This course is designed to help students understand, manipulate and extract Earth Observation (EO) data and to conduct land cover analysis related to natural resources including water and vegetation. The course provides and highlights means to identify and access EO data in different formats, extract meaningful information, and to help students developing critical thinking skills. The course introduces tools such as python and ArcGIS Pro to handle different data formats (e.g. hdf) efficiently; develop and present creative maps. The course provides basic information about how to conduct land use, land cover change analysis, mapping vegetation, water related variables and plant and animal distribution analysis. Crosslisted with: RGSC 585.

WSAM 589. Landscape Hydrology Modeling

3 Credits (3)

Understand the landscape scale of hydrologic cycle and related hydrological processes. Quantitatively evaluate hydrological system components. Retrieve, visualize and model some of the physical processes using some of the available tools. Consent of Instructor required.

WSAM 590. System Dynamics

3 Credits (3)

This course takes a system dynamics approach to the study of economics and natural resources management. We will examine some of the example theories such as Solow-Swan model and endogenous growth theories as well as the tragedy of the commons, using system dynamics tools to uncover the feedback and explicitly examine its impact on the dynamic behavior of the system. Through these examples, we

will learn how to develop, validate, and use system dynamics models for policy design and analysis.

Learning Outcomes

1. Identify common generic structures and behavioral modes in socioeconomic and ecological systems.
2. Define important feedback theories that explain the behavioral modes in socioeconomic and ecological systems.
3. Implement the system dynamics method to translate the feedback theories into dynamic simulation models.

WSAM 595. Hands-On Transboundary Aquifer and Community System

Convergence Seminar

1 Credit (1)

An opportunity for graduate researchers to build partnerships with their colleagues in the IWR cohort and with our expert collaborators. Graduate researchers present their research methods, share lessons from their research activities, and report on experiences in the field and in the IWR program. An opportunity for academic, industry, and stakeholder project partners to share career development and research convergence insight with the cohort. May be repeated up to 18 credits.

Learning Outcomes

1. Students will learn about natural and social science convergence.
2. Convergence tool skill-building.
3. Students will learn how to lead the coordination of international, multidisciplinary research collaboration.

WSAM 598. Internship

1-9 Credits (1-9)

Out-of-classroom learning experiences to gain relevant education, experience, and expertise. Field-based learning providing transformative education and hands-on training. May be repeated up to 18 credits.

Learning Outcomes

1. Gain the experience necessary to engage confidently in community-centered hydrologic and social science approaches to water research.
2. Students will learn how to lead the coordination of international, cross-disciplinary research collaboration.
3. Gain experience applying academic and research knowledge in professional capacities.
4. Develop cross-sector communication skillsets.

WSAM 599. Masters Thesis

1-15 Credits (1-15)

Thesis. May be repeated up to 88 credits. Consent of Instructor required. Restricted to: Water and Science Management majors. Thesis/Dissertation Grading.

WSAM 600. Doctoral Research

1-15 Credits (1-15)

Assigned credit for research preformed. May be repeated up to 15 credits. Consent of Instructor required.

Learning Outcomes

1. Identify appropriate research methodologies.
2. Reflect on their own research, identifying lessons learned, strengths, and ways to improve.
3. Communicate confidently and constructively with faculty advisors.

WSAM 605. Arid Land Water Resources

3 Credits (2+2P)

The course will cover various issues of relevance to water resources and water supply management within the Southwest US and other semiarid and arid regions. Discussions may include development and

sustainability, climate change and drought, socioeconomic and cultural, and transboundary issues. May be repeated up to 3 credits. Crosslisted with: ENV5 605.

**WSAM 610. Water and Sustainable Economic Development
3 Credits (3)**

For graduate students in the Water Science and Management or other research degree programs, use the water economics literature as a model for student research leading to an M.S. thesis or Ph.D. dissertation.

**WSAM 700. Doctoral Dissertation
1-15 Credits (1-15)**

Dissertation for Water Sciences and Management Majors May be repeated up to 88 credits. Restricted to: Water Sciences and Management majors. Thesis/Dissertation Grading.

Office Location: Stucky Hall Room 111

College of Arts and Sciences

Dean - Enrico Pontelli

Associate Dean (Research) - Michèle Shuster

Associate Dean (Academics) - Joseph Lakey

Executive Administrative Assistant - Marissa Holguin

Business Manager - Lucille Casas

Undergraduate programs offered in the College of Arts and Sciences prepare students for a variety of career opportunities and for graduate study. The broad curriculum offered provides both the motivation and the tools for lifelong learning experiences.

While the ultimate responsibility for planning an academic program in compliance with university, college and departmental requirements rests with the student, the college recognizes the importance of helping students navigate appropriate academic programs.

Students should consult the "Academic Regulations (p. 31)" section of the catalog regarding general limitations for total credit hours, independent study and registration under S/U option, registration deadlines, and conditions required to make academic progress and maintain good academic standing. Students may not revise or do

additional course work after the semester has ended in order to raise a grade in any course. Exceptions will be made for students completing an official Incomplete grade.

College Undergraduate Degree Requirements

1. In accordance with NMSU policy, students in all majors in the College of Arts and Sciences must meet the Basic Academic Skills requirements in English and Mathematics prior to enrolling in upper division courses numbered 300 or higher. See "Basic Academic Skills (p. 31)" under Performance/Progress in the NMSU System Academic Regulations & Policies section.
2. University graduation requirements. See "Graduation/ Commencement (p. 31)" in the Regulations & Policies section. In order to graduate, undergraduate students must have met all degree requirements for their program, earned a minimum of 120 university level credits, or more if required for the degree, of which at least 48 must be upper division (except for the Bachelor of Applied Studies, which requires 36 upper division credits) and must have a cumulative GPA of 2.0 in all courses taken at NMSU. Each student must complete at least 30 of the necessary credits for their Bachelor Degree at NMSU. A minimum of "C-" in all courses counting toward the major, supplemental major and minor is required of all students.

S/U Grading Option for Undergraduate Students

Instructors may establish individual standards for an S grade, but the minimum standard for an S grade in the College of Arts and Sciences courses is a C-.

Developmental and Applied Credit Limitations for Undergraduate Students

The College of Arts and Sciences will accept all applied coursework, which includes Occupational Education courses, BOT, FDMA, FYEX (not including FYEX 1112 The Freshman Year Experience and UNIV 350 Peer Education), ARTS/ARTH (applied), DANC (applied), MUSC (applied and participation), THEA (applied), NURS, A EN, AXED, and AECC. These courses count towards overall credit hours to bring the student's total to the minimum credit hours required. Students must still complete all university requirements: General Education; Viewing a Wider World; the required number of upper division credits, as well as all requirements for their declared major degree. Students should contact their Arts and Sciences Student Records Specialist regarding the acceptability of specific courses.

Independent Study/Directed Reading Courses for Undergraduate Students

Students are limited to six credits in any independent study course. Independent study courses include directed reading and special topic courses, which do not carry a subtitle.

Majors, Minors and Supplementary Majors for Undergraduate Students

Except for the Bachelor of Applied Studies and Bachelor of Individualized Studies, students who wish to obtain a bachelor's degree must select a major field or fields. For a listing of majors, the student should refer to the list of majors in this catalog. Course requirements for majors are listed under individual departments. Students should consult the department with any questions about requirements. Until a major is selected, the student is designated as undeclared.

Each major consists of not less than 24 credits in the major field, of which 18 or more must be in upper-division courses (300 and above).

Some departments also require specific courses outside the major field. Please refer to the departmental section of the catalog for specific nondepartmental requirements. Students must earn a grade of C- or better for all course requirements indicated for each major, minor, or supplementary major, including any nondepartmental courses required. Students may not count an S grade towards completion of any major, minor or supplementary major requirement unless a course is automatically S/U for all enrolled students. A student may not earn a minor that bears the same name as a bachelor's degree that the student is earning. (For example, a student earning a B.S. in Biology cannot also earn a minor in Biology.) It is imperative that students consult the departmental sections of this catalog and the department(s) for advice in planning to fulfill requirements for their declared majors. The requirements for academic minors in the College of Arts and Sciences are found under each offering department or program section of this catalog.

Supplementary Majors

Requirements for supplementary majors are found as follows:

- the Supplementary Majors in Chicano Studies, Latin American Studies, and Linguistics (p. 713) are listed under Languages and Linguistics (p. 713);
- the Supplementary Major in Law and Society (p. 676) is listed under Government (p. 676); and
- the Supplementary Major in Applied Mathematics (p. 747) is listed under Mathematical Sciences (p. 747).

Most students have considerable latitude in choosing elective courses. These are the courses beyond university and major requirements that a student must take to bring her or his total credits to the minimum overall credits required for the degree. This latitude provides students with opportunities to major in more than one field, to take a minor or to devise interdisciplinary programs tailored to individual interests or future career needs.

Regardless of the option elected, students should consult regularly with an advisor and track their progress towards degree completion and graduation using the online degree audit system STAR (Student Academic Requirements), at: <http://www.myNMSU.edu> (<https://my.nmsu.edu>).

Preprofessional Studies

NMSU offers a number of programs designed for transfer to professional schools through its undergraduate colleges. Several programs in the College of Arts and Sciences provide preparation for Law and Health professions.

- Pre-Health Professions advising is coordinated by the Center for Academic Advising and Student Support (CAASS).
- Pre-Law advising is coordinated by the Department of Government. Students interested in attending law school must first obtain a bachelor's degree but that degree can be in any subject. Many pre-law students take some law courses in their undergraduate program; law related courses are taught in government, philosophy, criminal justice and other departments. The Department of Government coordinates the interdisciplinary Supplementary Major in Law and Society. See the NMSU Department of Government webpage. The Department of Philosophy offers both a major and a minor in Justice, Political Philosophy, and Law. See the NMSU Department of Philosophy webpage.

Bachelor of Applied/Individualized Studies

The Interdisciplinary Studies Department extends New Mexico State University's reach beyond traditional academic programs to provide educational opportunities for students to meet their academic, professional, and personal learning goals. The Interdisciplinary Studies Department offers flexible degree programs in the **Bachelor of Applied Studies (BAS)** and the **Bachelor of Individualized Studies (BIS)**, giving students the opportunity to work with an advisor to develop their own interdisciplinary program, appropriate to their unique educational and career goals.

The Bachelor of Applied Studies is a program designed for those students who have procured an Associates of Applied Studies (AAS) at a community or two-year college. This major allows students to transfer credits and build from their Associates degree toward a university-level degree. The BAS degree helps minimize credits for associate degree graduates when pursuing a baccalaureate degree at NMSU by requiring a fewer number of upper-division credits: requiring 36 as opposed to the 48 upper-division courses required of other majors. The aim is to equip students to effectively build from their applied backgrounds and knowledge to shift careers or to advance in their chosen career.

The Bachelor of Individualized Studies is a flexible degree program serving multiple needs. It can be designed to serve students desiring an academic degree not offered at NMSU, particularly students with broad or diverse academic and career interests. It can also allow students to complete a college degree when an initial major does not fit as well as planned. Its flexibility in accepting course credits also serves as a completion program for students who left college and now want to return to earn a Bachelor degree. A well-designed interdisciplinary curriculum emphasizes the value of approaching complex issues from multiple perspectives, equipping students with the requisite critical and analytical skills to become effective problem solvers in a chosen career.

Minors Recommended for BAS & BIS Majors

Students seeking a **Bachelor of Applied Studies** or the **Bachelor of Individualized Studies** degree are encouraged to complete one or more minors offered through various NMSU colleges. A minor is designated on a transcript and consists of a minimum of 18 credits, nine of which must be upper-division. Courses required to complete a minor may be in a single department or interdepartmental, are offered through various NMSU colleges, and are subject to availability. Students seeking to complete a minor must have the minor verified, prior to graduation, by the college academic department administering the minor. Specific requirements for minors may be obtained from the academic department administering a specific minor, the academic department's college dean's office, and in the college departmental listings of this catalog. **Note: The NMSU College of Business allows a maximum of 30 business credit hours (excluding MATH 1350G) to count towards the BAS or BIS degrees. Also, the only College of Business minor allowed for these degrees is the Business Administration Minor.**

Bachelors Degrees

A

- Animation and Visual Effects - Bachelor of Creative Media (p. 600)
- Anthropology (Culture & Language) - Bachelor of Arts (p. 458)
- Anthropology - Bachelor of Arts (p. 455)
- Applied Studies - Bachelor of Applied Studies (p. 463)
- Applied Studies - Bachelor of Applied Studies (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/applied-studies-bas-online/>)

- Art (Art History) - Bachelor of Arts (p. 477)
- Art (Museum Conservation) - Bachelor of Fine Arts (p. 480)
- Art (Studio Art) - Bachelor of Arts (p. 478)
- Art (Studio Art) - Bachelor of Fine Arts (p. 482)

B

- Biochemistry - Bachelor of Science (p. 525)
- Biology - Bachelor of Arts (p. 502)
- Biology - Bachelor of Science (p. 504)

C

- Chemistry (Pre-Med) - Bachelor of Arts (p. 529)
- Chemistry (Secondary Education) - Bachelor of Arts (p. 532)
- Chemistry (Secondary Education) - Bachelor of Science (p. 536)
- Chemistry - Bachelor of Arts (p. 527)
- Chemistry - Bachelor of Science (p. 534)
- Communication Studies - Bachelor of Arts (p. 545)
- Communication Studies - Bachelor of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/communication-disorders-ba-online/>)
- Computer Science (Algorithm Theory) - Bachelor of Science (p. 569)
- Computer Science (Artificial Intelligence) - Bachelor of Science (p. 571)
- Computer Science (Big Data and Data Science) - Bachelor of Science (p. 574)
- Computer Science (Computer Networking) - Bachelor of Science (p. 576)
- Computer Science (Cybersecurity) - Bachelor of Science (p. 579)
- Computer Science (Human Computer Interaction) - Bachelor of Science (p. 581)
- Computer Science (Secondary Education) - Bachelor of Arts (p. 584)
- Computer Science (Software Development) - Bachelor of Science (p. 586)
- Computer Science - Bachelor of Arts (p. 564)
- Computer Science - Bachelor of Science (p. 566)
- Computer Science - Bachelor of Science/Master of Science (p. 590)
- Conservation Ecology - Bachelor in Conservation Ecology (p. 507)
- Criminal Justice - Bachelor of Criminal Justice (p. 611)
- Criminal Justice - Bachelor of Criminal Justice (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/criminal-justice-bcj-online/>)
- Cybersecurity - Bachelor of Science (p. 589)

D

- Digital Film Making - Bachelor of Creative Media (p. 603)

E

- Economics - Bachelor of Arts (p. 618)
- English (Creative Writing) - Bachelor of Arts (p. 635)
- English (Literature, Language and Culture) - Bachelor of Arts (p. 639)
- English (Rhetoric, Digital Media and Professional Communication) - Bachelor of Arts (p. 641)

- Spanish - Master of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/spanish-ma-online/>)

Doctoral Degrees

A

- Astronomy - Doctor of Philosophy (p. 180)

B

- Biology - Doctor of Philosophy (p. 183)

C

- Chemistry - Doctor of Philosophy (p. 184)
- Computer Science - Doctor of Philosophy (p. 185)

E

- Experimental Psychology - Doctor of Philosophy (p. 197)

G

- Geography - Doctor of Philosophy (p. 198)

M

- Mathematics - Doctor of Philosophy (p. 200)
- Molecular Biology - Doctor of Philosophy (p. 201)

P

- Physics - Doctor of Philosophy (p. 203)

R

- Rhetoric and Professional Communication - Doctor of Philosophy (p. 205)

T

- Transborder and Global Human Dynamics - Doctor of Philosophy (p. 206)

Supplemental Majors

- Applied Mathematics - Supplemental Major (p. 772)
- Chicano Studies - Supplemental Major (p. 746)
- Latin American Studies - Supplemental Major (p. 745)
- Law and Society - Supplemental Major (p. 688)
- Law and Society - Undergraduate Supplemental Major (p. 615)
- Linguistics - Supplemental Major (p. 746)

Graduate Certificates

- Cultural Resource Management - Graduate Certificate (p. 214)
- Museum Studies - Graduate Certificate (p. 215)

Undergraduate Minors

- Aerospace Studies - Undergraduate Minor (p. 439)
- Algorithm Theory - Undergraduate Minor (p. 591)
- American Government and Politics - Undergraduate Minor (p. 686)
- Animation and Visual Effects - Undergraduate Minor (p. 604)
- Anthropology - Undergraduate Minor (p. 460)
- Archaeology - Undergraduate Minor (p. 461)
- Art - Undergraduate Minor (p. 484)
- Art History - Undergraduate Minor (p. 484)
- Astronomy - Undergraduate Minor (p. 489)
- Biochemistry - Undergraduate Minor (p. 538)
- Bioinformatics - Undergraduate Minor (p. 591)
- Biology - Undergraduate Minor (p. 513)
- Chemistry (Pre-Med) - Bachelor of Arts (p. 529)
- Chemistry (Secondary Education) - Bachelor of Arts (p. 532)

- Chemistry (Secondary Education) - Bachelor of Science (p. 536)
- Chemistry - Undergraduate Minor (p. 538)
- Communication Studies - Undergraduate Minor (p. 547)
- Comparative Politics - Undergraduate Minor (p. 687)
- Computer Science (Secondary Education) - Bachelor of Arts (p. 584)
- Computer Systems - Undergraduate Minor (p. 592)
- Conservation Ecology - Undergraduate Minor (p. 513)
- Creative Writing - Undergraduate Minor (p. 604)
- Digital Film Making - Undergraduate Minor (p. 605)
- East Asian Studies - Undergraduate Minor (p. 743)
- Economics - Undergraduate Minor (p. 620)
- English - Undergraduate Minor (p. 645)
- Ethics - Undergraduate Minor (p. 812)
- Forensic Science - Undergraduate Minor (p. 614)
- French - Undergraduate Minor (p. 744)
- Gender & Sexuality Studies - Undergraduate Minor (p. 645)
- Genetics and Biotechnology - Undergraduate Minor (p. 513)
- Geographic Information Systems - Undergraduate Minor (p. 662)
- Geography (Environmental Studies) - Bachelor of Science (p. 657)
- Geography - Undergraduate Minor (p. 663)
- Geology - Undergraduate Minor (p. 675)
- German - Undergraduate Minor (p. 744)
- History - Undergraduate Minor (p. 700)

- International Studies - Undergraduate Minor (p. 744)
- Journalism and Media Studies - Undergraduate Minor (p. 713)
- Justice, Political Philosophy, and Law - Undergraduate Minor (p. 812)
- Linguistics - Undergraduate Minor (p. 745)
- Literature - Undergraduate Minor (p. 646)
- Mathematics - Undergraduate Minor (p. 773)
- Medical Anthropology - Undergraduate Minor (p. 461)
- Medieval and Early Modern Studies - Undergraduate Minor (p. 646)
- Microbiology - Undergraduate Minor (p. 514)
- Military Science - Undergraduate Minor (p. 775)
- Molecular Biology - Undergraduate Minor (p. 777)
- Museum Conservation - Undergraduate Minor (p. 484)
- Music - Undergraduate Minor (p. 806)
- Philosophy - Undergraduate Minor (p. 813)
- Physics - Undergraduate Minor (p. 829)
- Political Science - Bachelor of Arts (p. 685)
- Political Science - Undergraduate Minor (p. 687)
- Political Theory - Undergraduate Minor (p. 687)
- Psychology - Undergraduate Minor (p. 837)
- Public Administration - Undergraduate Minor (p. 687)
- Public Law - Undergraduate Minor (p. 688)
- Religious Studies - Undergraduate Minor (p. 462)
- Rhetoric and Professional Communication - Undergraduate Minor (p. 647)

- Social Media Management - Undergraduate Minor (p. 713)
- Software Development - Undergraduate Minor (p. 592)
- Spanish - Undergraduate Minor (p. 745)
- Strategic Communications - Undergraduate Minor (p. 713)
- Sustainability- Undergraduate Minor (p. 462)
- Theatre Arts - Undergraduate Minor (p. 845)

Graduate Minors

- Anthropology - Graduate Minor (p. 219)
 - Archaeology - Graduate Minor (p. 219)
 - Bioinformatics (with Computer Science) - Graduate Minor (p. 220)
 - Communication Studies - Graduate Minor (p. 220)
 - Computer Science - Graduate Minor (p. 220)
 - Gender and Sexuality Studies - Graduate Minor (p. 221)
 - Geographic Information Systems - Graduate Minor (p. 222)
 - History - Graduate Minor (p. 222)
 - Native American Studies - Graduate Minor (p. 224)
 - Physics - Graduate Minor (p. 225)
 - Psychology - Graduate Minor (p. 225)
 - Security Studies - Graduate Minor (p. 225)
- In the College of Arts and Sciences, the Department of Chemistry and Biochemistry is accredited by the American Chemical Society.
 - The Bachelor of Science in Computer Science and the Bachelor of Science in Physics are accredited by ABET.
 - Music curricula in the Department of Music are accredited by the National Association of Schools of Music.
 - The Master of Public Administration program in the Department of Government is accredited by the National Association of Schools of Public Affairs and Administration.

Aerospace Studies

Undergraduate Program Information

Air Force Reserve Officer Training Corps (AFROTC) is a nationwide program that allows students to pursue commissions (become officers) in the United States Air Force (USAF) while simultaneously attending college. AFROTC classes are held on college campuses throughout the United States and Puerto Rico; students can register through normal course registration processes. AFROTC consists of four years of Aerospace Studies classes (Heritage and Values of the United States Air Force, Team and Leadership Fundamentals, Leading People and Effective Communication, and National Security Affairs/Preparation for Active Duty), and a corresponding Leadership Laboratory for each year (where students apply leadership, demonstrate command and effective communication, develop physical fitness, and practice military customs and courtesies). College students enrolled in the AFROTC program (known as "cadets") who successfully complete both AFROTC training and college degree requirements will graduate and simultaneously commission as Second Lieutenants in the Active Duty Air Force.

Freshman and Sophomore Years (General Military Course or GMC)

This group provides a general background knowledge of the military establishment with emphasis on the Air Force. GMC courses may be taken out of sequence.

Prefix	Title	Credits
AERO 121 & AERO 122	Heritage and Values and Heritage and Values II	4
AERO 221	Team and Leadership Fundamentals	2
AERO 222	Team and Leadership Fundamentals II	2
Total Credits		8

Junior and Senior Years (Professional Officer Course or POC)

This group constitutes an in-depth study of topics that provides a broad preparation for a career as an Air Force officer. Students must have certain qualifications for entry and have a desire to be commissioned in the Air Force. These qualifications include, achieving a passing score on the Air Force Officer's Qualifying Test, passing a physical fitness test, and successfully completing a medical exam. They must also complete a four- or five-week summer orientation course.

Students may, with departmental approval, take POC courses out of normal sequence. However, compressed or dual enrollment in upper-division POC courses is normally prohibited. Through this department, you can also earn a minor in Aerospace Studies.

Prefix	Title	Credits
AERO 301	Leading People and Effective Communication	4
AERO 302	Leading People and Effective Communication II	4
AERO 401	National Security, Leadership Responsibilities and Commissioning Preparation	4
AERO 402	National Security, Leadership Responsibilities and Commissioning Preparation II	4

Leadership Laboratory

This is an integral and mandatory portion of the Aerospace Studies curriculum. Within the framework of the cadet wing, it provides a progression of experiences designed to develop each student's leadership potential and serves as an orientation to military life.

Minors for the Department

- Aerospace Studies - Undergraduate Minor (p. 439)

Lieutenant Colonel Dee Bochte, Department Head

Assistant Professors and Staff: Capt Brigitte Palacios; Major Xavier Flores; MSgt Crystal Brown; SSgt Mariah Rodriguez; and **Event Planner Senior**, Ms. Patti Alarcon

Aerospace Studies Courses

AERO 121. Heritage and Values

2 Credits (1.25+2P)

"Heritage and Values of the United States Air Force," is a survey course designed to introduce students to the United States Air Force and provides an overview of the basic characteristics, missions, and organization of the Air Force. Includes Leadership Lab practicum. May be repeated up to 2 credits. Restricted to Las Cruces campus only.

AERO 122. Heritage and Values II

2 Credits (1.25+2P)

"Heritage and Values of the United States Air Force," is a survey course designed to introduce students to the United States Air Force and provides an overview of the basic characteristics, and organization of the

Air Force. Includes Leadership Lab practicum. May be repeated up to 2 credits. Restricted to Las Cruces campus only.

AERO 221. Team and Leadership Fundamentals
2 Credits (1.25+2P)

"Teams and Leadership Fundamentals," focuses on laying the foundation for teams and leadership. The topics include skills that allow cadets to improve their leadership on a personal level and within a team. The courses will prepare cadets for their field training experience where they will be able to put the concepts learned into practice. The purpose is to instill a leadership mindset and to motivate sophomore students to transition from AFROTC cadet to AFROTC officer candidate. Includes Leadership Lab practicum. May be repeated up to 2 credits. Restricted to Las Cruces campus only.

AERO 222. Team and Leadership Fundamentals II
2 Credits (1.25+2P)

"Team and Leadership Fundamentals," focuses on laying the foundation for teams and leadership. The topics include skills that will allow cadets to improve their leadership on a personal level and within a team. The courses will prepare cadets for their field training experience where they will be able to put the concepts learned into practice. The purpose is to instill a leadership mindset and to motivate sophomore students to transition from AFROTC cadet to AFROTC officer candidate. Includes Leadership Lab practicum. May be repeated up to 2 credits. Restricted to Las Cruces campus only.

AERO 223. Air Force Leadership Development
1 Credit (2P)

This course prepares cadets to excel in field training. Cadets are prepared in all facets of field training, including: leadership competency evaluations, the Cadet's Guide to Field Training, individual drill evaluations, attention to detail, dining hall procedures, maintenance of living areas, and the group problem solving process. Restricted to: Main campus only.

AERO 301. Leading People and Effective Communication
4 Credits (3+2P)

"Leading People and Effective Communication," teaches cadets advanced skills and knowledge in management and leadership. Special emphasis is placed on enhancing leadership skills and communication. Cadets have an opportunity to try out these leadership and management techniques in a supervised environment as juniors and seniors. Includes Leadership Lab practicum.

Prerequisite(s): Completion of AERO 121/AERO 122 and AERO 221/AERO 222, or permission of instructor.

AERO 302. Leading People and Effective Communication II
4 Credits (3+2P)

"Leading People and Effective Communication," teaches cadets advanced skills and knowledge in management and leadership. Special emphasis is placed on enhancing leadership skills and communication. Cadets have an opportunity to try out these leadership and management techniques in a supervised environment as juniors and seniors. Include Leadership Lab practicum.

Prerequisite(s): Completion of AERO 121/AERO 122 and AERO 221/AERO 222, or permission of instructor.

AERO 401. National Security, Leadership Responsibilities and Commissioning Preparation
4 Credits (3+2P)

"National Security Affairs/Preparation for Active Duty," is designed for college seniors and gives them the foundation to understand their role as military officers in American society. It is an overview of the complex social and political issues facing the military profession and requires a measure of sophistication commensurate with the senior college level.

The final semester provides information that will prepare the cadets for Active Duty. Includes Leadership Lab practicum.

Prerequisite(s): Completion of AERO 121/AERO 122, AERO 221/AERO 222, and AERO 301/AERO 302, or permission of instructor.

AERO 402. National Security, Leadership Responsibilities and Commissioning Preparation II
4 Credits (3+2P)

"National Security Affairs/Preparation for Active Duty," is designed for college seniors and gives them the foundation to understand their role as military officers in American society. It is an overview of the complex social and political issues facing the military profession and requires a measure of sophistication commensurate with the senior college level. The final semester provides information that will prepare the cadets for Active Duty. Includes Leadership Lab practicum.

Prerequisite(s): Completion of AERO 121/AERO 122, AERO 221/AERO 222, AERO 301/AERO 302, and AERO 401 or permission of instructor.

AERO 411. Aerospace Studies Independent Study
1 Credit (1)

This course provides in-depth research on specified topics of the United States Air Force and NMSU's Detachment 505 history. Consent of instructor required.

Prerequisite(s): AERO 301, AERO 302, AERO 401, AERO 402.

Phone: (575) 646-2136

Anthropology

Anthropologists study the human species and our closest non-human relatives. We seek to understand the human condition in the past and present so that we can shape our future.

Undergraduate Program Information

Anthropology is the study of humankind, a multidisciplinary endeavor that crosses the usual divides between social sciences, natural sciences, and humanities. In order to tackle this complicated subject from different angles, the discipline of anthropology is often divided into different subfields, including:

- **Archaeology**, which uses the material evidence of archaeological sites and artifacts to reconstruct past societies and interpret their behaviors;
- **Biological anthropology**, which seeks to understand humankind from a biological perspective, including the study of human origins, primate relatives, and human biological diversity;
- **Cultural anthropology**, which describes and compares living human cultures in order to understand human cultural diversity;
- **Linguistic anthropology**, which studies different systems of human communication in order to understand how culture is shared and maintained; and
- **Medical anthropology**, which takes a holistic approach to understanding health, illness, disease, sickness, and healing.

The Department of Anthropology offers the following undergraduate degrees and minors. Click on each link to see a description of the major or minor program requirements.

Undergraduate students can earn a:

- Bachelor of Arts degree in Anthropology (<https://catalogs.nmsu.edu/nmsu/arts-sciences/anthropology/anthropology-bachelor-arts/>)
- Bachelor of Arts degree in **Anthropology (Culture & Language)**, which includes a concentration in culture and language studies
- Minor(s) in Anthropology (<https://catalogs.nmsu.edu/nmsu/arts-sciences/anthropology/anthropology-undergraduate-minor/>), Archaeology (<https://catalogs.nmsu.edu/nmsu/arts-sciences/anthropology/archaeology-undergraduate-minor/>), **Medical Anthropology**, Religious Studies (<https://catalogs.nmsu.edu/nmsu/arts-sciences/anthropology/religious-studies-undergraduate-minor/>), and Sustainability (<https://catalogs.nmsu.edu/nmsu/arts-sciences/anthropology/sustainable-development-undergraduate-minor/>)

Please visit the Anthropology Catalog (<https://catalogs.nmsu.edu/nmsu/course-listings/anth/>) for descriptions of all courses offered by the department.

Anthropology Master's Accelerated Program (MAP)

The Anthropology MAP Program permits qualified **undergraduate students** to earn a maximum of 9 credits of graduate-level coursework and have these **credits count both for the BA in Anthropology and the Master's degree in Anthropology**. The Anthropology MAP program is a dual credit program, not a dual degree program.

Students accepted to the Anthropology MAP Program may apply 9 credits of qualified elective courses towards the graduate MA degree in Anthropology or towards an interdisciplinary graduate minor or graduate certificate in Anthropology, Archaeology, Food Studies, the Graduate Certificate in Cultural Resource Management, or the Graduate Certificate in Museum Studies.

The NMSU Graduate School has established general rules and processes for all MAP programs at NMSU. They have been adapted to meet the particular requirements of the Department of Anthropology and the requirements of Anthropology's graduate programs. For details about the NMSU Graduate School MAPS program, please see Honors College: <https://honors.nmsu.edu/for-students/masters-accelerated-program-map.html>.

For questions about the Anthropology MAP Program, please contact the Department of Anthropology Home Page ([nmsu.edu](https://anthropology.nmsu.edu/)) (<https://anthropology.nmsu.edu/>).

Graduate Program Information

The Anthropology Master of Arts Program at NMSU provides students with the knowledge, skills, and practical experience they need to transform their interests into a rewarding career. Our program strengths include applied research, especially in the areas of cultural resource management, museum studies, environmental anthropology, food security, and health and wellness. We value our M.A. students, and work to develop strong advising and mentoring relationships. Many of our graduates go on to successful careers in the public or private sector, while some choose to pursue a Ph.D. after completing their master's degree at NMSU.

In addition to the Anthropology Master of Arts degree, our program also offers two Graduate Certificates and several graduate minors. Click on each of the links below to see descriptions of the program requirements.

Graduate students can earn a:

- Master of Arts in Anthropology (p. 99)
 - An undergraduate anthropology degree is not required for admission; however, students who lack the equivalent of core undergraduate anthropology courses may be required to take them during their first year of the master's program.
- Graduate Certificates in Cultural Resource Management (p. 214) (CRM) and Museum Studies (p. 215)
 - These graduate certificates are separate from the M.A. degree and require a separate application. Many of our M.A. students also earn graduate certificates.
- Graduate minors in Anthropology (p. 219), Archaeology (p. 219), and Food Studies (p. 221)
 - Graduate minors are available to students earning their master's or Ph.D. degrees in other programs at NMSU.

Please visit the Anthropology Catalog (<https://catalogs.nmsu.edu/nmsu/course-listings/anth/>) for descriptions of all of our anthropology courses.

If you have additional questions or would like to schedule a campus visit or virtual meeting, please contact the Department of Anthropology: Home Page ([nmsu.edu](https://anthropology.nmsu.edu/)) (<https://anthropology.nmsu.edu/>)

Degrees for the Department Bachelor Degree(s)

- Anthropology (Culture & Language) - Bachelor of Arts (p. 458)
- Anthropology - Bachelor of Arts (p. 455)

Master Degree(s)

- Anthropology - Master of Arts (p. 99)

Anthropology Master's Accelerated Program (MAP)

The Anthropology MAP Program permits qualified **undergraduate students** to earn a maximum of 9 credits of graduate-level coursework and have these **credits count both for the BA in Anthropology and the Master's degree in Anthropology**. The Anthropology MAP program is a dual credit program, not a dual degree program.

Students accepted to the Anthropology MAP Program may apply 9 credits of qualified elective courses towards the graduate MA degree in Anthropology or towards an interdisciplinary graduate minor or graduate certificate in Native American Studies, Anthropology, Archaeology, the Graduate Certificate in Cultural Resource Management, or the Graduate Certificate in Museum Studies.

The NMSU Graduate School has established general rules and processes for all MAP programs at NMSU. They have been adapted to meet the particular requirements of the Department of Anthropology and the requirements of Anthropology's graduate programs. For details about the NMSU Graduate School MAPS program, please see Honors College: <https://honors.nmsu.edu/for-students/masters-accelerated-program-map.html>.

For questions about the Anthropology MAP Program, please contact Dr. Rani T. Alexander (raalexan@nmsu.edu).

Eligibility:

Undergraduate students may petition to participate in the Master's Accelerated Program (MAP) in the Department of Anthropology if they meet the following requirements:

- Undergraduate students must be juniors or seniors and have completed 60 credit hours of coursework towards an undergraduate degree.
- Preferred 3.5 GPA.
- Completion of two or more of the undergraduate core courses, Anth 301, Anth 315, Anth 355, and Anth 350 is strongly preferred.
- Undergraduate students must have an assigned faculty advisor within the Department of Anthropology and obtain appropriate signatures before being approved for MAPS by the NMSU Graduate School.
- Students must be advised by financial aid advisor and obtain appropriate signatures before being approved for MAP by the NMSU Graduate School.
- MAP students must meet with their advisor at least once per semester before registration.
- Students accepted into the Anthropology MAP program, must participate in the Online Developing New Scholars Program (DNSP), offered by the Graduate School.
- Students may not have previously earned a Bachelor's Degree.
- Students have removed any Incomplete grades or holds at the time that they request admission to a graduate-level class.
- Students may not attempt more than 3 credits of graduate coursework in one semester.
- Students must earn a grade of B or higher to have graduate credits count under the MAP program. Graduate courses completed with a B- or lower are not eligible for MAP credit.
- Qualified graduate level courses included in the Anthropology MAP program are limited to a discrete list of electives numbered 500 and above. Eligible MAP courses are chosen only with approval of the student's MAP advisor and consent of instructor.

- For full program details and questions, please contact the Anthropology Department: Home Page (nmsu.edu) (<https://anthropology.nmsu.edu/>).

Graduate Certificates

- Cultural Resource Management - Graduate Certificate (p. 214)
- Museum Studies - Graduate Certificate (p. 215)

Professor, Lois Stanford, Department Head

Professors Stanford, Walker; **Associate Professors** Jenks, Olszowy; **Assistant Professors** Brause, Hart, Marks; **University Museum Curator**; **Emeritus Professors**, Alexander, Chaiken, Conelly, Eber, O'Leary, Pepion, Staski, Trevathan.

L. Stanford, Department Head, Ph.D. (Florida)-food studies, food justice, qualitative methods, Mexico, U.S.-Mexico border; H. Brause, Ph.D. (New Mexico)- environmental anthropology, water, small farmers, U.S.-Mexico border; T. Hart, Ph.D. (Connecticut)- paleoethnobotany, prehistoric agriculture, Mesoamerican archaeology; K. Jenks, Ph.D. (Arizona)-cultural resource management, historical archaeology, Southwestern archaeology; A. Marks, Ph.D. (Tulane)- medical anthropology, pharmaceuticals, reproductive justice, feminist discourses, Latin America; K. Olszowy, Ph.D. (Binghamton) - economic development and chronic disease risk, sex/gender-based disparities in obesity risk, mental and physical health outcomes associated with natural disasters, child growth and development, and the biology of poverty; W. Walker, Ph.D. (Arizona)- Southwestern archaeology, theory and field method in archaeology, ritual prehistory.

Anthropology Courses

ANTH 1115G. Introduction to Anthropology 3 Credits (3)

Anthropology is the systematic study of the humanity both past and present. The course introduces students to the four subfields of anthropology, which include archaeology, biological, linguistic and cultural anthropology. Students will learn about the concepts and methods that anthropologists use to study our species and gain a broader perspective on the human experience.

Learning Outcomes

1. Describe and summarize terms, approaches, and cultural and biological adaptations in the four subfields of anthropology.
2. Explain and analyze conceptual and ethical arguments in the four subfields of anthropology.
3. Effectively communicate content, perspectives, and ideas in four subfields of anthropology.
4. Critically evaluate sources, approaches, and arguments in the four subfields of anthropology.

ANTH 1135G. Introduction to Biological Anthropology 3 Credits (3)

This course provides a basic introduction to the broad field of biological anthropology. The research interests of biological anthropologists include the history and development of modern evolutionary biology, molecular and population genetics, modern primates, the primate and human fossil record, and modern human biological diversity.

Corequisite(s): ANTH 1135L.

Learning Outcomes

1. Summarize the basic principles of evolution and recognize how they apply to the human species.
2. Recognize the biological and behavioral continuity of humans with all life, and especially other modern primate species.
3. Identify ways in which the human species is biologically and behaviorally unique.
4. Summarize fossil evidence for human evolution.
5. Distinguish the major Paleolithic industries and outline the behavioral and cognitive changes indicated by the fossil and archeological evidence.
6. Critically evaluate popular accounts of human variation and human evolution.
7. Interpret modern human dilemmas (e.g., overpopulation, co-evolution of disease, and genetic engineering) from an evolutionary perspective.
8. Discuss in class and analyze in writing scholarly arguments concerning course concepts.

ANTH 1135L. Introduction to Biological Anthropology Lab

1 Credit (2P)

This laboratory course expand on the topics covered in lecture course and uses scientific methods and principles to examine evidence for the process of evolution, the nature of heredity, human evolutionary history and family tree relationships, primate ecology and behavior, and modern human diversity. Hands-on experience with fossil and skeletal material will be an important part of the learning process. **Corequisite(s):** ANTH 1135G

Learning Outcomes

1. Demonstrate an understanding of the scientific method.
2. Employ principles of Mendelian genetics to determine genotype and phenotype probabilities, and calculate gene, genotype, and phenotype frequencies using the Hardy-Weinberg Equilibrium formula.
3. Demonstrate an understanding of cell structure and functions.
4. Use common lab and anthropometric equipment such as a compound microscope and calipers.
5. Discuss primate evolution, and compare and contrast members of the Primate order in terms of structure, behavior, and phylogeny.
6. Classify hominid species based upon selected traits such as anatomical changes associated with bipedalism, changes in the size and structure of the brain, and the development of culture.
7. Locate and describe the major bones of the human skeleton, and identify characteristics of human skeletons or skulls such as gender, age, and ancestry.
8. Discuss current research in genome analysis of various hominid populations.

ANTH 1136. Introduction to Historic Preservation

3 Credits (3)

Introduction to historic preservation, its history, goals, methods, legal basis, and economic importance. Explores public role in decision-making. Community Colleges only.

Learning Outcomes

1. Understand why historic preservation is important;
2. be familiar with what is important to preserve;
3. know who among the general public, state, and federal governments is responsible for preserving the past;
4. Have gained experience in how we all preserve.

ANTH 1140G. Introduction to Cultural Anthropology

3 Credits (3)

This is an introductory course that provides an overview of cultural anthropology as a subfield within the broader discipline of anthropology and as a research approach within the social sciences more generally. The course presents core concepts and methods of cultural anthropology that are used to understand the ways in which human beings organize and experience their lives through distinctive cultural practices. More specifically, this course explores social and cultural differences and similarities around the world through a variety of topics such as: language and communication, economics, ways of making a living, marriage and family, kinship and descent, race, ethnicity, political organization, supernatural beliefs, sex and gender, and globalization. This course ultimately aims to present a broad range of perspectives and practices of various cultural groups from across the globe. May be repeated up to 3 credits.

Learning Outcomes

1. Introduce students to the basic concepts and research methods of cultural anthropology as one of the disciplines of social science, including fundamental concepts, such as culture and society, which form the pillars of the discipline (e.g., cultural relativism, cultural persistence and change, world-view and enculturation).
2. Comprehend the importance of studying cultural anthropology.
3. Demonstrate knowledge of the practice of anthropological research in the modern world that is increasingly multicultural, transnational and globally interconnected (e.g., globalization and modern world system).
4. Demonstrate an awareness of how students' own cultures shape their experiences and the way they see the world, as well as help them understand and interact with other cultures.
5. Understand how beliefs, values and assumptions are influenced by culture, biology, history, economic, and social structures.
6. Gain a sense of relationship with people possessing different experiences from their own.
7. Gain a deeper understanding and appreciation for cultural anthropology as a broad discipline through learning about its practices, and differentiating cultural anthropology from other disciplines that study people
8. Become more sensitive and engaged global citizens from culturally relative perspectives.

ANTH 1160G. World Archaeology

3 Credits (3)

This course is an exploration of human evolution and cultural development throughout the world. Students will be introduced to basic anthropological methods and theories and will learn how anthropological research has contributed to our understanding of major themes in human prehistory, including human evolution, the origins of culture, migration and colonization, animal and plant domestication, and the rise and fall of civilizations.

Learning Outcomes

1. Describe and explain the major developments in human prehistory.
2. Identify and describe major archaeological cultures throughout the world.
3. Employ critical thinking skills in the evaluation of competing theories about the past.
4. Select and use relevant archaeological evidence to explain how prehistoric populations adapted to their natural and cultural environments.
5. Demonstrate competency in written communication.

ANTH 2140G. Indigenous Peoples of North America**3 Credits (3)**

This course is a general survey of the history and ethnology of indigenous groups in North America. The course is designed to give students a comprehensive view of major issues pertaining to the indigenous cultures of North America, such as family structure, social organization, subsistence and contemporary economies, environmental adaptation, Indian-White relations, religious practices, and contemporary issues.

Learning Outcomes

1. Demonstrate familiarity with common elements pertaining to the languages and social organization of indigenous peoples in North America.
2. Recognize fundamental differences and similarities among traditional indigenous cultures.
3. Describe social relations of indigenous peoples in relationship to other ethnic groups.
4. Identify and analyze important ways that European societies and cultures and indigenous societies and cultures interacted from the time of Columbus to the present.
5. Evaluate the impacts of Euroamerican policies and programs on indigenous cultures.
6. Distinguish major social issues facing contemporary indigenous communities in North America.
7. Understand objectives and limitations of cross-cultural analysis in anthropology as they relate to the study of indigenous peoples in North America.
8. Demonstrate research and communication skills as they relate to the study of indigenous peoples in North America.

ANTH 2996. Special Topics**1-4 Credits**

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

Learning Outcomes

1. Varies

ANTH 301. Cultural Anthropology**3 Credits (3)**

The course will introduce students to the basic concepts and methods in cultural anthropology, focusing on the critical role of culture in traditional society and in the modern world. We apply the anthropological perspective to study the components of cultural systems, including language and meaning, ways of making a living, kinship, worldview, power and political systems, and socio-cultural inequalities, among others, across different cultures. By "unpacking" culture, we focus on how local knowledge is put to work in grappling with practical problems of everyday life. May be repeated up to 3 credits.

Learning Outcomes

1. Students will explain the core concepts in cultural anthropology, including the complexities, contradictions, dynamics, and implications.
2. Students will identify the important methods of fieldwork, linking theory to application.
3. Students will explain the critical components of cultural systems and how they operate, comparing and contrasting their different manifestations across different cultures. This identification should also address the complexities, dynamics, and implications.
4. Students will develop anthropological field skills in carrying out field projects, analyzing observed practices, symbols, and activities.
5. Students will identify and explain factors that explain cultural persistence and the relevance of culture in the modern world.

ANTH 305V. Contemporary Native Americans**3 Credits (3)**

Introduction to contemporary native peoples and cultures of North America. Emphasis on sociocultural and socioeconomic history, sociocultural change and persistence, present day reservation life, and current social and economic goals.

Learning Outcomes

1. Identify the major challenges within American Indian communities.
2. Analyze the components and causes of contemporary issues in Indian country.
3. Understand and be able to define sovereignty and self-determination and the relationship of Native nations to the U.S. government.
4. Develop an awareness of the historical and continuing efforts of resistance, adaptation, and endurance of Native peoples.
5. Integrate learned concepts to address contemporary Native American issues.
6. Possess foundation knowledge as preparation for higher-level coursework in NATV.

ANTH 306V. Peoples of Latin America**3 Credits (3)**

The course presents an overview of different cultures in Latin America, covering a range of topics including history, environment, race and ethnicity, religion, health, music, food, popular culture, globalization, and violence. Within this context, the perspective of cultural anthropology looks at the commonality of patterns shared across Latin America, at the same time that we examine the construction of cultural diversity, a diversity that has persisted into the modern era. We also examine how different Latin American peoples use culture, i.e., through their food, music, religion, and politics among other elements, as a way of shaping and conserving their ethnic identity. The class includes a mixture of lecture, discussion, films, music, and good food...

Learning Outcomes

1. Students will explain the major prehistoric Latin American civilizations and their role in shaping distinctive modern cultures today.
2. Students will identify the major ecological zones in Latin America and corresponding cultural adaptations and subsistence strategies.
3. Students will explain the critical role of economic and political history throughout the Colonial Period and Independence in shaping the patterns of cultural diversity, racial boundaries, and ethnic identities.
4. Students will explain the role of cultural practices (such as religion, music, popular culture, and foodways) in supporting indigenous and minority populations' efforts to retain distinct cultural identities.

- Students will explain the global and historical connections between Latin American and the United States, in particular the role that Latin American culture, migration, and traditions have played in shaping our society's development.

ANTH 307V. Japanese Culture and Society: Anthropological Perspectives
3 Credits (3)

This course introduces students to Japanese culture from anthropological and philosophical perspective. Learning about Japanese culture (non-Western) enhances students' awareness of the diversity of human values, beliefs, and morals and provides an understanding of cultural differences outside of mainstream American culture.

Learning Outcomes

- Take a position on an anthropological theory that accounts for how and why Japanese culture has changed through time.
- Select and integrate relevant anthropological perspectives to argue for or against ethical and moral differences between American and Japanese cultures.
- Analyze social, political, and religious aspects in Japanese society and compare them with those in America.
- Investigate sociopolitical and economic status of minority groups in Japan using anthropological approaches and compare them with those of America.
- Engage in face-to-face interactions with Japanese people in southern New Mexico and discuss similarities and differences between cultures, values, and worldview.

ANTH 312. The Ancient Maya

3 Credits (3)

Archaeological evidence of culture change in the Maya civilizations of Mexico and Central America from 2000 BC to the Spanish Conquest.

ANTH 313V. Ancient Mexico

3 Credits (3)

We will explore the archaeology the Aztecs, Zapotecs, and the Maya of Mexico and Central America from 3000BC up to and including the Spanish invasion of 1519-1521. We will examine how the legacies of these great civilizations were erased from written sources and how Mesoamerican heritage can be preserved and reclaimed for descendant communities and the public using archaeological remains. We will address: (1). the origins of agriculture and traditional food systems in Mesoamerica; (2). the rise of cities and urban centers; (3). writing, religion, social inequality, and the circulation of commodities; (4). Political disintegration, fragmentation, and collapse; (5). the formation and expansion of the Aztec and Tarascan empires; and (6). the consequences of the Spanish invasion and colonialism.

Learning Outcomes

- Take a position on theories that explain how, when, and why human lifeways changed in ancient Mesoamerica.
- Select and integrate relevant archaeological evidence to argue for and against a theoretical position.
- Analyze the significance of sites, structures, artifacts, and ecofacts within their archaeological contexts and explain their relevance for people today.
- Evaluate how practices in research, conservation, and tourism to archaeological sites promote stewardship of non-renewable archaeological resources and intangible heritage.
- Critique and reflect on designs for virtual public tours of archaeological sites in Mexico or Central America and suggest

improvements to best practices for the preservation and public presentation of archaeological resources.

ANTH 315. Introduction to Archaeology

3 Credits (3)

This course introduces you to the discipline of archaeology, situating this discipline within the wider field of anthropology. The first part of the course presents a brief history of the discipline, introduces some foundational concepts, and explains common field research methods. The second part of the class takes you through the process of identifying, classifying, and interpreting archaeological materials. The third and final part of the class introduces you to different research areas and types of professional work within archaeology. May be repeated up to 3 credits.

Learning Outcomes

- Identify major figures, sites, and trends in the history of archaeology
- Identify and describe common field and laboratory methods used in archaeology
- Construct and critically evaluate material culture typologies
- Explain and provide examples of different models of archaeological inference
- Describe and apply different theoretical approaches to the study of the human past
- Identify and describe significant areas of archaeological research and work

ANTH 318. Historical Archaeology

3 Credits (3)

This survey course explores the development of historical archaeology, its methods and theory, and popular research themes within the discipline. Students will be introduced to the ways that archaeologists identify and analyze historical-period documents, oral histories, features, and artifacts, and how they use these data to deepen our understanding of the recent past. Crosslisted with: ANTH 518.

Learning Outcomes

- Critically evaluate historical sources.
- Identify and analyze common historical-period artifacts and features.
- Utilize historical and archaeological evidence in research.
- Demonstrate how historical archaeology can be used to draw attention to and highlight the contributions of diverse populations in history.
- Demonstrate improved oral and written communication skills.

ANTH 320. Anthropological Linguistics

3 Credits (3)

The study of language and culture with particular emphasis on the cultural factors in the communication process.

ANTH 330V. Magic Witchcraft and Religion

3 Credits (3)

Provides an introduction to method and theory for the study of religion, ritual, and spiritual practice. Review and discussion of case studies drawn from around the globe to enhance understanding of the varied ways that people in diverse cultural systems construct and change their religious traditions to serve practical and meaningful ends.

Learning Outcomes

- Define and identify examples of magic, science, witchcraft, and religion. Develop an understanding of the variation in cultural and behavioral practices associated with each.
- Develop knowledge and critique early approaches and concepts in the anthropology of religion and its role in explanations of cultural change.

3. Develop knowledge of variation in religion as a cultural system and the experiences of liminality in rites of passage.
4. Identify the statuses and roles of various kinds of religious practitioners and their positionalities vis a vis dominant and resistant ideologies and structural inequality.
5. Develop critical thinking skills that speak to the relevance of different forms of religious thought and ritual practice in our daily lives.

ANTH 345. Introduction to Museology

3 Credits (3)

This course provides a broad introduction to the museum world. Through discussion of readings, examination of case-studies, and practical assignments, students will gain an understanding of the museum as an institution, as well as learn the challenges and responsibilities that museums and their staff encounter. Topics include the history of museums, contemporary debates surrounding the definition of museums, ethical and legal issues, and community connections. The course will cover various types of museums—including art, history, ethnographic, indigenous, and scientific—and discuss how these thematic orientations impact museum practice. Students will also explore common museum processes such as collecting, cataloguing, conservation, exhibition, research, and education through practical exercises using the collections of the University Museum in Kent Hall, as well as through case studies of museums around the world.

Learning Outcomes

1. Describe the major conceptual and practical influences on museums today—including issues of historical development, ethics, missions, and thematic orientations.
2. Critically engage with diverse types of museums as cultural institutions, their practices, and the communities with whom they engage.
3. Implement skills relevant to the museum profession, such as collections management, condition reporting, exhibition and programming planning, and research.

ANTH 349. Museum Anthropology

3 Credits (3)

This course provides an introduction to the methodological and theoretical approaches of museum anthropology. Students will gain experience with all these aspects of museum anthropology in the course by engaging with critical scholarship, analyzing case studies, and practicing collections-based research methods utilizing the collections of the University Museum. Through assignments students will analyze objects in the museum's collections using techniques of close looking, drawing, photography, sequences of making, and external research using scholarly sources. Students will gain skills in primary and secondary research, the analysis of material culture, and the practicalities of navigating research in museums.

Learning Outcomes

1. Describe major theoretical approaches to museum anthropology, and how these have changed over time.
2. Critically engage with the intersections between museums as institutions and the practice of anthropology, including the politics of representation.
3. Implement methodological research skills as a student-scholar by conducting independent research based on museum collections.
4. Convert collections-based research into written and media works characteristic of scholar-facing and public-facing practice in museum anthropology, curatorship, and museum studies.

ANTH 350. Anthropological Theory

3 Credits (3)

This course introduces students to historical and contemporary theory in anthropology with a focus on understanding why theory matters in our discipline. Key questions the course explores include: How have anthropologists thought about the concept of culture in different ways throughout the history of anthropology? What is the relevance of anthropological theory, both inside and outside the discipline? What new and promising trajectories do we see in anthropological theory today? May be repeated up to 3 credits.

Learning Outcomes

1. Trace the history of anthropological theory. You will recognize major figures and schools of thought in anthropological theory and be able to articulate their contributions to the field.
2. Critically analyze anthropological concepts of culture. Throughout the course, you will hone analysis skills through discussing and critiquing various anthropological perspectives on the culture concept.
3. Apply anthropological theory to contemporary anthropological "problems". Throughout the course, you will reflect on the usefulness of anthropological theory to the field and beyond. You will be able to articulate the connections made through writing and class discussion.

ANTH 355. Biological Anthropology

3 Credits (3)

An introduction to the fundamentals of the scientific method and organic evolution specific to the study of human origins and contemporary biological variation. Non-human primate diversity and behavior are also considered.

Learning Outcomes

1. Increase scientific literacy.
2. Improve specific skill areas including: Critical thinking; Expository writing; Analytical reading; Oral presentation skills.
3. Establish foundational knowledge as a basis for further study in: Evolutionary theory; Human variation and adaptation; Primatology; Human origins and evolution.

ANTH 356. Forensic Anthropology

3 Credits (3)

Overview of the field of forensic anthropology. Topics covered include basic human osteology; skeletal examination and documentation; skeletal trauma; personal identification; forensic taphonomy and the process of decomposition; archaeology and scene processing; sex, age, stature, and ancestry estimation; and contemporary issues and limitations in the field of forensic anthropology.

Learning Outcomes

1. Learn about the scientific method and how to apply scientific findings to field work.
2. Learn about the history and applications of forensic anthropology.
3. Gain a practical understanding of the methods, applications, and limitations of forensic anthropology as relates to police and other investigations.
4. Learn to identify human bones and the process of building a biological profile of human remains.
5. Learn about decomposition and how forensic anthropologists process and interpret crime scenes.

ANTH 357V. Medical Anthropology

3 Credits (3)

This course introduces students to evolutionary, ecological, interpretive, political-economic, and applied anthropological perspectives on health,

illness, and healing to address some of the major questions in the field. How do humans adapt to changing environments that bring with them new illnesses and diseases? How do anthropologists understand the multiple meanings of health and illness cross-culturally? How can anthropologists effectively study health inequalities? What can medical anthropological perspectives contribute to addressing the health issues that we face in our current global context?

Learning Outcomes

1. Explain medical anthropology to someone unfamiliar with the field. Meeting this goal requires that you are able to: Define medical anthropology; Define health, illness, sickness, disease, and healing; Explain basic research methods in medical anthropology; Identify the different perspectives within medical anthropology.
2. Evaluate health problems from medical anthropological perspectives. Meeting this goal requires that you are able to: Accomplish goal
3. Identify different medical anthropological perspectives in research and reporting on health problems; Identify what is missing (based on your knowledge of medical anthropological perspectives) in addition to what is present in research and reporting on health problems.
4. Apply medical anthropological perspectives to current health problems. Meeting this goal requires that you are able to: Accomplish goals 1 and 2; Develop deeper understanding of medical anthropological perspectives by formulating "in your own words" definitions of medical anthropological perspectives; Identify multiple facets of major health issues.

ANTH 360V. Food and Culture Around the World

3 Credits (3)

Study of the interaction between food and human culture from an anthropological perspective. Examines the traditional role of food in local economies, social relations, and identity around the world. Also examines the impact of globalization on traditional food systems and cultures.

ANTH 362V. Environmental Anthropology

3 Credits (3)

This course examines environmental studies from an anthropological perspective. The class focuses on how cultural values mediate environmental management. The class covers topics such as environmental anthropology, large scale development, biodiversity conservation, sustainable development, indigenous groups, consumption, and globalization.

Learning Outcomes

1. Students will understand the impact of cultural values on how humans interact with the environment.
2. Students will understand how different cultural perspectives can be used to address environmental problems.
3. Students will critically reflect on their own environmental values and recognize how these values are shaped by our own culture.

ANTH 375. Pottery Analysis in Archaeology

3 Credits (3)

This course introduces the basic concepts, methods, and approaches used in the analysis of archaeological pottery. The purpose of the course is first to provide hands-on experience with the full range of analytical techniques routinely applied to ceramic materials recovered from archaeological sites, but to also provide a contextual framework for the interpretation and evaluation of these data. Classes consist of brief introductory lectures, and seminar presentation and discussion of course readings. Lab meetings consist of exercises designed to provide you with practical experience working with the materials and measures covered in lectures and readings. Crosslisted with: ANTH 575.

Learning Outcomes

1. Students will learn the theory underlying pottery analysis as well as some of the methods used to identify and interpret pottery;
2. Students will learn to think about the organization of pottery technology from a behavioral rather than a purely typological framework;
3. Students will have the opportunity to develop and then evaluate a research question or problem statement within a chosen theoretical framework, as well as have the opportunity to evaluate that question or questions using both qualitative and quantitative analyses;
4. Students will gain the skills needed to assess pottery analysis reports and undertake pottery analyses for senior thesis, M.A. theses, and CRM contexts.

ANTH 376. Lithic Technology Organization

3 Credits (3)

Advanced seminars and laboratory exercises to learn and develop techniques and methods that will help us determine how to interpret behavioral and cultural information from lithic (stone tool) data.

Prerequisite(s): ANTH 315.

ANTH 378. Introduction to Lab Methods in Archaeology

3 Credits (3)

Introduction to laboratory techniques used in the analysis of archaeological materials.

Learning Outcomes

1. Identify different categories and types of archaeological materials.
2. Employ common methods for analyzing material culture.
3. Explain how research design determines analytical methods and shapes interpretations.
4. Discuss our ethical obligation to preserve collections for future researchers, while recognizing the challenges involved in this endeavor.

ANTH 385. Internship in Anthropology

3-12 Credits (3-12)

Applied or field experience to gain professional expertise. Placements with public agencies, NGOs, or research organizations. Topical focus tailored to student's individual needs through consultation with instructor.

Prerequisite(s): Junior status, consent of instructor and GPA 2.8 or better.

ANTH 388. Intermediate Archaeological Field School

2-6 Credits (2-6P)

Training in archaeological field methods, including excavation of archaeological sites, mapping, and data management and analysis. Consent of Instructor required.

Learning Outcomes

1. Map sites/site features using a compass and tape, GPS unit, and total station/RTK GNSS receiver.
2. Identify artifacts, ecofacts, and features in archaeological contexts.
3. Document sites, features, and/or excavation units using appropriate forms.
4. Conduct excavations using arbitrary or natural levels.
5. Process/analyze archaeological materials in field/laboratory settings.
6. Work collaboratively and productively with a team in a challenging field setting.
7. Record your daily field activities, observations, and preliminary interpretations in a field journal.

ANTH 389. Archaeological Mapping**3 Credits (3)**

Techniques for mapping archaeological sites and recording spatial distributions of archaeological data using a variety of surveying equipment and computer mapping software. This course will take you through the process of creating a detailed archaeological site plan map and record the information on the NM Cultural Resource Information System (NMCRIS). You will learn how to set up and operate a theodolite and GPS devices (both optical and total station, GNSS receivers). You will record data sufficient to make 1. a feature map; 2. a topographic map; and 3. an artifact density map on our chosen site. You will learn how to calculate horizontal distances and elevations. You will learn about the capabilities and common sources of error in the use of the equipment. You will transform your raw data and draw several kinds of maps using Surfer software.

Learning Outcomes

1. Learn different methods and use of survey instrumentation to create maps of archaeological sites.
2. Learn how to record and process field data needed to create a. a feature map; b. a topographic map; and c. an artifact density map on our chosen site.
3. Learn to calculate horizontal distance and elevation.
4. Use common mapping software – ARCGIS and Surfer to draw your maps.
5. Learn about the capabilities and common sources of error in survey instrumentation.
6. Produce accurate information and site maps needed to complete NMCRIS LA forms.

ANTH 399. Professionalism & Practice in Anthropology**3 Credits (3)**

This course serves as a capstone for Anthropology majors. It offers students a writing focused opportunity to hone professional anthropological skills including critical thinking and communication strategies. All communication takes a position; it makes an argument. Students will learn and practice these skills through writing, rewriting and then rewriting again a research paper, a curriculum vitae/resume, employment letters of inquiry, and graduate school letters of inquiry. Restricted to Anthropology Majors. May be repeated up to 3 credits.

Learning Outcomes

1. Learn and practice written communication these skills through writing, rewriting and then rewriting again a research paper,
2. Learn and practice professional verbal and visual communications through research presentations, job interviews and elevator speeches
3. Identify and use anthropologically informed ethical responsibilities that pervade written, verbal and visual communication skills (e.g., goals for use of information, use of accurate information, protection of sources of information, honest attribution of credit to sources of scholarly work, sensitivity to others cultural traditions);

ANTH 402. Contemporary Medical Anthropology**3 Credits (3)**

Contemporary Medical Anthropology This advanced seminar in medical anthropology addresses contemporary issues in the field of medical anthropology through theoretical and ethnographic texts. Topics span a wide range of studies in medical anthropology and may include such issues as the social production of health and illness, medical pluralism, discourses of mental health, the practice of complementary and alternative medicine, health disparities, the political economy of infectious disease, race and biological variation in biomedicine, and implementing biocultural perspectives. Crosslisted with: ANTH 546.

Prerequisite(s): ANTH 301 or ANTH 355 or ANTH 357V or consent of instructor.

Learning Outcomes

1. Discuss current issues relevant to the study of medical anthropology.
2. Apply medical anthropological concepts and ideas to theoretical and practical health issues.
3. Acquire skills in the critical appraisal of ethnographic literature.

ANTH 414. The Archaeology of Religion**3 Credits (3)**

The class offers an in-depth introduction to the Archaeology of Religion focusing on the theoretical framework of artifact agency. The course begins with a discussion of the role of material culture in society and religion (artifact agency theory) and then moves through a series of case studies that highlight important themes in the archaeology of religion. These themes include the Religion among the Earliest Paleolithic Cultures, Relationships between Houses and Temples, Sacrifice (Artifact, Animal and Human), New Religious Movements, and Witchcraft Persecution.

Learning Outcomes

1. Students will develop a stronger understanding of the role of religious material culture in anthropology and archaeology.
2. Students will develop strong research skills by applying that knowledge of material culture theory in a term paper that explores artifact agency in an ancient religion.
3. Students will develop strong communication skills through the preparation of a written term paper and class power point presentation of that research.

ANTH 415. Applied Anthropology**3 Credits (3)**

Examines the intellectual roots of applied anthropology and early case studies of anthropologists working as administrators. Examines the ethical and methodological approaches that applied anthropologists employ. Examination of case studies that show role of applied anthropologists in improving human service delivery, cultural preservation, planning and implementing programs of participatory change, advocacy, and economic development. Taught with ANTH 515.

ANTH 419. Topics in Prehistoric Archaeology**3 Credits (3)**

Specific subjects in prehistoric archaeology as announced in the Schedule of Classes. May be repeated up to 6 credits.

ANTH 431V. Nutritional Anthropology**3 Credits (3)**

This course provides biological, ecological, and cross-cultural perspectives on human nutrition. Topics covered include human nutritional evolution, dietary adaptation, variation in human foodways and habits, relationships between diet and health, nutrition transitions, and methods for studying human diet and nutrition in field settings.

Learning Outcomes

1. Understand the ways in which biology, culture, and ecology shape human nutritional outcomes and dietary patterns.
2. Be able to identify methods best suited to answering questions about human diet and nutrition in field settings.
3. Be able to develop a research question and basic research strategy.

ANTH 433V. Sex, Gender and Culture**3 Credits (3)**

This seminar course introduces students to the anthropological study of gender. We take an integrated approach to the subject, considering

the ways that that different kinds of anthropological research, including archaeology, biological anthropology, ethnography, etc., expand our understanding of the various ways gender is defined across space and time, how it is lived, and what it means to us and others. Students will review the historical context and development of this subject within the field, and will explore such topics as sex versus gender, embodiment and gendered performance, gender hierarchies, the politics of reproduction, and globalization. May be repeated up to 3 credits.

Learning Outcomes

1. Identify and evaluate different anthropological approaches to the study of gender
2. Develop and employ analytical and critical thinking skills
3. Demonstrate proficiency in oral and written communication
4. Integrate and synthesize knowledge of gender-related topics in a research paper

ANTH 435. Human Health and Biological Variation 3 Credits (3)

Overview of contemporary human biological variation and adaptability within a scientific evolutionary and biocultural framework. Special emphasis is placed on human adaptation to the environment and the sociocultural, epidemiological, and evolutionary factors that underlay contemporary issues in human health and disease. Crosslisted with: ANTH 535.

Learning Outcomes

1. Develop critical thinking skills and scientific literacy through discussion, reading, and writing exercises and evaluating scientific theories, data, and research methods.
2. Develop an understanding of evolutionary theory, and how human organic evolution shapes variation, adaptation, and health in contemporary human populations.
3. Learn how human evolutionary history has shaped the global distribution of contemporary human biological diversity.
4. Understand the scientific critique of the biological race concept, and how social inequality, particularly racism, can become embodied.
5. Understand the various ways that humans adapt to the environment on different timescales.
6. Study life course theory and how experiences during development impact health across the life course.
7. Develop specific transferable skills, including written communication, public speaking, and information gathering (research), and for graduate students, research questions development, hypothesis testing, basic data analysis/visualization in Excel.

ANTH 436. Evolutionary Medicine 3 Credits (3)

This course provides an overview of evolutionary medicine, a field that applies evolutionary theory to understanding variation in human biology and health and treating and preventing disease. Topics covered in the course include evolutionary perspectives on diet and nutrition, chronic disease, infectious disease, cancer, stress, mental health, reproductive health, women's health, and child growth and development.

Learning Outcomes

1. Understand the basic principles of evolutionary theory.
2. Understand how anthropologists and medical and public health professionals can apply evolutionary theory to understand human health and disease.
3. Understand both the promise and limits of evolution as an explanatory paradigm for variation in human health and disease.

4. Be able to apply principles of evolutionary medicine to development of a research proposal.
5. Develop collaborative and oral presentation skills through a group presentation.

ANTH 449. Directed Reading 1-6 Credits

Comprehensive reading on selected topics. May be repeated for a maximum of 6 credits.

Prerequisite(s): Upper division anthropology majors with consent of instructor.

ANTH 449 H. Directed Reading Honors 1-3 Credits

Same as ANTH 449. Additional work to be arranged. May be repeated for a maximum of 6 credits.

ANTH 456. Native American Intersections in Museums 3 Credits (3)

This course explores the changing relationships and complex intersections between Native people and museums. We will examine how museum practices of collection and exhibition influence ways in which knowledge is formed and presented, and interrogate the role of museums as crucial sites for discourse around issues of ownership, indigenous knowledge and representation. Case studies revealing shifting meanings of objects, curatorial challenges, the development of tribal museums and repatriation complexities will be used to critically engage with Native responses via art, criticism and legal action. Crosslisted with: ANTH 556.

ANTH 458. Gender and Reproduction 3 Credits (3)

This course examines biocultural variation in reproductive health and birth practices. Human reproductive events like childbirth, contraception, abortion, surrogacy, fertility treatment, and conception, are not only biological in nature, but are also shaped by cultural beliefs and social, medical, and political institutions. Through cross-cultural case studies, we will examine how reproductive experiences are impacted by health-related ideas and medical technologies, and by national and international population policies. We will explore how pregnancy, menstruation, birth, menopause, and fertility control provide sites for gender formation, the reproduction of social inequalities, and state regulation of national populations.

Prerequisite: ANTH 301 or ANTH 355 or ANTH 357V or consent of instructor.

Learning Outcomes

1. Identify the fundamental concepts, modes of analysis, and central questions of the anthropology of reproduction.
2. Gain proficiency in the use of critical thinking skills in their assessment of ethnographic writing.
3. Apply knowledge of peoples' reproductive practices, and gendered identities and sexual lifeways in a range of social contexts.
4. Articulate, in oral and written forms, the central issues in reproduction and culture.

ANTH 463. Cultural Resource Management I 3 Credits (3)

This course introduces you to the field of cultural resource management (CRM) and to the federal and state laws and regulations that govern most archaeology and historic preservation projects conducted today. Class lectures, readings, and written assignments will cover the major relevant US federal laws (NHPA, NEPA, ARPA, NAGPRA); New Mexico state cultural resource laws, regulations, and permitting practices; and major international heritage laws. Particular emphasis will be placed

on understanding how to evaluate and nominate cultural resources for listing on the National Register of Historic Places (NRHP). Good oral and written communication skills are essential for success in CRM, so students will be provided with numerous opportunities to develop these skills in class.

Learning Outcomes

1. Explain the goals of cultural resource management (CRM)
2. Describe the major laws and regulations that govern CRM in the United States, in the state of New Mexico, and abroad
3. Identify some common challenges with implementing these laws and regulations
4. Determine the eligibility of cultural resources for listing on the NRHP, and justify this determination

ANTH 464. Curation Crisis in Archaeology

3 Credits (3)

This collection management course will introduce students to collections curation, collections care, and collections-based research. Archaeological collections stewardship begins before an archaeologist steps foot into the field and continues well after the recovered collections reach the repository. This course provides students with an understanding of the curation "crisis" using archaeological collections curated at the University Museum as a case study and the responsibilities that archaeologists have to the collections they generate.

Learning Outcomes

1. Learn about the maintenance of archaeological collections
2. Learn about the management of, access to, and use of archaeological collections
3. Learn about the curation crisis at a small museum (e.g., Kent Hall University Museum)
4. Learn about collections-based research
5. Learn about various ways of disseminating archaeological collections to the public
6. Change the perception of the "just digging and we will deal with the collections later" approach.

ANTH 467. Archaeology of the American Southwest

3 Credits (3)

Description and analysis of the archaeology of the American Southwest including paleo-environmental reconstruction, culture change, and relations with contemporary cultures.

Prerequisite: ANTH 315.

Learning Outcomes

1. Learn the culture history of the American Southwest from the Ice-Age through the Spanish Colonial Period.
2. Students will learn the advances in archaeological method and theory developed in the American Southwest such as Tree-ring dating, Pottery Seriation, Paleoindian Archaeology.
3. Students will develop a research interest in the region through a paper specializing in a theme and subregion e.g. Architectural change in the four corners during the 13th century, the adoption of corn in the Late archaic borderlands of southern New Mexico.

ANTH 468. Applied Medical Anthropology

3 Credits (3)

This course introduces students to applications of medical anthropological perspectives to health care, international development, public health, and health policy.

Learning Outcomes

1. Discuss the usefulness of anthropological perspectives in addressing health issues in a variety of interdisciplinary and professional settings.
2. Assess the health impact of public policy from anthropological perspective.

ANTH 474. Human Osteology

3 Credits (3)

A survey of the functional, developmental, and evolutionary biology of the human skeleton. Identifying bones and teeth from hands-on experience with skeletal and dental material. Provides a foundation for human evolutionary studies, bioarchaeology and forensic anthropology. May be repeated up to 3 credits. Crosslisted with: BIOL 424.

ANTH 477. Zooarchaeology

3 Credits (3)

Detailed study and analysis of taphonomic processes affecting animal bone recovered from archaeological and paleontological contexts. May be repeated up to 3 credits.

ANTH 485. Special Research Project

1-3 Credits

Anthropological, archaeological, or museum field work or laboratory experience in academic, private, state, or federal agencies. Must spend 30 hours in a field, museum, or laboratory setting per credit hour earned. May be repeated up to 6 credits.

Prerequisite(s): Complete 12 ANTH credits and consent of instructor.

ANTH 486. Community Engagement and Service Learning

3 Credits (3)

Course combines classroom instruction with a local community service project. Formal instruction component will examine social science research findings and perspectives on a locally relevant social issue or problem. In the service learning component, students will be trained and work on a local community service project. Students will develop field experience and methodological skills in community engagement. Projects and social issues may vary for different semesters.

ANTH 488. Archaeological Field School Advanced

2-6 Credits (2-6P)

Additional training in archaeological field methods for students with previous fieldwork experience. Consent of Instructor required.

Learning Outcomes

1. Map sites/site features using a compass and tape, GPS unit, and total station/RTK GNSS receiver.
2. Identify artifacts, ecofacts, and features in archaeological contexts.
3. Document sites, features, and/or excavation units using appropriate forms.
4. Conduct excavations using arbitrary or natural levels.
5. Process/analyze archaeological materials in field/laboratory settings.
6. Work collaboratively and productively with a team in a challenging field setting.
7. Record your daily field activities, observations, and preliminary interpretations in a field journal.

ANTH 497. Special Topics

1-6 Credits (1-6)

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

Prerequisite(s): Junior or above standing.

ANTH 500. Seminar in Anthropological Theory

3 Credits (3)

Detailed focus on specific areas of anthropological theory. Course subtitled in the Schedule of Classes. Course may be repeated.

Prerequisite(s): graduate standing in Anthropology or consent of instructor.

ANTH 502. Fundamentals of Anthropology

1-4 Credits (1-4)

Review of fundamental knowledge and theories in biological, cultural, or linguistic anthropology or archaeology. Graded S/U.

ANTH 503. Anthropological Theory

3 Credits (3)

This seminar is designed to introduce graduate students to the major concepts and developments in anthropological theory. Students will develop an understanding of the major principles, contributions, and limitations of anthropological theory from the 1890s to the present. The course will address theoretical developments in biological anthropology, sociocultural anthropology, archaeology, and public and applied anthropology.

Learning Outcomes

1. Articulate the history of theoretical developments in multiple anthropological subfields and explain the holistic connections among them.
2. Explain and critique the major theoretical formulations of the field, including: human biological evolution and variation; cultural relativism; practice theory; life history and formation processes of archaeological, paleontological, and contemporary sites and specimens; historical contingency in culture change and globalization; human ecology and environmental anthropology, past and present; indigenous perspectives, participatory action research, and collaborative research designs; identity and the intersections of gender, sex, race, class, and other categories, past and present; origins and contemporary variation of inequality and socioeconomic disparities; political economy, domination and resistance, past and present; the development and critique of diverse narratives of the past drawn from archaeological/material, visual and performative, documentary, and oral historical media; stewardship of tangible and intangible cultural heritage,
3. Read and practice in the norms of written and verbal expression across multiple theoretical domains in anthropology.

ANTH 505. Issues in Anthropological Practice

3 Credits (3)

This is a course in professional development in which students design their thesis/non-thesis research projects and write a first draft of their capstone research proposal. The purpose is to connect the MA thesis or non-thesis research project to your future career. Professionals in anthropology should demonstrate competency in research and writing by completing an M.A. thesis or qualification equivalent (e.g. internship report, research report, which increasingly include public scholarship and the development of creative digital media). Successful completion of an original research project demonstrates that a student can conduct applied and collaborative research, complete a scope of work according to standards and guidelines of the agency, institution, or organization, and evaluate the research and contributions of colleagues and peers. Anthropologists are all called to participate in the investigation, management, and evaluation of cultural resources (tangible and intangible), address the intersectionalities within organizations and institutions that differentially impact social groups, and work with individuals and communities to achieve shared objectives that enhance engagement.

Learning Outcomes

1. Students will develop and implement a research project in anthropology. We will focus on research design—from defining the research problem, funding, lit review, logistics of fieldwork, analysis, and write-up. Students will move from exploring a topic of interest to developing a proposal for investigation.
2. Students will develop professional skills, ethics, values, and attitudes necessary for developing and implementing a research project and for employment in the field. They will map out a pathway to a career in anthropology. We will examine anthropological practice in academic and applied contexts. We will consider expectations and qualifications needed for different work environments and degree programs. Students will work towards matching NMSU's MA curriculum to their professional goals. You should make the curriculum and university resources work for you.

ANTH 506. Advanced Studies in Physical Anthropology

1-3 Credits

Lectures, seminars, or laboratory research in selected topics. May be repeated for a maximum of 12 credits.

Prerequisite(s): graduate standing in Anthropology or consent of instructor.

ANTH 507. Advanced Studies in Archaeology

1-3 Credits

Lectures, seminars, field or laboratory research in selected topics. May be repeated for a maximum of 12 credits.

Prerequisite(s): graduate standing in Anthropology or consent of instructor.

ANTH 508. Advanced Studies in Cultural Anthropology

1-3 Credits

Lectures, seminars, or field research in selected topics. May be repeated for a maximum of 12 credits.

Prerequisite(s): graduate standing in Anthropology or consent of instructor.

ANTH 512. Quantitative Analytical Methods in Anthropology

3 Credits (3)

This class is an introduction to statistical analysis of anthropological and social science data. Students will learn how quantitative and statistical techniques are used in the analysis of anthropological problems and how to evaluate statistical arguments in the literature. No previous background in statistics is required. We will consider data collection, sampling and statistical populations, exploratory summaries of data, and the importance of choosing appropriate statistical techniques. All course work will emphasize anthropological interpretation through applied statistical methods. The course has a four-field focus (archaeology, biological anthropology, cultural anthropology, and linguistics), and students will work with readings, examples, and problem assignments from each subfield.

Learning Outcomes

1. Articulate the difference between descriptive and inferential statistics.
2. Explain the difference between a population and a sample and learn how to draw random samples (various methods – simple random, stratified, systematic, etc.) in the field and using numerical data and statistical procedures within SAS or other STATPACKS (SPSS, R).
3. Use appropriate graphs, tables, and measures of central tendency and dispersion to display and summarize distributions of nominal, ordinal, interval and ratio level data.
4. Understand the Normal Distribution and the assumptions required for hypothesis testing.

5. Perform hypothesis testing and interpret the results for univariate, bivariate, and multivariate statistical procedures, including Chi Square, T-tests, Non-parametric Comparison tests, ANOVA, Correlation, Simple Linear Regression, Multiple Regression, Cluster and Discriminant Analysis (as time permits).
6. Develop an exploratory statistical analysis for original anthropological data and write a final paper interpreting the results.

ANTH 514. Advanced Issues in the Archaeology of Religion
3 Credits (3)

The class offers an in-depth introduction to the Archaeology of Religion focusing on the theoretical framework of artifact agency. The course begins with a discussion of the role of material culture in society and religion (artifact agency theory) and then moves through a series of case studies that highlight important themes in the archaeology of religion. These themes include the Religion among the Earliest Paleolithic Cultures, Relationships between Houses and Temples, Sacrifice (Artifact, Animal and Human), New Religious Movements, and Witchcraft Persecution.

Learning Outcomes

1. Students will develop a stronger understanding of the role of religious material culture in anthropology and archaeology and be required to lead class discussions.
2. Students will develop strong research skills by applying that knowledge of material culture theory in a term paper that explores artifact agency in an ancient religion.
3. Students will develop strong communication skills through the preparation of a written term paper and class power point presentation of that research.

ANTH 515. Applied Anthropology
3 Credits (3)

Examines the intellectual roots of applied anthropology and early case studies of anthropologists working as administrators. Examines the ethical and methodological approaches that applied anthropologists employ. Examination of case studies that show the role of applied anthropologists in improving human service delivery, cultural preservation, planning and implementing programs of participatory change, advocacy, and economic development. Taught with ANTH 415.

ANTH 516. Advanced Archaeology of the American Southwest
3 Credits (3)

Advanced topics in Southwestern archaeology including ritual architecture, environmental reconstruction, violence, site formation processes, and experiment and research.

Learning Outcomes

1. Students will have an advanced understanding of the changes in subsistence, social organization, and material culture in the American Southwest from the Ice Age through the Spanish Entrada.
2. Students will understand the history of archaeological method and theory as it played out in the archaeology of the American Southwest. They will recognize that theory determines they questions ask about the ancient peoples of the region.
3. Graduate students will write a term paper (professional technical and scientific writing) that contributes to their MA projects either directly as part of a specific thesis or as extension of their interest in a topic (e.g., identity, domestication, ritual violence) or method (e.g., pottery sourcing, faunal analysis).

ANTH 517. Advanced Topics in Mesoamerican Archaeology
3 Credits (3)

Specific subjects in Mesoamerican archaeology to be announced in the Schedule of Classes. May be repeated for a maximum of 6 credits.

Prerequisite: graduate standing.

