to provide future speech-language pathologists, educational diagnosticians and special educators with a foundation for evaluating the linguistic, cognitive and academic skills of students from any cultural linguistic background. The course covers a review of the literature on best practices for working with interpreters during assessments. Practitioners will be expected to gather qualitative information about cultural/linguistic and educational histories of school-age children and integrate those results with the results of standardized tests. Restricted to: C DS,C D majors. May be repeated up to 2 credits.

**Corequisite:** SPHS 5990.

**Learning Outcomes**

1. Demonstrate an understanding of successful strategies to work with families and clients from various clinical settings/cultural backgrounds.
2. Demonstrate an understanding of ethical and confidential service delivery.
3. Identify characteristics of properly written clinical reports.
4. Demonstrate skill in oral and written or other forms of communication sufficient for entry into professional practice.
5. Demonstrate knowledge of entry level and advanced certifications, licensure, and other relevant professional credentials.

**SPHS 5529. Externship in Communication Disorders**

3-9 Credits (3-9)

This course is designed to provide opportunities for the developing clinician to provide treatment to and evaluations for clients in a full term externship experience under the supervision of a licensed SLP. Restricted to: C DS majors. May be repeated up to 9 credits.

**Learning Outcomes**

1. Various

**SPHS 5990. Practicum in Speech-Language Pathology**

1-4 Credits (1-4)

Supervised clinical practice in a variety of speech, language, and hearing disorders. Practicum includes diagnostic, treatment, and management work through direct patient/client contact. Attendance at weekly clinical staff meetings is required. Restricted to: C DS,C D majors. May be repeated up to 15 credits.

**Prerequisite:** Good standing in the graduate school; a course grade of B or higher in all graduate courses and an overall GPA of 3.0 or higher.

**Learning Outcomes**

1. Various

**SPHS 5996. Special Topics**

1-9 Credits (1-9)
Individual and/or group study of special topics identified by subtitle. Restricted to: C DS majors. May be repeated up to 9 credits. **Prerequisite:** Prior arrangement with faculty; a course grade of B or higher in all graduate courses and an overall GPA of 3.0 or higher.

**Learning Outcomes**
1. Various

SPHS 5999. Master's Thesis
1-15 Credits (1-15)
Thesis. May be repeated up to 88 credits.

**Learning Outcomes**
1. Various

Name: Dr. Heike Lehnert-LeHouillier, Interim Department Head

Name: Yvette Claeys, Administrative Assistant

Office Location: Communication Studies Building, Room 245

Phone: (575) 646-2402

Fax: (575) 646-7712

Website: https://cd.nmsu.edu/

**Communication Disorders - Bachelor of Science in Communication Disorders**

The Communication Disorders curriculum provides specialized preparation for students who would like to work as Speech-Language Pathology Assistant (SLP-A) and those who plan to enter a graduate program in speech-language pathology or audiology. Students supplement their academic study of typical communication development, communication disorders, and clinical management with observation of the clinical experience in the department's Edgar R. Garrett Speech and Hearing Center and/or via alternative clinical education such as virtual patients. Students must maintain a grade of B or better in all Speech Language Hearing Sciences (SPHS) courses and maintain a cumulative GPA of 3.0 or higher, to remain in the program.

The undergraduate program fulfills all educational requirements needed for certification as Speech-Language Pathology Assistant (SLP-A) by the American Speech-Language-Hearing Association. Details regarding certification are available from the American Speech-Language-Hearing Association (http://www.asha.org/certification/) (ASHA), and for those seeking a license as Apprentice in Speech-Language (ASL) in New Mexico, information can be found on the website of the Regulations & Licensing Department (http://www.rld.state.nm.us/boards/speech_language_pathology_audiology_and_hearing_aid_dispensing_practices.aspx). Professional employment opportunities for speech-language pathologists and audiologists are numerous within settings such as school systems, community clinics, medical centers, hospitals, private practice, residential programs, and schools for individuals with disabilities.

**Program Requirements**

**Required coursework (120 credits; minimum 48 upper-division credits)**

Electives to meet the 120 minimum credit hours for this degree can either come from any minor that a student chooses to pursue or any other elective courses not counting elsewhere towards the degree.

Recommended minors for this degree are Linguistics, Spanish, or Counseling and Educational Psychology.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300/3000 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

New Mexico State University - Las Cruces 1117
A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

1 MATH 1220G College Algebra is required for the degree but students may need to take any prerequisites needed to enter MATH 1220G first.
2 See the General Education (https://catalogs.nmsu.edu/nmsu/general-education-viewing-wider-world/) section of the catalog for a full list of courses.
3 See the View a Wider World (p. 231) section of the catalog for a full list of courses.
4 SPAN 1110 Spanish I/SPAN 1120 Spanish II or an advanced Spanish course.
5 Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
hybrid courses. The MSAT is a 2-year (24-month) professional degree comprised of 60 credit hours of coursework through traditional and distance learning means.

The Master of Science in Athletic Training (MSAT) program at NMSU is designed to prepare students for careers in the athletic training profession. The program covers a broad range of topics including the human body, injury prevention, rehabilitation, and emergency care. Students will learn the latest techniques and practices in the field and are encouraged to participate in service-learning projects to gain real-world experience.

Undergraduate Program Information

The Undergraduate Program at NMSU offers minors in Dance and Exercise Science.

Graduate Program Information

Master of Science in Athletic Training

The Master of Science in Athletic Training (MSAT) program at NMSU comprises 60 credit hours of coursework through traditional and hybrid courses. The MSAT is a 2-year (24-month) professional degree program that starts in June and prepares students to sit for the Board of Certification (BOC) exam leading to the BCAT credential. NMSU is currently seeking accreditation for the program through the Commission on Accreditation of Athletic Training Education.

Admissions

Admissions are competitive, and applications are managed via the ATCAS central application system. The application deadline is April 15th. Interested students can contact the Athletic Training Program Director, Kim O’Connell (kbrock@nmsu.edu) for further information.

Doctor of Philosophy in Kinesiology

The Ph.D. in Kinesiology encompasses opportunities for focused study in physiological, biomechanical, psychological, and pedagogical domains of human movement. Program emphasis is placed on the acquisition of skills needed for high-quality research and innovative teaching.

Admission

To maximize consideration for admittance, candidates should submit applications by January 15 of the same year. Students are admitted to the graduate program based on their potential for achievement in research, scholarship, and teaching. The most promising applicants will be accepted. Because the number of spots is limited, it is not always possible to admit all qualified applicants. Attendees will be considered on a case-by-case basis.

Requirements

1. A completed Graduate School admission application.
2. Complete transcripts of all college work, reflecting a bachelor’s degree and a masters degree - preferred (or 30 hours of graduate work) in a related field of study, and a minimum cumulative GPA of 3.0 in prior degree programs.
3. Scores on the Graduate Record Examination (GRE) (there is no minimum requirement; however, scores will be considered during the admission process).
4. Three letters of recommendation from professors, employers, or others qualified to evaluate your potential for successful graduate work.
5. A curriculum vitae or resume.
6. A personal statement explaining how graduate work at NMSU fits your educational and career goals.

Kinesiology

Undergraduate Program Information

The Department of Kinesiology provides students with the education necessary to pursue careers in allied health sciences (athletic training, medical school, physician’s assistant, physical and occupational therapy, chiropractic medicine, clinical exercise physiology, etc.) physical education and pedagogy, dance, and various careers in the fitness and wellness industry. Details of the degree programs and their respective concentrations are provided below.

The department also offers minors in Dance and Exercise Science.

6. A personal statement explaining how graduate work at NMSU fits your educational and career goals.
7. A reference to the specific member whose work is of particular interest to you.
8. A letter of support from at least one faculty member from the Department of Kinesiology and Dance indicating an interest in guiding you through your program of studies.

Degrees for the Department

Bachelor Degree(s)

- Dance (Contemporary Dance) - Bachelor of Arts in Dance (p. 1141)
- Kinesiology (Exercise Science) - Bachelor of Science in Kinesiology (p. 1144)
- Kinesiology (Performance Psychology) - Bachelor of Science in Kinesiology (p. 1146)
- Kinesiology (Physical Education) - Bachelor of Science in Kinesiology (p. 1149)

Master Degree(s)

- Athletic Training - Master of Science (p. 97)

Doctoral Degree(s)

- Kinesiology - Doctor of Philosophy (p. 200)

Minors for the Department

- Dance - Undergraduate Minor (p. 1151)
- Exercise Science - Undergraduate Minor (p. 1151)

Faculty and Administration

Interim Department Head: Christopher A. Aiken, PhD

Professors: Oliver, Associate Professor; Aiken, Lee, True, Assistant Professor; Hirsch, Smoak, Yoder, Vanderlinden, College Associate Professor; Aranda, Meyer, O'Connell, Snyder, College Assistant Professor; Gregory, McMullen

C. Aiken, PhD (Louisiana State University) - Interim Department Head, Kinesiology Program Director, Motor Behavior; R.S. Aranda, MS (New Mexico State University) - Physical Education; M. Gregory, MA (New Mexico State University) - Clinical Coordinator AT; R. Hirsch, K., MS (University of Windsor) - Sport and Exercise Psychology; S. Lee, PhD (Florida State University) - Exercise Physiology; R. McMullen, MFA (Florida State University) - Dance; S. Meyer, MS (University of Idaho) - Kinesiology; K. O'Connell, MS (California University of Pennsylvania) - Athletic Training Program Director; K. Oliver, PhD (Virginia Polytechnic Institute) - Physical Education; P. Smoak, PhD (University of Northern Colorado) - Exercise Physiology; L. True, PhD (Michigan State University) - Graduate Program Coordinator, Motor Behavior; A. Vanderlinden, PhD (University of Texas, El Paso) - Biomechanics; H. Yoder, PhD (University of Alabama) - Exercise Physiology

Dance Courses

DANC 1110G. Dance Appreciation
3 Credits (3)
This course introduces the student to the diverse elements that make up the world of dance, including a broad historic overview, roles of the dancer, choreographer and audience, and the evolution of the major genres. Students will learn the fundamentals of dance technique, dance history, and a variety of dance aesthetics. Restricted to: Main campus only. May be repeated up to 3 credits.

Learning Outcomes
1. Explain a range of ideas about the place of dance in our society.
2. Identify and apply critical analysis while looking at significant dance works in a range of styles.
3. Identify dance as an aesthetic and social practice and compare/contrast dances across a range of historical periods and locations.
4. Recognize dance as an embodied historical and cultural artifact, as well as a mode of nonverbal expression, within the human experience across historical periods and cultures.
5. Use dance to consider contemporary issues and modes of thought.

DANC 1130. Ballet I
1 Credit (1)
This course is the beginning level of ballet technique. Students learn the basic fundamentally and performance skills of ballet techniques, which may include flexibility, strength, body alignment, coordination, range of motion, vocabulary, and musicality. May be repeated up to 2 credits.

Learning Outcomes
1. Apply fundamental movements of ballet techniques.
2. Enhance flexibility, strength, body alignment, coordination, balance, kinesthetic awareness, range of motion, and musicality.
3. Employ basic theories of classical ballet placement and proper alignment.
4. Develop basic ballet terminology, variations in timing and changes of facing, and barre and center combinations.

DANC 1131. Introduction to Ballroom Dance
1 Credit (1)
An introduction to ballroom dance at the beginning level. Students will learn the fundamentals of technique including carriage, common movement vocabulary, and partnering, and will be introduced to steps and dances from the Bronze Syllabus of American Smooth and International Standard dances. Offered every Fall. May be repeated up to 2 credits.

Learning Outcomes
1. Execute the basic figures of various Ballroom dances in American and International styles
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow
3. Develop the skills of style and performance quality within the dance
4. Demonstrate improved overall physical capability, musicality, and movement memory
5. Appreciate Ballroom dancing as an artform and a discipline

DANC 1135. Introduction to Argentine Tango
1 Credit (1)
An introduction to Argentine Tango at the beginning level. Students will learn the fundamentals of technique including carriage, common movement vocabulary, and partnering, as well as the history and culture of the form. Offered Spring of even years. May be repeated up to 2 credits.

Learning Outcomes
1. Execute the basic figures of Tango and Argentine Tango
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow
3. Develop the skills of style and performance quality within the dance
4. Articulate the cultural and historical underpinnings of these forms as World dances
5. Demonstrate improved overall physical capability, musicality, and movement memory
6. Appreciate Tango as an artform and a discipline

**DANC 1140. Flamenco I**
1 Credit (1)
This course introduces the student to the art of flamenco and its cultural features and significance. Students will learn the fundamentals of this art form and introductory techniques and skills, which may include handwork, footwork, postures, and specific dances. May be repeated up to 2 credits.

**Learning Outcomes**
1. Demonstrate a basic level of competency in the principles of alignment, anatomy, coordination, mobility, stability, and stamina.
2. Demonstrate fundamental flamenco techniques relative to spatial awareness, rhythm, phrasing, and sequencing.
3. Demonstrate competency with basic flamenco movement vocabulary.
4. Perform a variety of flamenco dances, poses, steps, hand movements, and combinations.

**DANC 1150. Modern Dance I**
1 Credit (1)
Modern Dance techniques and styles. Students are introduced to proper warm-up techniques, body alignment, control and flexibility. Students work with various rhythms and combinations of movements. The course emphasizes dance technique and creative experience. The history, terminology and philosophy of Modern Dance are also discussed. May be repeated up to 2 credits.

**Learning Outcomes**
1. Use a more developed sense of muscle control and strength, stretch and balance, coordination.
2. Demonstrate and verbalize an increased awareness of Modern Dance techniques
3. Execute dance phrases, combining several movements and in more than one rhythm.
4. Demonstrate an increased awareness of musicality while dancing and use Modern Dance Techniques creatively.

**DANC 1185. Introduction to Country Western Dance**
1 Credit (1)
An introduction to Country Western Dance at the beginning level. Students will learn the fundamentals of technique and several dances, including Country Western Two-Step, Nightclub Two-Step, Polka, and Line Dance. Offered Fall of odd years. May be repeated up to 2 credits.

**Learning Outcomes**
1. Execute the basic figures of various Country Western social dances.
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow.
3. Develop the skills of style and performance quality within the dance.
4. Demonstrate improved overall physical capability, musicality, and movement memory.
5. Appreciate Country Western dancing as an artform and a discipline.