ANTH 518. Advanced Historical Archaeology
3 Credits (3)

This survey course explores the development of historical archaeology, its methods and theory, and popular research themes within the discipline. Students will be introduced to the ways that archaeologists identify and analyze historical-period documents, oral histories, features, and artifacts, and how they use these data to deepen our understanding of the recent past. Crosslisted with: ANTH 318.

Learning Outcomes

1. Critically evaluate historical sources.
2. Identify and analyze common historical-period artifacts and features.
3. Utilize historical and archaeological evidence in research.
4. Demonstrate how historical archaeology can be used to draw attention to and highlight the contributions of diverse populations in history.
5. Demonstrate improved oral and written communication skills.

ANTH 519. Advanced Topics in Prehistoric Archaeology
3 Credits (3)

Seminar on specialized research archaeology.

Prerequisite: graduate standing.

ANTH 520. Ethnographic Field Methods
3 Credits (3)

Basic methodologies used in conducting qualitative ethnographic research. Projects in participant observation, ethnographic interviews, life history interviews, folk taxonomy construction, and coding of field notes.

ANTH 522. Archaeological Field School-Graduates
2-6 Credits (2-6P)

Graduate-level training in archaeological field methods, including excavation, survey, mapping, documentation, and processing/analysis of data. Consent of Instructor required.

Learning Outcomes

1. Map sites/site features using a compass and tape, GPS unit, and total station/RTK GNSS receiver.
2. Identify artifacts, ecofacts, and features in archaeological contexts.
3. Document sites, features, and/or excavation units using appropriate forms.
4. Conduct excavations using arbitrary or natural levels.
5. Process/analyze archaeological materials in field/laboratory settings.
6. Process archaeological materials safely so that they can be analyzed in a laboratory environment.
7. Record your daily field activities, observations, and preliminary interpretations in a field journal.

ANTH 523. Archaeological Mapping
3 Credits (3)

Techniques for mapping archaeological sites and recording spatial distributions of archaeological data using a variety of surveying equipment and computer mapping software. This course will take you through the process of creating a detailed archaeological site plan map and record the information on the NM Cultural Resource Information System (NMCRIS). You will learn how to set up and operate a theodolite and GPS devices (both optical and total station, GNSS receivers). You will record data sufficient to make 1. a feature map; 2. a topographic map; and 3. an artifact density map on our chosen site. You will learn how to calculate horizontal distances and elevations. You will learn about the

capabilities and common sources of error in the use of the equipment. You will transform your raw data and draw several kinds of maps using Surfer software.

Learning Outcomes

1. Learn different methods and use of survey instrumentation to create maps of archaeological sites.
2. Learn how to record and process field data needed to create a. a feature map; b. a topographic map; and c. an artifact density map on our chosen site.
3. Learn to calculate horizontal distance and elevation.
4. Use common mapping software – ARCGIS and Surfer to draw your maps.
5. Learn about the capabilities and common sources of error in survey instrumentation.
6. Produce accurate information and site maps needed to complete NMCRIS LA forms.

ANTH 529. Advanced Evolutionary Medicine

3 Credits (3)

This course provides an overview of evolutionary medicine, a field that applies evolutionary theory to understanding variation in human biology and health and treating and preventing disease. Topics covered in the course include evolutionary perspectives on diet and nutrition, chronic disease, infectious disease, cancer, stress, mental health, reproductive health, women's health, and child growth and development.

Learning Outcomes

1. Understand the basic principles of evolutionary theory.
2. Understand how anthropologists and medical and public health professionals can apply evolutionary theory to understand human health and disease.
3. Understand both the promise and limits of evolution as an explanatory paradigm for variation in human health and disease.
4. Be able to apply principles of evolutionary medicine to development of a research proposal.
5. Develop collaborative and oral presentation skills through a group presentation.

ANTH 531. Issues in Nutritional Anthropology

3 Credits (3)

This course provides biological, ecological, and cross-cultural perspectives on human nutrition. Topics covered include human nutritional evolution, dietary adaptation, variation in human foodways and habits, relationships between diet and health, nutrition transitions, and methods for studying human diet and nutrition in field settings.

Learning Outcomes

1. Understand the ways in which biology, culture, and ecology shape human nutritional outcomes and dietary patterns.
2. Be able to identify methods best suited to answering questions about human diet and nutrition in field settings.
3. Be able to develop a research question and basic research strategy.

ANTH 533. Advanced Issues in Sex, Gender, and Culture

3 Credits (3)

Survey of the history of anthropological ideas about gender and women, and a comparison of gender roles, relations, and ideologies across a range of cultures. May be repeated up to 3 credits.

Learning Outcomes

1. Explain to others how you understand the concepts of sex, women, gender, and culture.

2. Critically analyze the uses of these concepts across a range of different contexts including media, politics, cultural performance, and everyday interactions.
3. Apply theoretical concepts introduced in this class to a current anthropological research problem/topic.

ANTH 535. Adv. Human Health and Biological Variation

3 Credits (3)

Overview of contemporary human biological variation and adaptability within a scientific evolutionary and biocultural framework. Special emphasis is placed on human adaptation to the environment and the sociocultural, epidemiological, and evolutionary factors that underlay contemporary issues in human health and disease. Crosslisted with: ANTH 435.

Learning Outcomes

1. Develop critical thinking skills and scientific literacy through discussion, reading, and writing exercises and evaluating scientific theories, data, and research methods.
2. Develop an understanding of evolutionary theory, and how human organic evolution shapes variation, adaptation, and health in contemporary human populations.
3. Learn how human evolutionary history has shaped the global distribution of contemporary human biological diversity.
4. Understand the scientific critique of the biological race concept, and how social inequality, particularly racism, can become embodied.
5. Understand the various ways that humans adapt to the environment on different timescales.
6. Study life course theory and how experiences during development impact health across the life course.
7. Develop specific transferable skills, including written communication, public speaking, and information gathering (research), and for graduate students, research questions development, hypothesis testing, basic data analysis/visualization in Excel.

ANTH 538. Plants, Culture, and Sustainable Development

3 Credits (3)

Study of role of indigenous cultures and indigenous knowledge systems in plant domestication, ethnobotany, and preservation of traditional crop diversity. Examination of issues related to conserving cultural diversity, food systems, food security and biodiversity.

ANTH 539. Culture and Foodways

3 Credits (3)

Study of interaction between food and culture from anthropological perspective. Study of role of food in cultural history, social relations, ritual, and identity. Examination of impact of globalization of food systems on traditional cultures, local food systems, and food security.

ANTH 540. Cultural Resource Management

3 Credits (3)

Study of federal and state of New Mexico historic preservation laws and regulations and their application in current Cultural Resource Management and a review of relevant case studies.

ANTH 542. Cultural Resource Management II

3 Credits (3)

Continuation of ANTH 540. This course introduces students to the business and practice of doing contractual cultural resource management in the United States.

Learning Outcomes

1. Map an archaeological site (meeting New Mexico state standards for archaeological survey)

2. Document an archaeological site (using a Laboratory of Anthropology site form)
3. Prepare a written site description suitable for inclusion in a survey report
4. Analyze and present data using relevant software (e.g., Excel, Access)
5. Prepare a research proposal or report (meeting New Mexico state standards)

ANTH 543. Indigenous Ways of Knowing

3 Credits (3)

This course examines Indigenous knowledge and ways of knowing as a means to gain an appreciation of an epistemology and ontology that may be outside the boundaries of Eurocentric theory, concepts, and principles. Knowledge development through mythology and story telling is viewed from the nature of difference rather than comparative analysis.

Learning Outcomes

ANTH 545. Advanced Museology

3 Credits (3)

This course provides a broad introduction to the museum world. Through discussion of readings, examination of case-studies, and practical assignments, students will gain an understanding of the museum as an institution, as well as learn the challenges and responsibilities that museums and their staff encounter. Topics include the history of museums, contemporary debates surrounding the definition of museums, ethical and legal issues, and community connections. The course will cover various types of museums—including art, history, ethnographic, indigenous, and scientific—and discuss how these thematic orientations impact museum practice. Students will also explore common museum processes such as collecting, cataloguing, conservation, exhibition, research, and education through practical exercises using the collections of the University Museum in Kent Hall, as well as through case studies of museums around the world.

Learning Outcomes

1. Describe the major conceptual and practical influences on museums today—including issues of historical development, ethics, missions, and thematic orientations.
2. Critically engage with diverse types of museums as cultural institutions, their practices, and the communities with whom they engage.
3. Implement skills relevant to the museum profession, such as collections management, condition reporting, exhibition and programming planning, and research.

ANTH 546. Advanced Contemporary Medical Anthropology

3 Credits (3)

This advanced seminar in medical anthropology addresses contemporary issues in the field of medical anthropology through theoretical and ethnographic texts. Topics span a wide range of studies in medical anthropology and may include such issues as the social production of health and illness, medical pluralism, discourses of mental health, the practice of complementary and alternative medicine, health disparities, the political economy of infectious disease, race and biological variation in biomedicine, and implementing biocultural perspectives. Crosslisted with: ANTH 402.

Learning Outcomes

1. Discuss current issues relevant to the study of medical anthropology.
2. Apply medical anthropological concepts and ideas to theoretical and practical health issues.
3. Acquire skills in the critical appraisal of ethnographic literature.

ANTH 549. Advanced Museum Anthropology

3 Credits (3)

This course provides an introduction to the methodological and theoretical approaches of museum anthropology. Students will gain experience with all these aspects of museum anthropology in the course by engaging with critical scholarship, analyzing case studies, and practicing collections-based research methods utilizing the collections of the University Museum. Through assignments students will analyze objects in the museum's collections using techniques of close looking, drawing, photography, sequences of making, and external research using scholarly sources. Students will gain skills in primary and secondary research, the analysis of material culture, and the practicalities of navigating research in museums.

Learning Outcomes

1. Describe major theoretical approaches to museum anthropology, and how these have changed over time.
2. Critically engage with the intersections between museums as institutions and the practice of anthropology, including the politics of representation.
3. Implement methodological research skills as a student-scholar by conducting independent research based on museum collections.
4. Convert collections-based research into written and media works characteristic of scholar-facing and public-facing practice in museum anthropology, curatorship, and museum studies.

ANTH 556. Advanced Native American Intersections in Museums

3 Credits (3)

This course explores the changing relationships and complex intersections between Native people and museums. We will examine how museum practices of collection and exhibition influence ways in which knowledge is formed and presented, and interrogate the role of museums as crucial sites for discourse around issues of ownership, indigenous knowledge and representation. Case studies revealing shifting meanings of objects, curatorial challenges, the development of tribal museums and repatriation complexities will be used to critically engage with Native responses via art, criticism and legal action. Crosslisted with: ANTH 456.

ANTH 558. Advanced Gender and Reproduction

3 Credits (3)

This course examines biocultural variation in reproductive health and birth practices. Human reproductive events like childbirth, contraception, abortion, surrogacy, fertility treatment, and conception, are not only biological in nature, but are also shaped by cultural beliefs and social, medical, and political institutions. Through cross-cultural case studies, we will examine how reproductive experiences are impacted by health-related ideas and medical technologies, and by national and international population policies. We will explore how pregnancy, menstruation, birth, menopause, and fertility control provide sites for gender formation, the reproduction of social inequalities, and state regulation of national populations.

Learning Outcomes

1. Identify the fundamental concepts, modes of analysis, and central questions of the anthropology of reproduction.
2. Learn how to use a cross-cultural approach to understand reproductive health.
3. Gain proficiency in the use of critical thinking skills in their assessment of ethnographic writing.
4. Summarize key historical and contemporary debates in the field of reproductive health.
5. Apply knowledge of peoples' reproductive practices, and gendered identities and sexual lifeways in a range of social contexts.

6. Articulate, in oral and written forms, the central issues in reproduction and culture.

ANTH 560. Advanced Forensic Anthropology

3 Credits (3)

Overview of the field of forensic anthropology. Topics covered include basic human osteology; skeletal examination and documentation; skeletal trauma; personal identification; forensic taphonomy and the process of decomposition; archaeology and scene processing; sex, age, stature, and ancestry estimation; and contemporary issues and limitations in the field of forensic anthropology.

Learning Outcomes

1. Understand how scientific findings from fields like biological anthropology are applied in forensic anthropology.
2. Understand the history and range of applications of forensic anthropology.
3. Gain a practical understanding of the methods, applications, and limitations of forensic anthropology as relates to police and other investigations.
4. Gain a practical understanding of how forensic anthropologists identify human bones and the process of building a biological profile of human remains.
5. Understand processes like decomposition and recovery of remains at crime scenes.

ANTH 564. Advanced Curation Crisis in Archaeology

3 Credits (3)

This collection management course will introduce students to collections curation, collections care, and collections-based research. Archaeological collections stewardship begins before an archaeologist steps foot into the field and continues well after the recovered collections reach the repository. This course provides students with an understanding of the curation "crisis" using archaeological collections curated at the University Museum as a case study and the responsibilities that archaeologists have to the collections they generate.

Learning Outcomes

1. Learn about the maintenance of archaeological and repository collections over time
2. Learn about the management of, access to, and use of archaeological collections
3. Learn about the curation crisis at a small museum (e.g., Kent Hall University Museum)
4. Learn about collections-based research
5. Learn about the development of a small as well as large archaeological database
6. Learn about various ways of disseminating archaeological collections to the public
7. Change the perception of the "just digging and we will deal with the collections later" approach.

ANTH 574. Advanced Human Osteology

3 Credits (3)

Advanced Human Osteology surveying the functional, developmental and evolutionary biology of the human skeleton. Identifying bones and teeth from hands-on experience with skeletal and dental material. Provides a foundation for human evolutionary studies, bioarchaeology and forensic anthropology. May be repeated up to 3 credits. Crosslisted with: BIOL 574.

ANTH 575. Advanced Pottery Analysis in Archaeology

3 Credits (3)

This course introduces the basic concepts, methods, and approaches used in the analysis of archaeological pottery. The purpose of the course is first to provide hands-on experience with the full range of analytical techniques routinely applied to ceramic materials recovered from archaeological sites, but to also provide a contextual framework for the interpretation and evaluation of these data. Classes consist of brief introductory lectures, and seminar presentation and discussion of course readings. Lab meetings consist of exercises designed to provide you with practical experience working with the materials and measures covered in lectures and readings. Crosslisted with: ANTH 375.

Learning Outcomes

1. Students will learn the theory underlying pottery analysis as well as some of the methods used to identify and interpret pottery;
2. Students will learn to think about the organization of pottery technology from a behavioral rather than a purely typological framework;
3. Students will have the opportunity to develop and then evaluate a research question or problem statement within a chosen theoretical framework, as well as have the opportunity to evaluate that question or questions using both qualitative and quantitative analyses;
4. Students will gain the skills needed to assess pottery analysis reports and undertake pottery analyses for senior thesis, M.A. theses, and CRM contexts.

ANTH 576. Lithic Technology Organization

3 Credits (3)

Advanced seminars and laboratory exercises to learn and develop techniques and methods that will help us determine how to interpret behavioral and cultural information from lithic (stone tool) data. Consent of Instructor required.

ANTH 577. Advanced Zooarchaeology

3 Credits (3)

Detailed study and analysis of taphonomic processes affecting animal bone recovered from archaeological and paleontological contexts.

ANTH 578. Advanced Lab Methods in Archaeology

3 Credits (3)

Examination of advanced laboratory techniques used in the analysis of archaeological materials.

ANTH 579. Qualitative Data Analysis and Interpretation

3 Credits (3)

This course focuses on methods for qualitative data analysis, both computer-assisted and non-computer-assisted, and interpretation. It includes writing up data for academic articles or theses.

ANTH 585. Method and Theory in Archaeology

3 Credits (3)

Focus on major methodological and theoretical aspects of contemporary archeology.

ANTH 587. Field Work in Latin America

3-12 Credits

Covers anthropological field methods in Latin America that also incorporate in-field lab analysis. No S/U grading.

Prerequisite: consent of instructor.

ANTH 596. Readings

1-6 Credits

Individual study of selected readings and topics. May be repeated for a maximum of 6 credits. Consent of instructor required.

ANTH 597. Internship

1-9 Credits

Anthropological or archaeological internship in private, state, or federal agency. May be repeated for a maximum of 18 credits. Consent of instructor required. Restricted to ANTH majors.

Prerequisite(s): graduate standing.

ANTH 598. Special Research Problems
1-6 Credits (6)

Individual analytic or experimental investigations. May be repeated under different subtitles for a maximum of 6 credits. Consent of instructor required. Restricted to ANTH majors.

Prerequisite(s): graduate standing.

ANTH 599. Master's Thesis
1-15 Credits

Thesis. Consent of instructor required. Restricted to ANTH majors.

Prerequisite(s): graduate standing.

Name: Lisa Muñoz, Department Administrator

Anthropology - Bachelor of Arts

The field of anthropology provides a broadly based education in the social and biological sciences. Undergraduate anthropology majors develop an understanding of human diversity that will benefit them in a wide variety of careers. They have particular advantage in positions that require contact with different cultures and ethnic groups or with large organizations that provide human services.

Students intending to become professional anthropologists pursue careers in teaching, archaeological research, museums, public and private cultural resource management, international development and business, human services and health care, forensic sciences, urban planning, agricultural development, and administration. While anthropology is a traditional academic discipline, it also has become an applied profession.

Today, many anthropologists hold important positions in government, business, public policy organizations, and health professions. Anthropology's broad perspective on human diversity and intercultural relations provides students with valuable professional skills. NMSU anthropologists are committed to teaching practical knowledge and useful skills that will contribute to students' career goals and to their intellectual development.

Requirements

The BA in Anthropology requires 36 credits, 15 in upper division core courses (ANTH 301 Cultural Anthropology, ANTH 315 Introduction to Archaeology, ANTH 355 Biological Anthropology, ANTH 350 Anthropological Theory, and ANTH 399 Professionalism & Practice in Anthropology). Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Prefix	Title	Credits
General Education		
<i>Area I: Communications</i>		
<i>English Composition - Level 1</i>		
ENGL 1110G	Composition I	4
or ENGL 1110H	Composition I Honors	
<i>English Composition - Level 2</i>		
Select one English course from the following list ¹		3
ENGL 2130G	Advanced Composition	
ENGL 2210G	Professional and Technical Communication Honors	
ENGL 2210H	Professional and Technical Communication Honors	
ENGL 2215G	Advanced Technical and Professional Communication	
ENGL 2221G	Writing in the Humanities and Social Science	
<i>Oral Communication</i> ²		3
<i>Area II: Mathematics</i>		3-4
Any Mathematics course found in Area II will meet the requirement, excluding MATH 2134G ²		
MATH 1350G	Introduction to Statistics (recommended)	
<i>Area III/IV: Laboratory Sciences and Social/Behavioral Sciences</i> ^{3,4}		10-11
Area III: Laboratory Sciences (4 credits)		
ANTH 1135G & ANTH 1135L	Introduction to Biological Anthropology and Introduction to Biological Anthropology Lab (recommended, not required)	
Area IV: Social/Behavioral Sciences (3 credits)		
The following are recommended but not required.		
ANTH 1115G	Introduction to Anthropology	
ANTH 1140G	Introduction to Cultural Anthropology	
ANTH 1160G	World Archaeology	
ANTH 2140G	Indigenous Peoples of North America	
Either an Area III/IV: Laboratory Sciences or Social/Behavioral Sciences Course (4 or 3 credits)		
<i>Area V: Humanities</i> ²		3
<i>Area VI: Creative and Fine Arts</i> ²		3
<i>General Education Elective</i> ²		3-4
Viewing A Wider World ⁵		6
Departmental/College Requirements		
ANTH 301	Cultural Anthropology	3
ANTH 315	Introduction to Archaeology	3
ANTH 350	Anthropological Theory	3
ANTH 355	Biological Anthropology	3
ANTH 399	Professionalism & Practice in Anthropology	3
ANTH 301, ANTH 315, and ANTH 355 may be taken in any order that best suits the student's interests.		
<i>Departmental Electives</i>		
Select additional electives in anthropology to bring total credits in major to 36, including 27 upper-division.		15
Second Language Requirement: (required- see below)		
Electives, to bring the total credits to 120		49-52
Students must graduate with 48 upper-division.		
Total Credits		120

¹ A grade of C- or better must be earned.

² See the General Education (p. 227) section of the catalog for a full list of courses

- ³ Students taking nine or more credits in a specific subject area, even though the courses are not designated as General Education courses, will have met the general education requirements for that subject area.
- ⁴ All students must take one Area III: Laboratory Science (4 credits), one Area IV: Social/Behavioral Science Course (3 credits) and one additional course in either area (3-4 credits) in order to complete the requirement.
- ⁵ Students must complete two Viewing the Wider World Courses (p. 231) (VWW) for a total of 6 credits. One VWW must be from outside of the College of Arts and Sciences, and the second must be from outside of Anthropology. A student may substitute three credits taken as study abroad for one of the VWW course requirements.

Second Language Requirement

For the Bachelor of Arts in Anthropology, all majors must reach a one year proficiency in a foreign language (through 1120 level, completed with a C- or better) or equivalent/placement. Student who choose to earn the Concentration in Culture and Language must reach a two year proficiency in a foreign language (through 2120 level with a C- or better) or equivalent/placement. The options to complete these requirements are listed below. The number of credits that a student needs to take may vary depending on what level of language proficiency they already possess. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree. Please note that language immersion courses are available through the Office of Experiential Learning and Education Abroad.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120 & FREN 2110 & FREN 2120	French I and French II and French III and French IV	3-14
GRMN 1110 & GRMN 1120 & GRMN 2110 & GRMN 2120	German I and German II and German III and German IV	3-14
JAPN 1110 & JAPN 1120 & JAPN 2110 & JAPN 2120	Japanese I and Japanese II and Japanese III and Japanese IV	3-14
SPAN 1110 & SPAN 1120 & SPAN 2110 & SPAN 2120	Spanish I and Spanish II and Spanish III and Spanish IV	3-14
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6
<i>For Heritage Speakers:</i>		
SPAN 1210 & SPAN 1220 & SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II and Spanish for Heritage Learners III	3-9

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3
SIGN 2110	American Sign Language III	3

Option 3:

Prefix	Title	Credits
Challenge the 1120 or 2120 level for the following courses:		
FREN 2120 or GRMN 2120 or JAPN 2120 or SPAN 2120	French IV German IV Japanese IV Spanish IV	3
<i>OR</i>		
Challenge the 1120/2210 level for the following courses:		
PORT 1120 or SPAN 2210	Portuguese II Spanish for Heritage Learners III	3

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of two years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Freshman		Credits

- ¹ Students must take one Area III: Laboratory Sciences course, one Area IV: Social/Behavioral Science Course and an additional course in either area in order to fulfill the General Education requirements.
- ² Students must take one Area V: Humanities course and one Area VI: Creative and Fine Arts Course in order to fulfill their General Education requirements. Students completing the Concentration in Culture and Language may take LING 2110G for their Area V requirement.
- ³ See the General Education (p. 227) section of the catalog for a full list of courses.
- ⁴ Please note that immersion courses abroad are available through Study Abroad and may substitute for courses in the second language sequence. Language courses numbered 1110 and 1120 are needed for the basic foreign language requirement for the BA in Anthropology. Language courses numbered 2110 and 2120 are required for students pursuing the Concentration in Language and Culture.
- ⁵ Core courses ANTH 301 Cultural Anthropology, ANTH 315 Introduction to Archaeology, and ANTH 355 Biological Anthropology may be taken in any order that best suits the student's academic development.
- ⁶ Summer Course offerings commonly include ANTH 388 Archaeological Field School, ANTH 488 Advanced Archaeological Field School, which follows logically from the ANTH 315 Introduction to Archaeology core class.
- ⁷ Students are encouraged to Study Abroad or begin a minor in a related field, and a VWW course can often be an entry to a minor. Three credits of Study Abroad may substitute for one VWW requirement. Students completing the Concentration in Culture and Language may take LING 302V as one VWW requirement.
- ⁸ Anthropology students often complete minors in related fields. It is recommended but not required. See faculty for advice about how to enhance your educational development with a minor.
- ⁹ Please note that ANTH 399 Professionalism & Practice in Anthropology is a capstone course for the degree and ideally should be taken in the Spring of the junior year, after completion or in conjunction with the Anthropology core courses. ANTH 399 is only offered in the Spring semester.
- ¹⁰ For summer field opportunities, consult a faculty advisor. Applications for summer field courses are usually due by mid March. Honors students in Anthropology are encouraged to seek out National Science Foundation - Research Experiences for Undergraduates Sites Programs in the Division of Social and Behavioral Sciences. The NMSU Honors College also offers the Honors College Scholarship for a self-designed international travel and research experience. Sophomore and Junior Crimson Scholars are eligible to apply.
- ¹¹ A minimum of 27 upper division credits in Anthropology is required overall. A minimum of 36 total credits in Anthropology is required for the B.A. degree.

Anthropology (Culture & Language) - Bachelor of Arts

The BA in Anthropology with a concentration in Culture and Language supports Anthropology majors who wish to develop a focus in cultural anthropology, linguistics, and foreign languages that develops the knowledge, skills, and abilities to navigate an increasingly globalized world. The concentration provides coursework that underpins successful international study abroad experiences, which enables students to gain cross-cultural experience needed for employment in transnational and international organizations and agencies.

A total of 12 credits earned with C- or above is required for the concentration along with non-departmental second language requirement demonstrating two years proficiency in a second language or equivalent/placement.

Prefix	Title	Credits
General Education		
<i>Area I: Communications</i>		
<i>English Composition - Level 1</i>		
ENGL 1110G	Composition I	4
or ENGL 1110H	Composition I Honors	
<i>English Composition - Level 2</i>		
Select one English course from the following list ¹		3
ENGL 2130G	Advanced Composition	
ENGL 2210G	Professional and Technical Communication Honors	
ENGL 2210H	Professional and Technical Communication Honors	
ENGL 2215G	Advanced Technical and Professional Communication	
ENGL 2221G	Writing in the Humanities and Social Science	
<i>Oral Communication</i> ²		3
<i>Area II: Mathematics</i>		3-4
Any Mathematics course found in Area II will meet the requirement, excluding MATH 2134G ²		
MATH 1350G	Introduction to Statistics (recommended)	
<i>Area III/IV: Laboratory Sciences and Social/Behavioral Sciences</i> ^{3,4}		10-11
Area III: Laboratory Sciences (4 credits)		
ANTH 1135G	Introduction to Biological Anthropology	
& ANTH 1135L	and Introduction to Biological Anthropology Lab (recommended, not required)	
Area IV: Social/Behavioral Sciences (3 credits)		
The following are recommended but not required.		
ANTH 1115G	Introduction to Anthropology	
ANTH 1140G	Introduction to Cultural Anthropology	
ANTH 1160G	World Archaeology	
ANTH 2140G	Indigenous Peoples of North America	
Either an Area III/IV: Laboratory Sciences or Social/Behavioral Sciences Course (4 or 3 credits)		
<i>Area V: Humanities</i> ²		3
<i>Area VI: Creative and Fine Arts</i> ²		3

ANTH 305V	Contemporary Native Americans	
ANTH 306V	Peoples of Latin America	
ANTH 307V	Japanese Culture and Society: Anthropological Perspectives	
ANTH 313V	Ancient Mexico	
ANTH 330V	Magic Witchcraft and Religion	
ANTH 360V	Food and Culture Around the World	
ANTH 362V	Environmental Anthropology	
Courses in Language and Culture through the NMSU Office of Experiential Learning and Education Abroad, including FacultyLed International Programs ⁸		3-6
<i>Departmental Electives</i>		
Select additional electives in anthropology to bring total credits in major to 36, including 27 upper-division.		21
Second Language Requirement: (required- see below) ⁹		3-14
Electives, to bring the total credits to 120		11-28
Students must graduate with 48 upper-division.		
Total Credits		120

¹ A grade of C- or better must be earned.

² See the General Education (p. 227) section of the catalog for a full list of courses

³ Students taking nine or more credits in a specific subject area, even though the courses are not designated as General Education courses, will have met the general education requirements for that subject area.

⁴ All students must take one Area III: Laboratory Science (4 credits), one Area IV: Social/Behavioral Science Course (3 credits) and one additional course in either area (3-4 credits) in order to complete the requirement.

⁵ Students completing the concentration in Culture and Language may take either LING 2110G Introduction to the Study of Language and Linguistics or LING 302V Language and Society, but not both to satisfy the core requirement (3 credits).

**Note: Students currently enrolled in the Anthropology program and who have completed ANTH 320 Anthropological Linguistics have fulfilled this requirement. Please see the Anthropology department head to process a substitution form.*

⁶ Students must complete two Viewing the Wider World Courses (p. 231) (VWW) for a total of 6 credits. One VWW must be from outside of the College of Arts and Sciences, and the second must be from outside of Anthropology. A student may substitute three credits taken as study abroad for one of the VWW course requirements.

⁷ ANTH 301 Cultural Anthropology, ANTH 315 Introduction to Archaeology, ANTH 350 Anthropological Theory, and ANTH 355 Biological Anthropology may be taken in any order that best suits the student's interests.

⁸ Study abroad and FLIP courses approved by the Anthropology Department Head.

⁹ Please note that immersion courses abroad are available through Study Abroad and may substitute for courses in the second language sequence. Please see second language options below for other equivalencies and proficiency options.

Second Language Requirement

For the Bachelor of Arts in Anthropology, all majors must reach a one year proficiency in a foreign language (through 1120 level, completed with a C- or better) or equivalent/placement. Students who choose to earn the Concentration in Culture and Language must reach a two year proficiency in a foreign language (through 2120 level with a C- or better) or equivalent/placement. The options to complete these requirements are listed below. The number of credits that a student needs to take may vary depending on what level of language proficiency they already possess. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree. Please note that language immersion courses are available through the Office of Experiential Learning and Education Abroad.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120 & FREN 2110 & FREN 2120	French I and French II and French III and French IV	3-14
GRMN 1110 & GRMN 1120 & GRMN 2110 & GRMN 2120	German I and German II and German III and German IV	3-14
JAPN 1110 & JAPN 1120 & JAPN 2110 & JAPN 2120	Japanese I and Japanese II and Japanese III and Japanese IV	3-14
SPAN 1110 & SPAN 1120 & SPAN 2110 & SPAN 2120	Spanish I and Spanish II and Spanish III and Spanish IV	3-14
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6
<i>For Heritage Speakers:</i>		
SPAN 1210 & SPAN 1220 & SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II and Spanish for Heritage Learners III	3-9

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3
SIGN 2110	American Sign Language III	3

Option 3:

Prefix	Title	Credits
Challenge the 1120 or 2120 level for the following courses:		
FREN 2120 or GRMN 2120 or JAPN 2120 or SPAN 2120 OR	French IV German IV Japanese IV Spanish IV	3
Challenge the 1120/2210 level for the following courses:		
PORT 1120 or SPAN 2210	Portuguese II Spanish for Heritage Learners III	3

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of two years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

- Students must take one Area III: Laboratory Sciences course, one Area IV: Social/Behavioral Science Course and an additional course in either area in order to fulfill the General Education requirements.
- Students must take one Area V: Humanities course and one Area VI: Creative and Fine Arts Course in order to fulfill their General Education requirements.
- See the General Education (p. 227) section of the catalog for a full list of courses.
- Please note that immersion courses abroad are available through Study Abroad and may substitute for courses in the second language sequence. Language courses numbered 1110 and 1120 are needed for the basic foreign language requirement for the BA in Anthropology. Language courses numbered 2110 and 2120 are required for students pursuing the Concentration in Language and Culture.
- Core courses ANTH 301 Cultural Anthropology, ANTH 315 Introduction to Archaeology, and ANTH 355 Biological Anthropology may be taken in any order that best suits the student's academic development.
- Summer Course offerings commonly include ANTH 388 Archaeological Field School, ANTH 488 Advanced Archaeological Field School, which follows logically from the ANTH 315 Introduction to Archaeology core class. Archaeological Field School is 6 credits and counts as upper division Anthropology elective class. It is also required for employment placement in the archaeology and cultural resource management industry.
- Students are encouraged to Study Abroad or begin a minor in a related field, and a VWW course can often be an entry to a minor. Three credits of Study Abroad may substitute for one VWW requirement. Students completing the Concentration in Culture and Language may take LING 302V as one VWW requirement.
- Anthropology students often complete minors in related fields. It is recommended but not required. See faculty for advice about how to enhance your educational development with a minor.
- Please note that ANTH 399 Professionalism & Practice in Anthropology is a capstone course for the degree and ideally should be taken in the Spring of the junior year, after completion or in conjunction with the Anthropology core courses. ANTH 399 is only offered in the Spring semester.
- For summer field opportunities, consult a faculty advisor. Applications for summer field courses are usually due by mid March. Honors students in Anthropology are encouraged to seek out National Science Foundation - Research Experiences for Undergraduates Sites Programs in the Division of Social and Behavioral Sciences. The NMSU Honors College also offers the Honors College Scholarship for a self-designed international travel and research experience. Sophomore and Junior Crimson Scholars are eligible to apply.

Anthropology - Undergraduate Minor

Students who earn a minor in Anthropology must earn 18 credits, distributed as follows:

Prefix	Title	Credits
Required Courses		
Select one from the following:		3
ANTH 301	Cultural Anthropology	
ANTH 315	Introduction to Archaeology	
ANTH 350	Anthropological Theory	
ANTH 355	Biological Anthropology	

Upper division Anthropology courses 300 or above	9
Anthropology courses (any level)	6
Total Credits	18

Students who earn a B.A. in Anthropology may **not** also earn a minor in Anthropology. Students earning the minor must pass 18 credits with grades of C- or higher. Nine of the credits must be upper-division. Students may count S only in courses in which all grades are S/U.

Archaeology - Undergraduate Minor

The Undergraduate Minor in Archaeology is an interdisciplinary program through which students develop a deeper understanding of global culture change and the long-term anthropogenic impacts to our planet. Archaeologists use the material evidence of landscapes, sites, and artifacts to reconstruct past lifeways and interpret human behavioral variation and cultural change. They apply their knowledge to promote stewardship of cultural resources and respect for diverse pasts. The minor offers students the opportunity to acquire training in archaeology through experiential learning of field data collection techniques, laboratory analysis of archaeological materials, and cross disciplinary skills needed for careers in public and private cultural resource management, historic preservation, and heritage conservation. NMSU occupies a strategic position as a land grant institution in a multi-cultural regional setting, combined with its geographic location on a binational border. Students in different programs can use the minor in archaeology to enhance their undergraduate degrees and prepare themselves professionally to seek careers and graduate degrees in archaeology, public lands management, environmental sciences, public history, geography, or teaching.

The minor requires 18 credit hours, distributed as follows.

- At least 12 credits must be earned in upper division (300+) courses.
- At least one course and no more than two courses (6 credits) must be earned in a field other than Anthropology.
- At least three credits must be earned in each division – required, area studies, field methods, and laboratory methods.

Prefix	Title	Credits
Required Courses		18

ANTH 315	Introduction to Archaeology (required Archaeological Method & Theory course)
----------	--

Select a minimum of 3 and a maximum of 6 credits in Area Studies in Archaeology from the following:

ANTH 1160G	World Archaeology
GEOL 1110G	Physical Geology
HNRS 2172G	Archaeology: Search for the Past
ANTH 312	The Ancient Maya
ANTH 313V	Ancient Mexico
ANTH 467	Archaeology of Ancient Southwest
ANTH 318	Historical Archaeology
ANTH 414	Archaeology of Magic, Witchcraft, and Religion
ANTH 463	Cultural Resource Management I
HIST 371	Greek Civilization: From Helen of Troy to Alexander the Great
HIST 372	Roman Civilization

Select a minimum of 3 and a maximum of 6 credits in Field Methods from the following:

ANTH 389	Archaeological Mapping
ANTH 388	Archaeological Field School

or ANTH 488	Advanced Archaeological Field School
GEOG 353	Geomorphology

Select a minimum of 3 and a maximum of 9 credits in Laboratory Methods and Analysis from the following:

ANTH 375	Pottery Analysis in Archaeology
ANTH 376	Lithic Technology Organization
ANTH 378	Lab Methods in Archaeology
ANTH 464	Curation Crisis in Archaeology
ANTH 474	Human Osteology
ANTH 477	Zooarchaeology
GEOG 381	Cartography and GIS
GEOL 1150	Introduction to Rocks and Minerals (pre/co-requisite GEOL 1110G)

Total Credits	18
----------------------	-----------

Notes:

- Students who earn a B.A. in Anthropology may also earn a minor in Archaeology.
- Students earning the minor must pass 18 credits with grades of C- or higher.
- Students may count S grades only in courses in which all grades are S/U.
- Alternate courses may be substituted with approval of the advisor for the minor.

Medical Anthropology - Undergraduate Minor

Program Overview and Objective

The goal of the Undergraduate Minor in Medical Anthropology is to help students develop a critical biocultural understanding of human health, disease, and illness. Students will learn about cultural, epidemiological, and evolutionary approaches to understanding health, wellness, and the body; culture and healing systems; social and structural determinants of health disparities; global/international health; human variation and adaptation; and engaging with diverse communities on health issues. The minor is particularly appropriate for students who are pursuing careers in health professions.

Students who earn a minor in Medical Anthropology must complete 18 credits. ANTH 357V Medical Anthropology is required. A grade of C- or better must be obtained for each course. Students may count S grades only in courses in which all grades are S/U, and no more than 6 hours of S credit can be accepted. Students may count no more than 15 credits in Anthropology. Please contact the Department of Anthropology regarding the minor.

Prefix	Title	Credits
Required Course		

ANTH 357V	Medical Anthropology	3
-----------	----------------------	---

Elective Courses (within Department)		15
---	--	-----------

Select a minimum of 9 credits and a maximum of 12 credits

ANTH 402	Contemporary Medical Anthropology
ANTH 431V	Nutritional Anthropology
ANTH 435	Human Health and Biological Variation
ANTH 436	Evolutionary Medicine
ANTH 458	Gender and Reproduction
ANTH 468	Applied Medical Anthropology

ANTH 385	Internship in Anthropology (with permission of Anthropology Department Head)
Elective Courses (outside of Department)	
Select a minimum of 3 credits and a maximum of 6 credits	
BIOL 353	Pre-Professional Human Anatomy (prerequisite BIOL 2110G/L)
BIOL 353 L	Pre-Professional Human Anatomy Laboratory
BIOL 354	Physiology of Humans (prerequisite BIOL 2110G/L)
BIOL 354 L	Laboratory of Human Physiology
CEPY 1120G	Human Growth and Behavior
PHLS 3110V	Human Sexuality
PHLS 3130V	Global Environmental Health Issues
PHLS 3120V	Women's Health Issues
PHLS 4620V	Cross-Cultural Aspects of Health
PSYC 325	Health Psychology (prerequisite PSYC 1110G)
Students may substitute other offerings in Human Biology, Anatomy, and Physiology (check prerequisites) with permission of Anthropology Department Head.	
Total Credits	18

Sustainability- Undergraduate Minor

The Undergraduate Minor in Sustainability is an interdisciplinary program through which students develop a deeper understanding of the relations between humans and the natural environment. The minor offers students the opportunity to cross disciplines and construct a coherent interdisciplinary program that focuses on:

- Human interactions with the natural environment
- Society's role in depleting and transforming natural resources
- Critical issues in sustainable development
- New strategies for conserving natural resources and/or sustainable agricultural production

NMSU occupies a unique strategic position as a land grant institution in a multi-cultural regional setting, combined with its geographic location on a binational border. Students in different programs can use the minor in sustainable development to enhance their undergraduate degree and prepare themselves professionally to seek careers and graduate degrees in sustainable and international development.

A minor in Sustainability is available for students who want to include sustainable development in their academic training. The minor requires **18 credit hours**.

NMSU occupies a unique strategic position as a land grant institution in a multi-cultural regional setting, combined with its geographic location on a binational border. Students in different programs can use the minor in sustainability to enhance their undergraduate degree and prepare themselves professionally to seek careers and graduate degrees in sustainable and international development.

A minor in Sustainability is available for students who want to include sustainable development in their academic training. The minor requires **18 credit hours**.

Requirements

Prefix	Title	Credits
Core Courses ¹		
Choose 18 credits from the following:		18

AEEC 3110V	World Agriculture and Food Problems
or GEOG 315V	World Agriculture and Food Problems
AEEC 3120V	Natural Resource Economics
or ECON 337V	Natural Resource Economics
AEEC 3130V	Water Resource Economics
or ECON 384V	Water Resource Economics
AXED 3210V	John Muir: Lessons in Sustainability
EPWS 380V	Science & Society
ANTH 360V	Food and Culture Around the World
ANTH 362V	Environmental Anthropology
GEOG 325V	New Mexico and the American West
GEOG 357	Climatology
GEOG 361V	Challenges of Globalization
GEOG 363V	Cultural Geography
GEOG 335V	Earthquakes, Volcanoes, Hurricanes, and Floods: The Role of Natural Hazards in Civ Past and Present
HIST 300	Special Topics (Subtitle Environmental History)
HIST 308V	The History of Food

POLS 324	Environmental Policy & Administration
SOCI 3310V	Social Issues in the Rural Americas
SOCI 4335V	Advanced Environmental Sociology

¹ Students who wish to substitute 3 credits of internship for one of the above listed classes may do so with permission of the Department Head, Anthropology. Suggested internship courses would include ANTH 385 Internship in Anthropology, ANTH 486 Community Engagement and Service Learning, or GEOG 401 Internship/Co-op.

Religious Studies - Undergraduate Minor

The Undergraduate Minor in Religious Studies introduces students to the diversity and history of religious experiences enabling them to evaluate critically the roles religion plays in cultures of the world. Students engage with the study of religion across disciplines including Anthropology, Art History, History, Native American Studies, Government, History, Native American Studies, and Sociology. The curriculum covers archaeological evidence of religion, new religious movements, religious iconography, forms of religious organization, politics and religion, and religious violence. The minor is particularly appropriate for students who pursue careers impacted by religious practices and beliefs such as health professions, legal careers, government agencies, religious vocations, and charitable organizations.

Students must take the required core class ANTH 330V Magic Witchcraft and Religion. Students must pass a total of 18 credits of which at least 9 are upper division. Students must earn C- or higher grades in each course and cannot count S/U courses unless all grades in the course are S/U. No more than 9 credits (upper or lower division) can be earned in any one department. Please contact the Department of Anthropology regarding substitutions and questions for the minor.

Total Credits		18

Applied Studies - Bachelor of Applied Studies

The Bachelor of Applied Studies (BAS) degree is designed specifically for students who have already procured an Associates degree in an Applied Studies field. The BAS promotes the mission and purpose of NMSU by making available flexible degree options and by providing a pathway of study for community college graduates with technical and applied degrees from an accredited institution. The BAS degree helps minimize credit loss for associate degree graduates when pursuing a baccalaureate degree at NMSU by requiring a fewer number of upper-division credits. The student population targeted for this program differs significantly from traditional degree programs at NMSU. The BAS offers opportunity for current and prospective students and welcomes those employed full-time, veterans, active duty military personnel or active duty family members, transfers from other institutions, those returning to college after time away, and students wishing to complete their upper-division coursework at a distance.

To Declare a BAS

Students entering the BAS program are required to:

- Have an Associate of Applied Science or a similar degree from a regionally accredited institution
- Have completed the English and Mathematics Basic Skills Requirements of NMSU (see Regulations - Basic Academic Skills) (p. 31)
- Declare the BAS degree by the last date to drop with a "W" in a student's final semester of study (see the NMSU Academic Calendar for date)

Degree Requirements

To graduate with the Bachelor of Applied Studies degree, you must complete at minimum 120 credit hours (or more, depending on the number and type of credits acquired in your Associate degree and as determined by your academic advisor). (*Note: The NMSU College of Business allows a maximum of 30 business credit hours to count towards the BAS degree. Also, the only College of Business minor allowed is the Business Administration Minor.*)

Within the total credit hours, you must

- Complete the university's general education requirements (p. 227) (at least 32-35 credit hours of approved New Mexico Common Core courses).
- Complete a minimum of 36 credit hours of upper-division courses (300-499 level), including six credits of Viewing a Wider World (VWW) from courses in two separate colleges at NMSU. You may substitute three credits of VWW with credits taken in study abroad. All 36 upper-division credits must have a grade of C- or better.
- Not have completed the requirements, or be a candidate, for another baccalaureate degree.

In addition, it is strongly recommended that students take one or more of the Interdisciplinary Studies courses designed specifically for the Bachelor of Applied Studies and the Bachelor of Individualized Studies degrees: INTR 300 Foundations of Interdisciplinary Studies and/or INTR 301 Interdisciplinary Research: Theory & Practice. These courses prepare BAS and BIS students to better plan and conceptualize their degree as they prepare to move into their professional careers or graduate school.

Second Language Requirement

For the Bachelor of Applied Studies there is no second language requirement for the degree.

Art

Undergraduate Program Information

Within the scope of the university's land-grant mission, the Department of Art utilizes our unique geographic location to serve and reflect diverse border communities. The program supports innovative and hybrid techniques, investigation of materials through both studio practice and a museum conservation program, as well as exhibition and curatorial opportunities. Establishing a foundation in critical and cultural discourse includes in-depth examination of theory, methodology, and materiality of art and art history. Capitalizing on the expertise and research agendas of the department's faculty, as well as a state-of-the-art facility, students are provided with multiple platforms for artistic and critical engagement, as well as professional advancement. The curriculum fosters learning

through collaborative and cross-disciplinary approaches and encourages exploration through a variety of research and curatorial practices. Critique and discourse are contextualized within historical and contemporary frameworks, with the possibility of developing new strategies of inquiry into culture and knowledge production. The faculty of nationally and internationally recognized practicing artists, historians, and conservators, in conjunction with a vibrant roster of visiting artists and researchers, create opportunities for active engagement across varied disciplines.

The department offers four undergraduate degrees: a Bachelor of Arts (BA) with a concentration in Studio Art, a BA with a concentration in Art History, a Bachelor of Fine Arts (BFA) in Studio Art and a BFA in Museum Conservation. Our studio degrees provide students with the opportunity to either specialize or diversify their program of study in the following media areas: graphic design and media arts, ceramics, sculpture, metals and jewelry, photography and lens-based media, painting and drawing and museum conservation. We also support students who are interested in research practices in installation, performance and multi-media.

BA in Art History – This program is designed to give students a broad familiarity with the visual arts through the study of aesthetics, cultural contexts, visual and iconographic traditions, stylistic development and technical practices.

BA in Studio Art – The BA provides a solid background in materials, techniques and idea development across all media areas combined with art historical studies. Students have the opportunity to specialize or generalize in various medias.

BFA in Studio Art – The BFA curriculum provides students with a multidisciplinary understanding of contemporary visual arts. Students who wish to embark on a professional career in art apply to the BFA program through a portfolio process in their sophomore year. Areas of potential specialization include photography and lens-based media, graphic design and media arts, ceramics, drawing, painting, jewelry/metalsmithing, and sculpture. Students may also elect to focus on several areas of specialization for an intermedia concentration. This degree culminates with a BFA thesis exhibition.

BFA in Museum Conservation - the BFA in Museum Conservation is an interdisciplinary degree, combining the studio arts, art history, anthropology, history, chemistry and conservation technologies to yield skills in the conservation of material objects of all types and historical value. NMSU offers one of only a few undergraduate degrees in museum conservation in the country.

The study of art provides an appropriate background for the pursuit of careers in studio art and art history in such areas as: the visual arts; graphic design; conservation; library work; museum work; advertising; architecture and interior design; photography; crafts; cinematography; education and art therapy; publishing; theatre; set design; television; industry and business; communication; management and research in the creative and academic areas. A major in art also provides students with a broad humanistic background appropriate to preparation for advanced degrees in other fields.

Graduate Program Information

The Department of Art offers a Master of Fine Arts in Studio Art and Master of Arts with an emphasis in Art History. Graduate students focus on an individualized program of study, supported by required coursework and mentorship with the graduate faculty. Students are encouraged to work across disciplines and cultivate their personal research within the broad context of 21st-century art, art history and theory. The department

supports work in and across the following areas: ceramics, graphic design, time-based media, lens-based media, jewelry and metalsmithing, painting and drawing, sculpture and museum conservation.

Degrees for the Department

Bachelor Degree(s)

- Art (Art History) - Bachelor of Arts (p. 477)
- Art (Museum Conservation) - Bachelor of Fine Arts (p. 480)
- Art (Studio Art) - Bachelor of Arts (p. 478)
- Art (Studio Art) - Bachelor of Fine Arts (p. 482)

Master Degree(s)

- Art - Master of Arts (p. 104)
- Fine Arts - Master of Fine Arts (p. 149)

Minors for the Department

- Art - Undergraduate Minor (p. 484)
- Art History - Undergraduate Minor (p. 484)
- Museum Conservation - Undergraduate Minor (p. 484)

Professor, Margaret Goehring, Department Head

Professors Cully, Goehring; **Associate Professors** d'Agostino, Furuhashi
Assistant Professors Clark, Lamb, Metcalf, Samaniego; **Museum Director** Sage

J. Clark, MFA (Cranbrook Academy of Art)- Ceramics; C. Cully, MFA (University of Arizona)- Painting and Drawing; B. d'Agostino MFA (University of Maryland Baltimore County)- Graphic Design; M. Furuhashi, MFA (University of Illinois- Champagne)- Jewelry and Metals; M. Goehring, Ph.D. (Case Western Reserve)- Art History; B. Lamb, MFA (University of New Mexico)- Photography; M. Metcalf, Ph.D. (UCLA)-Art History; M. Sage, MFA (MICA)- University Art Museum Director; Carissa Samaniego, MFA (UC Boulder)- Sculpture

Art History Courses

ARTH 1115G. Orientation in Art

3 Credits (2+3P)

A multicultural examination of the principles and philosophies of the visual arts and the ideas expressed through them.

Learning Outcomes

1. Identify elements of art principles of design.
2. Articulate the relationship of art to the human experience.
3. Write and discuss critically using the vocabulary of art.
4. Interpret art within cultural, social, personal, and historical contexts.
5. Critically analyze an original work of art.

ARTH 2110G. History of Art I

3 Credits (3)

This survey course explores the art and architecture of ancient pre-historic cultures through the end of the fourteenth century. While focused primarily on the art of the Western civilizations, this course will also provide insights into the works of other major cultures in order to provide alternate views of art and history. Emphasis will be placed on the relationship of artworks to political, social, spiritual, intellectual, and cultural movements that affect and are affected by their creation and development.

Learning Outcomes

1. Identify major artworks from a variety of regions and time periods.
2. Investigate the methods of producing various works of art.
3. Articulate an understanding and appreciation for the political, social, spiritual, intellectual, and cultural contexts of art forms.
4. Comprehend and apply terms, methodologies and concepts common to studies of art history, developing a language to further understanding of art.
5. Compare works across a range of historical styles and periods.

ARTH 2120G. History of Art II**3 Credits (3)**

This survey course will explore the architecture, sculpture, ceramics, paintings, drawings, and glass objects from the 14th century to the modern era. While focused primarily on the art of the Western civilizations, this course will also provide insights into the works of other major cultures in order to provide alternate views of art and history. Emphasis will be placed on the relationship of artworks to political, social, spiritual, intellectual, and cultural movements that affect and are affected by their creation and development. May be repeated up to 3 credits.

Learning Outcomes

1. Identify major artworks from a variety of regions and time periods.
2. Investigate the methods of producing various works of art.
3. Articulate an understanding and appreciation for the political, social, spiritual, intellectual, and cultural contexts of art forms.
4. Comprehend and apply terms, methodologies and concepts common to studies of art history, developing a language to further understanding of art.
5. Compare works across a range of historical styles and periods.

ARTH 2136. Writing in Art**3 Credits (3)**

This class looks at the variety of writings associated with art history and studio art practice. It explores the discipline of art history itself, and introduces students to the specific ways in which art historians study art. Within a workshop setting, students will practice approaches to research, understanding art and writing about art. Students will also be introduced to professional writing practices, including digital formats, relating to studio art.

Learning Outcomes

1. Develop visual literacy in looking at art 2 .Analyze a complex art historical argument
2. Apply art specific vocabulary to critically-based writings and discussions of art
3. Develop writing skills to articulate the relationship of art to the human experience

ARTH 300. Special Topics in Art History**3 Credits (3)**

Specific subjects to be announced in the Schedule of Classes, individual topics may not be repeated . Restricted to Las Cruces campus only. May be repeated up to 12 credits.

Prerequisite: ARTH 2110G, ARTH 2120G, and ARTH 2136 or consent of instructor.

Learning Outcomes

1. Analysis of specific problems in art history
2. Evaluate approaches to specific problems in art history

ARTH 311. Art of China I: Neolithic to Song Dynasty**3 Credits (3)**

Survey of the art of China from the neolithic period to the end of the Song dynasty. Non-majors welcome.

Prerequisite: ARTH 2110G, ARTH 2120G, and ARTH 2670 or HIST 2250G and HIST 2251G or consent of instructor.

Learning Outcomes

1. identify the principal periods and dynasties up to the Song dynasty and the major political, philosophical and religious ideas that emerged during those periods.
2. describe the principal stylistic characteristics of two-dimensional and three-dimensional artworks and architecture for each period
3. Analyze how the form, function and style of art corresponds to religious beliefs and funerary practices
4. identify some of the major monuments of Chinese painting and be able to discuss their specific historical contexts and meaning
5. Identify basic elements of Buddhist and Taoist iconography

ARTH 312. Art of China II: Song Dynasty to Today**3 Credits (3)**

Survey of art, architecture and landscape design of China from the Song Dynasty to the present day Crosslisted with: ARTH 512.

Prerequisite(s): ARTS 2671 or ARTH 2110G or HIST 2250G and HIST 2251G or consent of instructor.

ARTH 336. Race and Art**3 Credits (3)**

Traces race, representation and appropriation through a historical and cultural lens. Issues of identity up to and including contemporary visual expression are examined. Non-majors welcomed. Each topic may be taken one time.

Prerequisite: ARTH 2110G, ARTH 2120G, and ARTH 2136 or consent of instructor.

Learning Outcomes

1. Recognize how identity is perceived and constructed and the contemporary challenges to the creation of the "Other"
2. identify and place art objects within political, social, artistic and philosophical contexts.
3. Acquire the tools to determine how issues of race and identity are being explored and understood today.
4. Interpret and evaluate the relationship of art to the human experience

ARTH 342. Global Modernisms**3 Credits (3)**

Examines themes and monuments from the late 19th century to 1968, emphasizing modern and avant-garde cultural practices.

Prerequisite: ARTH 2110G, ARTH 2120G, ARTH 2136, or consent of instructor.

Learning Outcomes

1. Identify and place art objects within political, social, artistic and philosophical contexts.
2. Summarize the major styles and practices that emerged in the Twentieth Century
3. Analyze the importance of context for these major styles
4. Explain different methodologies of Art History and their relevance for understanding Twentieth Century Art
5. Apply art specific vocabulary to critically based writings and discussions of the art objects studied
6. Develop analytical processes, writing skills and research methodology to interpret and articulate the relationship of art to the human experience.

ARTH 343. Contemporary Global Art Practices**3 Credits (3)**

Examines the myriad of contemporary art practices, media, and forms from 1968 to the present.

Prerequisite: ARTH 2120G, ARTH 2136; or consent of instructor.

Learning Outcomes

1. Identify and place art objects within political, social, artistic and philosophical contexts.
2. Summarize the major styles and practices that emerge in the Contemporary period
3. Analyze the importance of context for these major styles and practices
4. Explain different methodologies of Art History and their relevance for understanding Contemporary Art
5. Apply art specific vocabulary to critically based writings and discussions of the art objects studied
6. Develop analytical processes, writing skills and research methodology to interpret and articulate the relationship of art to the contemporary human experience.

ARTH 344. Gender, Sexuality, and Art in the Americas**3 Credits (3)**

This course examines woman power/trans/ queer discourses of both the global south and those of people of color in the United States in relation to art from Latin, Central, and North America.

Prerequisite: ARTH 2110G, ARTH 2120G, and ARTS 2136, or consent of instructor.

Learning Outcomes

1. Identify and analyze arguments and problems within gender and sexualities of the global south
2. Locate works of art in relation to the cultures from which they originate, historicizing and contextualizing them in socio-political histories
3. Identify and employ methodology(ies) and theoretical approaches salient to the specific forms of art practice which they are studying
4. Evaluate, comment upon, and formulate approaches to the artistic practices of people of the Americas based in feminist, decolonial methodologies

ARTH 345. Latin American Film**3 Credits (3)**

Surveys films and their histories from Latin American and the LatinX diaspora.

Prerequisite: ARTH 2110G, ARTH 2120G, and ARTS 2136, or consent of instructor.

Learning Outcomes

1. Discuss, distinguish among, and analyze film techniques, genres, distribution systems, and movements, particularly as they relate to Latin America
2. Demonstrate an historical understanding of the political histories, movements, and changes in Latin America
3. Locate films in relation to the cultures from which they originate, historicizing and contextualizing them in socio-political histories
4. Identify and employ methodology(ies) and theoretical approaches salient to filmic

ARTH 346. Museum and Curatorial Studies**3 Credits (3)**

This museum and curatorial studies course surveys practices, objects, and histories.

Prerequisite: ARTH 2110G, ARTH 2120G, and ARTS 2136, or consent of instructor.

Learning Outcomes

1. Historicize the development of museums, patronage, collecting, looting, and restitution; noting distinctions between cultures, geographic regions, and nation-state systems
2. Identify and analyze arguments and problems within museum studies
3. Distinguish between the professional positions, institutional functions, and governing missions within and among of distinct types of art institutions
4. Evaluate, comment upon, and formulate approaches to exhibition design in both their practical and ideological functions

ARTH 444. Art and Life in Renaissance Italy**3 Credits (3)**

Examines how Italian Renaissance textual and visual culture offered Europe new ways of seeing and portraying itself. 1350-1550. Topics include: Florence, Venice, Rome, Leonardo, Michelangelo, titian, humanism, the Medici, and republican and courtly culture.

Prerequisite(s): ARTH 2110G, ARTH 2120G, ARTS 2671, or consent of instructor.

ARTH 477. Independent Research in Art History**1-9 Credits (1-9)**

Advanced research on special problems to be conducted under supervision of art history faculty. May be taken up to 12 credits. Consent of instructor required.

Learning Outcomes

1. Student will analyze approaches to a problem in art history
2. Student will evaluate approaches to a problem in art history
3. Student will formulate approaches to address a problem in art history

ARTH 478. Seminar in Art History**3 Credits (3)**

Reading, research, and discussion of advanced problems. Topics will be announced in the course schedule. Each topic may be only taken once. Non-art/art history majors, contact instructor for consent.

Prerequisite: ARTH 2110G, ARTH 2120G and ARTH 2136, and one 300 level ARTH course or consent of instructor.

Learning Outcomes

1. Analyze problems in art history
2. Propose a hypothesis relating to a problem in art history and support conclusions through research
3. Evaluate various approaches to problems in art history

ARTH 479. Methodologies and Theories of Art and Art History**3 Credits (3)**

Theories and methodologies in art, art history and art criticism; taught with ARTH 579

Prerequisite: ARTH 2110G, ARTH 2120G, ARTH 2136 and one 300 level art history course or consent of instructor.

Learning Outcomes

1. understand the history of the discipline of art history, its origins, and its institutional developments
2. Assess the strengths and limitations of various approaches and methods to interpreting works of art
3. identify the methodology employed in an art historical argument
4. apply a variety of methodological and critical approaches to interpreting a work of art and assess the strengths and limitations of those applications

5. recognize strategies of art practice that correspond to different methodological and critical approaches

ARTH 500. Special Topics in Art History

3 Credits (3)

Specific subjects to be announced in the Schedule of Classes. Individual topics may only be taken one time. Students must be Graduate students to enroll.

Learning Outcomes

1. Analyze specific problems in Art History
2. Evaluate approaches to specific problems in Art History

ARTH 511. Art of China I: Neolithic to Song Dynasty

3 Credits (3)

Survey of the art of China from the neolithic period to the Song dynasty. Student must be a Graduate student to enroll.

Learning Outcomes

1. Identify the principal periods and dynasties up to the Song dynasty and the major political, philosophical and religious ideas that emerged during those periods.
2. Describe the principal stylistic characteristics of two-dimensional and three-dimensional artworks and architecture for each period
3. Analyze how the form, function and style of art corresponds to religious beliefs and funerary practices.
4. Identify some of the major monuments of Chinese painting and be able to discuss their specific historical contexts and meaning
5. Identify basic elements of Buddhist and Daoist iconography

ARTH 536. Race and Art

3 Credits (3)

This course explores the visual expression of race and identity in art and visual culture from a diverse geographical and historical range. Each topic may only be taken one time. Crosslisted with: ARTH 336. Students must be Graduate students to enroll.

Learning Outcomes

1. Recognize how identity is perceived and constructed and the contemporary challenges to the creation of the "Other"
2. Identify and place art objects within political, social, artistic and philosophical contexts.
3. Acquire the tools to determine how issues of race and identity are being explored and understood today.
4. Interpret and evaluate the relationship of art to the human experience.
5. Formulate a question concerning race and art and using analysis, evaluate the research on that question and create an original argument.

ARTH 542. Global Modernisms

3 Credits (3)

Examines themes and monuments of created from the end of the 19th century to 1968 emphasizing modern and avant-garde cultural practices. Crosslisted with: ARTH 342. Students must be Graduate students to enroll.

Learning Outcomes

1. Identify and place art objects within political, social, artistic and philosophical contexts.
2. Summarize the major styles that emerged in the early Twentieth Century to 1968
3. Analyze the importance of context for these major styles

4. Explain different methodologies of Art History and their relevance for understanding the art of this period
5. Apply art specific vocabulary to critically based writings and discussions of the art objects studied
6. Formulate a question in art history relating to the topic of the course, evaluate and assess research, and create an original argument concerning that problem

ARTH 543. Contemporary Global Art Practices

3 Credits (3)

Examines the myriad of contemporary art practices, media, and forms from 1968 to the present. Crosslisted with: ARTH 343. Students must be in Graduate standing to enroll.

Learning Outcomes

1. Identify and place art objects within political, social, artistic and philosophical contexts.
2. Summarize the major styles and practices that emerge in the Contemporary period
3. Analyze the importance of context for these major styles and practices
4. Explain different methodologies of Art History and their relevance for understanding Contemporary Art
5. Apply art specific vocabulary to critically based writings and discussions of the art objects studied
6. Formulate a question in contemporary art, evaluate and assess research, and create an original argument concerning that problem

ARTH 544. Gender, Sexuality, and Art in the Americas

3 Credits (3)

This course examines woman power/trans/ queer discourses of both the global south and people of color in the United States in relation to art from Latin, Central, and North America. Cross-listed with ARTH 344. Students must be in graduate standing to enroll.

Learning Outcomes

1. Identify and analyze arguments and problems within gender and sexualities of the global south
2. Locate works of art in relation to the cultures from which they originate, historicizing and contextualizing them in socio-political histories
3. Identify and employ methodology(ies) and theoretical approaches salient to the specific forms of art practice which they are studying
4. Evaluate, comment upon, and formulate approaches to the artistic practices of people of the Americas based in feminist, decolonial methodologies

ARTH 545. Latin American Film

3 Credits (3)

Surveys films and their histories from Latin American and the LatinX diaspora. Taught with ARTH 345. Students must be in graduate standing to enroll.

Learning Outcomes

1. Discuss, distinguish among, and analyze film techniques, genres, distribution systems, and movements, particularly as they relate to Latin America
2. Demonstrate an historical understanding of the political histories, movements, and changes in Latin America
3. Locate films in relation to the cultures from which they originate, historicizing and contextualizing them in socio-political histories

4. Identify and employ methodology(ies) and theoretical approaches salient to filmic works

ARTH 546. Museum and Curatorial Studies

3 Credits (3)

This museum and curatorial studies course surveys practices, objects, and histories. Taught with ARTH 346. Students must be in graduate standing to enroll.

Learning Outcomes

1. Historicize the development of museums, patronage, collecting, looting, and restitution; noting distinctions between cultures, geographic regions, and nation-state systems
2. Identify and analyze arguments and problems within museum studies
3. Distinguish between the professional positions, institutional functions, and governing missions within and among of distinct types of art institutions
4. Evaluate, comment upon, and formulate approaches to exhibition design in both their practical and ideological functions

ARTH 578. Seminar in Art History

3 Credits (3)

Reading, research, and discussion of advanced problems in art history; rotating topics will be announced in the course schedule. Individual topics may only be taken once. Student must be Graduate students to enroll.

Learning Outcomes

1. Analyze advanced problems in art history
2. Evaluate approaches to advanced problems in art history

ARTH 579. Graduate Seminar: Art Theory, Criticism, Historiography

3 Credits (3)

Theories and methodologies in art history and art criticism.

Prerequisite: graduate standing.

ARTH 597. Independent Study in Art History

3 Credits (3)

Supervised independent study in topics in art history. Students must be in graduate standing to enroll.

Learning Outcomes

1. Student will formulate a question in art history, evaluate and assess research, and create an original argument concerning that problem

ARTH 599. Art History Thesis

1-15 Credits (1-15)

Art history master's thesis research. Students must be in Graduate standing to enroll.

Learning Outcomes

1. Student will formulate a question in art history, evaluate and assess research, and create an original argument concerning that problem

Studio Art Courses

ARTS 1121. Foundations in Art

3 Credits (2+4P)

The Foundations course will focus on a deceptively simple question. "What is Contemporary Art, and how can we make it?" Through the exploration of basic visual design concepts, collaborative learning, and interdisciplinary studio production, this course will help us to discover what it means to be an artist in the 21st century.

Learning Outcomes

1. Create original works of art through the investigation of ideas and concepts resulting in the communication of meaning. Develop forms that convey meaning.

2. Evaluate works of art through critiques that appraise how the form communicates meaning. Justify the decisions that were made in the use and application of the chosen medium and form to communicate meaning in a work of art.
3. Analyze the differences in clarity of communication between works of art based subject matter, medium and form.
4. Apply knowledge provided in lectures to produce works of art that communicate meaning. Demonstrate an ability to express concepts in visual form.
5. Understand how the choice of subject matter, medium and form translate in the expression of concepts through discussion and description.
6. Remember the fundamental tenets of art, elements and principles of design, through the duplication of them in works of art as well their use in discussions.

ARTS 1145G. Visual Concepts

3 Credits (2+4P)

Visual Concepts is an introduction to the philosophies of art, visual thinking, and principles of visual organization. Designed to give students a broad view of aesthetic traditions, ideologies, and techniques basic to the creation and evaluation of art. Principles and concepts are taught in a common lecture and applied in parallel small studio sections. For non-art majors only.

Learning Outcomes

1. Develop understanding of history, major styles and contemporary issues in art.
2. Introduce students to the language of visual perception and aesthetic evaluation.
3. Introduce students to the fundamental processes of visual perception and artistic expression.
4. Develop students' confidence in using various art materials for artistic expression.
5. Develop students' ability to verbalize ideas and processes in art making.
6. Develop student's ability to communicate through writing about art and art experiences.

ARTS 1240. Design I

3 Credits (3)

This course introduces the fundamentals of two-dimensional design as it applies to fine art and commercial contexts. Emphasis will be on basic color theory, elements of dynamic composition, vocabulary of visual arts and design, and development of visual conceptual skills. Students will use a variety of materials and techniques. Restricted to Community Colleges campuses only.

Learning Outcomes

1. Produce art works that apply and organize the elements of two-dimensional form (line, shape, value, texture, color and space).
2. Produce artworks that apply the principles of two-dimensional design (harmony, variety, repetition, balance, rhythm, proportion, dominance, movement, and economy).
3. Demonstrate effective use of materials and techniques with consideration for craftsmanship and presentation.
4. Use visual art vocabulary in the development and critique of work
5. Explore concepts and ideas: from conceptual, realistic/referential to non-representational

ARTS 1250. Design II

3 Credits (3)

This course introduces the basic formal (aesthetic), spatial, and physical aspects of 3-D form as they can be applied to sculptural and functional design. Techniques that explore structure, mass, volume, scale, surface, form, and function are covered, along with various media, which may include paper, wood, clay, and/or metal. Restricted to Community Colleges campuses only.

Learning Outcomes

1. Apply the artistic qualities of the elements of art and principles of design to three-dimensional form.
2. Create 3 dimensional form using varied sculptural methods, construction techniques and media.
3. Produce 3 D design projects safely with proper use of equipment and materials.
4. Apply realistic, referential, and abstract concepts and ideas to projects.
5. Demonstrate knowledge of 3-D related art vocabulary, origin and trends in sculpture, and 3-D design fundamentals.

ARTS 1310. Introduction to Ceramics

3 Credits (2+4P)

This course introduces the technical processes and conceptual concerns of working with ceramic material. Various methods of forming functional and expressive works out of clay are explored. Methods used include handbuilding and throwing, basic clay bodies, slip and glaze, and atmospheric firing.

Learning Outcomes

1. Explain the transformation of the ceramic material from raw clay form to glazed ceramic object
2. Demonstrate proficiency of technical ceramic skills
3. Explain larger concepts and design principles
4. Apply basic 3-D design principles in the formation of a work of art, as they apply to the ceramic media
5. Create ceramic works of art based on conceptual prompts
6. Critically evaluate a variety of artwork
7. Gain an understanding of the history of ceramic art from a multicultural perspective

ARTS 1320. Ceramics I

3 Credits (2+4P)

An introduction to the medium of clay incorporating hand building and wheel throwing to introduce the student to both the sculptural and utilitarian uses of clay. The student will also be introduced to a variety of glazing and firing techniques

Learning Outcomes

1. Demonstrate through critical discourse or writing an introductory knowledge of the history of ceramics, and ceramic language and terminology.
2. Demonstrate through mechanical application an introductory knowledge of the properties of clays, glazes, and a variety firing techniques.
3. Produce a body of work that exemplifies good ceramic design through the effective use of form, surface, and color.
4. Through the production a body of work demonstrate competency in hand building and throwing on the wheel.

ARTS 1410. Introduction to Photography

3 Credits (2+4P)

This course introduces the making of photographic images from a broad viewpoint to consider both as an art practice and as a cultural practice. The course covers technical information on camera use and functionality,

composition and visual design, digital workflow and editing, professional functions of manipulating and enhancing images, and printing correctly and effectively. The historical aspects of photography are also covered.

Learning Outcomes

1. Gain fluency with basic camera function as well as a working knowledge of other photographic equipment and software to produce technically competent photographs.
2. Have a familiarity with current image-editing software to enhance images as well as developing a digital workflow for the management of digital images.
3. Be able to develop creative solutions to visual photographic problems.
4. Gain awareness of contemporary issues in contemporary art photographic practice that can be applied to the one's own individual practice.
5. Develop the ability to critically analyze and discuss photographic images.
6. Print and produce a final project that demonstrates synthesis of ideas presented in the course readings, critiques, and individual research.
7. Demonstrate photographic terminology, and the many ways photographs function in society, both currently and historically.

ARTS 1520. Digital Media I

3 Credits (2+4P)

This course provides an introduction to two of Adobe's major software applications, Illustrator and Photoshop, which are essential in creating artwork, designing promotional materials, websites and more. Part of the course deals with creating a variety of documents using the major tools of each program, and gaining an understanding of the contemporary graphic design industry and basic elements and principles of design. Community Colleges only.

Learning Outcomes

1. Demonstrate appropriate skills in configuring and navigating computer systems software applications as appropriate to digital image making needs including organization of files using keywords and running batch processes.
2. Exhibit an understanding of a layer based bitmap editing program, through photo retouching, precise use of selection tools, and color adjustment techniques.
3. Create imagery using a vector based illustration program which demonstrates an understanding of vector based drawing tools.
4. Integrate the use of bitmap and vector images using bitmap and vector based image making applications to demonstrate a basic understanding of composition, color, and appropriate image size and resolution.

ARTS 1610. Drawing I

3 Credits (2+4P)

This course introduces the basic principles, materials, and skills of observational drawing. Emphasis is placed on rendering a 3-D subject on a 2-D surface with visual accuracy. Other topics include historical and contemporary references as well as an investigation of linear perspective, line, value, shape, space & composition.

Learning Outcomes

1. Produce drawings that demonstrate techniques and mechanics of observational drawing.
2. Demonstrate competency in the following practices: measuring and sighting, gesture, contour line, negative space, shape, value, space, volume, plane and texture.

3. Create drawings primarily from observation with black and white traditional drawing media.
4. Demonstrate effective verbal or written response to one's own art and the art of others.

ARTS 1630. Painting I**3 Credits (2+4P)**

This course introduces the tradition of painting as a medium for artistic expression. Students will investigate materials, tools, techniques, history and concepts of painting. Emphasis is placed on developing descriptive and perceptual skills, color theory, and composition.

Prerequisite: ARTS 1610.

Learning Outcomes

1. Produce paintings that demonstrate the tradition of methods, techniques, materials, and tools of oil painting.
2. Construct a variety of support structures and grounds on which paintings are created
3. Examine the historical origins and practices of painting from the personal, social and cultural perspective.
4. Identify and apply environmentally safe painting practices, care of tools, equipment, and facilities, as well as disposal of mediums, solvents and paints.
5. Apply basic color theory to representational and non-representational painting.

ARTS 1710. Introduction to Printmaking**3 Credits (2+4P)**

This course provides direct experience of exploring basic printmaking processes, including relief, intaglio, and monoprint processes, as well as the investigation of materials/media, tools, techniques, history, and concepts of printmaking. Emphasis is given to solving problems through thematic development while producing a portfolio of prints.

Learning Outcomes

1. Properly operate a printing press and safely handle materials and equipment.
2. Demonstrate an adequate ability to utilize basic historical printmaking techniques that are widely relevant to contemporary, artistic expressions.
3. Utilize formal elements of art and design (line, shape, value, texture, space, and color), to create prints that are formally sophisticated.
4. Create imagery that contains conceptual depth, which can be interpreted by viewers with regard to social, cultural, political, geographical, and/or psychological experiences and relevance.

ARTS 1711. Computer-Based Illustration**3 Credits (2+4P)**

Introduction to the principles of computerized drawing and design. Using the basic concepts, drawing tools, and vocabulary of Adobe Illustrator.

Prerequisite: ARTS 1610, ARTS 1240, or consent of instructor.

Learning Outcomes

1. Demonstrate drawing with the pen tool.
2. Demonstrate the use of blending color and creating shapes.
3. Create spot colors and effectively use them in a page layout.
4. Demonstrate formatting and creating typography.
5. Demonstrate the use of layers, effects, graphic styles, symbols, and brushes
6. Demonstrate competency in creating digital graphics using of Adobe Illustrator software

ARTS 1712. Digital Graphics**3 Credits (2+4P)**

Importing and exporting images and text into various desktop publishing formats. Exploring imaging, drawing, and page layout applications. Introduction to typography.

Prerequisite: ARTS 1520.

Learning Outcomes

1. Demonstrate competency in the use of InDesign software.
2. Create appropriate visual solutions based on target marketing information.
3. Demonstrate competency in the design and production of advertising and promotional materials.
4. Present ideas and concepts effectively and competently.
5. Visually demonstrate design solutions to be used in a portfolio

ARTS 1713. Web Page Design**3 Credits (2+4P)**

Introduction to the creation of well-designed and organized Web sites. Emphasis on building creative but functional user-friendly sites. Introduction to HTML, Flash, Java Script, and Web-authoring software. Community Colleges only.

Prerequisite: ARTS 1520.

Learning Outcomes

1. Outline the structure and functionality of a typical website.
2. Demonstrate design and layout skills.
3. Demonstrate competency in the use of Dreamweaver software.
4. Demonstrate competency in the use of photo editing software.
5. Demonstrate skills learned for website functionality.
6. Create an Internet compatible website.

ARTS 1810. Jewelry and Small Metal Construction I**3 Credits (2+4P)**

This course introduces the basic techniques, materials, and tools traditionally used in the creation of jewelry and/or small-scale sculptural objects.

Learning Outcomes

1. Apply basic jewelry fabrication techniques (such as: piercing, cold connections, soldering, metal forming, casting and stone setting) to complete projects.
2. Create design sketches of the objects prior to fabrication.
3. Demonstrate knowledge of materials and safe practices for making jewelry, as well as small functional and non-traditional objects.
4. Analyze projects through critiques, oral presentations, and discussions.

ARTS 2010. Portfolio Development**3 Credits (2+4P)**

This course presents the practicalities of building an art career with emphasis on developing a professional portfolio through visual aids, resumes, statements, and presentations. It covers professional practices of the studio artist including self-promotion, contracts, research tools for exhibition venues and other art related opportunities.

Prerequisites: ARTS 1712, ARTS 2611, and ARTS 1520, or consent of instructor.

Learning Outcomes

1. Develop a portfolio package with visual aids, photographic documentation, resumes, bios and artist statements.
2. Analyze the qualifications, procedures and portfolio requirements necessary for professional art related opportunities.
3. Complete an oral presentation on a series of personal works.

4. Distinguish pathways for navigating the business side of being a professional artist.

ARTS 2430. Photographic Portraiture

3 Credits (2+2P)

This course covers the study of professional photography that involves people, including studio and environmental portraits. Topics include studio and exterior lighting techniques, and selecting lighting equipment and supplies. Restricted to: Community Colleges only.

Prerequisite(s): ARTS 1410 or FDMA 1545.

Learning Outcomes

1. Demonstrate successful operation of studio lighting equipment and accurately define lighting equipment terminology
2. Illustrate the principles of photographic lighting
3. Demonstrate and apply how to use and modify natural light effectively
4. Demonstrate understanding of different approaches such as formal, informal, candid, vernacular and their cultural implications
5. Distinguish historic and contemporary cultural notions informing different types of portraits

ARTS 2431. Introduction to Graphic Design

3 Credits (2+4P)

Introduction to the principles of visual communication and digital media, letterforms, typography and identity marks. Projects produced using conventional and digital tools.

Learning Outcomes

1. Demonstrate working knowledge of the graphic design software.
2. Identify and apply basic design concepts for the purpose of visual communication.
3. Conduct visual research and create presentations on design topics.
4. Solve graphic design problems through solving fundamental communication challenges by sketching, drawing, typographic composition, use of image and color.

ARTS 2440. Photo Finishing & Presentation

2 Credits (1+2P)

Use of visual language for personal expression. Freelance photography; care of original photos; preparation of portfolios, photographic markets, exhibitions and judging, galleries and copyrights. Students will prepare a photographic portfolio. Restricted to: Community Colleges only.

Prerequisite(s): FDMA 1545.

Learning Outcomes

1. Define your target market and create a complete "Personal Promotional Package"
2. Produce a professional Resume Cover Letter.
3. Produce a professional looking Business Card, Letterhead Mailing Labels
4. Produce a single page Promotional Piece, (and possible follow-up material)
5. Produce a PDF Formatted Portfolio (Create in Photoshop Export as PDF)
6. Produce a clean, professional looking traditional hard portfolio with 20-30 pieces
7. Present the Entire Promotional Portfolio and promo materials in a "Job Interview"

ARTS 2610. Drawing II

3 Credits (2+4P)

This course introduces color and colored media as an element of composition while emphasizing descriptive and perceptual drawing skills and conceptual approaches to contemporary drawing. Restricted to ART and ANVE/DFM majors.

Prerequisite(s): ARTS 1610.

Learning Outcomes

1. Create drawings in wet and dry color media.
2. Practice analyzing and visually translating observed subjects from realistic, referential, and/or objective form, to non-representational or abstract imagery in drawings.
3. Compose fully developed drawings that include a conceptual or historical basis.
4. Engage in effective written and oral critique in response to one's own art and the art of others.

ARTS 2611. Advanced Computer-Base Illustration

3 Credits (2+4P)

Design custom graphics and create special effects with filtering, special effects on type, graphing, technical illustrations, and three-dimensional drawing using Adobe Illustrator.

Prerequisites: ARTS 1212, ARTS 1711, and ARTS 1520, or consent of instructor.

Learning Outcomes

1. Demonstrate competency in the use of Adobe Illustrator software.
2. Create appropriate visual solutions based on target marketing information.
3. Demonstrate competency in the design and production of advertising and promotional materials.
4. Present ideas and concepts effectively and competently.
5. Visually demonstrate design solutions to be used in a portfolio

ARTS 2616. Aspects of Drawing

2-3 Credits

Continued work in drawing with emphasis on personal creative endeavor. Community Colleges only.

Prerequisites: ARTS 1610 and ARTS 2610.

Learning Outcomes

1. Advanced skill level in the visual dynamics of line involved in the creation of drawing.
2. Advanced skill level in the visual dynamics of shape involved in the creation of drawing.
3. Advanced skill level in the visual dynamics of value involved in the creation of drawing.
4. Advanced skill level in the visual dynamics of color involved in the creation of drawing.
5. Advanced skill level in the visual dynamics in the combination of line, shape, value and color involved in the creation of drawing.

ARTS 2630. Painting II

3 Credits (2+4P)

This course focuses on the expressive and conceptual aspects of painting, building on the observational, compositional, technical, and critical skills gained previously. Students will investigate a variety of approaches to subject matter, materials, and creative processes through in-class projects, related out-of-class assignments, library research or museum/gallery attendance, written responses, and critiques.

Prerequisite(s): ARTS 1610 and ARTS 1630

Learning Outcomes

1. Produce paintings building on the skills and techniques learned in Painting I

2. Solve unique format, support, ground, over and under texturing surface challenges
3. Practice analyzing and translating observed subjects from realistic, referential, and/or objective form, to non-representational imagery
4. Create paintings that explore personal content, stylization, symbolism, narrative, and/or iconography

ARTS 2635. Painting III**2-3 Credits**

Continuation of ARTS 2630.

Prerequisites: ARTS 1610, ART 1240 (for art majors), ART 1630, or consent of instructor.

Learning Outcomes

1. Color mixing and color relationships
2. Create illusions of space and volume
3. The student will strengthen his or her own personal artistic style.
4. Knowledge of the proper use and maintenance of painting tools
5. Explore and learn the technique of a master painter of the past.
6. Awareness of nature, "eye hand response," and an imaginative or personal use of the medium.
7. Awareness of the creative process, exploring unforeseen possibilities
8. An ability to work independently.
9. Understanding of painting styles and arts vocabulary

ARTS 2839. Introduction to Sculpture**3 Credits (2+4P)**

Beginning sculpture students "explore space" while learning new processes and skills, including mold making, welding and woodworking.

Learning Outcomes

1. Be able to utilize a variety of traditional materials and sculpture processes, including: mold making, metal fabrication/wood fabrication, and the creative integration of mixed media.
2. You will learn to differentiate between objects and installations, and be prepared to explore sculpture in upper division, topics based courses.

ARTS 2993. Art Workshop**0.5 Credits (.5)**

Required for all freshman and sophomore Art majors for four semesters, this workshop is designed to build professional student cohorts within the Department of Art; incorporate visiting artist and scholar lectures into the curriculum; and actively involve students in exhibitions and gallery and departmental events. May be repeated up to 4 credits. Crosslisted with: ARTS 308. Restricted to: BA Studio Art, BA Art History BFA Studio Art, BFA Museum Conservation majors. Restricted to Las Cruces campus only.

Learning Outcomes

1. Varies

ARTS 2996. Special Topics in Studio**1-3 Credits**

Specific subjects and credits to be announced in the Schedule of Classes. No more than 9 credits toward a degree.

Prerequisite: consent of instructor.

Learning Outcomes

1. Varies

ARTS 308. Art Workshop**0.5 Credits (.5)**

Required for all junior and senior Art majors for four semesters, this workshop is designed to build professional student cohorts within the

Department of Art; incorporate visiting artist and scholar lectures into the curriculum; and actively involve students in exhibitions and gallery and departmental events. May be repeated up to 4 credits. Crosslisted with: ARTS 208. Restricted to: BA studio art, BA Art History BFA studio art, BFA Museum Conservation majors.

ARTS 340. Internship in Art**1-9 Credits (3P)**

This course provides students with the opportunity for workplace learning as an important component in their program of study. Students can identify an internship in graphic design, photography, conservation or other studio areas; or within broader arts institutions such as museums, galleries and visual arts centers which will provide them with professional experience that will support the successful achievement of their career goals in art. May be repeated up to 9 credits.

Prerequisite: ARTH 2110G, ARTH 2120G, ARTS 2136 and eighteen credits of ARTS/ARTH 2000 or ARTS/ARTH 300 studio courses.

ARTS 350. Special Topics in Intermediate Drawing and Painting**3 Credits (2+4P)**

Intermediate drawing and painting course focusing on the following topics: Realism, Color, Narrative, and Abstraction. Other topics may be offered as well. Topics will be announced in the course schedule. Each topic may only be taken once. May be repeated up to 12 credits.

Prerequisite: ARTS 1610 and ARTS 1630, or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an intermediate level drawing and painting course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering intermediate level tools and processes in drawing and painting.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary drawing and painting.
4. Create original works of art through the application of medium, tools, techniques and concepts specific to drawing and painting.

ARTS 355. Special Topics in Intermediate Graphic Design**3 Credits (2+4P)**

Intermediate graphic design course focusing on the following topics: web design, typography, motion graphics, publication design. Other topics may be offered as well. Topics will be announced in the course schedule. Each topic may only be taken once. May be repeated up to 12 credits.

Prerequisite: ARTS 2431 or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an intermediate level graphic design course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering intermediate level tools and processes in graphic design.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary graphic design.
4. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary graphic design.

ARTS 360. The Figure**3 Credits (2+4P)**

Introduction to working from live models, anatomical skeletons, source images and the imagination in a variety of two-dimensional media, including painting and drawing. An emphasis is placed on anatomical

accuracy and with a focus on the figure as an expressive subject. May be repeated up to 6 credits.

Prerequisite(s): ARTS 1610 or consent of instructor.

ARTS 365. Intermediate Sculpture Special Topics

3 Credits (2+4P)

Intermediate sculpture students will expand their fabrication skills in metal, wood and mixed media. Topics will be announced in the course schedule. Each topic may only be taken once. May be repeated up to 12 credits. May be repeated up to 12 credits.

Prerequisite: ARTS 2839 or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an intermediate level sculpture course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering intermediate level tools and processes in sculpture.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary sculpture.
4. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary sculpture.

ARTS 370. Special Topics in Intermediate Digital Photography

3 Credits (2+4P)

Intermediate digital photography course addressing techniques and production of photo media within the context of contemporary art. Rotating topics include: Networks, Photo-book and Video art, among others. Each topic may only be taken one time. May be repeated up to 12 credits.

Prerequisite: ARTS 1410, or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an intermediate level photography course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering intermediate level tools and processes in photography.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary photography.
4. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary photography.

ARTS 373. Intermediate Analog Photography

3 Credits (2+4P)

Introduction to skills and techniques of black and white film photography within the context of contemporary art. Emphasis on analog camera work and darkroom procedures. 35 mm SLR or rangefinder film camera required for course. May be repeated up to 6 credits.

Prerequisite(s): ARTS 1410, or consent of instructor.

ARTS 374. Intermediate Ceramics Multiples (Design and Production)

3 Credits (2+4P)

Intermediate ceramics course focusing on an introduction to the technical processes of throwing, prototyping, mold making, glaze calculation, and alternative firing.

Prerequisite: ARTS 1310 or consent of instructor.

Learning Outcomes

1. Develop the basic visual and tactile problem solving skills necessary to making one part and two part molds.
2. Demonstrate competency is using these techniques to translate basic cylindrical, spherical, and rectangular forms.

3. Develop ability to make successful clay casts from properly made molds.
4. Apply the principles of design to creating multiples: Balance, Emphasis, Rhythm, Contrast, Proportions, and Scale, Movement.
5. Develop basic skills in glazing and a variety of other surface design techniques.
6. Apply the visual element to glazing and surface design of ceramic forms: Line, Shape, Mass, Value, Color, Texture, Pattern, Space.
7. Through research, writing, and class critiques develop the ability to think, speak and write about the conceptual relevance to creating multiples in contemporary art.

ARTS 375. Intermediate Ceramics Sculptural Concerns

3 Credits (2+4P)

Intermediate ceramics course focusing on the refinement of technical skills with an emphasis on conceptual development related to materiality.

Prerequisite(s): ARTS 1310 or consent of instructor.

Learning Outcomes

1. Refine and master the basic skills in all the standard ceramic building techniques. This includes wheel throwing, coil building, and slab building.
2. Demonstrate competency is using these techniques to replicate complex geometric, organic, and figurative forms
3. Through the guidance of course assignments begin to develop original conceptual themes and natives to translate into sculptural forms.
4. Through the guidance of course assignments begin to develop original conceptual themes and natives to translate into sculptural form.
5. Refine and master glazing and surface design techniques. Begin to develop ability to mix glazes and slips.
6. Demonstrate clear understanding of the visual element to glazing and surface design: Line, Shape, Mass, Value, Color, Texture, Pattern, Space
7. Through research, writing, and class critique refine the ability to think, speak and write about contemporary ceramic sculpture in a competent and nuanced way.

ARTS 376. Museum/Gallery Research Internship

1-9 Credits

Research internship in museum or gallery. Requirements determined by instructor in cooperation with supervising museum/gallery professional. May be repeated up to 9 credits. Consent of Instructor required.

Prerequisite(s): ARTH 2110G, ARTH 2120G, ARTS 2671, or consent of instructor.

ARTS 385. Special Topics in Intermediate Metals/Jewelry

3 Credits (2+4P)

Intermediate Metals/Jewelry course focusing on the following topics: design and production, materiality and sculptural concern. Techniques may include casting, complex construction, forming, and mix media. Topics will be announced in the course schedule. Each topic may only be taken once. May be repeated up to 12 credits.

Prerequisite(s): ARTS 1810 or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an intermediate level metals/jewelry course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering intermediate level tools and processes in metals/jewelry.

- Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary metals/jewelry.
- Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary metals/jewelry.

ARTS 394. Special Topics in Studio

3 Credits (3)

Specific subjects and credits to be announced in the Schedule of Classes online. Topics cannot be repeated. May be repeated up to 9 credits.

ARTS 401. Museum Conservation Techniques I

3 Credits (2+3P)

Introduces the student to conservation theory and the basic principles of conservation for cultural objects. The course integrates the history, philosophy and technologies of art conservation with knowledge of the properties of materials used in conservation. The student will learn and develop conservation skills including learning about the most frequent kinds of deterioration that can occur in various types of art objects, symptoms and causes as well as preventative and restoration techniques. Although this course provides practical experience, it also seeks to provide a broad understanding of the field of conservation. This course also includes how to document the condition of an object during the conservation process.

Learning Outcomes

- Identify and explain strengths and weaknesses of the theory of conservation
- Analyze a ceramic object through testing and observation; evaluate the results of an object to be conserved.
- Create and defend a conservation treatment plan based on the conservation theory and the principles of conservation for cultural objects, tests results, observations, and personal experience in the lab.
- Apply conservation and restoration techniques to the ceramic object in the lab, after analyzing, evaluating and creating a treatment plan for the object.
- Create a Condition Report of the ceramic object by describing the condition and its treatment during the conservation process.

ARTS 402. Museum Conservation Techniques II

3 Credits (2+3P)

Continues conservation theory and the basic principles of conservation for cultural objects. The course integrates the history, philosophy and technologies of art conservation with knowledge of the properties of materials used in conservation. The student will learn and develop conservation skills including learning about the most frequent kinds of deterioration that can occur in various types of art objects, symptoms and causes as well as preventative and restoration techniques. Although this course provides practical experience, it also seeks to provide a broad understanding of the field of conservation.

Prerequisite(s): ARTS 401.

Learning Outcomes

- Analyze different types of materials by examining two objects, a painted canvas and a painted wood panel, through testing and observation and evaluate the results of the objects to be conserved
- Create and defend a conservation treatment plan based on the conservation theory and the principles of conservation for cultural objects, tests results, observations, and personal experience in the lab.

- Apply conservation and restoration techniques to both objects in the lab, a painted canvas and a painted wood panel, after analyzing, evaluating and creating a treatment plan for the object.
- Create a Condition Report for each object, describing the condition of the object, history, the problems the object presents, its treatment during the conservation process, and any remaining issues after treatment.

ARTS 403. Preventative Conservation/Collections Care

3 Credits (3)

Introduces the student on how to mitigate the deterioration and damage of cultural property in a museum setting through the formulation and implementation of policies and procedures. The course addresses most aspects of collections management and care for objects in storage, exhibitions and during transportation.

Learning Outcomes

- Understand the principles of Preventive Conservation and Collections Care and develop conservation skills through recognizing, describing, explaining, locating, and reporting symptoms and causes of the agents of deterioration that affect all types of art objects
- Apply methods of Preventive Conservation and collections care for causes of deterioration in museum collections
- Analyze and Evaluate several museums and create a Museum Assessment that could serve a plan of action to remediate any problems encountered.
- Create a plan for re-organizing a museum based on the Museum Assessment
- Create a binder based on the readings from class that includes all the causes of deterioration of materials, how to prevent deterioration, and environmental control of collections.

ARTS 404. Applied Projects in Museum Conservation

3 Credits (3)

This course provides student with the practical application of techniques and policies learned in previous museum conservation coursework with the underpinnings of basic museum and conservation practices, particularly in collection care, preventive conservation, conservation, ethics, teamwork and security. Rotating special projects. May be repeated up to 6 credits.

Prerequisite(s): ARTS 401, ARTS 402, ARTS 403 or ARTS 501, ARTS 502, ARTS 503.

Learning Outcomes

- Analyze and examine the different types of materials that compose one or various objects through testing and observation and evaluate the results of the object/s to be conserved
- Create and defend the conservation treatment plan based on conservation theory and the principles of conservation for cultural objects, the tests results, and the observations.
- Apply conservation and restoration techniques to the object/s in the lab after analyzing, evaluating and creating a treatment plan for the object/s.
- Create Condition Reports, one for each object, by describing the condition of the object and its treatment during the conservation process.

ARTS 440. Internship in Art

1-9 Credits (3P)

This course provides students with the opportunity for workplace learning as an important component in their program of study. Students can identify an internship in graphic design, photography, conservation or other studio areas; or within broader arts institutions such as museums,

galleries and visual arts centers which will provide them with professional experience that will support the successful achievement of their career goals in art. May be repeated up to 9 credits.

Prerequisite: ARTH 2110G, ARTH 2120G, ARTS 2136 and eighteen credits of ARTS/ARTH 2000 or ARTS/ARTH 300 studio courses.

ARTS 450. Special Topics In Advanced Drawing and Painting
3-6 Credits (2-4+4P)

Advanced drawing and painting course focusing on the following topics: Identity, Place, Spirituality, Body, and among others. Topics will be announced in the course schedule. May be repeated up to 12 credits.

Prerequisite: 3 credits of ARTS 350, or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an advanced level drawing and painting course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering advanced level tools and processes in drawing and painting.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary drawing and painting.
4. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary drawing and painting

ARTS 455. Special Topics in Advanced Graphic Design
3-6 Credits (2-4+4P)

Advanced graphic design course focusing on the following special topics: special projects, identity design, storytelling, portfolio. Other topics may be offered as well. Topics will be announced in the course schedule. Each topic may only be taken once. May be repeated up to 15 credits.

Prerequisite: 6 credits of ARTS 355, or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an advanced level graphic design course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering advanced level tools and processes in graphic design.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary graphic design.
4. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary graphic design.

ARTS 465. Advanced Sculpture Special Topics
3-6 Credits (2-4+4P)

Thematic classes deepen students' knowledge of contemporary sculpture and extended media through a series of interpretive assignments that culminates in a unified body of work. Special topics will be announced in the course schedule. May be repeated up to 12 credits.

Prerequisite: ARTS 365 or permission of the instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an intermediate level sculpture course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering intermediate level tools and processes in sculpture.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary sculpture.

4. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary sculpture.

ARTS 470. Advanced Digital Photography
3-6 Credits (2-4+4P)

Advanced digital photography course addressing technique and production of photo media within the context of contemporary art. Rotating topics may include: Temporality, Photo-installation and Video Art, among others. Each topic may only be taken once. May be repeated up to 12 credits.

Prerequisite: ARTS 370 or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an advanced digital photography course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering advanced level tools and processes in digital photography.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary photography.
4. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary photography.

ARTS 474. Advanced Ceramics Design and Production
3-6 Credits (3-6)

Advanced ceramics course focusing on the technical processes of throwing, prototyping, mold making, glaze calculation, and alternative firing. Discussions may also include issues of professional practice, marketing, and branding. May be repeated up to 6 credits.

Prerequisite(s): ARTS 374 and ARTS 375, or consent of instructor.

Learning Outcomes

1. Refine the basic visual and tactile problem solving skills necessary to making two part molds, and develop the ability to make complex multipart molds.
2. Demonstrate competency in using these techniques to translate complex geometric and organic forms
3. Develop pertinent conceptual reasoning for creating multiples of a form in ceramic material.
4. Demonstrate clear understanding of the principles of design in designing ceramic multiples: Balance, Emphasis, Rhythm, Contrast, Proportions, and Scale, Movement.
5. Develop basic skills in glazing and a variety of other surface design techniques.
6. Demonstrate clear understanding of the visual element of art to the glaze and surface design of ceramic multiples: Line, Shape, Mass, Value, Color, Texture, Pattern, Space,
7. Through research, writing, and class critiques refine the ability to think, speak and write about the conceptual relevance to creating multiples in contemporary art and articulate.

ARTS 475. Advanced Ceramics Sculptural Concerns
3-6 Credits (2-4+4P)

Advanced ceramics course focusing on conceptual development as it relates the creation of a unified body of work. Topics may include discussions of advanced techniques, professional practices, and contemporary issues in ceramics. May be repeated up to 15 credits.

Prerequisite(s): ARTS 374 and ARTS 375, or consent of instructor.

Learning Outcomes

1. Strive to innovate the standard ceramic building techniques in a way that contributes to, and is informed by, the field of ceramic sculpture.

2. Develop a cohesive body of work, which explores completely original concepts and themes.
3. Demonstrate clear understand of the principles of design by challenging them in an informed way.
4. Refine and master glazing and surface design techniques. Begin to develop ability to mix glazes and slips.
5. Demonstrate clear understanding of the visual element of art by challenging them in an informed way.
6. Through research, writing, and class critique refine the ability to think, speak and write about contemporary ceramic sculpture in a competent, nuanced, and critical way. Begin to measure one's work against the larger context of contemporary art.

ARTS 485. Special Topics in Advanced Metals/Jewelry
3-6 Credits (2-4+4P)

Advanced Metals/Jewelry course focusing on the following topics: conceptual development and personal aesthetic and style, professional practices, contemporary issues in Metals/Jewelry, and senior exhibition. Techniques may include enameling, coloring, historical processes, and digital technology. Topics will be announced in the course schedule. Each topic may only be taken once. May be repeated up to 12 credits.

Prerequisite: 6 credits of ARTS 385, or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an intermediate level metal/jewelry course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering intermediate level tools and processes in metal/jewelry.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary metal/jewelry.
4. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary metal/jewelry.

ARTS 490. Museum Conservation Internship
1-6 Credits (1-6)

The goal of this internship is to provide a student with a practical learning experience in preventative conservation techniques and policies so that they can relate what they have learned in the classroom from ART 403 Preventative Conservation/Collections Care to applied situations. It will provide the student an opportunity to learn skills and knowledge needing in working with museum collections. Tasks and projects will be assigned by the instructor. 3 credits required for BFA in Museum Conservation. May be repeated up to 6 credits.

Prerequisite(s): ARTS 403.

ARTS 494. Special Topics in Studio
3 Credits (3)

Specific subjects and credits to be announced in the Schedule of Classes online. May be repeated up to 9 credits.

ARTS 495. Undergraduate Studio Thesis
3-6 Credits (3-6)

Special research and independent study leading to undergraduate thesis exhibition. May be repeated up to 6 credits. Consent of Instructor required.

Prerequisite(s): Consent of instructor.

ARTS 496. Fundamentals of Studio Management
1 Credit (1)

Advanced studio course designed to introduce students to the fundamentals of studio management. Includes training in proper tools use and maintenance; safety procedures; and practical experience with

studio oversight. Concurrent registration in advanced level studio course of the same media area required. May be repeated for a maximum of 3 credits. Restricted to majors. Graded S/U.

Prerequisite: consent of instructor.

ARTS 499. Problems in Studio Art
1-6 Credits (1-6)

Individualized study in specialized studio areas not covered by other advanced courses. May be repeated up to 9 credits. Consent of Instructor required.

ARTS 501. Museum Conservation Techniques I
3 Credits (2+3P)

Introduces the student to conservation theory and the basic principles of conservation for cultural objects. The course integrates the history, philosophy and technologies of art conservation with knowledge of the properties of materials used in conservation. The student will learn and develop conservation skills including learning about the most frequent kinds of deterioration that can occur in various types of art objects, symptoms and causes as well as preventative and restoration techniques. Although this course provides practical experience, it also seeks to provide a broad understanding of the field of conservation. This course also includes how to document the condition of an object during the conservation process. May be repeated up to 3 credits. Crosslisted with: ARTS 401.

ARTS 502. Museum Conservation Techniques II
3 Credits (2+3P)

Continues conservation theory and the basic principles of conservation for cultural objects. The course integrates the history, philosophy and technologies of art conservation with knowledge of the properties of materials used in conservation. The student will learn and develop conservation skills including learning about the most frequent kinds of deterioration that can occur in various types of art objects, symptoms and causes as well as preventative and restoration techniques. Although this course provides practical experience, it also seeks to provide a broad understanding of the field of conservation. Crosslisted with: ARTS 402.

Prerequisite(s): ARTS 501.

ARTS 503. Preventive Conservation/Collections Care
3 Credits (3)

Introduces the student on how to mitigate the deterioration and damage of cultural property in a museum setting through the formulation and implementation of policies and procedures. The course addresses most aspects of collections management and care for objects in storage, exhibitions and during transportation. Crosslisted with: ARTS 403.

ARTS 504. Applied Projects in Museum Conservation
3 Credits (3)

This course provides students with the practical application of techniques and policies learned in previous conservation coursework with the underpinnings of basic museum and conservations practices, particularly in collection care, preventative conservation, conservation, ethics, teamwork and security. May be repeated up to 6 credits. Crosslisted with: ARTS 404.

Prerequisite(s): ARTS 401, ARTS 402, ARTS 403 OR ARTS 501, ARTS 502, ARTS 503.

ARTS 540. Internship in Art
1-9 Credits (3P)

This course provides students with the opportunity for workplace learning as an important component in their program of study. Students can identify an internship in graphic design, photography, conservation or other studio areas; or within broader arts institutions such as museums, galleries and visual arts centers which will provide them with professional experience that will support the successful achievement of their career

goals in art. May be repeated up to 9 credits. Crosslisted with: ARTS 440 and ARTS 340.

ARTS 550. Drawing and Painting Workshop

3-6 Credits (2-4+4P)

Graduate level drawing and painting course focusing on the development of concepts, expression and visual form. May be repeated up to 27 credits.

Prerequisite(s): Graduate standing.

ARTS 555. Graphic Design

3 Credits (3)

May be repeated up to 27 credits.

ARTS 565. Sculpture Media

3-9 Credits

May be repeated up to 27 credits.

ARTS 570. Photography Seminar

3-9 Credits (3-9)

Graduate students develop and implement a research program using photographic media and processes. Outcomes and program developed in consultation with photography faculty.

Prerequisite: .

Learning Outcomes

1. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary photography at the graduate level.

ARTS 575. Ceramic Arts

3-9 Credits

May be repeated up to 27 credits.

ARTS 576. Museum/Gallery Research Internship

1-9 Credits

Research internship in museum or gallery. Requirements determined by instructor in cooperation with supervising museum/gallery professional. For art history credit. May be repeated for a maximum of 9 credits.

Prerequisite: graduate standing.

ARTS 585. Metals and Jewelry Design

3-9 Credits

May be repeated up to 27 credits.

ARTS 595. Problems in Studio

1-6 Credits

Individualized study in specialized studio areas not covered by other advanced courses. May be repeated up to 12 credits. Consent of Instructor required.

ARTS 596. Graduate Studio Seminar

3 Credits (3)

Explores issues in contemporary art making and their relationship to personal work. Presentation of research in oral, visual, and written form. May be repeated for a maximum of 18 credits. Restricted to majors.

Prerequisite(s): Graduate standing.

ARTS 598. Studio Thesis

1-15 Credits

Special research in studio, leading to an exhibition and written thesis statement.

Art (Art History) - Bachelor of Arts

The art history program is designed to give the student a broad familiarity with the visual arts through the factual and theoretical study of aesthetics, cultural contexts, iconography, stylistic development and technical practices. Students explore a range of methodologies and theoretical lenses through which to study objects and images. Art history coursework opens up broader questions about structures of race, class, sexuality, gender, identity and power as it relates to art, with a particular emphasis on the unique lens of the border region in which we are located. Art history is fundamentally interdisciplinary, therefore, students should take related courses in anthropology, history, languages and literature, music history, philosophy, religion, and theatre history. Students are **strongly** encouraged to study at least one other language to prepare them for advanced research in the discipline, as the study of art is especially dependent on written sources in other languages. A degree in art history is excellent preparation for a range of careers, including in museum and galleries, education, travel and tourism, auction houses and estate sales, art and copyright law, equity analysis and public relations, arts correspondence and journalism, appraisal, libraries and archives, and more.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

¹ See the General Education (p. 227) section of the catalog for a full list of courses.

² Students must complete a Second Language requirement, see the Requirements (p. 477) tab for more information about the ways to complete this.

³ Please see the Courses (p. 464) tab of the Art Department page within this catalog to determine which courses are Studio Arts (ARTS) and which are Art History (ARTH).

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Art (Studio Art) - Bachelor of Arts

The Bachelor of Arts is designed to give the student a broad interdisciplinary understanding of the areas of painting/drawing, graphic design, printmaking, sculpture, photography, ceramics, conservation, jewelry and metalsmithing, through a series of introductory and special topics courses and the history and appreciation of art in the context of a liberal education. Students are required to take 30 credits of upper-level studio art classes and 18 credits of Art History.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective

credits, but may be needed in order to take the necessary English and Mathematics coursework.

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁵ Students can take one 4 credit Upper-Division Elective or can take one 3 credit Upper-Division and a 1 credit Elective to fulfill the requirement.

Art (Museum Conservation) - Bachelor of Fine Arts

Art Conservation is the study of the preservation and restoration of art as well as of other cultural and natural objects. The B.F.A. degree with an concentration in Museum Conservation provides an academic structure within which students master specific sets of practical skills while developing broad professional and theoretical perspectives toward the issue of conserving objects in a museum or collection setting. By combining theory with practice, the program offers students the interpretive, quantitative and administrative skills needed for careers as conservators, curators, registrars, collections managers, exhibit designers and museum administrators, all of whom must have specialized training in the care and handling of works of art to be successful.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

¹ See the General Education (p. 227) section of the catalog for a full list of courses.

² For students interested in graduate school in this major, it is highly recommended to obtain a B- or better for all Museum Conservation Requirements

³ Please see the Courses (p. 464) tab of the Art Department page within this catalog to determine which courses are Studio Art (ARTS) and which are Art History (ARTH).

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁵ Work with your program advisor to select an approved HIST course to meet this requirement.

⁶ Work with your program advisor to select an approved ANTH course to meet this requirement.

Art (Studio Art) - Bachelor of Fine Arts

The studio art curriculum is designed to give the student a broad, transdisciplinary understanding of the field of visual arts, including appreciation and criticism, art history, ceramics, drawing, graphic design and media arts, jewelry/metalsmithing, painting, photography, printmaking, sculpture and museum conservation. This program is recommended for those students who wish to embark on a professional career in art. The Bachelor of Fine Arts degree is a professional baccalaureate degree, which requires a senior thesis exhibition and capstone class in the final semester of study. Students seeking a BFA must apply in the spring of their sophomore year for acceptance into the BFA program - this is done via a portfolio review.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

¹ See the General Education (p. 227) section of the catalog for a full list of courses

² A Mathematics General Education course is required for the degree but students may need to take any prerequisites needed to enter the course first.

³ See the Viewing a Wider World (p. 231) section for a full list of courses

⁴ **Introductory ARTS Courses:** Certain ARTS 1000/2000-level courses, in addition to the ones below, may count but only apply for Transfer Students.

- ARTS 1310 Introduction to Ceramics
- ARTS 1410 Introduction to Photography
- ARTS 1610 Drawing I
- ARTS 1630 Painting I
- ARTS 1710 Introduction to Printmaking
- ARTS 1810 Jewelry and Small Metal Construction I
- ARTS 2431 Introduction to Graphic Design
- ARTS 2839 Introduction to Sculpture

⁵ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Arts- Art with an emphasis in Studio Art there is no second language requirement for the degree.

A Suggested Plan of Study

This roadmap assumes student placement in ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

First Year		Credits
ENGL 1110G	Composition I (C- or better)	4
ARTH 2136	Writing in Art (C- or better)	3
Introductory Studio Art Course (C- or better) ¹		3

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Art - Undergraduate Minor

The Studio Art minor requires 18 credits. Students earning a BA or BFA in Studio Art cannot get a minor in Studio Art. Students earning a BA in Art History or BFA in Museum Conservation can get a minor in Studio Art by passing at least 6 credits in the minor beyond the requirements of the major.

Prefix	Title	Credits
Required Courses		
Studio art or art history at the 300-400 level		9
Select three from the following:		9
ARTH 2110G	History of Art I	
ARTH 2120G	History of Art II	
ARTS 1310	Introduction to Ceramics	
ARTS 1410	Introduction to Photography	
ARTS 1610	Drawing I	
ARTS 1630	Painting I	
ARTS 1810	Jewelry and Small Metal Construction I	
ARTS 1710	Introduction to Printmaking	
ARTH 2136	Writing in Art	
ARTS 2431	Introduction to Graphic Design	
ARTS 2839	Introduction to Sculpture	
Total Credits		18

Art History - Undergraduate Minor

The Art History minor requires 18 credits. Students earning a BA in Art History cannot get a minor in Art History. Students earning a BA in Studio Art, BFA in Studio Art, or BFA in Museum Conservation can get a minor in Art History by passing at least 6 credits in the minor beyond the requirements of the major.

Prefix	Title	Credits
Required Courses		
ARTH 2110G	History of Art I	3
ARTH 2120G	History of Art II	3
ARTH 2136	Writing in Art	3
ARTH courses at the 300-499 level		9
Total Credits		18

Museum Conservation - Undergraduate Minor

The Museum Conservation minor requires 18 credits. Students cannot earn both a bachelor's degree in the Department of Art and the Museum Conservation minor unless they pass at least 6 credits in the minor beyond the requirements of the major. An undergraduate minor in Museum conservation requires the completion of 9 credits of the three 400 level museum conservation courses listed below, and 9 credits of the courses selected from one of the three tracks listed below.

Prefix	Title	Credits
Required Courses		
ARTS 401	Museum Conservation Techniques I (Spring)	3
ARTS 402	Museum Conservation Techniques II (Fall)	3
ARTS 403	Preventative Conservation/Collections Care (Directed Readings)	3
Select one from the following tracks:		9
Anthropology		
Art		
History		
Total Credits		18

Track 1: Anthropology

Prefix	Title	Credits
Select 9 credits from the following:		9
ANTH 315	Introduction to Archaeology	
ANTH 345	Introduction to Museology	
ANTH 349	Museum Anthropology	
ANTH 313V	Ancient Mexico	
ANTH 330V	Magic Witchcraft and Religion	
ANTH 464	Curation Crisis in Archaeology	
ANTH 467	Archaeology of Ancient Southwest	
ANTH 318	Historical Archaeology	
ANTH 378	Lab Methods in Archaeology	
Total Credits		9

Track 2: Art

Prefix	Title	Credits
Select 9 credits from the following:		9
ARTH 2110G	History of Art I	
ARTH 2120G	History of Art II	
ARTS 1310	Introduction to Ceramics	
ARTS 1410	Introduction to Photography	
ARTS 1610	Drawing I	
ARTS 1630	Painting I	
ARTS 1710	Introduction to Printmaking	
ARTS 1810	Jewelry and Small Metal Construction I	
ARTH 2136	Writing in Art	
ARTS 2839	Introduction to Sculpture	
Any 300-400 level ARTH course		
Total Credits		9

Track 3: History

Prefix	Title	Credits
Select 9 credits from the following: 9		
HIST 371	Greek Civilization: From Helen of Troy to Alexander the Great	
HIST 397	Introduction to Public History	
HIST 438	Antiquity and Modernity	
HIST 483	Historic Preservation	
HIST 486	Interpreting Historic Places for the Public	
Total Credits		9

Astronomy

Undergraduate Program Information

The department offers an undergraduate astronomy minor degree, which requires 18-20 credits. The department does not offer a BS degree but encourages interested students to enroll in the physics program as a first step toward a career in astronomy. Our 100- and 300-level courses meet various university general education requirements. All students are invited to share with us this exciting area of study, through our basic and advanced undergraduate courses

Prefix	Title	Credits
Course List ¹		
ASTR 1115G	Introduction to Astronomy Lecture & Laboratory	4
ASTR 1120G	The Planets Lecture & Laboratory	4
ASTR 301V	Revolutionary Ideas in Astronomy	3
ASTR 305V	The Search for Life in the Universe	3
ASTR 308V	Into the Final Frontier	3
ASTR 400	Undergraduate Research	1-3
ASTR 401	Topics in Modern Astrophysics	3
ASTR 402	Astronomical Observations and Techniques	3

¹ Other courses at the 300 and 400-levels are offered on an occasional basis. Consult the "Course Descriptions" section in this catalog.

Graduate Program Information

The Department of Astronomy offers graduate work leading to the Doctor of Philosophy and Master of Science degrees. To be admitted as a regular student to the NMSU Graduate School as a major in astronomy, a student must present a suitable undergraduate background with emphasis (12-16 credits) on junior-senior level physics, and mathematics.

Information on assistantships and fellowships in teaching and research can be obtained from the department.

Each entering graduate student will be assigned a committee that will guide the student in choice of courses, suggest training if needed to remedy deficiencies and determine specific degree requirements in accord with the student's needs and objectives, and in agreement with departmental policies. The program requires 33 traditional course credit hours (11 classes), 4 seminar class credit hours, plus research in astronomy. Each student must demonstrate no later than during the third year sufficient academic and research ability to qualify for continuation in doctoral studies.

The MS degree in astronomy is closely connected with the astronomy Ph.D. program, and questions concerning requirements should be directed to the department.

Qualifying, Comprehensive and Final examinations are described elsewhere in this catalog. Questions concerning styles of the examinations should be directed to the department head.

The department has access to several different observing facilities. NMSU operates the Apache Point Observatory on behalf of the Astrophysical Research Corporation and the observatory is home to several telescopes:

- the ARC 3.5m telescope,
- a 1-meter telescope as part of the global SONG (<http://astronomy.nmsu.edu/song-wiki/>) project
- the ARCSAT 0.5m telescope, and
- the Sloan Digital Sky Survey (SDSS) 2.5m telescope.

The Department is a full partner in the SDSS project. The Department also operates the Dunn Solar Telescope and the Visitor Center at the Sunspot Solar Observatory. The Department also operates a 24-inch telescope on Tortugas Mountain, near the NMSU campus.

The department is home to the NASA Planetary Data System Atmosphere Node, where solar system exploration data are archived.

Degrees for the Department

Master Degree(s)

- Astronomy - Master of Science (p. 104)

Doctoral Degree(s)

- Astronomy - Doctor of Philosophy (p. 180)

Minors for the Department

- Astronomy - Undergraduate Minor (p. 489)

Professor, Jason Jackiewicz, Department Head

Professors: Chanover, Churchill, Holtzman, Jackiewicz, McAteer; **Associate Professors:** Finlator, Lyra, Prescott; **Assistant Professors:** Burchett, Nielsen, Shetye; **Observatory Specialist:** Edwards

J. Burchett, Ph.D. (University of Massachusetts) - galaxy clusters, intergalactic medium, cosmic simulations;

N. Chanover, Ph.D. (New Mexico State) - planetary astronomy;

C. Churchill, Ph.D. (California-Santa Cruz) - galaxies and intergalactic medium; K. Finlator, Ph.D. (University of Arizona) - galaxy evolution, the intergalactic medium, cosmological reionization;

K. Finlator, Ph.D. (University of Arizona) - galaxy evolution, reionization, cosmological simulations;

J. Holtzman, Ph.D. (California-Santa Cruz) - stars and stellar populations in galaxies;

J. Jackiewicz, Ph.D. (Boston College) - solar physics, helioseismology, stellar structure and evolution, planetary interiors;

W. Lyra (Uppsala University) - planet formation, habitability;

R. T. J. McAteer, Ph.D. (Queen's University, Belfast) - solar physics, Sun-Earth connection;

E. Nielsen, Ph.D. (University of Arizona) - extrasolar planets;

M. Prescott, Ph.D. (University of Arizona) - Lyman-alpha nebulae, kinematics of gas within cosmic web;

J. Shetye, Ph.D. (Armagh Observatory) - solar physics

Astronomy Courses

ASTR 1115G. Introduction to Astronomy Lecture & Laboratory **4 Credits (3+2P)**

This course surveys observations, theories, and methods of modern astronomy. The course is predominantly for non-science majors, aiming to provide a conceptual understanding of the universe and the basic physics that governs it. Due to the broad coverage of this course, the specific topics and concepts treated may vary. Commonly presented subjects include the general movements of the sky and history of astronomy, followed by an introduction to basic physics concepts like Newton's and Kepler's laws of motion. The course may also provide modern details and facts about celestial bodies in our solar system, as well as differentiation between them – Terrestrial and Jovian planets, exoplanets, the practical meaning of “dwarf planets”, asteroids, comets, and Kuiper Belt and Trans-Neptunian Objects. Beyond this we may study stars and galaxies, star clusters, nebulae, black holes, and clusters of galaxies. Finally, we may study cosmology—the structure and history of the universe. The lab component of this course includes hands-on exercises that work to reinforce concepts covered in the lecture, and may include additional components that introduce students to the night sky. May be repeated up to 4 credits.

Learning Outcomes

1. Students will discuss the night sky as seen from Earth, including coordinate systems, the apparent daily and yearly motions of the sun, Moon, and stars, and their resulting astronomical phenomena.
2. Students will list and apply the steps of the scientific method.
3. Students will describe the scale of the Solar System, Galaxy, and the Universe.
4. Students will explain telescope design and how telescopes and spectra are used to extract information about Astronomical objects.
5. Students will describe the formation scenarios and properties of solar system objects.
6. Students will describe gravity, electromagnetism, and other physical processes that determine the appearance of the universe and its constituents.
7. Students will describe methods by which planets are discovered around other stars and current results.
8. Students will describe the structure, energy generation, and activity of the sun.
9. Students will compare our sun to other stars and outline the evolution of stars of different masses and its end products, including black holes. 1
10. Students will describe the structure of the Milky Way and other galaxies and galaxy clusters. 1
11. Students will describe the origin, evolution, and expansion of the universe based on the Big Bang Theory and recent Astronomical observations. 1
12. Students will describe conditions for life, its origins, and possible locations in the universe.

ASTR 1116. Introduction to Astronomy Lab, Special **1 Credit (1)**

This lab-only listing exists only for students who may have transferred to NMSU having taken a lecture-only introductory astronomy class, to allow them to complete the lab requirement to fulfill the general education requirement. Consent of Instructor required. , at some other institution). Restricted to Las Cruces campus only.

Prerequisite(s): Must have passed Introduction to Astronomy lecture-only.

Learning Outcomes

1. Course is used to complete lab portion only of ASTR 1115G or ASTR 112
2. Learning outcomes are the same as those for the lab portion of the respective course.

ASTR 1120G. The Planets Lecture & Laboratory **4 Credits (3+2P)**

Comparative study of the planets, moons, comets, and asteroids which comprise the solar system. Emphasis on geological and physical processes which shape the surfaces and atmospheres of the planets. Laboratory exercises include analysis of images returned by spacecraft. Intended for non-science majors, but some basic math required. May be repeated up to 4 credits.

Learning Outcomes

1. Students will describe the sky as seen from Earth, the apparent daily and yearly motions of the Sun, Moon, planets and stars, and resulting astronomical phenomena.
2. Students will apply the process of the scientific method in an astrophysical setting.
3. Students will describe the structure of the solar system and explain the development of the currently accepted model of solar system formation.
4. Students will explain how telescopes and spectra are used to extract information about astronomical objects.
5. Students will describe properties of minor solar system objects, such as dwarf planets, moons, asteroids, meteoroids, and comets.
6. Students will compare and contrast bulk and unique properties of the Terrestrial and Jovian worlds.
7. Students will describe how gravity and other physical processes determine the appearance of the solar system and its constituents.

ASTR 301V. Revolutionary Ideas in Astronomy **3 Credits (3)**

Examines recent fundamental scientific revolutions that have shaped our view of Earth and the universe. Topics in astronomy range from exoplanets to black holes to dark energy and raise questions about the very nature of how we use the scientific method to see the unseen, and how this shapes science research today.

Prerequisite(s): Any general education science course.

ASTR 305V. The Search for Life in the Universe **3 Credits (3)**

Use of information from several of the sciences to explore the likelihood that life exists elsewhere in the universe. Subjects include an overview of historical ideas about the possibility of life elsewhere in the universe, the chemistry and biology of life on Earth, recent explorations for life within our solar system, and current search strategies for life in the universe and their scientific basis.

ASTR 308V. Into the Final Frontier **3 Credits (3)**

Exploration of space: a brief review of the history of space flight, the Apollo program, joint U.S.-Soviet space missions, and unstaffed exploration of the planets. Emphasis on knowledge gained through these efforts. Includes new space initiatives. Same as HNRS 308V.

ASTR 330V. Planetary Exploration

3 Credits (3)

A current planetary exploration mission is studied within the context of the solar system. The data acquired and principles involved in executing the mission, as well as social, political, ethical and economic implications of planetary exploration, are examined. May be repeated up to 3 credits.

Learning Outcomes

1. Students will describe the various types of interplanetary missions used to explore solar system objects.
2. Students will explain the roles and responsibilities of the groups of scientists and engineers that comprise a mission team.
3. Students will describe the social, political, ethical, and financial challenges associated with planetary exploration.

ASTR 400. Undergraduate Research

1-3 Credits

Supervised individual study or research. May be repeated for a maximum of 6 credits.

Prerequisite: consent of instructor.

ASTR 401. Topics in Modern Astrophysics

3 Credits (3)

This course is designed for students interested in astrophysics who have some background in math and physics and want to learn about basic astrophysical concepts such as orbital mechanics, light, and radiative processes and transfer. These concepts will be applied to the discussion of exciting modern topics involving planets, exoplanets, stars, galaxies, and/or cosmology, with topical emphasis determined by the instructor.

Prerequisite(s): MATH 1521G and (PHYS 2110 or PHYS 1310G).

ASTR 402. Astronomical Observations and Techniques

3 Credits (3)

Designed for students interested in astrophysics who have some background in math and astronomy and want to learn about techniques for obtaining and analyzing astronomical data. This course will review the properties of light and discuss the process of experimental design. The course will describe basic observational tools such as telescopes and detectors. It will discuss how data is obtained, and how features of the detector and the Earth's atmosphere can be corrected for. Some topics in basic astronomical data analysis will be discussed, with topical emphasis determined by the instructor. Some simple data analysis projects will be assigned. May be repeated up to 3 credits.

Prerequisite: MATH 1511G and (PHYS 2140 or PHYS 1320G) and (ASTR 1120G, ASTR 1115G, or ASTR 401).

Learning Outcomes

1. Review the properties of light and discuss the process of experimental design.
2. Describe basic observational tools such as telescopes and detectors.
3. Discuss how data is obtained, and how features of the detector and the Earth's atmosphere can be corrected for.
4. Discuss topics in basic astronomical data analysis.

ASTR 403. Fundamentals of Astronomy

3 Credits (3)

This course is designed to ensure a basic, quantitative knowledge of fundamental topics in astronomy and astrophysics. These topics include orbital mechanics, properties of radiation, principles of stellar radiation

and spectra, structure and dynamics of the Milky Way, properties of galaxies, and basic cosmology. While this course is designed for first year graduate students, it is also cross-listed as a undergraduate course for students who have already had some exposure to astronomy and are prepared for a fast-paced review of fundamental topics and concepts in astronomy. Undergraduates will have a reduced homework load. Consent of Instructor required. Crosslisted with: ASTR 505.

Prerequisite(s): ASTR 401 or demonstrated background in astronomy and problem solving.

ASTR 500. Seminar

1 Credit (1)

Organized group study treating selected topics.

ASTR 503. Fundamentals of Astrophysics

3 Credits (3)

This course is designed to ensure a basic, quantitative knowledge of fundamental topics in astronomy and astrophysics. These topics include orbital mechanics, properties of radiation, principles of stellar radiation and spectra, structure and dynamics of the Milky Way, properties of galaxies, and basic cosmology.

Learning Outcomes

1. Ensure a basic, quantitative knowledge of fundamental topics in astronomy and astrophysics.
2. Discuss orbital mechanics, properties of radiation, principles of stellar radiation and spectra, structure and dynamics of the Milky Way, properties of galaxies, and basic cosmology.

ASTR 506. Dynamics and Hydrodynamics

3 Credits (3)

Graduate level course on basic stellar dynamics and fundamentals of hydrodynamics. May be repeated up to 3 credits.

Learning Outcomes

1. Learn and be able to apply basics of stellar dynamics and hydrodynamics.

ASTR 535. Observational Techniques

3 Credits (3)

Up-to-date introduction to modern observational astronomy in a two-semester sequence. Topics include: introduction to computers, error analysis in data, the different types of optical telescopes, and optical and infrared photometry, image processing, and detectors. May be repeated up to 3 credits.

Learning Outcomes

1. Discuss an introduction to computers, error analysis in data, the different types of optical telescopes, and optical and infrared photometry, image processing, and detectors.

ASTR 545. Stellar Spectroscopy

3 Credits (3)

This course covers the physics of stellar atmospheres with emphasis on using spectra as a diagnostic tool for understanding the properties of stars. Topics include spectral classification, radiative transfer, gas equilibrium physics, line and continuum opacities, adiabatic and superadiabatic convection, and extraction of observed quantities from spectra for deducing physical conditions of the source.

ASTR 555. Galaxies I

3 Credits (3)

Fundamentals of the properties of galaxies and galaxy components, including stars and stellar populations, gas and dust, central black holes, and dark matter. Includes a detailed description of the properties of the Milky Way Galaxy.

ASTR 565. Stellar Interiors**3 Credits (3)**

Internal constitutions of stars, computation of stellar models, and stellar evolution.

ASTR 598. Special Research Programs**1-6 Credits**

Individual investigations, either analytical or experimental.

ASTR 599. Master's Thesis**1-15 Credits (1-15)**

Master's level research in astrophysics or observational astronomy. May be repeated up to 88 credits.

Learning Outcomes

1. Varies

ASTR 600. Pre-dissertation Research**1-15 Credits**

Research.

ASTR 601. Thesis Proposal Preparation**1 Credit (1)**

This is a one-credit course that introduces students to Departmental expectations regarding the Thesis Proposal and provides rigorous training in proposal-writing. Drawing heavily from the presentation in the course textbook, *Writing Science* by Joshua Schimel, students will practice devising, developing, and proposing three new ideas for astronomical research over the course of the academic term. Classroom activity will consist of a mixture of short lecture-discussions and focused peer-editing sessions; homework will consist of readings and writing assignments. While the course will assist students in developing their thesis proposals, its topics are general enough to be useful for any proposal. Students taking Pre-Dissertation Research in their fifth semester are required to register for this course, while students in their fourth and fifth years who have not yet defended their thesis proposals are strongly encouraged to join them. This course should not change the total number of credits for which students are expected to register in a semester

Corequisite: ASTR 600.

Learning Outcomes

1. Provide continuing programmatic/structural support to students as they transition from structured coursework/cumes to unstructured thesis work.
2. Suppress the temptation for students to distance physically starting in the third year.
3. Optimize balance between programmatic progress and ongoing research/outreach commitments.
4. Clarify thesis proposal expectations and improve consistency between experiences of different students.
5. Suppress thesis proposal inflation.
6. Train students in ideation and proposal writing.

ASTR 605. Interstellar Medium**3 Credits (3)**

Basics of radiative transfer and processes in the interstellar medium. Properties of dust and infrared emission from grains. Applications to neutral atomic and molecular gas and ionized plasmas in galaxies. May be repeated up to 3 credits.

ASTR 616. Galaxies II**3 Credits (3)**

Galaxy formation within a cosmological context. Topics include an introduction to cosmology, the growth of linear and nonlinear structures, the formation of dark matter halos, galaxy growth and feedback

processes, and their observational signatures in the intergalactic and circumgalactic media.

ASTR 620. Planetary Processes**3 Credits (3)**

Evaluation and analysis of observational data on solar system objects to determine their nature and physical conditions, with emphasis upon atmospheres (composition, structure, thermodynamics, evolution, etc.). Restricted to Astronomy Majors. May be repeated up to 3 credits.

Learning Outcomes

1. Evaluation and analysis of observational data on solar system objects to determine their nature and physical conditions, with emphasis upon atmospheres (composition, structure, thermodynamics, evolution, etc.)

ASTR 621. Planetary System Formation**3 Credits (3)**

The physical processes involved in planetary system formation are addressed. Specific foci include molecular cloud collapse, disk processes, and competing theories of planet formation within disks. Additional topics to be discussed may include: the solar wind, planetary magnetic fields, planetary ring processes, and mineralogy. May be repeated up to 3 credits. Restricted to: ASTR majors.

ASTR 630. Advanced Methods in Astrophysics**3 Credits (3)**

Provides basic background in numerical and statistical methods relevant to astrophysical research. Topics include a review of probability and probability distribution functions, Bayesian and frequentist approaches, data simulation, parameter estimation, Markov Chain Monte Carlo, image processing, feature detection, inversions or other topics. May be repeated up to 3 credits.

Learning Outcomes

1. Perform basic background in numerical and statistical methods relevant to astrophysical research.
2. Review of probability and probability distribution functions, Bayesian and frequentist approaches, data simulation, parameter estimation, Markov Chain Monte Carlo, image processing, feature detection, inversions or other topics.

ASTR 670. Heliophysics, Space Plasmas, and Space Weather**3 Credits (3)**

Explore the Sun and its processes. the heliosphere, and its interactions with the planets. Topics include: A introductory description of space weather and its physics; energy interaction with the space environment; the quiet Sun and its interactions with planetary atmospheres (with an emphasis on Earth); Magnetohydrodynamics; frozen-in flux; the solar wind; magnetized fluid dynamics; the active Sun (flares and coronal mass ejections); the effects of Space Weather. May be repeated up to 3 credits.

Learning Outcomes

1. Manipulate the equations of electromagnetism for any astrophysical plasma, and thereby predict the behavior of any plasma under specific conditions.
2. Use the equations of electromagnetism to explain temporal and spatial size scales throughout the heliosphere.
3. Interpret the role magnetism plays in both the storage and release of energy in plasmas.
4. Analyze the effect and impact of solar particles and radiation on Earth, and at other planets.

ASTR 671. Solar Astrophysics**3 Credits (3)**

Solar astrophysics, including observational and theoretical aspects of the Sun's atmosphere. Although focused on the Sun, the course will be conducted so be of general interest to all astronomy graduate students

Learning Outcomes

1. Develop critical thinking skills in study the solar atmosphere.
2. Asses the validity of solar MHD and other approximations in uncovering the physics of the Sun.
3. Investigate the evolution of solar features at multiple size scales.
4. Determine the connections of the solar plasma oscillations and particle acceleration to energy release processes.

ASTR 698. Special Topics.

1-9 Credits

Special topics.

ASTR 700. Doctoral Dissertation

1-15 Credits (1-15)

Dissertation. May be repeated up to 88 credits.

Learning Outcomes

1. Varies

Phone: (575) 646-4438

Website: <http://astro.nmsu.edu/> (<http://astro.nmsu.edu/>)

Astronomy - Undergraduate Minor

The department offers a minor created for majors in a variety of scientific fields, and two minor emphases specifically designed to address the needs and interests of students from the Colleges of Education and Engineering. Any undergraduate, however, may pursue any of the three minor tracks.

Requirements

The requirements for the regular minor requires 19 credits, from the following:

Prefix	Title	Credits
Requirements		
ASTR 1115G	Introduction to Astronomy Lecture & Laboratory	4
or ASTR 1120G	The Planets Lecture & Laboratory	
Select two from the following: ¹		6
ASTR 301V	Revolutionary Ideas in Astronomy	
ASTR 305V	The Search for Life in the Universe	
ASTR 308V	Into the Final Frontier	
Select 9 credits between the following groups: ²		9
<i>Group A</i>		
Select 6-9 credits from the following: ²		
ASTR 401	Topics in Modern Astrophysics	
ASTR 402	Astronomical Observations and Techniques	
<i>Group B</i>		
Select 3-9 credits from the following: ^{2,4}		
A E 424	Aerospace Systems Engineering	
BIOL 451	Physiology of Microorganisms	
BIOL 467	Evolution	
BIOL 473	Ecology of Microorganisms	
C S 475	Artificial Intelligence I	
C S 482	Database Management Systems I	

C S 491	Parallel Programming
CHEM 431	Physical Chemistry
CHEM 433	Physical Chemistry I
E E 395	Introduction to Digital Signal Processing
E E 400	Undergraduate Research
E E 444	Advanced Image Processing
E E 446	Digital Image Processing
E E 454	Antennas and Radiation
E E 460	Space System Mission Design and Analysis
E E 465	Machine Learning I
E E 473	Introduction to Optics
E E 478	Fundamentals of Photonics
ENGR 401	Engineering Capstone I
ENGR 402	Engineering Capstone II
GEOL 465	Isotope Geochemistry
MATH 4210	Complex Variables
MATH 4220	Fourier Series and Boundary Value Problems
PHYS 451	Intermediate Mechanics I
PHYS 461	Intermediate Electricity and Magnetism I
PHYS 480	Thermodynamics
STAT 3110	Statistics for Engineers and Scientists
STAT 4210	Probability: Theory and Applications
STAT 4220	Statistics: Theory and Applications

Total Credits 19

- ¹ Three credits of ASTR 400 Undergraduate Research may replace one of these courses.
- ² ASTR 401 Topics in Modern Astrophysics and ASTR 402 Astronomical Observations and Techniques are the preferred classes but are generally offered only in alternate years. Three credits of ASTR 400 Undergraduate Research may replace one of these courses, but not the same three if used above.
- ³ Cross-listed with graduate classes and require special permission.
- ⁴ Alternative 400-level courses in the physical sciences, engineering, or related fields, including one-time seminars, may be proposed on a case-by-case basis to fulfill this requirement, drawn from the fields of astronomy, biochemistry, biology, chemistry, computer science, geology, geophysics, mathematics, physics, statistics or from engineering. Proposals should include a clear justification that connects the course materials to a particular topic in astronomy or astrophysics.

Emphasis: Education

The requirements for the education track minor requires 18-20 credits from the following:

Prefix	Title	Credits
ASTR 1115G	Introduction to Astronomy Lecture & Laboratory	4
ASTR 1120G	The Planets Lecture & Laboratory	4
Select two from the following:		6
ASTR 301V	Revolutionary Ideas in Astronomy	
ASTR 305V	The Search for Life in the Universe	
ASTR 308V	Into the Final Frontier	
Select 4-6 credits from the following: ⁵		4-6
ASTR 400	Undergraduate Research	
ASTR 401	Topics in Modern Astrophysics	
ASTR 402	Astronomical Observations and Techniques	

EDUC 4310	Methods of Teaching Elementary School Science	
EDUC 4410	Teaching Science at the Middle and High School Level	
Total Credits		18-20

⁵ This requirement will generally be fulfilled by two 3-credit courses. Students may request the 4 credit option instead, if an appropriate topic and instructor for 1 credit of ASTR 400 Undergraduate Research are available. ASTR 401 Topics in Modern Astrophysics and ASTR 402 Astronomical Observations and Techniques are generally offered only in alternate years, and have prerequisites.

Emphasis: Engineering

The requirements for the engineering track minor requires 18-19 credits from the following:

Prefix	Title	Credits
Required Courses		
Select 3-4 credits from the following:		3-4
ASTR 1115G	Introduction to Astronomy Lecture & Laboratory	
ASTR 1120G	The Planets Lecture & Laboratory	
PHYS 1310G	Calculus -Based Physics I	
PHYS 1320G	Calculus -Based Physics II	
Select one from the following:		3
ASTR 301V	Revolutionary Ideas in Astronomy	
ASTR 305V	The Search for Life in the Universe	
ASTR 308V	Into the Final Frontier	
Select 12 credits from the following two groups:		12
<i>Group A</i>		
Select 6-9 credits from the following: ⁶		
A E 428	Aerospace Capstone Design	
ASTR 400	Undergraduate Research	
ASTR 401	Topics in Modern Astrophysics ⁷	
ASTR 402	Astronomical Observations and Techniques ⁷	
E E 400	Undergraduate Research	
M E 400	Undergraduate Research	
<i>Group B</i>		
Select 3-6 credits from the following: ⁹		
A E 424	Aerospace Systems Engineering	
BIOL 451	Physiology of Microorganisms	
BIOL 467	Evolution	
BIOL 473	Ecology of Microorganisms	
C S 475	Artificial Intelligence I	
C S 482	Database Management Systems I	
C S 491	Parallel Programming	
CHEM 431	Physical Chemistry	
CHEM 433	Physical Chemistry I	
E E 454	Antennas and Radiation	
E E 460	Space System Mission Design and Analysis	
E E 473	Introduction to Optics	
E E 478	Fundamentals of Photonics	
GEO 465	Isotope Geochemistry	
MATH 4210	Complex Variables	
MATH 4220	Fourier Series and Boundary Value Problems	
PHYS 451	Intermediate Mechanics I	

PHYS 461	Intermediate Electricity and Magnetism I	
PHYS 480	Thermodynamics	
STAT 3110	Statistics for Engineers and Scientists	
STAT 4210	Probability: Theory and Applications	
STAT 4220	Statistics: Theory and Applications	
Total Credits		18-19

⁶ Taking any of the non-astronomy classes for this requirement requires prior approval from the head of astronomy on a case-by-case basis, with a clear connection being established between the proposed research or design project and a particular topic in astronomy or astrophysics (astronomy instrumentation or observational projects are particularly encouraged); no more than 3 non-ASTR credits can be counted toward the minor.

⁷ Generally offered in alternate years.

⁸ Cross-listed with graduate classes and require special permission.

⁹ Alternative 400-level courses in the physical sciences, engineering, or related fields, including one-time seminars, may be proposed on a case-by-case basis to fulfill this requirement, drawn from the fields of astronomy, biochemistry, biology, chemistry, computer science, geology, geophysics, mathematics, physics, statistics, or from engineering. Proposals should include a clear justification that connects the course materials to a particular topic in astronomy or astrophysics.

Biology Undergraduate Program Information

A student may earn the Bachelor of Arts in biology or the Bachelor of Science in biology, genetics, microbiology, or conservation ecology through major studies in the Department of Biology. The Bachelor of Science in biology or microbiology is recommended for premedical and pre dental students, for those preparing to teach biology and other sciences at the secondary and college levels, for those interested in the numerous fields of biological research and applied biology, and for those planning on obtaining an advanced degree in biology.

Freshmen should begin taking required biology and chemistry courses in their first year. Degree plans for specific areas of interest can be obtained from the Biology Success Center (<https://bio.nmsu.edu/success2.html>) in Foster Hall room 204. More information on the Department of Biology is available on our web site (<http://bio.nmsu.edu>).

A student must earn a grade of C- or better to receive credit for any nondepartmental or departmental requirement for any major or minor offered by the Department of Biology.

Students who wish to explore a minor or supplementary course work in a specific discipline to enhance their academic experience are encouraged to speak with an advisor. The Biology Department offers minors in biology, microbiology, human biology, conservation ecology, or genetics and biotechnology. A student may not earn a major and a minor in the same discipline.

A student must fulfill a second language requirement to receive a Bachelor of Arts or Bachelor of Science degree in the Biology and Microbiology majors. ***This requirement does not apply to the Conservation Ecology major, offered jointly with the Department of Fisheries, Wildlife and Conservation Ecology, or the Genetics and Biotechnology major, offered jointly with the Department of Plant and Environmental Science.*** To meet the second language requirement, the student must do one of the following:

- Complete two semesters of second language courses numbered 1110 and 1120 with a grade of C- or better. Spanish speakers should complete SPAN 1210 Elementary Spanish for Heritage Learners I, SPAN 1220 Spanish for Heritage Learners II or SPAN 2210 Spanish for Heritage Learners III with a C- or better to fulfill the requirement.
- Challenge the 1120 level of French, Chinese, German, Japanese, or Spanish; or the 1130 level for the Spanish-for Heritage Learners student or the 1130 level for Portuguese.
- Obtain college certification of completion of two years of a second language at the high school level with a grade of C- or higher in the second-year level. (i.e. equivalent to FREN 2120G French IV, GRMN 2120 German IV, SPAN 2120 Spanish IV, etc.)
- Complete two semesters of American Sign Language, courses SIGN 1110 American Sign Language I and SIGN 1120 American Sign Language II, with a grade of C- or better.
- Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.
- Obtain certification of a working knowledge of a Native American language from the American Indian program director.
- Obtain certification of a working knowledge of a second language if such language is not taught at NMSU from the head of the Department of Languages and Linguistics.
- In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

Graduate Program Information

The Department of Biology offers research and coursework that cover the natural world whether it is at the molecular, organismic, or ecosystem level. Our goal is to prepare students for careers in diverse areas such as ecology, microbiology, evolution, botany, health science, and biology education through formal coursework, research experiences, interactive seminars, and professional development activities. Biology graduate students conduct their own research in a productive environment using state-of-the-art facilities. The Biology Department offers the following degree emphasis:

- Thesis Masters research program in Biology (M.S.)
- Non-thesis Masters program in Biology (M.S.)
- Non-thesis Masters program in Biology (Biotechnology emphasis) (M.S.)
- Doctorate research program in Biology (Ph.D.)

For research toward the Master of Science or the Doctorate of Philosophy, students can choose among the Department's three areas of emphasis:

1. Behavioral, Ecological, and Evolutionary Biology
2. Cell and Organismal Biology
3. Microbiology

There are two formal course requirements for all Biology Graduate students, with the exception of students in the accelerated non-thesis MS Biotechnology option. These core courses are

Prefix	Title	Credits
BIOL 510	Current Topics in Biology	3
BIOL 540	Science and Ethics	1-3

All graduate students develop their curriculum plan in consultation with their faculty advisor and graduate committee. Graduate students may also take a minor in other graduate departments and programs. Sample course sequences within the Department's three different emphases are described in the Biology Graduate Handbook available for download from the Graduate Student section of the Biology website (<https://bio.nmsu.edu/students/grads.html>).

All prospective applicants must submit all required materials specified in the Department Graduate Application Packet available in the Graduate Student section of the Biology website (<https://bio.nmsu.edu/students/grads.html>).

Degrees for the Department

Bachelor Degree(s)

- Biology - Bachelor of Arts (p. 502)
- Biology - Bachelor of Science (p. 504)
- Conservation Ecology - Bachelor in Conservation Ecology (p. 507)
- Genetics and Biotechnology - Bachelor of Science in Genetics (p. 508)
- Microbiology - Bachelor of Science (p. 510)

Master Degree(s)

- Biology - Master of Science (p. 109)

Doctoral Degree(s)

- Biology - Doctor of Philosophy (p. 183)

Minors for the Department

- Biology - Undergraduate Minor (p. 513)
- Conservation Ecology - Undergraduate Minor (p. 513)
- Genetics and Biotechnology - Undergraduate Minor (p. 513)
- Human Biology - Undergraduate Minor (p. 513)
- Microbiology - Undergraduate Minor (p. 514)

C. Shuster, Professor, Department Head

Donovan Bailey, Professor, Associate Department Head

Professors Bailey, Boecklen, Hanley, Hansen, Houde, James, Milligan, C. Shuster, M. Shuster, Serrano, Smith, Unquez, Wright, Xu; **Associate Professors** Castillo, Curtiss, Mabry; **Assistant Professors** Catalan-Dibene, Corcoran, Jaszczak, Orr, Romero-Olivares

C. D. Bailey, Ph.D. (Cornell)– plant systematics; W. J. Boecklen, Ph.D. (Northern Arizona)– plant/ insect and community ecology; M. G. Castillo, Ph.D. (Wisconsin)– microbiology/immunology; J. Catalan-Dibene, Ph.D. (University of California-Irvine)- microbiology and immunology; A. Corcoran, Ph.D. (University of California-Los Angeles) – algal ecology; J. Curtiss, Ph.D. (University of Colorado at Boulder)– cell and development; K. A. Hanley, Ph.D. (California-San Diego)– evolution, ecology, and control of flaviviruses; I. A. Hansen, Ph.D. (University of Wurzburg)– molecular vector biology; P. W. Houde, Ph.D. (Howard)– avian systematics; A. C. James, Ph.D. (University of Rochester)- science education; J.S. Jaszczak, Ph.D. (University of Virginia)- developmental and neurobiology; K. E. Mabry, Ph.D. (California-Davis)– behavioral ecology; B. G. Milligan, Ph.D. (California-Davis)– plant evolutionary biology; T. J. Orr, Ph.D. (University of California, Riverside)- reproductive physiology/ecology; A. L. Romero-Olivares, Ph.D. (University of California-Irvine)- soil microbiology/microbial ecology; E. E. Serrano, Ph.D. (Stanford)– biophysics, neuroscience; C. B. Shuster, Ph.D. (Tufts)– cell and

developmental biology; M. Shuster, Ph.D. (Tufts)– biology education; G. B. Smith, Ph.D. (North Carolina State)– environmental microbiology; G. A. Unguez, Ph.D. (California-Los Angeles)– developmental biology; T. F. Wright, Ph.D. (California-San Diego)– animal behavior and evolution; J. Xu, Ph.D. (Military Medical University, Shanghai)– mosquito-malaria interactions.

Biology Courses

BIOL 1120G. Human Biology

3 Credits (3)

This course is an introduction to modern biological concepts with an emphasis on the relevance to humans and their relationships with the environment.

Learning Outcomes

1. Explain that biology is a scientific discipline based on observations and experimentations.
2. Explain the process of scientific inquiry and explain how scientific knowledge is discovered and validated.
3. Describe the chemical basis of living organisms and how biomolecules contribute to the structure and function of cells.
4. Develop a basic familiarity with cells and cell organelles.
5. Describe the structure and function of DNA as well as how DNA is used in the production of proteins
6. Describe the basic principles of genetics and heredity leading to human diversity.
7. Identify the major features of the systems in the human body, and understand the anatomy and physiology of them
8. Describe the roles of the organ systems in maintaining homeostasis
9. Explain the principles of evolution by means of natural selection explaining the diversity of life. 1
10. Describe how science and technology have impacted life in particular to society and the environment (e.g. medicine, forensic science, agriculture, ecology, sustainability).

BIOL 1120L. Human Biology Laboratory

1 Credit (3P)

This course introduces exercises, experiences, and activities exploring biological concepts and theories relevant to humans and their relationship to the environment in a laboratory setting.

Prerequisite(s)/Corequisite(s): BIOL 1120G.

Learning Outcomes

1. Understand general principles of cell structure and function.
2. Understand general principles of genetics.
3. Understand basic human anatomy and physiology.
4. Communicate scientific information effectively.
5. Demonstrate an understanding of the scientific method.
6. Knowledge of appropriate laboratory skills
7. Apply quantitative reasoning and scientific thinking to real world problems.

BIOL 1130G. Introductory Anatomy & Physiology (non-majors)

4 Credits (3+3P)

This course introduces the anatomy (structure) and physiology (function) of the human body, which includes the study of basic chemistry, molecules, cells, tissues, organs, organ systems, and terminology related to these concepts. May be repeated up to 4 credits. Restricted to Community Colleges campuses

Learning Outcomes

1. (Lecture) Define and explain anatomy and physiology.
2. (Lecture) Use anatomic directional, regional, and sectional terminology related to the human body.
3. (Lecture) Explain and describe the basic chemical principles of the human body including the structure and function of carbohydrates, lipids, proteins and nucleic acids.
4. (Lecture) Develop a basic familiarity with cells and cell organelles that include cell division, DNA replication, and protein synthesis.
5. (Lecture) Describe the structure and function of the major tissues in the human body.
6. (Lecture) Identify and describe the basic anatomical features of the integumentary, skeletal, muscle, nervous, endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems.
7. (Lecture) Describe the basic physiological roles of the integumentary, skeletal, muscle, nervous, endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems.
8. (Lecture) Apply and describe the principles of homeostasis in the human body.
9. (Laboratory) Use and apply proper anatomic terms 1
10. (Laboratory) Develop skills using the microscope correctly. 1
11. (Laboratory) Identify basic tissue types. 1
12. (Laboratory) Discuss and describe the basic anatomical features of the integumentary, skeletal, muscle, nervous, endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems. 1
13. (Laboratory) Demonstrate and describe physiological roles of the integumentary, skeletal, muscle, nervous, endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems.

BIOL 1190G. Contemporary Problems in Biology

4 Credits (3+3P)

Fundamental concepts of biology will be presented using examples from relevant problems in ecology, medicine and genetics. For nonscience majors only. Community Colleges only.

Learning Outcomes

1. Identify the unity and diversity of living things
2. Identify the structure and function of cells and biological molecules
3. Recognize and demonstrate patterns of inheritance
4. Describe mechanisms of evolution
5. Describe the human body systems including immune response
6. Discuss population dynamics and ecological systems
7. Describe the process of scientific inquiry, solve problems scientifically, and communicate on a scientific level
8. Apply quantitative analysis and scientific thinking to scientific and real world problems

BIOL 1996. Topics in Biology

1-3 Credits (1-3)

Introductory level coverage of biological topics. May be repeated up to 9 credits.

Learning Outcomes

1. Varies

BIOL 2110G. Principles of Biology: Cellular and Molecular Biology

3 Credits (3)

This course introduces students to major topics in general biology. This course focuses on the principles of structure and function of living things at the molecular, cellular and organismic levels of organization.

Major topics included are introduction to the scientific process, chemistry of cells, organization of cells, cellular respiration, photosynthesis, cell division, DNA replication, transcription, and translation. Must be taken with BIOL 2110L to meet general education requirements. May be repeated up to 3 credits.

Prerequisite/Corequisite: a C- or better in MATH 1215 or higher and a C- or better in (CHEM 1120G or CHEM 1215G or CHEM 1216).

Learning Outcomes

1. Apply the scientific method to develop and evaluate hypotheses and propose an experiment to test a scientific hypothesis related to cell biology and molecular biology.
2. Describe the distinguishing characteristics of various biological molecules (water, carbohydrates, lipids, proteins, and nucleic acids).
3. Compare and contrast the basic features of cells and how prokaryotic cells differ from eukaryotic cells.
4. Understand how organisms maintain homeostasis in a dynamic environment.
5. Describe how biological molecules are acquired and how they are subsequently used to meet the metabolic needs of organisms.
6. Describe membrane structure and function.
7. Describe and analyze the nature of bioenergetic transformations and metabolism within the cell.
8. Describe the processes of cellular respiration and photosynthesis.
9. Analyze with specific detail the processes of DNA replication, transcription, and translation. 1
10. Analyze with specific detail the types, mechanisms, and regulation of cellular division. 1
11. Assess important applications of cell and molecular biology to energy use, medicine, and other day-to-day processes.

BIOL 2110L. Principles of Biology: Cellular and Molecular Biology

Laboratory

1 Credit (3P)

This course introduces students to major topics in general biology. This course focuses on the principles of structure and function of living things at the molecular, cellular and organismic levels of organization. Major topics included are introduction to the scientific process, chemistry of cells, organization of cells, cellular respiration, photosynthesis, cell division, genetics, DNA replication, transcription, and translation. May be repeated up to 1 credit.

Prerequisite: MATH 1215 or higher, and a C- or better in (CHEM 1120G or CHEM 1215G or CHEM 1216).

Prerequisite/Corequisite: BIOL 2110G.

Learning Outcomes

1. Describe and apply the scientific method to solve problems in biological context
2. Demonstrate knowledge of laboratory safety skills and procedures.
3. Practice principles of scientific method while conducting laboratory activities and experiments.
4. Perform laboratory activities using relevant laboratory equipment, chemical reagents, and supplies to observe biological specimens, to measure variables, and to design and conduct experiments.
5. Operate light microscopes, prepare wet mount slides, and use stains.
6. Exhibit ability to use pipettes and other volumetric measuring devices, chemical glassware, balances, pH meters or test papers, spectrophotometers, and separation techniques, such as chromatography and/or electrophoresis to perform activities relevant to other course competencies.

7. Analyze and report data generated during laboratory activities and experiments.

BIOL 2210. Human Anatomy and Physiology I for the Health Sciences

4 Credits (3+3P)

This course is the first of two that serve as an introduction to human anatomy and physiology for biology majors and allied health students. The course entails describing, explaining, and analyzing structure and function from the submicroscopic to the organismal level with emphasis on anatomic, directional, and sectional terminology, basic cellular structure and metabolism, tissue differentiation and characteristics, and organ system structure and function; Specifically the integumentary, skeletal, muscular, and nervous systems.

Prerequisite(s)/Corequisite(s): CHEM 1120G or CHEM 1215G. Restricted to: Community Colleges only.

Learning Outcomes

1. Describe and apply anatomical terminology.
2. Describe multi cellular organization.
3. Distinguish and describe major tissue types.
4. Describe the structure and function of the integumentary system.
5. Describe the structure and function of the skeletal system.
6. Describe the structure and function of the muscular system.
7. Describe the structure and function of the nervous system.
8. Describe the structure and function of the special senses.
9. Define homeostasis and describe specific examples for the integumentary, skeletal, muscular, and nervous systems.

BIOL 2225. Human Anatomy and Physiology II

4 Credits (3+3P)

This course is the second of two that serve as an introduction to human anatomy and physiology for biology majors and allied health students. The course entails describing, explaining, and analyzing structure and function from the submicroscopic to the organismal level with emphasis on specific cellular, tissue, and organ structure and physiology, and organ system structure and function; specifically the endocrine, cardiovascular, respiratory, urinary, and reproductive systems. Additionally, an analysis of these concepts is included: fluid and electrolyte balance, pregnancy, growth and development from zygote to newborn, and heredity. Restricted to: Community Colleges only.

Prerequisite(s): BIOL 2210, CHEM 1120G or CHEM 1215G.

Learning Outcomes

1. Identify and describe the major anatomical features of the endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems.
2. Analyze the physiological roles of the endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems in maintaining homeostasis in the human body.
3. Explain how fluid and electrolyte balance is maintained in the human body.
4. Compare and contrast the anatomy and physiology of male and female reproductive systems.
5. Describe pregnancy from conception to parturition including human growth and development from zygote to newborn.
6. Explain heredity and genetic control.

BIOL 2310. Microbiology

3 Credits (3P)

Introduction to the basic principles of microbiology, microbial pathogenesis, host defenses and infectious diseases. The course will emphasize concepts related to the structure and function of

microorganisms, including their mechanisms of metabolism and growth. Host parasite interactions will also be emphasized, including mechanisms of microbial pathogenesis and mechanisms of host defenses against infectious diseases. Restricted to Community Colleges campuses only.

Prerequisite(s): CHEM 1120G or CHEM 1215G or CHEM 1225G.

Corequisite(s): BIOL 2310L.

Learning Outcomes

1. Describe and compare the structure and function of prokaryotic and eukaryotic cells.
2. Describe and compare the techniques used for staining of and microscopic observation of bacteria including morphology.
3. Describe the nutritional requirements for bacterial growth and the impact of environmental factors on bacterial growth (temperature, pH, oxygen, etc.).
4. Describe and compare the mechanisms of aerobic respiration, anaerobic respiration, and fermentative metabolism.
5. Describe the mechanism of bacterial growth by binary fission, and laboratory methods used for observing and measuring bacterial growth.
6. Describe the mechanisms of bacterial DNA replication, RNA transcription, and translation, and compare and contrast with eukaryotic cells.
7. Describe the structure and replication strategies of viruses.
8. Describe and contrast mechanisms of innate nonspecific immunity and adaptive specific immunity.
9. Describe immune hypersensitivity reactions, autoimmune diseases, and immunodeficiency diseases. 1
10. Differentiate between host microberelationships, mechanisms of microbial pathogenesis, differentiate between communicable and noncommunicable diseases and describe mechanisms of direct and indirect transmission of communicable diseases.

BIOL 2310L. Microbiology Lab

1 Credit (3P)

This course will emphasize both the theory and hands-on application of techniques used in a microbiology laboratory for the growth and identification of bacterial species. Students will learn microscopy skills and staining techniques for the observation of bacteria. Students will also learn aseptic techniques used for isolation of bacteria, inoculation of cultures, and interpretation of selective and differential growth media for the identification of bacterial species.

Prerequisite: BIOL 2310 or BIOL 2320 or concurrent enrollment.

Learning Outcomes

1. Demonstrate skills of microscopy.
2. Demonstrate skills of bacterial staining.
3. Demonstrate aseptic technique for inoculation of bacterial growth media.
4. Interpret results from selective and differential media.
5. Demonstrate appropriate use of diagnostic reagents.
6. Interpret results of diagnostic assays.
7. Identify unknown bacterial species through the use of a dichotomous key, inoculation and interpretation of laboratory assays, and application of the scientific method.

BIOL 2320. Public Health Microbiology

3 Credits (3)

This course introduces microbiology on the health profession level. It incorporates cell structure, metabolism, growth, controls of growth,

infectious epidemiology, etiology, pathogenicity, and relative virulence of pathogens. It will lead to students assessing a clinical infection scenario from the microbiological perspective that includes making diagnoses based on data from appropriate diagnostic tests, investigating appropriate treatment options, and making recommendations for prevention.

Prerequisite: BIOL 2110G and BIOL 2110L.

Learning Outcomes

1. Identify key physical features of various infectious agents and describe their structure and function in the pathogen
2. Describe the microbiological, serological, biochemical and genetic tests that are used to identify infectious agents in a laboratory setting and be able to interpret test results in order to identify the pathogen
3. Explain how structural and metabolic differences between infectious agents and human host can be exploited for chemotherapy
4. Explain the observed effect of a particular environmental change on the growth of a given microorganism, and the relationship between bacterial growth patterns and selected foodborne illnesses
5. Describe several mechanisms by which pathogens generate genetic diversity and the role genetic diversity plays in resistance to therapy and treatment failure
6. Explain the role of innate, and adaptive immunity in host defense
7. Describe general virulence strategies used by variety of pathogens, and different types of vaccines along with recommendations for vaccinations of specific populations
8. Demonstrate understanding of signs and symptoms of selected diseases, and be able to relate disease agents with environmental reservoirs and transmission

BIOL 2505. Pathophysiology

3 Credits (3)

This course is designed to provide the conscientious student with a solid foundation for understanding the pathophysiological processes of the human organism. Successful completion of this course will promote the general student learning outcomes listed below. **Corequisite/ Prerequisite(s):** AHS 154 or BIOL 2225. Restricted to: Community Colleges only.

Prerequisite(s): AHS 153 or BIOL 2210.

Learning Outcomes

1. To describe the general concepts of disease processes and factors associated with disease causation.
2. To identify the function of basic cellular structures, determining the process of cellular malfunctions.
3. To describe the response of the body to injury and immunologic challenge.
4. To discuss the etiology, pathogenesis, and treatment modalities of frequently occurring diseases.

BIOL 2511. Human Pathophysiology

3 Credits (3)

The first in a two-course sequence that covers changes in body physiology that result from disease or injury. Includes a general introduction to pathophysiology as well as an overview of altered cellular and tissue biology, injury, inflammation, and neoplasia. Students will also explore deviation from fluid, hemodynamic, and endocrinologic balance. Topics related to the science of pathophysiology, including pathology, pathogenesis, etiology, epidemiology, and clinical manifestations, are also discussed throughout the course where relevant. Grade of C- or higher in microbiology is recommended. Restricted to Community Colleges campuses only.

Prerequisite(s): Grade of C- or higher in BIOL 2210 and BIOL 2225.

Learning Outcomes

1. The cellular adaptations occurring in atrophy, hypertrophy, hyperplasia, dysplasia, and metaplasia; the types and causes of cellular injury; and the types of necrosis.
2. The different compartments for body fluids; the factors that affect water movement; the processes that drive and affect capillary exchange; the mechanisms causing edema; the electrolytes in body compartments; the various electrolyte imbalances; the body mechanisms that maintain acid-base balance; and the various acid-base imbalances and how they are compensated for .
3. The interrelationships of DNA, RNA, and proteins; the various types of mutations; the various types of mutagens, the various types of numerical and structural chromosomal aberrations; the various genetic terms; the single-gene disorders discussed in class; the multifactorial disorders discussed in class.
4. The relationships between genes, environment, and multifactorial diseases; the criteria used to define multifactorial disease; the characteristics of multifactorial traits; and the various features of the threshold model.
5. The terms related to tumor/cancer biology, classification, and nomenclature; the various features of cancer biology, including the characteristics of cancer and the genetic basis of cancer; features related to cancer invasion and metastasis; and the clinical manifestations and treatments of cancer.
6. Features related to Innate and adaptive immunity; features related to the first, second, and third lines of defense; the mechanisms and manifestations of inflammation; components/mechanisms related to the complement, clotting, and kinin systems; mechanisms of wound healing; and features of dysfunctional wound healing.
7. Aspects/mechanisms of specific (adaptive) immunity, features related to the structure, function, and classification of immunoglobulins; features related to haptens, antigens, immunogens, and epitopes; the different types of antigens; features related to immunological memory; and features related to the different types of active and passive immunity.
8. Aspects related to allergy, autoimmunity, and alloimmunity; aspects/mechanisms/examples related to the four basic types of hypersensitivity reactions; mechanisms and examples related to autoimmunity; and aspects/mechanisms related to immunodeficiency.
9. The risk factors for infection; the six components of the chain of infection; general concepts, terms, and processes/mechanisms related to basic microbiology; and the mechanisms of microbial pathogenicity. 1
10. General concepts, terms, and processes/mechanisms related to normal hormonal action; mechanisms of hormonal alterations; processes/mechanisms related to the pathophysiology of the various disorders discussed in class; and the clinical manifestations and treatment of the hormonal alterations discussed in class.

BIOL 2512. Human Pathophysiology II

3 Credits (3)

The second in a two-course sequence that covers changes in body physiology that result from disease or injury. This course focuses on the pathophysiology of the nervous, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems. Topics related to the science of pathophysiology, including pathology, pathogenesis, etiology, epidemiology, and clinical manifestations, are also discussed throughout the course where relevant. Grade of C- or higher in microbiology is

recommended. Restricted to Community Colleges campuses only. May be repeated up to 3 credits.

Prerequisite: Grade of C- or higher in BIOL 2210, BIOL 2225, and BIOL 2511.