**DANC 1220. Introduction to Latin Social Dance**
1 Credit (1)
An introduction to Latin social dance at the beginning level. Students will learn the fundamentals of technique including carriage, common movement vocabulary, and partnering, and will be introduced to steps and dances from the Bronze Syllabus of American Rhythm and International Latin dances. Offered every Spring. May be repeated up to 2 credits.

**Learning Outcomes**
1. Execute the basic figures of various Latin dances in American and International styles.
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow.
3. Develop the skills of style and performance quality within the dance.
4. Demonstrate improved overall physical capability, musicality, and movement memory.
5. Appreciate Latin dancing as an artform and a discipline.

**DANC 1235. Introduction to West Coast Swing Dance**
1 Credit (1)
An introduction to West Coast Swing dancing at the beginning level. Students will learn the fundamentals of technique of several Swing forms and the Hustle, including basic steps, partnering, and musical forms. Offered Fall of even years. May be repeated up to 2 credits.

**Learning Outcomes**
1. Execute the basic figures of both West Coast Swing and the Hustle.
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow.
3. Develop the skills of style and performance quality within the dance.
4. Demonstrate improved overall physical capability, musicality, and movement memory.
5. Appreciate Swing dancing as an artform and a discipline.

**DANC 2130. Ballet II**
2 Credits (2)
Intermediate level of ballet technique; Introduction of more advanced Ballet vocabulary at barre/center work; increase flexibility, strength, body alignment, and coordination for practice of steps/combinations with variations in timing and changes of facing. Restricted to Las Cruces campus only. May be repeated up to 8 credits.

**Learning Outcomes**
1. A successful student will be able to understand and execute with accuracy all the steps presented on the take home quizzes and are encouraged and expected to attend at least two semesters of each level in order to advance to the next level of ballet technique

**DANC 2150. Modern Dance II**
2 Credits (2)
Modern II is designed to further the student’s abilities in modern dance technique, to enhance efficient use of weight and momentum, to release held patterns in the body’s mechanics, to enrich spatial awareness, and to begin work on performance techniques. May be repeated up to 8 credits.

**Learning Outcomes**
1. Improve accuracy in alignment and shape
2. Improve precision in space, in timing and rhythm, and in focus/intent
3. Learn combinations and movement dynamics quickly
4. Begin to integrate performance techniques while working in the classroom setting
5. Use a concentrated attitude and an open, creative mind to approach the work in an artistic manner unique to your abilities
6. Listen, see and apply all the information given within one class period and over the semester
7. Self-awareness and mindfulness: how much space do you take in the class and why? How aware are you of those around you, and those you are dancing with?
8. Release of weight to create controlled momentum
9. Locating center and moving from there

DANC 2157. Hip-Hop Dance
2 Credits (2)
An introduction to hip hop dance and its relationship to other aspects of hip-hop culture, music, and media, with an emphasis on creativity, individuality, and expression. Coursework may include street styles, breaking, and various regional forms. No previous dance experience is expected. May be repeated up to 6 credits.

Learning Outcomes
1. Recognize and articulate the fundamentals of various styles of hip hop dance technique and vocabulary.
2. Contextualize the history and cultural aspects of hip hop dance.
3. Examine the relationship between dance and other aspects of hip hop culture such as music and media representation.
4. Demonstrate improvement in overall physical capability, musicality, and movement memory.
5. Appreciate hip hop dance as an artform and a discipline.

DANC 2270. Dance Improvisation
2 Credits (2)
An introduction to the practice of dance improvisation focusing on play and discovery as methods for generating movement and exploring the full potential of the communicative, authentic body in motion. Course content includes concepts in Body, Effort, Shape, Space, Kinesthetic Response, Scoring, and Contact. Offered Spring of even years.

Prerequisite: DANC 1150.

Learning Outcomes
1. Understand the core concepts of exploration and authenticity and the importance of these ideas to a modern dancer and choreographer.
2. Demonstrate immediacy of presence, both physically and mentally, in the way that they responding to both choices and instincts in the moment.
3. Connect the concepts learned in Modern dance technique to the study of dance improvisation and the concepts of this class to outside work as dancers, students, and citizens.
4. Access the constantly expanding movement vocabulary which will inform their work moving forward in dance technique and composition.
5. Improvise confidently both individually and as part of a group.

DANC 2310. Bronze American Rhythm
2 Credits (2)
Bronze level American Rhythm patterns, techniques, and partnering with an emphasis on elements of dance. May be repeated up to 4 credits.

Learning Outcomes
1. Learn to dance the Bronze DIVIDA Manual in American Rhythm
2. Develop Bronze level dance technique
3. Gain deeper understanding of the Elements of Dance
4. Develop rhythmic accuracy in movement, ability to dance on time and discover phrasing
5. Further develop lead follow skills that will enable you to dance at more advanced levels

DANC 2311. Bronze American Smooth
2 Credits (2)
Bronze level American Smooth patterns, technique, and partnering with an emphasis on the elements of dance. May be repeated up to 4 credits.

Learning Outcomes
1. Learn to dance the Bronze DIVIDA Manual in International Latin
2. Develop Bronze level dance technique
3. Gain deeper understanding of the Elements of Dance
4. Develop rhythmic accuracy in movement, ability to dance on time and discover phrasing
5. Further develop lead follow skills that will enable you to dance at more advanced levels

DANC 2320. Bronze International Latin
2 Credits (2)
This is the style of Latin dance that is danced around the globe and is featured in the World DanceSport Championships. Students will learn the Bronze Level figures and techniques in four (4) International Styles: Rumba, Cha Cha, Samba & Jive. May be repeated up to 6 credits.

Learning Outcomes
1. Learn to dance the Bronze DIVIDA Material for the International Latin Syllabus
2. Develop Bronze level dance technique
3. Gain deeper understanding of the Elements of Dance
4. Develop Smooth accuracy in movement, ability to dance on time and discover phrasing
5. Further develop lead follow skills that will enable you to dance more advanced levels

DANC 2321. Bronze International Standard
2 Credits (2)
This is the style of Ballroom dance that is performed around the globe and is featured in the World DanceSport Championships. Learn the Bronze Level figures and techniques in five (5) International Style dances: Waltz, Tango, Viennese Waltz, Foxtrot & Quickstep. Students will focus on understanding technical elements of dance, memorizing and performing routines. May be repeated up to 6 credits.

Learning Outcomes
1. Learn to dance the Bronze DIVIDA Manual in International Standard
2. Develop Bronze level dance technique
3. Gain deeper understanding of the Elements of Dance
4. Develop Smooth accuracy in movement, ability to dance on time and discover phrasing
5. Further develop lead follow skills that will enable you to dance more advanced levels

DANC 2460. Dance for Musical Theatre
2 Credits (2)
This course will supplement the dance technique curriculum specifically in support of the study of Musical Theatre. Students will practice various social, world, and theatrical dance forms, learn selections from iconic choreography, experience mock dance auditions, and explore the skill of dance composition for musical theatre repertory. Offered every Spring. May be repeated up to 4 credits.

Prerequisite: DANC 1130 or DANC 1160.

Learning Outcomes
1. Participate successfully in dance techniques and styles outside of the basic tap, jazz, ballet, and modern dance curriculum.
2. Recognize and contextualize musical theatre history and repertory through exposure to significant historical choreography and choreographers.
3. Understand and excel at the skill of taking part in a musical theatre dance audition.
4. Demonstrate improvement in overall physical capability, musicality, and movement memory.
5. Appreciate the practice of musical theatre dance as an artform and a discipline.

DANC 3110. DanceSport Pedagogy: Smooth
3 Credits (3)
In this teacher education course, students will begin to develop skills necessary in becoming a successful, professional Ballroom Dance Instructor. Students will gain technical mastery of Bronze level figures in the four (4) American Style Smooth Ballroom Dances to include the Waltz, Foxtrot, Tango and Viennese Waltz. Students will gain practical teaching experience in the area of Group Class Instruction with required in class practicums. May be repeated up to 12 credits.
Prerequisite: DANC 2311.
Learning Outcomes
1. Students will understand several philosophies of teaching
2. They will gain teaching skills through practical experience.
3. The students will teach both group and private lessons.
4. The student will gain knowledge about learning styles.

DANC 3114. DanceSport Ensemble
1 Credit (1)
Involvement with the DanceSport performance ensemble rehearsal and performance process. May substitute for 1 credit of the Contemporary Dance Ensemble course in the Dance Major. May be taken in every semester of undergraduate study or for up to 8 hours credit. Students can enroll by audition only. Consent of the instructor is required. May be repeated up to 8 credits.
Learning Outcomes
1. Collaborate in the process of creating a work of Latin or Ballroom dance.
2. Participate in the process of producing a dance concert with fully realized technical elements including lighting and costumes.
3. Apply the knowledge and skills that are being developed in the study of dance technique, choreography, and pedagogy to the culminating performance experience.
4. Demonstrate a more developed sense of artistry, energy, ingenuity, and presence onstage.

DANC 3130. Ballet III
2 Credits (2)
The theory and practice of ballet technique at the advanced level. A high level of technical accomplishment, artistry, and professionalism is expected. May be repeated twice for a maximum of 6 credits. May be repeated up to 6 credits.
Prerequisite: DANC 2130.
Learning Outcomes
1. Achieve a greater clarity of line, released use of turnout, and expressivity in port de bras and epaulement, demonstrating improved adagio and allegro skills at the advanced level.
2. Experience the idiosyncrasies of the Cecchetti, Vaganova, and Bournonville techniques and differentiate the Romantic, Classical, Neo-Classical, and Contemporary styles.
3. Apply experience from other disciplines such as modern dance to the exercise of ballet, referencing concepts such as body patterning and energy pathways.
4. Demonstrate an increased level of physical and artistic achievement and professionalism.

DANC 3150. Modern Dance III
2 Credits (2)
The theory and practice of modern dance technique at the advanced level. A high level of technical accomplishment, artistry, and professionalism is expected. Course may be repeated twice for a maximum of 6 credits. May be repeated up to 6 credits.
Prerequisite: DANC 2150.
Learning Outcomes
1. Delve into movement concepts with a greater sense of risk and challenge at the advanced level.
2. Achieve an increased mastery of alignment, control, and efficiency, taking full advantage of the knowledge of body patterning and energy pathways.
3. Improvise solo, in an ensemble, and with a partner, demonstrating the application of instinct and choice in the authentic body.
4. Increase the student driven problem-solving skill that is essential to a professional modern dance artist.
5. Demonstrate a high level of physical and artistic achievement.

DANC 3250. Contemporary Dance Ensemble
1 Credit (1)
Involvement with the Contemporary performance ensemble rehearsal and performance process, which may include faculty or student-produced choreography, performance in up to 3 concerts per academic year, and travel to festivals or conferences. Course content will also include practical experience in theatrical production and design for concert dance. This course should be taken by dance majors for at least 4 semesters. May be taken in every semester of undergraduate study or for up to 8 hours credit. By audition only. Permission of the instructor is required. Course should be taken in conjunction with any Ballet or Modern Dance technique class. Student can enroll by audition only. Consent of the instructor is required. May be repeated up to 8 credits.
Learning Outcomes
1. Collaborate in the process of creating a work of concert dance.
2. Participate in the process of producing a dance concert with fully realized technical elements including lighting and costumes.
3. Apply the knowledge and skills that are being developed in the study of dance technique, choreography, and pedagogy to the culminating performance experience.
4. Demonstrate a more developed sense of artistry, energy, ingenuity, and presence onstage.

DANC 3265. Principles of Choreography I
3 Credits (3)
An introduction to the basic tools of dance composition, beginning with improvisation and including body, space, time, energy, and elements of design. Offered Fall of even years.
Prerequisite: DANC 2270.
Learning Outcomes
1. Understand the core improvisational concepts of exploration, authenticity, instinct, and choice, and the importance of these ideas to a modern dancer and choreographer.
2. Connect the concepts learned in Modern I to the study of dance improvisation and composition and the concepts of this class to outside work as dancers, students, and citizens.
3. Build a constantly expanding movement vocabulary.
Learning Outcomes

1. Recognize and use the basic components of dance composition—body, space, time, and energy—and explore the roles of invention and communication in the creation of contemporary dances.
2. Develop the communication skills necessary to articulate and defend academic and artistic choices and to give and receive feedback.
3. Begin building a body of creative work and developing a sense of personal values as an individual and as an artist.

DANC 3310. Silver American Rhythm
3 Credits (3)
Silver level American Rhythm patterns and technique with emphasis on performance. May be repeated up to 9 credits.
Prerequisite: DANC 2310.
Learning Outcomes
1. To enhance advanced dance sport skills beyond Bronze Level

DANC 3311. Silver American Smooth
3 Credits (3)
Silver level American Smooth patterns and technique with emphasis on performance. May be repeated up to 9 credits.
Prerequisite: DANC 2311.
Learning Outcomes
1. Advance introductory skill levels and enhancing technique towards Gold level

DANC 3320. Silver International Latin
3 Credits (3)
Students will learn Silver Level syllabus figures in four (4) International Style dances: Rumba, Cha Cha, Samba & Jive and Bronze Level figures in Paso Doble. Continued training and practice in International Style Latin dance technique. May be repeated up to 9 credits.
Prerequisite: DANC 2320.
Learning Outcomes
1. Learn and work towards mastery for the four different styles of dances in Dance Sport

DANC 3321. Silver International Standard
3 Credits (3)
Learn Silver Level syllabus figures in the five (5) International Style Standard dances: Waltz, Tango, Viennese Waltz, Foxtrot & Quickstep. Students will focus on increased technical understanding to increase their ability in partnering and musicality. May be repeated up to 9 credits.
Prerequisite: DANC 2321.

DANC 3350. Dance Pedagogy I
3 Credits (3)
This course will include discussion of human development, body patterning, teaching methods, the structure and analysis of course content, and educational values as they apply to teaching creative movement and dance technique. Student must have one semester each of ballet and modern technique or permission of the instructor to enroll. Offered Spring of odd years.
Prerequisite: DANC 2130 and DANC 2150.
Learning Outcomes
1. Understand the basic progression of human development and how the study of Creative Movement and Dance can aid in that development physically, cognitively, and emotionally.
2. Recognize basic sociological and developmental demographic factors and determine how to develop lessons that are appropriate, safe, and constructive.
3. Communicate clearly, assertively, thoughtfully, appropriately, and constructively, recognizing communication as a vital skill in education.
4. Expand upon an existing syllabus of terminology, rhythmic structures, and movement vocabulary that is necessary in a comprehensive elementary dance education.
5. Practice executing a basic dance class structure including short and long-term lesson plans and a variety of teaching methods.
6. Begin developing a system of personal values and a philosophy of education that will engender an effective, ethical, and responsible teaching practice.