Learning Outcomes

1. The different types of sensory modalities; the different dysfunctions of the general and special senses; the different pain theories discussed in class; the various aspects of the neuroanatomy and neuromodulation of pain; the various clinical descriptions of pain; the various aspects of temperature regulation; components of the pathogenesis of fever; the various disorders of temperature regulation; the various aspects of sleep disorders; the various components of visual dysfunction; and the various aspects of auditory, gustatory, and olfactory dysfunction.
2. The various alterations in cognitive systems; the various alterations in arousal; the outcomes of alterations in arousal; the various alterations in awareness; the various seizure disorders; the various data processing deficits; various alterations in cerebral hemodynamics; and alterations in neuromotor function.
3. The various disorders of the central and peripheral nervous systems; and the various disorders of the neuromuscular junction.
4. The components of normal blood; the process/stages of hematopoiesis; the various normal RBC laboratory values; the components and functions of the lymphatic system; the various types of imbalances of erythropoiesis; the various types of anemias and their causes; the various types of polycythemia and their causes; the processes related to hemostasis; the various alterations of white blood cells and their causes; and the various alterations of lymphoid and hemostatic function.
5. The various diseases of the veins; the various diseases of the arteries; the various aspects of atherosclerosis; features related to the pathogenesis and consequences of coronary artery disease; the disorders of the heart wall and their consequences; the various aspects of valvular dysfunction; aspects of the pathogenesis and manifestations of rheumatic disease; the causes, pathogenesis, and manifestations of infective endocarditis; the causes, manifestations, and pathophysiology of heart failure; and the various types of shock.
6. The various signs and symptoms of pulmonary disease; the various conditions caused by pulmonary disease/injury; the various disorders of the chest wall and pleura; and the causes, manifestations, and pathophysiology of selected pulmonary disorders.
7. The features and consequences of upper and lower urinary tract obstruction; the various types of urinary tract infection; the causes, pathogenesis, and clinical manifestations of glomerulonephritis; the various features of nephrotic and nephritic syndrome; and the various features (etiology, pathophysiology, and clinical manifestations) of both acute kidney injury and chronic kidney disease.
8. The various clinical manifestations of gastrointestinal dysfunction; the various aspects (etiology, pathophysiology, and clinical manifestations) of disorders of motility; the causes, manifestations, and pathophysiology of gastritis; features related to the causes, manifestations, and pathophysiology of peptic ulcer disease; features related to the etiology, pathogenesis and pathophysiology of selected malabsorption syndromes, inflammatory bowel diseases, diverticular disease of the colon, appendicitis, and irritable bowel syndrome; the various types of vascular insufficiency; the various disorders of nutrition and their causes and clinical manifestations; and the various disorders of the accessory organs of digestion.
9. The various features associated with alterations of sexual maturity (delayed puberty and precocious puberty); features related to

the etiology, pathogenesis, and pathophysiology of the various disorders of the male reproductive system, including disorders of the urethra, disorders of the penis, disorders of the scrotum, disorders of the testes, disorders of the epididymis, disorders of the prostate gland, and disorders of the male breast; features related to the etiology, pathogenesis, and pathophysiology of male sexual dysfunction; features associated with abnormalities of reproductive tract development; the various hormonal and menstrual alterations and their causes and clinical manifestations; the various conditions related to infection, inflammation, and pelvic organ prolapse (uterine prolapse, cystocele, rectocele, and enterocele); conditions involving benign growths and cancer (endometriosis, cervical cancer, vaginal cancer, vulvar cancer, endometrial cancer, uterine sarcoma, and ovarian cancer); features related to the etiology, pathogenesis, and pathophysiology of female sexual dysfunction (disorders of desire, vaginismus, anorgasmia, and dyspareunia); features related to infertility; and features related to the etiology, pathogenesis, and pathophysiology of breast cancer.

BIOL 2610G. Principles of Biology: Biodiversity, Ecology, and Evolution
3 Credits (3)

This course is an introduction to the dynamic processes of living things. Major topics include the mechanisms of evolution, biological diversity, Mendelian genetics, and ecology.

Prerequisite/Corequisite: grade of C- or better in MATH 1215 or higher, or a Math Placement Exam score adequate to enroll in mathematics courses beyond MATH 1215.

Learning Outcomes

1. Understand the scientific method and apply it to biological topics of genetics, evolution, ecology, and biodiversity.
2. Apply quantitative reasoning and scientific thinking to real world problems.
3. Identify and describe the basic principles of evolution.
4. Analyze the relationships between the genetics of populations and evolution.
5. Analyze the processes of speciation.
6. Describe how the hierarchical classification scheme is used to categorize organisms.
7. Describe how DNA research has modernized bio systematics.
8. Compare and contrast the general characteristics of each of the living domains and kingdoms.
9. Relate the structure of organisms to the way they function. 1
10. Explain how the life histories of organisms are adapted for different environments. 1
11. Relate the complexity of behavior to the overall complexity of an organism. 1
12. Describe the ecological roles played by organisms in each kingdom. 1
13. Compare basic ecological principles at the population and community levels of organization. 1
14. Describe and compare energy relationships and the cycling of materials in ecosystems. 1
15. Identify and describe the basic principles of Mendelian genetics.

BIOL 2610L. Principles of Biology: Biodiversity, Ecology, and Evolution
Laboratory
1 Credit (3P)

This laboratory course is an introduction to the dynamic processes of living things. This course introduces students to the methods used in the

study of Mendelian genetics, evolution, ecology, and biological diversity. Designed for students continuing in life sciences.

Prerequisite/Corequisite: BIOL 2610G; grade of C- or better in MATH 1215 or higher, or a Math Placement Exam score adequate to enroll in mathematics courses beyond MATH 1215.

Learning Outcomes

1. Describe and apply the scientific method to generate testable hypotheses in evolution and ecology.
2. Design and conduct laboratory experiments using relevant laboratory equipment and methods.
3. Analyze and report data generated during laboratory activities and experiments.
4. Communicate scientific results from experiments in Mendelian genetics, evolution, ecology, and biodiversity.

BIOL 2996. Special Topics

1-3 Credits

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 6 credits. Community Colleges only.

Learning Outcomes

1. Varies

BIOL 301. Principles of Ecology

3 Credits (3)

A survey of ecology including general theory, the adaptations of organisms, population dynamics, species interactions, and the structure and function of natural communities and ecosystems. MATH 1511G and A ST 311 recommended. Same as ENVS 301. Crosslisted with: ENVS 301.

Prerequisite(s): BIOL 2610G, MATH 1220G.

BIOL 302. Molecular Biology Techniques Laboratory

3 Credits (6P)

This combined lecture and laboratory course emphasizes molecular biology laboratory practices through the hands-on application of commonly applied techniques, protocols, and equipment. The topics covered include both the fundamental development of empirical data as well as data analysis using stand-alone and web-based resources. Consent of instructor required.

Prerequisite(s): BIOL 2110G or equivalent, and MATH 1220G.

BIOL 305. Principles of Genetics

3 Credits (3)

Covers fundamental principles of reproduction, variation, and heredity in plants and animals. May be repeated up to 3 credits.

Prerequisite: (BIOL 2610G and BIOL 2110G, or BIOL 2110G and BCHE 140, and either CHEM 1215G or CHEM 1216).

Learning Outcomes

1. To provide an introduction to the basic concepts, methods, and terminology of genetics. Introduction to genomics and bioinformatics.
2. To develop a working understanding of genetics and heredity
3. To understand in some depth, the mechanism of DNA replication, transcription and protein synthesis. To understand the regulation of gene expression.
4. To examine the impact of genetics on both basic and applied aspects of the biological sciences, as well as its effects on our everyday lives.

BIOL 309. Guided Biological Research Lab

3 Credits (3)

This laboratory course provides a guided experience to hands-on research in biology. It is intended for early-career undergraduates who

have finished the introductory sequence of Biology courses. Topics will vary with instructor.

Prerequisite(s): BIOL 2610G, BIOL 2110G, and MATH 1220G.

BIOL 311. General Microbiology

3 Credits (3)

Principles of physiology, molecular biology, ecology, and taxonomy of microorganisms.

Prerequisite(s): BIOL 2110G and MATH 1220G.

BIOL 311 L. General Microbiology Laboratory

2 Credits (4P)

Microbiology techniques and procedures, including isolation and identification of microorganisms and biotechnology procedures that employ microorganisms.

Prerequisite(s)/Corequisite(s): BIOL 2320 or BIOL 311. **Prerequisite(s):** BIOL 2110G and MATH 1220G.

BIOL 312. Plant Taxonomy

3 Credits (2+3P)

Classification and identification of representative plant families and local plants. Emphasis on ability to use technical sources. Saturday field trips may be recommended.

Prerequisite(s): BIOL 2610G and MATH 1220G.

BIOL 313. Structure and Function of Plants

3 Credits (2+3P)

Structure, function, and survey of plants. BIOL 2110G recommended.

Prerequisite(s): BIOL 2610G, MATH 1220G, and sophomore-level standing.

BIOL 314. Plant Physiology

3 Credits (3)

Photosynthesis, respiration, water relation of plants, minerals and organic nutrition, growth and development.

Prerequisite(s): BIOL 2110G and CHEM 1225G.

BIOL 322. Zoology

3 Credits (2+3P)

Structure, function, and survey of animals. BIOL 2110G recommended.

Prerequisite(s): BIOL 2610G, MATH 1220G, and at least sophomore-level standing.

BIOL 350. Special Topics

1-4 Credits

Specific subjects announced in Schedule of Classes and offered as scheduled courses. May be repeated for unlimited credit.

BIOL 351. Biology Internship

1-6 Credits

Substantial off-campus experience in biology selected by student in consultation with regular biology faculty member. Internship must be approved by faculty member. Student will supply mutually agreed upon documentation of internship activities after the internship is completed. May be repeated up to 6 credits. Restricted to: BIOL, MBIO, CEC, GEBT majors. Graded: S/U Grading (S/U, Audit).

Prerequisite(s): 45 college credits, 2.5 or better GPA, consent of instructor.

BIOL 353. Pre-Professional Human Anatomy

4 Credits (4)

Pre-professional clinically-oriented survey of human anatomy. Designed primarily for pre-nursing majors. Provides comprehensive anatomical training for students planning careers in health and allied health sciences, such as medicine, dentistry, nursing, physical therapy, physicians aid, human nutrition, and food science. Suitable as a biology elective.

Concurrent enrollment in BIOL 353 L is recommended but not required. May be repeated up to 4 credits.

Prerequisite(s): BIOL 2110G and either CHEM 1120G, CHEM 1215G, or CHEM 1216.

BIOL 353 L. Pre-Professional Human Anatomy Laboratory

1 Credit (3P)

Laboratory experience in human anatomy using anatomical models and cat dissections. Designed as a learning aid to support and augment BIOL 353 pre-professional Human Anatomy. For students planning careers in health and allied health sciences such as medicine, dentistry, nursing, physical therapy, physicians aid, human nutrition, and food science. May be repeated up to 1 credits.

Prerequisite(s)/Corequisite(s): BIOL 353. **Prerequisite(s):** BIOL 2110G and either CHEM 1120G, CHEM 1215G, or CHEM 1216.

BIOL 354. Physiology of Humans

3 Credits (3)

Principles of integrative functions in humans. A systems approach emphasizing tissues, organs, and their regulation.

Prerequisite(s): BIOL 2110G and MATH 1220G.

BIOL 354 L. Laboratory of Human Physiology

1 Credit (3P)

Laboratory to accompany BIOL 354.

Prerequisite(s): MATH 1220G and either BIOL 2221, BIOL 381, BIOL 354, or concurrent enrollment in BIOL 354.

BIOL 377. Cell Biology

3 Credits (3)

Fundamentals of eukaryotic cell structure, organization, and function. Emphasis on membranes, subcellular organelle systems, cytoskeleton, and cell cycle. Includes basic aspects of molecular biology. May be repeated up to 3 credits. BIOL 2610G recommended.

Prerequisite(s): (BIOL 2110G, BIOL 305 or GENE 315) and MATH 1220G.

BIOL 381. Animal Physiology

3 Credits (3)

Principles of integrative function in animals, emphasizing tissues, organs, organ systems, and regulation. Includes adaptations of animals to their environments. BIOL 2610G and BIOL 377 recommended.

Prerequisite(s): BIOL 2110G and junior-level standing, MATH 1220G.

BIOL 382. Plant Signalling and Development

3 Credits (3)

This is a course that introduces plant signalling pathways and their role in development to students. The lectures are structured to facilitate in-class discussions on the current state and future directions in this field. Topics will cover a wide range of biological questions and the methods used to study them. May be repeated up to 3 credits.

Prerequisite(s): BIOL 305 or GENE 315, and MATH 1220G.

BIOL 385. An Introduction to Cancer

3 Credits (3)

This course will cover 3 areas of cancer research and their interdisciplinary connections: clinical cancer research, epidemiology and public health, and basic cancer research. May be repeated up to 3 credits.

Prerequisite(s): BIOL 305 or GENE 315 or equivalent and MATH 1220G.

BIOL 398. Biology Research Programs

1-3 Credits

Directed studies and research experiences, by arrangement with instructor. May be repeated for a maximum of 6 credits.

BIOL 402. Biology Honors Thesis

1-3 Credits (1-3)

Provides guidance in how to write a scientific paper in the sciences. Students will produce an honors thesis based on previous independent research. Consent of instructor required.

Prerequisite(s): MATH 1220G and consent of instructor.

BIOL 412. Seminar in Microbiology

1 Credit (1)

Seminar to aid students in assessment and presentation of current topics in microbiology.

Prerequisite(s): BIOL 311, BIOL 311 L, and MATH 1220G.

BIOL 417. Topics in Environmental Microbiology

3 Credits (3)

This is an advanced undergraduate course based on current literature in Environmental Microbiology, and is a seminar-style, discussion-based class. Topics typically include marine microbiology, ancient DNA, and the human microbiome. Crosslisted with: BIOL 577.

Prerequisite(s): MATH 1220G, BIOL 477 or consent of instructor.

BIOL 424. Human Osteology

3 Credits (3)

A survey of the functional, developmental, and evolutionary biology of the human skeleton. Identifying bones and teeth from hands-on experience with skeletal and dental material. Provides a foundation for human evolutionary studies, bioarchaeology and forensic anthropology. Students are recommended to take ANTH 355 or an equivalent before enrolling in this course. BIOL 424L should be taken concurrently when it is offered. Crosslisted with: ANTH 474.

BIOL 427. Symbiosis

3 Credits (3)

In-depth treatment of the ecology, evolution, and mechanisms that are found in symbiotic systems. May be repeated up to 3 credits. Crosslisted with: BIOL 527.

Prerequisite(s): BIOL 2610G, BIOL 2110G, and MATH 1220G.

BIOL 436. Disease Vector Biology

3 Credits (3)

Fundamentals of disease vector biology with emphasis on molecular biology. Explores an overview of vector borne diseases, insect endocrinology, insect immunity, olfaction, vector genome projects and transgenic insect techniques. Includes student presentations and literature discussions. Crosslisted with: BIOL 536

Prerequisite(s): BIOL 2110G, BIOL 305, and MATH 1220G.

BIOL 442. Genomics Technology

3 Credits (3)

The course introduces current genomic techniques in genome sequencing, transcriptome analysis, detection of genetic variation, and metagenomics. May be repeated up to 3 credits. Crosslisted with: BIOL 562.

Prerequisite(s): BIOL 2110G, BIOL 305 or BIOL 478 or GENE 315, and MATH 1220G.

BIOL 446. Bioinformatics and NCBI Database

3 Credits (3)

The course discusses how to use NCBI database and bioinformatic tools for research with genomics approaches. The topics include nucleotide and protein sequence analysis, similarity search with blast algorithms, gene/genome annotation, protein structure analysis, gene expression analysis, and metagenomic study.

Prerequisite(s): BIOL 2110G, BIOL 305 or BIOL 478 or GENE 315, and MATH 1220G.

BIOL 450. Special Topics

1-3 Credits

Specific subjects announced in the Schedule of Classes and offered as scheduled courses. May be repeated for unlimited credit.

BIOL 451. Physiology of Microorganisms

3 Credits (3)

Aspects of cellular physiology unique to prokaryotes. BCHE 395 recommended.

Prerequisite(s): C- or better in BIOL 311, MATH 1220G.

BIOL 455. Biometry

3 Credits (3)

Biometry is the analysis of biological data using mathematical and statistical models. The course will cover basic theories of probability and statistics and will introduce principles of sampling, estimation, experimental design, and hypothesis testing. Students will analyze biological data using computer programs and will perform tests for goodness-of-fit, independence, analysis of variance, correlation, and regression. May be repeated up to 3 credits.

Prerequisite: BIOL 2610G or BIOL 2110G, and MATH 1220G.

Learning Outcomes

1. Cover basic theories of probability and statistics
2. Understand principles of sampling, estimation, experimental design, and hypothesis testing.
3. Analyze biological data.
4. Perform tests for goodness-of-fit, independence, analysis of variance, correlation, and regression.

BIOL 459. Darwinism Versus Creationism

3 Credits (3)

This course examines the debate regarding Creationism versus Darwinism as explanations for the origin and diversification of life on Earth. Topics covered include the nature and philosophy of science, new-world creationism, old-world creationism, intelligent design, history of evolutionary thought, modern evolutionary theory, and the Creationism-Darwinism debate at the societal, political, and educational interfaces. The course structure will include formal lectures and in-class discussion of assigned readings.

Prerequisite(s): BIOL 2610G or BIOL 2110G, and MATH 1220G.

BIOL 459 H. Darwinism versus Creationism Honors

3 Credits (3)

This course will examine the history and philosophy surrounding the debate between Darwinism and Creationism. The course will also examine the consequences of the debate at the interface of sociology, economics, politics, and education. The Honors version of the course (BIOL 459H) will require a term paper in addition to the requirements of BIOL 459. Crosslisted with: BIOL 459.

Prerequisite(s): BIOL 2610G or BIOL 2110G, and MATH 1220G.

BIOL 462. Conservation Biology

3 Credits (3)

Examination of the value of biological diversity, the natural processes that control biological diversity, and the ways in which human activities have resulted in the loss of biological diversity, both regionally and globally.

Prerequisite(s): BIOL 301 and either MATH 1430G or MATH 1511G.

BIOL 467. Evolution

3 Credits (3)

Covers theory, historical background, population variation, natural selection, adaptation, speciation.

Prerequisite(s): BIOL 2610G, BIOL 305 or GENE 320, and MATH 1220G.

BIOL 469. Biology of Emerging Infectious Diseases

3 Credits (3)

This class will investigate the evolutionary and ecological drivers of disease emergence. The effect of emerging diseases on human health will be addressed throughout the class, but the class will also consider the consequences of disease emergence for the health of wildlife and plant populations. Additionally, the class will consider the mechanisms used to control disease emergence and why they succeed or fail.

Prerequisite(s): MATH 1220G, Introductory Genetics (BIOL 305 or equivalent) or consent of the instructor.

BIOL 470. Developmental Biology
3 Credits (3)

The purpose of this course is to introduce students to the principles that govern the development of a single fertilized egg cell into a complex multicellular organism. These principles, and often the molecular mechanisms by which they are accomplished, appear to be universal for all multicellular organisms including both plants and animals. We will explore issues such as: how cells become committed to particular cell fates and how this commitment is maintained; how organs acquire particular shapes, sizes and positions; the developmental causes of some human diseases; how the environment affects development; and, how changes in development provide the material basis for evolutionary change.

Prerequisite(s): BIOL 2110G, BIOL 305, and MATH 1220G.

BIOL 473. Ecology of Microorganisms
3 Credits (2+3P)

The metabolic interactions of microorganisms in the environment, with emphasis on their roles in ecological processes.

Prerequisite(s): MATH 1220G, BIOL 311 or consent of instructor.

BIOL 474. Immunology
3 Credits (3)

Basic concepts of the immune response.

Prerequisite(s): MATH 1220G, BIOL 305, and CHEM 2115 or CHEM 313.

BIOL 475. Virology
3 Credits (3)

Mechanisms of viral infections of animals and man. BCHE 395 or BIOL 305 are recommended.

Prerequisite(s): BIOL 311 and MATH 1220G.

BIOL 476. Soil Microbiology
3 Credits (3)

Nature and physiology of soil microorganisms, how they affect plant growth and recycle nutrients. Land farming, bioremediation, and other environmental problems as influenced by soil microorganisms. SOIL 2110 and BIOL 311 recommended. Same as SOIL 476.

BIOL 476 L. Soil Microbiology Laboratory
1 Credit (3P)

Enumeration of soil microorganisms, their activities, and transformations they mediate. Same as SOIL 476L.

Prerequisite(s)/Corequisite(s): BIOL 476.

BIOL 477. Applied and Environmental Microbiology
4 Credits (4)

A lecture-laboratory course on the microorganisms and the reactions they mediate which either impact the environment or have industrial applications. Reading of current literature will be emphasized. Topics include bioremediation, water quality, and aspects of industrial and food microbiology.

Prerequisite(s): MATH 1220G, BIOL 311, and 311 L, or consent of instructor.

BIOL 478. Molecular Biology of Microorganisms
3 Credits (3)

The biochemical basis for gene mutation, recombination, and expression with emphasis on prokaryotes. Includes fundamentals of recombinant DNA technology. BIOL 305 and BCHE 395 recommended.

Prerequisite(s): BIOL 311 and MATH 1220G.

BIOL 479. Medical Microbiology
3 Credits (3)

An in-depth overview of microbial pathogens associated with human infectious disease. Etiological agents, pathogenesis, and processes leading to the disease state and the therapies of infectious disease.

Prerequisite(s): MATH 1220G and BIOL 311 required, BIOL 474 recommended.

BIOL 479 L. Medical Microbiology Laboratory
1 Credit (1)

Overview of common procedures used by medical microbiologists to identify agents of disease or microbial pathogen traits. May be repeated up to 1 credits.

Prerequisite(s)/Corequisite(s): BIOL 479. **Prerequisite(s):** MATH 1220G, BIOL 311, BIOL 311 L.

BIOL 480. Animal Behavior
3 Credits (3)

A survey of the field of animal behavior. BIOL 322 recommended. May be repeated up to 3 credits.

Prerequisite: MATH 1220G or higher, BIOL 2610G, and junior-level standing.

Learning Outcomes

1. Distinguish between proximate mechanisms and ultimate causation.
2. Engage in the scientific process as applied to animal behavior.
3. Interpret and produce graphical representations of data.
4. Describe general patterns of animal behavior across a wide range of contexts.

BIOL 484. Animal Communication
3 Credits (3+3P)

An examination of how animals produce and perceive signals, what factors influence the form of signals in different sensory modalities, and how conflicts between senders and receivers affect signaling strategies. Weekly discussion from the primary literature and group research products. May be repeated up to 3 credits.

Prerequisite: BIOL 2610G or consent of instructor, and MATH 1220G or higher.

Learning Outcomes

1. Describe how animal signals are produced, transmitted, and received in various taxa,
2. Understand how evolutionary, ecological and economic principles help predict how animals will communicate,
3. Describe general patterns of animal communication across a range of social contexts.

BIOL 488. Principles of Conservation Genetics
3 Credits (3)

Fundamentals of the genetics of small populations. Genetic technologies used in studying small populations. Application of genetics and evolution to the conservation of biological populations.

Prerequisite(s): MATH 1220G and BIOL 305.

BIOL 490. Neurobiology
3 Credits (3)

Fundamentals of neurobiology with an emphasis on properties of neurons and glia, principles of synaptic transmission, development of nervous system and organization of motor and sensory systems.

Prerequisite(s): BIOL 2110G, MATH 1430G or equivalent.

BIOL 498. Biology Research Programs

1-3 Credits

Directed studies and research experiences, by arrangement with instructor. May be repeated for a maximum of 6 credits.

BIOL 509. Guided Biological Research Lab

3 Credits (3P)

This laboratory course provides a guided experience to hands-on research in biology. It is intended for early-career graduate students wishing an introduction to research practices. Topics will vary with instructor. Crosslisted with: BIOL 309.

BIOL 510. Current Topics in Biology

3 Credits (3)

Introduction to diverse topics in modern biology, including dynamic areas of current research.

BIOL 514. Plant Physiology

3 Credits (3)

Overview of photosynthesis, respiration, water relations of plants, minerals and organic nutrition, growth and development. May be repeated up to 2 credits.

Prerequisite: BIOL 2110G and CHEM 1225G.

Learning Outcomes

1. Describe how individual plants survive in variable environments.
This means that students will be able to: a. Summarize the chemical and physical bases for major plant processes. b. Explain how major plant processes interact to support plant growth and development. c. Describe the adaptive forms of physiological processes and their underlying anatomical modifications.
2. Predict consequences of environmental change on physiological processes within individual plants.
3. Apply course concepts to real-world scenarios that involve plant function and plant development.
4. Describe experimental approaches used to understand physiological processes within individual plants.

BIOL 520. Molecular Cell Biology

3 Credits (3)

An in-depth look at cellular processes and structures at the molecular level. Emphasis is placed on formal student presentations and discussions of current literature.

Prerequisite: BIOL 377 or equivalent.

BIOL 527. Symbiosis

3 Credits (3)

In-depth treatment of the ecology, evolution, and mechanisms that are found in symbiotic systems. May be repeated up to 3 credits. Crosslisted with: BIOL 427.

Prerequisite(s): Graduate status.

BIOL 536. Advanced Disease Vector Biology

3 Credits (3)

Fundamentals of disease vector biology with emphasis on molecular biology. Explores an overview of vector borne diseases, insect endocrinology, insect immunity, olfaction, vector genome projects and transgenic insect techniques. Includes student presentations and literature discussions. Taught with: BIOL 436.

Prerequisite(s): BIOL 2110G and BIOL 305.

BIOL 540. Science and Ethics

1-3 Credits (1-3)

Ethical concerns facing researchers in the basic and applied biological sciences. Coverage of responsible conduct in research

including scientific integrity and research misconduct, mentor/trainee responsibilities, data management, authorship, publication practices, human subjects, animal welfare, intellectual property, conflicts of interest and effort and collaborative science. Emphasis on ethical reasoning skills. Discussion of ethical and societal implications of issues selected from a broad range of contemporary research areas (genetics, reproductive biology, environmental sciences, nanoscience, drug discovery, bioengineering, neuroscience). Subtitled. May be repeated up to 4 credits. Crosslisted with: PHIL 540.

BIOL 541. Professional Development Seminar

1-3 Credits

Practical aspects of career enhancement including job seeking, professional presentations, grant proposals, etc.

Prerequisite: consent of instructor.

BIOL 550. Special Topics

1-3 Credits

Readings, discussions, and/or field and laboratory investigation of selected problems. Possible topics: human genetics, systematic entomology, or parasitism in animals. May be repeated for unlimited credit.

Prerequisite: consent of instructor, and designation of a specific topic before registration.

BIOL 562. Advanced Genomics Technology

3 Credits (3)

This course covers current genomics techniques in genome sequencing, transcriptome analysis, detection of genetic variation, and metagenomics. May be repeated up to 3 credits. Consent of Instructor required. Crosslisted with: BIOL 442.

BIOL 565. Biology In The K-6 Curriculum

3 Credits (3)

Linking important biological concepts to the K-6 curriculum and standards. Addressing known content area challenges with effective pedagogical approaches. Aligning content, standards, classroom activities and assessment. Does not fulfill requirements for degrees in biology. Consent of Instructor required. Restricted to: Master of Arts in Education: Elementary Mathematics and Science majors.

Learning Outcomes

1. Explain that biology is a scientific discipline based on observations and experimentations.
2. Explain the process of scientific inquiry and explain how scientific knowledge is discovered and validated.
3. Describe the chemical basis of living organisms and how biomolecules contribute to the structure and function of cells.
4. Develop a basic familiarity with cells and cell organelles.
5. Describe the structure and function of DNA as well as how DNA is used in the production of proteins
6. Describe the basic principles of genetics and heredity leading to human diversity.
7. Identify the major features of the systems in the human body, and understand the anatomy and physiology of them
8. Describe the roles of the organ systems in maintaining homeostasis
9. Explain the principles of evolution by means of natural selection explaining the diversity of life. 1
10. Describe how science and technology have impacted life in particular to society and the environment (e.g. medicine, forensic science, agriculture, ecology, sustainability) 1
11. Describe the benefits of a case study approach to teaching 1

12. Align biology content with specific K-6 (e.g. NGSS) science standards
1
13. Design an instructional case study (complete with teaching notes and assessment) to address specific K-6 science standards

BIOL 566. Advanced Bioinformatics and NCBI Database
3 Credits (3)

The course discusses how to use NCBI database and bioinformatic tools for research with genomics approaches. The topics include nucleotide and protein sequence analysis, similarity search with blast algorithms, gene/genome annotation, protein structure analysis, gene expression analysis, and metagenomic study. Consent of Instructor required.

BIOL 568. Communities and Ecosystems
3 Credits (3)

Community ecology is an interdisciplinary field that integrates numerous theories, concepts, and methods to study the patterns and dynamics of biotic assemblages. Because biotic groups affect the biogeophysical and biogeochemical processes that govern Earth system functioning, community ecology also plays an increasingly large role in the study of ecosystem ecology, a discipline which seeks to understand the processes governing nutrient and energy flow across the Earth system. This course will explore the theories and methods for study of biodiversity, biogeography, and community assembly, as well as the pathways through which communities exert influence on ecosystem functioning. Topics will also include evolutionary influences on communities, the integration of community ecology into conservation and land management, and community ecology in an era of rapid environmental change.

BIOL 577. Advanced Topics in Environmental Microbiology
3 Credits (3)

This course is based on current literature in Environmental Microbiology, and is a seminar-style, discussion-based class. Topics typically include marine microbiology, ancient DNA and the human microbiome.

Prerequisite(s): Consent of instructor.

BIOL 581. Physiology of Animals
3 Credits (3)

Comprehensive treatment of integrative physiology of animals, emphasizing tissues, organ systems, and regulatory control, including neuroendocrine function, circulation, respiration, and excretion. Term paper required. BIOL 2610G, BIOL 377 recommended.

Prerequisite: BIOL 2110G.

BIOL 582. Advanced Plant Signalling and Development
3 Credits (3)

This is a course that introduces plant signalling pathways and their role in development to students. The lectures are structured to facilitate in-class discussions on the current state and future directions in this field. Topics will cover a wide range of biological questions and the methods used to study them. May be repeated up to 3 credits.

Prerequisite(s): BIOL 305 or GENE 315, and MATH 1220G.

BIOL 587. Behavioral and Evolutionary Ecology
3 Credits (3)

This course will investigate the causes and consequences of phenotypic variation and the adaptive value of phenotypic traits.

BIOL 589. Speciation and Adaptation
1-3 Credits (1-3)

Examination of the two great themes of evolutionary biology. Begins with an historical overview of perspectives on these evolutionary processes, and then moves through the foundations of modern research to focus on recent advances driven by improvements in theory and technology.

Emphasis on synthesis of the primary literature through lectures, discussion, and written assignments.

Learning Outcomes

1. Students will actively participate in discussions focused on both classic foundational texts as well as recent research in this field.
2. Students are expected to lead class discussions on relevant evolution topics.
3. Students will learn to write a literature review paper on a specific topic in the field of evolutionary biology.

BIOL 590. Neuroscience

1-3 Credits

Detailed examination of the principles underlying nervous system organization and function. Emphasis on recent advances in multidisciplinary, integrated approaches to study the nervous system. May be repeated up to 9 credits.

BIOL 598. Special Research Programs

1-9 Credits

Individual investigations either analytical or experimental.

BIOL 599. Master's Thesis

15 Credits

Thesis.

BIOL 600. Doctoral Research

1-15 Credits

Research.

BIOL 610. Seminar

1-3 Credits (1-3)

Oral presentation and discussion of journal articles and ongoing research projects. May be repeated up to 6 credits. Graded: S/U Grading (S/U, Audit).

BIOL 612. Microbiology Seminar

1 Credit (1)

Seminar to aid graduate students in assessment and presentation of classical and current topics in microbiology.

BIOL 698. Selected Topics

1-3 Credits

Selected topics for doctoral students.

BIOL 700. Doctoral Dissertation

15 Credits

Dissertation.

Genetics Courses

GENE 1110. Experimental Systems in Genetics

1 Credit (1)

Survey of molecular, biochemical, organismal, and computer science based approaches to investigate how genes determine important traits. Historical development and topics of current interest will be discussed.

Learning Outcomes

1. To give the students a historical perspective on the field of genetics.
2. To familiarize the students to introductory concepts and vocabulary to the field of genetics.
3. Introduce experimental systems within the field of genetics and to give perspective to current genetic research.
4. As this course is designed for beginning students as an overview of faculty and research labs on campus. The students majoring in genetics are encouraged to meet with faculty and to explore opportunities available to them on campus

GENE 305. Principles of Genetics**3 Credits (3)**

Covers fundamental principles of reproduction, variation, and heredity in plants and animals. May be repeated up to 3 credits.

Prerequisite: (BIOL 2610G and BIOL 2110G, or BIOL 2110G and BCHE 140, and either CHEM 1215G or CHEM 1216).

Learning Outcomes

1. To provide an introduction to the basic concepts, methods, and terminology of genetics. Introduction to genomics and bioinformatics.
2. To develop a working understanding of genetics and heredity
3. To understand in some depth, the mechanism of DNA replication, transcription and protein synthesis. To understand the regulation of gene expression.
4. To examine the impact of genetics on both basic and applied aspects of the biological sciences, as well as its effects on our everyday lives.

GENE 305 L. Genetic Techniques**1 Credit (3P)**

Experimental procedures used in genetic research including: sexual transmission genetics, eukaryotic DNA isolation, DNA marker development and genotyping, polymerase chain reaction, and cytogenetics.

Prerequisite(s)/Corequisite(s): GENE 315, or AGRO/ANSC/BIOL/HORT 305.

GENE 315. Molecular Genetics**3 Credits (3)**

Covers fundamental principles of DNA structure and replication, transcription, translation, gene regulation, recombinant DNA technology, and a survey of genomics and bioinformatics. Recommend CHEM 313.

Prerequisite(s): CHEM 1225G and BIOL 2110G.

GENE 320. Hereditary and Population Genetics**3 Credits (3)**

Covers fundamental principles of reproduction, variation, and heredity in plants and animals including: Mendelian inheritance, mitosis, meiosis, genetic linkage, random mating, genetic drift, natural selection, inbreeding, migration, mutation, interrelationships between individuals, populations and communities and the environment.

Prerequisite(s): CHEM 1215G & BIOL 2110G.

GENE 391. Genetics Internship**1-6 Credits (1-6)**

Professional work experience in genetics under the joint supervision of an employer and a faculty member. Documentation of proposed internship activities must be submitted prior to the start of the internship. A written report is required after the internship is completed. No more than 6 credits toward a degree. May be repeated up to 6 credits. Graded: S/U Grading (S/U, Audit).

GENE 440. Genetics Seminar**1 Credit (1)**

Organization, preparation, and presentation of genetic studies in model microorganism, plant, or animal systems that have been used to solve problems in molecular, cellular, and developmental biology. Consent of instructor required.

Prerequisite(s): Seniors only; GENE 315 & GENE 320.

GENE 449. Special Problems**1-3 Credits (1-3)**

Research problem, experience training, or other special study approved by a faculty adviser. Maximum of 3 credits per semester and a grand total of 3 credits toward a degree. Consent of instructor required.

GENE 450. Special Topics**1-3 Credits (1-3)**

Specific subjects to be announced in the schedule of classes. Maximum of 3 credits per semester and a total of 3 credits toward a degree. Consent of instructor required.

GENE 452. Applied Bioinformatics**3 Credits (3)**

Survey and application of publicly available bioinformatic tools that treat genomic DNA, cDNA, and protein sequences, RNA abundance, as well as tools that allow inference based on phylogenetic relationships.

Prerequisites: AGRO/ANSC/BIOL/HORT 305 or GENE 315 and GENE 320, and BCHE 341, or BCHE 395.

GENE 486. Genes and Genomes**3 Credits (3)**

Extensive coverage of nuclear and organelle genome structure in plants and animals, genome restructuring including duplication, aneuploidy, chromosome translocations and inversions, comparative genomics, and molecular systematics.

Prerequisites: AGRO/ANSC/BIOL/HORT 305 or GENE 315, and GENE 320.

Name: Biology Department

Office Location: Foster Hall room 275

Biology - Bachelor of Arts

The Bachelor of Arts curriculum is intended for students who desire a broad education with emphasis in biology in a program chosen by the student in consultation with an academic advisor. The Bachelor of Arts is recommended for those who plan to teach at the primary levels or to use a background in life science in business or other endeavors.

Requirements

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Prefix	Title	Credits
General Education		
<i>Area I: Communications</i>		10
	<i>English Composition - Level 1</i> ¹	
	<i>English Composition - Level 2</i> ¹	
	<i>Oral Communication</i> ¹	
<i>Area II: Mathematics</i> ²		3-4
MATH 1430G	Applications of Calculus I or MATH 1511G Calculus and Analytic Geometry I	
<i>Area III/IV: Laboratory Sciences and Social/Behavioral Sciences</i>		11
CHEM 1215G	General Chemistry I Lecture and Laboratory for STEM Majors	
CHEM 1225G	General Chemistry II Lecture and Laboratory for STEM Majors	
<i>Area IV: Social/Behavioral Sciences course (3 credits)</i> ¹		
<i>Area V: Humanities</i> ¹		3

<i>Area VI: Creative and Fine Arts</i> ¹		3
<i>General Education Elective</i>		
BIOL 2610G & BIOL 2610L	Principles of Biology: Biodiversity, Ecology, and Evolution and Principles of Biology: Biodiversity, Ecology, and Evolution Laboratory (Departmental Requirement)	4
Viewing a Wider World ³		6
Departmental Requirements		
BIOL 2110G & BIOL 2110L	Principles of Biology: Cellular and Molecular Biology and Principles of Biology: Cellular and Molecular Biology Laboratory	4
BIOL 301	Principles of Ecology	3
BIOL 305	Principles of Genetics	3
BIOL 377	Cell Biology	3
BIOL 467	Evolution	3
<i>Biology Electives</i>		12
Select sufficient upper-division biology electives to bring total upper-division credits to 24. ⁴		
Non-Departmental Requirements (in addition to Gen.Ed/VWW)		
<i>Organic Chemistry Requirement</i>		4-8
CHEM 2120 & 2120L	Integrated Organic Chemistry and Biochemistry and Integrated Organic Chemistry and Biochemistry Lab	4
OR		
CHEM 313 & CHEM 314 & CHEM 315	Organic Chemistry I and Organic Chemistry II and Organic Chemistry Laboratory	8
Select 3-4 credits from one of the following departments: astronomy, computer science, geology or physics		3-4
Second Language Requirement (See below)		0-8
The number of credits required to satisfy this requirement will vary depending on the option a student chooses.		
Electives, to bring the total credits to 120 ⁵		19-33
Selective sufficient electives to bring the total to 120, including at least 48 upper-division credits.		
Total Credits		120

¹ See the General Education (p. 227) section of the catalog for a full list of courses.

² Either MATH 1430G Applications of Calculus I or MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need prerequisite courses before entering one of these.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁴ Choice of Biology electives should be done in consultation with an advisor.

⁵ Elective credit may vary depending on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The elective credit in the requirement list is the amount needed to bring the total to 120 credits and may vary based on the degree. Students may need to complete more or less courses on a case-by-case basis and each student should discuss this with their advisor.

Second Language Requirement

For the Bachelor of Arts in Biology there is a one year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending

on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120	French I and French II	4-8
GRMN 1110 & GRMN 1120	German I and German II	4-8
JAPN 1110 & JAPN 1120	Japanese I and Japanese II	4-8
SPAN 1110 & SPAN 1120	Spanish I and Spanish II	4-8
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6
<i>For Heritage Speakers:</i>		
SPAN 1210 & SPAN 1220 or SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II and Spanish for Heritage Learners III	3-6

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3

Option 3:

Prefix	Title	Credits
Challenge the 1120 level for the following courses:		
FREN 1120 or PORT 1120 or SPAN 1120 or SPAN 2210	French II and Portuguese II and Spanish II and Spanish for Heritage Learners III	4

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

First Year

Semester 1		Credits
MATH 1220G	College Algebra ¹	3
ENGL 1110G	Composition I ¹	4
BIOL 2610G & BIOL 2610L	Principles of Biology: Biodiversity, Ecology, and Evolution and Principles of Biology: Biodiversity, Ecology, and Evolution Laboratory ¹	4
Area IV: Social and Behavioral Science Course ²		3
Elective Course		3
Credits		17

Semester 2		Credits
CHEM 1215G	General Chemistry I Lecture and Laboratory for STEM Majors ¹	4
CHEM 1121	General Supplemental Instruction I	1
BIOL 2110G & BIOL 2110L	Principles of Biology: Cellular and Molecular Biology and Principles of Biology: Cellular and Molecular Biology Laboratory	4
Choose from one of the following:		3-4
MATH 1430G	Applications of Calculus I ¹	
MATH 1511G	Calculus and Analytic Geometry I	
Choose from one of the following Area I Oral Communication General Education Courses:		3
COMM 1115G	Introduction to Communication	
HNRS 2175G	Introduction to Communication Honors	
ACOM 1130G	Effective Leadership and Communication in Agriculture	
Credits		15-16

Second Year

Semester 1		Credits
ENGL 2210G	Professional and Technical Communication Honors	3
CHEM 1225G	General Chemistry II Lecture and Laboratory for STEM Majors ¹	4
CHEM 1122	General Supplemental Instruction II	1
BIOL 305	Principles of Genetics ¹	3
Elective Course ³		4
Credits		15
Semester 2		Credits
BIOL 377	Cell Biology ¹	3
First Course in Second Language Series		3-4
Upper-division Biology Elective Course ¹		3
Area VI: Creative and Fine Arts Course ²		3
Area V: Humanities Course ²		3
Credits		15-16

Third Year

Semester 1		Credits
CHEM 313	Organic Chemistry I ¹	3

CHEM 303	Organic Supplemental Instruction I	1
Upper-division Biology Elective Course ¹		3
Next Second Language Course in Series ¹		3-4
VWW: Viewing a Wider World Course ⁴		3
Elective Course ³		2

Credits 15-16

Semester 2

CHEM 314	Organic Chemistry II	3
CHEM 315	Organic Chemistry Laboratory	2
Upper-division Biology Elective Course ¹		3
Science Elective Course with prefix ASTR, C S, GEOL or PHYS		4
Elective Course ³		3

Credits 15

Fourth Year

Semester 1

BIOL 301	Principles of Ecology ¹	3
Upper-division Biology Elective Course ¹		3
VWW: Viewing a Wider World Course ⁴		3
Upper-division Elective Course ³		3
Upper-division Elective Course ³		3

Credits 15

Semester 2

BIOL 467	Evolution	3
Upper-division Elective Course ¹		3
Elective Course ³		4
Elective Course ³		3

Credits 13

Total Credits 120-123

¹ These courses have prerequisites and it is the students responsibility for checking and fulfilling all course prerequisites listed for these courses.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ Elective credit may vary depending on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The elective credit in the requirement list is the amount needed to bring the total to 120 credits and may vary based on the degree. Students may need to complete more or less courses on a case-by-case basis and each student should discuss this with their advisor.

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Biology - Bachelor of Science

The major in biology provides a solid academic base for those planning to enter any of the various fields of the biological sciences. The program allows considerable latitude. Degree plans for specific areas of interest can be obtained from the Biology Success Center (<https://bio.nmsu.edu/success2.html>) in Foster Hall room 204.

Requirements

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective

credits, but may be needed in order to take the necessary English and Mathematics coursework.

CHEM 313 & CHEM 314 & CHEM 315 & BCHE 395	Organic Chemistry I and Organic Chemistry II and Organic Chemistry Laboratory and Biochemistry I	
Second Language Requirement (see below)		0-8
The number of credits required to satisfy this requirement will vary depending on the option a student chooses.		
Electives, to bring the total credits to 120 ⁶		15-27
Select sufficient electives to bring the total to 120 credits, including at least 48 upper-division credits.		
Total Credits		120

¹ See the General Education (p. 227) Section of the catalog for a full list of courses.

² MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisite courses needed to enter MATH 1511G first.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁴ Only BIOL 455 will count as Departmental Requirements, students taking A ST 311 will need 3 more credits of upper-division Biology.

⁵ At least one upper-division course must include a laboratory and/or field experience. The laboratory/field requirement can be satisfied by any BIOL course above the 300 level that includes a laboratory or is a field course—including BIOL 350 Special Topics or BIOL 450 Special Topics.

⁶ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The elective credits in the requirement list is the amount needed to bring the total to 120 credits and may vary depending on the degree. Students may need to complete more or less courses on a case-by-case basis and each student should discuss this with their advisor.

Second Language Requirement

For the Bachelor of Science in Biology there is a one year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120	French I and French II	8
GRMN 1110 & GRMN 1120	German I and German II	8
JAPN 1110 & JAPN 1120	Japanese I and Japanese II	8
SPAN 1110 & SPAN 1120	Spanish I and Spanish II	8
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	6
<i>For Heritage Speakers:</i>		
SPAN 1210 & SPAN 1220	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II	3-6
	or SPAN 2210 Spanish for Heritage Learners III	

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3

Option 3:

Prefix	Title	Credits
Challenge the 1120 level for the following courses:		
FREN 1120	French II	3-4
or PORT 1120	Portuguese II	
or SPAN 1220	Spanish for Heritage Learners II	
or SPAN 2210	Spanish for Heritage Learners III	

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

Total Credits	120-122

¹ These courses have prerequisites and it is the students responsibility for checking and fulfilling all course prerequisites listed for these courses.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Conservation Ecology - Bachelor in Conservation Ecology

Co-directors of the Program:

Professor, Charles Shuster, Department Head, Biology
Professor, Matthew Gompper, Department Head, Fish, Wildlife and Conservation Ecology

Professors Bailey, Boecklen, Boeing, Caldwell, Cowley, Desmond, Gompper, Hanley, Houde, James, Milligan, Roemer, Smith, Wright; **Associate Professors** Cain, Mabry; **Assistant Professors** Orr

New Mexico State University offers an interdisciplinary, undergraduate program in Conservation Ecology. The goal of this program is to train biologists for the current and future challenges that we face in the conservation and wise use of our Earth's natural resources. An overriding principle of the program is to provide a solid foundation in basic science coupled with a practical approach towards sustainability and stewardship. The curriculum encompasses several disciplines and includes a wide variety of courses from the Biology; Fish, Wildlife and Conservation Ecology; Geography; and Range Science departments.

The educational experience will provide students with an overview of global biodiversity and an understanding of the ecological and evolutionary processes that have created and sustained it. Courses in population and community ecology coupled with population viability analysis and risk assessment will give students the necessary background to understand the theory and development of these fields as well as the tools to tackle real-world problems. Courses in basic genetics, evolution, and conservation genetics will expose students to the importance of conserving genetic variation in order to maintain adaptive potential within populations, thereby sustaining the evolutionary process. Students will also receive background on wildlife law and environmental policy, information vital for assisting governing bodies in making decisions regarding the protection and wise use of our natural resources. Skills obtained in the application of geographic information systems, molecular genetics, and professional communication can also be acquired through various electives. In sum, we seek to provide undergraduate students with an education that will allow them the opportunity to contribute to the conservation of all life on Earth.

The requirements are listed below. In addition, each required course must be passed with a grade of C- or better.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Prefix	Title	Credits
General Education		
<i>Area I: Communications</i>		
English Composition - Level 1 ¹		4
English Composition - Level 2		3
ENGL 2210G	Professional and Technical Communication Honors (preferred)

BIOL 480	Animal Behavior	
EPWS 303	Economic Entomology	
EPWS 462	Parasitology	
FWCE 430	Avian Field Ecology	
FWCE 431	Mammalogy	
FWCE 467	Herpetology	
FWCE 482	Ichthyology	
Non-Departmental Requirements (in addition to Gen.Ed/VWW)		
CHEM 2120 & 2120L	Integrated Organic Chemistry and Biochemistry and Integrated Organic Chemistry and Biochemistry Lab	4
Choose one from the following:		4
PHYS 1230G & PHYS 1230L	Algebra-Based Physics I and Algebra-Based Physics I Lab	
PHYS 2230G & PHYS 2230L	General Physics for Life Science I and Laboratory to General Physics for Life Science I	
Choose one from the following:		4
PHYS 1240G & PHYS 1240L	Algebra-Based Physics II and Algebra-Based Physics II Lab	
PHYS 2240G & PHYS 2240L	General Physics for Life Science II and Laboratory to General Physics for Life Science II	
Second Language: (not required)		
Electives, to bring the total credits to 120⁴		6-10
Select additional electives to bring total to 120 credits including 48 upper division credits. ⁵		
Total Credits		120

¹ See the General Education (p. 227) Section of the catalog for a full list of courses.

² Either MATH 1430G Applications of Calculus I or MATH 1521G Calculus and Analytic Geometry II is required for the degree but students may need to take any prerequisites needed to enter these courses.

³ One Viewing a Wider World (p. 231) course will be satisfied using the 9-hour rule: students with Biology as home department use FWCE courses and students with Fish, Wildlife and Conservation Ecology as home department use BIOL courses.

⁴ Other related courses may include BIOL 436 Disease Vector Biology, BIOL 442 Genomics Technology, BIOL 446 Bioinformatics and NCBI Database, BIOL 469 Biology of Emerging Infectious Diseases,

ECON 337V Natural Resource Economics, GEOG 381 Cartography and GIS, GEOG 481 Fundamentals of GIS, GEOL 1110G Physical Geology, GEOL 424 Soil Chemistry, POLS 378 U.S.-Mexico Border Politics, RGSC 318 Watershed Management, RGSC 325 Rangeland Restoration Ecology, RGSC 452 Vegetation Measurements for Rangeland Assessment.

⁵ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The elective credits in the requirements list is the amount needed to bring the total to 120 credits and may vary based on the degree. Students may need to complete more or less courses on a case-by-case basis and each student should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Science in Conservation Ecology there is no second language requirement for the degree.

Genetics and Biotechnology - Bachelor of Science in Genetics

Codirectors of the Program:

Professor, Charles Shuster, Department Head, Biology

Professor, Niall Hanan, Interim Department Head, Plant and Environmental Sciences

Professors Bailey, Cramer, Hanley, Houde, James, Milligan, Randall, Serrano, C. Shuster, M. Shuster, Smith, Unguez, Zhang; **Associate Professors** Curtiss, JXu **Assistant Professors** Lozado

Have you ever wondered why your hair or eye color, facial features, or the build of your body resembles that of your parents, grandparents, or other close relatives? What factors are responsible for generating all the variety of colors and shapes of flowers, trees, and different types of animals? If these questions have crossed your mind, then you have been thinking about Genetics; the science of heredity. Genetics is studied at the DNA/gene/genome level (molecular genetics, biotechnology, genomics and bioinformatics), the level of organisms (classical or Mendelian genetics), and within/among populations of individuals (population and quantitative genetics).

One of the most significant scientific accomplishments in history has been the use of genomic technologies to recently identify most human genes, as well as, most genes for a number of other animals, plants, fungi, and bacteria. Geneticists now have tremendous opportunities to use molecular, biochemical, mathematical, and computer science-based (bioinformatics) approaches to investigate how these genes determine observable traits. This information can be used to significantly advance human health and well being, and to meet the food and fiber needs of the world.

A degree in Genetics can provide excellent preparation for careers in academic research and technical support, teaching, agriculture, the biotechnology industry, medicine and health sciences, forensic science, technical writing, and sales or marketing. It is also an excellent background for students wishing to enter a graduate program, medical school, and veterinary school.

Undergraduates in the Genetics program must earn a grade of C- or better to receive credit for Departmental and Non-Departmental required courses. Within the Departmental Required courses, Tier I courses must be taken by all majors, for a total of 31 credit hours*. To accommodate

differing interests among students, a series of Tier II courses comprising 9-11 credits are provided. Ethical considerations of genetic based technologies will be infused throughout the curriculum, with a focused course on Science and Ethics in the Tier III portion of the core curriculum.

**Note: This includes BIOL 2610G which also counts as a General Education elective.*

Requirements

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, other Non-Departmental requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Electives, to bring the total credits to 120⁴ 17-19

Select electives to bring total to 120 credits including 48 upper division credits.

Recommended Electives

HNRS courses⁵

Total Credits 120

¹ See the General Education Section (p. 227) of the catalog for a full list of courses.

² MATH 1521G Calculus and Analytic Geometry II is required for the degree but students may need to take prerequisite courses before entering MATH 1521G Calculus and Analytic Geometry II.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁴ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The elective credits in the requirements list is the amount needed to bring the total to 120 credits and may vary based on the degree. Students may need to complete more or less courses on a case-by-case basis and each student should discuss elective requirements with their advisor.

⁵ Students interested in graduating with University Honors should consult with an advisor to select 18 credits of relevant Honors (HNRS) courses.

Second Language Requirement

For the Bachelor of Science in Genetics with a major in Genetics and Biotechnology there is no second language requirement for the degree.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

First Year

Fall		Credits
BIOL 2610G	Principles of Biology: Biodiversity, Ecology, and Evolution	3
GENE 1110	Experimental Systems in Genetics	1

Microbiology - Bachelor of Science

The major in microbiology provides a solid academic base for those planning to enter any of the various fields of microbiology.

Requirements

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Prefix	Title	Credits

CHEM 315	Organic Chemistry Laboratory	2
BCHE 395	Biochemistry I	3
Second Language Requirement (see below)		0-8
The number of credits required to satisfy this requirement will vary depending on the option a student chooses.		
Electives, to bring the total credits to 120 ⁵		18-26
Select sufficient electives to bring total credits to 120 including 48 upper-division credits.		
Total Credits		120

¹ See the General Education (p. 227) section of the catalog for a full list of courses.

² MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take prerequisites courses before entering MATH 1511G.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁴ Students may take both BIOL 451 Physiology of Microorganisms and BIOL 475 Virology; the second course will count as a microbiology elective.

⁵ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The elective credits in the requirement list is the amount needed to bring the total to 120 credits and may vary depending on the degree. Students may have to take more or less courses on a case-by-case basis and each student should discuss this with their advisor.

Second Language Requirement

For the Bachelor of Science in Microbiology there is a one year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120	French I and French II	4-8
GRMN 1110 & GRMN 1120	German I and German II	4-8
JAPN 1110 & JAPN 1120	Japanese I and Japanese II	4-8
SPAN 1110 & SPAN 1120	Spanish I and Spanish II	4-8
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6

For Heritage Speakers:

Prefix	Title	Credits
SPAN 1210 & SPAN 1220 or SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II Spanish for Heritage Learners III	3-6

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3

Option 3:

Prefix	Title	Credits
Challenge the 1120 level for the following courses:		
FREN 1120 or GRMN 1120 or JAPN 1120 or SPAN 1120	French II German II Japanese II Spanish II	4
PORT 1120 or SPAN 1220 or SPAN 2210	Portuguese II Spanish for Heritage Learners II Spanish for Heritage Learners III	3

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

BIOL 451	Physiology of Microorganisms ¹	
BIOL 475	Virology ¹	
Upper-division Elective Course ¹		3
Elective Course		3
Credits		13
Total Credits		120

¹ These courses have prerequisites and/or co-requisites and it is the students responsibility for checking and fulfilling all requirements for these courses.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Biology - Undergraduate Minor

The courses of the Biology minor represent core biological content, critical for a general view of biology. A student cannot earn a bachelor's degree in Biology and also earn a minor in Biology.

Requirements

A minor in Biology must include 20 credits in Biology, of which at least 9 credits must be numbered 300 and above.

No more than 3 credits of special topics or individual study courses may be applied to the minor. A grade of C- or better must be earned in all courses.

Prefix	Title	Credits
Required Courses		
BIOL 2610G & BIOL 2610L	Principles of Biology: Biodiversity, Ecology, and Evolution and Principles of Biology: Biodiversity, Ecology, and Evolution Laboratory	4
BIOL 2110G & BIOL 2110L	Principles of Biology: Cellular and Molecular Biology and Principles of Biology: Cellular and Molecular Biology Laboratory	4
BIOL 301 or BIOL 377	Principles of Ecology Cell Biology	3
BIOL 305	Principles of Genetics	3
BIOL 467	Evolution	3
Elective		3
Select any Biology courses to bring the total credits to 20.		
Total Credits		20

Conservation Ecology - Undergraduate Minor

A minor in Conservation Ecology is available for students who choose to major in other areas, but wish to include Conservation Ecology in their academic training. A minor in Conservation Ecology must include a minimum of 20 credits in the discipline with 9 of these coming from upper-division courses.

Requirements

Prefix	Title	Credits
Core Curriculum		
BIOL 2610G & BIOL 2610L	Principles of Biology: Biodiversity, Ecology, and Evolution and Principles of Biology: Biodiversity, Ecology, and Evolution Laboratory	4
BIOL 301 or FWCE 301	Principles of Ecology Wildlife Ecology	3
BIOL 462	Conservation Biology	3
FWCE 2110	Principles of Fish and Wildlife Management	3
FWCE 402	Seminar in Natural Resource Management	1
Select 6 credits from the following:		6
BIOL 312 or RGSC 316	Plant Taxonomy Rangeland Plants	

BIOL 313	Structure and Function of Plants
BIOL 322	Zoology
BIOL 467	Evolution
BIOL 480	Animal Behavior
BIOL 488	Principles of Conservation Genetics
ECON 384V	Water Resource Economics
ECON 337V	Natural Resource Economics
EPWS 303	Economic Entomology
EPWS 462	Parasitology
FWCE 330	Natural History of the Vertebrates
FWCE 409	Introduction to Population Ecology
FWCE 430	Avian Field Ecology
FWCE 431	Mammalogy
FWCE 447	Wildlife Law and Policy
FWCE 464	Management of Aquatic and Terrestrial Ecosystems
FWCE 467	Herpetology
FWCE 482	Ichthyology

Total Credits 20

Genetics and Biotechnology - Undergraduate Minor

Prefix	Title	Credits
Required Courses		
GENE 1110	Experimental Systems in Genetics	1
BIOL 2610G	Principles of Biology: Biodiversity, Ecology, and Evolution	3
BIOL 2110G & BIOL 2110L	Principles of Biology: Cellular and Molecular Biology and Principles of Biology: Cellular and Molecular Biology Laboratory	4
GENE 305 L	Genetic Techniques	1
GENE 452	Applied Bioinformatics	3
Select two from the following:		6
BIOL 305	Principles of Genetics	
GENE 315	Molecular Genetics	
GENE 320	Hereditary and Population Genetics	
Total Credits		18

Human Biology - Undergraduate Minor

The Human Biology minor is intended to provide academic recognition for students who wish to focus a significant amount of attention on courses that deal with human beings from a wide variety of biological standpoints. Thus, course work may encompass topics representing a range of viewpoints such as biological function, human ecology, human origins, and psychology. Successful completion of this minor will provide students with a valuable interdisciplinary perspective on the human condition. This program consists of a minimum of 18 hours, that includes a minimum of 12 from within the Biology Department and a minimum of 3 outside the department. Successful completion of the minor will be certified by the Biology Department. A grade of C- or better is required of all minor courses.

Requirements

Prefix	Title	Credits
Required Departmental Courses		
BIOL 2110G & BIOL 2110L	Principles of Biology: Cellular and Molecular Biology and Principles of Biology: Cellular and Molecular Biology Laboratory	4
Select 3-4 credits from the following: ¹		3-4
BIOL 353	Pre-Professional Human Anatomy	
BIOL 354	Physiology of Humans	
Additional Courses		
Select sufficient credits to total 18 credits from within and outside Biology department:		11
<i>Within Department</i>		
Select a minimum of 5 credits from the following:		
BIOL 1120G	Human Biology	
BIOL 305	Principles of Genetics	
BIOL 353 L	Pre-Professional Human Anatomy Laboratory	
BIOL 354 L	Laboratory of Human Physiology	
BIOL 385	An Introduction to Cancer	
BIOL 424	Human Osteology	
BIOL 469	Biology of Emerging Infectious Diseases	
BIOL 470	Developmental Biology	
BIOL 474	Immunology	
BIOL 490	Neurobiology	
<i>Outside Department</i>		
Select a minimum of 3 credits; maximum 6 credits from the following:		
ANTH 1135G & ANTH 1135L	Introduction to Biological Anthropology and Introduction to Biological Anthropology Lab	
ANTH 355	Biological Anthropology	
ANTH 357V	Medical Anthropology	
ANTH 435	Human Health and Biological Variation	
ANTH 436	Evolutionary Medicine	
ANTH 458	Gender and Reproduction	
HNRS 2170G	The Human Mind	
HNRS 306V	Science, Ethics and Society	
PHLS 3110V	Human Sexuality	
PSYC 375	Psychology and the Brain	
Total Credits		18-19

¹ Any of BIOL 353 Pre-Professional Human Anatomy, or BIOL 354 Physiology of Humans not taken as a departmental requirement can be taken as one of the departmental elective courses.

Microbiology - Undergraduate Minor

A student cannot earn a bachelor's degree in Microbiology and also earn a minor in Microbiology.

Requirements

Prefix	Title	Credits
Required Courses		
BIOL 311	General Microbiology	3
BIOL 311 L	General Microbiology Laboratory	2
BCHE 341	Survey of Biochemistry	3-4

or BCHE 395	Biochemistry I	
Select elective courses from this list to bring the total credits to 20:		12-11
BIOL 412	Seminar in Microbiology	
BIOL 451	Physiology of Microorganisms	
BIOL 473	Ecology of Microorganisms	
BIOL 474	Immunology	
BIOL 475	Virology	
BIOL 477	Applied and Environmental Microbiology	
BIOL 478	Molecular Biology of Microorganisms	
BIOL 479	Medical Microbiology	
BIOL 479 L	Medical Microbiology Laboratory	
Total Credits		20

Chemistry and Biochemistry Undergraduate Program Information

A degree in chemistry or biochemistry enables a student to pursue a wide variety of careers in: research, production, sales, management and teaching. These degrees are also an excellent preparation for professional studies in medicine, dentistry, forensics, veterinary science, optometry, pharmacology, pharmacy and law.

The NMSU Bachelor of Science Chemistry major is certified by the American Chemical Society (ACS). Graduates who complete the program are also eligible for immediate election to membership in the ACS.

The NMSU Bachelor of Science Biochemistry major is accredited by the American Society of Biochemistry and Molecular Biology (ASBMB). BS Biochemistry majors are eligible to obtain degree certification through examination.

The department offers concentrations in Secondary Education for the Bachelor of Arts in Chemistry major and the Bachelor of Science major. These concentrations follow the same Chemistry degree plans but also provide the Education courses that lead to a certification as a secondary education teacher in science.

The department also offers a Pre-Med concentration for the Bachelor of Arts Chemistry major. The concentration in Pre-Medical Studies provides foundational knowledge to students who are preparing to take the MCAT exam. Graduates will successfully complete medical school pre-requisite coursework and obtain an interdisciplinary understanding of healthcare that includes scientific, humanistic, and social science perspectives.

All departmental and nondepartmental requirements may not be taken S/U, unless the course only offers S/U grading option, and must earn a C- or better final grade.

This department does not have a foreign language requirement for any of its degrees.

Graduate Program Information

The Department of Chemistry and Biochemistry offers programs leading to the MS and Ph.D. degrees in Chemistry in the areas of physical, organic, inorganic, biological, and analytical chemistry. Admission to these programs without deficiency is based on an undergraduate program essentially equivalent to that pursued by a chemistry or biochemistry major at this university. All applying students must submit undergraduate transcripts, a personal statement and CV, and arrange for 3 letters of recommendation. All foreign students from undergraduate programs taught in a language other than English must additionally

submit TOEFL or IELTS scores and demonstrate adequate English speaking and writing skills. GRE scores are not required to apply.

The core course work required of students entering with no previous graduate study in chemistry or biochemistry consists of courses exploring the concepts of Energy, Structure, Dynamics, and Measurements as applied to all disciplines of chemistry and biochemistry as well as short courses in Safety, Research Ethics, and Professional Development. Successful completion of a Qualifying Exam taken after the first year of coursework will determine whether a student is qualified to pursue continued study at the M.S. or Ph.D. level. Ph.D. candidates must take at least 6 additional credits of specialized coursework chosen in consultation with the thesis committee while M.S. candidates must take at least 3 additional credits. Ph.D. candidates must successfully complete a Comprehensive Exam in order to be eligible to write and defend a Ph.D. thesis. All students are expected to participate in discussion groups and department colloquia.

Since research is central in both the M.S. and Ph.D. programs, the early selection of a research advisor is encouraged. Students may choose to rotate through up to 3 research labs during their first semester before selecting a research advisor. Financial support is provided to all graduate students during their first year through teaching assistantships. Continued support may be provided through a research or teaching assistantship, depending upon individual laboratory funding. All support is contingent upon satisfactory academic and research performance. In addition, numerous traineeships and fellowships are available to qualified students. Inquiries regarding these opportunities should be directed to the graduate program coordinator.

Degrees for the Department

Bachelor Degree(s)

- Biochemistry - Bachelor of Science (p. 525)
- Chemistry (Pre-Med) - Bachelor of Arts (p. 529)
- Chemistry (Secondary Education) - Bachelor of Arts (p. 532)
- Chemistry (Secondary Education) - Bachelor of Science (p. 536)
- Chemistry - Bachelor of Arts (p. 527)
- Chemistry - Bachelor of Science (p. 534)

Master Degree(s)

- Chemistry - Master of Science (p. 121)

Doctoral Degree(s)

- Chemistry - Doctor of Philosophy (p. 184)

Minors for the Department

- Biochemistry - Undergraduate Minor (p. 538)
- Chemistry - Undergraduate Minor (p. 538)

Shelley Lusetti, Department Head

Professors Arterburn, Houston, Lusetti, Maio, Lyons; **Associate Professors** Ashley, Baker, Talipov, Tello-Aburto, Yukl; **Assistant Professors** Folkman, Gold, Vincent-Ruz, Windorff; **College Professor** Dunlavy; **College Associate Professor** Chinnasamy; **College Assistant Professors** Beltran, Marcheschi; **Emeritus Professors** Eiceman, Gopalan, Herndon, Johnson, Kuehn, Lara, Quintana, Rayson, Smirnov

S. Lusetti, Department Head, Ph.D. (Wisconsin-Madison)– biochemistry; enzymology of DNA repair; J. B. Arterburn, Ph.D. (Arizona)– organic

chemistry; synthetic medicinal and chemical biology; A. K. Ashley, Ph.D. (Colorado State)– biochemistry and toxicology; DNA replication and repair, cancer; C. A. Baker, Ph.D. (Florida State)– analytical chemistry; separation science, micro- and nanotechnologies for neuroscience and astrobiology; S. J. Folkman, Ph.D. (Colorado State University)- electrochemistry, materials; inorganic, green chemistry, for sustainability; B. Gold, Ph.D. (Florida State)– organic chemistry; synthetic methods for chemical biology; bioorganic and medicinal chemistry K. D. Houston, Ph.D. (Texas- MD Anderson)– biochemistry; molecular mechanisms of hormone action in tumorigenesis; B. A. Lyons, Ph.D. (Cornell)– physical biochemistry; NMR spectroscopic studies of signal transduction pathways in breast cancer; W. A. Maio, Ph.D. (Johns Hopkins)– organic chemistry; total synthesis of marine natural products and explorations of new chemical methods; M. R. Talipov, Ph.D. (Bashkir State)– theoretical physical chemistry; electronic structure calculations, ab initio calculations, density functional theory calculations; R. Tello-Aburto, Ph.D. (Iowa) - medicinal and natural products chemistry, asymmetric organic synthesis; P. Vincent-Ruz, Ph.D. (Pittsburgh) - chemistry education research, equity and justice, quantitative methods; C. J. Windorff, Ph.D. (UC-Irvine)- inorganic chemistry; organometallic f-element and transition metal chemistry, redox chemistry; E. T. Yukl, Ph.D. (Oregon Health and Science)– biochemistry; x-ray crystallography and spectroscopy of bacterial metalloproteins

Biochemistry Courses

BCHE 140. Introduction to Biochemistry

1 Credit (1)

A description of the nature of inquiry in biochemistry, especially with respect to the interaction of chemistry and biology. Both historical development and topics of current interest will be discussed. Graded S/U.

BCHE 241. Introduction to Research in Biochemistry

1-3 Credits

Techniques and procedures of biochemical research. May be repeated for a maximum of 3 credits.

Prerequisites: 8 credits of chemistry and 3.0 GPA in chemistry.

BCHE 341. Survey of Biochemistry

4 Credits (3+3P)

Basic principles of biochemical processes and the structure/function of the major classes of biomolecules, with introductions to metabolism and the central dogma of biochemistry. The chemical and biological properties of major biomolecules (DNA, proteins, May be repeated up to 4 credits.

Prerequisite(s): C- or better in CHEM 2115 or CHEM 314.

BCHE 395. Biochemistry I

3 Credits (3)

Principles governing chemistry and physics of life processes with emphasis on the relationships between molecular structure and cell function. Basic principles of biochemical processes, enzymology, and the structure/function of the major classes of biomolecules with introductions to metabolism. Introduction to catabolic metabolism. May be repeated up to 3 credits.

Prerequisite: C- or better in CHEM 314.

Learning Outcomes

1. Understand the structure, reactivity, and metabolic function of the presented biological molecules and apply that knowledge to biomolecules encountered in future experiences. Examples include the 20 common amino acids, carbohydrate molecules of glycolysis, carboxylic acids of the citric acid cycle, lipid components of biological membranes, and many catalytic enzymes.
2. Understand the theory and application of many of the experimental techniques of Biochemistry.

- Understand biochemical regulation and the interconnectedness of metabolic processes. A large fraction of contemporary biochemical research is devoted to delineating biochemical regulation. Details of biochemical regulation will be interwoven with material presented throughout the semester, stressing the principles of regulation that are common in many organisms.
- Understand enzyme kinetics and enzyme mechanism.

BCHE 396. Biochemistry II, Lecture and Laboratory

4 Credits (2.5+3P)

Introduction to anabolic metabolism and hormonal regulation. Biochemical principles of the mechanism and regulation of replication, transcription, recombination and translation in prokaryotes and eukaryotes. Introduction to DNA-based information technology. Taught with BCHE 396 H. May be repeated up to 4 credits.

Prerequisite: C- or better in BCHE 395.

Learning Outcomes

- Recognize the essential biochemical reactions and enzymatic mechanisms required for nucleic acid, amino acid, and fatty acid synthesis.
- Learn the biochemical reaction mechanisms associated with key elements of the central dogma of molecular biology.
- Identify the reactions and enzymes required for DNA maintenance and replication, transcription and RNA polymerization, and the translation of mRNA to primary amino acid sequence and protein synthesis.
- Conduct experiments safely.
- Select and manipulate plasmids to achieve desired recombinant DNA for experimentation.
- Obtain relevant DNA sequence information from public databases.
- Transform and isolate plasmid DNA to be used for cloning procedures.
- Design DNA specific primers for PCR reactions.
- Perform restriction digest and ligation reactions. 1
- Analyze DNA sequence to validate the outcome of recombinant DNA experimentation. 1
- Demonstrate scientific dissemination skills by attending scientific seminars or review primary literature and provide summary via written or oral presentation.

BCHE 396 H. Biochemistry II Honors, Lecture and Laboratory

4 Credits (2.5+3P)

Introduction to anabolic metabolism and hormonal regulation. Biochemical principles of the mechanism and regulation of replication, transcription, recombination and translation in prokaryotes and eukaryotes. Introduction to DNA-based information technology. Taught with BCHE 396 with additional work required. May be repeated up to 3 credits.

Prerequisite: C- or better in BCHE 395.

Learning Outcomes

- Recognize the essential biochemical reactions and enzymatic mechanisms required for nucleic acid, amino acid, and fatty acid synthesis.
- Learn the biochemical reaction mechanisms associated with key elements of the central dogma of molecular biology.
- Identify the reactions and enzymes required for DNA maintenance and replication, transcription and RNA polymerization, and the translation of mRNA to primary amino acid sequence and protein synthesis.

- Conduct experiments safely.
- Select and manipulate plasmids to achieve desired recombinant DNA for experimentation.
- Obtain relevant DNA sequence information from public databases.
- Transform and isolate plasmid DNA to be used for cloning procedures.
- Design DNA specific primers for PCR reactions.
- Perform restriction digest and ligation reactions. 1
- Analyze DNA sequence to validate the outcome of recombinant DNA experimentation. 1
- Demonstrate scientific dissemination skills by attending scientific seminars or review primary literature and provide summary via written or oral presentation.

BCHE 424. Experimental Biochemistry I

3 Credits (1.25+6P)

Laboratory techniques required for experimentation with recombinant DNA such as nucleic acid isolation and purification, polymerase chain reaction (PCR), sequence analysis, and directed mutagenesis using genetic material from both prokaryotic and eukaryotic organisms.

Prerequisite(s): C- or better in BCHE 395, and BCHE 396 or GENE 315.

Learning Outcomes

- Conduct experiments safely
- Select and manipulate plasmids to achieve desired recombinant DNA for experimentation
- Obtain relevant DNA sequence information for gene of interest from public databases
- Make buffers and reagents necessary for transforming and isolating plasmid DNA from *E. coli*
- Transform and isolate plasmid DNA to be used for cloning of gene of interest
- Design primers for PCR to enrich gene of interest from genomic DNA
- Analyze DNA sequence and choose appropriate restriction enzymes for cloning gene of interest
- Design primers for PCR to incorporate restriction sites at the ends of gene of interest
- Perform restriction digest on plasmid DNA and PCR products 1
- Perform ligation reaction to combine gene of interest with plasmid DNA 1
- Analyze sequence of plasmid containing gene of interest to validate the outcome of experimentation

BCHE 425. Experimental Biochemistry

3 Credits (1.25+6P)

Introduction to fundamental techniques used to explore structure and function of biological macromolecules such as proteins, carbohydrates, lipids, and nucleic acid. Course covers analyzing and reporting experimental data; enzymology; quantitative methods to determine biological molecules; basic principles of electrophoresis, chromatography, and spectroscopic immunochemistry. May be repeated up to 3 credits.

Prerequisite: C- or better in BCHE 395.

Learning Outcomes

- Understand and implement various methods of protein purification as well as qualitative and quantitative analysis of protein preparations
- Become proficient in absorbance and fluorescence spectroscopy.
- Determine ligand binding parameters.
- Understand and measure enzyme kinetics and inhibition.

5. Perform basic protein crystallization and structure determination.
6. Develop skills in scientific writing and presentation.

BCHE 432. Physical Biochemistry**3 Credits (3)**

This course focuses on the theoretical principles of biophysical techniques and how they are applied to biological problems. Primary literature is used heavily to explain concepts and applications along with periodic demonstrations of biophysical techniques using department instruments. Students taking this course will be expected to present primary literature highlighting the applications of various techniques. May be repeated up to 3 credits. CHEM 431, or CHEM 433.

Prerequisite: One semester of undergraduate physical chemistry, e.g.

Learning Outcomes

1. Understand the theoretical principles of spectroscopic and biophysical techniques.
2. Understand the appropriate applications for various instruments.
3. Be able to interpret spectroscopic and biophysical data.
4. Understand and describe biophysical literature.
5. Be able to describe biophysical studies to a diverse audience of scientists and non-scientists.

BCHE 440. Biochemistry Seminar**1 Credit (1)**

Introduction to current literature in biochemistry and molecular biology. Selected topics in the field will be presented by the faculty. Students will present written and oral reports from literature searches. Restricted to: BCHE majors.

Prerequisite(s): BCHE 395.

BCHE 441. Advanced Research in Biochemistry**1-3 Credits**

Investigation of biochemical problems and the development of special techniques. May be repeated for a maximum of 3 credits.

Prerequisites: consent of instructor, 16 credits of chemistry and 3.0 GPA in chemistry for nonmajors.

BCHE 451. Special Topics**1-3 Credits**

Same as CHEM 451. May be repeated for a maximum of 12 credits.

Prerequisite: consent of instructor.

BCHE 455. Independent Studies**1-3 Credits**

Independent studies directed by consulting faculty.

Prerequisite: consent of instructor.

BCHE 542. Biochemistry I**3 Credits (3)**

Relationship between macromolecular structure and function. Basic enzymology. Energy metabolism.

Prerequisite(s): CHEM 314 and CHEM 431 or CHEM 433; or BCHE 395 or equivalent.

BCHE 545. Molecular and Biochemical Genetics**3 Credits (3)**

An accelerated treatment of the molecular basis of gene expression. Discussion of chemical, enzymological, and genetic techniques of molecular biology. Same as BIOL 545.

Prerequisite: BCHE 542 or equivalent.

BCHE 546. Biochemistry II**3 Credits (3)**

Intermediary metabolism: catabolic and anabolic pathways of carbohydrates, lipids, amino acids, and nucleic acids, including their regulation.

Prerequisite: BCHE 542 or BCHE 395 with consent of instructor.

BCHE 598. Special Research Programs**1-3 Credits**

May be repeated for a maximum of 6 credits. Same as CHEM 598. Graded S/U.

BCHE 599. Master's Thesis**15 Credits**

May be repeated for a maximum of 6 credits. Same as CHEM 599.

BCHE 600. Research**1-15 Credits**

May be repeated for a maximum of 20 credits. PR/U grading. Same as CHEM 600.

BCHE 647. Physical Biochemistry**3 Credits (3)**

Fundamental applications of physical chemistry to the investigation of biological metabolites and biological macromolecules, including proteins, oligo-nucleotides, and molecular arrays with an emphasis on understanding biological functions based on chemical structures. Taught with BCHE 432. May be repeated up to 3 credits.

Prerequisite: C- or better in CHEM 430 or CHEM 433 or BCHE 542.

Learning Outcomes

1. Understand the theoretical principles of spectroscopic and biophysical techniques.
2. Understand the appropriate applications for various instruments.
3. Be able to interpret spectroscopic and biophysical data.
4. Understand and describe biophysical literature.
5. Be able to describe biophysical studies to a diverse audience of scientists and non-scientists.

BCHE 649. Topics in Biochemistry**1-3 Credits**

Selected topics of current interest designated by title and credit. May be repeated for a maximum of 3 credits.

BCHE 700. Doctoral Dissertation**20 Credits**

May be repeated for a maximum of 20 credits. Graded PR/U. Same as CHEM 700.

Chemistry Courses

CHEM 1111. Basic Chemistry**3 Credits (3)**

For students whose preparatory science or math training has been deficient. Does not meet the chemistry requirement in any curriculum.

Prerequisite: Enhanced ACT composite score of at least 18 or a grade of C- or better in CCDM 114 N.

Learning Outcomes

1. The goals and objectives for CHEM 1111 are to equip students with the necessary problem solving skills to be successful in CHEM 1215G/1225G

CHEM 1120G. Introduction to Chemistry Lecture and Laboratory (non majors)**4 Credits (3+3P)**

This course covers qualitative and quantitative areas of non-organic general chemistry for non-science majors and some health professions. Students will learn and apply principles pertaining, but not limited to,

atomic and molecular structure, the periodic table, acids and bases, mass relationships, and solutions. The laboratory component introduces students to techniques for obtaining and analyzing experimental observations pertaining to chemistry using diverse methods and equipment.

Prerequisite: CCDM 114N or A S 103 or MATH 1215 or higher.

Learning Outcomes

- (Lecture) Use the different systems of measurements and perform conversions within the same system of measurement and between different systems of measurements
- (Lecture) Identify elements from their name or symbol, use the periodic table to describe reactivity patterns of elements and to predict compound formation.
- (Lecture) Describe the basic structure of an atom using subatomic particles, and apply these concepts to nuclear reactions.
- (Lecture) Describe ion formation and the difference between covalent and ionic compounds. Name and write formulas for ionic and simple molecular compounds.
- (Lecture) Write and balance chemical reactions. Use balanced reactions in stoichiometric calculations.
- (Lecture) Describe the differences between the solid, liquid and gas phases. Use the gas laws in calculations, and apply these laws to everyday situations.
- (Lecture) Explain different types of energy, and how energy is released or absorbed in a reaction
- (Lecture) Describe acid and base behavior.
- (Lecture) Explain the intermolecular attractive forces that determine physical properties; apply this knowledge to qualitatively evaluate these forces and predict the physical properties that result. 1
- (Lecture) Explain the intermolecular attractive forces that determine physical properties; apply this knowledge to qualitatively evaluate these forces and predict the physical properties that result 1
- (Laboratory) Practice concepts associated with laboratory safety, including the possible consequences of not adhering to appropriate safety guidelines. 1
- (Laboratory) Demonstrate the computational skills needed to perform appropriate laboratory-related calculations to include, but not be limited to determining the number of significant figures in numerical value, solving problems using values represented in exponential notation, solving dimensional analysis problems, and manipulating mathematical formulas as needed to determine the value of a variable. 1
- (Laboratory) Perform laboratory observations (both qualitative and quantitative) using sensory experience and appropriate measurement instrumentation (both analog and digital). 1
- (Laboratory) Record quantitatively measured values to the correct number of significant figures and assign the correct units. 1
- (Laboratory) Master basic laboratory techniques including, but not limited to weighing samples (liquid and solid), determining sample volumes, measuring the temperature of samples, heating and cooling a sample or reaction mixture, decantation, filtration, and titration. 1
- (Laboratory) Draw appropriate conclusions based on data and analyses. 1
- Present experimental results in laboratory reports of appropriate length, style and depth, or through other modes as required. 1
- Determine chemical formulas and classify different types of reactions. 1

- Relate laboratory experimental observations, operations, calculations, and findings to theoretical concepts presented in the complementary lecture course.

CHEM 1121. General Supplemental Instruction I

1 Credit (1)

Collaborative workshop for students in General Chemistry I. Course does not count toward departmental degree requirements. May be repeated for a maximum of 2 credits.

Corequisite(s): CHEM 1215G.

CHEM 1122. General Supplemental Instruction II

1 Credit (1)

Collaborative workshop for students in General Chemistry II. Course does not count toward departmental degree requirements. May be repeated for a maximum of 2 credits.

Corequisite(s): CHEM 1225G.

CHEM 1123. Principles of Supplemental Instruction III

1 Credit (1)

Collaborative workshop for students in CHEM 1120G, Principles and Applications of Chemistry. Course does not count toward departmental degree requirements. May be repeated for maximum of 2 credits.

Corequisite(s): CHEM 1120G.

CHEM 1215G. General Chemistry I Lecture and Laboratory for STEM Majors

4 Credits (3+3P)

This course covers descriptive and theoretical chemistry.

Prerequisite: (1) grade of C- or better in MATH 1215 or higher, or a Mathematics Placement Exam Score adequate to enroll in mathematics courses beyond MATH 1215.

Learning Outcomes

- Use dimensional analysis, the SI system of units and appropriate significant figures to solve quantitative calculations in science. Understand the differences between physical and chemical changes to matter. Classify types of matter.
- Understand the scientific method in the context of scientific discoveries.
- Explain the structure of atoms, isotopes and ions in terms of subatomic particles.
- Analyze how periodic properties (e.g. electronegativity, atomic and ionic radii, ionization energy, electron affinity, metallic character) and reactivity of elements results from electron configurations of atoms.
- Understand the creation of different types of compounds (ionic and molecular), comparing and contrasting their structures, naming schemes and formulas. Apply knowledge of electronic structure to determine molecular spatial arrangement and polarity.
- Understand bulk pure substances, their properties and their states of matter by understanding and identifying intermolecular forces. Apply kinetic molecular theory to relate atomic level behavior to macroscopic properties. Introduce the mole and apply the mole concept to amounts on a macroscopic and a microscopic level
- Understand mixtures, solubility by considering intermolecular forces and expressing concentration in molarity.
- Identify different reaction types. Apply the law of conservation of mass to reactions. Perform stoichiometry on balanced reactions. Laboratory Student Learning Outcomes
- Demonstrate and apply concepts associated with laboratory safety, including the possible consequences of not adhering to appropriate safety guidelines.

10. Demonstrate the computational skills needed to perform appropriate laboratory related calculations to include, but not be limited to determining the number of significant figures in numerical value with the correct units, solving problems using values represented in exponential notation, solving dimensional analysis problems, and manipulating mathematical formulas as needed to determine the value of a variable.
11. Perform laboratory observations (both qualitative and quantitative) using sensory experience and appropriate measurement instrumentation (both analog and digital).
12. Prepare solutions with an acceptable accuracy to a known concentration using appropriate glassware.
13. Master basic laboratory techniques including, but not limited to weighing samples (liquid and solid), determining sample volumes, measuring the temperature of samples, heating and cooling a sample or reaction mixture, decantation, filtration, and titration.
14. Draw conclusions based on data and analyses from laboratory experiments.
15. Relate laboratory experimental observations, operations, calculations, and findings to theoretical concepts presented in the complementary lecture course.

CHEM 1216. General Chemistry I Lecture and Laboratory for CHEM Majors

4 Credits (3+3P)

As the first of a two-semester sequence, this course teaches fundamental concepts in chemistry, including the electronic structure of atoms, chemical periodicity, nature of chemical bonds, molecular structure, the three phases of matter, etc. Designed for majors in chemical and other physical sciences, including engineering. May be appropriate for the life science major. It is assumed that the students are familiar with college algebra, chemical nomenclature, stoichiometry, and scientific measurements. The laboratory component is designed to complement the theory and concepts presented in lecture, and will introduce students to techniques for obtaining and analyzing experimental observations pertaining to chemistry using diverse methods and equipment.

Prerequisite(s): Eligible to take MATH 1250G and an ACT composite score of 22 or higher.

Learning Outcomes

1. Apply the mole concept to amounts at a microscopic level and use this to perform stoichiometric calculations for reactions in solution, gases and thermochemistry.
2. Calculate solution concentrations in various units.
3. Apply the gas laws and kinetic molecular theory to relate atomic level behavior to macroscopic properties.
4. Explain the electronic structure of atoms, isotopes and ions in terms of its subatomic particles.
5. Analyze how periodic properties (e.g. electronegativity, atomic and ionic radii, ionization energy, electron affinity, metallic character) and reactivity of elements results from electronic configurations of atoms.
6. Understand the nature of chemical bonds (ionic and covalent). Apply knowledge of electronic structure to determine molecular structure and polarity.
7. Understand the formation of different phases of matter and the underlying fundamental intermolecular interactions.
8. Describe physical states and changes, and distinguish these from chemical changes.
9. Describe the energy conversions that occur in chemical reactions and state changes, relating heat of reaction to thermodynamic properties

such as enthalpy and internal energy; apply these principles to measure and calculate energy changes in reaction. 1

10. Apply principles of general chemistry to specific real-world problems in environment, engineering and health-related fields.

CHEM 1225G. General Chemistry II Lecture and Laboratory for STEM Majors

4 Credits (3+3P)

This course is intended to serve as a continuation of general chemistry principles for students enrolled in science, engineering, and certain preprofessional programs. The course includes, but is not limited to a theoretical and quantitative coverage of solutions and their properties, kinetics, chemical equilibrium, acids and bases, entropy and free energy, electrochemistry, and nuclear chemistry. Additional topics may include (as time permits) organic, polymer, atmospheric, and biochemistry. The laboratory component is designed to complement the theory and concepts presented in lecture, and will introduce students to techniques for obtaining and analyzing experimental observations pertaining to chemistry using diverse methods and equipment.

Prerequisite(s): C- or better in CHEM 1215G.

Learning Outcomes

1. Explain the intermolecular attractive forces that determine physical properties and phase transitions, and apply this knowledge to qualitatively evaluate these forces from structure and to predict the physical properties that result.
2. Calculate solution concentrations in various units, explain the effects of temperature, pressure and structure on solubility, and describe the colligative properties of solutions, and determine solution concentrations using colligative property values and vice versa.
3. Describe the dynamic nature of chemical equilibrium, and apply LeChatelier's Principle to predict the effect of concentration, pressure and temperature changes on equilibrium mixtures as well as describe the equilibrium constant and use it to determine whether equilibrium has been established, and calculate equilibrium constants from equilibrium concentrations and vice versa.
4. Describe the different models of acids and base behavior and the molecular basis for acid strength, as well as apply equilibrium principles to aqueous solutions, including acid/base and solubility reactions, and calculate pH and species concentrations in buffered and unbuffered solutions.
5. Explain titration curves as well as calculate concentrations of reactants.
6. Explain and calculate the thermodynamic functions, enthalpy, entropy and Gibbs free energy, for a chemical system, and relate these functions to equilibrium constants Student Learning Outcomes – Laboratory
7. Demonstrate and apply concepts associated with laboratory safety, including the possible consequences of not adhering to appropriate safety guidelines.
8. Demonstrate the computational skills needed to perform appropriate laboratory related calculations to include, but not be limited to determining the number of significant figures in numerical value with the correct units, solving problems using values represented in exponential notation, solving dimensional analysis problems, and manipulating mathematical formulas as needed to determine the value of a variable.
9. Perform laboratory observations (both qualitative and quantitative) using sensory experience and appropriate measurement instrumentation (both analog and digital).

10. Prepare solutions with an acceptable accuracy to a known concentration using appropriate glassware.
11. Perform basic laboratory operations related to, but not limited to, colligative properties of solutions, chemical equilibria, acid/base titrations, electrochemistry.
12. Draw conclusions based on data and analyses from laboratory experiments.
13. Relate laboratory experimental observations, operations, calculations, and findings to theoretical concepts presented in the complementary lecture course.

CHEM 1226. General Chemistry II Lecture and Laboratory for CHEM Majors

4 Credits (3+3P)

As the second of a two-semester sequence, this course teaches fundamental concepts in chemistry, including solutions, equilibria, electrochemistry, thermodynamics and kinetics. Designed for majors in chemical and other physical sciences, including engineering. May be appropriate for the life science major. It is assumed that the students are familiar with college algebra, chemical nomenclature, stoichiometry, and scientific measurements. The laboratory component is designed to complement the theory and concepts presented in lecture, and will introduce students to techniques for obtaining and analyzing experimental observations pertaining to chemistry using diverse methods and equipment.

Prerequisite(s): C- or better in CHEM 1216.

Learning Outcomes

1. Describe the colligative properties of solutions and explain them using intermolecular forces. Determine solution concentrations using colligative property values and vice versa.
2. Explain rates of reactions, rate laws, and half-life; determine the rate, rate law and rate constant of a reaction and calculate concentration as a function of time and vice versa. Understand the principle of catalysis.
3. Explain the collision model of reaction dynamics, including activation energy, catalysts and temperature; Derive a rate law from a reaction mechanism and evaluate the consistency of a mechanism with a given rate law.
4. Describe the dynamic nature of chemical equilibrium and its relation to reaction rates; apply Le Chatelier's Principle to predict the effect of concentration, pressure and temperature changes on equilibrium mixtures.
5. Describe the equilibrium constant and use it to determine whether equilibrium has been established; calculate equilibrium constants from equilibrium concentrations (including pressures) and vice versa.
6. Describe the different models of acids and base behavior, and the molecular basis for acid strength.

CHEM 2111. Explorations in Chemistry

1 Credit (1)

The major intent of this course is to deepen your interest in chemistry and make you aware of research and career opportunities in the field. During this semester we hope to discuss both old and new developments in chemistry that impact our lives. We also want to build our communication skills that are so necessary in our profession. Graded S/U.

CHEM 2115. Survey of Organic Chemistry and Laboratory

4 Credits (3+3P)

This course is a one -semester survey of organic and biological chemicals. Students will be introduced to nomenclature, molecular

structure, properties, and reactions of hydrocarbons, alcohols, carbonyls, organic acids and bases, carbohydrates, lipids, and proteins. The handling of organic chemicals, simple organic reactions, tests for functional groups, and synthesis will be learned in the laboratory component of this course.

Prerequisite: C- or better in CHEM 1225G or CHEM 1226.

Learning Outcomes

1. Identify common organic functional groups.
2. Translate between the IUPAC names and structures of simple organic molecules.
3. Predict the products of certain organic chemical reactions from reagents and conditions presented.
4. Predict physical and chemical behavior of organic molecules based on structure.
5. Synthesize several classes of organic compounds in the laboratory that were previously studied in the lecture component of this course.
6. Recognize and name the four basic bioorganic units and certain of their derivatives and macromolecules.
7. Construct 3 dimensional models of organic compounds.
8. Understand and apply safety principles associated with Organic Chemistry laboratory operations and activities.
9. Present experimental results in laboratory reports of appropriate length, style and depth, or through other modes as required. 1
10. Draw/recognize stereochemistry and explain its relevance to bioorganic molecules.

CHEM 2120. Integrated Organic Chemistry and Biochemistry

3 Credits (3)

This course is a one- semester introduction to Organic Chemistry and Biochemistry designed for students in health and environmental occupations. The course surveys organic compounds in terms of structure, physical, and chemical properties, followed by coverage of the chemistry of specific classes of organic compounds in the biological environment. Students will apply course concepts to everyday organic and biological chemistry problems in preparation for careers in health and environmental fields.

Prerequisite: CHEM 1120G or CHEM 1215G.

Learning Outcomes

1. Identify and name basic organic compounds.
2. Construct/draw organic compounds from the names.
3. Predict the products of certain organic chemical reactions from reagents and conditions presented.
4. Recognize and name the four basic bioorganic units and certain of their derivatives and macromolecules.
5. Compare and contrast the function and location of the four bioorganic units and their macromolecules and cofactors.
6. Draw/recognize stereochemistry and explain its relevance to bioorganic molecules.
7. Discuss the pathways and functions of some of the cellular metabolic processes.
8. Recognize and describe metabolic cellular processes and macromolecular structure with respect to health and/or disease state

CHEM 2120L. Integrated Organic Chemistry and Biochemistry Lab

1 Credit (1,3P)

This course provides experiences with the physical properties and laboratory synthesis of organic compounds.

Prerequisite/Corequisite: CHEM 2120.

Learning Outcomes

1. Discuss the chemical, structural, and physical differences among the different functional groups.
2. Prepare, label, and use solutions of appropriate and known concentrations.
3. Recognize chiral organic molecules, and explain their biological significance.
4. Understand and be able to identify the process of organic reactions: nucleophilic and electrophilic, redox reactions, and enzyme catalyzed reactions.
5. Predict the products of substitution, elimination, condensation, and redox reactions.
6. Explain why certain lipids and amino acids are essential while others are not.

CHEM 2130. Organic Chemistry I**3 Credits (3)**

This course is the first of a two semester sequence of Organic Chemistry, the chemistry of carbon containing compounds, as required for chemistry, medical science, and engineering majors. The course includes theoretical, qualitative, and quantitative discussion of Organic Chemistry concepts, including but not limited to a review of electronic structure and bonding, acids and bases, stereochemistry, an introduction to organic compounds, isomers, substitution and elimination reactions of alkyl halides, reactions of alkenes, alkynes, alcohols, ethers, epoxides, amines, and thiols, mass and infrared spectrometry, ultraviolet/visible spectroscopy, and nuclear magnetic resonance.

Prerequisite: CHEM 1225G or CHEM 1226.

Learning Outcomes

1. Review properties of elements and molecules discussed in general chemistry (electronegativity, bonding, formal charge, octet rule).
2. Review chemical reactions discussed in general chemistry (products, reactants, balanced equations, byproducts).
3. Classify organic compounds and their properties by functional group, including substitution and elimination reactions of alkyl halides, reactions of alkenes, alkynes, alcohols, ethers, epoxides, amines, and thiols.
4. Use common and IUPAC rules of nomenclature to name organic compounds.
5. Review the structure and stability of compounds.
6. Comprehend the relationship between structure and reactivity.
7. Comprehend configurations of organic compounds (resonance structures, stereochemistry, isomers).
8. Interpret spectral properties and use in structure determination.
9. Correctly describe the four-five step synthesis of a simple organic molecule using reactions learned in the class.

CHEM 2135. Organic Chemistry II**3 Credits (3)**

This course is the second of a two semester sequence of Organic Chemistry, the chemistry of carbon containing compounds, as required for chemistry, medical science, and engineering majors. The course will emphasize structure, main physical properties, chemical reactivity, and reaction mechanisms relating to alcohols, arenes and carbonyl compounds, as well as continued integration of mass and infrared spectrometry, ultraviolet/visible spectroscopy, and nuclear magnetic resonance technique and analysis.

Prerequisite: CHEM 2130 or CHEM 313.

Learning Outcomes

1. Identify functional groups and other key features of different organic compounds.
2. Correctly name organic compounds using the proper nomenclature (IUPAC and common names).
3. Analyze relationships among molecular structure, chemical reactivity, physical and spectral properties.
4. Understand chemical reactivity and reaction mechanisms relating, but not limited to dienes, arenes, alcohols, ethers, amines, phenols, and carbonyl compounds, i.e. aldehydes, ketones, carboxylic acids and derivatives.
5. Write out correctly the mechanisms of electrophilic aromatic substitution, formation and hydrolysis of acetals and ketals, formation and hydrolysis of imines and enamines, conjugate addition of nucleophiles to α,β -unsaturated carbonyl compounds, Fischer esterification and hydrolysis of esters under both acidic and basic conditions, transesterification under acidic and basic conditions, amide hydrolysis under acidic and basic conditions, the aldol reaction and condensation, and the Claisen condensation/Dieckmann cyclization for examples that are different than those studied in class.
6. Relate structures to spectral properties, interpreting IR, ¹³C and ¹H NMR.
7. Describe the six-seven step synthesis of a simple organic molecule using reactions learned in this class.
8. Convert the Fischer projection of a carbohydrate to its corresponding Haworth projection, or convert the Haworth projection of a carbohydrate to its Fischer projection.
9. Recognize derivatives of carbonic and phosphoric acids, alkaloids, carbohydrates, peptides, steroids, prostaglandins, aglycones, carbohydrate anomers, reducing sugars, waxes, fats, and oils.

CHEM 2991. Introduction to Research**1-3 Credits (3+9P)**

Techniques and procedures of chemical research. May be repeated for a maximum of 3 credits.

Prerequisites: 8 credits of chemistry and a 3.0 GPA in chemistry.

Learning Outcomes

1. Varies

CHEM 2996. Special Topics in Chemistry**1-6 Credits (1-6)**

Specific subjects in Chemistry. These subjects will be announced in the 'Schedule of Classes'. It may be repeated under different topics for a maximum of 12 credits.

Learning Outcomes

1. Varies

CHEM 303. Organic Supplemental Instruction I**1 Credit (1)**

Collaborative workshop for students in Organic Chemistry I. Course does not count toward departmental degree requirements. May be repeated for a maximum of 2 credits.

Corequisite(s): CHEM 313.

CHEM 304. Organic Supplemental Instruction II**1 Credit (1)**

Collaborative workshop for students in Organic Chemistry II. Course does not count toward departmental degree requirements. May be repeated for a maximum of 2 credits.

Corequisite(s): CHEM 314.

CHEM 313. Organic Chemistry I**3 Credits (3)**

Nomenclature, uses, basic reactions, and preparation methods of the most important classes of aliphatic and aromatic compounds.

Prerequisite(s): C- or better in CHEM 1225G or CHEM 1226.

CHEM 314. Organic Chemistry II**3 Credits (3)**

An in-depth focus on reactions and mechanisms as they relate to organometallic compounds, alcohols, ethers, ketones, aldehydes, carboxylic acid derivatives, and amines. May be repeated up to 3 credits.

Prerequisite(s): C- or better in CHEM 313.

Learning Outcomes

1. Identify several new functional groups and other key features of organic compounds
2. Interpret ^1H / ^{13}C NMR, IR, UV-Vis, and Mass spectrometry data and have the ability to correlate structural elements with spectral features
3. Understand the chemical reactivity and reaction mechanisms relating, but not limited to, organometallic compounds, alcohols, ethers, ketones, aldehydes, carboxylic acids, and amines. Mechanistic highlights include: etherification, acetal formation / removal, alcohol oxidation, carbonyl addition reactions, enolate (and related) reactions, formation of carboxylic acid derivatives, and nucleophilic acyl substitution processes. Apply these mechanistic and reactivity considerations to these same groups when they appear as substructures in larger biologically-important molecules (e.g. carbohydrates, amino acids, and lipids).
4. Design concise, three to five step syntheses of simple organic molecules using reactions learned in both CHEM 313 and 314
5. Qualitatively assess stability, solubility properties, chemical reactivity, spectral properties, and potential reactions that would lead to preparation, simply via visual inspection of structure.

CHEM 315. Organic Chemistry Laboratory**2 Credits (6P)**

Techniques, preparative and analytical methods in organic chemistry.

May be repeated up to 2 credits.

Prerequisite(s)/Corequisite(s): CHEM 314. Prerequisite(s): C- or better in CHEM 313 or consent of instructor.

CHEM 351. Special Topics**1-3 Credits**

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

Prerequisite: consent of instructor.

CHEM 357. Synthetic Inorganic Laboratory**2 Credits (6P)**

Explores synthesis and analysis of main group and transition metal inorganic compounds. Inorganic laboratory and spectroscopic techniques will be used.

Prerequisites: CHEM 356.

CHEM 371. Analytical Chemistry**4 Credits (2+6P)**

The fundamentals of quantitative chemical analysis.

Prerequisite(s): C- or better in CHEM 1225G or CHEM 1226.

CHEM 422. Environmental Chemistry**3 Credits (3)**

Chemistry of organic and metal ion pollutants in the environment and principles important to their remediation including bioremediation.

Restricted to: Main campus only. Crosslisted with: ENVS 422

Prerequisite(s): CHEM 1225G and either CHEM 2120 or CHEM 313.

Learning Outcomes

1. Describe and explain the solid, liquid, and gas phases of the environment and how they interact.
2. Understand the chemical reactions and processes that occur between various phases of the environment.
3. Learn how the chemical processes can be managed to promote environmental remediation, including the techniques and calculations used.

CHEM 424. Soil Chemistry**3 Credits (3)**

Same as SOIL/GEOL 424.

CHEM 430. Physical Chemistry: Thermodynamics, Kinetics, Quantum Chemistry, and Spectroscopy**3 Credits (3)**

Lecture course covering the basic four areas of Physical Chemistry at the advanced undergraduate level. Topics include: Statistical Mechanics, Thermodynamics, Kinetics, Quantum Chemistry, Group Theory, and Spectroscopy at the advanced undergraduate level.

Prerequisite: CHEM 1225G or 1226; MATH 1521G or higher; PHYS 1240G, 2140, 2240 or PHYS 1320G.

Learning Outcomes

1. Students will master the theoretical basis and underlying laws governing Physical Chemistry (Thermodynamics, Kinetics, Quantum Chemistry, and Spectroscopy) at the advanced undergraduate level of expertise. In particular, students will develop critical thinking and problem solving skills in the above four areas of Physical Chemistry.

CHEM 431. Physical Chemistry**3 Credits (3)**

Principles that govern the physical and chemical behavior of matter. May not be counted toward Bachelor of Science degree in Chemistry.

Prerequisite(s): CHEM 1226 or CHEM 2226; MATH 1521G; PHYS 1240G or PHYS 2240G or PHYS 2140 or PHYS 1320G.

CHEM 431 H. Physical Chemistry Honors**3 Credits (3)**

Same as CHEM 431. Additional work to be arranged.

Prerequisite(s): CHEM 1226 or CHEM 2226; MATH 1521G or MATH 1521H; PHYS 1240G or PHYS 2240G or PHYS 2140 or PHYS 1320G.

CHEM 433. Physical Chemistry I**3 Credits (3)**

This course will cover topics relevant to the quantum description of the Chemical world at the undergraduate level, with an emphasis on acquiring sufficient background knowledge necessary for subsequent graduate level courses. May be repeated up to 3 credits.

Prerequisite: CHEM 1225 or CHEM 1226; MATH 1521G; PHYS 2140 or PHYS 1320G, or consent of instructor.

Learning Outcomes

1. Students will develop critical thinking and problem-solving skills with direct application to basic Quantum Chemistry and Spectroscopy. Topics the students will master include (but are not limited to): The Schrodinger Equation, One-Electron Atoms, (i.e. the hydrogen atom), Many-Electron Atoms, Molecular Symmetry (Group Theory), Working with and generating Character Tables, Electric Dipole Spectroscopy, Vibrational Spectroscopy, Rotational Spectroscopy.

CHEM 433 H. Physical Chemistry I Honors**3 Credits (3)**

Same as CHEM 433. Additional work to be arranged. May be repeated up to 3 credits.

Prerequisite: CHEM 1225 or CHEM 1226; MATH 1521G or MATH 1521H; PHYS 2140 or PHYS 1320G, or consent of instructor.

Learning Outcomes

1. Students will develop critical thinking and problem-solving skills with direct application to basic Quantum Chemistry and Spectroscopy. Topics the students will master include (but are not limited to): The Schrodinger Equation, One-Electron Atoms, (i.e. the hydrogen atom), Many-Electron Atoms, Molecular Symmetry (Group Theory), Working with and generating Character Tables, Electric Dipole Spectroscopy, Vibrational Spectroscopy, Rotational Spectroscopy.

CHEM 434. Physical Chemistry II

3 Credits (3)

Laws and theories underlying chemical phenomena.

Prerequisite: CHME 302 or CHEM 433.

CHEM 435. Physical Chemistry Laboratory

2 Credits (6P)

Prerequisite: concurrent registration in CHEM 434.

CHEM 441. Advanced Research

1-3 Credits (3+9P)

Investigation of chemical problems and the development of special techniques. May be repeated for a maximum of 3 credits.

Prerequisites: consent of instructor, 16 credits of chemistry and 3.0 GPA in chemistry for nonmajors.

CHEM 443. Senior Seminar

1 Credit (1)

Discussions of current chemical research, impact of chemistry on society and/or ethics as applied to chemists. Each student will present a written and an oral report on an approved topic.

Prerequisite: CHEM 431 or CHEM 433.

CHEM 451. Special Topics

1-3 Credits

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

Prerequisite: consent of instructor.

CHEM 455. Independent Studies

1-3 Credits

Independent studies directed by consulting faculty.

Prerequisite: consent of instructor.

CHEM 456. Inorganic Structure and Bonding

3 Credits (3)

Study of structure and bonding of inorganic elements with a focus on transition metals. An introduction to symmetry, group theory, and spectroscopy will be included. May be repeated up to 3 credits.

Prerequisite: (MATH 1521G or MATH 1521H) and C- or better in CHEM 314.

Learning Outcomes

1. Students will learn about inorganic coordination complexes with a focus on transition metals, and may include the main group and f-elements. Students will learn about inorganic nomenclature and to analyze complexes using Lewis acid-base concepts.
2. Students will learn bonding theories, including group theory and symmetry point groups. Students will learn introductory concepts in organometallic chemistry and electronic spectroscopy.

CHEM 471. Advanced Integrated Inorganic and Physical Chemistry Laboratory

3 Credits (9P)

Laboratory course covering Inorganic and Physical Chemistry techniques at the advanced undergraduate level. Topics may include: Transition

metal/Main group synthesis in air and air free environments, Period f-element synthesis, UV-Vis spectroscopy, FT-IR spectroscopy, NMR spectroscopy, Isothermal Titration Calorimetry.

Prerequisite/Corequisite: CHEM 430 and CHEM 315.

Learning Outcomes

1. Students will engage in experiential learning to become proficient in the listed techniques at the advanced undergraduate level of expertise. Students will develop critical thinking and problem solving skills. Students will learn essential laboratory data documentation, record keeping, and communication skills.

CHEM 472. Advanced Integrated Instrumental Analysis and Protein Biochemistry Laboratory

3 Credits (9P)

Laboratory course covering Protein Biochemistry and Instrumental Analysis techniques at the advanced undergraduate level. Topics may include: Affinity-based protein purification, basic protein quantification, protein activity assay, multi-variant analysis, diode array UV/VIS spectroscopy, ICP-MS, absorption and emission spectroscopy, raman spectroscopy, fluorescence, and separation science (HPLC, GCMS). Includes data analysis lab.

Prerequisite: CHEM 371.

Learning Outcomes

1. Students will engage in experiential learning to become proficient in the listed techniques at the advanced undergraduate level of expertise. Students will develop critical thinking and problem solving skills. Students will learn essential laboratory data documentation, record keeping, and communication skills.

CHEM 475. Central Concepts in Chemistry - Safety

1 Credit (1)

Students will obtain university safety training plus departmental-specific safety guidelines for the research laboratory

Learning Outcomes

1. Students completing this course will be knowledgeable of all safety guidelines delineated by the University, College, and Department.
2. When possible accident case-studies will be incorporated within the curriculum.

CHEM 476. Central Concepts in Chemistry - Research Ethics

1 Credit (1)

Students will complete Federal Agency (NSF, NIH, etc.) on-line training modules in responsible conduct in research and discuss relevant case-studies of research misconduct.

Learning Outcomes

1. Completion of this class will yield researchers fully aware of federal and professional guidelines regarding the ethical conduction and dissemination of data and conclusions.

CHEM 477. Central Concepts in Chemistry - Professional Development

1 Credit (1)

Students will receive basic instruction in research dissemination strategies (presentations) and career planning.

CHEM 501. Central Concepts in Chemistry - Energy

3 Credits (3)

This course will provide the students with a detailed examination of several topics in chemical energetics. These topics include: (1) basic thermodynamics concepts, (2) statistical thermodynamics (3) chemical equilibria, and (4) intermolecular interactions.

Learning Outcomes

1. Students completing this course will gain an understanding of chemical thermodynamics and equilibria as they relate to all areas of chemistry.

**CHEM 502. Central Concepts in Chemistry - Structure
3 Credits (3)**

This course will provide the students with a detailed examination of several topics in chemical reactivity. These topics include: (1) principles of chemical bonding and (2) organic, inorganic and biochemical structure determination.

Learning Outcomes

1. Students completing this course will understand the fundamental components of molecular interactions and their impact on molecular structure and function in all areas of chemistry.
2. In addition, they will learn the theory and practice of physical techniques used to determine molecular structure.

**CHEM 503. Central Concepts in Chemistry - Dynamics
3 Credits (3)**

This course will provide the students with a detailed examination of several topics in chemical reactivity. These topics include: (1) basic kinetic concepts, (2) fundamental gas phase kinetics (3) organic, inorganic and biochemical reaction mechanisms.

Learning Outcomes

1. Students who successfully complete this course will understand the fundamentals of chemical dynamics: from simple gas or solution phase reaction mechanisms to biomolecular interactions.

**CHEM 504. Central Concepts in Chemistry - Measurements
3 Credits (3)**

This course will provide the students with a detailed examination of several topics in chemical measurements. These topics include: (1) spectroscopic, electrochemical and chromatographic techniques, (2) statistical methods of measurement and validation relevant to biomolecules, synthetic polymers and mixtures.

Learning Outcomes

1. The collection of quantitative data is central to all subdisciplines of chemistry.
2. Students completing this course will understand the basic principles of chemical measurements and the uncertainties inherently associated with those measurements.
3. They will also gain knowledge of tools available to minimize those uncertainties in data interpretation.

**CHEM 507. Chemistry of the Elements
3 Credits (3)**

Discussion of the reactions and structures of inorganic compounds.

**CHEM 510. Graduate Student Seminar
1 Credit (1)**

Research seminar for graduate students in Chemistry. Enrollment required each semester for all graduate students. Masters or Doctoral candidates presenting a research seminar enroll for a letter grade. All other participating students enroll using the S/U grading option.

Learning Outcomes

1. Graduate students will gain experience organizing a research presentation.
2. Graduate students will develop oral presentation skills.

**CHEM 514. Organic Structure Determination
1-3 Credits (1-3)**

This course is made up of three independent modules of 1 credit each. May be taught in one, two or three modules. Module 1: Infrared Spectroscopy and Other Spectroscopic Methods, Applications of infrared spectroscopy to the structure determination of organic compounds. Module 2: Mass Spectrometry, Application of mass spectrometry to the structure determination of organic compounds. Module 3: NMR spectroscopy, Applications of NMR spectroscopy to the structure determination of organic compounds. May be repeated up to 3 credits.

Learning Outcomes

1. By the end of module one, students will have a general understanding of the physical basis of infrared spectroscopy and molecular vibrations, be able to describe and use the frequency, shape and intensity of diagnostic absorptions in the IR spectra to correlate with common organic functional groups, recognize the utility of the fingerprint region of an IR spectrum to establish identity of small organic compounds, and integrate IR knowledge with other spectroscopic methods for the structure determination of small organic compounds.
2. By the end of module two, students will understand the basis of mass spectrometry as a tool for structure determination, have a general understanding of the different techniques commonly used for sample ionization, describe fragmentation patterns for common classes of organic compounds: alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, amines and carbonyl compounds, use molecular ion and fragmentation pattern information to propose structures of small organic molecules, integrate mass spectrometry knowledge with other spectroscopic methods for the structure determination of small organic compounds.
3. By the end of module three, students will understand the physical basis of the nuclear magnetic resonance experiment and the relationship between nuclear and magnetic properties of atoms, describe and use the concepts of chemical and magnetic equivalence, chemical shift, and anisotropic effects in oneH NMR spectra, use information from homonuclear (oneH-oneH) and heteronuclear (oneH-thirteenC) coupling experiments to propose structures of small organic molecules, use information from twoD-NMR experiments (COSY, HMQC, HMBC, NOESY) to propose structures of small organic molecules including stereochemistry, integrate NMR knowledge with other spectroscopic methods for the structure determination of small organic compounds.

**CHEM 515. Modern Organic Chemistry
3 Credits (3)**

Recent developments in synthesis and theoretical principles of organic chemistry.

**CHEM 520. Comprehensive Literature Review Seminar for Graduate Students
1 Credit (1)**

Graduate student presents a literature review on an approved topic. The seminar presentation will include cover new developments of primary significance to the topic based on current research papers and culminate in a testable hypothesis. A passing grade allows the student to take the comprehensive exam.

Learning Outcomes

1. Student will prepare an abstract of their presentation understandable to a broad chemistry/biochemistry audience
2. Student will demonstrate a reasonable understanding of every concept introduced
3. Student will present a well-organized topic leading to a logical hypothesis

4. Student will demonstrate the ability to develop a data-supported hypothesis

CHEM 526. Advanced Analytical Chemistry**3 Credits (3)**

Equilibria, and the theories of gravimetric, volumetric, and instrumental analysis.

CHEM 527. Separations**3 Credits (3)**

Covers the fundamentals of separation methods and relationships to modern analytical techniques such as gas chromatography and liquid chromatography.

CHEM 598. Special Research Programs**1-3 Credits**

Individual investigations, either analytical or experimental. Graded S/U.

CHEM 599. Master's Thesis**15 Credits**

Thesis preparation.

CHEM 600. Research**1-15 Credits**

Course used for assigning credit for research performed prior to successful completion of the doctoral qualifying examination.

CHEM 619. Topics in Organic Chemistry**1-3 Credits**

Selected topics of current interest designated by subtitle.

CHEM 629. Advanced Topics in Analytical Chemistry**3 Credits (3)**

Discussion of advanced topics in the field of analytical chemistry. May be repeated with different subtitles. Consent of instructor required.

CHEM 639. Topics in Physical Chemistry**1-3 Credits**

Selected topics of current interest designated by subtitle.

CHEM 700. Doctoral Dissertation**17 Credits**

Dissertation preparation.

Phone: (575) 646-2505

Biochemistry - Bachelor of Science

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework. All departmental and nondepartmental requirements may not be taken S/U and must earn a C- or better final grade.

Prefix	Title	Credits
General Education		
<i>Area I: Communications</i>		
	<i>English Composition - Level 1</i> ¹	4
	<i>English Composition - Level 2</i>	

ENGL 2210G	Professional and Technical Communication Honors (Recommended)	3
<i>Oral Communication</i>		
COMM 1115G	Introduction to Communication (Recommended)	3

Electives, to bring the total credits to 120	
Select sufficient electives to bring total credits to 120, including 48 upper division.	17
Total Credits	120

¹ See the General Education (p. 227) section of the catalog for a full list of courses

² MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.

³ CHEM 1216 General Chemistry I Lecture and Laboratory for CHEM Majors and CHEM 1226 General Chemistry II Lecture and Laboratory for CHEM Majors are recommended and are acceptable General Education substitutions for CHEM 1215G General Chemistry I Lecture and Laboratory for STEM Majors and CHEM 1225G General Chemistry II Lecture and Laboratory for STEM Majors but will need a degree audit exception that can be coordinated with your advisor.

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses

⁵ PHYS 2110 Mechanics is the recommended Physics I course for B.S. majors. PHYS 1230G Algebra-Based Physics I, PHYS 2230G General Physics for Life Science I, and PHYS 1310G Calculus -Based Physics I are acceptable and are recommended in the decreasing order listed.

⁶ PHYS 2140 Electricity and Magnetism is the recommended Physics II course for B.S. majors. PHYS 1240G Algebra-Based Physics II, PHYS 2240G General Physics for Life Science II, and PHYS 1240G Algebra-Based Physics II are acceptable and are recommended in the decreasing order listed. Students are highly cautioned to check prerequisites for the individual courses when schedule planning.

⁷ Students are strongly encouraged to verify prerequisite/corequisite requirements for Physics labs when schedule planning.

Second Language Requirement

For the Bachelor of Science with a major in Biochemistry there is no second language requirement for the degree.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for

students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Total Credits **120-116**

¹ These courses may have prerequisites and/or co-requisites, and it is the students responsibility for checking and fulfilling all those requirements.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁴ The BCHE 432 Physical Biochemistry is highly recommended for all Biochemistry majors.

Chemistry - Bachelor of Arts

The Bachelor of Arts curriculum is designed to provide flexibility with less depth in chemistry, physics, and mathematics. The program may be used by students planning extensive study in other areas and requires emphasis in a second field of study. Students may not receive both a Bachelor of Science in Biochemistry degree and a Bachelor of Arts in Chemistry degree. All departmental and nondepartmental requirements may not be taken S/U and must earn a C- or better final grade.

Requirements

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Select 18 credits from an Emphasis area ⁹		18
Second Language Requirement: (not required)		
Electives, to bring the total credits to 120		
Select sufficient electives to bring total credits to 120, including 48 upper-division. ¹⁰		30
Total Credits		120

- See the General Education (p. 227) section of the catalog for a full list of courses
- MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.
- See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses
- CHEM 1216 General Chemistry I Lecture and Laboratory for CHEM Majors and CHEM 1226 General Chemistry II Lecture and Laboratory for CHEM Majors are recommended and are acceptable General Education substitutions for CHEM 1215G General Chemistry I Lecture and Laboratory for STEM Majors and CHEM 1225G General Chemistry II Lecture and Laboratory for STEM Majors but will need a degree audit exception that can be coordinated with your advisor.
- The additional chemistry course can be one 3-credit CHEM course or three 1-credit CHEM courses. BCHE 341 Survey of Biochemistry or BCHE 395 Biochemistry I can also be used to fulfill the additional chemistry course requirement.
- PHYS 2110 Mechanics is the Physics I course recommended for all Chemistry majors. PHYS 1230G Algebra-Based Physics I, PHYS 2230G General Physics for Life Science I, and PHYS 1310G Calculus -Based Physics I are acceptable and are recommended in the decreasing order listed.
- PHYS 2140 Electricity and Magnetism is the Physics II course recommended for all Chemistry majors. PHYS 1240G Algebra-Based Physics II, PHYS 2240G General Physics for Life Science II, and PHYS 1240G Algebra-Based Physics II are acceptable and are recommended in the decreasing order listed. Students are highly cautioned to check prerequisites for the individual courses when schedule planning.
- Students are strongly encouraged to check prerequisite/corequisite requirements for Physics labs when schedule planning.
- The Emphasis area is composed of courses outside either chemistry or biochemistry degrees (non-departmental and departmental requirements cannot be used for emphasis area credit). These courses must have a common theme, which complement (whenever possible) principles learned on either chemistry or biochemistry. For example, astronomy and physics courses could be taken as an emphasis area in astrophysics. See a faculty mentor for approval of the courses to be used for an emphasis area. A minimum of 18 credits can be used as an Emphasis area (which could constitute

a minor in some cases), but at least nine credits must be upper – division.

- ¹⁰ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Arts with a major in Chemistry there is no second language requirement for the degree.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

¹ These courses may have prerequisites and/or co-requisites, and it is the students responsibility for checking and fulfilling all those requirements.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ The Emphasis area is composed of courses outside either chemistry or biochemistry degrees (non-departmental and departmental requirements cannot be used for emphasis area credit). These courses must have a common theme, which complement (whenever possible) principles learned on either chemistry or biochemistry. For example, astronomy and physics courses could be taken as an emphasis area in astrophysics. See a faculty mentor for approval of the courses to be used for an emphasis area. A minimum of 18 credits can be used as an Emphasis area (which could constitute a minor in some cases), but at least nine credits must be upper – division.

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁵ Selection course option - Departmental requirement includes a choice of one of the following: CHEM 456 Inorganic Structure and Bonding, CHEM 471 Advanced Integrated Inorganic and Physical Chemistry Laboratory, or CHEM 472 Advanced Integrated Instrumental Analysis and Protein Biochemistry Laboratory. If the student wishes to now take the CHEM offerings in the specific term they should add an elective course for 3 credits, however, the student must complete at least one of the above courses.

Chemistry (Pre-Med) - Bachelor of Arts

The Bachelor of Arts curriculum is designed to provide flexibility with less depth in chemistry, physics, and mathematics. The concentration in Pre-Medical Studies provides foundational knowledge to students who are preparing to take the MCAT exam. Graduates will successfully complete medical school pre-requisite coursework and obtain an interdisciplinary understanding of healthcare that includes scientific, humanistic, and social science perspectives. Students may not receive both a Bachelor of Science in Biochemistry degree and a Bachelor of Arts in Chemistry (Pre-Med concentration) degree. All departmental and nondepartmental requirements may not be taken S/U and must earn a C- or better final grade.

Requirements

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

CHEM 443	Senior Seminar ¹	1
TOX 361	Basic Toxicology	3
Pre-Med Elective Course ³		3
Pre-Med Elective Course ³		3
Elective Course		3
Credits		13
Total Credits		121

¹ These courses may have prerequisites and/or co-requisites, and it is the students responsibility for checking and fulfilling all those requirements.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ The Emphasis area is composed of courses outside either chemistry or biochemistry degrees (non-departmental and departmental requirements cannot be used for emphasis area credit). These courses must have a common theme, which complement (whenever possible) principles learned on either chemistry or biochemistry. For example, astronomy and physics courses could be taken as an emphasis area in astrophysics. See a faculty mentor for approval of the courses to be used for an emphasis area. A minimum of 18 credits can be used as an Emphasis area (which could constitute a minor in some cases), but at least nine credits must be upper – division.

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁵ Selection course option - Departmental requirement includes a choice of one of the following: CHEM 456 Inorganic Structure and Bonding, CHEM 471 Advanced Integrated Inorganic and Physical Chemistry Laboratory, or CHEM 472 Advanced Integrated Instrumental Analysis and Protein Biochemistry Laboratory. If the student wishes to now take the CHEM offerings in the specific term they should add an elective course for 3 credits, however, the student must complete at least one of the above courses.

Chemistry (Secondary Education) - Bachelor of Arts

The Bachelor of Arts curriculum is designed to provide flexibility with less depth in chemistry, physics, and mathematics. The Secondary Education concentration curriculum prepares high-quality teachers for public schools and leads to a Minor in Secondary Education which leads to the New Mexico—Initial Teaching License, Secondary General Science Education (Grades 6-12). Students may receive both a Bachelor of Science in Biochemistry degree and a Bachelor of Arts in Chemistry (Secondary Education) degree. All departmental and nondepartmental requirements must earn a C- or better final grade or an S if the course is designated for S/U grading.

Requirements

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Second Language Requirement: (not required)**Electives, to bring the total credits to 120**

Select sufficient electives to bring total credits to 120, including 48 upper-division.¹¹

Total Credits 120

- See the General Education (p. 227) section of the catalog for a full list of courses
- MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.
- CHEM 1216 General Chemistry I Lecture and Laboratory for CHEM Majors and CHEM 1226 General Chemistry II Lecture and Laboratory for CHEM Majors are recommended and are acceptable General Education substitutions for CHEM 1215G General Chemistry I Lecture and Laboratory for STEM Majors and CHEM 1225G General Chemistry II Lecture and Laboratory for STEM Majors but will need a degree audit exception that can be coordinated with your advisor.
- See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses. VWW 3-credit Upper-division rule can be met with Secondary Education Minor.
- The additional chemistry course can be one 3-credit CHEM course or three 1-credit CHEM courses. BCHE 395 Biochemistry I can also be used to fulfill the additional chemistry course requirement.
- PHYS 2110 Mechanics is the Physics I course recommended for all Chemistry majors. PHYS 1230G Algebra-Based Physics I, PHYS 2230G General Physics for Life Science I, and PHYS 1310G Calculus -Based Physics I are acceptable and are recommended in the decreasing order listed.
- PHYS 2140 Electricity and Magnetism is the Physics II course recommended for all Chemistry majors. PHYS 1240G Algebra-Based Physics II, PHYS 2240G General Physics for Life Science II, and PHYS 1240G Algebra-Based Physics II are acceptable and are recommended in the decreasing order listed. Students are highly cautioned to check prerequisites for the individual courses when schedule planning.
- Students are strongly encouraged to check prerequisite/corequisite requirements for Physics labs when schedule planning.
- Requires Teacher Education Program (TEP) admittance
- Requires application for Student Teaching Entrance (STEP)
- Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor. Since the degree leads to a General

Science teaching license, we strongly recommend that courses in Biology, Astronomy, Geology, etc. are included in the elective credits.

Second Language Requirement

For the Bachelor of Arts with a major in Chemistry there is no second language requirement for the degree.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

First Year

Semester 1		Credits
ENGL 1110G	Composition I ¹	4
MATH 1511G	Calculus and Analytic Geometry I ¹	4

Total Credits		120

- ¹ These courses may have prerequisites and/or co-requisites, and it is the students responsibility for checking and fulfilling all those requirements.
- ² See the General Education (p. 227) section of the catalog for a full list of courses.
- ³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
- ⁴ Students who need to enroll in 15 credits a semester for Financial Aid purposes will need to enroll in additional elective credits to meet that requirement.

Biochemistry - Undergraduate Minor

The courses of the Biochemistry minor represent core biochemical content. A student cannot earn a bachelor's degree in Biochemistry or Chemistry and also earn a minor in Biochemistry. A student cannot earn minors in both Biochemistry and Chemistry.

Prefix	Title	Credits
Required Courses		
BCHE 395	Biochemistry I	3
CHEM 1215G	General Chemistry I Lecture and Laboratory for STEM Majors	4
or CHEM 1216	General Chemistry I Lecture and Laboratory for CHEM Majors	
CHEM 1225G	General Chemistry II Lecture and Laboratory for STEM Majors	4
or CHEM 1226	General Chemistry II Lecture and Laboratory for CHEM Majors	
CHEM 313	Organic Chemistry I	3
CHEM 314	Organic Chemistry II	3
One additional Upper Division Biochemistry (BCHE) course		1-3
Total Credits		18-20

The following (BCHE) courses do not count towards minor:

Prefix	Title	Credits
BCHE 140	Introduction to Biochemistry	1
BCHE 341	Survey of Biochemistry	4
BCHE 440	Biochemistry Seminar	1
Toxicology and Supplemental Instruction (SI) courses are not accepted.		

Courses provisionally allowed:

Prefix	Title	Credits
BCHE 441	Advanced Research in Biochemistry (3 credits maximum)	1-3
BCHE 451	Special Topics (by petition only)	1-3

Chemistry - Undergraduate Minor

The courses of the Chemistry minor represent core chemical content. A student cannot earn a bachelor's degree in Chemistry or Biochemistry

and also earn a minor in Chemistry. A student cannot earn minors in both Biochemistry and Chemistry.

Prefix	Title	Credits
Required Courses		
CHEM 1215G	General Chemistry I Lecture and Laboratory for STEM Majors	4
or CHEM 1216	General Chemistry I Lecture and Laboratory for CHEM Majors	
CHEM 1225G	General Chemistry II Lecture and Laboratory for STEM Majors	4
or CHEM 1226	General Chemistry II Lecture and Laboratory for CHEM Majors	
Select one from the following:		4-6
CHEM 313 & CHEM 314	Organic Chemistry I and Organic Chemistry II	
CHEM 2115	Survey of Organic Chemistry and Laboratory	
Additional Courses		
Select sufficient additional upper division CHEM/BCHE credits to bring total credits to at least 18		6
Total Credits		18-20

The following courses do not count towards a minor in Chemistry:

Prefix	Title	Credits
CHEM 1111	Basic Chemistry	3
CHEM 1120G	Introduction to Chemistry Lecture and Laboratory (non majors)	4
CHEM 2991	Introduction to Research	1-3
CHEM 351	Special Topics	1-3
CHEM 443	Senior Seminar	1
No BCHE courses except BCHE 341 or BCHE 395		
Supplemental instruction (SI) courses are not accepted.		

Courses provisionally allowed:

Prefix	Title	Credits
CHEM 441	Advanced Research (3 credits maximum)	1-3
CHEM 451	Special Topics (by petition only)	1-3

Communication Studies Undergraduate Program Information

Communication Studies focus on the complex role that human communication plays in everyday life.

The undergraduate program in Communication Studies is designed to enhance students' interpersonal skills, presentation skills, and critical thinking skills. The successful graduate should be able to work effectively with people, assimilate, organize and analyze information, solve problems, make effective presentations and show potential for leadership. The program prepares students for careers in several professions, such as training and development, public relations, law, advertising and sales, government service, mediation, customer relations, human resources, international service, fundraising, and the ministry.

Graduate Program Information

The Master of Arts in Communication Studies provides students with a social scientific approach to the study of human interaction, using quantitative and qualitative methods. Our curriculum is designed to explore how communication occurs interpersonally, within organizations,

our political system, and between and within cultures. Students take courses in interpersonal communication, organizational communication, political communication, and/or cultural communication. All graduate students take courses in communication theory and research methods. In addition, students can take courses in topic areas such as conflict management, small group communication, persuasion, and nonverbal communication.

The program offers a wide variety of courses allowing students an opportunity to select topics pursuant to their special interests. In addition to courses, students have the opportunity to obtain practical experience by participating in professional activities offered by the department; for example, graduate teaching assistantships, research, and colloquia.

Master's Accelerated Program Information

The Master's Accelerated Program is an opportunity for qualified, advanced undergraduate students to begin graduate study while still enrolled as an undergraduate student. Students accepted into the program will be able to take up to 12 credits that can be applied to a Master's degree in Communication Studies at New Mexico State University. This equates to one-third of the required credits to obtain a graduate degree in Communication Studies at NMSU.

For a complete list of the qualifications and courses requirements for the Accelerated program see the Master of Arts in Communication Studies (p. 127) program.

Degrees for the Department

Bachelor Degree(s)

- Communication Studies - Bachelor of Arts (p. 545)
- Communication Studies - Bachelor of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/communication-disorders-ba-online/>)

Master Degree(s)

- Communication Studies (Analysis and Decision-Making) - Master of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/communication-studies-analysis-decision-making-ma-online/>)
- Communication Studies (Leadership Communication) - Master of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/communication-studies-leadership-communication-ma-online/>)
- Communication Studies - Master of Arts (p. 127)

Minors for the Department

- Communication Studies - Undergraduate Minor (p. 547)

Department Head: Greg G. Armfield, Ph.D.

Professors G. Armfield, J. Flora, A. Hubbell, **Assistant Professor** G. Morales, D. Shi,

Greg G. Armfield, Ph.D. (University of Missouri-Columbia) – Communication and Sport, Organizational Communication, and Leadership

Jeanne Flora, Ph.D. (University of Kansas) – Family Communication and Interpersonal Communication

Anne Hubbell, Ph.D. (Michigan State University) – Health Communication and Organizational Communication

Gabriela Morales, Ph.D. (University of New Mexico) – Communication and Culture and Health Communication

Duli Shi, Ph.D. (University of Maryland, College Park) – Strategic Communication and Organizational Communication

Communication Studies Courses

COMM 1115G. Introduction to Communication

3 Credits (1+2P)

This survey course introduces the principles of communication in the areas of interpersonal, intercultural, small group, organizational, public speaking, mass, and social media. May be repeated up to 3 credits.

Learning Outcomes

1. Describe basic communication terms, forms and concepts.
2. Identify basic communication research methods and theories.
3. Explain the significance of ethics and diversity in communication processes.
4. Apply various concepts and skills in multiple communication contexts

COMM 1130G. Public Speaking

3 Credits (3)

This course introduces the theory and fundamental principles of public speaking, emphasizing audience analysis, reasoning, the use of evidence, and effective delivery. Students will study principles of communication theory and rhetoric and apply them in the analysis, preparation and presentation of speeches, including informative, persuasive, and impromptu speeches. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate effective speech preparation.
2. Demonstrate effective speech delivery through use of language, nonverbal elements and the creation of presentation aids.
3. Analyze a potential audience and tailor a speech to that audience.
4. Evaluate presentations according to specific criteria.
5. Explain common propaganda techniques and logical fallacies, and identify them in the speeches of others.
6. Recognize diversity and ethical considerations in public speaking.

COMM 2110. Communication Theory

3 Credits (3)

This course provides an exploration of major theories, concepts and methods of research in the study of human communication. May be repeated up to 3 credits.

Learning Outcomes

1. Identify, explain, and illustrate key concepts and principles of the major traditions of communication theory.
2. Analyze practical problems and situations using theories.
3. Integrate research correctly and ethically from credible sources to support the primary purpose of communication.

COMM 2996. Special Topics

1-3 Credits (1-3)

Specific subjects and credits to be announced in the Schedule of Classes. May be repeated up to 12 credits.

Learning Outcomes

1. Define and describe key concepts and principles related to the group study or selected topic as identified by the course subtitle.
2. Apply key concepts and principles related to the group study or selected topic as identified by the course subtitle.

COMM 2997. Independent Study**1-3 Credits (1-3)**

Individualized, self-paced projects for students with a special interest in communication topics. Students must be sophomore standing to enroll. May be repeated up to 6 credits.

Prerequisite: COMM 1115G.

Learning Outcomes

1. The student will study a selected topic and conduct a literature review or comparable research assignment.
2. The student will apply knowledge and understanding of the topic in a final paper or project.

COMM 3110. Communication Theory and Discovery**3 Credits (3)**

The course explores the nature of communication science, major communication theories, and how communication research is conducted and interpreted.

Learning Outcomes

1. Understand philosophical underpinnings of communication theories and methods
2. Understand the relationship between theory and research methods in the field of communication
3. Apply concepts, theories, and research findings to various contexts outside of the classroom
4. Become an intelligent consumer of research: have the ability to read, comprehend, demonstrate understanding and critically evaluate communication and other research reported in scholarly journals and published documents as well as in the popular press.

COMM 3120. Persuasion Theory and Practice**3 Credits (3)**

Training in understanding and applying the principles and techniques of argumentation and persuasion. May be repeated up to 3 credits.

Learning Outcomes

1. Identify and explain key concepts and theories in persuasion.
2. Apply concepts, theories, and research findings to various contexts outside of the classroom.
3. Create persuasive messages utilizing principles from one or more of the theories covered in class.
4. Become a critical consumer of persuasive messages and persuasive campaigns.

COMM 3510. Organizational Communication**3 Credits (3)**

Communication strategies and patterns of private and governmental organizations, including research on the communication process. May be repeated up to 3 credits.

Learning Outcomes

1. Evaluate the organizational theory, concepts, and research discussed in class and their implications for the field of organizational communication.
2. Explain the role communication plays in each of the organizational communication processes discussed in class.
3. Critically assess communication practices within all types of organizations.
4. Evaluate the ethical issues brought forth in organizational communication.

COMM 3530. Conflict Management**3 Credits (3)**

Communication strategies to manage and negotiate conflict in intrapersonal, interpersonal, group, and organizational settings. May be repeated up to 3 credits.

Learning Outcomes

1. Analyze the role of communication in conflict and conflict management processes.
2. Analyze the components of conflict that lead to constructive or destructive communication patterns.
3. Evaluate the effectiveness and appropriateness of strategies, methods, and responses that are appropriate to a given conflict situation.

COMM 3610. Interpersonal Communication**3 Credits (3)**

Theories of interpersonal communication and relational communication including study of relevant models, contexts and constructs. May be repeated up to 3 credits.

Learning Outcomes

1. To define and describe communication and interpersonal communication.
2. To identify and describe concepts and behaviors related to nonverbal, verbal, relational, interpretive, role, self, and goal competence in the context of interpersonal communication.
3. To compare and apply concepts of interpersonal communication competence by reflecting on examples from communication in personal and everyday relationships.
4. To define, apply, and analyze concepts of family communication competence in media portrayals of, and in one's own experience of, family communication.
5. To define, apply, and analyze concepts of romantic communication competence in either a personal romantic relationship or in the example of a couple observed/interviewed.

COMM 3710. Communication and Culture**3 Credits (3)**

Cultural and intercultural communication theory and behavior, with a concentration on the development of specific communication skills which should facilitate effective intercultural communication. May be repeated up to 3 credits.

Learning Outcomes

1. Define culture and other related concepts.
2. Explain processes of enculturation and acculturation.
3. Apply the concepts to one's own experience.
4. Create new ways of presenting material about culture and communication.

COMM 4210. Political Communication**3 Credits (3)**

Presidential and congressional campaigns, political persuasion techniques, political advertising, power in language, and media aspects of political information. Ideology, resistance to political manipulation, and dependence of democracies on communication. May be repeated up to 3 credits.

Learning Outcomes

1. Identify and explain key concepts in political communication, and apply that knowledge to your own life experiences and views on the world.
2. Read and critically analyze current research in political communication.

3. Become informed and critical consumers of political messages and the news media.

COMM 4220. Communication Technologies

3 Credits (3)

Development and evolution of human communication technologies from prehistory through the future of computer-mediated communication networks. Examines behavioral, cognitive, social, cultural, and political issues of new communication technologies and their use and management. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the key concepts, theories, and research findings regarding scholarly investigations of new media technologies.
2. Apply concepts, theories, and research findings related to social media to a variety of social issues and one's own lived experiences.
3. Develop the ability to think about social media critically and analytically.
4. Learn how to effectively communicate ideas, information, and messages through new media technologies (particularly, social media platforms) in order to achieve a specific goal.
5. Articulate the benefits and drawbacks of living in a digital world.

COMM 4230. Strategic Communication

3 Credits (3)

This course covers history, theory, and research related to the use of strategic organizational communication to change attitudes. The course is a survey course designed to help you understand how organizations create targeted, creative, research-based communication to accomplish their objectives. Students will examine the role of communication in organizational planning and execution of advertising, marketing, public relations, and social change. Strategic Communication provides insight into how communicators use critical and creative thinking to gather, organize, evaluate and deliver information in a culturally diverse world. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the role and functions of Strategic Communication in a culturally diverse world.

COMM 4310. Sports Communication

3 Credits (3)

This course provides a senior-level exploration of the role sports and sports communication plays in contemporary culture. Readings will examine the interrelationship between sports and media in society, the identities that fans assume when engaging in fandom and sports viewership, the pervasiveness of sports communication practices in the sports industry, the role of media in story telling, and the way cultural identifiers of class, ethnicity, and gender play out in the media. This is taught with COMM 5310. May be repeated up to 3 credits.

Learning Outcomes

1. Evaluate the historical impact of sports on society.
2. Understand the evolution of sports media and ESPN and its impact on American culture.
3. Assess existing and future sports communication research and media theory.
4. Assess the current trends in sports media and the culture of sports.
5. Transfer knowledge of sports communication to a critical appreciation of sports media; including the study of image repair and framing theory.

COMM 4520. Small Group Communication

3 Credits (3)

Principles and methods of modern group discussion with emphasis on the role of the group in problem solving. May be repeated up to 3 credits.

Learning Outcomes

1. Recognize and develop a complex understanding of the theories and principles of group communication.
2. Become an intelligent consumer of group research literature.
3. Adopt and articulate a clearly developed communication perspective toward group research.
4. Gain an understanding of the within-group phenomena.

COMM 4530. Leadership Communication

3 Credits (3)

Examination of traditional theories and concepts of leader-follower dynamics; presentation of cognitive, systems, and symbolic interpretative views of leadership with an emphasis on persuasion and motivation in leader-follower interactions. May be repeated up to 3 credits.

Learning Outcomes

1. Apply leadership concepts and theories.
2. Analyze leadership philosophies.
3. Identify the fundamental ways leadership is practiced in organizations.
4. Assess your own leadership traits and behaviors.
5. Develop your own personal leadership philosophy.

COMM 4550. Case Studies in Leadership Communication

3 Credits (3)

Students will assess, synthesize, integrate and evaluate research in the area of leadership and organizational communication. Students will interact with modern topics related to communication and organizations through the analysis and discussion of various cases pulled from current events in organizational research.

Learning Outcomes

1. Practice case analysis related to organizational theories and skills.
2. Apply leadership communication concepts and theories to real life scenarios.
3. Develop critical thinking skills for inclusive leaders.
4. Examine the role of the inclusive model of leadership within organizations.
5. Develop your own case studies related to current organizational topics.
6. Examine emerging organizational ethics issues such as gender, ethics, and morality within leadership.
7. Develop an understanding of the personal and organizational factors related to leading teams and organizations.

COMM 4560. Ethics & Diversity in Leadership Communication

3 Credits (3)

To provide students with an opportunity to explore the issues related to ethical decision-making and personal ethical development as they apply to interpersonal communication, followership, organizations, diversity, and organizational citizenship.

Learning Outcomes

1. Practice personal ethical decision-making in organizations.
2. Apply ethical leadership concepts and theories to real-life scenarios.
3. Develop critical thinking skills for inclusive leaders.
4. Examine the role of individual morals and philosophies in organizational ethics.
5. Develop your own personal philosophy of organizational ethics.
6. Examine emerging organizational ethics issues.

7. Develop an understanding of the personal and organizational factors related to ethics and diversity.

COMM 4620. Deception and Communication

3 Credits (3)

Deceptive communication including nonverbal indicators of lies, types of lies, and influence of relationships on lying behavior and interpretation.

May be repeated up to 3 credits.

Learning Outcomes

1. Students will acquire basic knowledge of research on Deception.
2. Students will be able to identify reasons for why people lie.
3. Students will be able to apply the course concepts to real world situations.
4. Students will be able to tell the difference between what is "true" and what is "false" about how we deceive in the popular press and movies/TV.
5. Students will learn about THE two theories in the area of Deception and be able to differentiate between them.

COMM 4630. Family Communication

3 Credits (3)

This course examines cutting edge research on family communication, as well as classic theories and research findings that have influenced and revolutionized the way scholars conceptualize family interaction. May be repeated up to 3 credits.

Learning Outcomes

1. To develop a communication perspective on the family as a system.
2. To identify and distinguish between theories of family interaction.
3. To recognize and explain how family communication patterns and processes affect communication between family members.
4. To analyze communication processes that are unique to family subsystems such as romantic, parent-child, sibling, and extended family relationships.
5. To analyze the role of family interaction in the development and course of mental and physical health problems.
6. To analyze theories of family stress and the impact of specific family stressors on family interaction and well-being.
7. To apply theories and concepts to real-life scenarios.

COMM 4640. Nonverbal Communication

3 Credits (3)

Study of and experimentation with nonverbal aspects of human communication as vital components of the total communication process.

May be repeated up to 3 credits.

Learning Outcomes

1. To analyze nonverbal channels of communication between persons, including channels such as the voice, face, eyes, posture, gestures, space, territory, clothing, paralanguage, and touch.
2. To analyze how nonverbal behaviors collectively communicate functions such as dominance, deception, intimacy, and turn-taking.
3. To analyze individual and social factors affecting the production of nonverbal behaviors, and the effects of such behaviors on others' attitudes, perceptions, cognitions, and relationships.
4. To analyze the origins of nonverbal communication, by examining developmental trends, continuities with other animal species, cultural similarities and differences, and physiological bases.
5. To examine applications of nonverbal research and theory to infant development, personality, gender, relational satisfaction, relationship development, culture, aging, and social media.

COMM 4720. International Communication

3 Credits (3)

Exploration of the forms and channels of communication is substantially influenced by international cultural and political factors. Covers: global communication technology; news, information, and entertainment flows; and international diplomacy and negotiation. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate an understanding of the history of international communications, and the issues and controversies that have appeared.
2. Demonstrate an understanding of the international agencies responsible for the regulation of media, including content, and technologies.

COMM 4730. Environmental Communication

3 Credits (3)

Examines the link between communication and environment within the context of communication scholarship. Topics include sense of place, cultural approaches to interacting with environment as well as exploring current themes surrounding environment. May be repeated up to 3 credits.

Learning Outcomes

1. Identify ways in which public discourses socially construct relationships between nature and humans.
2. Demonstrate an understanding of critical and cultural approaches to environmental communication.
3. Identify key issues in environmental conflicts, risk communication, and democratic participation in policy-making.
4. Demonstrate an ability to critically evaluate environmental advocacy, deliberation, and public relations.

COMM 4750. Health Communication

3 Credits (3)

Examination of central issues in communication theory and practice as applied to health care. Includes communication in health care organizations, media dissemination of health information, role of communication in disease prevention and health promotion, and symbolic meaning of illness within cultures. May be repeated up to 3 credits.

Learning Outcomes

1. Students will gain an understanding of health communication theories and concepts.
2. Students will be able to apply theories and concepts to a real-world health issue.
3. Students will be able to differentiate among health communication theories and concepts.

COMM 4996. Selected Topics

1-6 Credits (1-6)

Individual and/or group study of selected topics. To be identified by subtitle. May be repeated up to 12 credits.

Learning Outcomes

1. Gain basic knowledge regarding the group study or selected topic as identified by the course subtitle.
2. Gain expert insight into the selected topic identified by the course subtitle.

COMM 4997. Independent Study

1-3 Credits (1-3)

Individualized, self-paced projects for advanced students. Students must be in junior standing to enroll. May be repeated up to 6 credits.

Prerequisite: COMM 1115G.

Learning Outcomes

1. The student will study a selected topic and conduct a literature review or comparable research assignment.
2. The student must demonstrate both quantity and quality of knowledge and understanding of the topic in a final written paper.

COMM 4998. Communication Internship

3 Credits (3)

Internship opportunity to apply what has been learned to a real-world situation. Students must be in junior standing to enroll. Students must be in Junior or Senior Standing. May be repeated up to 6 credits.

Prerequisite: COMM 3510.

Learning Outcomes

1. Apply course concepts and discussion topics to the internship experience.
2. Differentiate between good and poor communication skills.
3. Evaluate the complex communication phenomena within the workplace.
4. Apply a valuable experiential education outside of the classroom.

COMM 5110. Theories of Communication

3 Credits (3)

The theories covered in this course are intended to provide you with a foundational background for future graduate courses that will explore theoretical and topical areas of study in more depth. May be repeated up to 3 credits.

Learning Outcomes

1. Learn how theories are developed, analyzed, evaluated, and applied.
2. Be able to assess, synthesize, and evaluate communication theories.
3. Gain a broad overview of the field of human communication theory.
4. Appreciate the diversity of theoretical ideas within communication literature.
5. Develop a deeper understanding through the exploration of selected topics.
6. Begin to solidify a theoretical stance of your own that will motivate and guide further studies.

COMM 5120. Persuasion Theory

3 Credits (3)

Work with an actual persuasion campaign, such as public information, political, or commercial marketing campaigns. Includes case studies of large-scale persuasion efforts, current theoretical models of persuasion processes, and methods for studying, evaluating, and refining messages for optimal effects. May be repeated up to 3 credits.

Learning Outcomes

1. Become a critical consumer of persuasive messages and persuasive campaigns.
2. Create persuasive messages utilizing principles from one or more of the theories covered in class.
3. Apply concepts, theories, and research findings to various contexts outside of the classroom.

COMM 5130. Quantitative Research Methods

3 Credits (3)

Seminar in the quantitative study of human communication phenomena, research design, and statistical analysis. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the logic of social science research.
2. Compare different research methods (experiment, survey, content analysis, and so on).
3. Develop and write clear hypotheses.
4. Understand how to assess the validity and reliability of measures.
5. Design a survey to test your hypotheses.
6. Use statistical analyses to answer questions in the field of communication.
7. Discuss the limitations of your study and the implications for your conclusions.
8. Become a better consumer of statistics and social science research.

COMM 5140. Qualitative Research Methods in Communication

3 Credits (3)

Survey of qualitative research methods in the study of human communication, including historical and critical approaches, interviewing, participant-observation, and communication ethnography. Students apply methods to their own research. May be repeated up to 3 credits.

Learning Outcomes

1. Learn about the nature and application of qualitative research in social and organizational research.
2. Learn to conceptualize qualitative research and to formulate problem statements and research questions.
3. Learn how to design a qualitative research study.
4. Learn about qualitative data collection procedures—observation, interviews, focus group interviews, and collection and use of documents and archival data.
5. Apply research design and data collection skills by undertaking a pilot research study.

COMM 5210. Political Communication

3 Credits (3)

Political communication theory, research, and issues. Empirical studies of campaigns, movements, news media, voter decision-making, political participation, socialization, and knowledge. Political theory, field research, communication science findings and research methods. May be repeated up to 3 credits.

Learning Outcomes

1. Identify and explain key concepts in political communication, and apply that knowledge to your own life experiences and views on the world.
2. Read and critically analyze current research in political communication.
3. Become informed and critical consumers of political messages and the news media.

COMM 5220. Communication Technologies

3 Credits (3)

Seminar on design, usage, and social impact of electronic mail, communication through computer networks, and new technologies of organizational communication such as group decision support systems (GDSS). Each student will study an actual application of a major communication technology in an organization. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the key concepts, theories, and research findings regarding scholarly investigations of new media technologies.
2. Apply concepts, theories, and research findings related to social media to a variety of social issues and one's own lived experiences.

3. Develop the ability to think about social media critically and analytically.
4. Learn how to effectively communicate ideas, information, and messages through new media technologies (particularly, social media platforms) in order to achieve a specific goal.
5. Articulate the benefits and drawbacks of living in a digital world.

COMM 5230. Strategic Communication

3 Credits (3)

This course covers history, theory, and research related to the use of strategic organizational communication to change attitudes. The course is a survey course designed to help you understand how organizations create targeted, creative, research-based communication to accomplish their objectives. Students will examine the role of communication in organizational planning and execution of advertising, marketing, public relations, and social change. Strategic Communication provides insight into how communicators use critical and creative thinking to gather, organize, evaluate and deliver information in a culturally diverse world. Graduate students will be required to fulfill advanced research and presentation requirements. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the role and functions of Strategic Communication in a culturally diverse world.

COMM 5310. Sports Communication

3 Credits (3)

This seminar provides a graduate-level exploration of the role sports and sports communication plays in contemporary culture. Readings will examine the interrelationship between sports and media in society, the identities that fans assume when engaging in fandom and sports viewership, the pervasiveness of sports communication practices in the sports industry, the role of media in story telling, and the way cultural identifiers of class, ethnicity, and gender play out in the media. This is taught with COMM 4310. May be repeated up to 3 credits.

Learning Outcomes

1. Evaluate the historical impact of sports on society.
2. Understand the evolution of sports media and ESPN and its impact on American culture.
3. Assess existing and future sports communication research and media theory.
4. Assess the current trends in sports media and the culture of sports.
5. Transfer knowledge of sports communication to a critical appreciation of sports media; including the study of image repair and framing theory.

COMM 5510. Organizational Communication

3 Credits (3)

Communication strategies and patterns of private and governmental organizations, including research on communication systems. May be repeated up to 3 credits.

Learning Outcomes

1. Recognize and develop a complex understanding of the theories and principles of organizational culture and communication.
2. Become an intelligent consumer of organizational culture.
3. Plan, design, execute, interpret, and/or critically evaluate the conclusions of an original organizational communication research project.
4. Adopt and articulate a clearly developed communication perspective toward organizational research.

COMM 5530. Leadership Communication

3 Credits (3)

This course examines traditional theories and concepts of leadership and also highlights popular and historic leaders. May be repeated up to 3 credits.

Learning Outcomes

1. Equip students with effective leadership skills.
2. Apply leadership concepts and theories to real-life scenarios.
3. Develop critical thinking skills for inclusive leaders.
4. Analyze leadership philosophies.
5. Identify the fundamental ways leadership is practiced in organizations.
6. Develop your own personal philosophy of organizational ethics.
7. Develop skills to be able to identify modern trends in organizations and emerging organizational leaders.

COMM 5550. Case Studies in Leadership Communication

3 Credits (3)

Students will assess, synthesize, integrate and evaluate research in the area of leadership and organizational communication. Students will interact with modern topics related to communication and organizations through the analysis and discussion of various cases pulled from current events in organizational research. COMM 5550 is the graduate version of COMM 4550. Additional work will be required for Graduate Students.

Learning Outcomes

1. Practice case analysis related to organizational theories and skills.
2. Apply leadership communication concepts and theories to real life scenarios.
3. Develop critical thinking skills for inclusive leaders.
4. Examine the role of the inclusive model of leadership within organizations.
5. Develop your own case studies related to current organizational topics.
6. Examine emerging organizational ethics issues such as gender, ethics, and morality within leadership.
7. Develop an understanding of the personal and organizational factors related to leading teams and organizations.

COMM 5560. Ethics & Diversity in Leadership Communication

3 Credits (3)

To provide students with an opportunity to explore the issues related to ethical decision-making and personal ethical development as they apply to interpersonal communication, followership, organizations, diversity, and organizational citizenship. Additional work will be required for Graduate Students.

Learning Outcomes

1. Practice personal ethical decision-making in organizations.
2. Apply ethical leadership concepts and theories to real-life scenarios.
3. Develop critical thinking skills for inclusive leaders.
4. Examine the role of individual morals and philosophies in organizational ethics.
5. Develop your own personal philosophy of organizational ethics.
6. Examine emerging organizational ethics issues.
7. Develop an understanding of the personal and organizational factors related to ethics and diversity.

COMM 5610. Interpersonal Communication

3 Credits (3)

Theories of interpersonal communication and communication within a relationship, including study of relevant models, contexts, and constructs. May be repeated up to 3 credits.

Learning Outcomes

1. To define interpersonal communication, explore relationship types, and analyze demographic trends in personal relationships.
2. To examine the human need for interpersonal relationships, as well as social networks, the development of social skills, and the role of social support.
3. To analyze how people develop and communicate their identity within relationships.
4. To examine the role of communication in developing and maintaining relationships, with a focus on relational stages, turning points, dialectics, uncertainty, expectations, self-disclosure, affection, intimacy, influence, conflict, power, as well as cultural influences to close relationships.
5. To analyze relational hurt, relational transgressions, relational deterioration, and termination from a communication perspective.
6. To analyze and review current theory and peer-reviewed research in interpersonal communication.
7. To examine practical applications of interpersonal communication that have the potential to help or harm people, and to explore the gaps and links between theory and practice.

COMM 5630. Family Communication

3 Credits (3)

This course examines cutting edge research on family communication, as well as classic theories and research findings that have influenced and revolutionized the way scholars conceptualize family interaction. Topics include basic family communication processes, communication in family subsystems, communication during family stress, and the role of family interaction in health and well-being. Students will explore how family relationships are built, maintained, and destroyed by communication as well as the potentially important and long lasting effects of family relationships on individuals. May be repeated up to 3 credits.

COMM 5640. Nonverbal Communication

3 Credits (3)

This course focuses on human physical behaviors as the basis of communication between persons. This physical behavior includes such variables as the voice, face, eyes, posture, gesture, space, territory, clothing, and touch. The content of the course considers the individual and social factors affecting the production of such behaviors, and the effects of such behaviors on others' attitudes, perceptions, cognitions, and relationships. Applications of research and theory in nonverbal communication to infant development, personality, sex differences, marital satisfaction, relationship development, culture, aging, and brain functioning are also studied throughout the course. May be repeated up to 3 credits.

COMM 5710. Communication and Culture

3 Credits (3)

Cultural and intercultural communication theory and research. Focuses on discovering and describing distinctive ways of speaking within and between cultures. May be repeated up to 3 credits.

Learning Outcomes

1. Discuss the practical application of the study of culture.

COMM 5994. MA Project

1-6 Credits (1-6)

Project credits are used for the master's degree project option. May be repeated up to 6 credits.

Learning Outcomes

1. Propose and defend the project during the first semester.
2. Complete and defend the project during the second semester.

COMM 5996. Special Topics

1-9 Credits (1-9)

Individual and/or group study of special topics. To be identified by subtitle. May be repeated up to 99 credits.

Learning Outcomes

1. Gain basic knowledge regarding the group study or selected topic as identified by the course subtitle.
2. Gain expert insight into the selected topic identified by the course subtitle.

COMM 5997. Independent Study

1-6 Credits (1-6)

Individualized, self-paced projects. May be repeated up to 99 credits.

Learning Outcomes

1. The student will study a selected topic and conduct a literature review or comparable research assignment.
2. The student must demonstrate both quantity and quality of knowledge and understanding of the topic in a final written paper.

COMM 5998. Communication Internship for Graduate Students

3 Credits (3)

Internship opportunity to apply what students have learned to the real world. May be repeated up to 3 credits.

Learning Outcomes

1. Apply course concepts and discussion topics to the internship experience.
2. Differentiate between good and poor communication skills.
3. Evaluate the complex communication phenomena within the workplace.
4. Apply a valuable experiential education outside of the classroom.

COMM 5999. Master's Thesis

1-15 Credits (1-15)

Thesis. May be repeated up to 88 credits.

Learning Outcomes

1. Submit Thesis Proposal and defend the first semester of enrollment.
2. Complete Thesis and defend during the second semester of enrollment.

Department Head: Greg G. Armfield, Ph.D.

Communication Studies - Bachelor of Arts

In addition to completing the general education requirements of the university and the college, students majoring in communication studies are required to complete 21 credits of core COMM courses and 15 credits of COMM electives for a total of 36 credits. Any exception to these policies requires department head approval.

All COMM courses must be completed with a grade of C- or better.

Undergraduate Course Rotation:

Fall

COMM 3110 Communication Theory and Discovery

COMM 3710 Communication and Culture

COMM 3610 Interpersonal Communication

Spring

COMM 3120 Persuasion Theory and Practice

COMM 3510 Organizational Communication

COMM 4998 Communication Internship

Requirements

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Prefix	Title	Credits
General Education		
<i>Area I: Communications</i>		
	<i>English Composition - Level 1</i> ¹	4
	<i>English Composition - Level 2</i> ¹	3
<i>Oral Communication</i>		
COMM 1115G	Introduction to Communication (Communication Core Course)	3

The department requires 21 total credits of Core Courses with the classes listed below and COMM 1115G from the General Education requirements		
COMM 3110	Communication Theory and Discovery	
COMM 3120	Persuasion Theory and Practice	
COMM 3510	Organizational Communication	
COMM 3710	Communication and Culture	
COMM 3610	Interpersonal Communication	
COMM 4998	Communication Internship	
<i>Departmental Elective Courses</i>		
		18
Second Language Requirement: (required- see below)		
		0-8

Electives to bring total credits to 120 ³	35-46
Total Credits	120

¹ For Information regarding the General Education Course Requirements see the General Education (p. 227) section of the catalog.

² See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses

³ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Arts in Communication Studies, there is a one-year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120	French I and French II	4-8
GRMN 1110 & GRMN 1120	German I and German II	4-8
JAPN 1110 & JAPN 1120	Japanese I and Japanese II	4-8
SPAN 1110 & SPAN 1120	Spanish I and Spanish II	4-8
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6
<i>For Heritage Speakers:</i>		
SPAN 1210 & SPAN 1220 or SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II Spanish for Heritage Learners III	3-6

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110 & SIGN 1120	American Sign Language I and American Sign Language II	3-6

Option 3:

Prefix	Title	Credits
Challenge or complete the 1120 level for the following courses:		
FREN 1120 or GRMN 1120 or JAPN 1120 or SPAN 1120	French II German II Japanese II Spanish II	4
<i>OR</i>		
Challenge or complete the 1120/1220/2210 level for the following courses:		
PORT 1120 or SPAN 1220	Portuguese II Spanish for Heritage Learners II	3

or SPAN 2210 Spanish for Heritage Learners III
 or SIGN 1120 American Sign Language II

Option 4:

Participate in an experiential learning study abroad course sponsored by NMSU or an approved International Internship that enhances the students' cultural competency through cultural understanding and experience. Please meet with the head of the Department of Communication Studies for information. Students must pass the course with a C- or higher.

Option 5:

Pass (with a C- or higher) any three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 6:

Obtain college certification of completion of two years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 7:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 8:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 9:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Freshman		Credits
Choose one from the following: ¹		4
ENGL 1110G	Composition I	
ENGL 1110H	Composition I Honors	
ENGL 1110M	Composition I	
COMM 1115G	Introduction to Communication	3
MATH 1130G	Survey of Mathematics	3
FYEX 1112	The Freshman Year Experience	3
Choose one from the following: ²		3
ENGL 2130G	Advanced Composition	
ENGL 2210G	Professional and Technical Communication Honors	
ENGL 2215G	Advanced Technical and Professional Communication

Upper-Division Elective Course(s)		3
Credits		30
Senior		
COMM Elective Course		3
Upper-Division Elective Course(s)		24
Choose one from the following:		3
COMM 4998	Communication Internship (offered Spring only)	
COMM Elective Course (3 credits)		
Credits		30
Total Credits		120-123

¹ These courses may have prerequisites and/or co-requisites, and it is the student's responsibility to fulfill all requirements.
² See the General Education (p. 227) section of the catalog for a full list of courses.
³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Communication Studies - Undergraduate Minor

A minor in Communication Studies consists of 18 credits; at least 9 of those credits must be in courses numbered 300 or above. All courses must be completed with grades of C- or better.

Prefix	Title	Credits
Required Courses		
COMM 1115G	Introduction to Communication	3
COMM 3510	Organizational Communication	3
COMM 3710	Communication and Culture	3
COMM 3610	Interpersonal Communication	3

Additional Courses

Select 6 credits of additional Communication Studies courses 6

Total Credits 18

Computer Science

Computer Science is the area of study that encompasses all of the theory and practice of computing. The mission of the Department of Computer Science at New Mexico State University is to provide formal education in the core disciplines of computer science, as well as to prepare our graduates for research, development and academic careers. For more information on the Department of Computer Science, please visit the web site <https://computerscience.nmsu.edu>.

Undergraduate Program Information

The undergraduate computer science programs prepare students for graduate study in computer science and for employment in positions involving the design, construction and application of computer systems. Undergraduate degree programs include a Bachelor of Science (**ABET accredited**), Bachelor of Arts, Bachelor of Science in Cybersecurity, four minor degree tracks, and seven concentrations. The B.S. degree is the traditional computer science degree program, while the B.A. degree offers a more open, flexible degree plan that is easier to combine with studies in other disciplines. The minors are for non-Computer Science majors and offer specialized tracks in algorithm theory, bioinformatics, computer systems and software development. The concentrations are for Computer Science majors and provide a focus on specialized areas such as algorithm theory, artificial intelligence, big data and data science, networking, cybersecurity, human computer interaction, and software development. With technology underpinning almost every area of human endeavor today, students across NMSU should consider pursuing a minor or at least taking some computer science courses. Computer science majors should review their programs of study in consultation with their advisors each semester, preferably using the most recent Undergraduate Catalog.