DANC 3510V. World Dance
3 Credits (3)
Examination of dance forms from a cross-cultural perspective, focusing on the role of dance in different cultures around the globe. Same as HNRS 347V. May be repeated up to 3 credits.
Learning Outcomes
1. An understanding of the social importance of dance in diverse cultural settings
2. A familiarity with the importance of dance as a vehicle through which various identities (i.e., cultural, gender and personal), roles (i.e., social and status) and values (i.e., personal and cultural) are identified and expressed.
3. An understanding of dance as a form of non-verbal communication.
4. The ability to discuss and compare culture's dance forms.
5. The ability to recognize how other art forms, religions, and political climates affect cultural identity.

DANC 3610. Dance History
3 Credits (3)
A survey of dance history from ancient Greece to the 21st century. Major emphasis on the development of dance as a Theatrical artform, on Ballet and Modern dance in Europe, Russia, and the U.S., and on criticism and theory of choreography and performance. Offered Fall of even years.
Learning Outcomes
1. Quantify factual knowledge of the progression of dance including primitive forms, court dance, ballet, and modern dance.
2. Recognize and contextualize important choreography, dancers, choreographers, composers, events, and phenomena in the history of Western Theatrical dance.
3. Discuss some of the root problems that dance historians face, such as the imperfect nature of documentation.
4. Understand how history shapes contemporary practices in dance.
5. Watch dance critically in order to derive choreographic intention and meaning in the work.
6. Articulate and support an informed point of view, both verbally and in writing, about works of concert dance.

DANC 3710. Somatics and Anatomy of Movement
3 Credits (3)
This course combines the study of human anatomy and physiology with the principles of Somatics in various forms to address dance movement in terms of body connectivity, efficiency, and access to full physical capability. Student should complete one semester of Modern Dance technique before enrolling. Offered Fall of odd years.
Learning Outcomes
1. Understand the mechanics of basic human anatomy and physiology, including but not limited to bones, muscles, and joints, and explore
the way that this quantitative knowledge can help in understanding and developing the dancer’s kinesthetic ability.

2. Recognize the vitality of basic components of wellness, including nutrition and injury prevention and treatment, and the impact that these issues have on dance as a professional practice.

3. Integrate the basic principles of various somatic fields outside of ballet and modern dance technique into their personal artistic practice and understand the ways that these additional methods can enhance their physical capability.

4. Apply their knowledge of physiology, wellness, and somatic systems to the study and practice of dance pedagogy.

DANC 3720. Dance, Technology, and Design
3 Credits (3)
This course explores the integration of technology into the creative process, focusing on projects in graphic design and filmmaking. Students will learn the fundamentals of photography, publicity design, sound editing and design, film documentation of live dance, and Dance for the Camera, and will be introduced to software including Photoshop and Final Cut. Offered Spring of odd years.
Prerequisite: DANC 3265.
Learning Outcomes

1. Demonstrate proficiency with some of the relevant technology, software, and tools that are used in producing digital images and video.

2. Effectively promote themselves and their work in their communities and online as 21st century artists and professionals must be prepared to do.

3. Think more broadly about the capabilities of their creative work, beginning with the choreographic process, with respect for the way that technology can enhance the artform of concert dance, and produce choreography in non-traditional formats.

4. Apply the skill of articulating specific and purposeful artistic choices, as is also being developed in technique, pedagogy, and composition classes.

DANC 4265. Principles of Choreography II
3 Credits (3)
Using the tools introduced in Principles of Choreography I, students will explore new methods of generating movement, delving into language, rhythmic and musical studies, props and architecture, sources of inspiration, and meaning making. Students will also be guided to consider the integration of technical and theatrical elements into the choreographic process and the relationship between their artistic work and their personal and social values. Offered Fall of odd years.
Prerequisite: DANC 3265.
Learning Outcomes

1. Surpass the principles learned in Choreography I to create increasingly complex contemporary work, informed by new points of inspiration, broader subject matter, and greater relevance.

2. Demonstrate a deepening understanding of the choreographic process as an exercise in Meaning-Making, using an unlimited movement vocabulary applied with absolute clarity.

3. Articulate the choices in craft and intention that are the underpinnings for the creation of work that is reflective of the artist’s personal and social values.

4. Create a wide and diverse body of work, utilizing multiple dancers, various styles of music, and varied creative processes.

DANC 4266. Advanced Independent Projects
1-3 Credits (1-3)
Independent work in dance practice, pedagogy, composition, or theory under faculty guidance. Intended to allow the student to broaden their experience and expertise in an artistic or academic area of dance beyond the published coursework. This course may substitute for Special Topics within the dance major if a project of sufficient depth and rigor is proposed. Consent of Instructor required. May be repeated up to 6 credits.
Learning Outcomes

2. Apply strong practices of inquiry and discovery, developed in other cross-disciplinary coursework, to their own personal areas of research and creative interest.

3. Exhibit a deeper understanding of specific artistic, academic, or theoretical field within the study of dance, reflective of the student’s goals and values.

DANC 4310. Gold American Rhythm
3 Credits (2+2P)
Advanced level American Rhythm dance technique and partnering work with choreography and performance emphasized. Includes cultural history and pedagogy methods. May be repeated up to 6 credits.
Prerequisite: DANC 3310.
Learning Outcomes

1. To enhance dance sport skills beyond Silver Rhythm

DANC 4311. Gold American Smooth
3 Credits (3)
Gold level American Smooth technique and choreography with an emphasis on performance and competition dancing. May be repeated up to 9 credits.
Prerequisite: DANC 3311.
Learning Outcomes
1. Continue to work towards mastery of dance sport perfection through advanced training

DANC 4320. Gold International Latin
3 Credits (3)
Students will complete all syllabus figures through the Gold level in the Rumba, Cha Cha, Samba, Jive and Paso Doble. Advanced training and practice in International Style Latin dance technique. May be repeated up to 9 credits.
Prerequisite: DANC 3320.

DANC 4321. Gold International Standard
3 Credits (3)
Students will learn Gold Level syllabus figures in the five (5) International Style Standard dances: Waltz, Tango, Viennese Waltz, Foxtrot & Quickstep. Students will focus on physical and cognitive mastery of standard dance technique and elements as well as high-level performance ability, musicality and choreography. May be repeated up to 9 credits.
Prerequisite: DANC 3321.

DANC 4610. DanceSport Certification Preparation
3 Credits (3)
The Professional Certification process offers extraordinary benefits to dance teachers, deeply enriching their dancing and teaching, and greatly expanding their career opportunities. This intensive course is designed to fully prepare students in taking the DVIDA and/or ISTD exams in the Smooth, Rhythm, Standard or Latin dances depending on course offered. See subtitle for specific style being taught in schedule of classes. May be repeated up to 12 credits.

DANC 4710. Senior Project
3 Credits (3)
As a capstone to the undergraduate study of dance, majors will select a research topic of interest to them and use the information gathered to inform the choreographic or pedagogical process. The project will include both academic and creative components. Students must be in Senior standing. Consent of Instructor required.
Learning Outcomes
1. Synthesize the complete undergraduate study of dance technique, performance, pedagogy, and choreography.
2. Connect the practice of academic research to the choreographic or pedagogical process.
3. Demonstrate a reinforced understanding of dance as an art form and the essential practices of creation, communication, meaning making, and reflection.
4. Present a professional portfolio appropriate to a dance artist, including a cover letter, CV, resume, and statement of teaching philosophy.

DANC 4996. Special Topics
1-3 Credits (1-3)
Specific subjects to be announced in the Schedule of Classes. May be repeated up to 3 credits.
Learning Outcomes
1. Varies

DANC 4997. Problems
1-6 Credits (1-6)
Problems in dance education, dance pedagogy, dance performance and independent work in their solutions. May be repeated up to 6 credits.

Learning Outcomes
1. Varies

Physical Education Courses

PHED 1110. Dance:
1 Credit (1)
Individual sections vary based on topic content; “audience”; type or level of participation. May be repeated up to 6 credits.
Learning Outcomes
1. Varies

PHED 1230. Individual Sport:
1 Credit (1)
Individual sections vary based on topic content; “audience”; type or level of participation. May be repeated up to 6 credits.
Learning Outcomes
1. Varies

PHED 1290. Team Sport:
1 Credit (1)
Individual sections vary based on topic content; “audience”; type or level of participation. May be repeated up to 6 credits.
Learning Outcomes
1. Varies

PHED 1310. Swim I:
1 Credit (1)
Individual sections vary based on topic content; “audience”; type or level of participation. May be repeated up to 6 credits.
Learning Outcomes
1. Varies

PHED 1320. Aqua Fit:
1 Credit (1)
Individual sections vary based on topic content; “audience”; type or level of participation. May be repeated up to 6 credits.
Learning Outcomes
1. Varies

PHED 1330. Lifeguarding
2 Credits (2)
Skills training for a nonsurf lifeguard. Course will include Standard First Aid and CPR certification. May be repeated up to 2 credits.
Learning Outcomes
1. To help the student become aware of the common hazards associated with various types of aquatic facilities and to develop the knowledge and skills to eliminate or minimize such hazards.
2. To help the student develop the skills necessary to recognize a person in distress or in a drowning situation and to effectively rescue that person.
3. To help the student understand their responsibility to their employer, fellow employees and especially to the patrons of their facility.
4. To provide explanations, demonstrations, practice and review of the rescue skills essential for lifeguarding.
5. To instill in the students an understanding and appreciation for the responsibilities, swimming skills and additional duties of lifeguarding.
6. To develop more advance swimming skills to assist in a water rescue.

PHED 1410. Yoga:
1 Credit (1)
Individual sections vary based on topic content; “audience”; type or level of participation. May be repeated up to 6 credits.

**PHED 1430. Pilates:**
1 Credit (1)
Individual sections vary based on topic content; “audience”; type or level of participation. May be repeated up to 6 credits.

**Learning Outcomes**
1. Varies

**PHED 1510. Training:**
1 Credit (1)
Individual sections vary based on topic content; “audience”; type or level of participation. May be repeated up to 6 credits.

**Learning Outcomes**
1. Varies

**PHED 1620. Fitness:**
1 Credit (1)
Individual sections vary based on topic content; “audience”; type or level of participation. May be repeated up to 6 credits.

**Learning Outcomes**
1. Varies

**PHED 1630. Career Fitness:**
1 Credit (1)
Individual sections vary based on topic content; “audience”; type or level of participation. May be repeated up to 6 credits.

**Learning Outcomes**
1. Varies

**PHED 1670. Aerobics:**
1 Credit (1)
Individual sections vary based on topic content; “audience”; type or level of participation. May be repeated up to 6 credits.

**Learning Outcomes**
1. Varies

**PHED 1830. Running:**
1 Credit (1)
Individual sections vary based on topic content; “audience”; type or level of participation. May be repeated up to 4 credits.

**Learning Outcomes**
1. Varies

**PHED 1910. Outdoor Experience**
1 Credit (1)
Individual sections vary based on topic content; “audience”; type or level of participation. May be repeated up to 6 credits.

**Learning Outcomes**
1. Varies

**PHED 2996. Special Topics**
1-3 Credits (1-3)
Specific subjects to be announced in the Schedule of Classes. Each offering will carry appropriate subtitle. May be repeated up to 6 credits.

**Learning Outcomes**
1. Varies

---

**Sports Medicine (Athletic Training & Kinesiology)**

**SPMD 1110. Introduction to Athletic Training**
3 Credits (3)
Introduction to the principles of athletic training. May be repeated up to 3 credits.

**Learning Outcomes**
1. Understand the historical development of athletic training and sports medicine.
2. Understand the knowledge and experiences needed to become a Certified Athletic Trainer.
3. Understand the specific responsibilities and duties of an athletic trainer.
4. Understand the diverse jobs settings within the profession of athletic training.
5. Understand the relationship between the athletic trainer and the sports medicine team.
6. Understand some of the general and specific injuries and medical conditions that occur in athletics; their causes, signs and symptoms, treatments, rehabilitation, and prevention.
7. Understand some of the contemporary issues and problems facing the athletic training profession.

**SPMD 1120. Medical Terminology**
3 Credits (3)
Study of the structure of medical language with emphasis on sports medicine-related terminology. To include analysis and interpretation of medical documentation. Restricted to: Las Cruces campus only.

**Learning Outcomes**
1. Master the fundamentals of word analysis, including the separation of terms into word roots or combining forms, common prefixes, and suffixes.
2. Differentiate types of medical terms and the relationships among terms.
3. Develop a proficiency in the use of physiological and anatomical terms as reflected in medical documents.
4. Master the terms, words, phrases, and symbols that describe the human body in its various states of health and disease, including essential anatomical terms.

**SPMD 1190. Clinical Practicum I**
2 Credits (2)
Introduction to the clinical aspects of the athletic training education program. Must maintain at least 3.0 GPA. May be repeated up to 4 credits.

**Learning Outcomes**
1. The Athletic Training Program application procedures.
2. The ability to perform selected taping and wrapping techniques.
3. Knowledge of HIPAA guidelines, pre-participation physical examinations, environmental illnesses, the history of Athletic Training and its governing bodies, Evidence Based Practice and its implications in the field of athletic training, evaluation procedures for the injured athlete, NMSU AT program and its affiliated clinical sites.
4. Proper documentation for the athletic training environment including SOAP notes.

**SPMD 1195. Clinical Practicum II**
3 Credits (3)
Athletic training related content and psycho-motor skills are introduced, enhanced, and assessed in the classroom and clinical rotations. Emphasis is on competencies and proficiencies previously instructed in didactic courses while providing increased depth of understanding and clinical practice. Must maintain a 3.0 GPA. May be repeated up to 3 credits.

**Learning Outcomes**

1. Demonstrate knowledge and skill in emergency situation prevention, recognition, and management.
2. Demonstrate proficiency in basic skills of musculoskeletal injury recognition and management.
3. Demonstrate competency in basic pre-participation exam skills, including but not limited to taking vital signs.
4. Demonstrate competency in wound care and first aid.