Graduate Program Information

The department offers both Master of Science and Doctor of Philosophy graduate degrees in computer science, along with a Master of Science in Bioinformatics. We also encourage students in other disciplines to do a graduate minor in computer science. Graduate students typically work closely with a faculty member in a specific area of research. The department offers expertise in several research areas, such as: artificial intelligence and knowledge representation; computer and wireless networks; data mining and machine learning; game design and human-computer interaction; bioinformatics; high performance computing; software engineering and programming languages; theory of computing; and assistive technologies.

A number of laboratories have been established to coordinate research activities, including

- the Knowledge representation, Logic and Advanced Programming (KLAP) lab;
- the Play and Interactive Experiences for Learning (PIxL) lab;
- the Knowledge Discovery and Data Mining (KDD) lab;
- the Programming Languages, Environments, and Automated Software Engineering (PLEASE) lab;
- the Bioinformatics Research lab;
- the Multimedia Management lab;

- the Cryptography, Privacy and Security Research (CrySPR) lab; and
- the Network and Systems Optimization Lab (NSOL).

Department members are also directing the iCREDITS interdisciplinary Center of Research Excellence in Design of Intelligent Technologies for Smartgrids, offering educational and research opportunities in smartgrids.

Entrance Requirements for Graduate Study in Computer Science

The Graduate Record Exam (GRE) General Test is not required for admission; however, high GRE scores will strengthen a candidate's application and are highly regarded in the awarding of Graduate Assistantships. To be admitted without undergraduate deficiencies, an entering student must have completed undergraduate preparation substantially equivalent to that required for the Bachelor of Science degree in Computer Science at New Mexico State University; in particular, this includes courses equivalent to

Prefix	Title	Credits
C S 172	Computer Science I	4
C S 271	Object Oriented Programming	4
C S 272	Introduction to Data Structures	4
C S 273	Machine Programming and Organization	4
C S 278	Discrete Mathematics for Computer Science	4
C S 370	Compilers and Automata Theory	4
C S 371	Software Development	4
C S 471	Programming Language Structure I	3
C S 474	Operating Systems I	3

Deficiencies should be satisfied as early in the student graduate program as possible, through the regular undergraduate courses, the C S 460 - C S 468 transition courses, or through tests administered by faculty members in the relevant areas. Students should consult with their Graduate Advisor to address issues related to deficiencies. Deficiencies are also assigned to applicants whose transcripts denote low grades in selected areas. Admission is often denied to candidates with little background in Computer Science. Instructions for prospective applicants can be found at <https://computerscience.nmsu.edu>.

Entrance Requirements for Graduate Study in Bioinformatics

The Graduate Record Exam (GRE) General Test is not required for admission; however, high GRE scores will strengthen a candidate's application and are highly regarded in the awarding of Graduate Assistantships. Students wishing to enroll in the Master program in Bioinformatics must meet the following criteria:

1. Hold a BS degree, from an accredited institution of higher learning, in either a computational field (e.g., Computer Science) or in life sciences (preferably Biology, Biochemistry, or Environmental Sciences)
2. Hold a minimum grade point average of 3.2

Applicants will be expected to provide a Career statement, motivating the interest in bioinformatics and a minimum of three letters of reference.

Graduate Assistantships

Graduate assistantships (in the form of Teaching and Research assistantships) are expected to be available during the academic year. Inquiries should be addressed to the departmental Graduate Committee.

Research assistantships are available at the discretion of individual research project leaders in the Department or elsewhere on campus. Submitting detailed vitae, letters of reference, and GRE test scores are encouraged when applying for any assistantship.

Degrees for the Department

Bachelor Degree(s) & Dual Degree(s)

- Computer Science (Algorithm Theory) - Bachelor of Science (p. 569)
- Computer Science (Artificial Intelligence) - Bachelor of Science (p. 571)
- Computer Science (Big Data and Data Science) - Bachelor of Science (p. 574)
- Computer Science (Computer Networking) - Bachelor of Science (p. 576)
- Computer Science (Cybersecurity) - Bachelor of Science (p. 579)
- Computer Science (Human Computer Interaction) - Bachelor of Science (p. 581)
- Computer Science (Secondary Education) - Bachelor of Arts (p. 584)
- Computer Science (Software Development) - Bachelor of Science (p. 586)
- Computer Science - Bachelor of Arts (p. 564)
- Computer Science - Bachelor of Science (p. 566)
- Computer Science - Bachelor of Science/Master of Science (p. 590)
- Cybersecurity - Bachelor of Science (p. 589)

Master Degree(s)

- Bioinformatics - Master of Science (p. 107)
- Computer Science - Master of Science (p. 128)
- Data Analytics (Digital Agriculture) - Master of Data Analytics (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/data-analytics-digital-agriculture-mds-online/>)
- Data Analytics - Master of Data Analytics (p. 130)
- Data Analytics - Master of Data Analytics (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/data-analytics-mds-online/>)

Doctoral Degree(s)

- Computer Science - Doctor of Philosophy (p. 185)

Minors for the Department

A student cannot earn more than one of the undergraduate minors unless they pass at least 6 credits in the second minor beyond the requirements of the first minor. The maximum number of undergraduate minors that a student may earn is two. Most courses for the minors listed below have prerequisites. Please check the undergraduate catalog for individual course prerequisites. Students interested in pursuing a computer science minor are encouraged to pick up more information at the departmental office.

- Algorithm Theory - Undergraduate Minor (p. 591)
- Bioinformatics (with Computer Science) - Graduate Minor (p. 220)
- Bioinformatics - Undergraduate Minor (p. 591)
- Computer Science (Secondary Education) - Bachelor of Arts (p. 584)
- Computer Science - Graduate Minor (p. 220)

- Computer Systems - Undergraduate Minor (p. 592)
- Software Development - Undergraduate Minor (p. 592)

Faculty

Professor Son Tran, Department Head

Professors Cook, Cao, Pontelli, Misra, Song, Tran; **Associate**

Professors Pivkina, Troups; **Assistant Professors** Hamilton, Le, Nagarkar, Reynolds, Vishwanathan, Wang; **College Associate Professor** Cooper

H. Cao, Ph.D. (Hong-Kong)– data mining, databases, data integration, applied machine learning; J. Cook, Ph.D. (Colorado)– software engineering, high performance computing; W. Hamilton, Ph.D. (Texas A&M)– media design, online communities, online education, and video game design/culture; T. Le, Ph.D. (Singapore Management University, Singapore)– data mining and machine learning, dimensionality reduction, visualization, topic models, embedding and generative models; S. Misra, Ph.D. (Arizona State)– communication networks, social networks, high performance computing, security and privacy; P. Nagarkar, Ph.D. (Arizona State)– query optimization, indexing, data analytics, big data; I. Pivkina, Ph.D. (Kentucky)– artificial intelligence, computer science education, data mining; E. Pontelli, Ph.D. (New Mexico State)– parallel processing, logic programming, knowledge representation, bioinformatics, assistive technologies; J. Reynolds (UIUC)– network and security; M. Song, Ph.D. (Washington)– statistical computing, systems biology, bioinformatics, computer vision; P. Troups Dugas, Ph.D. (Texas A&M)– digital games, human-computer interaction, mixed reality; S. Tran, Department Head, Ph.D. (Texas-El Paso)– artificial intelligence, knowledge representation, planning, logic programming, non-monotonic reasoning; R. Vishwanathan, Ph.D. (North Texas)– cryptography, theoretical and applied, security, privacy; T. Wang, Ph.D. (University of South Florida)– cyber-physical system security, web security, network security.

College Faculty:

S. Cooper, Ph.D. (New Mexico State)– computer networks

Computer Science Courses

C S 111. Computer Science Principles

4 Credits (3+2P)

This course provides a broad and exciting introduction to the field of computer science and the impact that computation has today on every aspect of life. It focuses on exploring computing as a creative activity and investigates the key foundations of computing: abstraction, data, algorithms, and programming. It looks into how connectivity and the Internet have revolutionized computing and demonstrates the global impact that computing has achieved, and it reveals how a new student in computer science might become part of the computing future. May be repeated up to 4 credits.

Prerequisite: MATH 1215 or higher.

Learning Outcomes

1. Identify and differentiate programming constructs like IF, FOR, and WHILE
2. Convert numbers between Hexadecimal, Binary and Decimal
3. Write pseudo code to manipulate a robot
4. Use an ASCII table to translate HEX strings into characters
5. Encrypt and Decrypt simple messages with a Caesar Cypher

C S 117. Introduction to Computer Animation

3 Credits (3)

Introductory course for learning to program with computer animation as well as learning basic concepts in computer science. Students create

interactive animation projects such as computer games and learn to use software packages for creating animations in small virtual worlds using 3D models. Recommended for students considering a minor/major in computer science or simply interested in beginning computer animation or programming.

C S 151. C++ Programming
3 Credits (2+2P)

Introduction to object-oriented programming in the C++ language. The focus will be on preparing students to use C++ in their own areas. No prior programming experience is required. Taught with C S 451.

Prerequisite(s): MATH 1215 or higher.

Learning Outcomes

1. Use various data types and the corresponding operations.
2. Write C++ programs that contain expressions, program control, functions, arrays, and input/output
3. Explain basic object-oriented programming concepts.
4. Demonstrate proficiency in using classes, inheritance, pointers, streams, and recursion

C S 152. Java Programming
3 Credits (2+2P)

Programming in the Java language. May be repeated up to 3 credits.

Prerequisite(s): MATH 1215 or higher.

C S 153. Python Programming I
3 Credits (3)

This course is an introduction to programming in the Python language, covering fundamental scripts, data types and variables, functions, and simple object creation and usage. The focus will be on preparing students to use Python in their own areas. No prior programming experience is required. Taught with C S 453.

Prerequisite(s): MATH 1215 or higher.

Learning Outcomes

1. Develop an algorithm to solve a problem
2. Demonstrate the ability to use Python data types: int, float, strings, and lists; and the built-in functions associated with those data types
3. Edit and debug programs using the Spyder IDE for Python
4. Implement algorithms using the Python features of assignment, input, output, branches, loops, and functions
5. Explain the fundamental concepts of object-oriented programming with Python
6. Design and implement Python classes based on given attributes and behaviors
7. Work with existing Python modules such as math, random, and os
8. Write Python programs that input data from files and store results in files

C S 154. Python Programming II
3 Credits (3)

This course covers advanced Python programming, including classes, objects, and inheritance, embedded programming in domain applications, database interaction, and advanced data and text processing. The focus will be on preparing students to use Python in their own areas.

Prerequisite(s): C S 153 or C S 453.

C S 158. R Programming I
3 Credits (3)

This course is an introduction to data processing in the R language, covering fundamental script configuration, data types and data collections, R control structures, and basic creation of graphs and data

visualizations. This course will not focus on the statistical capabilities of R, though some basic statistical computations will be used.

Prerequisite(s): MATH 1220G.

C S 171G. Modern Computing in Practice
4 Credits (3+2P)

This course provides a survey of practical and theoretical foundations for how computers work and how they support fundamental organizational needs. The course covers broad aspects of the hardware, software, and mathematical basis of computers. Lab assignments provide hands-on applications to use simple basic software tools to write simple programs, build and edit websites, analyze data with spreadsheets, choose an office productivity suite, and demonstrate computer literacy to potential employers. May be repeated up to 4 credits.

Prerequisite(s): MATH 1130G or MATH 1215 or higher.

Learning Outcomes

1. Students will create simple python programs using conditional statements and loops
2. Students will analyze data with spreadsheet formulas, charts, and tools
3. Students will create and publish a personal website using website building tools
4. Students will edit HTML and CSS to format a website manually
5. Students will practice the skill of performing software QA and providing actionable feedback to developers
6. Students will become aware of common cybersecurity risks
7. Students will learn basic vocabulary and context for broad aspects of hardware, software, and computer science theory such as Security, Privacy, Cloud Computing, the Internet, the Web, Operating Systems, Discrete Math, and Information Systems
8. Students will be exposed to various sub-fields of CS including artificial intelligence, security, data analytics, UX, web development, and QA testing
9. Students will reason about the societal impacts of technology 1
10. Students will incorporate their new knowledge and skills into their resume

C S 172. Computer Science I
4 Credits (3+2P)

Computational problem solving; problem analysis; implementation of algorithms using Java. Object-oriented concepts, arrays, searching, sorting, and recursion. Taught with C S 460. May be repeated up to 4 credits.

Prerequisite(s): (A C- or better in either MATH 1250G or (MATH 1430G or higher)) OR (A C- or better in MATH 1220G and a 1 or better in the CS Placement Test) OR (A C- or better in MATH 1220G and a C- or better in C S 111).

Learning Outcomes

1. Develop algorithms to solve problems
2. Implement algorithms using the fundamental programming features of sequence, selection, iteration, and recursion
3. Apply an understanding of primitive and object data types
4. Design and implement classes based on given attributes and behaviors
5. Explain the fundamental concepts of object-oriented programming,

C S 209. Special Topics.
1-3 Credits

May be repeated for a maximum of 12 credits.

C S 271. Object Oriented Programming**4 Credits (3+2P)**

Introduction to problem analysis and problem solving in the object-oriented paradigm. Practical introduction to implementing solutions in the C++ language. Pointers and dynamic memory allocation. Hands-on experience with useful development tools. Taught with C S 462. May be repeated up to 4 credits.

Prerequisite: At least a C- in C S 172 or ENGR 140.

Learning Outcomes

1. Develop an algorithm to solve a problem.
2. Implement algorithms using the C and C++ languages including imperative and object-oriented language features.
3. Beyond what was learned in C S 172, E E 112, or E E 161 demonstrate a noticeable increase in understanding of problem analysis and program design.
4. Demonstrate proficiency in using control structures including if statements (single selection), switch (multiple selection), and loops (repetition).
5. Demonstrate proficiency in using arrays and functions
6. Create UML class and relationship diagrams.
7. Design a class to model a real-world person, place, thing, or event.
8. Use editing and debugging software to create, debug, and test C and C++ programs.
9. Understand the basic terminology used in object-oriented programming. 1
10. Create a make file to build an executable from a set of C or C++ source files.

C S 272. Introduction to Data Structures**4 Credits (3+2P)**

Design, implementation, use of fundamental abstract data types and their algorithms: lists, stacks, queues, deques, trees; imperative and declarative programming. Internal sorting; time and space efficiency of algorithms. Taught with C S 463.

Prerequisite: At least a C- in C S 172, or placement.

Learning Outcomes

1. Be able to implement and use lists
2. Be able to implement and use stacks
3. Be able to implement and use queues
4. Be able to implement and use trees
5. Be able to perform the run time analysis of basic algorithms using Big O notation
6. Be able to implement, use, and analyze searching algorithms
7. Be able to solve a problem recursively
8. Take a problem statement from a user and convert it into a Java program that fulfills the user's needs
9. Create object oriented Java classes that effectively separate and hide implementation details from client applications

C S 273. Machine Programming and Organization**4 Credits (3+2P)**

Computer structure, instruction execution, addressing techniques; programming in machine and assembly languages. Taught with C S 464. May be repeated up to 4 credits.

Prerequisite: At least a C- in C S 172 or ENGR 140.

Learning Outcomes

1. Describe the architecture of a microcontroller, the interconnections between the components, and the basic units inside the CPU

2. Use signed and unsigned numbers, the associated branching instructions, and the corresponding flags in the status register
3. Explain immediate, direct, indirect addressing modes, their opcode and operands, and their utilities
4. Map high-level programming language features to assembly instructions, including loops, conditionals, procedure calls, value and reference parameter passing, return values, and recursion
5. Interface with I/O devices including LED and sensors via digital input and output, and analog-to-digital conversion
6. Program timers/counters and interrupts to control real-time applications
7. Design an assembly program

C S 278. Discrete Mathematics for Computer Science**4 Credits (3+2P)**

Discrete mathematics required for Computer Science, including the basics of logic, number theory, methods of proof, sequences, mathematical induction, set theory, counting, and functions. Taught with C S 465.

Prerequisite: At least C- in C S 172.

Learning Outcomes

1. Use logic to specify precise meaning of statements, demonstrate the equivalence of statements, and test the validity of arguments
2. Construct and recognize valid proofs using different techniques including the principle of mathematical induction
3. Use summations, formulas for the sum of arithmetic and geometric sequences
4. Explain and apply the concepts of sets and functions
5. Apply counting principles to determine the number of various combinatorial configurations

C S 343. Algorithm Design & Implementation**3 Credits (3)**

Introduction to efficient data structure and algorithm design. Basic graph algorithms. Balanced search trees. Classic algorithm design paradigms: divide-and-conquer, greedy scheme, and dynamic programming. Taught with C S 493.

Prerequisite: At least a C- in C S 272, or consent of instructor.

Learning Outcomes

1. Be able to use and implement sorting algorithms
2. Be able to design and implement graph algorithms
3. Be able to design and implement algorithms using the divide-and-conquer technique
4. Be able to design and implement algorithms using the greedy technique
5. Be able to design and implement algorithms using the dynamic programming technique
6. Be able to use and implement balanced search trees
7. Be able to use and implement hashing techniques
8. Be able to perform the run time analysis of basic algorithms using Big O notation

C S 370. Compilers and Automata Theory**4 Credits (3+2P)**

Methods, principles, and tools for programming language processor design; basics of formal language theory (finite automata, regular expressions, context-free grammars); development of compiler components. Taught with C S 466.

Prerequisite: At least a C- in C S 271, C S 272, and C S 273.

Learning Outcomes

1. Understand the language theory concepts of regular languages, context free languages, regular expressions, context free grammars, and formal language hierarchy
2. Use Thompson's construction to convert from regular expression to NFA, and subset construction to convert from NFA to DFA
3. Apply recursive descent parsing in programming a parser of a small grammar
4. Understand the ideas in LL and LR parsing of context-free language classes
5. Understand and use table-driven top-down (LL(1)) and bottom up (SLR) parsing to parse a sentence

C S 371. Software Development**4 Credits (3+2P)**

Software specification, design, testing, maintenance, documentation; informal proof methods; team implementation of a large project. Taught with C S 468.

Prerequisite: At least a C- in C S 271 and C S 272.

Learning Outcomes

1. Understand and explain the activities and structure of different styles of software development processes, including waterfall, (spiral), iterative, and agile methodologies
2. Apply requirements knowledge and techniques to create functional and non-functional requirements for a software system
3. Apply high and low level design ideas to create an object-oriented design of a software system
4. Use good design and programming ideas to implement individual and team software systems in compiled OOP languages
5. Apply white and black box testing techniques and tools to individual and team software development
6. Use UML class diagrams (and sequence diagrams) to capture aspects of system design and/or requirements (domain)
7. Use practical software development tools, including version control systems, automated build tools, and testing tools

C S 372. Data Structures and Algorithms**4 Credits (3+2P)**

Introduction to efficient data structure and algorithm design. Order notation and asymptotic run-time of algorithms. Recurrence relations and solutions. Abstract data type dynamic set and data structures based on trees. Classic algorithm design paradigms: divide-and-conquer, dynamic programming, greedy algorithms. Taught with C S 469. May be repeated up to 4 credits.

Prerequisite: At least a C- in C S 272 and C S 278.

Learning Outcomes

1. Analyze the growth of functions via asymptotic notation
2. Evaluate the asymptotic running time of a given algorithm
3. Solve recurrence relations of the kinds encountered in algorithm analysis
4. Design algorithms using the divide-and-conquer technique
5. Design algorithms using the greedy technique
6. Design algorithms using the dynamic-programming technique
7. Use and analyze data structures based on trees
8. Analyze the design, correctness, and time complexity of basic graph algorithms

C S 380. Introduction to Cryptography**3 Credits (3)**

The course covers basic cryptographic primitives, such as symmetric, public-key ciphers, digital signature schemes, and hash functions, and their mathematical underpinnings. Course helps students understand basic notions of security in a cryptographic sense: chosen plaintext and chosen ciphertext attacks, games, and reductions. Course also covers computational number theory relevant to cryptography. Consent of Instructor required. Taught with: C S 525.

Prerequisite: C S 278 (or equivalent) with a C or better.

Learning Outcomes

1. Describe basic cryptographic primitives, including symmetric ciphers, asymmetric ciphers, digital signatures, message authentication codes, and hash functions.
2. Understand the mathematical, fundamental underpinnings of cryptography, and how to reason about the security of cryptographic primitives: indistinguishability (IND) properties of ciphertexts, CPA/CCA games, and reductions to fundamental math assumptions;
3. Be able to discuss number theory/algebra underpinning the design of cryptographic primitives, in some depth.

C S 381. Principles of Virtual Reality**3 Credits (3)**

This course is an introduction to building systems and doing research in / on virtual reality. We cover system design, development, and evaluation, with an emphasis on recent research in the space. We cover a range of methods, qualitative and quantitative, in order to develop insights into effective VR designs. Students in this class will develop a foundation in VR development; learn about current topics in VR; and design, develop, evaluate, and report on a VR system. Consent of Instructor required.

Prerequisite: C S 485.

Learning Outcomes

1. Design and develop systems in virtual reality.
2. Understand the variety of development techniques in VR.
3. Understand the state-of-the-art in VR systems.
4. Communicate understanding of people, designs, and evaluations through presentations, demos, and/or reports.

C S 382. Modern Web Technologies**3 Credits (3)**

In this course, we will take a full-stack approach to modern web application design. We will start with the fundamentals including HTML5, CSS3, Javascript, JSON, and the underlying networking concepts and protocols driving the modern web. We will then move on to more advanced topics including javascript backend development with Node.js, NoSQL database design with MongoDB, cloud computing, and responsive web design. Finally, we cover advanced topics including the design and implementation of browser extensions and real-time web technologies like WebRTC and WebSockets. Consent of Instructor required. Taught with: C S 532.

Learning Outcomes

1. Understand the fundamental technologies and operation of the web.
2. Design and develop responsive interactive web sites.
3. Deploy web applications on Cloud Computing Platforms.
4. Leverage modern tools and packages to develop full stack web applications.
5. Be fluent in the application of emerging web technologies like browser extensions, WebSockets, and WebRTC.
6. Use existing materials and references on the web to learn new skills.

C S 383. Introduction to Deep Learning**3 Credits (3)**

The course covers basic concepts of neural networks which include transition of classical machine learning to hierarchical feature learning, feedforward networks, regularization, optimization, hyperparameter tuning, deep convolutional networks and their applications in computer vision, deep sequence models, and deep generative models. Taught together with C S 533. May be repeated up to 3 credits.

Prerequisite: At least a C- in C S 272 or C S 153, and C S 278, or consent of instructor.

Learning Outcomes

1. Have significant familiarity with different state-of-the-art theories and practices of deep learning.
2. Be able to apply deep learning to a variety of tasks suitable for data science-based projects of academia and industry.
3. Understand much of the current literature on the topic, review papers, and extend their knowledge through further study.
4. Design and evaluate novel deep learning models.
5. Train and test deep learning models on real-life and benchmark datasets using Python libraries such as TensorFlow and PyTorch.

C S 384. Graph Data Mining

3 Credits (3)

The course covers graph terminology, representation, and techniques to extract patterns from large graph data. The topics include random and scale-free graph generation, link analysis (PageRank), graph representation learning, graph neural networks, deep graph generation, community detection, frequent subgraph mining, graph classification, influence maximization, and knowledge graph mining. May be repeated up to 3 credits.

Prerequisite: At least a C- in C S 272 or C S 153, and C S 278, or consent of instructor.

Learning Outcomes

1. Have significant familiarity with different state-of-the-art theories and practices of graph data mining
2. Graph representation and graph querying using graph manipulating toolbox/library
3. Use random and scale-free graph models to generate graphs and visualize complex network properties
4. Apply algorithms such as PageRank, spectral clustering, and non-negative matrix factorization
5. Implement graph representation learning algorithms and graph neural networks
6. Understand much of the current literature on the topic, review papers, extend their knowledge through further study, and present findings of the papers.

C S 409. Independent Study

1-6 Credits (1-6)

Faculty supervised investigation, to culminate in a written report. May be repeated up to 6 credits.

Prerequisite(s): Written agreement with faculty supervisor.

C S 419. Computing Ethics and Social Implications of Computing

1 Credit (1)

An overview of ethics for computing majors includes: history of computing, intellectual property, privacy, ethical frameworks, professional ethical responsibilities, and risks of computer-based systems.

Prerequisite: At least a C- in C S 371.

Learning Outcomes

1. Understand the fundamental technologies and operation of the web.
2. Design and develop responsive interactive web sites.
3. Deploy web applications on Cloud Computing Platforms.

4. Leverage modern tools and packages to develop full stack web applications.
5. Be fluent in the application of emerging web technologies like browser extensions, WebSockets, and WebRTC.
6. Use existing materials and references on the web to learn new skills.

C S 448. Senior Project

4 Credits (4)

Capstone course in which C S majors work in teams and apply computer science skills to complete a large project. Restricted to: C S majors.

Prerequisite: At least a C- in C S 370 and C S 371.

Learning Outcomes

1. Apply design and development principles in the construction of software systems of varying complexity
2. Apply mathematical foundations, algorithmic principles, and computer science theory in the modeling and design of computer-based systems in a way that demonstrates comprehension of the tradeoffs involved in design choices
3. Design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs
4. Use current techniques, skills, and tools necessary for computing practice
5. Analyze a problem, and identify and define the computing requirements appropriate to its solution
6. Function effectively as teams to accomplish a common goal
7. Communicate effectively with a range of audiences

C S 449. Senior Thesis

4 Credits (4)

Capstone course in which C S majors apply computer science skills to complete a research project, culminating in a written thesis report. Restricted to: C S majors.

Prerequisite: At least a C- in C S 370 and C S 371.

Learning Outcomes

1. Apply design and development principles in the construction of software systems of varying complexity
2. Apply mathematical foundations, algorithmic principles, and computer science theory in the modeling and design of computer-based systems in a way that demonstrates comprehension of the tradeoffs involved in design choices
3. Design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs
4. Use current techniques, skills, and tools necessary for computing practice
5. Analyze a problem, identify, and define the computing requirements appropriate to its solution
6. Communicate effectively with a range of audiences via presentations and technical reports

C S 451. C++ Programming

3 Credits (3)

Programming in the C++ language. Taught with C S 151. More advanced than C S 151. Recommended for nonmajors only. Not for CS undergraduate students. May be repeated up to 3 credits.

Learning Outcomes

1. Use various data types and the corresponding operations.
2. Write C++ programs that contain expressions, program control, functions, arrays, and input/output.
3. Explain basic object-oriented programming concepts.

4. Demonstrate proficiency in using classes, inheritance, pointers, streams, and recursion.

C S 452. Java Programming

3 Credits (2+2P)

Programming in the Java language. More advanced than C S 152. Recommended for nonmajors only. Not for CS undergraduate standing. May be repeated up to 3 credits.

C S 453. Python Programming I

3 Credits (3)

This course is an introduction to programming in the Python language, covering fundamental scripts, data types and variables, functions, and simple object creation and usage. The focus will be on preparing students to use Python in their own areas. No prior programming experience is required. Taught with C S 153. More advanced than C S 153.

Learning Outcomes

1. Develop an algorithm to solve a problem
2. Demonstrate the ability to use Python data types: int, float, strings, and lists; and the built-in functions associated with those data types
3. Edit and debug programs using the Spyder IDE for Python
4. Implement algorithms using the Python features of assignment, input, output, branches, loops, and functions
5. Explain the fundamental concepts of object-oriented programming with Python
6. Design and implement Python classes based on given attributes and behaviors
7. Work with existing Python modules such as math, random, and os
8. Write Python programs that input data from files and store results in files

C S 454. Python Programming II

3 Credits (3)

This course covers advanced Python programming, including classes, objects, and inheritance, embedded programming in domain applications, database interaction, and advanced data and text processing. The focus will be on preparing students to use Python in their own areas. For graduate students only. Has more advanced work than C S 154, and does not count towards CS major requirements. Not for CS undergraduate students. May be repeated up to 3 credits. Restricted to: exclude C S majors.

Prerequisite(s): C S 153 or C S 453.

C S 458. R Programming I

3 Credits (3)

This course is an introduction to data processing in the R language, covering fundamental script configuration, data types and data collections, R control structures, and basic creation of graphs and data visualizations. This course will not focus on the statistical capabilities of R, though some basic statistical computations will be used. For graduate students only. Has more advanced work than C S 158. Does not count towards CS major requirements. May be repeated up to 3 credits.

Prerequisite(s): Good understanding of college algebra or higher.

C S 460. Computer Science I Transition

3 Credits (3)

Computational problem solving; problem analysis; implementation of algorithms. Recursive structures and algorithms. For C S graduate students only; cannot be used to meet a C S student's program of study. Taught with C S 172.

Learning Outcomes

1. Develop algorithms to solve problems
2. Implement algorithms using the fundamental programming features of sequence, selection, iteration, and recursion
3. Apply an understanding of primitive and object data types
4. Design and implement classes based on given attributes and behaviors
5. Explain the fundamental concepts of object-oriented programming

C S 462. Object Oriented Programming Transition

3 Credits (3)

Introduction to problem analysis and problem solving in the object-oriented paradigm. Practical introduction to implementing solutions in the C++ language. Hands-on experience with useful development tools. Cannot be used in a C S student's program of study. Consent of Instructor required. Taught with C S 271.

Prerequisite: At least a C- in C S 172 or C S 460 or consent of instructor.

Learning Outcomes

1. Develop an algorithm to solve a problem.
2. Implement algorithms using the C and C++ languages including imperative and object-oriented language features.
3. Demonstrate a noticeable increase in understanding of problem analysis and program design beyond what was learned in C S 172, E E 112, or E E 161
4. Demonstrate proficiency in using control structures including if statements (single selection), switch (multiple selection), and loops (repetition).
5. Demonstrate proficiency in using arrays and functions.
6. Create UML class and relationship diagrams.
7. Design a class to model a real-world person, place, thing, or event.
8. Use editing and debugging software to create, debug, and test C and C++ programs.
9. Understand the basic terminology used in object-oriented programming. 1
10. Create a make file to build an executable from a set of C or C++ source files.

C S 463. Introduction to Data Structures Transition

3 Credits (3)

Design, implementation, use of fundamental abstract data types and their algorithms: lists, stacks, queues, deques, trees; imperative and declarative programming. Internal sorting; time and space efficiency of algorithms. Cannot be used in a C S student's program of study. Consent of Instructor required. Taught with C S 272.

Prerequisite: At least a C- in C S 172 or C S 460 or consent of instructor.

Learning Outcomes

1. Be able to implement and use lists
2. Be able to implement and use stacks
3. Be able to implement and use queues
4. Be able to implement and use trees
5. Be able to perform the run time analysis of basic algorithms using Big O notation
6. Be able to implement, use, and analyze searching algorithms
7. Be able to solve a problem recursively
8. Take a problem statement from a user and convert it into a Java program that fulfills the user's needs

9. Create object oriented Java classes that effectively separate and hide implementation details from client applications

C S 464. Machine Programming and Organization Transition

3 Credits (3)

Computer structure, instruction execution, addressing techniques; programming in machine and assembly languages. Cannot be used in a C S student's program of study. Consent of Instructor required. Taught with C S 273.

Prerequisite: At least a C- in C S 172 or C S 460 or consent of instructor.

Learning Outcomes

1. Describe the architecture of a microcontroller, the interconnections between the components, and the basic units inside the CPU
2. Use signed and unsigned numbers, the associated branching instructions, and the corresponding flags in the status register
3. Explain immediate, direct, indirect addressing modes, their opcode and operands, and their utilities
4. Map high-level programming language features to assembly instructions, including loops, conditionals, procedure calls, value and reference parameter passing, return values, and recursion
5. Interface with I/O devices including LED and sensors via digital input and output, and analog-to-digital conversion
6. Program timers/counters and interrupts to control real-time applications
7. Design an assembly program

C S 465. Discrete Math for Computer Science Transition

3 Credits (3)

Logical connectives, sets, functions, relations, graphics, trees, proofs, induction, and application to computer science. For C S graduate students only. Cannot be used in a C S student's program of study. Consent of Instructor required. Taught with C S 278.

Prerequisite: At least a C- in C S 172 or C S 460 or consent of instructor.

Learning Outcomes

1. Use logic to specify precise meaning of statements, demonstrate the equivalence of statements, and test the validity of arguments
2. Construct and recognize valid proofs using different techniques including the principle of mathematical induction
3. Use summations, formulas for the sum of arithmetic and geometric sequences
4. Explain and apply the concepts of sets and functions
5. Apply counting principles to determine the number of various combinatorial configurations

C S 466. Compilers and Automata Transition

3 Credits (3)

Methods, principles, and tools for programming language processor design; basics of formal language theory (finite automata, regular expressions, context-free grammars); development of compiler components. For C S graduate students only; cannot be used in a students program of study. Taught with C S 370.

Prerequisite: At least a C in (C S 271 or C S 462), in (C S 272 or C S 463), in (C S 273 or C S 464), or consent of instructor.

Learning Outcomes

1. Understand the language theory concepts of regular languages, context free languages, regular expressions, context free grammars, and formal language hierarchy
2. Use Thompson's construction to convert from regular expression to NFA, and subset construction to convert from NFA to DFA

3. Apply recursive descent parsing in programming a parser of a small grammar
4. Understand the ideas in LL and LR parsing of context-free language classes
5. Understand and use table-driven top-down (LL(1)) and bottom up (SLR) parsing to parse a sentence

C S 468. Software Development Transition

3 Credits (3)

Software specification, design, testing, maintenance, documentation; informal proof methods; team implementation of a large project. For C S graduate students only. Cannot be used in a C S student's program of study. Consent of Instructor required. Taught with C S 371.

Prerequisite: At least a C- in C S 271 or C S 462, in C S 272 or C S 463, or consent of instructor.

Learning Outcomes

1. Understand and explain the activities and structure of different styles of software development processes, including waterfall, (spiral), iterative, and agile methodologies
2. Apply requirements knowledge and techniques to create functional and non-functional requirements for a software system
3. Apply high and low level design ideas to create an object-oriented design of a software system
4. Use good design and programming ideas to implement individual and team software systems in compiled OOP languages
5. Apply white and black box testing techniques and tools to individual and team software development
6. Use UML class diagrams (and sequence diagrams) to capture aspects of system design and/or requirements (domain)
7. Use practical software development tools, including version control systems, automated build tools, and testing tools

C S 469. Data Structure and Algorithms Transition

3 Credits (3)

Introduction to efficient data structure and algorithm design. Order notation and asymptotic run-time of algorithms. Recurrence relations and solutions. Abstract data type dynamic set and data structures based on trees. Classic algorithm design paradigms: divide-and-conquer, dynamic programming, greedy algorithms. For CS graduate students only. Taught with CS 372. May be repeated up to 24 credits.

Prerequisite: At least a C- in (C S 272 or C S 463) and a C- in (C S 278 or C S 465), or consent of instructor.

Learning Outcomes

1. Analyze the growth of functions via asymptotic notation
2. Evaluate the asymptotic running time of a given algorithm
3. Solve recurrence relations of the kinds encountered in algorithm analysis
4. Design algorithms using the divide-and-conquer technique
5. Design algorithms using the greedy technique
6. Design algorithms using the dynamic-programming technique
7. Use and analyze data structures based on trees
8. Analyze the design, correctness, and time complexity of basic graph algorithms

C S 471. Programming Language Structure I

3 Credits (3)

Syntax, semantics, implementation, and application of programming languages; abstract data types; concurrency. Not for C S graduate students.

Prerequisite: At least a C- in C S 370 and C S 371.

Learning Outcomes

1. Improve the background for choosing appropriate programming languages for certain classes of programming problems
2. Increase the ability to learn new programming languages
3. Critically evaluate what paradigm and language are best suited for a new problem
4. Demonstrate the use of the primary segments for a running program
5. Apply the principles of functional programming
6. Apply the principles of logic programming
7. Program a simple parallel program with threads
8. Program in at least five different programming languages
9. Program in C to demonstrate architecture details

C S 473. Architectural Concepts I

3 Credits (3)

Comparison of architectures to illustrate concepts of computer organization; relationships between architectural and software features. Not for C S graduate students.

Prerequisite: At least a C- in C S 273 and C S 370.

Learning Outcomes

1. Explain the concepts in instruction set architecture
2. Analyze the behavior of pipelined CPU data path and control
3. Analyze behavior and performance of memory hierarchies with different cache designs
4. Describe the implementation of binary integer and floating point representation and arithmetic
5. Identify and analyze performance of instruction level parallelism and multi-core parallelism
6. Describe virtual memory and architectural support for operating systems
7. Understand the organization of various kinds of secondary storage devices, and their performance and tradeoffs
8. Create software that demonstrates performance of architectural features and evaluate the effects of software change

C S 474. Operating Systems I

3 Credits (3)

Operating system principles and structures, and interactions with architectures. Not for C S graduate students.

Prerequisite: At least a C- in C S 273, C S 371, and C S 372.

Learning Outcomes

1. Explain OS control and management of hardware resources
2. Explain OS management and execution of processes
3. Explain OS control and management of real and virtual memory
4. Explain classical concurrency issues and their solutions
5. Analyze and implement threads
6. Analyze OS interaction with networks and architecture

C S 475. Artificial Intelligence I

3 Credits (3)

Fundamental principles and techniques in artificial intelligence systems. Intelligent Agents; solving problems by searching; local search techniques; game-playing agents; constraint satisfaction problems; knowledge representation and reasoning. Further selected topics may also be covered. Not for C S graduate students. Taught with C S 505.

Prerequisite: At least a C- in C S 272 and C S 278.

Learning Outcomes

1. Use various search algorithms commonly used in problem-solving
2. Use methods for solving constraint satisfaction problems
3. Use propositional and first-order logic to represent knowledge
4. Use logical inference methods to derive conclusions from a knowledge base
5. Use adversarial search for game-playing agents
6. Analyze the different search strategies
7. Design and Implement heuristic search for problem-solving

C S 476. Computer Graphics I

3 Credits (3)

Languages, programming, devices, and data structures for representation and interactive display of complex objects. Not for C S graduate students. Taught with C S 506.

Prerequisite: At least C- in C S 370 or C S 371.

Learning Outcomes

1. Techniques used in three-dimensional graphics
2. Computer Graphics lightning and shading
3. Client-server graphics using WebGL
4. Geometric and Solid modeling
5. Computer Graphics implementation algorithms

C S 477. Digital Game Design

3 Credits (3)

An introduction to digital game design. Topics include design, development, and playtesting of games. The course is structured to use team-based learning. Not for C S graduate students. Taught with C S 517.

Prerequisite/Corequisite: C S 371.

Learning Outcomes

1. Describe, analyze, and/or critique games with a consistent vocabulary
2. Design, develop, and playtest games
3. Understand the formal systems of games
4. Communicate game designs through demonstrations and presentations

C S 478. Computer Security

3 Credits (3)

Introduction to the art and science of computer security. Fundamentals of computer security including elementary cryptography, authentication and access control, security threats, attacks, detection and prevention in application software, operating systems, networks and databases. Not for C S graduate students. Taught with C S 513.

Prerequisite: At least a C- in C S 272, C S 273 or consent of instructor.

Learning Outcomes

1. Describe fundamental concepts in security and privacy
2. Understand requirements of security in different contexts
3. Describe practical implementation challenges in security/privacy system design
4. Explain at a high-level symmetric and public key cryptography
5. Explain various access control mechanisms such as authentication, authorization
6. Understand aspects of secure system design that a computer programmer/engineer needs to account for

C S 479. Special Topics

1-12 Credits

Topics announced in the Schedule of Classes. May be repeated under different subtitles. Not for C S graduate students. May be repeated up to 12 credits.

C S 480. Linux System Administration

3 Credits (3)

Basic system administration for Linux environments. Topics include user managements, file systems, security, backups, system monitoring, kernel configuration and other relevant aspects of system administration. Not for Computer Science graduate students.

Learning Outcomes

1. Be able to properly set up, configure, and maintain a Linux-based set of networked computers with shared resources
2. Understand the significance of proper administration of systems and its impact on users, their data and computational resources, and the security of the overall installation

C S 481. Visual Programming

3 Credits (3)

Design and implementation of programs using visual (i.e. dataflow or diagrammatic) programming techniques, with an emphasis on real-time data processing. Students will learn how to design visual programs, including how to handle cycles and state maintenance, and will learn to process audio, video, and other data using visual programs. Not for C S graduate students. Taught with C S 518.

Prerequisite: At least a C- in C S 272 and C S 278.

Learning Outcomes

1. Develop software in graph-based visual environments
2. Understand flows of control in visual programming environments
3. Use signals, digital and analog, to drive software
4. Communicate software design and evaluation with presentations, demos, and reports

C S 482. Database Management Systems I

3 Credits (3)

Database design and implementation; models of database management systems; privacy, security, protection, recovery. Not for C S graduate students. Taught with C S 502.

Prerequisite: At least a C- in C S 272 and C S 278.

Learning Outcomes

1. Utilize the basic concepts of relational database model
2. Utilize database query languages (e.g. SQL)
3. Identify data integrity and security requirements
4. Analyze, capture, and model user requirements for building database systems using conceptual models
5. Design and normalize relational schemas
6. Apply application development methods to implement a database system

C S 484. Computer Networks I

3 Credits (3)

Fundamental concepts of computer communication networks: layered network architecture, network components, protocol stack and service. Example of application, transport, network and data link layers, protocols primarily drawn from the Internet (TCP, UDP, and IP) protocol multimedia networks; network management and security. Not for C S graduate students. Taught with C S 504.

Prerequisite: At least a C- in C S 272 and CS 273.

Learning Outcomes

1. Explain the layered model of networking using the OSI and TCP/IP models

2. Describe the purpose and concepts of each layer in the OSI and TCP/IP models
3. Describe IP as a particular network layer protocol
4. Describe TCP and UDP as particular transport layer protocols
5. Describe Ethernet (11) and WiFi (15) as particular data link layer protocols
6. Describe and analyze routing and routing issues
7. Describe and analyze data link layer switching
8. Describe the need for application protocols such as HTTP
9. Explain other network issues such as multicasting and audio/video data streaming 1
10. Implement socket-based network programs

C S 485. Human-Centered Computing

3 Credits (3)

Covers iterative, human-centered interface design, including prototyping and evaluation. Basics of graphic design and visualization. Not for C S graduate students. Taught with C S 515.

Prerequisite: At least C- in C S 371.

Learning Outcomes

1. Describe, analyze, and/or critique a device interface using a design vocabulary
2. Enact a human-centered process of interaction design: gather data; develop a data-driven design; iterate design through testing; and evaluate results
3. Conduct human-computer interaction research by proposing, developing, and conducting experiments; analyzing data; and developing synthesized results
4. Communicate design and evaluation with presentations, demos, and reports
5. Implement a variety of interaction techniques

C S 486. Bioinformatics

3 Credits (3)

Introduction to bioinformatics and computational biology. Computational approaches to sequences analysis, protein structure prediction and analysis, and selected topics from current advances in bioinformatics. Not for C S graduate students. Taught with C S 516.

Prerequisite: At least a C- in C S 272 and C S 278.

Learning Outcomes

1. Explain the biology motivation of a bioinformatics question
2. Formulate a computational problem and its solution to address a molecular biology question
3. Implement basic bioinformatics algorithms such as sequence alignment, pattern matching, and genome assembly
4. Evaluate the performance of a bioinformatics algorithm on real data sets
5. Argue the correctness of a bioinformatics algorithm
6. Analyze the complexity of a bioinformatics algorithm

C S 487. Applied Machine Learning I

3 Credits (3)

An introductory course on practical machine learning. An overview of concepts for both unsupervised and supervised learning. Topics include classification, regression, clustering, and dimension reduction. Classical methods and algorithms such as linear regression, neural networks, support vector machines, and ensemble approaches. Recent techniques such as deep learning. Focused on applying of machine

learning techniques in application domains. Not for Graduate Majors.
Taught with: C S 519.

Prerequisite: At least a C- in C S 272, MATH 1511G; or consent of instructor.

Learning Outcomes

1. Implement and utilize different data processing techniques
2. Differentiate and assess several dimension reduction techniques
3. Utilize several classifiers (SVM, Decision tree, k-Nearest Neighbor, and logistic regression) and differentiate their advantages and disadvantages
4. Explain and demonstrate regression analysis
5. Describe and illustrate clustering approaches
6. Apply ensemble learning approaches
7. Implement several neural network classifiers, including deep learning models

C S 488. Introduction to Data Mining

3 Credits (3)

Techniques for exploring large data sets and discovering patterns in them. Data mining concepts, metrics to measure its effectiveness. Methods in classification, clustering, frequent pattern analysis. Selected topics from current advances in data mining. Taught with C S 508.

Prerequisite: At least a C- in C S 272 and C S 278.

Learning Outcomes

1. Explain and recognize different data mining tasks such as data pre-processing, visualization, classification, regression, clustering, association rules, and anomaly detection
2. Apply classical data mining / machine learning algorithms for classification, clustering, association rules, and anomaly detection
3. Evaluate and compare the performance of different data mining / machine learning algorithms
4. Utilize data mining algorithms to analyze data in real applications using a data mining tool

C S 489. Bioinformatics Programming

3 Credits (3)

Computer programming to analyze high-throughput molecular biology data including genomic sequences, bulk and single-cell transcriptome, epigenome, and other omics data. Quality control, library size normalization, confounding effect removal, clustering, statistical modeling, trajectory inference, and visualization. Taught with C S 509.

May be repeated up to 3 credits.

Learning Outcomes

1. Write R scripts and functions to manipulate biological sequences, genome annotation, and gene expression data
2. Perform high-throughput data analysis with established R packages
3. Detect differential gene expression on RNA sequencing data
4. Perform single-cell RNA sequencing data analysis (quality control, library size normalization, confounding effect removal, modeling)
5. Assess statistical significance of analytical results
6. Create automatic data analysis pipeline to link multiple software packages

C S 491. Parallel Programming

3 Credits (3)

Programming of shared memory and distributed memory machines; tools and languages for parallel programming; techniques for parallel programming; parallel programming environments. Not for C S graduate students. Taught with C S 521.

Prerequisite: At least a C- in C S 370 or consent of instructor.

Learning Outcomes

1. Describe existing parallel architectures including shared memory versus distributed memory platforms
2. Apply basic techniques for organizing parallel computations
3. Apply basic techniques for performance measurement and theoretical limitations of parallelism
4. Explain alternative parallel techniques and hardware
5. Perform performance Analysis of different parallel programming techniques
6. Program shared memory machines using threads, processes, and the OpenMP library
7. Program using a message passing paradigm and obtain working knowledge of the Message Passing Interface (MPI)

C S 493. Algorithm Design and Implementation

3 Credits (3)

This course introduces the basic knowledge of designing classical algorithms and implementing these algorithms using a programming language. In particular, the course teaches various data structures, including graphs and balanced binary search trees, and efficient schemes to implement these data structures. This course also teaches basic algorithm design techniques including divide-and-conquer, greedy scheme, and dynamic programming. This course covers graph algorithms, including graph traversals (depth-first search and breadth-first search), connectivity, shortest paths, and minimum spanning trees. Graduate standing. Not for CS students. Taught with C S 343.

Prerequisite: At least a C- in C S 272, or Consent of Instructor.

Learning Outcomes

1. Be able to use and implement sorting algorithms
2. Be able to design and implement graph algorithms
3. Be able to design and implement algorithms using the divide-and-conquer technique
4. Be able to design and implement algorithms using the greedy technique
5. Be able to design and implement algorithms using the dynamic programming technique
6. Be able to use and implement balanced search trees
7. Be able to use and implement hashing techniques
8. Be able to perform the run time analysis of basic algorithms using Big O notation

C S 494. Introduction to Smart Grids

3 Credits (3)

This course is an introduction to the technologies and design strategies associated with the Smart Grid. The emphasis will be on the development of communications, energy delivery, coordination mechanisms, and management tools to monitor transmission and distribution networks. Topics include: Smart grid introduction and evolution; Power systems; Networking and transport control; Artificial intelligence & agent coordination; Data mining for smart grids. Taught with C S 514. May be repeated up to 3 credits.

Prerequisite: At least a C- in C S 272 and a C- in ENGR 230; or Consent of instructor.

Learning Outcomes

1. Get basic understanding of how conventional power system is operated and protected
2. Understand and use basic knowledge of communication techniques in smart grids

3. Understand and use basic knowledge for the coordination of the different units in smart grids
4. Understand and apply data mining techniques for protecting smart grids

C S 496. Cloud and Edge Computing **3 Credits (3)**

The course presents a top-down view of cloud computing, from applications and administration to programming and infrastructure. Its main focus is on the concepts of networking and parallel programming for cloud computing and large scale distributed systems which form the cloud infrastructure. The topics include: overview of cloud computing, cloud systems, parallel processing in the cloud, distributed storage systems, virtualization, security in the cloud, and multicore operating systems. Students will study state-of-the-art approaches to cloud computing followed by large cloud corporations, namely Google, Amazon, Microsoft, and Yahoo. Students will also apply what they learn through project developments using Amazon Web Services. Not for graduate CS majors. Taught with: C S 522.

Prerequisite: At least a C- in C S 372; background in C S 484/C S 504 is preferred or consent of instructor.

Learning Outcomes

1. The emphasis of the course will be on the understanding the concepts and the engineering trade-offs involved in the design of cloud computing systems
2. Cloud deployment models, cloud service models (software-as-a-service, infrastructure-as-a-service, protocol-as-a-service), cloud architecture, cloud-edge security, service level agreements, and load balancing in cloud and datacenters
3. Learn about cloud computing, especially what are their fundamental components, how these components interact, and how the technology is evolving for the future (edge computing, cloudlets, mobile edge computing, etc.).

C S 502. Database Management Systems I **3 Credits (3)**

Database design and implementation; models of database management systems; privacy, security, protection, recovery; taught with C S 482; requires more advanced graduate work than C S 482. Students are expected to have solid knowledge of data structures and discrete mathematics.

Learning Outcomes

1. Utilize the basic concepts of relational database model
2. Utilize database query languages (e.g. SQL)
3. Identify data integrity and security requirements
4. Analyze, capture, and model user requirements for building database systems using conceptual models
5. Design and normalize relational schemas
6. Apply application development methods to implement a database system

C S 504. Computer Networks I **3 Credits (3)**

Fundamental concepts of computer communication networks: layered network architecture, network components, protocol stack and service. Example of application, transport, network and data link layers, protocols primarily drawn from the Internet (TCP, UDP, and IP) protocol suite; local and wide area networks, wireless and mobile networks, multimedia networks; network management and security; taught with C S 484; requires more advanced graduate work than C S 484. Students are expected to have solid knowledge of data structures, machine-level

programming. Knowledge of statistics (at the level of MATH 371 or MATH 470) is recommended.

Learning Outcomes

1. Explain the layered model of networking using the OSI and TCP/IP models
2. Describe the purpose and concepts of each layer in the OSI and TCP/IP models
3. Describe IP as a particular network layer protocol
4. Describe TCP and UDP as particular transport layer protocols
5. Describe Ethernet (802-11) and WiFi (802-15) as particular data link layer protocols
6. Describe and analyze routing and routing issues
7. Describe and analyze data link layer switching
8. Describe the need for application protocols such as HTTP
9. Explain other network issues such as multicasting and audio/video data streaming
10. Implement socket-based network programs

C S 505. Artificial Intelligence I **3 Credits (3)**

Fundamental principles and techniques in artificial intelligence systems. Knowledge representation formalisms; heuristic problem solving techniques; automated logical deduction; robot planning methods; algorithmic techniques for natural language understanding, vision and learning; taught with C S 475; requires more advanced graduate work than C S 475. Students are expected to have strong knowledge of algorithms and data structures (at the level of C S 372).

Learning Outcomes

1. Use various search algorithms commonly used in problem-solving
2. Use methods for solving constraint satisfaction problems
3. Use propositional and first-order logic to represent knowledge
4. Use logical inference methods to derive conclusions from a knowledge base
5. Use adversarial search for game-playing agents
6. Analyze the different search strategies
7. Design and Implement heuristic search for problem-solving

C S 506. Computer Graphics I **3 Credits (3)**

Languages, programming, devices, and data structures for representation and interactive display of complex objects. Taught with C S 476. Requires more advanced graduate work than C S 476. Students are expected to have knowledge of compilers design and software engineering equivalent to C S 370 and C S 371.

Learning Outcomes

1. Techniques used in three-dimensional graphics
2. Computer Graphics lightning and shading
3. Client-server graphics using WebGL
4. Geometric and Solid modeling
5. Computer Graphics implementation algorithms

C S 508. Introduction to Data Mining **3 Credits (3)**

Techniques for exploring large data sets and discovering patterns in them. Data mining concepts, metrics to measure its effectiveness. Methods in classification, clustering, frequent pattern analysis. Selected topics from current advances in data mining. Students are expected to have a preparation in Discrete Mathematics and Data Structures

equivalent to C S 272 and C S 278. Requires more advanced graduate work than C S 488. Taught with: C S 488.

Learning Outcomes

1. Explain and recognize different data mining tasks such as data pre-processing, visualization, classification, regression, clustering, association rules, and anomaly detection
2. Apply classical data mining / machine learning algorithms for classification, clustering, association rules, and anomaly detection
3. Evaluate and compare the performance of different data mining / machine learning algorithms
4. Utilize data mining algorithms to analyze data in real applications using a data mining tool

C S 509. Bioinformatics Programming

3 Credits (3)

Computer programming to analyze high-throughput molecular biology data including genomic sequences, bulk and single-cell transcriptome, epigenome, and other omics data. Quality control, library size normalization, confounding effect removal, clustering, statistical modeling, trajectory inference, and visualization. Taught with C S 489. Requires more advanced graduate work than C S 489.

Learning Outcomes

1. Write R scripts and functions to manipulate biological sequences, genome annotation, and gene expression data
2. Perform high-throughput data analysis with established R packages
3. Detect differential gene expression on RNA sequencing data
4. Perform single-cell RNA sequencing data analysis (quality control, library size normalization, confounding effect removal, modeling)
5. Assess statistical significance of analytical results
6. Create automatic data analysis pipeline to link multiple software packages

C S 510. Automata, Languages, Computability

3 Credits (3)

Regular and context-free languages, pushdown and finite-state automata, Turing machines, models of computation, halting problems. Students are expected to have knowledge of algorithms equivalent to C S 372. May be repeated up to 3 credits.

Learning Outcomes

1. Describe the language accepted by an automaton or generated by a regular expression or a context-free grammar
2. Design automata, regular expressions and context-free grammars accepting or generating a certain language
3. Prove properties of languages, grammars, and automata with formal mathematical methods
4. Convert between equivalent deterministic and non-deterministic finite automata, and regular expressions
5. Convert between equivalent context-free grammars and pushdown automata
6. Define Turing machines performing simple tasks

C S 513. Computer Security

3 Credits (3)

Introduction to the art and science of computer security. Fundamentals of computer security including elementary cryptography, authentication and access control, security threats, attacks, detection and prevention in application software, operating systems, networks and databases. Taught with C S 478. Requires more advanced graduate work than C S 478. Recommended knowledge of materials in C S 272. May be repeated up to 3 credits.

Prerequisite: At least a C- in C S 273 or consent of instructor.

Learning Outcomes

1. Describe fundamental concepts in security and privacy
2. Understand requirements of security in different contexts
3. Describe practical implementation challenges in security/privacy system design
4. Explain at a high-level symmetric and public key cryptography
5. Explain various access control mechanisms such as authentication, authorization
6. Understand aspects of secure system design that a computer programmer/engineer needs to account for

C S 514. Introduction to Smart Grids

3 Credits (3)

This course is an introduction to the technologies and design strategies associated with the Smart Grid. The emphasis will be on the development of communications, energy delivery, coordination mechanisms, and management tools to monitor transmission and distribution networks. Topics include: Smart grid introduction and evolution; Power systems; Networking and transport control; Artificial intelligence & agent coordination; Data mining for smart grids. Taught with C S 494. Requires more advanced work than C S 494. May be repeated up to 3 credits.

Prerequisite: At least a C- in C S 272 and a C- in ENGR 230; or Consent of instructor.

Learning Outcomes

1. Get basic understanding of how conventional power system is operated and protected
2. Understand and use basic knowledge of communication techniques in smart grids
3. Understand and use basic knowledge for the coordination of the different units in smart grids
4. Understand and apply data mining techniques for protecting smart grids

C S 515. Human-Centered Computing

3 Credits (3)

Covers iterative, human-centered interface design, including prototyping and evaluation. Basics of graphic design and visualization. Taught with C S 485. Requires more advanced graduate work than C S 485 with an emphasis on studying recent research in human-computer interaction. Students are expected to have knowledge of software engineering equivalent to C S 371.

Learning Outcomes

1. Describe, analyze, and/or critique a device interface using a design vocabulary
2. Enact a human-centered process of interaction design: gather data; develop a data-driven design; iterate design through testing; and evaluate results
3. Conduct human-computer interaction research by proposing, developing, and conducting experiments; analyzing data; and developing synthesized results
4. Communicate design and evaluation with presentations, demos, and reports
5. Implement a variety of interaction techniques

C S 516. Bioinformatics

3 Credits (3)

Introduction to bioinformatics and computational biology. Computational approaches to sequences analysis, protein structure prediction and analysis, and selected topics from current advances in bioinformatics;

taught with C S 486; requires more advanced graduate work than C S 486. Students are expected to have a knowledge of algorithms and data structures equivalent to C S 372 or exposure to Biology (equivalent to BIOL 2310 or BIOL 311).

Learning Outcomes

1. Explain the biology motivation of a bioinformatics question
2. Formulate a computational problem and its solution to address a molecular biology question
3. Implement basic bioinformatics algorithms such as sequence alignment, pattern matching, and genome assembly
4. Evaluate the performance of a bioinformatics algorithm on real data sets
5. Argue the correctness of a bioinformatics algorithm
6. Analyze the complexity of a bioinformatics algorithm

C S 517. Digital Game Design

3 Credits (3)

An introduction to digital game design. Topics include design, development, and playtesting of games. The course is structured to use team-based learning. Taught with C S 477. Requires more advanced graduate work than C S 477 with deeper attention to a team game project.

Learning Outcomes

1. Describe, analyze, and/or critique games with a consistent vocabulary
2. Design, develop, and playtest games
3. Understand the formal systems of games
4. Communicate game designs through demonstrations and presentations

C S 518. Visual Programming

3 Credits (3)

Design and implementation of programs using visual (i.e. dataflow or diagrammatic) programming techniques, with an emphasis on real-time data processing. Students will learn how to design visual programs, including how to handle cycles and state maintenance, and will learn to process audio, video, and other data using visual programs. Students must be in graduate standing to enroll. Taught with C S 481. Requires more advanced graduate work than C S 481.

Learning Outcomes

1. Develop software in graph-based visual environments
2. Understand flows of control in visual programming environments
3. Use signals, digital and analog, to drive software
4. Communicate software design and evaluation with presentations, demos, and reports

C S 519. Applied Machine Learning I

3 Credits (3)

An introductory course on practical machine learning. An overview of concepts for both unsupervised and supervised learning. Topics include classification, regression, clustering, and dimension reduction. Classical methods and algorithms such as linear regression, neural networks, support vector machines, and ensemble approaches. Recent techniques such as deep learning. Focused on applying of machine learning techniques in application domains. Taught with: C S 487. Requires more advanced graduate work than C S 487.

Learning Outcomes

1. Implement and utilize different data processing techniques
2. Differentiate and assess several dimension reduction techniques

3. Utilize several classifiers (SVM, Decision tree, k-Nearest Neighbor, and logistic regression) and differentiate their advantages and disadvantages
4. Explain and demonstrate regression analysis
5. Describe and illustrate clustering approaches
6. Apply ensemble learning approaches
7. Implement several neural network classifiers, including deep learning models

C S 521. Parallel Programming

3 Credits (3)

Programming of shared memory and distributed memory machines; tools and languages for parallel programming; parallelizing compilers; parallel programming environments; taught with C S 491; requires more advanced graduate work than C S 491. Students are expected to have knowledge of programming and machine organization equivalent to C S 271 and C S 273.

Learning Outcomes

1. Describe existing parallel architectures including shared memory versus distributed memory platforms
2. Apply basic techniques for organizing parallel computations
3. Apply basic techniques for performance measurement and theoretical limitations of parallelism
4. Explain alternative parallel techniques and hardware
5. Perform performance Analysis of different parallel programming techniques
6. Program shared memory machines using threads, processes, and the OpenMP library
7. Program using a message passing paradigm and obtain working knowledge of the Message Passing Interface (MPI)

C S 522. Cloud and Edge Computing

3 Credits (3)

The course presents a top-down view of cloud computing, from applications and administration to programming and infrastructure. Its main focus is on the concepts of networking and parallel programming for cloud computing and large scale distributed systems which form the cloud infrastructure. The topics include: overview of cloud computing, cloud systems, parallel processing in the cloud, distributed storage systems, virtualization, security in the cloud, and multicore operating systems. Students will study state-of-the-art approaches to cloud computing followed by large cloud corporations, namely Google, Amazon, Microsoft, and Yahoo. Students will also apply what they learn through project developments using Amazon Web Services. Might have additional requirements for graduate students. To enroll in this course a background in C S 484/C S 504 is preferred or have consent from the instructor. Taught with: C S 496. Requires more advanced graduate work than C S 496.

Learning Outcomes

1. The emphasis of the course will be on the understanding the concepts and the engineering trade-offs involved in the design of cloud computing systems
2. Cloud deployment models, cloud service models (software-as-a-service, infrastructure- as-a-service, protocol-as-a-service), cloud architecture, cloud-edge security, service level agreements, and load balancing in cloud and datacenters
3. Learn about cloud computing, especially what are their fundamental components, how these components interact, and how the

technology is evolving for the future (edge computing, cloudlets, mobile edge computing, etc.).

C S 525. Introduction to Cryptography

3 Credits (3)

The course covers basic cryptographic primitives, such as symmetric, public-key ciphers, digital signature schemes, and hash functions, and their mathematical underpinnings. Course helps students understand basic notions of security in a cryptographic sense: chosen plaintext and chosen ciphertext attacks, games, and reductions. Course also covers computational number theory relevant to cryptography. Consent of Instructor required. Taught with: C S 380. Requires more advanced graduate work than C S 380.

Prerequisite: C S 278 (or equivalent) with a C or better.

Learning Outcomes

1. Describe basic cryptographic primitives, including symmetric ciphers, asymmetric ciphers, digital signatures, message authentication codes, and hash functions.
2. Understand the mathematical, fundamental underpinnings of cryptography, and how to reason about the security of crypto primitives: indistinguishability (IND) properties of ciphertexts, CPA/CCA games, and reductions to fundamental math assumptions;
3. Be able to discuss number theory/algebra underpinning the design of cryptographic primitives, in some depth.

C S 532. Modern Web Technologies

3 Credits (3)

In this course, we will take a full-stack approach to modern web application design. We will start with the fundamentals including HTML5, CSS3, Javascript, JSON, and the underlying networking concepts and protocols driving the modern web. We will then move on to more advanced topics including javascript backend development with Node.js, NoSQL database design with MongoDB, cloud computing, and responsive web design. Finally, we cover advanced topics including the design and implementation of browser extensions and real-time web technologies like WebRTC and WebSockets. Consent of Instructor required. Taught with: C S 382. Requires more advanced graduate work than C S 382.

Learning Outcomes

1. Understand the fundamental technologies and operation of the web.
2. Design and develop responsive interactive web sites.
3. Deploy web applications on Cloud Computing Platforms.
4. Leverage modern tools and packages to develop full stack web applications.
5. Be fluent in the application of emerging web technologies like browser extensions, WebSockets, and WebRTC.
6. Use existing materials and references on the web to learn new skills.

C S 533. Introduction to Deep Learning

3 Credits (3)

The course covers basic concepts of neural networks which include transition of classical machine learning to hierarchical feature learning, feedforward networks, regularization, optimization, hyperparameter tuning, deep convolutional networks and their applications in computer vision, deep sequence models, and deep generative models. Taught with C S 383. Requires more advanced graduate work than C S 383. May be repeated up to 3 credits.

Prerequisite: At least a C- in C S 272 or C S 153, and C S 278, or consent of instructor.

Learning Outcomes

1. Have significant familiarity with different state-of-the-art theories and practices of deep learning.
2. Be able to apply deep learning to a variety of tasks suitable for data science-based projects of academia and industry.
3. Understand much of the current literature on the topic, review papers, and extend their knowledge through further study.
4. Design and evaluate novel deep learning models.
5. Train and test deep learning models on real-life and benchmark datasets using Python libraries such as TensorFlow and PyTorch.

C S 534. Graph Data Mining

3 Credits (3)

The course covers graph terminology, representation, and techniques to extract patterns from large graph data. The topics include random and scale-free graph generation, link analysis (PageRank), graph representation learning, graph neural networks, deep graph generation, community detection, frequent subgraph mining, graph classification, influence maximization, and knowledge graph mining. Taught with C S 384. Requires more advanced graduate work than C S 384. May be repeated up to 3 credits.

Prerequisite: At least a C- in C S 272 or C S 153, and C S 278, or consent of instructor.

Learning Outcomes

1. Have significant familiarity with different state-of-the-art theories and practices of graph data mining.
2. Graph representation and graph querying using graph manipulating toolbox/library.
3. Use random and scale-free graph models to generate graphs and visualize complex network properties.
4. Apply algorithms such as PageRank, spectral clustering, and non-negative matrix factorization.
5. Implement graph representation learning algorithms and graph neural network.
6. Understand much of the current literature on the topic, review papers, extend their knowledge through further study, and present findings of the papers.

C S 570. Analysis of Algorithms

3 Credits (3)

Techniques for design and analysis of algorithms; time and space complexity; proving correctness of programs. Particular algorithms such as sorting, searching, dynamic programming. NP complete problems. Students are expected to have knowledge of algorithms and data structures equivalent to C S 372.

Learning Outcomes

1. Prove algorithm correctness by loop-invariant
2. Prove an algorithm to be incorrect by counterexamples
3. Develop efficient divide-and-conquer algorithms
4. Design and analyze binary search tree algorithms
5. Construct dynamic programming solutions
6. Prove the correctness of dynamic programming solutions by contraposition
7. Traverse graphs efficiently
8. Find paths in graphs efficiently
9. Determine if a problem is NP-Complete or NP-Hard 1
10. Basic concepts of quantum computing

C S 573. Architectural Concepts II**3 Credits (3)**

Advanced topics related to computer architecture, guided by the current literature. Students are expected to have knowledge of computer architectures equivalent to C S 473 and of operating systems equivalent to C S 474. Crosslisted with: E E 564.

Learning Outcomes

1. Be able to explain the features in a modern multicore CPU architecture
2. Be able to utilize hardware counter features of a CPU in performance evaluation
3. Be able to explain the architecture of GPUs and their capabilities and drawbacks
4. Be able to evaluate novel cutting-edge architectural features and designs
5. Be able to present a research paper to an advanced audience

C S 574. Operating Systems II**3 Credits (3)**

Advanced topics related to operating system principles, guided by the current literature. Students are expected to have knowledge of computer architectures and operating systems equivalent to C S 473 and C S 474.

Learning Outcomes

1. Further an understanding of the principles of operating systems.
2. Develop insight into process management and scheduling issues.
3. Understand memory management operation.
4. Develop an understanding of file system implementation and of multiple levels of hardware support and management.
5. Develop a deep understanding of the concepts of cooperating processes, including communication, synchronization, and deadlock (detection and avoidance).
6. Be able to evaluate operating system features.
7. Develop an understanding of the distributed operating system environment.

C S 575. Artificial Intelligence II**3 Credits (3)**

Covers advanced theory and application of artificial intelligence. Concentration on several specific research areas, such as knowledge representation, problem solving, common-sense reasoning, natural language understanding, automated tutoring systems, learning systems. Students are expected to have knowledge of artificial intelligence equivalent to C S 475.

Learning Outcomes

1. Apply selected planning algorithms in solving problems
2. Identify problems where knowledge representation and reasoning techniques are applicable
3. Be able to apply answer set programming in problem solving
4. Be aware of various advanced research topics in Artificial Intelligence

C S 579. Special Topics**1-6 Credits**

Topic announced in the Schedule of Classes.

C S 581. Advanced Software Engineering**3 Credits (3)**

Advanced tools and methods for developing large software systems. Topics include object-oriented modeling and design, component architectures, templates and generic programming, software configuration and revision control, static and dynamic analysis tools, model checking, advanced testing, and verification. Students are

expected to have knowledge of software engineering equivalent to C S 371.

Learning Outcomes

1. Be able to explain modern software development process ideas
2. Be able to apply agile software development techniques in a project
3. Be able to specify, design, and develop a complex software system in a team
4. Be able to properly utilize both black box and white box testing techniques
5. Be able to explain how unsound and incomplete formal methods can aid in system verification and validation
6. Be able to utilize sound and complete formal methods to prove properties of a system

C S 582. Database Management Systems II**3 Credits (3)**

Advanced data models and abstractions, dependencies, implementations, languages, database machines, and other advanced topics. Students are expected to have knowledge of data base management systems equivalent to C S 482.

Learning Outcomes

1. Analyze storage and file structures of an RDBMS
2. Analyze and apply indexing techniques of an RDBMS
3. Analyze query evaluation approaches of an RDBMS
4. Analyze the mechanisms of transaction management in an RDBMS

C S 584. Computer Networks II**3 Credits (3)**

Advanced topics in computer networks. Covers advanced topics in networking, with emphasis on wireless, and IP networks. Students are expected to have knowledge of computer networks equivalent to C S 484, and of statistics equivalent to MATH 371 or MATH 470.

Learning Outcomes

1. Understand design of link layer protocols.
2. Understand challenges and implementations for multimedia streaming.
3. Be able to use basic security constructs in the networking context.
4. Understand the concepts of edge and cloud computing
5. Understand the concepts and challenges of Internet of Things
6. Learn concepts of distributed networking
7. Learn and evaluate future internet architectures

C S 586. Algorithms in Systems Biology**3 Credits (3)**

The course will introduce important algorithms and computational models used in systems biology to study molecular mechanisms for cellular dynamics, processes, and systems. Cellular processes, such as metabolism and signal transduction, are studied as systems and networks quantitatively from high throughput molecular measurements. The topics include molecular biological systems, network alignment, model simulation, network inference, model optimization, and hybrid models. Students will be able to construct models and analyze their properties in the context of molecular biological systems. Students are expected to have knowledge of algorithms and data structures equivalent to C S 372.

Learning Outcomes

1. Create mathematical representation of biological systems
2. Infer biological network topology from observed omics data set

3. Simulate the behavior of a biological system using a mathematical model
4. Characterize behaviors of biological systems
5. Estimate parameters in a biological system model
6. Validate a model's statistical relevance given observed data

C S 589. Special Research Problems**1-6 Credits (1-6)**

Faculty-supervised investigation, to culminate in a written report. Maximally 6 credits can be applied to the student program of study. Written agreement with faculty supervisor is the required consent. May be repeated up to 18 credits.

Learning Outcomes

1. Research experience for graduate student.

C S 598. Master's Project**1-6 Credits**

Project-oriented capstone course to be completed by M.S. students under supervision of their advisor. Maximum of 6 credits may be applied toward M.S. degree. Restricted to C S majors.

Prerequisite: written agreement with instructor.

C S 599. Master's Thesis**1-6 Credits (1-6)**

Thesis to be developed by M.S. Students under supervision of their advisor. May be repeated for a maximum of 6 credits. Restricted to majors.

Prerequisite: consent of instructor.

C S 600. Pre-dissertation Research**1-15 Credits**

Pre-dissertation research.

C S 700. Doctoral Dissertation**1-15 Credits**

Dissertation.

Computer Science - Bachelor of Arts

The Bachelor of Arts in Computer Science is an open, flexible degree plan that offers the student both a rigorous undergraduate degree program in Computer Science and an extensive open credit hour allotment to pursue knowledge in other domains. It is an excellent choice to combine into a double major program, and is an option for the student who has an interest in learning both domain knowledge in some areas outside of Computer Science, and in acquiring a Computer Science background sufficient to pursue a strong technology career.

Students planning to undertake graduate work in Computer Science are encouraged to pursue the Bachelor of Science degree rather than the Bachelor of Arts degree.

General Requirements Exception

A grade of a least C- must be earned in each of the courses taken to satisfy the departmental and non-departmental requirements. No course may be counted as satisfying both a departmental and a non-departmental requirement. No course taken to satisfy either a departmental or a non-departmental requirement may be taken S/U.

Requirements

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Prefix	Title	Credits

C S 488	Introduction to Data Mining	
C S 489	Bioinformatics Programming	
C S 491	Parallel Programming	
C S 496	Cloud and Edge Computing	

List 2:

Select 6 credits from the following: ⁵ 6

C S 380	Introduction to Cryptography	
C S 381	Principles of Virtual Reality	
C S 382	Modern Web Technologies	
C S 383	Introduction to Deep Learning	
C S 384	Graph Data Mining	
C S 475	Artificial Intelligence I	
C S 476	Computer Graphics I	
C S 477	Digital Game Design	
C S 478	Computer Security	
C S 479	Special Topics ⁶	
C S 480	Linux System Administration	
C S 481	Visual Programming	
C S 484	Computer Networks I	
C S 485	Human-Centered Computing	
C S 486	Bioinformatics	
C S 487	Applied Machine Learning I	
C S 488	Introduction to Data Mining	
C S 489	Bioinformatics Programming	
C S 491	Parallel Programming	
C S 496	Cloud and Edge Computing	

Non-departmental Requirements (in addition to Gen.Ed/VWW)

Select two upper-division courses in any one department except Computer Science 6-8

Choose one from the following: 3

MATH 1350G	Introduction to Statistics (can count towards General Education Elective requirement)	
MATH 2350G	Statistical Methods (can count towards General Education Elective requirement)	
STAT 3110	Statistics for Engineers and Scientists	
STAT 4210	Probability: Theory and Applications	
A ST 311	Statistical Applications	
Second Language Requirement: (not required)		
Electives, to bring the total credits to 120 ⁷		19-25
Select upper division electives to bring total upper division to 48		
Total Credits		120

- ¹ Students with Area I transfer credits may sometimes complete this requirement with 9 credits
- ² See the General Education (p. 227) section of the catalog for a full list of courses.
- ³ Either MATH 1430G Applications of Calculus I or MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter either first.
- ⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
- ⁵ A course can satisfy only one requirement.
- ⁶ Must be taken for 3 credits to count as one course.
- ⁷ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Arts with a major in Computer Science, there is no second language requirement for the degree.

A Suggested Plan of Study For Students

This roadmap assumes student placement in MATH 1220G and ENGL 1110G. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

This roadmap adds the MATH 1511G prerequisites into the plan, MATH 1220G and MATH 1250G will not appear on the requirements tab. Any students who test into MATH 1511G can supplement MATH 1220G and MATH 1250G with elective credits.

Freshman		Credits
C S 111	Computational Thinking for Solving Problems ¹	4
ENGL 1110G	Composition I	4

Credits	30-38
Total Credits	120-134

¹ Required for students who do not pass MATH 1215 Intermediate Algebra or do not pass the CS placement exam and is not counted towards graduation

² MATH 1511G Calculus and Analytic Geometry I is the starting requirement for this degree but students may need to take MATH 1220G College Algebra and MATH 1511G Calculus and Analytic Geometry I before enrolling in it. If a student tests into MATH 1511G

Calculus and Analytic Geometry I then elective credits can replace MATH 1220G College Algebra/MATH 1250G Trigonometry & Pre-Calculus in the roadmap.

³ See the General Education (p. 227) section of the catalog for a full list of courses.

⁴ Any course offered by the university. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

⁵ For electives see List 1 or List 2 of Computer Science electives (p. 564) in Degree Requirement Section.

⁶ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Computer Science - Bachelor of Science

The Bachelor of Science in Computer Science is the traditional undergraduate degree in Computer Science. It is rigorously focused on educating the student in the fundamental disciplines of Computer Science. It prepares the student for any technological field in industry, and also provides the preparation for graduate studies in Computer Science. It is the main undergraduate degree in the Computer Science department, and should be the choice of a single-major Computer Science student. This degree is accredited by the ABET Computing Accreditation Commission (CAC) under the General and Computer Science Program Criteria (through 9/30/2022).

General Requirements Exception

A grade of at least C- must be earned in each of the courses taken to satisfy the departmental and non-departmental requirements. No course may be counted as satisfying both a departmental and a non-departmental requirement. No course taken to satisfy either a departmental or a non-departmental requirement may be taken S/U.

Requirements

Students who plan to seek employment immediately after the bachelor level should strongly consider taking one of the concentration area curricula in addition to the general and departmental requirements. An elective course cannot be used for more than two concentrations. A course that is required for one concentration cannot be used as an elective course of another one.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Second Language Requirements: (not required)		
Electives, to bring the total credits to 120⁷		14
<i>The specific requirements for the concentration in Algorithm Theory are as follows:</i>		
Select 3-4 credits from the following:		
C S 372	Data Structures and Algorithms	
C S 343	Algorithm Design & Implementation	
Select 9 credits from the following:		
C S 475	Artificial Intelligence I	
C S 476	Computer Graphics I	
C S 487	Applied Machine Learning I	
C S 488	Introduction to Data Mining	
Total Credits		120

¹ Students with Area I transfer credits may sometimes complete this requirement with 9 credits

² See the General Education (p. 227) section of the catalog for a full list of courses

³ MATH 1511G Calculus and Analytic Geometry I and MATH 1521G Calculus and Analytic Geometry II are required for the degree but students may need to take any prerequisites needed to enter MATH 1511G or MATH 1521G first.

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁵ A course can satisfy only one requirement.

⁶ Must be taken for 3 credits to count as a course.

⁷ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Intermediate Algebra and ENGL 1110G Rhetoric and Composition. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may

vary from fall to spring semester and may be subject to modification or change.

Students planning to undertake graduate work in computer science are encouraged to consult with their advisor regarding the possibility of taking other computer science electives to satisfy their departmental requirements.

Computer Science (Artificial Intelligence) - Bachelor of Science

The Bachelor of Science in Computer Science is the traditional undergraduate degree in Computer Science. It is rigorously focused on educating the student in the fundamental disciplines of Computer Science. It prepares the student for any technological field in industry, and also provides the preparation for graduate studies in Computer Science. It is the main undergraduate degree in the Computer Science department, and should be the choice of a single-major Computer Science student. This degree is accredited by the ABET Computing Accreditation Commission (CAC) under the General and Computer Science Program Criteria (through 9/30/2022).

General Requirements Exception

A grade of at least C- must be earned in each of the courses taken to satisfy the departmental and non-departmental requirements. No course may be counted as satisfying both a departmental and a non-departmental requirement. No course taken to satisfy either a departmental or a non-departmental requirement may be taken S/U.

Requirements

Students who plan to seek employment at the bachelor level are advised to take one of the concentration area curricula in addition to the general and departmental requirements. An elective course cannot be used for

more than two focuses. A course that is required for one concentration cannot be used as an elective course of another one.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

¹ MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1521G first.

² See the General Education (p. 227) section of the catalog for a full list of courses

³ Students who plan to graduate with a concentration need to complete the specific requirements for the chosen concentration. *Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.*

⁴ See list of Computer Science electives (p. 574) in Degree Requirement Section.

⁵ **Math Electives:**

- MATH 3110 Introduction to Modern Algebra
- MATH 3120 Introduction to Analysis
- MATH 3140 Introduction to Numerical Methods
- MATH 3160 Introduction to Ordinary Differential Equations
- MATH 4320 Logic and Set Theory
- MATH 4330 Elementary Number Theory

⁶ See list of Lab Science (p. 574) courses in the Degree Requirement Section.

⁷ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses

Students planning to undertake graduate work in computer science are encouraged to consult with their advisor regarding the possibility of taking other computer science electives to satisfy their departmental requirements.

Computer Science (Computer Networking) - Bachelor of Science

The Bachelor of Science in Computer Science is the traditional undergraduate degree in Computer Science. It is rigorously focused on educating the student in the fundamental disciplines of Computer Science. It prepares the student for any technological field in industry, and also provides the preparation for graduate studies in Computer Science. It is the main undergraduate degree in the Computer Science department, and should be the choice of a single-major Computer Science student. This degree is accredited by the ABET Computing Accreditation Commission (CAC) under the General and Computer Science Program Criteria (through 9/30/2022).

General Requirements Exception

A grade of at least C- must be earned in each of the courses taken to satisfy the departmental and non-departmental requirements. No course may be counted as satisfying both a departmental and a non-departmental requirement. No course taken to satisfy either a departmental or a non-departmental requirement may be taken S/U.

Requirements

Students who plan to seek employment at the bachelor level are advised to take one of the concentration area curricula in addition to the general and departmental requirements. An elective course cannot be used for more than two focuses. A course that is required for one concentration cannot be used as an elective course of another one.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48

credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

PHYS 1320G & PHYS 1320L	Calculus -Based Physics II and Calculus -Based Physics II Lab

Second Language Requirements: (not required)
Electives, to bring the total credits to 120⁷ **14**

The specific requirements for the concentration in Human Computer Interaction are as follows:

C S 371	Software Development (required)
C S 485	Human-Centered Computing (required)
Select 6 credits from the following:	
C S 476	Computer Graphics I
C S 477	Digital Game Design
C S 481	Visual Programming

Total Credits **120**

- ¹ Students with Area I transfer credits may sometimes complete this requirement with 9 credits
- ² See the General Education (p. 227) section of the catalog for a full list of courses
- ³ MATH 1511G Calculus and Analytic Geometry I and MATH 1521G Calculus and Analytic Geometry II are required for the degree but students may need to take any prerequisites needed to enter MATH 1511G or MATH 1521G first.
- ⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
- ⁵ A course can satisfy only one requirement.
- ⁶ Must be taken for 3 credits to count as a course.
- ⁷ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Freshman		Credits
C S 172	Computer Science I	4

Total Credits		120-123

- ¹ MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.
- ² See the General Education (p. 227) section of the catalog for a full list of courses
- ³ Students who plan to graduate with a concentration need to complete the specific requirements for the chosen concentration. *Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students*

may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

⁴ See list of Computer Science electives (p. 581) in Degree Requirement Section.