**SPMD 1310. Introduction to Kinesiology**

*3 Credits (3)*

An introduction to the field of Kinesiology which will explore areas such as exercise physiology, sport and exercise psychology, motor behavior, biomechanics, strength and conditioning, exercise prescription, as well as professional and graduate programs, and allied health and applied careers opportunities.

**Learning Outcomes**

1. Improve students’ knowledge of foundations of physical education. (Research) (Standard 4 j, k, l, m, o, p)
2. Improve students’ abilities to analyze current physical activity issues based on historical, philosophical, sociological, and psychological perspectives. (Research) (Standard 4 l, m, e, g)
3. Improve students’ knowledge of and ability to critically analyze how gender, race, social class, sexual orientation, and ability issues affect physical education and performance programs. (Research, Diversity) (Standard 4j, k, l, m, o; Standard 2 d, g, j, f, k)
4. Improve students’ knowledge of forces influencing the development of physical education programs. In particular, attitudes, values, and beliefs about gender, race, social class, sexual orientation, and ability, etc. (Diversity, Practitioners, Reflection, Pedagogy) (Standard 1 a, b, h, l; Standard 4 j, k, l, m, o; Standard 2 a, d, g, j, f, k)
5. Improve students’ strategies for becoming an advocate in the school and/or community to promote a variety of physical activity opportunities. (Practitioners) (Standard 2 m, n; Standard 3 n, o, p, q, r; Standard 10 d, j, p)
6. Improve students’ knowledge of current educational issues and trends. In particular, socio-cultural issues that affect educational, fitness, and sports settings. (Diversity, Research) (Standard 4 j, k, l, m, o, p Standard 9 a, c, e, f, m, n)
7. Improve students’ knowledge of how students’ learning is influenced by individual experiences, talents, and prior learning, including language and family/community values and conditions. (Diversity, Research) (Standard 1 b, h, l; Standard 2 d, g, j, k, n, m, o; Standard 3 l)
8. Improve students’ knowledge of the impact of international changes on the content of physical education, fitness, and sports programs. (Research) (Standard 4 j, k, l, m, o, p)
9. Improve students’ ability to critically analyze how gender, race, sexuality and social class issues affect how we view the body, and how these views can affect students’ health and participation in physical education, fitness, and sports programs. (Diversity, Reflection) (Standard 2 d, g, j, f, k, m, o) 1
10. Improve students’ ability to become critically aware of how their feelings, beliefs, and values in relation to gender, race, social class, sexual orientation, and ability issues will affect their abilities to work as professionals in the fields of physical education, sport, or fitness. (Diversity, Reflection) (Standard 2d, g, j, f, k, m, o Standard 9 e, d, g, l, m) 1
11. Improve students’ knowledge of and ability to critically analyze cultural stereotypes of diverse populations of people. (Diversity) (Standard 2 d, g, j, f, k, m, o) 1
12. Improve students’ knowledge of how cultural stereotypes influence the development of physical education, fitness and sport programs. (Research, Diversity) (Standard 2 d, g, j, f, k, m, o; Standard 4 j, k, m, o, p, q Standard 8 p) 1
13. Improve students’ knowledge of how groups influence individuals, and how individuals influence groups in a democratic society. (Diversity) (Standard 2 d, g, j, f, k, m, o; Standard 4 m, p;) 1
14. Improve students’ abilities to communicate in ways that demonstrate sensitivity to all learners. (Diversity, Effectiveness) (Standard 1 d, h, l; Standard 2 d, g, j, f, k, m, o) 1
15. Students will demonstrate through writing the ability to apply the issues discussed in class to their specific fields in ways that benefit society. (Evaluation) (Standard 9 e, g, l, m) 1
16. Students will improve their ability to take the content from readings and present it in thought provoking ways to their classmates. (Research, Evaluation, Reflection) (Standard 9 e, g, l, m; Standard 10 a, d, h, n) 1
17. Writing proficiency is required for a passing grade in this course. (Standard 4 I) 1
18. Improve students’ abilities to use computers and other technologies to communicate, network, and/or foster inquiry. (Standard 10 g) 1
19. Consult professional literature, colleagues, and other resources to develop as a professional.(Standard 10 e, f, h, l, n, r)

**SPMD 2130. Emergency Response in Sports Medicine**

*2 Credits (2)*

Designed to provide knowledge and experience in emergency care procedures, blood borne pathogens, and first aid. Students will receive certification in CPR/AED for the Professional Rescuer and in First Aid, upon successful completion of course. May be repeated up to 4 credits.

**Prerequisite:** Consent of Instructor.

**Learning Outcomes**

1. Identify the individuals involved in the Emergency Response Team
2. Construct the components of an effective emergency Action Plan
3. Assess the scene and patient during an emergency situation
4. Demonstrate proper universal precautions and wound care
5. Demonstrate effective Cardiopulmonary Resuscitation, AED use
6. Demonstrate effective Rescue Breathing Airway Management techniques
7. Demonstrate effective splinting techniques
8. Demonstrate understanding of the techniques utilized in cervical stabilization
9. Identify components of acute care for general medical and orthopedic emergencies.
SPMD 2210. Anatomy and Physiology I
3 Credits (3)
Detailed study of the structure and function of the human musculoskeletal, cardiovascular, respiratory, and peripheral nervous systems. Designed specifically for students interested in allied health professions.

**Learning Outcomes**
1. The student will learn and identify bones, connective tissue, joints and muscular structures of the human body.
2. The student will study joints and associated structures of the body.
3. The student will learn about skeletal muscle, origins, insertions, and actions.
4. The student will learn about the fundamentals of the nervous system and associated structures.
5. The student will learn about smooth and cardiac muscle and their association actions.
6. The student will learn the structures associated with the cardiovascular system (heart and blood vessels).
7. The student will learn the location of all visceral organs.
8. Evaluation of knowledge is determined through practical identification of anatomical structures via written opened ended exams.

SPMD 2210L. Anatomy and Physiology Laboratory
1 Credit (1P)
Students will engage in activities designed to enhance appreciation of the anatomical structures related to the content areas for SPMD 2210. Restricted to Las Cruces campus only.

**Learning Outcomes**
1. The student will learn and identify bones, connective tissue, joints and muscular structures of the human body.
2. The student will study joints and associated structures of the body.
3. The student will learn about skeletal muscle, origins, insertions, and actions.
4. The student will learn about the fundamentals of the nervous system and associated structures.
5. The student will learn about smooth and cardiac muscle and their association actions.
6. The student will learn the structures associated with the cardiovascular system (heart and blood vessels).
7. The student will learn the location of all visceral organs.
8. Evaluation of knowledge is determined through practical identification of anatomical structures via written opened ended exams.

SPMD 2250. Fitness for Health and Sport
3 Credits (3)
A study of the fitness needs for health enhancement and sport participation.

**Learning Outcomes**
1. Recognize the importance of incorporating positive fitness/wellness habits within one's lifestyle in terms of enhancing longevity, disease prevention, and overall quality of life.
2. Examine various physiological benefits and adaptations to such factors as muscular strength, muscular endurance, cardiovascular fitness, flexibility, and body composition when certain stimuli are applied to each. Assessment of these characteristics will be witnessed primarily in practical experiences within the course's laboratory settings.
3. Identify current trends and/or health patterns within society in regards to scientific findings, declination in health habits, and increases in health ailments.
4. Compare various nutritional concepts, specifically proper dietary habits and their impact on weight management aspects.
5. Describe the role physical activity and sport specific training play on competitive athletic performance.

SPMD 2310. Career Preparation
1 Credit (1)
From concept to implementation: Career exploration, setting up degree plans, finding graduate programs, developing professional resumes, writing letters of application, seeking letters of recommendation, and interview preparation.

**Learning Outcomes**
1. Career opportunities within human movement and allied health fields
2. Chose both a primary and secondary career of their interest
3. Search for appropriate graduate schools to match their career choices
4. Create a plan by aligning their undergraduate curriculum with their career choices
5. Explore additional education (dual majors, minors, and certifications specific to their chosen field)
6. Study and create a professional resume
7. Create a curriculum vita as a historical reference for future job prospects
8. Write a professional letter of application for jobs and school applications
9. Learn how to seek "outstanding" letters of recommendation
10. Study appropriate interview protocol
11. Practice interviews (one on one, panel and group)

SPMD 3010. Orthopedic Examination, Evaluation and Diagnosis of Lower Extremity Injuries
4 Credits (3+1P)
Examines normal human anatomy, mechanisms of athletic injury, and deviation from normal anatomy following athletic injury to the lower extremity. Must maintain at least 3.0 GPA. Consent of Instructor required.

**Learning Outcomes**
1. Demonstrate knowledge and ability to apply current best practices in acute care, diagnosis and treatment of injuries involving the lower extremity
2. Demonstrate strong clinical examination skills in order to accurately diagnose and effectively treat the patient.
3. Demonstrate the knowledge and skills necessary to evaluate and provide immediate management of acute injuries.
4. Determine and apply therapeutic interventions designed to maximize the patient's participation and health-related quality of life.
5. Develop and implement strategies and programs to prevent the incidence and/or severity of injuries.

SPMD 3050. Therapeutic Modalities
4 Credits (4)
The physiological effects, indications, contraindication, dosage, and maintenance of therapeutic modalities related to the treatment of athletic or activity-related injuries. May be repeated up to 4 credits.

**Prerequisite:** SPMD 2210 or BIOL 2210; 2.75 GPA.
Learning Outcomes
1. Demonstrate proper assessment techniques to identify appropriate therapeutic modalities for the treatment of injury and illnesses.
2. Design treatment plans based upon sound clinical assessment and appropriate selection of modalities that address the physiologic and psychological needs of the patient.
3. Demonstrate competence with the application of a wide variety of modalities including patient preparation, modality application and modification based upon clinical findings using principles of evidence based practice.
4. Perform appropriate documentation of treatments to include patient history, evaluation, treatment goals, expectations and treatment outcomes.
5. Demonstrate competence with the collection and analysis of baseline and post-treatment data to evaluate and interpret treatment outcomes based upon principles of evidence-based practice.

SPMD 3090. Clinical Practicum III
3 Credits (3)
Athletic training psychomotor skills are enhanced and assessed by a preceptor during clinical rotations. Emphasis is on competencies and proficiencies previously instructed in didactic courses. Must maintain a 3.0 GPA. Consent of Instructor required. Restricted to: Athletic Training majors.

Learning Outcomes
1. Practice sessions are conducted to assist the student in achieving clinical proficiency skills.
2. Depending on the difficulty level, selected clinical proficiencies will be evaluated in this clinical.
3. For those proficiencies indicated, students will need to show proficiency either in this clinical or in a later clinical class.

SPMD 3093. Clinical Practicum IV
3 Credits (3)
Athletic training psychomotor skills are enhanced and assessed by a preceptor during clinical rotations. Emphasis is on competencies and proficiencies previously instructed in didactic courses. Must maintain a 3.0 GPA. Consent of Instructor required. Restricted to: Athletic Training majors.

Learning Outcomes
1. Identify and locate muscles, tendons, ligaments and bony structures.
2. Demonstrate basic evaluation skills, including but not limited to: taking a history, observation, differential diagnoses, palpation, ROM, neurological/circulation, MMT, special tests, clinical impression, plan.
3. Demonstrate taping, bracing skills, appropriate emergency care skills, select and properly fit athletic equipment, appropriate removal of athletic equipment in the event of an emergency, the ability to develop and answer a clinically relevant question.

SPMD 3110. Racquet Sports
2 Credits (2)
Knowledge and skills related to the racquet sports of tennis, badminton, and pickleball with emphasis on developmental strategies and skill performance that influences pedagogical content knowledge. Administrative issues will be addressed.

SPMD 3120. Theory and Technique of Lifelong Outdoor Leisure Activities
2 Credits (2)
Knowledge and skills related to lifelong outdoor leisure activities, including the examination of environmental science and awareness, kinesiology, and fundamental motor skills.

SPMD 3130. Theory and Technique of Sports and Games
2 Credits (2)
Knowledge and skills related to team sports and games, with emphasis on developmental strategies and skill performance that influence pedagogical content knowledge. Administrative issues will also be addressed.

SPMD 3140. Designing Student Centered Afterschool Physical Activity Clubs
3 Credits (3)
Knowledge, skills and field based practical application for creating student centered and student designed after school physical activity clubs.

SPMD 3150. Theory and Technique of Dance and Rhythms
2 Credits (2)
Knowledge and skills related to dance and rhythms, with emphasis on the analysis of dance elements and its role in physical education.

SPMD 3160. Elementary School Physical Education
3 Credits (2+2P)
Methods for teaching physical education at the elementary level. Primary focus on creating a learning environment for the acquisition and enhancement of developmentally appropriate locomotor, manipulative, and nonmanipulative skills. Field experience included. Consent of Instructor required.

Prerequisite: GPA of 2.5.

Learning Outcomes
1. All course objectives are linked to the InTASC Teaching Standards
2. Improve your knowledge of K-5 physical education content, disciplinary concepts, and tools of inquiry related to the development of a physically educated person (Standard 4 j, k, l, n, o; Standard 5 i, Standard 6 j; Standard 7 g, k, l; Standard 8 l; Standard 9 o).
3. Improve your knowledge of and ability to plan instruction based on curriculum goals/objectives and students’ experiences. (Standard 1 a, b, d, e, h, i; Standard 2 a, b, c, g, e; Standard 4 j, m, n, o; Standard 5 j, k; Standard 9 a, c, h, l)
4. Improve your ability to design and teach developmentally appropriate K-5 physical education curriculum for diverse learners. (Standard 1 a, b, d, e, h, j; Standard 2 a, b, c, d, f, g, h, j, j, k, l, m; Standard 4 b, c, d, e, f; Standard 5 b, d, h, r; Standard 7 a, b, c, d, e, g, h, j, k, l, n, q; Standard 8 l)
5. Improve your knowledge of, and ability to, teach a variety of manipulative, nonmanipulative and locomotor skills and concepts. (Standard 7 a, b, c, d, e, g, h, j, k, l, m, n, q)
6. Improve your ability to teach using a variety of strategies such as cooperative learning, problem-based learning, direct instruction, etc. that facilitate learning (Standard 8 a, b, d, e, f, h, i, j, k, l, m, n, s)

SPMD 3210. Anatomy and Physiology II
3 Credits (3)
Detailed study of the structure and function of the human endocrine, immune, digestive, reproductive, integumentary, central nervous and renal systems. Designed specifically for students interested in allied health professions.

Prerequisite: SPMD 2210 or consent of instructor.

Learning Outcomes
1. Students will demonstrate knowledge through testing, practical skills and demonstration an understanding in visceral anatomy and physiological functioning.

SPMD 3210L. Anatomy and Physiology II Lab
1 Credit (1)
The students will develop skills in palpating various bony landmarks as well as origins and insertions of major soft tissues. In addition, problem-based learning scenarios will be used to complement the SPMD 3210 lecture material and thereby further students understanding of certain physiologic systems including neural, digestive, reproductive, endocrine, and integumentary.

**Prerequisite:** SPMD 2210; SPMD 2210L; or approved transfer equivalent.

**Learning Outcomes**
1. To demonstrate through practical application and demonstration a comprehensive understanding of visceral operations and diseases.

**SPMD 3250. Introduction to Exercise Science: Exercise Physiology and Biomechanics**
3 Credits (3)
This course serves to provide a broad introduction to both the physiology of exercise and the mechanics of human movement. The conceptual framework of the course will allow for the development of a broad knowledge base regarding these concepts and the latter portions of the course will focus on real world application of the concepts.

**Learning Outcomes**
1. Students will learn a basic introduction to both exercise physiology and biomechanics and be able to demonstrate their knowledge of the introductory topics by providing real world examples.

**SPMD 3310. Lifetime Activities**
2 Credits (2)
Knowledge and skills related to the lifetime activities of swimming, weight training, and other fitness promoting activities with emphasis on learning progressions.

**Prerequisite:** GPA 2.5.

**Learning Outcomes**
1. All course objectives are linked to the InTASC Teaching Standards
2. Improve your ability to design and teach developmentally appropriate fitness lesson plans for diverse learners (e.g. aerobics, yoga, strength training). (Standard 7 a, b, c, i, j Standard 8 a, b, d)
3. Improve your ability to modify instructions, lesson plans and tasks based on students’ strengths and needs. (Standard 1 b, Standard 3 e, Standard 7 b, c, i, j, l, Standard 8 a, b, d)
4. Improve your knowledge of, and ability to teach a variety fitness content (Standard 7 a, g, h, k, l, n)
5. Improve your ability to plan effective lesson plans to insure equity and sensitivity to students with diverse characteristics. This includes structuring a safe, educational environment that facilitates learning for all students. (Standard 3, e, Standard 7 q, i)
6. Improve your ability to use self-assessment and peer-assessment to reflect on your teaching and plan for adaptations/adjustments (Standard 8 b, d, Standard 9 g).
7. Improve your ability to evaluate and modify instructional resources and curriculum to better meet the needs of their students. (Standard 4 f, Standard 7 g, Standard 8 a)

**SPMD 3350. Inferential Statistics in Sport and Exercise Science**
3 Credits (3)
Statistical concepts and methods basic to experiential research to include normal distribution, z-tests, t-tests, analysis of variance and regression analysis. An understanding of sport and exercise science theory is required for students enrolling in this course

**Learning Outcomes**
1. Upon successful completion of this course the student will be able to competently assess exercise data using a variety of techniques that include measures of central tendency, variability, distributional assessments, correlation, regression, and mean testing (t-test and ANOVA).

**SPMD 3410. Exercise Physiology**
3 Credits (3)
Basic physiological principles as they apply to exercise and fitness programs. Laboratory experiences included. Requires 2.75 GPA.

**Prerequisite:** SPMD 2210 or BIOL 2210; GPA 2.75.

**Learning Outcomes**
1. To gain knowledge of the structure and function of the body systems (muscle, cardiorespiratory, etc.).
2. To gain knowledge related to the body system in reference to acute bout of exercise (responses), as well as following chronic exposure to exercise (adaptions).
3. To understand laboratory procedures used to study the body system.
4. To be able to integrate knowledge related to the function of each system and apply this information to humans undergoing exercise training.

**SPMD 3450. Biomechanics**
3 Credits (3)
The application of anatomical, mechanical and electrical concepts to better understand the fundamental nature of human movement.

**Prerequisite:** SPMD 2210 or BIOL 2210, and GPA of 2.75.

**Learning Outcomes**
1. Learn the basic anatomical, kinematic, and kinetic concepts
2. Learn how the human body generates mobility
3. Learn the kinematic concepts, laws, and principle that govern the human body motion
4. Learn the kinetic concepts laws, and principle that govern the human body motion
5. Learn the forces acting on the body in a fluid and how the human body motion is affected
6. Learn how to utilize the principles and concepts to solve problems

**SPMD 3450L. Biomechanics Laboratory**
1 Credit (1)
This course serves to provide an introduction to human movement and its analysis. The conceptual framework of the course will allow for the application of anatomical, mechanical, and electrical concepts in order to better understand the fundamental nature of movement.

**Prerequisite:** SPMD 2210 or BIOL 2210, GPA 2.75.

**Corequisite:** SPMD 3450.

**Learning Outcomes**
1. Use physical laws of motion to quantitatively analyze human performance.
2. Use physical descriptors of movement to qualitatively analyze human performance.
3. Apply principles of kinetics kinematics to solve problems of human motion.
4. Gain exposure to the various data collection and analysis tools in biomechanics.
5. Apply critical thinking skills to problem solving and writing assignments.
6. Use teamwork to complete an experimental motion analysis projects.

**SPMD 3550. Psychology of Sport**
3 Credits (3)
Development of coaching techniques to enhance sport performance based on understanding and use of psychological principles.
Prerequisite: GPA 2.75.

Learning Outcomes
1. Identify psychological characteristics associated with peak performance
2. Describe and explain factors practitioners should consider when diagnosing, designing, and implementing a mental training intervention.
3. Recognize and define the psychological constructs of—for example but not limited to—concentration, confidence, motivation, stress/anxiety, and arousal
4. Understand how personality attributes and the environment affect human performance and injury rehabilitation

SPMD 3610. Health and Exercise Psychology
3 Credits (3)
The course examines the reciprocal relationship among physical activity, exercise behavior, and psychological determinants associated with adopting and maintaining an exercise program. Topics include theories of behavioral change, exercise psychology interventions, the benefits/pitfalls of exercise, and psychological factors influencing patient rehabilitation.
Prerequisite: GPA 2.75.

SPMD 3650. Motor Development
3 Credits (3)
Covers development of motor skills from infancy through maturity. Focus on the principles of motor development, early motor behavior, stage theory, and assessment. Field experiences will augment lecture and readings.
Prerequisite: GPA 2.5.

SPMD 3710. Motor Learning
3 Credits (3)
An examination of the theoretical foundations and related literature that underline the learning, performing, and retention of motor skills with implications for effective teaching and coaching.
Prerequisite: GPA 2.5.

Learning Outcomes
1. Assess functional differences between motor skill types
2. Compare motor control theories and how they control human movement.
3. Critically evaluate current research in motor learning
4. Assess practice schedules and provide recommendations on how practice might be improved in both therapy and sport settings.
5. Compare the pros and cons for retention and transfer testing.
6. Examine the influence of attention on skill performance and debate the role of attention on motor skill preparation

SPMD 4010. Orthopedic Examination, Evaluation and Diagnosis of Upper Extremity Injuries
4 Credits (3+1P)
Examines normal human anatomy, mechanisms of athletic injury, and deviation from normal anatomy following athletic injury to the upper extremity. Must maintain a 3.0 GPA. Consent of Instructor required.

Learning Outcomes
1. Demonstrate knowledge and ability to apply current best practices in acute care, diagnosis, and treatment of injuries involving the upper extremity
2. Demonstrate strong clinical examination skills in order to accurately diagnose and effectively treat the patient.
3. Demonstrate the knowledge and skills necessary to evaluate and provide immediate management of acute injuries.
4. Determine a therapeutic intervention designed to maximize the patient’s participation and health-related quality of life.
5. Develop and implement strategies and programs to prevent the incidence and/or severity of injuries and optimize their patients’ overall health and quality of life.

SPMD 4015. Therapeutic Exercise
3 Credits (3)
The physiological effects, indications, contraindications, dosage, and maintenance of therapeutic modalities related to the treatment of athletic or activity-related injuries. Must maintain a 3.0 GPA. May be repeated up to 3 credits.

Learning Outcomes
1. Apply appropriate clinical reasoning to the selection of therapeutic exercises based upon evidence-based practice guidelines, relevant physical findings, indications, contraindications and precautions.
2. Demonstrate appropriate application of therapeutic exercises and techniques including selection, application, patient instruction, and documentation.
3. Design an individualized therapeutic exercise program incorporating appropriate modifications for tissue repair timelines, physiological and psychological factors, and any additional clinical findings.
4. Demonstrate effective assessment skills to determine safe levels of physical activity for patients.

SPMD 4020. Orthopedic Examination, Evaluation and Diagnosis of Core, Spine and Head Injuries
3 Credits (3)
Advanced clinical assessment techniques and applications. Must maintain at least a 3.0 GPA. May be repeated up to 3 credits. Consent of Instructor required. Restricted to: Athletic Training majors.

Learning Outcomes
1. Students will incorporate advanced clinical reasoning skills and apply clinical prediction rules as appropriate.
2. Interpret and apply physical examination findings for appropriate treatment or referral.
3. Apply clinical knowledge for diagnosing injuries and illness of the core, spine, head, and face.

SPMD 4025. Pharmacology in Athletic Training
2 Credits (2)
An introduction to general medical conditions and pharmacological applications in the athletic training setting. Emphasis on the laws governing the development and distribution, indications, contraindications, precautions, and interactions of prescription and over-the-counter medications. Must maintain a 3.0 GPA. May be repeated up to 2 credits.

Learning Outcomes
1. Describe the principles of pharmacology as they relate to the field of sports medicine.
2. Demonstrate the uses and abuses of drugs in sports.
3. Formulate a philosophical and ethical base of thinking in reference to the field of athletic training as it relates to pharmacology.
4. Describe federal, state and local laws, regulations and procedures for proper storage, disposal, transportation, dispensing and documentation for prescription and nonprescription medications.

**SPMD 4030. Organization and Administration in Athletic Training**
3 Credits (3)
An introduction to management, leadership, financial strategies, professional development and legal issues related to the athletic training setting. Must maintain 3.0 GPA. May be repeated up to 3 credits.

**Learning Outcomes**
1. Demonstrate mastery of health care management concepts
2. Demonstrate comprehension of legal and ethical issue in Athletic Training and healthcare management.
3. Construct policies and procedures relevant to running an athletic training clinic or organization.
4. Demonstrate basic concepts of management including distribution of financial resources, inventory and athletic training facility design/evaluation.
5. Summarize appropriate human resources policies relevant to athletic training staffing.

**SPMD 4090. Clinical Practicum V**
3 Credits (3)
Athletic training psychomotor skills are enhanced and assessed by a preceptor during clinical rotations. Emphasis is on competencies and proficiencies previously instructed in didactic courses. Must maintain a 3.0 GPA. Consent of Instructor required. Restricted to: Athletic Training majors.

**Learning Outcomes**
1. Utilize critical thinking skills and apply relevant clinical evidence in the evaluation, treatment and rehabilitation of athletic injuries of the upper extremity.
2. Perform a comprehensive evaluation of the upper extremity to include the shoulder, elbow, forearm, wrist and hand; and then design a specific plan of treatment, and rehabilitation program for injuries and conditions of the upper extremity.
3. Demonstrate an understanding of the referral process as warranted in situations dealing with athletic injuries.
4. Demonstrate an understanding of professional communication as it relates to rehabilitation, plan of care documentation and the referral process.
5. Demonstrate an understanding of the time commitment needed to perform as an ATC by completing the clinical hours required for this course.

**SPMD 4093. Clinical Practicum VI**
3 Credits (3)
Athletic training psycho-motor skills are enhanced and assessed by a preceptor during clinical rotations. Emphasis is on competencies and proficiencies previously instructed in didactic courses. Students might complete a general medical rotation with this course. Consent of Instructor required. Restricted to: Athletic Training majors.

**Learning Outcomes**
1. Recognition of general medical conditions including emergent physical and psychological conditions for intervention, referral or return to play criteria as appropriate.
2. Demonstrate proper clinical examination techniques for the assessment of general medical conditions including signs and symptoms of catastrophic and emergent conditions.
3. Develop and implement prevention strategies for at-risk individuals and large groups.
4. Demonstrate professional communication skills as related to athletic training including both written and verbal communication.
5. Define and utilize evidence-based practice in the clinical decision making process.

**SPMD 4095. Clinical Practicum VII**
3 Credits (3)
Athletic training psycho-motor skills are enhanced and assessed by a preceptor during clinical rotations. Emphasis is on competencies and proficiencies previously instructed in didactic courses. Students may complete a general medical rotation as part of this course. Must maintain 3.0 GPA. Consent of Instructor required. Restricted to: Athletic Training majors.

**Learning Outcomes**
1. Be prepared to sit for the Board of Certification (BOC) examination.
2. Confidently understand the BOC exam format, and method of delivery.
3. Meet the requirements to maintain certification, including evidence based practice requirements and continuing education units and their reporting cycles.
4. Demonstrate competence in in the following educational content areas for the practice of Athletic Training: evidence-based practice, prevention and health promotion, clinical examination and diagnosis, acute care of injury and illness, therapeutic interventions, psychosocial strategies and referral, healthcare administration, professional development and responsibility.

**SPMD 4098. Advanced Athletic Training I**
1-3 Credits (1-3)
Advanced clinical experiences and education in athletic training. Assessment of Athletic Training Program clinical proficiencies as described by the National Athletic Trainer’s Association Education Council. May be repeated up to 9 credits.

**Learning Outcomes**
1. Describe an advanced clinical setting.
2. Demonstrate advanced clinical reasoning skills.
3. Demonstrate advanced clinical competence in one or more of the domains as described by the National Athletic Trainers Association Education Council.

**SPMD 4210. Advanced Exercise Physiology**
3 Credits (3)
Detailed study of the integrated response of neuromuscular, cardiovascular, and respiratory systems to acute and chronic exercise, nutrition, and environmental conditions with a strong emphasis on laboratory experiences.