⁵ **Math Electives:**

- MATH 3110 Introduction to Modern Algebra
- MATH 3120 Introduction to Analysis
- MATH 3140 Introduction to Numerical Methods
- MATH 3160 Introduction to Ordinary Differential Equations
- MATH 4320 Logic and Set Theory
- MATH 4330 Elementary Number Theory

⁶ See list of Lab Science (p. 581) courses in the Degree Requirement Section.

⁷ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses

Students planning to undertake graduate work in computer science are encouraged to consult with their advisor regarding the possibility of taking other computer science electives to satisfy their departmental requirements.

Computer Science (Secondary Education) - Bachelor of Arts

The Bachelor of Arts in Computer Science is an open, flexible degree plan that offers the student both a rigorous undergraduate degree program in Computer Science and an extensive open credit hour allotment to pursue knowledge in other domains. It is an excellent choice to combine into a double major program, and is an option for the student who has an interest in learning both domain knowledge in some areas outside of Computer Science, and in acquiring a Computer Science background sufficient to pursue a strong technology career.

Students planning to undertake graduate work in Computer Science are encouraged to pursue the Bachelor of Science degree rather than the Bachelor of Arts degree.

General Requirements Exception

A grade of a least C- must be earned in each of the courses taken to satisfy the departmental and non-departmental requirements. No course may be counted as satisfying both a departmental and a non-departmental requirement. No course taken to satisfy either a departmental or a non-departmental requirement may be taken S/U (except for EDUC 4820 Secondary Student Teaching which is graded as S/U).

Requirements

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Prefix	Title	Credits

READ 4330	Content Area Literacy ⁸
SPED 3105	Introduction to Special Education in a Diverse Society

Total Credits 120

¹ Students with Area I transfer credits may sometimes complete this requirement with 9 credits

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ Either MATH 1430G Applications of Calculus I or MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter either first.

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses. 3 credits of VWW can be met using the upper division rule for the EDUC classes.

⁵ A course can satisfy only one requirement.

⁶ Must be taken for 3 credits to count as one course.

⁷ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

⁸ Requires admittance into the Teacher Education Program TEP.

⁹ Requires admittance into Student Teaching STEP.

Second Language Requirement

For the Bachelor of Arts with a major in Computer Science, there is no second language requirement for the degree.

A Suggested Plan of Study For Students

This roadmap assumes student placement in MATH 1220G and ENGL 1110G. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

This roadmap adds the MATH 1511G prerequisites into the plan, MATH 1220G and MATH 1250G will not appear on the requirements tab. Any students who test into MATH 1511G can supplement MATH 1220G and MATH 1250G with elective credits.

¹ Required for students who do not pass MATH 1215 Intermediate Algebra or do not pass the CS placement exam and is not counted towards graduation

² MATH 1511G Calculus and Analytic Geometry I is the starting requirement for this degree but students may need to take MATH 1220G College Algebra and MATH 1511G Calculus and Analytic Geometry I before enrolling in it. If a student tests into MATH 1511G Calculus and Analytic Geometry I then elective credits can replace MATH 1220G College Algebra/MATH 1250G Trigonometry & Pre-Calculus in the roadmap.

³ See the General Education (p. 227) section of the catalog for a full list of courses.

⁴ Any course offered by the university. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

⁵ For electives see List 1 or List 2 of Computer Science electives (p. 564) in Degree Requirement Section.

⁶ Requires admittance into the Teacher Education Program TEP.

⁷ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁸ Requires admittance into Student Teaching STEP.

Computer Science (Software Development) - Bachelor of Science

The Bachelor of Science in Computer Science is the traditional undergraduate degree in Computer Science. It is rigorously focused on educating the student in the fundamental disciplines of Computer Science. It prepares the student for any technological field in industry, and also provides the preparation for graduate studies in Computer Science. It is the main undergraduate degree in the Computer Science department, and should be the choice of a single-major Computer Science student. This degree is accredited by the ABET Computing Accreditation Commission (CAC) under the General and Computer Science Program Criteria (through 9/30/2022).

General Requirements Exception

A grade of at least C- must be earned in each of the courses taken to satisfy the departmental and non-departmental requirements. No course may be counted as satisfying both a departmental and a non-departmental requirement. No course taken to satisfy either a departmental or a non-departmental requirement may be taken S/U.

Requirements

Students who plan to seek employment at the bachelor level are advised to take one of the concentration area curricula in addition to the general and departmental requirements. An elective course cannot be used for more than two focuses. A course that is required for one concentration cannot be used as an elective course of another one.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

C S 491	Parallel Programming

Total Credits **120**

¹ Students with Area I transfer credits may sometimes complete this requirement with 9 credits

² See the General Education (p. 227) section of the catalog for a full list of courses

³ MATH 1511G Calculus and Analytic Geometry I and MATH 1511G Calculus and Analytic Geometry I are required for the degree but students may need to take any prerequisites needed to enter MATH 1511G or MATH 1521G first.

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁵ A course can satisfy only one requirement.

⁶ Must be taken for 3 credits to count as a course.

⁷ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Freshman		Credits
C S 172	Computer Science I	4
C S 271	Object Oriented Programming	4
C S 273	Machine Programming and Organization	4
ENGL 1110G	Composition I	4
MATH 1511G	Calculus and Analytic Geometry I ¹	4
MATH 1521G or MATH 1521H	Calculus and Analytic Geometry II or Calculus and Analytic Geometry II Honors	4
Area IV: Social/ Behavioral Sciences Course ²		3
Area V: Humanities Course ²		3

Credits **30**

Sophomore		Credits
C S 272	Introduction to Data Structures	4
C S 278	Discrete Mathematics for Computer Science	4
C S 370	Compilers and Automata Theory	4
C S 372	Data Structures and Algorithms	4
COMM 1115G	Introduction to Communication	3
ENGL 2210G	Professional and Technical Communication Honors	3
MATH 2415 or MATH 4230	Introduction to Linear Algebra or Applied Linear Algebra	3
Area VI: Creative and Fine Arts ²		3
Select one from the following:		3

A ST 311	Statistical Applications
STAT 3110	Statistics for Engineers and Scientists
STAT 4210	Probability: Theory and Applications
Elective credits if needed for financial aid requirements ³	3+

Credits **31-34**

Junior		Credits
C S 371	Software Development	4
C S 471	Programming Language Structure I	3
C S 482	Database Management Systems I	3
Computer Science 400-level Elective ⁴		3
MATH elective (upper division) ⁵		3
Lab Science Elective ⁶		4
Lab Science Elective ⁶		4
Viewing a Wider World ⁷		3
Viewing a Wider World ⁷		3
Elective credits if needed for financial aid requirements ³		3

Credits **33**

Senior		Credits
C S 448 or C S 449	Senior Project or Senior Thesis	4
C S 419	Computing Ethics and Social Implications of Computing	1
C S 474	Operating Systems I	3
Lab Science Elective ⁶		4
Computer Science 400-level Elective ⁴		3
Upper division electives to bring total upper division to 48 ³		4
Electives as needed to meet minimum credit requirements ³		7

Credits **26**

Total Credits **120-123**

¹ MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1521G first.

² See the General Education (p. 227) section of the catalog for a full list of courses

³ Students who plan to graduate with a concentration need to complete the specific requirements for the chosen concentration.

Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

⁴ See list of Computer Science electives (p. 586) in Degree Requirement Section.

⁵ **Math Electives:**

- MATH 3110 Introduction to Modern Algebra
- MATH 3120 Introduction to Analysis
- MATH 3140 Introduction to Numerical Methods
- MATH 3160 Introduction to Ordinary Differential Equations
- MATH 4320 Logic and Set Theory
- MATH 4330 Elementary Number Theory

⁶ See list of Lab Science (p. 586) courses in the Degree Requirement Section.

⁷ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses

Students planning to undertake graduate work in computer science are encouraged to consult with their advisor regarding the possibility of taking other computer science electives to satisfy their departmental requirements.

Cybersecurity - Bachelor of Science

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Credits		13
Total Credits		119-120

- ¹ MATH 1511G Calculus and Analytic Geometry I or MATH 1430G Applications of Calculus I is the starting requirement for this degree but students may need to take prerequisites before enrolling.
*If a student tests into MATH 1521G Calculus and Analytic Geometry II then elective credits can replace this requirement in the roadmap.
- ² See the General Education (p. 227) section of the catalog for a full list of courses.
- ³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
- ⁴ Any course offered by the university. Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
- ⁵ Students need to fill in one credit to meet the requirement of 15 credit hours.
- ⁶ This course does not have a course number yet. It will be offered as a special topic course in CS (C S 479 Special Topics or C S 579 Special Topics) or EE (E E 490 Selected Topics). The topic of the course must be Mobile and Wireless Computing.

Computer Science - Bachelor of Science/Master of Science

5 Year Dual Degree BS+MS Program

The dual degree program combines some of the requirements of the Bachelor of Science (BS) and the Master of Science (MS) in Computer Science. It is very important for the student to apply to the BS+MS program before they take any 400-level C S courses. Full details of the program can be found at <https://computerscience.nmsu.edu/>.

Admission occurs in two steps.

1. First, students will apply to the Computer Science department to receive approval for the BS+MS program. The student submits the pre-application when he/she is within 48 credits of earning a BS in Computer Science; an application form is provided on the department website. Qualification for the BS+MS program will be based on the cumulative (non-grade replaced) grade point average in Computer Science and Math courses taken up to that point (at least 3.5), including at least two of the following: C S 370 Compilers and Automata Theory, C S 371 Software Development and C S 372 Data Structures and Algorithms, and recommendations by faculty members listed on the departmental application. Additional factors might be taken into account when available (e.g., GRE scores). Students having a grade point average below 3.5 may be admitted to the combined program on a case-by-case basis, depending on faculty recommendations and evaluations of the individual academic and professional history.
2. Once the Computer Science department has notified the applicant of acceptance in the combined BS+MS program, the applicant must then formally apply to the graduate school (<https://apply.nmsu.edu/apply/?id=1c3c41ea-b5f9-48ef-83c3-b085794ba277>) for formal admission to the graduate program. This application to the graduate

school is made during the semester of graduation from the BS in Computer Science.

The curriculum for the first three years of the BS+MS program coincides with the requirements of the BS program. In particular, the general requirements include a grade of at least a C- in each course satisfying the departmental and non-departmental requirements. No course may be counted as satisfying both a departmental and non-departmental requirement. No course taken to satisfy either a departmental or non-departmental requirement may be taken S/U. The following are the departmental requirements for the degree (the non-departmental requirements are identical to those of the BS in Computer Science).

Prefix	Title	Credits
Departmental Requirements for Years 1 through 4		
C S 172	Computer Science I	4
C S 271	Object Oriented Programming	4
C S 272	Introduction to Data Structures	4
C S 273	Machine Programming and Organization	4
C S 278	Discrete Mathematics for Computer Science	4
C S 370	Compilers and Automata Theory	4

C S 515	Human-Centered Computing	
C S 516	Bioinformatics	
C S 517	Digital Game Design	
C S 518	Visual Programming	
C S 519	Applied Machine Learning I	
C S 521	Parallel Programming	
C S 522	Cloud and Edge Computing	
Select one from the following:		3
C S 574	Operating Systems II	
C S 584	Computer Networks II	
Departmental Requirements for Year 5		
C S 510	Automata, Languages, Computability	3
C S 570	Analysis of Algorithms	3
One additional course numbered 550 or above		3
One additional course numbered 500 or above		3
C S 599	Master's Thesis ¹	6
or C S 598	Master's Project	
Select one from the following:		3
C S 575	Artificial Intelligence II	
C S 581	Advanced Software Engineering	

C S 582	Database Management Systems II	
Select one from the following:		3
C S 574	Operating Systems II	
C S 575	Artificial Intelligence II	
C S 581	Advanced Software Engineering	
C S 582	Database Management Systems II	
C S 584	Computer Networks II	
C S 586	Algorithms in Systems Biology	
Total Credits		76

¹ In order to fulfill the degree requirement, the student must complete a total of 6 credits for either course.

Algorithm Theory - Undergraduate Minor

Prefix	Title	Credits
Required Courses		
C S 172	Computer Science I	4
C S 271	Object Oriented Programming	4
C S 272	Introduction to Data Structures	4
C S 372	Data Structures and Algorithms	4
Select 3-4 credits from the following:		3-4
C S 278	Discrete Mathematics for Computer Science	
MATH 1531	Introduction to Higher Mathematics	
Select 6-7 credits from the following:		6-7
C S 370	Compilers and Automata Theory	
C S 475	Artificial Intelligence I	
C S 476	Computer Graphics I	
MATH 3140	Introduction to Numerical Methods	
MATH 4320	Logic and Set Theory	
Total Credits		25-27

Bioinformatics - Undergraduate Minor

Prefix	Title	Credits
Required Courses		
BIOL 2110G & BIOL 2110L	Principles of Biology: Cellular and Molecular Biology and Principles of Biology: Cellular and Molecular Biology Laboratory	4
C S 172	Computer Science I	4
C S 272	Introduction to Data Structures	4
C S 371	Software Development	4
C S 486	Bioinformatics	3
C S 489	Bioinformatics Programming	3
Select one from the following:		3
C S 482	Database Management Systems I	
C S 491	Parallel Programming	
BIOL 305	Principles of Genetics	
CHEM 433	Physical Chemistry I	
MATH 3110	Introduction to Modern Algebra	
PHYS 315	Modern Physics	
Total Credits		25

Computer Systems - Undergraduate Minor

Prefix	Title	Credits
Required Courses		
C S 172	Computer Science I	4
C S 271	Object Oriented Programming	4
C S 272	Introduction to Data Structures	4
C S 273	Machine Programming and Organization	4
C S 370	Compilers and Automata Theory	4
or C S 371	Software Development	
C S 473	Architectural Concepts I	3
or C S 474	Operating Systems I	
Select one from the following:		3
C S 476	Computer Graphics I	
C S 482	Database Management Systems I	
C S 484	Computer Networks I	
C S 480	Linux System Administration	
C S 491	Parallel Programming	
Total Credits		26

Software Development - Undergraduate Minor

C S 484	Computer Networks I	
C S 485	Human-Centered Computing	
C S 491	Parallel Programming	
Total Credits		22-23

Creative Media

Undergraduate Program Information

New Mexico State University's Creative Media Institute (CMI) prepares students to become digital storytellers using state of the art, industry-standard tools. The Creative Media Institute is dedicated to developing and nurturing the artistic endeavors of student filmmakers through industry-standard education, research and collaboration in the art, craft and production of the moving image through storytelling, resulting in a Bachelor of Creative Media degree. The program provides learning opportunities for newly admitted NMSU students, and provides some credit transfer opportunities for students with an associate degree from a NMSU community college or other two-year degree granting institution. The Bachelor of Creative Media provides a liberal arts background

enabling students to pursue further education, professional training or employment in the digital media-based industry. Study in the CMI program fosters collaborative expression based on a clear understanding of media culture, history, design and practice. CMI also offers students the opportunity for internships in digital video, animation, visualization and simulation, industrial and educational video at varied production facilities on and off campus.

Theory and practice are integrated at every step as students manipulate text, sound and images using industry-standard technology. CMI houses a state of the art digital projection system screening room, post-production lab, animation lab, production space, motion capture laboratory and THX sound mixing theatre.

Due to limited capacity, new students wishing to continue in the CMI program after their freshman year are required to complete an application process. Transfer students from other institutions, including NMSU Community Colleges, must complete the application process. Transfer students should contact an Academic Advisor from the College of Arts and Sciences Advising Office for information about joining one of the two degree programs offered in CMI. Space is limited and varies each year. The quality of the student's work as demonstrated in the application and prior course work are additional criteria of the admission decision. Exact details and procedures for applying to the CMI program can be found on the CMI website at: cmi.nmsu.edu (<http://cmi.nmsu.edu>).

Graduate Program Information

Starting Fall 2022, the MFA Creative Writing Program will be housed in the Creative Media Institute as we work to expand course offerings to include screenwriting, playwriting and writing for new media. In Spring 2024, courses will change from the ENGL to the FDMA prefix.

The Master of Fine Arts Degree in Creative Writing is a 3-year program. Students choose a major genre: poetry or fiction, though classes in nonfiction, writing, screenwriting and others are offered. Students must complete 54 hours of graduate-level course work, submit a creative writing thesis, give a public reading from the thesis, and pass an oral examination.

Our mission is to emphasize the creation and critical analysis of literature, so that our students can be part of the national conversation about writing, graduating with a publishable manuscript. By providing our students with a set of skills, we prepare them to contribute to their communities as writers, publishing professionals and teachers.

Creative Writing - Master of Fine Arts

Students pursuing the MFA in Creative Writing devote themselves to concentrated study and development of a chosen genre: poetry or fiction. Students

- complete 54 hours of graduate-level coursework,
- present a book-length thesis of original work with an introduction or afterward,
- perform a public reading from the thesis, and
- pass an oral examination in the final semester.

A maximum of 12 credits in Form and Technique count for the degree.

Students wishing to apply to the MFA should consult application information on the Graduate School website (<https://apply.nmsu.edu/apply/>). Applications are due by February 1 for Fall admission to the MFA.

Support in the form of a Graduate Assistantships is awarded through a competitive selection process; this application is folded into the application for admission and should be submitted by the February 1 deadline. All Graduate Assistantships in Creative Writing begin in the Fall semester.

Degrees for the Department

Bachelors Degree(s)

- Animation and Visual Effects - Bachelor of Creative Media (p. 600)
- Digital Film Making - Bachelor of Creative Media (p. 603)

Master Degree(s)

- Creative Writing - Master of Fine Arts (p. 129)

Minors for the Department

Currently, the Animation and Visual Effects and Digital Filmmaking minors are closed to any students outside of the major. The minor in Creative Writing is open to all majors.

- Animation and Visual Effects - Undergraduate Minor (p. 604)
- Creative Writing - Undergraduate Minor (p. 604)
- Digital Film Making - Undergraduate Minor (p. 605)

Department Head, Amy Lanasa

Professors Bradburd, Greenfield, Lanasa, Lapid, Voisine; **Associate**

Professors Fowler, Hobson, Lau, Marks; **Assistant Professors** Chase, Rodgers, Yapyapan; **College Associate Professors** Bakshi; **College Assistant Professors** Nirmalakhandan, Santiago, Swander

Film & Digital Media Courses

FDMA 1210. Digital Video Production I

3 Credits (2+4P)

An introduction to digital video production. Students learn camera operation, lights and audio equipment. Hands-on production is completed in the studio and on location.

Learning Outcomes

1. Plan and produce a digital video project
2. Apply post-production workflow
3. Work in team and as individual to complete digital video projects.

FDMA 1220. Introduction to Digital Video Editing

3 Credits (3)

In this course, students learn the basics of the post-production process for non-linear video editing. Students work with multiple video formats and create short movies for multiple distribution platforms. Skills include media management and professional terminology. Sections on the Main Campus will be restricted to CMI students.

Learning Outcomes

1. Define concepts related to digital video editing.
2. Use non-linear video editing software for editing a short film
3. Enhance storytelling through the use of continuity, timing, cutaways, intercutting, compositing, transitioning, jump cutting, montaging and animating.
4. Use text, titles, transitions, video effects, sound effects, dialogue, and visual assets for digital video editing.

FDMA 1415. Principles of Sound

3 Credits (2+2P)

The creation of a professional quality original media soundtrack is possible for relatively low production/post production cost. This class is designed to give the student and overview of creating sound for a variety of digital media. Topics include acoustic principles, sound design, audio hardware, recording techniques; and editing, processing, and multi-track mixing, using software applications. Restricted to: Community Colleges only.

Prerequisite(s)/Corequisite(s): FDMA 1220.

Learning Outcomes

1. Record and edit wild sound effects and synced dialogue
2. Discover, upload, and edit on-line music, ambience and sound effect loops
3. Implement audio design theories
4. Create an aesthetic soundtrack which incorporates multiple elements and dimensions
5. Design, edit, process, mix and master a synced multi-track soundtrack
6. Demonstrate capable use of digital audio production and post-production workflow
7. Produce short audio projects which meet media industry technical standards

FDMA 1510. Introduction to 3D Animation

3 Credits (3)

This course provides an overview of 3D animation production processes. Students will be introduced to basic story development and the creation of computer-generated assets and cinematic sequences. The course will survey specialty areas of digital animation and various software and techniques applied in entertainment and information media. Students will review and critique other's animation, as well as plan and produce original animation for review by classmates and as part of a CGI demo reel.

Prerequisite(s): FDMA 2382 or FDMA 2381 or consent of instructor.

Learning Outcomes

1. Demonstrate a fundamental understanding of 3D animation history and principles.
2. Analyze animation work of other artists.
3. Appropriately utilize the various media technologies for digital 3D animation.
4. Demonstrate and apply basic techniques of digital 3D animation.
5. Demonstrate and apply basic processes of creating CGI for a narrative. 6. Apply some basic strategies for developing and creating a story visually, and create original animations.
6. Present original animations to instructor and classmates for critique.
7. Create a CGI demo reel of work completed during the course.

FDMA 1555. Introduction to the Creative Media Industry

3 Credits (3)

This class is an introductory course for students who are beginning their understanding of Media and how it affects them and our society. It offers a broad-stroked view of the entire industry including Marketing, Production, History, Jobs, Design, Architecture, New Media Literacy, and industry standards. Students will listen to experts in the field, get involved in open discussions about the industry and use new information to complete hands-on individual & group assignments.

Learning Outcomes

1. The basic philosophies and methods that guide people working in the Creative Media industry.
2. Knowledge of a wide variety of different jobs, qualifications and paradigms used in the industry.

3. Marketing, Production, Budgets, History, New Media, Inspiration and other aspects of the industry.
4. An accurate view of the Creative Media field.

FDMA 1715. 2-D Compositing & FX

3 Credits (3)

This course will familiarize students with the process of compositing and creating special effects for animation using industry standard software. Students will learn how to assemble an animated scene and use advanced 3D lighting, spacing, and digital effects to achieve a dynamic, professionally rendered look.

Prerequisite: FDMA 2710.

Learning Outcomes

1. The goal of this class is for students to learn how to use advanced compositing and effects tools in order to achieve a more dynamic and professional visual look for their animations or motion graphics.
2. By the end of the class, you should be proficient animation compositors that can assemble and synthesize a basic animation into a rendered, visually sophisticated piece.
3. Students who pass this class will have a basic to intermediate knowledge of Adobe After Effects

FDMA 2310. History of Cinema I

3 Credits (3)

This course surveys the history of cinema - investigating the process by which the original "cinema of attractions" evolved into a globally dominant form of visual storytelling. We will explore the development of cinema both as an art form and as an industry, and consider the technological, economic, cultural factors, as well as many key international movements that helped shape it. Restricted to: G-CMI, DFM, ANVE majors.

Learning Outcomes

1. Gain a greater appreciation for the history of cinema
2. Develop knowledge of the key eras in the history of U.S. cinema
3. Learn the characteristics of major movements in international cinema
4. Understand the various elements that go into telling a story in cinema: screenplay, narrative devices, director, producer, talent, production design, cinematography, editing, sound design
5. Learn how major genres in U.S. cinema have evolved in the past 100+ years
6. Gain a basic understanding of the operations and organization of the Hollywood film industry, from the studio system until today
7. Gain an awareness of the shifts in the film industry that present new opportunities for independent filmmakers
8. Understand the importance of learning about the history of cinema to the process of becoming a filmmaker
9. Strengthen public speaking skills

FDMA 2311. History of Animation

3 Credits (3)

Explores the history of Animation as an art form and industry through readings, screenings, lecture and periodic guest speakers. Restricted to: G-CMI, ANVE, DFM majors. Restricted to Las Cruces campus only.

Learning Outcomes

1. To expand your knowledge of the history of animation and its evolution to the modern day.
2. To expand your ability to view animation critically and to understand its early connections to cartooning as well as its ongoing cultural presence and relevance.

3. To expand your comfort with accessing information and completing assignments both online and independently. Canvas will be utilized for many of our readings and for some response assignments.

FDMA 2381. Storyboarding

3 Credits (3)

Examines effective writing principles to create storyboards that communicate the overall picture of a project, timing, scene complexity, emotion and resource requirements. Further, the purpose of this course is to introduce students to the principles of visual storytelling—in film—through the use of the storyboard. In other words, to show how storyboards are critical "architectural component" of the filmmaking process, used as a blueprint (or guide) to communicate the complex elements of a film story. Crosslisted with: ENGL 2381. Restricted to: DFM, ANVE, G-CMI majors. Restricted to Las Cruces campus only.

Learning Outcomes

1. Learn to conceive and draw original images.
2. Learn to use images to tell a story.
3. Design, develop, and order images (shots) into storyboarded scenes.
4. Understand how storyboarded sequences are a tool in the process of filmmaking.
5. Understand how the storyboard image is translated from the written page.
6. Build scenes from the scripted sequences into a storyboard.

FDMA 2382. Principles of Story Across the Media

3 Credits (3)

The purpose of this course is to help students understand the basic elements of narrative structure (e.g. character, dramatic conflict, theme, etc.) and how these elements may be used effectively in media expression. Crosslisted with: ENGL 2382. Restricted to: G-CMI, DFM, ANVE majors. Restricted to Las Cruces campus only.

Learning Outcomes

1. Identify the elements of storytelling in scripted text or improvised performance
2. Understand how these elements work together across different media
3. Apply these elements of storytelling in original work
4. Appreciate and master these elements for independent or collaborative work

FDMA 2510. Introduction to Sound Design for Film

3 Credits (3)

This course is an introduction to the principles, techniques and applications of sound design and film scoring. Students learn how sound affects storytelling in a film, examine the role of sound from the script to screen, and the professional process of creating a soundtrack. Students learn how to use sound equipment in a production environment and execute basic techniques used to develop a soundtrack. Crosslisted with: FDMA 1415.

Prerequisite(s)/Corequisite(s): FDMA 2382. Restricted to: DFM, ANVE majors. Restricted to Las Cruces campus only.

Learning Outcomes

1. Compare the properties and propagation of sound and importance of sound to the storytelling aspect of filmmaking
2. Learn the process of designing a soundtrack for film and recording live audio dialogue for use in post-production editing.

- Learn methods of capturing sound including live audio recording, dialogue recording, foley, orchestration and audio dialogue replacement
- Design a soundtrack for motion media project.

FDMA 2520. Introduction to Cinematography

3 Credits (3)

The Director of Photography (or Cinematographer), in close collaboration with the Director and Production Designer, helps determine the look of a film. This course is designed to introduce students to the technical and aesthetic fundamentals of creating, developing, and collaborating on the visual elements of storytelling, using camera framing, lensing, and lighting fundamentals such as shadows, light and color. May be repeated up to 6 credits. only. Prerequisite(s)/Corequisite(s): FDMA 2382 (Las Cruces Campus) or FDMA 1210 (Community College Campus(es))

Learning Outcomes

- Define and explain the fundamental concepts of cinematography, such as exposure, lighting solutions, and color temperature.
- Understand how cinematography brings the Director's vision to reality.
- Demonstrate proficiency in plotting and executing interior and exterior lighting solutions.

FDMA 2530. Introduction to 3D Modeling

3 Credits (3)

This course will introduce 3D modeling methods and current practices. Students will learn preliminary and detailed modeling techniques using industry standard software. Methods will emphasize formal and functional aspects of modeling as they apply to mechanical, organic, and sculpted topology for application in animation, games, and information media. May be repeated for a maximum of 6 credits.

Learning Outcomes

- Identify the role of a 3D modeler in a production pipeline within various fields of digital animation.
- Apply techniques in modeling mechanical and organic objects.
- Utilize tools available in professional 3D modeling software.
- Create simple animations and renders.
- Present original animations to instructor and classmates for critique.
- Create a demo reel of work completed during the course.

FDMA 2535. Digital Illustration Techniques

3 Credits (3)

Introductory course examining traditional artistic expressions and translating visual art experiences into a digital art medium to enhance visual storytelling. Students acquire basic principles of drawing and painting through hands-on experience manipulating tonal value, composition, form development, light and shadow, color theory, rendering realism, and graphic design. Restricted to: DFM, ANVE majors. Restricted to Las Cruces campus only.

Learning Outcomes

- Be familiar with the CMI computer system, facilities, equipment and policies.
- Appropriately utilize the various media technologies available at CMI for digital illustration.
- Understand the different roles and areas of digital illustration.
- Understand and apply some basic techniques of digital illustration.
- Understand and apply some basic processes of creating pleasing images based on knowledge of traditional art principles.

- Begin to apply some basic strategies for developing and creating aesthetically pleasing images.

FDMA 2710. Beginning 2-D Animation

3 Credits (3)

Students will learn the basics of digital 2D animation by working through a variety of exercises, creating an original storyboard, and animating five or more shots utilizing industry standard software. Restricted to: DFM, ANVE majors. Restricted to Las Cruces campus only.

Learning Outcomes

- The student will demonstrate an overall knowledge of computers as a tool of the animation artist and be able to produce simple animations using the techniques learned in class.
- Use major software tools with ease
- Manage time lines through key frames
- Build storyboards
- Demonstrate knowledge of 2-D and animation terminology
- Produce actions, set environments and constraints for 2-D animation
- Render full animation.

FDMA 2720. 3D Animation

3 Credits (3)

Overview of the essentials and principles of 3D animation; creative methods for using industry standard tools to produce the illusion of movement for storytelling and creating 3D effects. Topics include, keyframe and curve animation, kinematics, cycle animation, camera animation, deformers, dynamics and constraints.

Prerequisite: FDMA 1510, FDMA 2710 or consent of instructor.

Learning Outcomes

- Clearly describe the role of an animator in cinema, gaming and related fields.
- Recognize leading animators and their methods.
- Demonstrate knowledge of advances in contemporary animation.
- Utilize current industry standard animation tools.
- Apply fundamental animation processes and techniques

FDMA 2725. Rigging for 3D Animation

3 Credits (3)

This course will introduce principles and practices of current 3D animation rigging. Students will develop fundamental methods necessary to create character rigs. Students will learn aesthetic, technical, and optimization concepts as they apply to organic and mechanical designs. Topics will include: hierarchies, constraints, deformation rigging, skeleton creation, skinning, forward and inverse kinematics, controls, body and facial rigging. Restricted to: DFM, ANVE majors.

Prerequisite(s): FDMA 1510.

Learning Outcomes

- Understand what Rigging is and the role it plays in the world of cinema and video games.
- Be familiar with industry professionals and their techniques and approaches to rigging.
- Understand and be able to apply the fundamentals of rigging to industry standard applications.
- Demonstrate ability to rig basic to intermediate machines, bipeds and quadrupeds

FDMA 2745. Light, Shade, Render

3 Credits (3)

This course will explore the theory and practice of 3D lighting and rendering methodologies. Techniques covered will implement cameras,

lighting sources, textures, surface-mapping and algorithmic rendering to produce stylized and photo realistic images. Topics covered will include direct and indirect lighting, shaders that simulate physical substances and effects, rendering multiple passes and simulating physical lens effects. Restricted to: DFM, ANVE majors. Restricted to Las Cruces campus only.

Prerequisite(s): FDMA 1510 OR FDMA 2530, or Consent of Instructor.

Learning Outcomes

1. Understand the role of lighting and surfacing to tell a story.
2. Be familiar with leading lighting artist and their approaches.
3. Utilize the software implemented in the entertainment industry.
4. Understand and apply fundamental lighting and rendering techniques.
5. Demonstrate ability to create successfully rendered scenes from concept through production.

FDMA 2755. Drawing for Animation

3 Credits (3)

Introductory study of the human and animal form in relation to animation. Students learn fundamentals and exaggeration of the figure, as related to proportion, rhythm, mechanics, and motion. Areas of focus are: basic form, proportion, shape, contour, gesture, anatomy, portraiture, perspective, clothing effects and drawing from observation. Restricted to: CMT, DFM, ANVE majors.

Learning Outcomes

1. Students will have an opportunity to gain hands on experience using industry standard state of the art animation software.
2. Understand what the basics of drawing the human form.
3. Have a general understanding of human anatomy as needed for the artist.
4. Be able to design the human form from imagination.

FDMA 301. Sound Design II

3 Credits (3)

Mixing and balancing dialogue, sound effects and music in postproduction. Study the role of sound effects, foley, soundtrack choices, and music supervision. Restricted to: DFM, ANVE majors.

Prerequisite(s): FDMA 2510.

FDMA 303. Cinema Review and Critique

3 Credits (3)

This course is for the student who wants to learn to be a more active, intelligent film viewer. It encourages critical thinking about films and educates students on how to write a film review. Students will meet in the movie theater to watch essential films that serious movie watchers should see from classic motion pictures, to current release major motion pictures, independent films and world cinema features. The course will serve as a guide to the illuminating process of evaluating, analyzing, and reviewing movies. Restricted to: DFM, ANVE majors.

Prerequisite(s): FDMA 2382.

FDMA 305. Business of Filmmaking/Animation

3 Credits (3)

Explores the roles of unions, basic contracts, legal arrangements, and the economics of the production process, distribution, and financing. Consent of Instructor required.

Prerequisite(s): FDMA 2382.

FDMA 308. Writing for Animation

3 Credits (3)

This class explores methods for, and approaches to, writing for animation. Students study and produce scripts for a range of animation

outlets while engaging in writing exercises based on character and story development.

Prerequisite(s): FDMA 2382 or consent of instructor.

FDMA 309. Screenwriting I

3 Credits (3)

Writing intensive. Students learn the craft of screenwriting, honing skills in writing dialogue and visual narrative, crafting dynamic characters and dramatic action. Original student scripts will be performed and discussed in class. Crosslisted with: ENGL 309 and THEA 306.

Prerequisite(s): ENGL 2382/FDMA 2382 or consent of instructor.

FDMA 310. Cinematography II

3 Credits (3)

Advanced tools of the cinematographer, lighting and composition techniques. Artistic and technological elements of cinematography. Restricted to: DFM, ANVE majors.

Prerequisite(s): FDMA 2520.

FDMA 311. Editing II

3 Credits (3)

Advanced techniques in digital films using professional non-linear editing systems. Restricted to: DFM, ANVE majors.

Prerequisite(s): FDMA 1220.

FDMA 312. Post Production Color Grading

3 Credits (3)

Color grading is an important part of the overall look of a film. It used to be a craft that only a small number of people knew how to do. However, due to advances in technology and business models, more and more people are diving into color grading. This class is an introductory look into the art and techniques of color grading. Restricted to: DFM, ANVE majors.

Prerequisite(s): FDMA 1220.

FDMA 314. Acting for Film

3 Credits (3)

Techniques for film and television acting. In-depth analysis of film performance creation among actor, director, writer, cinematographer, and editor. Restricted to: THTR, DFM majors.

Prerequisite(s): FDMA 2382.

FDMA 318. Documentary Production

3 Credits (3)

Survey of theory and history of documentary film making including viewings and discussions of notable films and directors. Class works with actual documentary project. May be repeated up to 6 credits. Restricted to: ANVE, DFM majors.

Prerequisite(s): FDMA 1220, FDMA 2520.

FDMA 320. Race and Gender in Film

3 Credits (3)

In this course students will analyze film as an art form as well as be exposed to Race and Gender Feminist Film Theory. We will consider the role of film in our understandings of sex, gender and sexuality. Through discussions and writing we will work to discern relevant social, political, ideological, and aesthetic concepts in the media we examine. Crosslisted with: ENGL 399, GNDR 450 and GNDR 550.

FDMA 325. Film Festival Production

3 Credits (3)

A course for students interested in learning about the processes of orchestrating an independent film festival. Students will engage in a professional environment with other film students and filmmakers, as well as learn about film event administration and organization. May be repeated up to 6 credits. Restricted to: DFM, ANVE majors.

FDMA 328. Producing**3 Credits (3)**

Examines the role of the Producer, essential to every film production. The course will revolve around the best practices in organizational design, the production process, the budgeting process, financial controls, scheduling, insurance and distribution.

Prerequisite(s)/Corequisite(s): FDMA 2510, FDMA 1220, FDMA 2382.

Restricted to: ANVE,DFM majors.

FDMA 332. 3D Character Animation**3 Credits (3)**

Essentials and principles of 3D character animation. Techniques and craft of breathing life into characters through movement, including dynamic poses, blocking action, run and walk cycles, lip syncing and realism. Students will plan and produce original animation for review by classmates and as part of a CGI demo reel. THEA 1221, Acting and FDMA 2510, Sound Design are recommended. Restricted to: DFM,ANVE majors.

Prerequisite: THEA 1210 (or FDMA 314 or FDMA 348), FDMA 1510 and FDMA 2720 or consent of instructor.

Learning Outcomes

1. Understand the character animation pipeline.
2. Understand basic body mechanics and how to represent them with a 3D character
3. Understand the twelve principles of animation on a deeper level and be able to apply them in individual work
4. Developing a vocabulary and critical eye in order to critique each other's work.

FDMA 341. Visual Effects I**3 Credits (3)**

This course will educate students on the fundamental principles, skills, and artistry needed to successfully integrate live action footage and computer generated imagery into technically correct and narrative engaging cinematic shots. Topics include: Cinematography for visual effects; Green screen setup/lighting/keying; Intermediate compositing techniques; Editing, color correction and grading. Restricted to ANVE, DFM Majors. May be repeated up to 3 credits.

Prerequisite: FDMA 1510, FDMA 2530, FDMA 2745 (or consent of instructor).

Learning Outcomes

1. At the end of this class, students will produce (alone or in a group), an engaging, well-thought out and professionally executed visual story from scratch - using a combination of live action plates, green screen elements and seamlessly integrated CGI elements.
2. Students will become fluent in setting up and operating a professional camera proper cinematography techniques.
3. Students will shoot green screen elements/plate using proper cinematography techniques.
4. Students will become fluent in editing software to edit an engaging narrative.
5. Students will become fluent in node-based compositing software to produce seamless, photoreal integrations of CGI elements and green screen mattes in live action plates.
6. Students will use color-correction and color grading techniques and use color as a narrative element.
7. Students will correctly adhere to established production standards and protocols.

FDMA 348. Acting for Animation**3 Credits (3)**

This course explores performance techniques relevant to animators including 2D and 3D animation and motion capture. Students learn to create dynamic, dramatic performances and believable character interactions for animation based reference. Students learn to analyze scripts, sound, acting, action and performance for production. Topics include: acting theory, emotional/mental states, character movement and style, dynamic facial expression, scene construction, posing, layering and rhythm, simplification and exaggeration, and lip sync. Restricted to: ANVE,DFM majors. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the different roles and character mindsets of digital animation in cinema.
2. Understand and apply some basic acting skills into animation reference.
3. Understand and apply some basic processes of creating reference for a narrative.
4. Begin to apply some basic strategies for developing and creating a story visually.

FDMA 350. Intermediate 2D Animation**3 Credits (3)**

Students will begin to refine their animation skills by animating more complex characters utilizing the Principles of Animation. They will practice these advanced drawing and motion techniques in a variety of exercises and projects using industry standard software. Areas of focus include: squash and stretch, cloth simulation, the successive breaking of joints, and biped walk cycles. May be repeated up to 3 credits.

Prerequisite: FDMA 2710.

Learning Outcomes

1. Students will refine foundational animation skills.
2. Students will learn and show proficiency in related industry-standard software.
3. Students will apply skills to more advanced projects than in previous 2D courses

FDMA 360. Previsualization**3 Credits (3)**

Implements 3D animation tools in preproduction shot and sequence design for motion picture and broadcast industries; including 3D storyboarding, technical planning and editing basics. LC Campus Only. Restricted to ANVE, DFM majors.

Prerequisite(s): FDMA 1510, FDMA 2530, and FDMA 2720 or consent of instructor.

FDMA 362. Motion Graphics**3 Credits (3)**

Students will learn the industry standard motion graphics techniques through a variety of exercises and projects that combine animation, text, visual effects, and sound. Restricted to: ANVE, DFM majors.

Prerequisite: FDMA 1715.

Learning Outcomes

1. Understand the context for and learn to create, combine, and animate text with graphics.
2. Explore various applications of creative techniques, including motion graphic design for commercials, logos, informative videos, UI design, and basic character rigging.
3. Learn to use industry-standard motion graphic softwares.

FDMA 365. Character Design and Development**3 Credits (3)**

Digital character design for the entertainment industry. Provides insight into the process of creating iconic characters. Traditional and

contemporary character designers are explored. Industry workflow is introduced and necessary skills are developed to design detailed 3D characters from concept through production. Restricted to ANVE, DFM majors. May be repeated up to 3 credits.

Prerequisite: FDMA 1510, FDMA 2530 and FDMA 2535, or consent of instructor.

Learning Outcomes

1. Understand the role of a character in cinema and gaming.
2. Become familiar with leading character designers and their approach.
3. Utilize current industry standard methods.
4. Understand and apply fundamental character design techniques.
5. Demonstrate a strong ability to design and create characters from concept through production.

FDMA 395. Directing I

3 Credits (3)

Study and application through short scene work of the basic tools of a director and relationships with actors, designers, playwright, and stage managers. Interpreting as well as organizing. May be repeated up to 3 credits. Restricted to: DFM, ANVE majors.

Prerequisite(s): FDMA 2510, AND FDMA 2520, AND FDMA 1220.

FDMA 396. Directing II

3 Credits (3)

Addresses pre-production concerns including script breakdown, casting ground plans and coverage. The criteria employed when selecting the creative team including a director of photography, art director, light, sound and wardrobe designers. Introduction to budgeting, scheduling, and script breakdowns. Prerequisite: FDMA 395

FDMA 397. Practicum

1-3 Credits (1-3)

Practical application of the student's field of study in a project environment. May be repeated up to 9 credits. Consent of Instructor required.

FDMA 398. Special Topics

3 Credits (3)

This course addresses specific subjects and issues as identified by the department. Topics and credits to be announced in the Schedule of classes. May be repeated up to 12 credits.

FDMA 400. Directed Studies

1-6 Credits (1-6)

Directed study course in CMI under the supervision of a CMI faculty member. May be repeated up to 9 credits.

FDMA 401. Motion Capture Techniques

3 Credits (3)

Students will implement industry standard motion capture techniques and essential skills to capture and integrate performance for movie making, 3D animation and game production. Students will learn how to use the motion capture system, equipment and workflow, and polish performances using industry standard software. Concepts covered will consist of exploring motion capture setup, shooting, data tracking, and animation correction and enhancement. Restricted to ANVE, DFM majors. May be repeated up to 3 credits.

Prerequisite: FDMA 1510, FDMA 2720 and FDMA 2725 (or consent of instructor).

Learning Outcomes

1. Understand and demonstrate basic approaches to integrating live actors with computer generated imagery.
2. Understand the role of motion capture in cinema, advertising and related fields.

3. Build familiarity with leading motion capture companies and their approaches.
4. Become knowledgeable of the history of motion capture.
5. Become knowledgeable of current advances in motion capture.
6. Learn to utilize industry standard motion capture software.
7. Demonstrate a strong ability to produce believable imagery from concept through final production.

FDMA 410. Cinematography III

3 Credits (3)

This class is geared towards those who want to learn more about cinematography, color grading, and digital technology as it pertains to cinematography. Shooting high-end codecs (ProRes/DNxHD) or RAW are becoming more and more popular in filmmaking as camera manufactures and computer processing get better. This class will be a mix of production and post-production as learning how to shoot these higher end codecs do not end with the camera. Focus will be on techniques of shooting raw, understanding how to operate a camera capable of high end image acquisition, properly building up the camera rig and accessories, managing data and the post-production workflow. Consent of Instructor required. Restricted to: DFM, ANVE majors.

Prerequisite(s): FDMA 310.

FDMA 433. Sets and Environments

3 Credits (3)

Digital environment design and creation for movies and games from concept to production; including illustration, modeling, matte painting, texturing, lighting, rendering, integration, and camera projection. Restricted to ANVE, DFM majors. May be repeated up to 3 credits.

Prerequisite: FDMA 1510, FDMA 2530, and FDMA 2535 or consent of instructor.

Learning Outcomes

1. Understand the role of digital production design in cinema.
2. Become familiar with the work of leading digital artists involved in production design for the entertainment and gaming industries.
3. Utilize the software implemented in the entertainment industry.
4. Understand and apply fundamental digital set design techniques.
5. Demonstrate a strong ability to design and create digital set and environments from concept through production.

FDMA 450. Advanced 2D Animation

3 Credits (3)

This course will cover the more advanced aspects of 2D Animation. Students will demonstrate their mastery of the principles of animation through a variety of exercises and projects focusing on: automated and manual lip sync, full motion character animation, acting, smears, and quadruped animation. Restricted to ANVE, DFM majors. May be repeated up to 3 credits.

Prerequisite: FDMA 350.

Learning Outcomes

1. Students will gain experience mastering Disney's Principles of animation.
2. Students will complete exercises to animate both humans and animals.
3. Students will gain proficiency in lip syncing and acting using industry standard software.

FDMA 480. Screenwriting II

3 Credits (3)

Students will write 2 short scripts, 10-15 pages each throughout the semester. Focus will be on learning how to take notes and rewrite. Script

analysis will be in a workshop format. Scripts will be read and discussed, scenes performed and reactions analyzed to consider effect of dialogue, character development, etc. Restricted to ENGL, DFM, ANVE majors.

Crosslisted with: ENGL 480

Prerequisite(s): ENGL 309 or FDMA 309 or THEA 306 or consent of instructor.

FDMA 490. Advanced Screenwriting

3 Credits (3)

Students will prepare a 30-60 page screenplay. Script analysis will be in an advanced workshop format. Scripts will be read and discussed, scenes performed and reactions analyzed to consider effect of dialogue, character development, etc. This course is aimed at preparing writers for the professional market. Consent of instructor required. May be repeated up to 6 credits.

FDMA 491. 3D Production Studio I

6 Credits (6)

The course is the first semester of a year-long effort to complete a culminating project that is a story-driven short film, which can be either full CGI, or live action with visual effects. In Production Studio I the emphasis will be on the pre-production phase, including analysis and critique, pipeline organization and project management. Pre-production consists of: Pitch, Script, Visual and sound references, Storyboards, 3D Previsualization, Scheduling/Project Management. Restricted to ANVE majors.

Prerequisite: FDMA 308 or FDMA 309, FDMA 341.

Prerequisite/Corequisite: FDMA 332, FDMA 360, FDMA 365, FDMA 433.

Learning Outcomes

1. Demonstrate an ability to create a transformational story.
2. Exhibit proficiency in visual storytelling, structure, and character development.
3. Develop a story appropriate to the chosen production approach.
4. Create storyboards/animatics to direct the cinematic aspects of the story.
5. Design the production visually in terms of characters and environment.
6. Learn to implement critiques of work to improve production quality.

FDMA 492. 2D Production Studio I

6 Credits (6)

Students will work through the pre-production process on short animated films. They will write a script, create a storyboard, and record voice over/ dialogue to create an animatic. Additional exercises will then be assigned to augment the skill set of the student according to the needs of each student. Restricted to ANVE majors.

Prerequisite: FDMA 1715 and FDMA 450.

Learning Outcomes

1. Students will synthesize animation techniques to produce a completed animatic.
2. Students will show proficiency in storytelling towards the development of a short script for production.
3. Students will demonstrate proficiency in industry standard animation softwares and production practices.

FDMA 493. 3D Production Studio II

6 Credits (6)

The course is the final semester of a year-long concentration on a culminating project. Emphasis will be on the production, post-production, and distribution of the work created during 3D Production Studio I. Students will produce a professional quality and industry-standard visual story that will help them gain entry into professional employment.

The overall objective is for students to execute their artistic vision with exceptional creative and technical proficiency - resulting in a story-driven and captivating cinematic experience. Restricted to ANVE majors.

Prerequisite: FDMA 491.

Learning Outcomes

1. Students will complete the process of transforming their story from script to screen.
2. Students will demonstrate mastery of craft as a digital artist.
3. Students will learn to direct the cinematic aspects of the story.
4. Students will show proficiency in the production workflow, and complete a deliverable short film by the end of the production schedule.

FDMA 494. 2D Production Studio II

6 Credits (6)

Students will produce the short animated films they developed in 2D Production Studio I. They will animate, composite, and edit their shorts into a final piece for presentation in a showcase. Restricted to ANVE majors.

Prerequisite: FDMA 492.

Learning Outcomes

1. To complete a final project (either short film or demo reel) that demonstrates synthesis of animation techniques taught in earlier classes.
2. To translate animatics from 2D Production Studio I into keyframes and then in-between their keyframes to get clean, smooth animations.

FDMA 495. Internship

1-12 Credits (1-12)

Placement in a production facility and supervised experience required. With CMI advisor approval only. May be repeated up to 18 credits. Consent of Instructor required. Restricted to: DFM,ANVE majors.

FDMA 497. Portfolio Design and Development

3 Credits (3)

Advanced graphic design projects with an emphasis on conceptual development, portfolio preparation, and professional practices. Refine general marketing strategies, personal portfolio, and resumes. Define, target, and penetrate personal target markets. Students develop individual promotional/demo packages. Restricted to: DFM,ANVE majors.

Animation and Visual Effects - Bachelor of Creative Media

The Creative Media Institute's Bachelor of Creative Media with an emphasis in Animation & Visual Effects currently offers 2 different paths, determined by the kind of senior project students wish to produce.

Pathway: 2D Production Studio

Students must complete all university requirements and the Animation and Visual Effects curriculum outlined below. All Animation and Visual Effects Curriculum requirements must be completed with a grade of C- or higher.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Animation and Visual Effects - Undergraduate Minor

Must be admitted to DFM

Take 18 credits of FDMA/ENGL, FDMA/THEA courses as listed in the Animation and Visual Effects major. A minimum of 9 credits must be upper division.

Creative Writing - Undergraduate Minor

Students not earning a bachelor's degree in English with an emphasis in Creative Writing are eligible to pursue a minor in Creative Writing. Students must earn 18 credits from the approved course lists below. At least 12 credits must be upper division. Students may request approval for other courses clearly related to the minor from the undergraduate advisor in the Department of English. Students earning a BA in English must earn at least 6 credits approved by the Department of English

undergraduate advisor beyond those earned for the major in order to earn a minor in Creative Writing.

Prefix	Title	Credits
Requirements		
Select two from the following: ¹		6
ENGL 2310G	Introduction to Creative Writing	
ENGL 2521	The Bible as Literature	
ENGL 2610	American Literature I	
ENGL 2620	American Literature II	
ENGL 2280	History of Argument	
ENGL 2630	British Literature I	
Select two from the following: ²		6
ENGL 304	Creative Writing: Prose	
ENGL 306	Creative Writing: Poetry	
ENGL 307	Creative Writing: Creative Nonfiction	
ENGL 308	Creative Writing: Playwriting	
ENGL 413	Advanced Creative Writing: Prose Workshop	
ENGL 414	Advanced Creative Writing: Poetry Workshop	
ENGL 446	Advanced Creative Writing: Nonfiction Prose	
Select one from the following (446 may satisfy this requirement if repeated or not used to satisfy the above requirement)		3
ENGL 413	Advanced Creative Writing: Prose Workshop	
ENGL 414	Advanced Creative Writing: Poetry Workshop	
Select 3 credits from English literature courses numbered 300 and above.		3
Total Credits		18

¹ Students may make 1 or 2 of the following substitutions:

- HNRS 2160G New Testament as Literature for ENGL 2521 The Bible as Literature;
- HNRS 2171G The Worlds of Arthur, HNRS 2173G Middle Ages, or HNRS 2117G The World of the Renaissance: Discovering the Modern for ENGL 2630 British Literature I;

² All Creative Writing workshops may be taken more than once.

Digital Film Making - Undergraduate Minor

Must be admitted to ANVE

Take 18 credits from the FDMA/ENGL, FDMA/THTR courses as listed in the Digital Film Making major. A minimum of 9 credits must be upper division.

Criminal Justice

Undergraduate Program Information

The Department of Criminal Justice offers courses in the traditional setting as well as online.

The criminal justice degree plan is broadly interdisciplinary in nature embracing the study of the humanities, law, natural, behavioral and

social sciences. The curriculum seeks to balance theoretical inquiry with applied knowledge.

Students become prepared for careers in law enforcement, corrections, probation and parole, work with juveniles, victim services, non- and not-for profit organizations connected with criminal and social justice, and the related field of forensics. Graduates have also been successful in law school and graduate programs in the social sciences. The undergraduate major consists of at least 33 credits in the major field, 27 of which must be numbered 300 or above (excluding CJUS 393 Internship in Criminal Justice).

The department offers an interdisciplinary minor in Forensic Sciences. Students interested in the minor should consult with the department head.

Graduate Program Information

The Department of Criminal Justice offers graduate study leading to the Master of Criminal Justice (MCJ) degree. Admission to the MCJ is competitive and prospective graduate students are expected to have at least a 3.0 undergraduate grade-point-average, coursework in research methods and statistics, and possess a bachelor's degree. Those not meeting these requirements may be admitted conditionally and required to make up deficiencies at the outset of their program of study. Applicants should review our graduate handbook (<https://crimjust.nmsu.edu/graduate-programs/HANDBOOK-Revised-May-2019f.pdf>) and provide a personal statement that includes a discussion of your interest in the field and reasons for wanting to pursue the degree (1-2 pages). If interested in a graduate assistantship, please complete the application form (https://crimjust.nmsu.edu/_assets/TA-Application-for-MCJ-in-CJ-.pdf) and provide three letters of recommendation. Students meeting the minimum GPA requirement (3.0 or better) do not need to submit letters of recommendation. Students not meeting the minimum GPA requirement may be asked for additional materials, including letters of recommendation. The GRE is NOT required for admission into the MCJ program. The MCJ Graduate Committee may require a student to complete additional English writing coursework. For more information, please visit the Criminal Justice Graduate Programs webpage (<https://crimjust.nmsu.edu/graduate-programs/criminal-justice-grad.html>).

Students must declare their intent to pursue one of the two degree options: the thesis option or the focused coursework option. The degree options are provided so that students may better match their education with career goals. The thesis option is often used by students interested in pursuing careers in basic and applied criminal justice research or a doctoral degree. The focused coursework option is often used by students pursuing administrative positions within criminal justice agencies. The thesis option is typically only available for Campus-Based students.

All candidates, regardless of chosen degree option, must complete a final examination. Examination requirements vary by degree option. Please contact the director of the MCJ program or consult the Department of Criminal Justice Graduate Programs webpage (<https://crimjust.nmsu.edu/graduate-programs/criminal-justice-grad.html>).

Thesis students must submit a thesis proposal to their faculty committee at a proposal hearing for approval and subsequently complete the approved thesis project. An approved thesis proposal is one wherein the thesis committee determines the student demonstrates a comprehensive understanding of the nexus of theory, method, and policy as it applies to the proposed thesis project. At the discretion of the thesis committee the

proposal may be considered inadequate and the student is required to revise and resubmit the thesis proposal until the committee determines the proposal is satisfactory. The final examination includes a defense of the completed thesis, but may also include a general examination based upon the candidate's program of study. The minimum coursework requirements are displayed below.

Focused coursework students must pass two written comprehensive examinations following completion of the required courses, no earlier than their third semester. Students not passing the examinations will be required to wait until the following semester to retake the examination. The minimum course requirements are displayed below.

Online M.C.J. Coursework

There is an online option for the MCJ degree. Online criminal justice courses are available only to those admitted to the MCJ program as online students, or with permission of the Director of the MCJ program. Students desiring to be admitted to the MCJ program as online students must declare that intent in writing to the MCJ director. For more information regarding the online MCJ degree option, consult the Department of Criminal Justice web page, <http://crimjust.nmsu.edu>, or contact the Director of the MCJ program.

Teaching Assistantships

Teaching assistantships are typically available for some traditional (on-campus) MCJ students on a competitive basis. The Director of the MCJ Program will contact admitted students to determine their interest, and the Graduate Committee will make recommendations to the Department Head for a final decision.

Degrees for the Department

Bachelor Degree(s) & Supplemental Major(s)

- Criminal Justice - Bachelor of Criminal Justice (p. 611)
- Criminal Justice - Bachelor of Criminal Justice (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/criminal-justice-bcj-online/>)
- Law and Society - Undergraduate Supplemental Major (p. 615)

Master Degree(s) & Dual Degree(s)

- Criminal Justice - Master of Criminal Justice (p. 130)
- Criminal Justice - Master of Criminal Justice (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/criminal-justice-mcj-online/>)
- MPA-MCJ Program - Dual Degree (p. 160)

Minors for the Department

- Forensic Science - Undergraduate Minor (p. 614)

Professor, Dennis M. Giever, Department Head

Professor Posadas; **Associate Professors** Keys, Natividad; **Assistant Professors** Baek, Cho, Trujillo; **College Associate Professor** Dimitrijevic; **College Assistant Professor**; D'Antonio-Hangen; **Emeritus Professors** Crowley, Gregware, Mays (Regents), Winfree.

H. Baek, Ph.D. (University of Louisville, Kentucky)—police administration, criminology; A. Cho, Ph.D. (Sam Houston State University)—corrections, gender as it relates to crime & justice; D. Giever, Ph.D. (Indiana University of Pennsylvania)—criminology, research methods, evidence-based program evaluation; D. Keys, Ph.D. (Missouri-Columbia)—penology, narcotic policy; N. Natividad, Ph.D. (Arizona State)—borderland studies, race and identity studies, immigration; C. E. Posadas, Ph.D. (Arizona State)—immigration*

and justice, juvenile justice, research methods; S. Trujillo, Ph.D. (University of Missouri - St. Louis)—immigration, ethnicity, community-level correlates of crime, as well as juvenile justice and gang behavior; M. Edwards, Ph.D. (Kansas State University) - criminology, community supervision, structural & social inequalities; J. Corey, Ph.D. (University of Texas at Dallas) - corrections, mental health, program evaluation; M. Dimitrijevic, M.A. (New Mexico State University) - human trafficking, drugs, comparative CJ systems; I. D'Antonio-Hangen, M.A. (New Mexico State University) - criminal investigations, human trafficking, forensic law.

*MCJ Program Director

Criminal Justice Courses

CJUS 1110G. Introduction to Criminal Justice

3 Credits (3)

This course provides an overall exploration of the historical development and structure of the United States criminal justice system, with emphasis on how the varied components of the justice system intertwine to protect and preserve individual rights. The course covers critical analysis of criminal justice processes and the ethical, legal, and political factors affecting the exercise of discretion by criminal justice professionals.

Learning Outcomes

1. Describe the history, structure and function of the criminal justice system in the United States.
2. Discuss the role of law enforcement, court systems, corrections, and security in maintaining social order.
3. Identify and describe crime causation theories, various measures of crime and their reliability and victimization theories.
4. Relate fundamental principles, concepts and terminology used in criminal justice to current events.
5. Apply basic analytical and critical thinking skills in evaluating criminal justice issues, policies, trends and disparities.

CJUS 1120. Criminal Law

3 Credits (3)

This course covers basic principles of substantive criminal law including elements of crimes against persons, property, public order, public morality, defenses to crimes, and parties to crime. May be repeated up to 3 credits.

Learning Outcomes

1. Explain the concepts of substantive criminal liability in the United States, including actus reus, mens rea, causation, concurrence, and parties to crime.
2. Define the differences between criminal law and civil law in the United States.
3. Demonstrate basic knowledge of legal terminology as it relates to criminal law.
4. Identify the elements of crimes against persons, property, public order and the administration of justice, public morality, and the inchoate crimes.
5. Describe the various defenses to crimes.

CJUS 1996. Special Topics in Criminal Justice

1-3 Credits

Specific subjects to be announced in the Schedule of Classes. May be repeated under different topics for a maximum of 6 credits.

Learning Outcomes

1. Varies

CJUS 2120. Criminal Courts and Procedure

3 Credits (3)

This course covers the structures and functions of American trial and appellate courts, including the roles of attorneys, judges, and other court

personnel, the formal and informal process of applying constitutional law, rules of evidence, case law and an understanding of the logic used by the courts.

Learning Outcomes

1. Explain the application of the Constitutional Amendments that apply to criminal justice.
2. Explain and describe the dual court system in the U.S. and how courts enforce the rule of law.
3. Identify and list the duties and requirements of the courtroom workgroup.
4. Describe courtroom procedures, rules of the court, and due process of law.
5. Articulate basic knowledge of the U.S. criminal court system.
6. Define legal terms.
7. Explain the use of discretion in criminal procedure.
8. Differentiate the role of courts of limited jurisdiction, courts of general jurisdiction, and the appellate courts in the processing of criminal cases.

CJUS 2140. Criminal Investigations

3 Credits (3)

This course introduces criminal investigations with in the various local, state, and federal law enforcement agencies. Emphasis is given to the theory, techniques, aids, technology, collection, and preservation procedures which insure the evidentiary integrity. Courtroom evidentiary procedures and techniques will be introduced. Community Colleges only. (Note: students completing CJUS 2140 may not take CJUS 321.)

Learning Outcomes

1. Identify developments in investigation technology.
2. Identify common types of criminal investigations and their key components.
3. Apply proper crime scene investigative protocols.
4. Explain proper evidentiary gathering and handing procedures, and utilize various interviewing techniques.
5. Identify and compare different law enforcement agencies and the role they play in criminal investigations.
6. Describe proper collection, evidence preservation, documentation, and court presentation.
7. Develop effective search authorization.

CJUS 2150. Corrections System

3 Credits (3)

This course introduces the corrections system in the United States, including the processing of an offender in the system and the responsibilities and duties of correctional professionals. The course covers the historical development, theory, and practice, as well as the institutional and community-based alternatives available in the corrections process.

Learning Outcomes

1. Describe the purposes of the corrections system and the issues facing the corrections system.
2. Explain the components of the corrections system and describe their functions.
3. Compare and contrast the different forms of correction practices.
4. Explain the goals of corrections, the different factors affecting the sentencing process, the legal rights of prisoners, and the issues concerning prison violence.
5. Explain the impact of reentry into society.
6. Identify the issues concerning capital punishment.

7. Describe the effectiveness of various correction programs on offenders.

CJUS 2160. Field Experience in Criminal Justice

3-6 Credits

This course is designed to provide actual experience working for a criminal justice agency and the opportunity to apply criminal justice concepts and theory to a field situation. Students already working in an agency will complete an approved learning project while on the job.

Prerequisites: CJUS 1110G, prior arrangement and consent of instructor and a GPA of 2.0 or better in major.

Learning Outcomes

1. Obtain practical experience by observing, researching, and working in a criminal justice agency.
2. Apply the knowledge of principles, theories, and methods that were learned in the classroom to situation in which field experience will be devoted
3. Instill an understanding for general and specific problems that criminal justice agencies encounter on a daily basis.
4. Develop a professional work ethic and attitudes, including reliability, professional responsibility, and the ability to work cooperatively with others.

CJUS 2220. The American Law Enforcement System

3 Credits (3)

This course covers the historical and philosophical foundations of law and order, with an in-depth examination of the various local, state, and federal law enforcement agencies and how they interact within the criminal justice system.

Learning Outcomes

1. Discuss, evaluate, and analyze the role of police in the democratic society today, and the historical development of modern day law enforcement
2. Define and explain the different types of community policing and the valid reasons behind their application within a community
3. List and discuss the ways to overcome the barriers to change within a police organization, good recruitment, screening, and retention of employees
4. Analyze and discuss the history of and the different types of police patrol, as well as the use of force and deadly force, and methods used for controlling police behavior
5. Describe and discuss the different types of police behavior, potential oversight, and remedy and their limitations
6. List and discuss the benefits of higher and continued education, along with the minimum educational requirements for police officers
7. Evaluate and discuss the reasons for police stress and the methods of dealing with stressors
8. Interpret current court cases, both state and federal, that affect police procedures

CJUS 300. Introduction to Criminal Justice Research

3 Credits (3)

Overview and evaluation of criminal justice research. Selection of research topics, methods of data selection and collection, analysis techniques, and presentation of findings.

Prerequisite: restricted to majors or consent of instructor.

CJUS 301. Advanced Research Methods

3 Credits (3)

Study of selected quantitative and qualitative skills and their application to criminal justice research.

Prerequisite: Restricted to majors or consent of instructor.

CJUS 302. Crime, Justice and Society

3 Credits (3)

Through critical analysis students build a rich understanding of the role of crime in our contemporary landscape and explore ideas and practices associated with justice, victimization, criminality, morality and righteousness. The course cultivates knowledge & awareness of the interactions between socially constructed phenomena (race, class, power, ethnicity, economic structures) and popular beliefs, policies, and practices associated with crime, punishment, and formal social control. It is recommended that you complete three of the following English courses before enrolling in this class: ENGL 1110G, ENGL 2210G, ENGL 2221G & ENGL 2130G. Restricted to: Criminal Justice majors.

CJUS 303. Introduction to Criminological Theory

3 Credits (3)

Defining and measuring crime, crime causation, and the criminal behavior system, and their linkage to criminal justice policies, procedures, and practices. Students must be enrolled or have completed third English writing class and completed two of the following: ENGL 1110G, ENGL 2210G, ENGL 2221G or ENGL 2130G. Restricted to: C J majors.

Prerequisite(s): CJUS 300.

CJUS 304. Historical Perspectives of Criminal Justice Systems

3 Credits (3)

Examines the precursors to and development of three distinct systems associated with crime and punishment in the United States: the Courts, the Police, & Corrections. By studying the historical context and socio-political backdrop in which these institutions emerged and expanded students will come to a richer understanding of them and their attendant policies, practices, conventions, and assumptions. It is recommended that you complete three of the following English courses before enrolling in this class: ENGL 1110G, ENGL 2210G, ENGL 2221G or ENGL 2130G.

Restricted to: Criminal Justice majors.

Prerequisite(s): CJUS 300.

CJUS 306. Criminal Procedural Law

3 Credits (3)

Legal analyses of the rights of criminal defendants; legal duties and responsibilities of criminal justice personnel in the processing of criminal defendants. May be repeated up to 3 credits. Restricted to: C J majors.

Prerequisite(s): Restricted to majors, Forensic Science minors, or consent of instructor.

CJUS 307. Law of Evidence

3 Credits (3)

Evidentiary rules and concepts and their application in a criminal trial. May be repeated up to 3 credits. Restricted to: C J majors.

Prerequisite(s): Restricted to majors, Forensic Science minors, or consent of instructor.

CJUS 321. Criminal Investigation and Intelligence

3 Credits (3)

Principles of criminal investigation and intelligence production; processing cases from complaint through crime scene search, identification and collection of evidence, interviewing and interrogation, and case preparation for courts. May be repeated up to 3 credits. Restricted to: C J majors.

Prerequisite(s): Restricted to majors, Forensic Science minors, or consent of instructor.

CJUS 331. American Correctional Institutions

3 Credits (3)

Structure, organization, and operations of United States jails and prisons. Overview of correctional standards and classification systems, emphasizing current theory and practice.

Prerequisite: restricted to majors or consent of instructor.

CJUS 332. Correctional Law

3 Credits (3)

Federal and state laws and rules of post-conviction procedures; rights of the convicted related to sentencing, appeals, clemency, and restoration of rights.

Prerequisite: restricted to majors or consent of instructor.

CJUS 333. Juvenile Corrections

3 Credits (3)

Development and implementation of juvenile facilities and community programs. Effectiveness of current corrections practices. Restricted to majors.

CJUS 345. Victimology

3 Credits (3)

Study of risk factors in crime victimization, the impact of crimes upon victims, and the role of the victim in the criminal justice system.

Prerequisite: restricted to majors or consent of instructor.

CJUS 347. Sex Crimes

3 Credits (3)

Dynamics of sex crimes for victims and offenders, plus consideration of the legal and correction systems' response to sex crimes. Restricted to majors.

CJUS 348. Serial Killers

3 Credits (3)

Overview and critical assessment of serial homicide and its relevance for contemporary U.S. society. Focus on factors influencing definitions and cultural understanding of serial homicide.

Prerequisite(s): 60 credit hours.

CJUS 360. The Juvenile Justice System

3 Credits (3)

History, development, and philosophy behind a separate juvenile justice system. Role of the juvenile court, evaluation of juvenile law and procedure, and the processing of juvenile offenders.

Prerequisite: restricted to majors or consent of instructor.

CJUS 380. Introduction to Terrorism

3 Credits (3)

Overview of the phenomenon of terrorism, psychological and sociological theories of terrorism, and various contemporary governmental policies.

CJUS 391. Special Readings in Criminal Justice

1-3 Credits

Individually chosen subject areas not readily available in other courses. May be repeated for a maximum of 6 credits under different subtitles.

Restricted to majors.

Prerequisites: at least a 2.5 GPA and consent of instructor.

CJUS 393. Internship in Criminal Justice

1-12 Credits

Field experience in a local, state, or federal criminal justice or private security agency. Includes orientation, observation, conferences, and work experience. Credits limited to six if student has taken CJUS 2160. May be repeated for a maximum of 12 credits. Restricted to majors. Graded S/U.

Prerequisites: consent of instructor and GPA of 2.5 or better.

CJUS 399. New Mexico Law

3 Credits (3)

Examination of the history, development and implementation of law in New Mexico with an emphasis on legal issues unique to New Mexico. Crosslisted with: POLS 399. May be repeated up to 3 credits.

Learning Outcomes

1. To understand the unique legal issues of New Mexico through critical examination of the history, development and implementation of law in the state.
2. To develop skills to critically analyze debates over legal issues in New Mexico.
3. To develop skills to effectively communicate analysis of legal issues in New Mexico in oral and written forms.

CJUS 405. Juvenile Courts and Law

3 Credits (3)

History, development, and current status of juvenile courts. Legal status of juveniles in court and constitutional protections afforded them. Restricted to majors.

CJUS 410. Criminal Justice Administrative Systems

3 Credits (3)

Administrative structures in criminal justice agencies and institutions; relationship of administrative structures to practical police, courts, and corrections problems.

Prerequisite: restricted to majors or consent of instructor.

CJUS 412. Introduction to Security Technology and Loss Prevention

3 Credits (3)

Private and public responses to security problems, including employee theft, perimeter security, and domestic or foreign terrorism; reviews related law and management practices.

CJUS 414. Race, Crime and Justice

3 Credits (3)

Historical and contemporary analysis of the relationship between race and crime in the United States with emphasis upon human equality and fairness. Overview of racial and ethnic social categorizations and how they impact law and order.

CJUS 416. Global Perspectives on Youth and Drug Use

3 Credits (3)

Overview of global drug use among young people, comparative legal structures, formal and informal responses. Restricted to C J, ANTH, GOVT, SOC, GNDR, S WK majors.

CJUS 417. Drugs In Our World

3 Credits (3)

Comparative analysis of patterns and theories of drug use, formal government mitigation strategies.

CJUS 424. Forensic Law

3 Credits (3)

Overview of the rules and issues related to the use of scientific information in the legal process. May be repeated up to 3 credits. Restricted to: C J majors.

Prerequisite(s): C J major, Forensic Science minors, or consent of instructor.

CJUS 425. Issues in Ethics, Law, and Criminal Justice

3 Credits (3)

Examination of the key ethical and decision-making dilemmas facing professionals working in the field of law and criminal justice.

Prerequisite: restricted to majors or consent of instructor.

CJUS 427. Race and Crime in Film

3 Credits (3)

Critical analysis of film where messages relating race and crime are present, with emphasis on how this imagery informs problem definition, policies, and practice within the criminal justice system.

Prerequisite(s): 60 credit hours.

CJUS 428. Mexican-Americans and Issues of Social Justice

3 Credits (3)

In this course we will explore and discuss social issues related to the Mexican American community in the U.S., with special emphasis on their collective historical struggles and contributions to society. We will discuss the political, economic and cultural forces that exemplify their experience as a "whole."

Prerequisite(s): Students must have completed CJUS 300 or research methods equivalent or consent from the instructor.

CJUS 429. Immigration & Justice

3 Credits (3)

This course is designed to introduce undergraduate students to the complexities of immigration in the United States through a social justice lens. Students will explore the intersections of race, ethnicity, gender, and class in immigration through different groups' historical and contemporary experiences, including immigrants' experience with the criminal justice system.

Prerequisite(s): Student must have completed CJUS 300 or Research Methods equivalent or consent of the instructor.

CJUS 432. Issues in Criminal Justice

3 Credits (3)

Seminar on problems and conflicts encountered in major criminal justice issues. Topics announced in the Schedule of Classes. May be repeated for unlimited credits under different subtitles.

CJUS 434. Probation, Parole, and Community Corrections

3 Credits (3)

Structure, organization, and operation of probation, parole, and other community-based correctional programs in the U.S. Overview of historical and recent trends in the supervision of offenders in the community and in the development of alternatives to incarceration. Analysis of issues related to community correctional policies and practices. Restricted to majors.

CJUS 435. Political Penology

3 Credits (3)

Comparative analysis of incarceration and sanctions as punishment for crimes of conscience, religious intolerance, and dissidence.

CJUS 436. Courts and Sentencing

3 Credits (3)

This course will focus on the structure, organization, and operation of the state and federal court systems in the United States. It examines courtroom decision making and dynamics of courthouse justice—prosecutorial discretion, plea bargaining practices, jury and judicial decision making and sentencing. Additional topics will include racial, gender and class disparities in sentencing outcomes and the impact of recent reforms directed at the criminal court system. Restricted to: Criminal Justice majors.

CJUS 437. Wrongful Convictions

3 Credits (3)

This course will address causes (e.g. problems in witness identification, forensics, police and attorney conduct) as well as results of erroneous dispositions (e.g. compensation, media dynamics, possible reforms) in a critical analysis. Appropriate for prospective police, legal, and policy professionals. Restricted to: Criminal Justice majors.

CJUS 440V. Comparative Criminal Justice Systems

3 Credits (3)

Cross-national study of selected Western and non-Western legal systems. Comparison of structures and functions of police, court systems, and corrections in different systems.

CJUS 453. Women and Justice

3 Credits (3)

Critical analysis of the impact of the criminal justice system, race and class upon the lives of women. Restricted to majors.

CJUS 454. Human Trafficking

3 Credits (3)

Study of global human trafficking, its causes and costs, and mitigation strategies. Restricted to C J, GOVT, SOC, GNDR, S WK majors.

CJUS 456. Police and the Community

3 Credits (3)

This course is an advanced introduction to policing in the United States. The course will also cover current issues in policing, such as new technologies and the role of police in terrorism prevention.

Learning Outcomes

1. Describe the evolution of police community relations and community policing.
2. Compare and contrast traditional policing with community policing.
3. Examine discretion in police work and relate it to legal, operational, and ethical issues and problems.
4. Examine police misconduct and corruption.
5. Examine the importance of professionalism and ethics in police work.
6. Identify strategies for interacting with the physically and mentally disabled, the elderly, and crime victims.

CJUS 484. Hate Crimes & Groups

3 Credits (3)

Explores the phenomenon of hate-motivated violence. Examines the hate crime laws, organized hate groups, and social theories attempting to explain violent hate.

CJUS 501. Research Methods in Criminal Justice

3 Credits (3)

Research design, methods of data collection and analysis, and preparation of research reports. Restricted to majors.

Prerequisite: C J major or consent of instructor.

CJUS 502. Statistics in Criminal Justice

3 Credits (3)

Intermediate level statistical techniques applied to criminal justice data.

Learning Outcomes

1. Understand the basic statistical procedures for criminal justice research.
2. Use statistical software to enter and edit data, and conduct basic analysis.
3. Allow students the opportunity to recognize the critical role of empirical research in informing, influencing, and evaluating criminal justice practices and policies.
4. Developing a basic understanding of the role of statistics in criminal justice research.
5. Interpret and evaluate research evidence and statistical operations.

CJUS 511. Nature of Crime

3 Credits (3)

Defining and measuring crime, crime causation, and criminal behavior systems. Restricted to majors.

Prerequisite: C J major or consent of instructor.

CJUS 514. Advanced Race, Crime, and Justice

3 Credits (3)

Advanced analysis of the historical and contemporary relationship between race and crime in the United States with emphasis upon human equality and fairness. Overview of racial and ethnic social categorizations and how they impact law and order.

CJUS 515. A Course on Punishment

3 Credits (3)

Exploration and analysis of the idea and practice of punishment through a variety of philosophical perspectives, seeking to understand its moral and practical viability as employed in contemporary society, including its application within the criminal justice system.

CJUS 520. Advanced Girls, Women & Crime

3 Credits (3)

Advanced critical social science analysis of concepts of violence and justice as experienced by women impacted by the criminal justice system. Restricted to C J, GNDR majors. Crosslisted with: GNDR 520

CJUS 525. Issues in Ethics, Law, and Criminal Justice

3 Credits (3)

Examination of the key ethical and decision-making dilemmas facing professionals working in the fields of law and criminal justice. Restricted to majors.

CJUS 527. Advanced Race & Crime in Film

3 Credits (3)

Advanced critical analysis of film where messages relating race and crime are present, with emphasis on how this imagery informs problem definition, policies, and practice within the criminal justice system.

CJUS 528. Advanced Mexican-Americans and Issues of Social Justice

3 Credits (3)

Advanced analysis of social issues related to the Mexican American community in the U.S., with special emphasis on their collective historical struggles and contributions to society. We will discuss the political, economic and cultural forces that exemplify their experience as a "whole."

Learning Outcomes

1. Explore and discuss social issues related to the Mexican American community in the U.S.
2. Gain a better understanding of the history of the Mexican American experience in the U.S.
3. Understand current social justice issues impacting the Mexican American community.
4. Explore the Mexican American community experience particularly in the southwest.
5. Critically engage the challenges faced by the Mexican American community on issues such racial discrimination, racial profiling, immigration, and crime.

CJUS 529. Advanced Immigration & Justice

3 Credits (3)

Advanced analysis of the complexities of immigration in the United States through a social justice lens. Students will explore the intersections of race, ethnicity, gender, and class in immigration through different groups' historical and contemporary experiences, including immigrants' experience with the criminal justice system.

CJUS 531. Advanced Family Violence and the Law

3 Credits (3)

This course will examine how practitioners are involved in the criminal justice system in areas of family violence including: child physical abuse; child sexual abuse; child neglect; child ritualistic abuse; child exploitation; sibling abuse; intimate partner abuse; stalking; sexual abuse

and elder abuse. This course will be helpful for those who wish to go into law enforcement or victim's advocacy work. Restricted to: Criminal Justice majors.

CJUS 532. Advanced Issues in Criminal Justice (f, s, sum)
3 Credits (3)

Seminar on problems and conflicts encountered in major criminal justice issues. Topics announced in the Schedule of Classes. May be repeated under different subtitles for unlimited credit.

CJUS 537. Advanced Wrongful Convictions
3 Credits (3)

This course will address causes (e.g. problems in witness identification, forensics, police and attorney conduct) as well as results of erroneous dispositions (e.g. compensation, media dynamics, possible reforms) in a critical analysis. Appropriate for prospective police, legal, and policy professionals. Restricted to: Criminal Justice majors.

CJUS 541. Seminar in Criminal Justice Policy Analysis and Planning
3 Credits (3)

Seminar on policy development, planning and implementation processes in criminal justice. Links formal policy goals as they relate to theory and outcomes. Topics announced in the Schedule of Classes. Restricted to majors.

Prerequisite: C J major or consent of instructor.

CJUS 545. Advanced Victimology
3 Credits (3)

Study of risk factors in crime victimization, the impact of crimes upon victims, and the role of the victim in the criminal justice system. Consideration of the impact of criminal justice policy on victim outcomes.

CJUS 560. Juvenile Justice Systems
3 Credits

Policy development and operations in police, court, and correctional agencies in response to juveniles. Analysis of programs designed to identify, prevent and treat juvenile offenders. CJUS 570. Probation and Parole 3 cr. Advanced analysis of goals, theories and practices of all forms of correction in the community, including probation, parole, plus other intermediate sanctions. Restricted to majors.

CJUS 581. Community Policing
3 Credits (3)

Overview and analysis of community policing issues from various perspectives. Analysis of strategies that facilitate police and community collaboration. Restricted to majors.

CJUS 591. Directed Readings in Criminal Justice
3 Credits (3)

Supervised review of literature in specialized areas of the nature of crime, law and social control, and criminal justice administration. Consent of instructor required.

CJUS 592. Independent Research
1-3 Credits

Design and execution of a criminal justice research project. Requires a written paper in standard format, including literature review, hypotheses, methodology, findings, and conclusions.

CJUS 593. Internship
3-6 Credits

Supervised placement in an applied or research setting in criminal justice. An in-depth written report of the project is required. Restricted to C J majors. May be repeated for a maximum of 6 credits. Graded S/U.

Prerequisites: introductory graduate course in the area of the internship and consent of the internship supervisor.

CJUS 599. Master's Thesis
1-15 Credits

Thesis.

<i>General Education Elective</i> ³		3-4
Viewing a Wider World ⁵		6
Departmental/College Requirements		
<i>CJUS Core Courses</i> ⁶		
The department requires CJUS 1110G and this course will count towards both the General Education and Departmental/College Requirements		
CJUS 1120	Criminal Law	3
CJUS 301	Advanced Research Methods	3
CJUS 302	Crime, Justice and Society	3
CJUS 425	Issues in Ethics, Law, and Criminal Justice	3
Select 3-4 credits from the following:		3-4
CJUS 300	Introduction to Criminal Justice Research	
POLS 300	Political Research Skills	
PSYC 3110	Experimental Methods	
SOCI 3150	Social Research: Methods	
<i>CJUS Theory Courses</i>		
One course from the following:		3
CJUS 303	Introduction to Criminological Theory	
CJUS 304	Historical Perspectives of Criminal Justice Systems	
CJUS 414	Race, Crime and Justice	
<i>Criminal Justice Electives</i>		
Select 12 credits from upper division Criminal Justice Electives ⁷		12
Non-Departmental Requirements (in addition to Gen.Ed/VWW)		
Choose one additional English Composition - Level 2 course, must be a different course that previously selected:		3
ENGL 1120	Composition II	
ENGL 2210G	Professional and Technical Communication Honors	
ENGL 2221G	Writing in the Humanities and Social Science	
Second Language Requirement: (required- see below)		3-14
Electives, to bring the total credits to 120 ⁸		32-46
15 credits must be Upper Division ⁹		
Total Credits		120

¹ The department requires 6 credits of English Composition - Level 2 coursework, 3 credits will count towards the General Education requirement, the other 3 credits will count as Non-Departmental requirements. ENGL 112 will only be accepted to fulfill one of the English Composition Level 2 requirements and is only allowed for transfer students.