**Prerequisite:** SPMD 3410 and GPA of 2.75 or consent of instructor.

**Learning Outcomes**
1. Fundamental concepts about nutrition and it application to human performance
2. Advanced understanding of nutrition and its association with human bioenergetics
3. Human bioenergetics and its responsibility for performance enhancement and outcomes
4. Energy transfer and expenditure under various physical and environmental conditions
5. Pulmonary and cardiovascular responses to exercise
6. Cardiovascular and cellular adaptations to altitude
SPMD 4250. Principles of Strength and Conditioning
3 Credits (3)
Application of research, theory, and methods of high-intensity, resistive overload training. Performance-specific topics include management, nutrition. Requires SPMD 2210 and SPMD 3410; GPA of 2.75.
Prerequisite: SPMD 3410; SPMD 2210 or BIOL 2210; GPA 2.75.
Learning Outcomes
1. Examine both applied and theoretical practices implemented towards various strength and conditioning concepts based on National Strength and Conditioning Association (NSCA) guidelines.
2. Discuss various acute and chronic adaptations to the above said applied and theoretical practices to include, but not limited to, musculoskeletal adaptation, muscular power output, speed and agility characteristics, plyometric training, body composition characteristics, and cardiovascular characteristics, among many others.
3. Recognize strength and conditioning adaptations regarding special populations, such as youth, female, and elderly populations.

SPMD 4250L. Principles of Strength and Conditioning Laboratory
1 Credit (2P)
An applied examination of the theory, principles, rules and regulations associated with various strength and conditioning exercises to include but not limited to Olympic lifting, powerlifting, bodybuilding, plyometrics, speed, agility and speed-endurance development. Lab required for Kinesiology majors.
Prerequisite: SPMD 2210 and SPMD 3410; GPA 2.75.
Corequisite: SPMD 4250.
Learning Outcomes
1. Examine applied practices towards various human performance concepts based on National Strength and Conditioning Association (NSCA) guidelines.
2. Assess various physiological adaptations to the above applied practices, including muscular hypertrophy, muscular power output, speed and agility drills, plyometric training, body composition assessment, and non-traditional training modes, among numerous others.
3. Demonstrate proficiency towards proper administration of performance assessments and exercises to participants of various skill levels as well as possess the capability of instruction and demonstration of said assessments and exercises

SPMD 4350. Exercise Testing and Prescription
3 Credits (3)
This combined lecture and lab class introduces students to the scientific basis for and principles of exercise testing and prescription. The focus is on basic approaches to exercise testing and prescription for healthy adults, while application to some special populations with chronic disease will be discussed.
Prerequisite: SPMD 2210 or BIOL 2210; SPMD 3410; GPA 2.75.
Learning Outcomes
1. Examine the appropriate administration of exercise tests for the assessment of health-related and performance-related fitness.
2. Apply principles pertaining to appropriate exercise prescription for the general population of healthy adults.
3. Analyze the psychological determinants of appropriate exercise programming.
4. Demonstrate the ability of proper diagnosis and interpretation towards a standard 12-lead ECG reading, including heart rates, heart rhythms, and common arrhythmias.
5. Assist every course participant in the preparation processes to sit for any of ACSM's credential-based exams.

SPMD 4410. Exercise for Special Populations
3 Credits (3)
Fundamentals of kinesiology adapted for adults with various diseases and disabilities. Focus will be on the application of exercise assessment and prescription for selected conditions.
Prerequisite: SPMD 3410 or consent of instructor; GPA of 2.75.
Learning Outcomes
1. Pathophysiology of various cardiovascular, pulmonary, metabolic, skeletal muscle, orthopedic, and mental diseases.
2. Diagnostic testing of various diseases.
3. Medical management of various diseases.
4. Exercise testing and prescription for a variety of chronic disease states

SPMD 4450. Pathophysiology and Human Function(s)
3 Credits (3)
Students will discuss basic concepts of pathophysiology such as inflammation & repair, infectious diseases, neoplasms, and diseases of specific physiological systems. In addition, students will discuss a variety of case studies, and in so doing will be able to relate pathophysiological conditions to symptoms, activity restrictions and disability.
Prerequisite: SPMD 2210 or BIOL 2210; SPMD 2210L or BIOL 2210L; SPMD 3410; GPA 2.75.
Learning Outcomes
1. Students will develop knowledge about basic neurophysiological function of the central and peripheral nervous system
2. Individuals will develop knowledge about motor control theory and assessment of human movement.
3. Students will demonstrate their knowledge about the control processes of both gross and fine motor skills.
4. Students will apply knowledge of sensory physiology to the relationship with human performance.
5. Individuals will develop and improve their ability to communicate complex theories and physiological processes through both oral and written work.

SPMD 4510. Neurophysiology and Human Function
3 Credits (3)
Students will discuss neurological control of human movement. Topics will include central and peripheral nervous system functions, with particular emphasis given to somatosensory afferent and motor efferent control. In addition, students will develop an understanding of the techniques employed to assess neurologic function in various patient populations.
Prerequisite: SPMD 2210 or BIOL 2210; SPMD 2210L or BIOL 2210L; SPMD 3410; GPA of 2.75.
Learning Outcomes
1. Students will develop knowledge about basic neurophysiological function of the central and peripheral nervous system
2. Students will be able to assess human movement using current motor control theory.
3. Students will develop knowledge about the control processes of both gross and fine motor skills.
4. Students will apply their knowledge of sensory physiology to the relationship to human performance.

SPMD 4520. Adapted Physical Education
3 Credits (3)
SPMD 4540. Psychology of Coaching in Sport
3 Credits (3)
This course is designed to focus on major topics and theories dealing with the social-psychological factors affecting the performance of athletes and teams, with practical suggestions for enhancing the effectiveness of teachers and coaches. The course will also focus on team and group dynamics that influence physical performance.
Prerequisite: SPMD 3550 or SPMD 3610.
Learning Outcomes
1. Examine current literature and popular media to understand coaching behaviors and the influence on human performance in sport and non-sport activities.
2. Compare the teaching from a psychological perspective to current understandings in motor learning.
3. Evaluate the effects of group roles on performance and team dynamics.
4. Apply practice manipulations to coaching that may alter team performance.

SPMD 4550. Exploring Extreme Human Performance
3 Credits (3)
A reading, writing and documentary based course studying human's quest and the related sacrifices associated with participating in extreme performance activities such as the Olympics, wakeboarding, snowboarding, military special forces, ultra-run events, marathons, etc. Consent of Instructor required.
Prerequisite: Consent of instructor and GPA 2.75.

SPMD 4610. Research Seminar
3 Credits (3P)
Capstone course for Kinesiology/Pre-Health minors. Consent of Instructor required.
Prerequisite: GPA 2.75.
Learning Outcomes
1. The Student Learning Outcomes are dependent on instructor and specific direction of course with individual group of students, similar to an independent study/research/practicum experience.

SPMD 4620. Nutrition and Metabolism of Sport
3 Credits (3)
This course addresses the aspects of nutrition that are related to exercise performance. Emphasis will be placed on the bioenergetics systems, the components of nutrition, nutritional and body composition assessments, ergogenic aids, and diet modifications for physically active individuals and athletes.
Prerequisite: SPMD 2210, SPMD 3410.
Learning Outcomes
1. Describe the metabolism of macronutrients and micronutrients.
2. Clarify the effects of high and low-carbohydrate diets on exercise performance.
3. Explain the potential athletic benefits of manipulating fat content in our diet.
4. Discuss increasing protein intake to promote exercise adaptations.
5. Explain specific physiological functions of micronutrients.
6. Specify fluid intake recommendations before, during, and after exercise.
7. Calculate macronutrient recommendations for endurance athletes, strength/power athletes, and team sport athletes.
8. Provide nutritional recommendations for special populations of athletes.
9. Recommend nutrition strategies related to weight management goals.
10. Discuss the benefits and challenges of unique body composition assessments.
11. Provide macronutrient recommendations within a periodized training program.
12. Compare and contrast the ergogenic benefits of popular dietary supplements.

SPMD 4805. Emergency Response
2 Credits (2)
Comprehensive approach to the identification of risk factors, preparation of emergency action plans, and recognition and care of emergency medical conditions including those that may lead to sudden death. This is a hybrid course combining online instructional components and clinical skills experience including clinical safety (blood-borne pathogens, ECC, first-aid, etc), and on-field emergency management. Consent of Instructor required.
Learning Outcomes
1. Identify the individuals involved in the Emergency Response Team.
2. Construct the components of an effective Emergency Action Plan.
3. Assess the scene and patient during an emergency situation.
4. Demonstrate proper universal precautions and wound care.
5. Demonstrate effective Cardiopulmonary Resuscitation, AED use.
7. Demonstrate effective splinting techniques.
8. Demonstrate understanding of the techniques utilized in cervical stabilization.
9. Identify components of acute care for general medical and orthopedic emergencies.

New Mexico State University - Las Cruces 1135
Learning Outcomes
1. Varies

**SPMD 4998. Internship**
6 Credits (6P)
A part-time internship in an approved wellness, fitness, athletic, recreation, research lab or other program as agreed upon by the internship supervisor. The student will gain experience in all phases of management and operation. This is a 6-hour internship which can be repeated for an additional 6-credit hours at the same or a different location allowing the student to gain one or multiple field experiences. Field instructor supervision will oversee the student's performance. This internship may require relocation to a site outside of the Las Cruces area.

**Learning Outcomes**
1. Students will apply their academic program didactic knowledge, skills and abilities at a professional site gaining hands-on learning experiences under the supervision of a practicing professional.
2. Students will learn in a working environment such that the internship becomes the capstone of their undergraduate education allowing them practical experience in a career field of their choice.

**SPMD 5005. Foundations of Athletic Training**
3 Credits (3)
This course provides an introduction to clinical decision making and covers standard techniques and procedures for the evaluation and diagnosis of musculoskeletal injuries and common illnesses, injury prevention concepts, documentation and management. Consent of Instructor required.

**Learning Outcomes**
1. Demonstration of clinical decision making skills.
2. Articulation of standard techniques and procedures for evaluation and diagnosis.
3. Produce standardized documentation of clinical findings.

**SPMD 5010. Clinical & Functional Anatomy in Athletic Training**
2 Credits (2)
This course allows students to develop applied knowledge and hands-on skills for future athletic training practitioners. Emphasizes skills for identifying musculoskeletal structures visually and via palpation, and then assessing their function. Use of anatomical and live human models to develop and demonstrate skills. Acceptance into the MSAT program.

**Learning Outcomes**
1. Demonstrate knowledge of human musculoskeletal structures and function.
2. Identify bony landmarks for assessment of musculoskeletal conditions.
3. Demonstrate appropriate palpation of muscles, bones and joints for musculoskeletal assessment.
4. Demonstrate knowledge of actions, origins, insertions and innervations of the major muscle groups of the human body.
5. Demonstrate appropriate techniques for assessment of functional movements.

**SPMD 5015. Graduate Athletic Training Seminar II**
1-3 Credits (1-3)
Advanced seminar topics in athletic training. Students will explore more specialized topics within the field of athletic training under the direct supervision of a Commission on Accreditation of Athletic Training Education (CAATE) accredited Athletic Training Program. Students should be prepared to further explore topics previously covered in SPMD 5310 (Graduate Athletic Training Seminar I). Students may engage in teaching and research opportunities in unique areas. May be repeated up to 3 credits.

**Learning Outcomes**
1. Demonstrate increased knowledge within the designated topic areas identified for the semester.
2. Demonstrate increased skill in teaching or academic preparation techniques as identified for the semester.

**SPMD 5020. Graduate Athletic Training Research I**
1-3 Credits (1-3)
Advanced research topics in athletic training. Students will explore research and evidence based practices within the field of athletic training. Students will work under the direct supervision of a Commission on Accreditation of Athletic Training Education (CAATE) accredited Athletic Training Program faculty member. Students should be prepared to further explore research topics within a specific discipline with the intent of disseminating and sharing information with the athletic training community. Topics previously covered in SPMD 5310 (Graduate Athletic Training Seminar I) Students may engage in teaching and research opportunities in unique areas. May be repeated up to 3 credits.

**Learning Outcomes**
1. Demonstrate increased knowledge within the designated topic areas identified for the semester.
2. Demonstrate increased skill in teaching or academic preparation techniques for the athletic training community.

**SPMD 5025. Graduate Athletic Training I**
1-3 Credits (1-3)
Advanced clinical experiences and education in athletic training. Students will examine topics in athletic training in conjunction with faculty members within the Commission on the Accreditation of Athletic Training Education Council. May be repeated up to 3 credits.

**Learning Outcomes**
1. Demonstrate increased knowledge within the designated topic areas identified for the semester.
2. Demonstrate increased skill in teaching or academic preparation techniques as identified for the semester.

**SPMD 5030. Graduate Athletic Training II**
3 Credits (3)
Advanced clinical experiences and education in athletic training. Assessment of Athletic Training Program clinical proficiencies as described by the National Athletic Trainers’ Association Education Council. May be repeated up to 3 credits.

**Learning Outcomes**
1. Demonstrate increased knowledge within the designated topic areas identified for the semester.
2. Demonstrate increased skill in teaching or academic preparation techniques as identified for the semester.

**SPMD 5050. Clinical Education I**
3 Credits (3)
Integration of clinical competencies with classroom instruction and a supervised field based experience in athletic training to link theory into practice. Consent of Instructor required.

**Learning Outcomes**
1. Demonstrate basic evaluation, taping, bracing and emergency care skills.
2. Select and properly fit protective equipment for a variety of injury and sport scenarios.
3. Demonstrate proper equipment removal for emergency care of the injured athlete.
4. Perform a pre-participation examination including physical evaluation, documentation and referral if needed.

SPMD 5120. Lower Extremity Injury Evaluation + Lab
4 Credits (4)
This course provides a comprehensive approach to the pathomechanics, clinical examination, diagnosis, role of clinical outcome measures and appropriate medical referral and treatment of orthopedic injuries and other conditions to the lower extremity. Consent of Instructor required.
Learning Outcomes
1. Demonstrate knowledge and ability to apply current best practices in acute care, diagnosis and treatment of injuries involving the lower extremity
2. Demonstrate strong clinical examination skills in order to accurately diagnose and effectively treat the patient.
3. Demonstrate the knowledge and skills necessary to evaluate and provide immediate management of acute injuries.
4. Determine and apply therapeutic interventions designed to maximize the patient's participation and health-related quality of life.
5. Develop and implement strategies and programs to prevent the incidence and/or severity of injuries.

SPMD 5150. Clinical Education II
3 Credits (3)
Integration of clinical competencies with classroom instruction and a supervised field-based experience in athletic training to link theory into practice.
Prerequisite: SPMD 5050.
Learning Outcomes
1. Students will become effective practitioners in the field of Athletic Training and Sports Medicine by utilizing critical thinking strategies based in evidence-based practice theories combined with pedagogical knowledge of the concepts in Athletic Training.
2. Students will utilize their clinical experience and knowledge of injury evaluation to enhance their athletic training skills working with an athletic population under the supervision of a preceptor.

SPMD 5180. Therapeutic Interventions I
4 Credits (3+1P)
Stud of physical rehabilitation theory and techniques used as therapeutic intervention for orthopedic injuries and conditions.
Learning Outcomes
1. Demonstrate appropriate application techniques for therapeutic modalities to include thermal, electrical, ultrasound and mechanical therapeutic modalities.
2. Demonstrate proper clinical assessment techniques to establish treatment and rehabilitation plans for a variety of orthopedic injuries and conditions including proper documentation procedures.
3. Demonstrate knowledge of the physiological and pathological processes of trauma, wound healing and tissue repair and their role/implications within the therapeutic intervention process.

SPMD 5205. Evidence Based Practice
2 Credits (2)
This course investigates the concepts of evidence-based practice as it relates to musculoskeletal assessment, diagnosis and therapeutic interventions with a primary focus on clinician- and patient-oriented outcome measures and appropriate referral decisions. Students will explore primary literature focused on clinical questions related to a comprehensive approach to injury evaluation.
Learning Outcomes
1. Define evidence-based practice as it relates to athletic training clinical practice.
2. Explain the role of evidence in the clinical decision-making process.
3. Describe and differentiate the types of quantitative and qualitative research, research components, and levels of research evidence.
4. Describe a systematic approach (e.g., five step approach) to create and answer a clinical question through review and application of existing research.
5. Develop a relevant clinical question using a pre-defined question format (e.g., PICO = Patients, Intervention, Comparison, Outcomes; PIO = Patients, Intervention, Outcomes).

SPMD 5220. Upper Extremity Injury Evaluation + Lab
4 Credits (3+1P)
This course provides a comprehensive approach to the pathomechanics, clinical examination, diagnosis, role of clinical outcome measures and appropriate medical referral and treatment of orthopedic injuries and other conditions to the upper extremity. Consent of Instructor required.
Learning Outcomes
1. Demonstrate knowledge and ability to apply current best practices in acute care, diagnosis and treatment of injuries involving the upper extremity
2. Demonstrate strong clinical examination skills in order to accurately diagnose and effectively treat the patient.
3. Demonstrate the knowledge and skills necessary to evaluate and provide immediate management of acute injuries.
4. Determine a therapeutic intervention designed to maximize the patient's participation and health-related quality of life.
5. Develop and implement strategies and programs to prevent the incidence and/or severity of injuries and optimize their patient's overall health and quality of life.

SPMD 5250. Immersive Clinical Experience
3 Credits (3P)
Integration of clinical competencies during an immersive, supervised, field-based experience in athletic training to link theory into practice. May be repeated up to 6 credits.
Prerequisite: SPMD 5150.
Learning Outcomes
1. Students will be proficient in the day to day operations of an athletic training room.
2. This immersive experience will prepare students for future employment as a full-time athletic trainers.
3. Students will demonstrate skills in all aspects of athletic training including patient-centered care, clinical examination, diagnosis and intervention, prevention, health promotion and wellness and healthcare administration.

SPMD 5280. Therapeutic Interventions II
4 Credits (3+1P)
A detailed study of the physiological effects, indications, contraindication, dosage, and maintenance of modern therapeutic devices related to the treatment and rehabilitation of orthopedic injuries and conditions.
Prerequisite: SPMD 5180.
Learning Outcomes
1. Demonstrate proper clinical assessment techniques to establish treatment and rehabilitation plans for a variety of orthopedic injuries and conditions including proper documentation procedures.
2. Demonstrate knowledge of the physiological and pathological processes of trauma, wound healing and tissue repair and their role/implications within the therapeutic intervention process.
3. Design treatment plans based upon sound clinical assessment and appropriate selection of modalities that address the physiological and psychological needs of the patient.
4. Demonstrate competence with the collection and analysis of baseline and post-treatment data to evaluate and interpret treatment outcomes based upon principles of evidence-based practice.
5. Demonstrate competence with the application of a wide variety of modalities including patient preparation, modality application and modification based upon clinical findings using principles of evidence based practice.

SPMD 5310. Inferential Statistics in Sports and Exercise Science
3 Credits (3)
This course serves to provide an introduction to statistical analyses. The conceptual framework of the course will allow for the application of a variety of statistical concepts in order to better understand the nature of data associated with scientific literature publications. Consent of Instructor
Learning Outcomes
1. Upon successful completion of this course the student will be able to competently assess exercise data using a variety of techniques that include measures of central tendency, variability, distributional assessments, correlation, regression, and mean testing (t-test and ANOVA).

SPMD 5350. Principles of Strength and Conditioning
3 Credits (3)
Application of research, theory, and methods of high-intensity, resistance training. Performance-specific topics include management, nutrition, exercise prescription, periodization, lifting techniques, testing, and evaluation. Course will emphasize standards set forth by the National Strength and Conditioning Association preparing students interested in sitting for the NSCA certification examinations. Consent of Instructor
Learning Outcomes
1. Understanding of general physiology and its responses to acute and chronic exercise
2. Understanding of cardiovascular effects of exercise, training and sport
3. Understanding of strength training affects on special populations such as youth, women and the elderly
4. Understanding of musculoskeletal changes from exercise, training and sport
5. Practicality and application of power and strength training
6. Comprehension of training programs and how they pertain to different training aspects
7. Demonstrate principles of plyometrics and training
8. Understand and demonstrate principles of periodization

SPMD 5370. Research Methods in Kinesiology
3 Credits (3)
This course will provide students with graduate-level understanding of research methods. Specifically, the course is designed to prepare students to critically read, understand, and evaluate research; retrieve scholarly articles; and develop research-related skills for further graduate education and professional work. Students will be trained to become scientific thinkers rather than anecdotal thinkers.
Learning Outcomes
1. Be able to accurately identify a research problem.
2. Conduct a literature search and summarize literature to develop a research problem.
3. Develop a hypothesis and research statement appropriate to their specific research interests.
4. Determine an appropriate study design/method to test the hypothesis.
5. Demonstrate understanding of measurement concepts such as validity, reliability, scales of measurement, field tests, and laboratory tests.
6. Interpret statistical analyses, tables, and summaries presented in research.
7. Understand research ethics.
8. Use written and verbal forms for reporting research.

SPMD 5410. Biomechanics
3 Credits (3)
The application biomechanical analysis of human movement as it relates to human performance through the use of anatomical, mechanical and electrical concepts. Consent of Instructor
Learning Outcomes
1. The student will be able to competently assess physical anatomy, analyze linear and angular forces, examine gait, understand the relationships between kinetics and kinematics, understand how muscle and bone architecture impact human movement, and be familiar with the utilization of various data collection methods used in evaluating and improving human movement.

SPMD 5450. Exercise for Special Populations
3 Credits (3)
Fundamentals of kinesiology adapted for adults with various diseases and disabilities. Focus will be on the application of exercise assessment and prescription for selected conditions. Consent of Instructor
Learning Outcomes
1. To develop an understanding of the pathophysiology of various cardiovascular, pulmonary, metabolic, skeletal muscle, orthopedic, and mental diseases.
2. To provide a medical perspective in the treatment and management of individuals with these conditions in which exercise therapy may be beneficial.
3. To provide a sound understanding of exercise testing and prescription for a variety of chronic disease states.
4. To be able to assess, interpret, and evaluate case studies of diseased individuals and to develop comprehensive rehabilitation programs based on this information.
5. To develop the ability to articulate / present information of various diseases / conditions in a professional manner both formally and in a one on one setting.

SPMD 5510. Psychology of Sport
3 Credits (3)
Development of coaching techniques to enhance sport performance based on understanding and use of psychological principles. Consent of Instructor
Learning Outcomes
1. Identify psychological characteristics associated with peak performance
2. Describe and explain factors practitioners should consider when diagnosing, designing, and implementing a mental training intervention.
3. Recognize and define the psychological constructs of—for example but not limited to—concentration, confidence, motivation, stress/anxiety, and arousal.

SPMD 5550. Skill Acquisition and Performance
3 Credits (3)
Behavioral and physiological examination factors that influence the acquisition and performance of motor skills. Consent of Instructor

Learning Outcomes
1. Describe and explain the principles and processes underlying skilled performance
2. Know the factors to consider when diagnosing, designing, and assessing learning experiences
3. Understand the elements of an effective instructional plan for skill acquisition

SPMD 5575. Advanced Motor Development
3 Credits (3)
Advanced coverage of motor development topics including: Theoretical perspectives of motor development; the sequential, age-related, continuous process of physical growth and maturation; changes in movement behavior from infancy to older adulthood; external influences on development of motor skills; research approaches in motor development. Consent of Instructor

Learning Outcomes
1. Describe the historical progression of motor development within the broader field of kinesiology
2. Explain the various theories and foundational concepts of motor development
3. Understand and apply the processes (social, cognitive, perceptual) involved in motor skill development throughout the lifespan (infancy, childhood, adolescence, adulthood)
4. Identify procedures and methodologies used to assess various aspects of motor development
5. Interpret the supporting literature and research related to the fundamental principles of motor development
6. Apply and transfer the knowledge gained to develop a research proposal to enhance understanding of a motor development topic of interest

SPMD 6005. Athletic Training Research I
2 Credits (2)
Instruction and development of research skills through the study of published reports and readings in athletic training and related fields. Consent of Instructor required.

Learning Outcomes
1. Describe a systematic approach (eg. five step approach) to create and answer a clinical question through review and application of existing research.
2. Develop skill in utilizing multiple scales for critical appraisal of literature and research studies.
3. Develop a relevant clinical question utilizing a predefined question format and conduct a literature review on the subject.
4. Describe multiple forms of research, research and literature resources and the differences between narrative reviews, systematic reviews and meta analyses.
5. Describe and apply concepts of diagnostic accuracy and clinical prediction rules as they pertain to patient centered care and evidence based practice.

SPMD 6010. Organization and Administration in Athletic Training
2 Credits (2)
Organization and administration of athletic training services including management, leadership, financial, human resources, facility, information technology and risk management.

Learning Outcomes
1. Students will employ values consistent with the NATA code of ethics for all health care administration actions.
2. Demonstrate knowledge of legal, ethical and risk management concepts in athletic training and health care administration.
3. Demonstrate mastery of a variety of health care management concepts.
4. Demonstrate comprehension of fiscal management strategies, resource management and facility design as it relates to athletic training.

SPMD 6020. Evaluation of the Head, Neck, Spine and Torso
3 Credits (3)
This course provides a comprehensive approach to the pathomechanics, clinical examination, diagnosis, role of clinical outcome measures and appropriate medical referral and treatment of orthopedic injuries and other conditions to the head, neck and spine.

Prerequisite: SPMD 5220.

Learning Outcomes
1. Demonstrate knowledge and ability to apply current best practices in acute care, diagnosis and treatment of injuries involving the head, neck, spine and torso.
2. Demonstrate strong clinical examination skills in order to accurately diagnose and effectively treat the patient.
3. Demonstrate the knowledge and skills necessary to evaluate and provide immediate management of acute injuries and illnesses.
4. Determine a therapeutic intervention designed to maximize the patient's participation and health-related quality of life.
5. Develop and implement strategies and programs to prevent the incidence and/or severity of injuries and optimize their patients’ overall health and quality of life.

SPMD 6050. Clinical Education III
3 Credits (3)
Integration of clinical competencies with classroom instruction and a supervised field based experience in athletic training to link theory into practice.

Prerequisite: SPMD 5150.

Learning Outcomes
1. Students will become effective practitioners in the field of Athletic Training and Sports Medicine by utilizing critical thinking strategies based in evidence based practice theories combined with pedagogical knowledge of the concepts in Athletic Training.
2. Students will utilize their clinical experience and knowledge of injury evaluation to enhance their athletic training skills working with an athletic population under the supervision of a preceptor.
SPMD 6110. Professional Preparation
3 Credits (3)
Knowledge and skills for successful pursuit of athletic training credentials, employment and continuing professional competency; emphasis on current topics and issues contributing to the professional preparation of athletic training. Student must be enrolled in its final semester of the MSAT program to enroll in this course.

**Learning Outcomes**
1. Students will create a profile with the Board of Certification (BOC) in preparation for the BOC Examination
2. Students will analyze their individual strengths and weaknesses through practice examinations in order to prepare for a successful challenge of the BOC Examination
3. Students will demonstrate knowledge of basic human resources policies and procedures and the hiring process for athletic trainers.
4. Students will self-assess professional competence and create professional development plans according to personal and professional goals and requirements

SPMD 6150. Clinical Education IV
3 Credits (3)
Integration of clinical competencies with classroom instruction and a supervised field based experience in athletic training to link theory into practice.

**Prerequisite:** SPMD 6050.

**Learning Outcomes**
1. Students will become effective practitioners in the field of Athletic Training and Sports Medicine by utilizing critical thinking strategies based in evidence based practice theories combined with pedagogical knowledge of the concepts in Athletic Training.
2. Students will utilize their clinical experience and knowledge of injury evaluation to enhance their athletic training skills working with an athletic population under the supervision of a preceptor.
3. Students will demonstrate professional behaviors congruent with the ethical standards of the profession of athletic training.
4. Students will develop, implement, and revise policies that pertain to prevention, preparedness, and response to medical emergencies and other critical incidents.

SPMD 6280. General Medical Conditions & Therapeutic Medications
4 Credits (3+1P)
Pathophysiology, assessment, and appropriate intervention and referral for general medical conditions and disabilities; common diagnostic tests and imaging assessment tools; commonly used therapeutic medications.

**Prerequisite:** SPMD 5280.

**Learning Outcomes**
1. Recognition of general medical conditions including emergent physical and psychological conditions for intervention, referral or return to play criteria as appropriate.
2. Demonstrate proper clinical examination techniques for the assessment of general medical conditions including signs and symptoms of catastrophic and emergent conditions.
3. Demonstrate knowledge of common therapeutic medications and the general medical conditions they treat within the fields of athletic training and sports medicine.
4. Demonstrate knowledge of the principles of pharmacology, including pharmacokinetics and pharmacodynamics, as they relate to the fields of athletic training and sports medicine.
5. Demonstrate knowledge of federal, state and local laws, regulations and procedures for proper storage, disposal, transportation, dispensing and documentation dealing with prescription and non-prescription medications.

SPMD 6310. The Social Construction of the Body
3 Credits (3)
This course will explore how people's health and physical activity experiences and choices are often shaped by cultural narratives and expectations of the male and female body. Designed for graduate students in allied health and physical activity professions

**SPMD 6350. Advanced Exercise Physiology**
3 Credits (3)
Detailed study of the integrated response of neuromuscular, cardiovascular and respiratory systems to acute and chronic exercise, nutrition and environmental conditions with a strong emphasis on laboratory experience. Consent of Instructor

**Learning Outcomes**
1. Fundamental concepts about nutrition and its application to human performance
2. Advanced understanding of nutrition and its association with human bioenergetics
3. Human bioenergetics and its responsibility for performance enhancement and outcomes
4. Energy transfer and expenditure under various physical and environmental conditions
5. Pulmonary and cardiovascular responses to exercise
6. Cardiovascular and cellular adaptations to altitude

**SPMD 6410. Cardiovascular Physiology**
3 Credits (3)
This graduate level course provides an in-depth study of cardiovascular structure and function. The course assumes that students have a strong background in human physiology. Topics include, but are not limited to: cellular structure of the heart and vascular system; cardiac function, including electrophysiology of the heart; vascular function; neurohumoral control of the heart and circulation, organ blood flow, exchange function of the microcirculation; the impact of common cardiovascular diseases on cardiovascular structure and function, and cardiovascular adaptations to chronic exercise. Consent of Instructor

**Learning Outcomes**
1. The student will demonstrate a comprehensive knowledge cardiovascular structure and function
2. The student will be able to relate common cardiovascular pathophysiology to cardiovascular functional impairments and physical functional limitations.
3. The student will be able to discuss chronic exercise training adaptations on the cardiovascular system and their value as a treatment strategy for cardiovascular diseases.

**SPMD 6450. Skeletal Muscle: Structure and Function**
3 Credits (3)
Basic muscle morphology and physiology with molecular and cellular adaptations in skeletal muscle as consequences to varying exercise regimens. Consent of Instructor

**Learning Outcomes**
1. To gain knowledge of the structure and function of skeletal muscle
2. To gain knowledge related to the skeletal muscle in reference to cellular and molecular responses and adaptations to exercise
3. To understand laboratory procedures used to study muscle metabolism
4. To develop ability to scientifically critique published papers and present them in a professional manner

SPMD 6510. Designing Resistance Training Program
3 Credits (3)
Detailed study of the physiological concepts associated with designing resistance-training programs for children, women, seniors, athletic performance and rehabilitation. Consent of Instructor

Learning Outcomes
1. Fundamental components associated with resistance training and exercise prescription
2. Compare and contrast isometric, dynamic, variable, isokinetic, eccentric, concentric resistance training
3. Design programs guided by a needs analysis
4. Demonstrate appropriate techniques and implement systems for training
5. Study physiological adaptations of resistance training for women, children, seniors, athletics and rehabilitation
6. Understand anatomical and physiological changes associated with detraining
7. Integrate components and concepts of resistance training for program design (periodization)
8. Explore alternative training programs

SPMD 6710. Project
1-12 Credits (1-12)
Selected projects for doctoral students. May be repeated up to 12 credits.

Learning Outcomes
1. Students will develop research skills through the work on projects with faculty members.

SPMD 6750. Kinesiology Research
1-3 Credits (1-3)
Research to be conducted under the direction of a Kinesiology faculty member May be repeated up to 15 credits.

SPMD 6996. Special Topics
1-3 Credits (1-3)
Offered under various subtitles that indicate the subject matter. May be repeated up to 9 credits.

Learning Outcomes
1. Varies

SPMD 6999. Capstone Project I
3 Credits (3)
Students will prepare an individualized capstone project

Prerequisite: SPMD 5205.

Learning Outcomes
1. Varies

SPMD 7000. Doctoral Dissertation
1-18 Credits (1-18)
Doctoral Dissertation hours to be conducted under the direction of a Kinesiology Faculty. May be repeated up to 18 credits.

Learning Outcomes
1. Varies

Interim Department Head: Christopher A. Aiken
Department Secretary and Administrative Assistant: Maggie Karveller

Dance (Contemporary Dance) - Bachelor of Arts in Dance

The Bachelor of Arts in Dance offers a broad technical, artistic, and academic curriculum designed to provide a well-rounded and comprehensive experience in technique, composition, pedagogy, performance, and interdisciplinary study.

Students must complete all University degree requirements, including General Education and Viewing the Wider World coursework and Dance Technique, Dance Technique Electives, Dance Major Core Requirements, and Interdisciplinary Electives.

Grades of C- or better are required in Area I: ENGL 1110G Composition I and Area II: Mathematics, as well as Dance Major Core Courses. The College of Health, Education and Social Transformation requires a minimum GPA of 2.5 for graduation. Developmental coursework will not count towards the degree requirements and/or elective credits but may be needed to take the necessary English and Mathematics coursework.

Students must complete a minimum of 120 credits with 48 credits in courses numbered 3000 (300) or above.

DAN 3150 Modern Dance III

Dance Technique Electives
Choose three of the following: 4-6
- DAN 1160 Jazz Dance I
- DAN 1161 Tap Dance I
- DAN 2157 Hip-Hop Dance
- DAN 2160 Jazz Dance II
- DAN 2161 Tap Dance II
- DAN 2460 Dance for Musical Theatre

Dance Major Core Requirements

- DAN 2270 Dance Improvisation
- DAN 3250 Contemporary Dance Ensemble (Course must be taken 4 times)
  Students may substitute DAN 3114 for up to 2 credits towards the DAN 3250 4 credit requirement
- DAN 3265 Principles of Choreography I
- DAN 3510V World Dance
- DAN 3350 Dance Pedagogy I
- DAN 3610 Dance History
- DAN 3710 Somatics and Anatomy of Movement or SPMD 2210 and Anatomy and Physiology Laboratory
- DAN 3720 Dance, Technology, and Design
- DAN 4996 Special Topics
- DAN 4265 Principles of Choreography II
- DAN 4250 Dance Pedagogy II
- DAN 4710 Senior Project

Interdisciplinary Elective Requirements
Choose three of the following: 9
- THEA 1110G Introduction to Theatre
- THEA 1210G Acting for Non-Majors
- THEA 334 Society in Style: Fashion, History and Culture
- THEA 352 Costume Design
- THEA 355 Lighting Design

Choose four from the following: 12
- Advanced Independent Project in Dance is repeatable for credit and may satisfy this requirement only if the topic proposed is Interdisciplinary in nature.
- ARTH 2120G History of Art II
- ARTS 1145G Visual Concepts
- BUSA 1110 Intro to Business
- DANC 4266 Advanced Independent Projects
- ECED 1110 Child Growth, Development, and Learning
- EDUC 1120 Introduction to Education
- ENTR 1110 Entrepreneurship
- MGMT 310V Entrepreneurial Mindset
- MUSC 1210 Fundamentals of Music for Non-majors
- SPMD 1310 Introduction to Kinesiology
- SPMD 1350 Social Foundations of Physical Activity

Interdisciplinary Electives should bring total hours up to 120

A course designated G or V cannot be used to satisfy both major and General Education requirements

Students taking a minor in a related or complementary discipline may request substitution of elective courses from their Dance Program faculty advisor. Students interested in Teacher Licensure are recommended to take a minor in Education

Electives to bring the total credits to 120

Total Credits 120-127

1. See the General Education (p. 227) Section of the catalog for a full list of courses
2. A Mathematics General Education course is required for the degree, but students may need to take any prerequisites needed to enter the Mathematics course of their course.
3. See the Viewing the Wider World (p. 231) Section of the catalog for a full list of courses
4. Elective credit may vary based on General Education course selection, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

A Suggested Plan of Study for Students - Even Start Year

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change. Additional courses to bring total hours up to 120 may be taken in any semester.

First Year
Fall
- Ballet or Modern Dance Technique Course 1-2
- PHED 1430 Pilates: 1
  or PHED 1410 Yoga: 1
- Dance Technique Elective Course 1-2
- ENGL 1110G Composition I 4
- General Education or Viewing the Wider World Course(s) 3-4
- Interdisciplinary Electives Course 3

Credits 13-16

Spring
- Ballet or Modern Dance Technique Course 1-2
- Dance Technique Electives Course 2-3
- DAN 3250 Contemporary Dance Ensemble 1
- THEA Elective Course 3
- General Education or Viewing the Wider World Course(s) (two in total) 1,2 6-8

Credits 13-17

Second Year
Fall
- Ballet or Modern Dance Technique Course 2
- Dance Technique Electives Course 2-3
DANC 3710  Somatics and Anatomy of Movement  3
DANC 3250  Contemporary Dance Ensemble  1
THEA Elective Course  3
General Education or Viewing the Wider World Course (two in total)  1,2  6-7

Credits  15-16
Kinesiology (Exercise Science) - Bachelor of Science in Kinesiology

Kinesiology is a great option and prepares students for many field in allied health. Career choices include, but are not limited to, medical school, physical and occupational therapy, athletic training, corporate health and wellness, chiropractic medicine, dentistry, optometry, pharmacy, and much more.

The Bachelor of Science in Kinesiology degree program can be completed in one of three concentration areas: Exercise Science, Performance Psychology, or Physical Education. For the required credit hours see the program descriptions below. Regardless of the concentration, students are required to complete 120 total semester hours for the Kinesiology degree. Additionally, students pursuing a Kinesiology degree will be responsible to ensure that they complete 48 upper division credits (3000 (300) and 4000 (400) level courses). Kinesiology students must maintain a minimum 2.75 GPA in order to enroll in most upper division SPMD (300) and 4000 (400) level courses). Kinesiology students must maintain a minimum 2.75 GPA in order to enroll in most upper division SPMD (300) and 4000 (400) level courses). Kinesiology students must maintain a minimum 2.75 GPA in order to enroll in most upper division SPMD (300) and 4000 (400) level courses). Kinesiology students must maintain a minimum 2.75 GPA in order to enroll in most upper division SPMD (300) and 4000 (400) level courses). Kinesiology students must maintain a minimum 2.75 GPA in order to enroll in most upper division SPMD (300) and 4000 (400) level courses). Kinesiology students must maintain a minimum 2.75 GPA in order to enroll in most upper division SPMD (300) and 4000 (400) level courses). Kinesiology students must maintain a minimum 2.75 GPA in order to enroll in most upper division SPMD (300) and 4000 (400) level courses).

Students must complete all University degree requirements, which include: General Education, Viewing a Wider World, and program specific courses to total a minimum of 120 credits. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Information about Kinesiology and potential career opportunities may be obtained at the Department of Kinesiology, Activity Center 204, phone 575-646-2215.

SPMD 4350 Exercise Testing and Prescription 3
SPMD 4410 Exercise for Special Populations 3
SPMD 4620 Nutrition and Metabolism of Sport 3
or SPMD 4210 Advanced Exercise Physiology 3
SPMD 4998 Internship 6

Departmental Requirements (in addition to Gen.Ed/VWW)
Choose one from the following: 3

A ST 311 Statistical Applications
MATH 1350G Introduction to Statistics
MATH 2350G Statistical Methods
SPMD 3350 Inferential Statistics in Sport and Exercise Science

Electives, to bring the total credits to 120 5

Choose from the following:

BIOL 2310 Microbiology
BIOL 2310L Microbiology Lab
BIOL 2320 Public Health Microbiology
BIOL 2610G Principles of Biology: Biodiversity, Ecology, and Evolution
BIOL 2610L Principles of Biology: Biodiversity, Ecology, and Evolution Laboratory
BIOL 305 Principles of Genetics
BIOL 377 Cell Biology
BIOL 385 An Introduction to Cancer
BIOL 424 Human Osteology
BIOL 470 Developmental Biology
BIOL 474 Immunology
BIOL 475 Virology
CHEM 1215G General Chemistry I Lecture and Laboratory for STEM Majors
CHEM 1225G General Chemistry II Lecture and Laboratory for STEM Majors
CHEM 313 Organic Chemistry I
CHEM 314 Organic Chemistry II
CHEM 315 Organic Chemistry Laboratory
PHYS 1230G Algebra-Based Physics I
PHYS 1230L Algebra-Based Physics I Lab
PHYS 1240G Algebra-Based Physics II
PHYS 1240L Algebra-Based Physics II Lab
PHYS 2230G General Physics for Life Science I
PHYS 2230L Laboratory to General Physics for Life Science I

PHYS 2240G General Physics for Life Science II
PHYS 2240L Laboratory to General Physics for Life Science II
SPMD 1110 Introduction to Athletic Training
SPMD 1120 Medical Terminology
SPMD 3350 Inferential Statistics in Sport and Exercise Science
SPMD 3550 Psychology of Sport
SPMD 3610 Health and Exercise Psychology
SPMD 4210 Advanced Exercise Physiology
SPMD 4450 Pathophysiology and Human Function(s)
SPMD 4510 Neurophysiology and Human Function
SPMD 4520 Adapted Physical Education
SPMD 4540 Psychology of Coaching in Sport
SPMD 4620 Nutrition and Metabolism of Sport
SPMD 4997 Problems
SPMD 4998 Internship
NUTR 2110 Human Nutrition
NUTR 3110 Nutrition Throughout the Lifecycle
NUTR 3750 Applied Nutrition Research
NUTR 4110 Advanced Nutrition
PSYC 2210 Abnormal Psychology
PSYC 2120 Developmental Psychology
PSYC 2220 Cognitive Psychology

PSYC 375 Psychology and the Brain
PSYC 380 Perception
PSYC 383 Memory
PHLS 4720 Health Promotion for the Older Adult
PHLS 4730 Adulthood and Aging
BCHE 395 Biochemistry I
CEPY 1120G Human Growth and Behavior
SPHS 2110 Introduction to Communication Disorders

Total Credits 120-122

1. See the General Education (p. 227) section of the catalog for a full list of courses.
2. A Mathematics General Education course is required for the degree but students may need to take any prerequisites needed to enter the course of their choosing first.
3. Students who select A ST 311 Statistical Applications or SPMD 3350 Inferential Statistics in Sport and Exercise Science will need to take an additional General Education course to complete the requirement.