² MATH 1220G, MATH 1350G or MATH 2350G are preferred but any Mathematics course that is higher level than MATH 121G, excluding MATH 1130G Survey of Mathematics, or higher than STAT 251G is also accepted.

**students may need to take any prerequisites needed to enter of the allowable Mathematics course(s) first.*

³ See the General Education (p. 227) section of the catalog for a full list of courses.

⁴ Students can take an Upper-Division PHIL course to meet departmental requirements, however, if this option is chosen, the student will have to take another general education humanities course to fulfill the general education humanities requirement.

⁵ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁶ Prior to enrolling in upper division courses, lower division courses must be completed or final courses must be in progress.

⁷ Not to include CJUS 393 Internship in Criminal Justice, or any criminal justice required course. Courses that fall under multiple content areas may only be counted once. Please visit our website for specific courses in each of these content areas <http://crimjust.nmsu.edu>.

⁸ Elective credit may vary based on General Education course selection, second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

⁹ For transfer students only.

*A student must earn a C- or better to receive credit for any departmental and nondepartmental requirement for the BC J degrees.

Second Language Requirement

For the Bachelor of Criminal Justice with a major in Criminal Justice there is a two year second language requirement (or the completion of MATH 1511G), the student must do one of the following: there is a two year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120 & FREN 2110 & FREN 2120	French I and French II and French III and French IV	3-14
GRMN 1110 & GRMN 1120 & GRMN 2110 & GRMN 2120	German I and German II and German III and German IV	3-14
JAPN 1110 & JAPN 1120 & JAPN 2110 & JAPN 2120	Japanese I and Japanese II and Japanese III and Japanese IV	3-14
SPAN 1110 & SPAN 1120 & SPAN 2110 & SPAN 2120	Spanish I and Spanish II and Spanish III and Spanish IV	3-14
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6
<i>For Heritage Speakers:</i>		
SPAN 1210 & SPAN 1220 & SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II and Spanish for Heritage Learners III	3-9

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3
SIGN 2110	American Sign Language III	3

Option 3:

Prefix	Title	Credits
Challenge the 2120 level for the following courses:		
FREN 2120	French IV	3
or GRMN 2120	German IV	
or JAPN 2120	Japanese IV	
or SPAN 2120	Spanish IV	
OR		

Challenge the 1120/2210 level for the following courses:		
PORT 1120	Portuguese II	3
or SPAN 2210	Spanish for Heritage Learners III	

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G , or MATH 1350G or MATH 2350G and ENGL 1110G. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Freshman		Credits
ENGL 1110G	Composition I (C- or better)	4
Choose one from the following: ¹		3
MATH 1220G	College Algebra (C- or better)	
MATH 1350G	Introduction to Statistics (C- or better)	
MATH 2350G	Statistical Methods (C- or better)	
CJUS 1110G	Introduction to Criminal Justice (C- or better and counts towards Area IV Requirement)	3
Choose one Area V: Humanities and Fine Arts Course from the following: ²		3
PHIL 1145G	Philosophy, Law, and Ethics (C- or better)	
PHIL 2230G	Philosophical Thought (C- or better)	
PHIL 1120G	Logic, Reasoning, & Critical Thinking (C- or better)	
PHIL 2110G	Introduction to Ethics (C- or better)	
FYEX 1112 or Elective		3

Choose one from the following:		3
ACOM 1130G	Effective Leadership and Communication in Agriculture	
COMM 1115G	Introduction to Communication	
COMM 1130G	Public Speaking	
HNRS 2175G	Introduction to Communication Honors	
Area III: Laboratory Science Course ³		4
Either an Area III/IV: Laboratory Sciences Course or Social/Behavioral Sciences Course ³		3-4
CJUS 1120	Criminal Law (C- or better)	3
Elective Course		1

Sophomore		
Choose one from the following: (C- or better)		3
ENGL 2210G	Professional and Technical Communication Honors	
ENGL 2221G	Writing in the Humanities and Social Science	
General Education Elective Course ³		3-4
Area V: Creative and Fine Arts Course ²		3
Second Language Requirement: 1110- level (C- or better) ⁴		4
Second Language Requirement: 1120- level (C- or better) ⁴		4
CJUS 300	Introduction to Criminal Justice Research (C- or better)	3
Elective Courses ⁵		10
Credits		30-31

Junior		
Second Language Requirement: 2110- level (C- or better) ⁴		3
Second Language Requirement: 2120- level (C- or better) ⁴		3
VWW - Viewing a Wider World Courses ⁹		6
CJUS 301	Advanced Research Methods (C- or better) ⁷	3
CJUS - Upper Division Elective Course (C- or better)		3
CJUS 302	Crime, Justice and Society (C- or better)	3
CJUS 425	Issues in Ethics, Law, and Criminal Justice (C- or better)	3
Elective Course - Upper Division ⁵		3
Elective Courses ⁵		3
Credits		30

Senior		
Choose one from the following:		3
CJUS 303	Introduction to Criminological Theory (C- or better)	
CJUS 304	Historical Perspectives of Criminal Justice Systems (C- or better)	
CJUS 414	Race, Crime and Justice (C- or better)	
CJUS - Upper Division Elective Course (C- or better)		9
Elective Course - Upper Division ⁵		12
Elective Course ⁵		6
Credits		30
Total Credits		120-122

¹ Math Placement: MATH 1220G College Algebra or MATH 1350G Introduction to Statistics or MATH 2350G Statistical Methods is the starting Math course for the degree, however, students may need to complete any prerequisites prior to enrolling into one of these courses.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ One of the following is required for the major: PHIL 1145G Philosophy, Law, and Ethics, PHIL 2230G Philosophical Thought, PHIL 1120G Logic, Reasoning, & Critical Thinking, and PHIL 2110G Introduction to Ethics

⁴ Second Language: options for completing the second language requirement can be located on the Requirements (p. 611) tab for this degree.

⁵ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

⁶ CJUS 300 Introduction to Criminal Justice Research can be taken in either the Fall or Spring semesters of Year Two. The following courses may substitute for CJUS 300: POLS 300 Political Research Skills, PSYC 3110 Experimental Methods, SOCI 3150 Social Research: Methods

⁷ CJUS 300 Introduction to Criminal Justice Research and CJUS 301 Advanced Research Methods should ideally be taken in separate semesters

⁸ Recommended: 1 credit of PHED, LSAT Prep or FYEX coursework

⁹ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses

Forensic Science - Undergraduate Minor

Forensic Science is the application of principles and techniques of scientific analysis in a legal context. Forensic scientists study physical evidence to resolve issues involving criminal investigations, environment analyses and similar areas of research.

A student must pass 18 credits with a grade of C- or higher from the following curriculum to earn the Forensic Science minor. No courses may be taken S/U. Students must take at least 6 credits from departments outside their major(s). At least 9 credits in any minor must be upper division. Students must register in the minor before enrolling in any upper division Criminal Justice courses.

The following curriculum represents minimum requirements for a minor. Students interested in a career in Forensic Science are encouraged to take additional courses from those listed below.

The Forensic Minor requires courses from three sections: (1) 6 credits from the list of Core Courses; (2) 3 credits from an additional course not already completed; and (3) 9 credits from one of the four tracks listed below.

Prefix	Title	Credits
Core Courses		
Select 6 credits from the following:		6
CJUS 306	Criminal Procedural Law	
CJUS 307	Law of Evidence	
CJUS 321	Criminal Investigation and Intelligence	
CJUS 424	Forensic Law	
PHYS 304	Forensic Physics	
Additional Course		
Select 3 credits from areas I or II above not already completed.		3
Track Courses		

9 credits from one of the four tracks (see below)	9
Total Credits	18

Track A: Laboratory Analysis

Students should check the catalog to ensure that they have taken prerequisites before enrolling in these courses.

Prefix	Title	Credits
Select one from the following:		4-5
BIOL 2310 & 2310L	Microbiology and Microbiology Lab	
BIOL 311 & 311 L	General Microbiology and General Microbiology Laboratory	
Select 4-5 credits from the following:		4-5
BIOL 354 & 354 L	Physiology of Humans and Laboratory of Human Physiology	
BCHE 395	Biochemistry I	
BCHE 396	Biochemistry II, Lecture and Laboratory	
CHEM 371	Analytical Chemistry	
TOX 361	Basic Toxicology	
TOX 461	Toxicology I	
PHYS 1230G & PHYS 1230L	Algebra-Based Physics I and Algebra-Based Physics I Lab	
Total Credits		8-10

Track B: Human Forensic Analysis

Honors, Special Topics, or Independent Studies courses if approved by Academic Head, Department of Criminal Justice.

Prefix	Title	Credits
Select 9 credits from the following: ¹		9
ANTH 1135G & ANTH 1135L	Introduction to Biological Anthropology and Introduction to Biological Anthropology Lab	
ANTH 315	Introduction to Archaeology	
ANTH 355	Biological Anthropology	
ANTH 356	Forensic Anthropology	
ANTH 357V	Medical Anthropology	
ANTH 388	Archaeological Field School	
ANTH 474	Human Osteology ²	
ANTH 477	Zooarchaeology	
Total Credits		9

¹ Recommended sequence ANTH 1135G Introduction to Biological Anthropology/ANTH 1135L Introduction to Biological Anthropology Lab, ANTH 355 Biological Anthropology or ANTH 315 Introduction to Archaeology, and then ANTH 474 Human Osteology.

² Courses have prerequisites, and students should check the catalog to ensure that they have taken prerequisites before enrolling in these courses.

Track C: Forensic Psychology

Students should check the catalog to ensure that they have taken prerequisites before enrolling in these courses.

Prefix	Title	Credits
Required Courses		
Select three from the following:		9

Principles of Behavior

PSYC 317	Social Psychology
PSYC 321	Psychology of Personality
PSYC 324	Sexual Behavior
PSYC 330	Psychology and the Law
PSYC 376	Evolutionary Psychology

Psychological Treatment

PSYC 302	Abnormal Psychology
----------	---------------------

Total Credits 9

Track D: General

Prefix	Title	Credits
Select 9 credits from the following:		
ANTH 474	Human Osteology ¹	9
CJUS 306	Criminal Procedural Law	
CJUS 307	Law of Evidence	
CJUS 321	Criminal Investigation and Intelligence	
CJUS 424	Forensic Law	
PSYC 330	Psychology and the Law	
PHYS 304	Forensic Physics	
Total Credits		9

¹ Courses have prerequisites, and students should check the catalog to ensure that they have taken prerequisites before enrolling in these courses.

Law and Society - Undergraduate Supplemental Major

The Law and Society Program (p. 688) is administered by the Department of Government and offers an interdisciplinary major for students interested in pursuing law school or careers that incorporate a strong legal element, such as government, law enforcement, business and social work. As a supplementary major, it must be taken in conjunction with a regular major. Some courses may double-count toward a student's regular major or General Education requirements. Students should check with academic advisors in their primary major. To declare this supplemental major please contact the College of Arts & Sciences Student Records Office. For more information please visit: <https://deptofgov.nmsu.edu/academic-programs/law-society.html>.

Economics, Applied Statistics, and International Business**Undergraduate Program Information**

The Department of Economics, Applied Statistics and International Business in the College of Business offers an economics major to Bachelor of Arts candidates in the College of Arts and Sciences. (Additional information may be found under the Economics and International Business (p. 861) section in the College of Business chapter).

Degrees for the Department

- Economics - Bachelor of Arts (p. 618)

Minors for the Department

- Economics - Undergraduate Minor (p. 620)

Economics Courses**ECON 1110G. Survey of Economics****3 Credits (3)**

This course will develop students' economics literacy and teaches students how economics relates to the everyday life of individuals, businesses and society in general. The course will also introduce students to the roles different levels of governments play in influencing the economy. At the conclusion of the course, students will be able to identify economic causes for various political and social problems at national and international levels, and have a better understanding of everyday economic issues that are reported in media and public forums.

Learning Outcomes

1. Gain and demonstrate a contextual understanding of economic terms and concepts.
2. Recognize and analyze common economic issues which relate to individual markets and the aggregate economy.
3. Learn basic economic principles that influence global trading and challenges relating to globalization.
4. Outline the implications of various economic policies on individuals and on economies.
5. Demonstrate ability to use diagrams and graphs to explain economic principles, policies and their applications.
6. Appreciate and understand how individual decisions and actions, as a member of society, affect economies locally, nationally and internationally.
7. Explain the roles of governments in influencing buyer and seller behavior in the market and how government failure occurs when intervention fails to improve or actually worsens economic outcomes.
8. Be able to apply course concepts to interpret, evaluate and think critically about economic events and policies, especially as regularly reported in the media and other public forums.

ECON 2110G. Macroeconomic Principles**3 Credits (3)**

Macroeconomics is the study of national and global economies. Topics include output, unemployment and inflation; and how they are affected by financial systems, fiscal and monetary policies.

Learning Outcomes

1. Explain the concepts of opportunity cost, comparative advantage and exchange.
2. Demonstrate knowledge of the laws of supply and demand and equilibrium and use supply and demand curves to analyze responses of markets to external events.
3. Explain the circular flow model and use the concepts of aggregate demand and aggregate supply to analyze the response of the economy to disturbances.
4. Explain the concepts of gross domestic product, inflation and unemployment and how they are measured.
5. Describe the determinants of the demand for money, the supply of money and interest rates and the role of financial institutions in the economy.
6. Define fiscal policy and monetary policies and how these affect the economy.

- Students will be able to identify the causes of prosperity, growth, and economic change over time and explain the mechanisms through which these causes operate in the economy.

ECON 2120G. Microeconomics Principles

3 Credits (3)

This course will provide a broad overview of microeconomics. Microeconomics is the study of issues specific to households, firms, or industries with an emphasis on the role of markets. Topics discussed will include household and firm behavior, demand and supply, government intervention, market structures, and the efficient allocation of resources.

Learning Outcomes

- Explain the concept of opportunity cost.
- Demonstrate knowledge of the laws of supply and demand and equilibrium.
- Use supply and demand curves to analyze responses of markets to external events.
- Use supply and demand analysis to examine the impact of government intervention.
- Explain and calculate price elasticity of demand and other elasticities.
- Demonstrate an understanding of producer choice, including cost and break-even analysis.
- Compare and contrast the following market structures: perfect competition, monopoly, monopolistic competition, and oligopoly.

ECON 2120H. Principles of Microeconomics Honors

3 Credits (3)

Microeconomic theory and public policy: supply and demand, theory of the firm, market allocation of resources, income distribution, competition and monopoly, governmental regulation of businesses and unions. Must be a Crimson Scholar.

Prerequisite(s): MATH 1220G.

Learning Outcomes

- Explain the concept of opportunity cost.
- Demonstrate knowledge of the laws of supply and demand and equilibrium.
- Use supply and demand curves to analyze responses of markets to external events.
- Use supply and demand analysis to examine the impact of government intervention.
- Explain and calculate price elasticity of demand and other elasticities.
- Demonstrate an understanding of producer choice, including cost and break-even analysis.
- Compare and contrast the following market structures: perfect competition, monopoly, monopolistic competition, and oligopoly.

ECON 304. Money and Banking

3 Credits (3)

Income measurement and determination, monetary and fiscal policies.

Prerequisite(s): ECON 2110G or ECON 2110H or equivalent.

ECON 311. Intermediate Macroeconomic Theory

3 Credits (3)

Analysis of gross domestic product, the Classical, Keynesian, and Neo-Keynesian theories of income, employment, inflation and growth.

Prerequisite: ECON 2110G or ECON 2110H.

Learning Outcomes

- Learn the uses and abuses of macroeconomic data
- Learn the role of economic theory in understanding economic issues and forecasting economic behavior
- Learn the causes and consequences of short-run economic fluctuations and long-run economic growth
- Learn the role of government in the macroeconomy
- By the end of the class, you should be able to describe the state of the macroeconomy and analyze the consequences of economic policy actions from several perspectives

ECON 312. Intermediate Microeconomic Theory

3 Credits (3)

Contemporary economic theory with emphasis upon value and distribution.

Prerequisite: ECON 2120G or ECON 2120H or equivalent.

Learning Outcomes

- Gain an understanding of the language of Intermediate Microeconomics.
- Know the underlying structure of economic models such as supply and demand, consumer theory, producer theory and market structure.
- Understand the assumptions of economic models.
- Be able to solve a supply and demand model.
- Demonstrate critical thinking skills by applying economic models to a wide variety of policy questions.

ECON 324V. Developing Nations

3 Credits (3)

Economic analysis of problems related to development of developing nations. Issues such as growth, industrialization, poverty, population, international trade, foreign debt, and international economic relations.

ECON 325V. Economic Development of Latin America

3 Credits (3)

Economic analysis of problems related to development in Latin America, including the agrarian problem, debt and austerity programs, industrialization, inflation and unemployment, the drug trade, U.S.-Latin American relations, development strategies. Also individual countries problems. May be repeated up to 3 credits.

Learning Outcomes

- Identify the basic components of economic growth and development
- Understand how Latin America fell behind other regions in terms of economic development
- Compare various policies implemented to support economic development in Latin America, as well as the successes and failures of these policies
- Gain a basic understanding of how to conduct independent research to be demonstrated by the completion of a term paper addressing an issue related to economic development in a nation or region of Latin America

ECON 332. Public Finance

3 Credits (3)

This course will examine the roles of government in modern, market-oriented, mixed economies. It will examine justifications for government participation in resource allocation, income distribution, and economic stabilization focusing primarily on the fiscal functions of government, taxation and public expenditure. Students will apply basic microeconomic analysis to analyze the impacts of public taxation and expenditures on economic decisions made elsewhere in the economy. In this course the emphasis will be on understanding the workings of public finance in fiscal

federalist systems like the United States, but the principles taught will be applicable across other economic systems. Prerequisites: ECON 2120G or ECON 2120H

ECON 335V. Business and Government

3 Credits (3)

Relation of government to business through regulation; political, legal, and social implications. Crosslisted with: MGMT 335G

ECON 337V. Natural Resource Economics

3 Credits (3)

Gain insight into important natural resource problems of our time. Apply economic principles to problems in the preservation, use, and development of agricultural, range, mineral, water, forestry, fishery, and environmental resources. Understand the use of cost-benefit analysis for government natural-resource projects, policies, and programs. Same as AEEC 337V.

Prerequisite(s): ECON 1110G or ECON 2120G or ECON 2120H.

ECON 345. Energy Economics

3 Credits (3)

Examines the economics of energy production including oil, coal, natural gas, renewables, and conservation as a substitute for energy production. Emphasis is on federal and state regulatory framework, and resulting public policy issues from a regional and national perspective.

Prerequisite(s): (ECON 2110G or ECON 2110H), (ECON 2120G or ECON 2120H).

ECON 384V. Water Resource Economics

3 Credits (3)

Use of economic principles to evaluate current and emerging issues in water resources. Applications focus on use of economic methods of analysis to current policy decisions surrounding agricultural, municipal, industrial, and environmental uses of water. Same as AEEC 384V.

Prerequisite: AEEC 1110 or ECON 2120G or ECON 2120H.

ECON 405. Introductory Econometrics

3 Credits (3)

Multiple regression and correlation applied to economics and business; inference techniques; significance tests; simultaneous equations, estimation, and problems.

Prerequisite: MATH 1350G or A ST 311 (or equivalent).

Learning Outcomes

1. Demonstrate knowledge of probability and statistics and basic expected value theory.
2. Define the relationship between population statistics and sample statistics.
3. Explain the method of ordinary least squares.
4. Understand multiple regression, correlation, inference techniques, and significance tests.
5. Interpret basic econometric results.

ECON 445. Oil and Natural Gas Economics

3 Credits (3)

Examines the economics of oil and gas production. Topics covered include transportation, refining, federal and state regulatory framework, and resulting public policy issues from a regional and national perspective.

Prerequisite: (ECON 2110G or ECON 2110H), (ECON 2120G or ECON 2120H).

Learning Outcomes

1. Oil and Natural Gas Production
2. Oil and Natural Gas Transportation and Storage

3. Advanced oil and gas market analysis

4. Economic analysis of government energy policy and regulation

ECON 449. Open Economy Macroeconomics

3 Credits (3)

This course studies theoretical and empirical macroeconomics in international dimension. It covers from the fundamental concepts of national income and growth, monetary/fiscal and exchange rate policies, foreign exchange markets, international trade and finance, and regionalization/economic integration to the impact analysis of these macroeconomic fundamentals in the open economy. Crosslisted with: I B 449.

Prerequisite(s): BFIN 341 OR ECON 311.

ECON 450. International Economics

3 Credits (3)

Trade and capital flows between countries, international payments, government policy in balance-of-payments and tariff matters, international organizations. Crosslisted with: I B 450

Prerequisite(s): ECON 2110G or ECON 2110H and ECON 2120G or ECON 2120H.

ECON 457. Mathematical Economics

3 Credits (3)

Application of mathematical tools, especially the calculus, to economic theory.

Prerequisite(s): MATH 1430G or equivalent.

ECON 471. Electricity Economics

3 Credits (3)

Regulatory policy and economic analysis related to the Electric Industry. Topics include characteristics of a utility and legal justification for regulation; characteristics and functions of a regulatory commission; history and structure of the industry; technology and network design; revenue requirements; cost allocation; and basic retail rate design. Crosslisted with: ECON 571.

Prerequisite(s): ECON 345.

ECON 489. Senior Economics Seminar

3 Credits (3)

Seminar primarily for economics majors in their final semester. Provides an opportunity to apply economic theory to a broad variety of topics.

Prerequisite(s): ECON 311 or ECON 312.

ECON 490. Selected Topics

1-3 Credits

Current topics in economics. Subject matter to be designated for each semester.

ECON 498. Independent Study

1-3 Credits

Individual studies directed by consenting faculty with the prior approval of the department head. May be repeated for a maximum of 3 credits.

Prerequisite: junior or above standing and consent of instructor.

ECON 503. Managerial Economics

3 Credits (3)

Theory and application of microeconomics to the management of organizations.

Prerequisite(s): MATH 1350G or A ST 311 or equivalent with B or better.

ECON 545. Econometrics II

3 Credits (3)

Application of statistical techniques to estimation of economic relationships: demand functions, production and cost functions, and macroeconomic equations.

Prerequisite(s): ECON 457 and AEEC 540.

ECON 550. Special Topics

1-3 Credits

Seminars in selected current topics in the various areas of economics. Prerequisites vary according to the topic being offered.

ECON 571. Regulatory Policy and Industry Analysis: Electricity I

3 Credits (3)

Regulatory policy and economic analysis related to the Electric Industry. Topics include: characteristics of a utility and legal justification for regulation; characteristics and functions of a regulatory commission; history and structure of the industry; technology and network design; revenue requirements; cost allocation; and basic retail rate design.

ECON 572. Regulatory Policy and Industrial Analysis: Water and Natural Gas

3 Credits (3)

Regulatory policy and economic analysis related to the Natural Gas and Water industries. Topics include: history and structure of the industry; technology and network design; revenue requirements; cost allocation; and retail rate design.

ECON 573. Regulatory Policy and Industry Analysis: Electricity II

3 Credits (3)

Regulatory policy and economic analysis related to the Electric industry. Topics include: optimal generation mix; ancillary services; environmental policies; rate case procedures and strategies for effective testimony; advanced retail rate design; wholesale exchanges; unbundled transmission tariffs; market institutions and how different markets function; state and federal deregulation policies; Federal Energy Regulatory Commission orders and policies; demand-side management; and regulatory treatment of non-traditional retail services. Consent of instructor required.

Prerequisite(s): ECON 571 or consent of instructor.

ECON 574. Advanced Seminar Regulatory Policy and Industry Analysis

3 Credits (3)

Advanced seminar and writing course specializing in regulatory policy and regulatory casework. Topics include: special policy & regulatory issues in telecommunications, electricity, natural gas, and water; preparation of written testimony; expert witness effectiveness including cross-examination; and contested case management. This course involves extensive reading and writing assignments. Consent of instructor required.

Prerequisite(s): ECON 571 or consent of instructor.

ECON 596. Independent Study

3 Credits (3)

Individual study program. Each offering will cover a subtitle. Maximum of 3 credits in a semester and 6 credits in a program. Consent of instructor required.

Phone: (575) 646-2113

Website: <https://business.nmsu.edu/academic-departments/easib/index.html> (<https://business.nmsu.edu/academic-departments/easib/>)

Economics - Bachelor of Arts

The Bachelor of Arts major in Economics is the only bachelor of arts degree offered through the College of Business. It has the advantage of including a large number of general electives. This feature provides great flexibility to the student who, in addition to completing the courses for a major in economics, may wish to take a double major or take

courses from a wide variety of other subjects of his or her own choosing.

This program is suitable for, among others, students who plan to go to graduate school in economics, law, business, the social sciences or other areas.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Prefix	Title	Credits
General Education		
Grades of C- or better are required in general education communications courses.		
<i>Area I: Communications</i>

<i>At least two electives must be from the following:</i>		6
ECON 332	Public Finance	
ECON 449	Open Economy Macroeconomics	
ECON 450	International Economics	
<i>Additional ECON Upper Division Electives</i>		6
Second Language: (not required)		
Electives, to bring the total credits to 120⁶		49
Total Credits		120

¹ Students may be required to take MATH 1215 Intermediate Algebra, depending on their math placement. MATH 1220G College Algebra or MATH 1430G Applications of Calculus I or MATH 1350G Introduction to Statistics fulfills the general education requirement in math.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses and how to fulfill this requirement.

⁴ All Foundation Requirement Courses must be taken, or satisfied with transfer credits, regardless of which Mathematics or Statistics course satisfies the Area II General Education course: MATH 1220G, MATH 1430G and MATH 1350G or A ST 311 must be completed.

⁵ Economics majors must earn a minimum cumulative GPA of 2.5 in the 27 credits of departmental requirements.

⁶ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Total Credits	120

- ¹ Prerequisites are required, students are responsible for checking and fulfilling course prerequisites listed in the catalog.
- ² See the General Education (p. 227) section of the catalog for a full list of courses.
- ³ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
- ⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
- ⁵ Upper Division ECON electives are typically only offered during certain semesters, so students must plan accordingly.
Fall: ECON 337V Natural Resource Economics, ECON 449 Open Economy Macroeconomics
Fall/Summer: ECON 457 Mathematical Economics
Spring: ECON 384V Water Resource Economics
- ⁶ **International Business Double Majors:** Students may not receive credit for both ECON 489 Senior Economics Seminar and I B 489 Senior Seminar in International Business For this reason, students majoring in both Economics and International Business must consult with the Department Head to arrange a suitable substitution.

Economics - Undergraduate Minor

The undergraduate minor in economics is appropriate for those who seek a better understanding of how micro- and macro-economic forces influence individuals, business and government decision making. Students thinking of a career in banking and finance, government service, or law will find the minor helpful.

A minor in economics consists of 18 or more credit hours of approved course work in economics (ECON), of which at least 12 are numbered 300 or higher, all completed with a grade of C- or higher. At least 12 credits must be completed at NMSU. This minor is not open to majors in the Bachelor of Individualized Studies and the Bachelor of Applied Studies.

Prefix	Title	Credits
Required Courses		
ECON 2110G	Macroeconomic Principles ¹	3
ECON 2120G	Principles of Microeconomics ¹	3
ECON 304 or ECON 311	Money and Banking Intermediate Macroeconomic Theory	3

ECON 312	Intermediate Microeconomic Theory	3
Upper-division courses (300 or higher) in economics		6
Total Credits		18

- ¹ ECON 1110G Survey of Economics may be substituted for one of Econ 251G Principals of Macroeconomics or Econ 252G Principals of Microeconomics with the approval of the Head of the Department of Economics, Applied Statistics, and International Business.

English Undergraduate Program Information

The Department of English offers the Bachelor of Arts (BA) in English as the cornerstone of studies in the humanities. This rich and versatile major provides students with a source of personal enrichment as well as verbal, analytical and cultural skills that are readily adaptable to a variety of careers. The English curriculum includes courses in literature, language, creative writing, technical and professional communication, rhetoric, cultural studies, digital media, and film. Our majors go on to succeed in a wide range of professions, including secondary and post-secondary education, business, government, publishing, and law. We offer four different major concentrations that students can tailor to their individual needs:

1. English
2. Creative Writing
3. Literature, Language and Culture
4. Rhetoric, Digital Media and Professional Communication

The department provides strong and personalized advising designed to help students reach their full academic potential and future career goals.

The department also offers four minors:

- English
- Literature
- Medieval and Early Modern Studies
- Rhetoric and Professional Communication

Further information about career opportunities, concentrations, and minors is available from the Department of English. Students who wish to pursue English as a double major may eliminate one elective from the departmental requirements. Students are required to fulfill a second language requirement (one year of college-level instruction, or the equivalent).

Graduate Program Information

Graduate coursework in the Department of English spans a diverse field of studies in culture, rhetoric, literature, digital media, composition pedagogy, professional communication, and writing. The department offers two graduate degrees: the Master of Arts in English and the Doctor of Philosophy in Rhetoric and Professional Communication. Students pursuing the MA in English may specialize in any of three areas: Literature; Rhetoric and Professional Communication; or English Studies for Teachers. Through NMSU-Global, the department also offers a fully online (asynchronous) MA in Technical and Professional Communication. These graduate degrees prepare students to succeed in a variety of careers, including writing, editing, publishing, secondary and post-secondary education, business and industry, media, web design, government, nonprofits, and law. Students work closely with faculty

advisors to develop programs of study that fit their individual needs and goals.

Students wishing to apply to the MA or PhD should consult application information on the English Department website at <http://english.nmsu.edu/apply/> (https://english.nmsu.edu/_assets/apply.html).

Applications are due by February 1st for Fall admission to the MA or the PhD program. MA applications are also accepted for Spring admission; review of MA applications for Spring admission begins on October 1.

Support in the form of a Graduate Assistantships is awarded through a competitive selection process; this application is folded into the application for admission and should be submitted by the February 1st deadline. Students in the PhD and in the MA emphases in Literature and Rhetoric and Professional Communication are eligible to apply for a Graduate Assistantship. All Graduate Assistantships in English begin in the Fall semester.

Degrees for the Department

Bachelor Degree(s)

- English (Creative Writing) - Bachelor of Arts (p. 635)
- English (Literature, Language and Culture) - Bachelor of Arts (p. 639)
- English (Rhetoric, Digital Media and Professional Communication) - Bachelor of Arts (p. 641)
- English - Bachelor of Arts (p. 637)
- Gender and Sexuality Studies - Bachelor of Arts (p. 643)
- Gender and Sexuality Studies - Bachelor of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/gender-sexuality-studies-ba-online/>)

Master Degree(s)

- English (Technical and Professional Communication) - Master of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/english-technical-professional-communication-ma-online/>)
- English - Master of Arts (p. 143)

Doctoral Degree(s)

- Rhetoric and Professional Communication - Doctor of Philosophy (p. 205)

Minors for the Department

- English - Undergraduate Minor (p. 645)
- Gender & Sexuality Studies - Undergraduate Minor (p. 645)
- Gender and Sexuality Studies - Graduate Minor (p. 221)
- Literature - Undergraduate Minor (p. 646)
- Medieval and Early Modern Studies - Undergraduate Minor (p. 646)
- Rhetoric and Professional Communication - Undergraduate Minor (p. 647)

Professor Elizabeth Schirmer, Department Head

Regents Professor Bejarano; **Professors** Schirmer, Sharp-Hoskins, Thatcher; **Associate Professors** Banazek, Cull, Jonet, Lanier, Miller-Tomlinson, Rourke, Stolte, Wells, Williams; **Assistant Professors** Aguilar, Blackston, House, Weisse; **College Professor** Brown; **College Associate Professors** Conley, Lawrence, Retzinger **College Assistant Professors** Anatska, Granger, Lavender-Smith, Tafoya

E. Schirmer, Department Head, Ph.D. (California-Berkeley) – medieval literature, gender theory; B. Rourke, Associate Department Head, Director of Graduate Studies, Ph.D. (Stanford) – modern British literature, critical theory; T. Stolte, Director of Undergraduate Studies, Ph.D. (British Columbia) – 19th-century British literature and culture; K. Sharp-Hoskins, Writing Program Administrator, Ph.D. (Illinois State) – rhetoric, composition, culture, pedagogy; L. A. Williams, Program Director, Gender and Sexuality Studies, Ph.D. (Purdue) – gender and sexuality studies, media and cultural studies; K. Weisse, Director, Writing Center, Ph.D. (Wisconsin-Madison) – rhetoric and writing studies, critical data studies; K. Banazek, Director, Creative Research Center, Ph.D. (Pittsburgh) – rhetoric, writing studies, cultural studies, philosophy of media; T. Anatska, Ph.D. (New Mexico State), multilingual education, TESOL; V. Aguilar, Ph.D. (Michigan State) – Latina/o/x literatures and cultures; C. Bejarano, Ph.D. (Arizona State) – gender and sexuality studies, justice studies; D. Blackston, Ph.D. (Arizona) – gender and sexuality studies, trans studies; M. Brown, M.A. (New Mexico State) – multilingual writing; R. Conley, M.A. (New Mexico State) – composition, women's literature, and film studies; Cull, Ph.D. (Illinois) – modern and contemporary American literature; M. Granger, M.A. (New Mexico State) – rhetoric and professional communication; E. House, Ph.D. (Arizona) – critical composition and writing studies; M. C. Jonet, Ph.D. (Purdue) – gender and sexuality studies, media and cultural studies; C. Lanier, Ph.D. (New Mexico State) – rhetoric and professional communication; J. Lavender-Smith, Ph.D. (CUNY), rhetoric and composition, literary and film studies; G. Lawrence, Ph.D. (UTEP) – composition, professional communication, gender studies; T. Miller-Tomlinson, Ph.D. (Yale) – Shakespeare, early modern literature and culture; D. Retzinger, Ph.D. (New Mexico State) – technical and professional communication; C. Tafoya M.F.A. (New Mexico State) – rhetoric and composition, professional communication, creative writing-poetry; B. Thatcher, Ph.D. (Purdue) – professional communication, intercultural rhetoric; J. Wells, Ph.D. (South Carolina) – rhetorical theory and history, environmental rhetoric.

English Courses

ENGL 1105M. Introduction to Academic Writing for Multilingual Students 3 Credits (3)

This course is offered to international and domestic multilingual students. The purpose of this course is to provide students with review and practice opportunities to develop writing fluency and coherence, grammar awareness, and academic vocabulary necessary to be successful in ENGL 1110M and/or ENGL 471M.

Prerequisite: Placement in ENGL 1105M through NMSU's English Language Placement Test (ELPT), or an ACT score of 13-15, or #placement with an academic advisor using the English Self-Placement Canvas#Course, or#consent of instructor.

Learning Outcomes

1. Create well-organized, coherent paragraphs alone or in essay format.
2. Integrate a variety of sentence structures in connected discourse.
3. Portray, with general mastery, basic grammatical forms with very few errors.
4. Summarize or paraphrase information from source readings correctly.
5. Analyze readings for meaning and main ideas through annotation.
6. Integrate APA style format for in-text citations and references into their writing.

ENGL 1110G. Composition I 4 Credits (4)

In this course, students will read, write, and think about a variety of issues and texts. They will develop reading and writing skills that will help with the writing required in their fields of study and other personal and

professional contexts. Students will learn to analyze rhetorical situations in terms of audience, contexts, purpose, mediums, and technologies and apply this knowledge to their reading and writing. They will also gain an understanding of how writing and other modes of communication work together for rhetorical purposes. Students will learn to analyze the rhetorical context of any writing task and compose with purpose, audience, and genre in mind. Students will reflect on their own writing processes, learn to workshop drafts with other writers, and practice techniques for writing, revising, and editing. May be repeated up to 4 credits.

Prerequisite: ACT standard score in English of 16 or higher, or an Accuplacer score 250 or higher, or an SAT score of 400 or higher or a C- or higher in either CCDE 110N or CCDS 119N.

Learning Outcomes

1. Analyze communication through reading and writing skills.
2. Employ writing processes such as planning, organizing, composing, and revising.
3. Express a primary purpose and organize supporting points logically.
4. Use and document research evidence appropriate for college-level writing.
5. Employ academic writing styles appropriate for different genres and audiences.
6. Identify and correct grammatical and mechanical errors in their writing.

ENGL 1110H. Composition I Honors

4 Credits (4)

In this course, students will read, write, and think about a variety of issues and texts. They will develop reading and writing skills that will help with the writing required in their fields of study and other personal and professional contexts. Students will learn to analyze rhetorical situations in terms of audience, contexts, purpose, mediums, and technologies and apply this knowledge to their reading and writing. They will also gain an understanding of how writing and other modes of communication work together for rhetorical purposes. Students will learn to analyze the rhetorical context of any writing task and compose with purpose, audience, and genre in mind. Students will reflect on their own writing processes, learn to workshop drafts with other writers, and practice techniques for writing, revising, and editing. May be repeated up to 4 credits.

Prerequisite: ACT standard score in English of 16 or higher, or an Accuplacer score 250 or higher, or an SAT score of 400 or higher or CCDE 1110 N.

Learning Outcomes

1. Analyze communication through reading and writing skills.
2. Employ writing processes such as planning, organizing, composing, and revising.
3. Express a primary purpose and organize supporting points logically.
4. Use and document research evidence appropriate for college-level writing.
5. Employ academic writing styles appropriate for different genres and audiences.
6. Identify and correct grammatical and mechanical errors in their writing.

ENGL 1110M. Composition I Multilingual

4 Credits (4)

In this course, students will read, write, and think about a variety of issues and texts. They will develop reading and writing skills that will help with the writing required in their fields of study and other personal and

professional contexts. Students will learn to analyze rhetorical situations in terms of audience, contexts, purpose, mediums, and technologies and apply this knowledge to their reading and writing. They will also gain an understanding of how writing and other modes of communication work together for rhetorical purposes. Students will learn to analyze the rhetorical context of any writing task and compose with purpose, audience, and genre in mind. Students will reflect on their own writing processes, learn to workshop drafts with other writers, and practice techniques for writing, revising, and editing. May be repeated up to 4 credits.

Prerequisite: ACT standard score in English of 16 or higher, or an Accuplacer score 250 or higher, or an SAT score of 400 or higher or CCDE 1110 N.

Learning Outcomes

1. Analyze communication through reading and writing skills.
2. Employ writing processes such as planning, organizing, composing, and revising.
3. Express a primary purpose and organize supporting points logically.
4. Use and document research evidence appropriate for college-level writing.
5. Employ academic writing styles appropriate for different genres and audiences.
6. Identify and correct grammatical and mechanical errors in their writing.

ENGL 1120. Composition II

2 Credits (2)

In this course, students will explore argument in multiple genres. Research and writing practices emphasize summary, analysis, evaluation, and integration of secondary sources. Students will analyze rhetorical situations in terms of audience, contexts, purpose, mediums, and technologies and apply this knowledge to their reading, writing, and research. Students will sharpen their understanding of how writing and other modes of communication work together for rhetorical purposes. The emphasis of this course will be on research methods.

Prerequisite: successful completion of ENGL 1110G or ENGL 1110H or ENGL 1110M.

Learning Outcomes

1. Analyze the rhetorical situation for purpose, main ideas, support, audience, and organizational strategies in a variety of genres.
2. Employ writing processes such as planning, organizing, composing, and revising.
3. Use a variety of research methods to gather appropriate, credible information.
4. Evaluate sources, claims, and evidence for their relevance, credibility, and purpose.
5. Quote, paraphrase, and summarize sources ethically, citing and documenting them appropriately.
6. Integrate information from sources to effectively support claims as well as other purposes (to provide background information, evidence/examples, illustrate an alternative view, etc.).
7. Use an appropriate voice (including syntax and word choice).

ENGL 1410G. Introduction to Literature

3 Credits (3)

In this course, students will examine a variety of literary genres, including fiction, poetry, and drama. Students will identify common literary elements in each genre, understanding how specific elements influence meaning.

Learning Outcomes

1. Identify, define, and understand basic literary conventions and themes in fiction, poetry and drama.
2. Write reasonable, well-supported analyses of literature that ethically integrate evidence from texts

ENGL 2130G. Advanced Composition**3 Credits (3)**

This course is for students who are striving for fluency, maturity, clarity and significance in their writing. It is an intermediate writing course that builds on and refines writing skills acquired in previous courses. It focuses on non-fiction writing for the professions, business, science, technical fields, academe and/or the popular press. Short works of master writers are studied for ideas, style and structure.

Learning Outcomes

1. Students will examine and apply different writing styles and modes used by masters of personal essay and keep a reading response journal of assigned readings as demonstrated by scoring a 70% in faculty designed assignments.
2. Students will develop a sense of audience by discussing their papers with each other in small groups during class or by reading each other's papers and participating in positive, helpful peer reviews as demonstrated by scoring a 70% in faculty designed assignments.

ENGL 2210G. Professional & Technical Communication**3 Credits (3)**

Professional and Technical Communication will introduce students to the different types of documents and correspondence that they will create in their professional careers. This course emphasizes the importance of audience, document design, and the use of technology in designing, developing, and delivering documents. This course will provide students with experience in professional correspondence and communicating technical information to a non-technical audience.

Prerequisite(s): Grade of C- or better in ENGL 1110G or ENGL 1110H or ENGL 1110M.

Learning Outcomes

1. Choose professional communication appropriate for audiences and situations.
2. Write in different genres of professional communication.
3. Identify the purpose of a work-related communication and assess the audiences' informational needs and organizational constraints.
4. Employ appropriate design/visuals to support and enhance various texts.
5. Demonstrate effective collaboration and presentation skills.
6. Integrate research and information from credible sources into professional communication

ENGL 2210H. Professional and Technical Communication Honors**3 Credits (3)**

Professional and Technical Communication writing for Crimson Scholars/Honors students will introduce students to the different types of documents and correspondence that they will create in their professional careers. This course emphasizes the importance of audience, document design, and the use of technology in designing, developing, and delivering documents. This course will provide students with experience in professional correspondence and communicating technical information to a non-technical audience. 3.5 GPA is also required. Restricted to Las Cruces campus only.

Prerequisite(s): grade of C- or better in ENGL 1110G or the equivalent; approval of the honors college.

Learning Outcomes

1. Choose professional communication appropriate for audiences and situations.
2. Write in different genres of professional communication.
3. Identify the purpose of a work-related communication and assess the audiences' informational needs and organizational constraints.
4. Employ appropriate design/visuals to support and enhance various texts.
5. Demonstrate effective collaboration and presentation skills.
6. Integrate research and information from credible sources into professional communication.

ENGL 2210M. Professional and Technical Communication for Multilingual Students**3 Credits (3)**

Professional and Technical Communication will introduce students to the different types of documents and correspondence that they will create in their professional careers. This course emphasizes the importance of audience, document design, and the use of technology in designing, developing, and delivering documents. This course will provide students with experience in professional correspondence and communicating technical information to a non-technical audience. NMSU specific description: In this course, students will explore the unique advantages and challenges of being multilingual writers. This course is designed for international and domestic multilingual students.

Prerequisite: Grade of C- or better in ENGL 1110G or ENGL 1110H or ENGL 1110M.

Learning Outcomes

1. Choose professional communication appropriate for audiences and situations.
2. Write in different genres of professional communication.
3. Identify the purpose of a work-related communication and assess the audiences' informational needs and organizational constraints.
4. Employ appropriate design/visuals to support and enhance various texts.
5. Demonstrate effective collaboration and presentation skills.
6. Integrate research and information from credible sources into professional communication.

ENGL 2215G. Advanced Technical and Professional Communication**3 Credits (3)**

Theory and practice of writing in technical and professional fields, individualized to each student's field. Emphasizes efficient writing processes and effective written products. May be repeated up to 3 credits. Restricted to Las Cruces campus only.

Prerequisite(s): Junior or above standing, or consent of instructor.

Learning Outcomes

1. To complicate the definition of "technical and scientific communication" and its relationship(s) to studying and practicing "rhetoric."
2. To complicate our relationship to concepts like "science", "knowledge", "objectivity," neutrality, "clarity," etc.
3. To use a community-based approach to study and practice technical and scientific documents within various discourse communities.
4. To study and practice different genres (i.e. memos, letters, e-mails, reports, proposals, and instruction sets) attending to issues of audience and purpose within discourse communities.

5. To practice some mindful reading strategies that allow you to attend to the use of language and its material and discursive effects in different situations.
6. To examine the material effects of producing, circulating, and consuming technical and scientific texts on the bodies of people within different contexts.
7. To complicate our understanding of "ethics," "responsibility," and "accountability" toward ourselves and others.
8. To work collaboratively and individually to research, to analyze, and to write about public debates regarding the conduct of science and technology.
9. To understand and use basic principles of document design attending to issues of usability and accessibility. 1
10. To articulate the relationship between technical and scientific communication and issues of inclusion and social justice in the world.

ENGL 2221G. Writing in the Humanities and Social Science
3 Credits (3)

Theory and practice in interpreting texts from various disciplines in the humanities and social sciences. Strategies for researching, evaluating, constructing, and writing researched arguments. Course subtitled in the Schedule of Classes. May be repeated up to 3 credits.

Prerequisite(s): Grade of C- or better in ENGL 1110G or ENGL 1110H, or ENGL 1110M.

Learning Outcomes

1. Develop the ability to interpret and respond to humanities and social sciences texts
2. Analyze and evaluate cultural artifacts such as texts, images, and practices as a means of academic inquiry
3. Critique arguments offered in the readings to determine the underlying methodology as well as underlying values
4. Construct a rhetorical argument with evidence appropriate for an explicit audience and purpose
5. Use written, visual, or oral strategies to persuade, inform, or engage, considering situation, audience, purpose, aesthetics, and diverse points of view
6. Practice effective research strategies, and integrate research correctly and ethically from credible sources
7. Understand and apply components of the writing process such as planning, collaborating, organizing, composing, revising, and editing

ENGL 2280. History of Argument
3 Credits (3)

Investigates the major figures and movements in rhetoric from the classical period to modern rhetorical theory, examining relations between rhetorical teaching and practice, culture, epistemology, and ideology. Main campus only. Prerequisite(s): ENGL 1110G, or ENGL 1110GH, or ENGL 1110M

Learning Outcomes

1. Understand how rhetoric, argument, and persuasion work. Become familiar with the key terms and various contexts in which rhetoric, argument, and persuasion function and the contingencies that influence their use and effectiveness;
2. be familiar with the broad history and major figures of western rhetoric;
3. apply a number of approaches used to analyze and construct/deconstruct rhetorical arguments, including (but not limited to) Aristotelian appeals and commonplaces, stasis theory, toulmin

analysis, pentadic/dramatistic analysis, fallacy analysis, and rogerian analysis;

4. complete an analysis as well as design and present a project regarding a contemporary issue or concern about which you feel deep passion and commitment; and
5. Improve general critical thinking and communication skills, both oral and written.

ENGL 2310G. Introduction to Creative Writing
3 Credits (3)

This course will introduce students to the basic elements of creative writing, including short fiction, poetry, and creative nonfiction. Students will read and study published works as models, but the focus of this "workshop" course is on students revising and reflecting on their own writing. Throughout this course, students will be expected to read poetry, fiction, and nonfiction closely, and analyze the craft features employed. They will be expected to write frequently in each of these genres.

Prerequisite(s): ENGL 1110G or ENGL 1110H or ENGL 1110M.

Learning Outcomes

1. Participate in a constructive conversation and community about creative writing.
2. Read and critically engage with a variety of texts.
3. Compose creative works in various genres of creative writing.
4. Provide respectful, honest, and critical feedback to peers about their work.
5. Revise creative work based on peer feedback and critique.
6. Develop thoughtful workshop reflection on students' own writing and writing process.
7. Evaluate and engage with publication process.

ENGL 2381. Script Development and Storyboarding
3 Credits (3)

Examines effective writing principles for creating storyboards that communicate the overall picture of a project, timing, scene complexity, emotion and resource requirements. Crosslisted with: FDMA 2381.

Learning Outcomes

1. develop a story idea into a complete storyboard
2. describe and visualize the creative aspects of a media project from conception to completion
3. write a scene in the professional script format
4. deliver a professional verbal and visual presentation of a story idea to an audience
5. the ability to conceive, illustrate and plan a visual project
6. proficiency in oral, written, and visual communication via storyboarding, script writing and verbal presentations

ENGL 2382. Narrative: Principles of Story Across the Media
3 Credits (3)

Examines the various strategies of written and visual storytelling, narrative structure and its principal components (plot, theme, character, imagery, symbolism, point of view) with an attempt to connect them to elements of contemporary forms of media expression, including screenwriting, playwriting, writing for documentaries and animation, etc. Crosslisted with: FDMA 2382

Learning Outcomes

1. Identify use the building blocks of storytelling: plot, theme, character, imagery,
2. Symbolism and point of view

3. Develop these building blocks into a cohesive narrative within a written document
4. Effectively communicate in different written formats
5. Create design documents for varied genres of media: narrative short, documentary, 6 Animation, commercial/industrial video, computer game
6. Describe how a written narrative can be translated into a visual medium

ENGL 2520G. Film as Literature

3 Credits (3+3P)

The purpose of this course is to teach students how to analyze film as a visual text. Students will learn to analyze films, film techniques, eras, and genres. Students will also identify significant trends and developments in film-making, examining the ways in which film reflects and creates cultural trends and values.

Learning Outcomes

1. Develop an understanding of the cultural, historical, and technical contexts for various films.
2. Identify, define, and analyze basic film techniques used in different genres and time periods.
3. Analyze how film uses literature by studying different sources of adaptation.
4. Demonstrate an understanding of film in its various aspects by writing film analysis, reviews, and/or other projects.

ENGL 2521. The Bible as Literature

3 Credits (3)

Develops informed readings of Hebrew and Christian scriptures. Emphasizes understanding Biblical literary forms, techniques, themes; historical, cultural contexts for interpretation; authorship, composition, audience for individual books; development of Biblical canon.

Learning Outcomes

1. Develop and articulate historically informed and textually supported arguments regarding the form and meaning of biblical texts
2. Express arguments and explication in clear, organized,
3. Understand the Jewish and Christian scriptures as cultural artifacts, using some fundamental techniques of literary analysis and interpretation, especially: thematic interpretation, stylistic analysis, narrative analysis, poetics, and the rhetorical analysis of figurative language.
4. Use socio-historically informed interpretive methods focused on these fundamental contextual questions : 1) who probably wrote and edited these texts, 2) why and how they most likely did so, 3) how their earliest audiences probably responded to them, and 4) why and how they were later combined to form the canonical Jewish and Christian bibles read today.
5. Know in detail substantial selections of representative, influential, and historically informative biblical texts
6. Distinguish literary critical and historical analysis of the Bible from those based on faith, tradition, authority, and theology
7. Recognize, understand, and analyze the forms, genres, and techniques used by biblical authors
8. Become familiar with and be able to use essential knowledge of the historical, cultural, and geographical contexts of Biblical writing
9. Learn how evaluate texts as historical documents, as well as how doing so relates to and differs from literary critical analysis and interpretation 1

10. Become familiar with common and influential scholarly, critical, and aesthetic ways of reading Biblical texts from a contemporary perspective 1
11. Understand the cultural influence of the Bible and its relevance for other areas of scholarly and artistic work

ENGL 2610. American Literature I

3 Credits (3)

This course surveys American literature from the colonial period to the mid-nineteenth century. This course provides students with the contexts and documents necessary to understand the origins of American Literature and the aesthetic, cultural, and ideological debates central to early American culture.

Learning Outcomes

1. Recognize the traditions of American literature and their connection to issues of culture, race, class, and gender.
2. Demonstrate familiarity with a variety of major works by American authors.
3. Explore the various influences and sources of American literature.
4. Apply effective analytic and interpretive strategies to American literary works using academic conventions of citation and style.

ENGL 2620. American Literature II

3 Credits (3)

This course surveys American literature from the mid-nineteenth-century to the contemporary period. This course provides students with the contexts and documents necessary to understand American literature and the aesthetic, cultural, and ideological debates central to American culture.

Learning Outcomes

1. Recognize the traditions of American literature and their connection to issues of culture, race, class, and gender.
2. Demonstrate familiarity with a variety of major works by American authors.
3. Explore the various influences and sources of American literature.
4. Apply effective analytic and interpretive strategies to American literary works using academic conventions of citation and style.

ENGL 2630. British Literature I

3 Credits (3)

This course offers a study of British literature from its origins in Old English to the 18th century. This survey covers specific literary works--essays, short stories, novels, poems, and plays--as well as the social, cultural, and intellectual currents that influenced the literature.

Learning Outcomes

1. Read and discuss representative works of British writers from its origins in Old English to the 18th century to understand cultural and historical movements which influenced those writers and their works.
2. Identify the characteristics of various British literary genres, such as the essay, novel, short story, poetry, and dramatic literature.
3. Apply effective analytic and interpretive strategies to British literary works using academic conventions of citation and style.

ENGL 2640. British Literature II

3 Credits (3)

This course offers a study of British literature from the 18th century to the present. This survey covers specific literary works--essays, short stories, novels, poems, and plays--as well as the social, cultural, and intellectual currents that influenced the literature.

Learning Outcomes

1. Read and discuss representative works of British writers from the 18th century to the present to understand cultural and historical movements, which influenced those writers, and their works.
2. Identify the characteristics of various British literary genres, such as the essay, novel, short story, poetry, and dramatic literature.
3. Apply effective analytic and interpretive strategies to British literary works using academic conventions of citation and style.

ENGL 2650G. World Literature I**3 Credits (3)**

In this course, students will read representative world masterpieces from ancient, medieval and Renaissance literature. Students will broaden their understanding of literature and their knowledge of other cultures through exploration of how literature represents individuals, ideas and customs of the world cultures. The course focuses strongly on examining the ways literature and culture intersect and define each other.

Learning Outcomes

1. Identify and comprehend key authors and literary works from ancient periods to the Enlightenment.
2. Understand each text's historical and cultural context.
3. Identify and analyze a variety of literary forms, including poetry, plays, and philosophical and religious texts.
4. Compare works from different cultures and historical periods examining genre, style, and content or theme.
5. Analyze how literary works reflect historical, national, cultural, and ethnic differences.

ENGL 2675. Transatlantic Literatures**3 Credits (3)**

This course tracks the production, circulation, and reception of literary works in transatlantic contexts over at least 150 years. Students examine a variety of documents to map transformations in form, genre, and medium across historical and geographic contexts. Students consider how colonization, exile, displacement, and migration have track the production, circulation, and reception of literary works in transatlantic contexts over at least 150 years reinforced or contested national literary traditions.

Learning Outcomes

1. Track the production, circulation, and reception of literary works in transatlantic contexts over at least 150 years
2. Identify and analyze a variety of documents to map transformations in form, genre, and medium across historical and geographic contexts
3. Explain how colonization, exile, displacement, and migration have reinforced or contested national literary traditions.

ENGL 2996. Special Topics**1-3 Credits**

Emphasis on a literary and/or writing subject chosen for the semester. Repeatable for a unlimited credit under different subtitles.

Learning Outcomes

1. Varies

ENGL 301. Theory and Criticism: Rhetoric and Culture**3 Credits (3)**

Introduction to rhetorical criticism with an emphasis on understanding the theoretical and cultural underpinnings for the rhetorical analyses of texts.

ENGL 302. Theory and Criticism: Literature and Culture**3 Credits (3)**

Introduction to literary criticism, from its classical beginnings through contemporary critical approaches.

ENGL 303. Theory and Criticism: Film, Media and Culture**3 Credits (3)**

Surveys classical and contemporary film theory. Explores the relationship of theory to textual analysis and filmmaking practices. Includes auteurism semiotics, psychoanalysis, and other theories, as well as theories of other media.

ENGL 304. Creative Writing: Prose**3 Credits (3)**

Imaginative writing, chiefly prose narrative. Repeatable for a maximum of 9 credits.

ENGL 306. Creative Writing: Poetry**3 Credits (3)**

Introduction to the writing of poetry. Repeatable for a total of 9 credits.

ENGL 307. Creative Writing: Creative Nonfiction**3 Credits (3)**

Introduction to creative nonfiction. Skills emphasized will include the personal voice, powers of observation and reflection, advocacy, argument, and a creative, powerful use of language. Repeatable for a maximum of 9 credits.

ENGL 308. Creative Writing: Playwriting**3 Credits (3)**

Technique of one-act playwriting, and analysis of dramatic structure. Crosslisted with: THEA 308

ENGL 309. Screenwriting I**3 Credits (3)**

Writing intensive. Students learn the craft of screenwriting, honing skills in writing dialogue and visual narrative, crafting dynamic characters and dramatic action. Original student scripts will be performed and discussed in class. Consent of instructor required. Crosslisted with: CMI 309 and THTR 306

Prerequisite(s): ENGL 235 or CMI 235.

ENGL 310. Critical Writing**3 Credits (3)**

A course in critical reading, writing, and research designed to prepare English majors for upper-division courses.

ENGL 312. Digital & Visual Rhetoric**3 Credits (3)**

Includes discussion of how digital and visual media shape our everyday lives. Prepares students to analyze media ecologies - moving from messages embedded in individual photographs to the physical infrastructures that make the internet work - and engage with media ethics.

Learning Outcomes

1. Conceptualize and articulate roles digital and visual media play in production of culture.
2. Describe media representation of individuals and communities in multiple, complex ways.
3. Demonstrate familiarity with public and academic conversations surrounding media ethics.
4. Discuss how technical limitations and media histories shape representational practices.
5. Use terms and ideas from course reading to engage media objects in day-to-day life.

ENGL 313. Media Literacy & Social Justice**3 Credits (3)**

Examines how information and misinformation spread through the media, while considering how this affects current social justice movements.

Learning Outcomes

1. Develop the ability to interpret and respond to current media texts as well as humanities and social sciences texts.
2. Analyze and evaluate cultural artifacts such as texts, images, and practices as a means of academic inquiry.
3. Critique arguments offered in the readings to determine the underlying methodology as well as underlying values.
4. Construct rhetorical arguments with evidence appropriate for an explicit audience and purpose.
5. Use written, visual, or oral strategies to persuade, inform, or engage, considering situation, audience, purpose, aesthetics, and diverse points of view.
6. Practice effective research strategies, and integrate research correctly and ethically from credible sources.
7. Understand and apply components of the writing process such as planning, collaborating, organizing, composing, revising, and editing.

ENGL 314. Public Writing and Rhetorics

3 Credits (3)

Invites students to study and practice writing for public audiences, considering its ethical, political, and technological contexts and consequences.

Learning Outcomes

1. Conceptualize and articulate the complex relationship(s) between writing and publics.
2. Propose, develop, and produce a defined, purpose-based and public-facing text.
3. Identify and integrate research in support of writing project.
4. Use relevant genre, media, and technological conventions in support of writing project.

ENGL 315. Writing for the Web

3 Credits (3)

Introduction to writing for the World Wide Web through practical application and analysis on both theory and research. Allows hands-on learning in a computer classroom.

ENGL 323. American Drama

3 Credits (3)

Masterworks of American drama by noted American playwrights. Crosslisted with: THEA 323

ENGL 326. Cultural Identity and Representation Across the Media

3 Credits (3)

Considers complex relationships between representation and culture including how images and language shape racial, ethnic, gender, sexual, and class identities. Examines theories from several disciplines. Includes lecture, discussion and production exercises.

ENGL 327V. Shakespeare around the Globe

3 Credits (3)

Introduction to multicultural issues in Shakespeare's plays and to adaptations of Shakespeare's plays in other cultures.

ENGL 328V. Literature of Science Fiction and Fantasy

3 Credits (3)

Survey and critical examination of the development of science fiction and fantasy as literature genres through selected authors and texts.

ENGL 339V. Chicana/o Literature

3 Credits (3)

Introduction to Chicano novels, short stories and selected creative nonfiction.

ENGL 354. Form and Technique in Fiction

3 Credits (3)

Literature course designed for fiction writers, especially those English majors in the Creative Writing emphasis. The course combines the study of published fiction with the study of craft. Some of the assignments will require the student to write original fiction based on exercises provided by the instructor. Repeatable for up to 9 credits.

ENGL 356. Form and Technique in Poetry

3 Credits (3)

Literature course designed for poets, especially those English majors in the Creative Writing emphasis. The course combines the study of published poetry with the study of craft. Some of the assignments will require the student to write original poems based on exercises provided by the instructor. Repeatable for up to 9 credits.

ENGL 363. Literature for Children and Young Adults

3 Credits (3)

A comparative, historical survey of literature for young (K to 12th grade) readers. Emphasis on critical evaluation.

Prerequisite: junior or above standing.

ENGL 380V. Women Writers

3 Credits (3)

Introduction to multicultural women's traditions through intensive study of works by women writers. Crosslisted with: GNDR 380V.

ENGL 392V. Mythology

3 Credits (3)

Greek and Roman mythology and its impact on European and English literature. Readings in myths, classical plays, and other literature with mythological interest, including nonclassical myths.

ENGL 394V. Southwestern Literature

3 Credits (3)

Introduction to multicultural literature of the Southwest: oral folk literature, literary fiction (classic and contemporary), nonfiction and poetry.

ENGL 399. Special Topics

3 Credits (3)

Emphasis on a theme, genre, figure, or technique chosen for study during the semester. Repeatable under different subtitles.

ENGL 400. Independent Study: Upper Division

1-3 Credits

For students with demonstrated aptitude for independent work. Approval of instructor required before registration. Repeatable under different subtitles.

ENGL 403. Web Design and Development

3 Credits (3)

Combines study and practice of web design and development as rhetoric, technical, processual, and collaborative.

Learning Outcomes

1. Read and write HTML without the use of an editor
2. Design and format web pages via CSS
3. Understand what JavaScript is and how it's used
4. Understand the methods for accessibility
5. Create usable, aesthetically pleasing, and functional websites

ENGL 404. User Experience and Assistance

3 Credits (3)

Includes theories and discussions of users, usability, accessibility, disability, design, embodiment, and ethics to prepare students to understand, write for, and collaborate with users and audiences in technical and professional communication contexts.

Learning Outcomes

1. Understand histories and politics that inform contemporary best practices and ethics conversations associated with the development of user-oriented documentation
2. Develop a robust vocabulary that permits engagement in both academic and industry-based conversations about users, access, and documentation
3. Discuss pros, cons, and nuances of multiple user-centered research methods
4. Produce professional user-assistance documents and discuss the ethics of design decisions.

ENGL 405. Chaucer

3 Credits (3)

Principal works, with emphasis on *The Canterbury Tales*.

ENGL 407. Milton

3 Credits (3)

Studies in Milton's works, including *Paradise Lost*.

Learning Outcomes

1. Analyze Milton's poetry using the methods of close reading;
2. Demonstrate ability to read and develop persuasive literary-critical interpretations of Milton's poetry and prose;
3. Demonstrate ability to locate Milton's writings in historical and cultural context;
4. Demonstrate skill in working with relevant secondary resources and research tools including the MLA bibliography to write a Working Bibliography and Research Paper on a topic related to our course material.

ENGL 408. Shakespeare I

3 Credits (3)

Study in Shakespeare's early poems and plays. Repeatable for up to six credits under different subtitles.

Learning Outcomes

1. Analyze Shakespeare's poetry using the methods of close reading
2. Demonstrate ability to read and develop persuasive literary-critical interpretations of Shakespeare's poems and plays;
3. Demonstrate skill in working with relevant secondary resources and research tools including the MLA bibliography to write a research paper on a topic related to our course material;
4. Work effectively in small groups to interpret a scene through performance

ENGL 409. Shakespeare II

3 Credits (3)

Study in Shakespeare's later plays. ENGL 408 is not a prerequisite. Repeatable for up to six credits under different subtitles. Crosslisted with THEA 409.

Learning Outcomes

1. Analyze Shakespeare's poetry using the methods of close reading;
2. Demonstrate ability to read and develop persuasive literary-critical interpretations of Shakespeare's poems and plays;
3. Demonstrate skill in working with relevant secondary resources and research tools including the MLA bibliography to write a research paper on a topic related to our course material;

4. Work effectively in small groups to interpret a scene through performance.

ENGL 412. Writing in the Workplace

3 Credits (3)

Study of workplace writing practices, including a focus on research-based, theoretical, and pedagogical approaches to professional communication.

ENGL 413. Advanced Creative Writing: Prose Workshop

3 Credits (3)

Imaginative writing, chiefly the narrative. May be repeated up to 12 credits.

Prerequisite(s): ENGL 304 or consent of instructor.

ENGL 414. Advanced Creative Writing: Poetry Workshop

3 Credits (3)

For advanced writers of poetry. Repeatable for a total of 12 credits.

Prerequisite(s): ENGL 306 or consent of instructor.

ENGL 416. Approaches to Literature

3 Credits (3)

Understanding, appreciation, techniques of instruction in the high school.

Prerequisite: at least 6 credits in upper-division English courses.

ENGL 417. Advanced Study in Critical Theory

3 Credits (3)

Advanced study of one or more major trends in theoretical inquiry within English studies. Some prior study of theory, such as English 301-303, strongly recommended. Repeatable under different subtitles.

ENGL 419. Modern Rhetorical Theory

3 Credits (3)

Major figures in rhetorical theory, with particular emphasis on developments in rhetorical theory in the twentieth century.

ENGL 422. Advanced Study in a Literary Form or Genre

3 Credits (3)

Close study of a topic in a particular literary form or genre. May be repeated under different subtitles.

ENGL 423. Advanced Study in a Major Author

3 Credits (3)

Close study of selected works by a major author. May be repeated under different subtitles.

ENGL 430. Online Publishing

3 Credits (3)

This three-credit course provides a theoretical background for online publishing and design as well as hands on experience publishing an online arts magazine.

ENGL 431. Technical Editing

3 Credits (3)

Uses workshops, readings, hands-on projects, and discussion to improve skills in gathering, writing, designing, and editing technical information. For students interested in technical communication as well as students interested in developing strengths in communicating in scientific and technical fields.

ENGL 433. Victorian Literature

3 Credits (3)

Intensive study of major writers and critical topics from the Victorian period. Repeatable under different subtitles.

ENGL 442. Modern and Contemporary American Poetry

3 Credits (3)

Studies the development of American poetry from World War I to the present. Repeatable under a different subtitle. May be repeated up to 6 credits.

ENGL 445. Postmodern Fiction

3 Credits (3)

Study of the various forms of formally innovative experimental fiction produced since 1945, with a focus on the relationship between literary history and its sociohistorical contexts. Some texts will be read in translation. Repeatable under different subtitles. May be repeated up to 6 credits.

ENGL 446. Advanced Creative Writing: Nonfiction Prose

3 Credits (3)

This workshop-format class for advanced writers will examine the many varieties of Creative Nonfiction. Students should be prepared for a rigorous reading load of published nonfiction and student submissions. Because of the workshop format, every student is expected to contribute extensively to every class, both in printed form and oral comments.

Taught with ENGL 546. May be repeated up to 12 credits.

Prerequisite(s): ENGL 307 or consent of instructor.

ENGL 449. Advanced Study in Writing

3 Credits (3)

Close study of a topic in composition, rhetoric and/or technical and professional communication. Repeatable for a maximum of 6 credits with permission of department.

ENGL 453. World Literatures

3 Credits (3)

Study of one or more literary traditions exclusive of those originating in Europe and the United States. Readings will include texts in translation. Repeatable under different subtitles. May be repeated up to 6 credits.

ENGL 458. Latino/a Literature and Culture

3 Credits (3)

Focuses on established and emergent Latino/a literary and cultural production. Incorporates both literary and sociocultural readings of texts. Repeatable under different subtitles. May be repeated up to 6 credits.

ENGL 460. Proposal Writing

3 Credits (3)

Developing proposals and grants in a workshop setting.

ENGL 469. Advanced Study in American Literature

3 Credits (3)

Covers selected works for a particular period of American literary history. Repeatable under different subtitles.

ENGL 470. Approaches to Composition

3 Credits (3)

Theory and practice of teaching writing. Discussion and application of classroom practices, definition of standards, and evaluation of student writing.

ENGL 471 M. Scholarly Writing for International Graduate Students

3 Credits (3)

This course is designed for international graduate students with an emphasis on strengthening academic writing skills, analyzing scholarly articles, writing research papers and reports, reviewing English grammar, and citing in APA style. Graded: S/U grading. May be repeated up to 3 credits. Graded: S/U grading.

Prerequisite: Placement in ENGL 471 M through NMSU's English Language Placement Test (ELPT), or successful completion of ENGL 1105M, or consent of instructor.

Learning Outcomes

1. Differentiate between genres in the discourses of their chosen disciplines.
2. Write part-genres (problem-solutions and Methods and Discussion sections) and genres (book/article reviews and research papers).
3. Analyze writing conventions in peer-reviewed, scholarly articles in their chosen disciplines.
4. Develop academic research abilities.
5. Apply analytical skills to the discourses of their chosen disciplines to explore how effective academic writing is achieved.
6. Incorporate APA style format for in-text citations and references into their writing.

ENGL 478. Document Design

3 Credits (3)

Advanced study in writing, with an emphasis on the computer as a tool for designing visually informative text. Includes theory and research in document design and the use of page composition and graphics software.

ENGL 479. Computers and Writing

3 Credits (3)

This course will trace the history of computers and composition as a field by looking at the work of important scholars including Selfe, Hawisher, Johnson-Eilola, and Wysocki. We will then focus on specific ways new media might be integrated into composition classrooms. The course will include discussions, student facilitations, and experimentation with technologies.

ENGL 481. Women's Literature

3 Credits (3)

Intensive study of literature by women, in particular historical, aesthetic, cultural, or intellectual contexts. Repeatable under different subtitles.

ENGL 485 M. International Teaching Assistant Development

3 Credits (3)

Prepares international graduate students for teaching assignments in their field of study and work at NMSU. Assists international/multilingual graduate students in developing communication and teaching studies necessary to fulfill duties their duties as teaching assistants at NMSU.

Learning Outcomes

1. Demonstrate effective communication strategies as an instructor
2. Apply a variety of teaching strategies to present and explain content in your academic field
3. Demonstrate understanding of different aspects of undergraduate education in the United States
4. Demonstrate understanding of diverse student populations at NMSU

ENGL 489. Cultural Studies: Literature and Theory

3 Credits (3)

Examines the theory and practice of cultural studies in relation to the variety of discourse describable as literary, including autobiography, avant-garde writing, nonfiction prose, the essay, online writing, folklore, and popular genre fiction (such as mystery, romance, thriller, or horror). Repeatable under different subtitles. May be repeated up to 6 credits.

ENGL 497. Internship

3-6 Credits (3-6)

Supervised technical and professional communication internship in business, industry, government, or the university. Repeatable for a total of 6 credits. Consent of instructor required.

ENGL 500. Supervised Study

1-3 Credits

To prepare the student for the master's degree examinations by special studies in fields not covered in routine course work.

Prerequisite: consent of instructor.

ENGL 501. Online Publishing

3 Credits (3)

This three-credit course provides a theoretical background for online publishing and design as well as hands-on experience publishing an online arts magazine. Taught with ENGL 430.

ENGL 502. Critical Conversations in Technical and Professional Communication

3 Credits (3)

Introduces students to critical histories, theories, and key concepts in technical and professional communication across academic and industry boundaries.

Learning Outcomes

1. Understand the histories and politics of emergence of technical and professional communication as a field of study and expertise;
2. Identify and track key concepts, terms, and conversations that give shape to technical and professional communication;
3. Draw on a range of theories and methodologies to articulate and critique the function and effects of technical and professional communication;
4. Participate in disciplinary conversations through research and writing.

ENGL 503. Web Design and Development

3 Credits (3)

Combines study and practice of web design and development as rhetorical, technical, processual, and collaborative.

Learning Outcomes

1. Read and write HTML without the use of an editor
2. Design and format web pages via CSS
3. Understand what JavaScript is and how it's used
4. Understand the methods for accessibility

ENGL 504. User Experience and Assistance

3 Credits (3)

Includes theories and discussions of users, usability, accessibility, disability, design, embodiment, and ethics to prepare students to understand, write for, and collaborate with users and audiences in technical and professional communication contexts.

Learning Outcomes

1. Understand histories and politics that inform contemporary best practices and ethics conversations associated with the development of user-oriented documentation
2. Develop a robust vocabulary that permits engagement in both academic and industry-based conversations about users, access, and documentation
3. Discuss pros, cons, and nuances of multiple user-centered research methods
4. Produce professional user-assistance documents and discuss the ethics of design decisions

ENGL 505. Graduate Study in Chaucer

3 Credits (3)

Principal works, with emphasis on the Canterbury Tales. Requirements include independent directed research. May be repeated up to 3 credits.

ENGL 507. Special Topics in Rhetoric and Technical and Professional Communication

3 Credits (3)

Seminar course centered on contemporary issues in rhetoric and technical and professional communication. Repeatable under different subtitles, for up to 6 credits.

Learning Outcomes

1. Use rhetoric inquiry and theory to contextualize and study technical and professional communication.
2. Understand the disciplinary overlaps, tensions, and possibilities among rhetoric and technical and professional communication.
3. Track a contemporary thematic trend, issue, or question through rhetoric and technical and professional communication.

ENGL 508. Graduate Study in Shakespeare I

3 Credits (3)

Graduate study in Shakespeare's early poems and plays. Requirements include independent directed research. Repeatable for up to six credits under different subtitles.

Learning Outcomes

1. Analyze Shakespeare's poetry using the methods of close reading
2. Demonstrate graduate-level ability to read and develop persuasive literary-critical interpretations of Shakespeare's poems and plays
3. Demonstrate graduate-level skill in working with relevant secondary resources and research tools including the MLA bibliography to write a research paper on a topic related to our course material;
4. Work effectively in small groups to interpret a scene through performance

ENGL 509. Graduate Study in Shakespeare II

3 Credits (3)

Study in Shakespeare's late poems and plays. Requirements include independent directed research. Repeatable for up to six credits under different subtitles.

Learning Outcomes

1. Analyze Shakespeare's poetry using the methods of close reading
2. Demonstrate graduate-level ability to read and develop persuasive literary-critical interpretations of Shakespeare's poems and plays;
3. Demonstrate graduate-level skill in working with relevant secondary resources and research tools including the MLA bibliography to write a research paper on a topic related to our course material;
4. Work effectively in small groups to interpret a scene through performance

ENGL 510. Proseminar in Rhetoric and Professional Communication

3 Credits (3)

Introduction to research in rhetoric and professional communication. Taught with ENGL 610.

ENGL 512. Graduate Study in Writing in the Workplace

3 Credits (3)

Study of workplace writing practices, including a focus on research-based, theoretical, and pedagogical approaches to professional communication.

ENGL 513. Creative Writing Workshop: Fiction

3 Credits (3)

Advanced creative writing prose workshop. Imaginative writing, chiefly the narrative. Graduate level workshop for students who are not in the English Department MFA program. May be repeated for a maximum of 12 credits. Taught with ENGL 413 with additional work required at the graduate level.

ENGL 514. Creative Writing Workshop: Poetry

3 Credits (3)

Creative writing poetry workshop for advanced writers of poetry. Graduate level works for students who are not in the English Department MFA program. Repeatable for a maximum of 12 credits. Taught with ENGL 414 with additional work required at the graduate level.

ENGL 516. Graduate Study in Approaches to Literature
3 Credits (3)

Understanding, appreciation, techniques of instruction in the high school. Requirements include independent directed research.

Prerequisite: at least 6 credits in upper-division English courses.

ENGL 517. Graduate Study in Critical Theory
3 Credits (3)

Advanced study of one or more major trends in theoretical inquiry within English studies. Some prior study of theory, such as English 301, 302, or 303, strongly recommended. Repeatable under different subtitles.

ENGL 518. History of Rhetoric
3 Credits (3)

An investigation of the crucial writings that have shaped Western attitudes towards and practice of rhetoric. Course will examine key texts from the Greeks through the Enlightenment, especially as they have influenced contemporary rhetorical theory.

ENGL 519. Graduate Study in Modern Rhetorical Theory
3 Credits (3)

Major figures in rhetorical theory, with particular emphasis on developments in rhetorical theory in the 20th century. Students will be responsible for all requirements of ENGL 419 and will in addition undertake independent directed research.

ENGL 521. Graduate Study in a Literary Period or Movement
3 Credits (3)

Close study of a topic in a particular literary period or movement. Requirements include independent directed research. Repeatable under different subtitles.

ENGL 522. Graduate Study in a Literary Form or Genre
3 Credits (3)

Close study of a topic in a particular literary form or genre. Requirements include independent directed research. Repeatable under different subtitles.

ENGL 523. Graduate Study of a Major Author
3 Credits (3)

Close study of selected works of a major author. Requirements include independent directed research. Repeatable under different subtitles.

ENGL 524. Graduate Study in a Major Text
3 Credits (3)

Close study of a major text. Requirements include independent directed research. Repeatable under different subtitles.

ENGL 525. Graduate Study in Comparative Literature
3 Credits (3)

Close study of a selection on non-English literary works read in translation. English-language works from a similar literary period or genre may also be read. Requirements include independent directed research. Repeatable under different subtitles.

Prerequisite: graduate standing or consent of instructor.

ENGL 526. Special Topics in Critical Theory
3 Credits (3)

Study of a specific historical or theoretical topic, trend, or movement in Critical Theory. Repeatable under different subtitles.

ENGL 527. Graduate Study in Film and Digital Media
3 Credits (3)

Offers close graduate study of a form or genre, a major figure or style, a historical period or movement, or a major theme or text. Topics vary from semester to semester.

ENGL 531. Technical Editing
3 Credits (3)

Uses workshops, readings, hands-on projects, and discussion to improve skills in gathering, writing, designing, and editing technical information. For students interested in technical communication as well as students interested in developing strengths in communicating in scientific and technical fields.

ENGL 533. Victorian Literature
3 Credits (3)

Intensive study of major writers and critical topics from the Victorian period. Repeatable under different subtitles.

ENGL 534. Graduate Study: Form and Technique in Fiction
3 Credits (3)

Advanced study of issues in form and technique in fiction, including point of view, scene and dialogue, and story structure. Repeatable for a maximum of 6 credits.

ENGL 535. Graduate Study: Form and Technique in Poetry
3 Credits (3)

Advanced study of issues in form and technique in poetry, including voice, tone, syntax, and structure. Repeatable for a maximum of 12 credits.

ENGL 536. The Borderlands Writing Project
3-6 Credits (3-6)

Intensive month-long seminar for practicing teachers and educators designed to improve the teaching of writing and the writing process and literacy and reading in schools and other educational contexts. Reading, discussing, and writing about current professional literature; completing teacher inquiry; and planning action research. Participants complete personal and professional writing, as well as additional professional development activities. By invitation only. Affiliated with the National Writing Project. Consent of instructor required. Crosslisted with: RDG 536

ENGL 542. Modern and Contemporary American Poetry
3 Credits (3)

Studies the development of American poetry from World War I to the present. Repeatable under different subtitles. May be repeated up to 6 credits.

ENGL 543. Multimedia Theory and Production
3 Credits (3)

Issues, theories, and production practices underlying design of multimedia, including rhetorical choices, aesthetic approaches, usability concerns, and diverse academic and popular discourses contributing to continued development of digital texts. Taught with ENGL 643.

ENGL 544. Modern British Fiction
3 Credits (3)

Study of the fiction produced in the British Isles in the 20th and 21st centuries. Repeatable under different subtitles. May be repeated up to 6 credits.

ENGL 545. Postmodern Fiction
3 Credits (3)

Study of the various forms of formally innovative experimental fiction produced since 1945, with a focus on the relationship between literary history and its sociohistorical contexts. Some texts will be read in translation. Repeatable under different subtitles. May be repeated up to 6 credits.

ENGL 546. Advanced Creative Writing: Nonfiction Prose**3 Credits (3)**

This graduate-level workshop will examine the many varieties of Creative Nonfiction. Students should be prepared for a rigorous reading load of published nonfiction and student submissions. Because of the workshop format, every student is expected to contribute extensively to every class, both in printed form and oral comments. Taught with ENGL 446 with additional work required at the graduate level. Consent of Instructor required. Crosslisted with: ENGL 446.

ENGL 548. Graduate Study in Empirical Research**3 Credits (3)**

Introduction to empirical research methods in composition, professional communication, and rhetoric.

ENGL 549. Graduate Study in Writing**3 Credits (3)**

Close study of a topic in composition, rhetoric, and/or technical and professional communication. Topics vary. Repeatable for a maximum of 6 credits.

ENGL 550. Graduate Study in Literacy**3 Credits (3)**

Studies in literacy theory and literacy research. Topics may vary. Taught with ENGL 650.

ENGL 552. Graduate Study in History of the English Language**3 Credits (3)**

This course examines the history of the English language from its Indo-European origins through its development into an international language. The aim is to describe the English language formally and to trace linguistic change over time. Samples of written English will illustrate various stages in the development of English. Also considered are contemporary social and political issues related to language, including the problem of 'standard English' and the uses of language in advertising, the media, and politics.

ENGL 553. World Literatures**3 Credits (3)**

Study of one or more literary traditions exclusive of those originating in Europe and the United States. Readings will include texts in translation. Repeatable under different subtitles. May be repeated up to 6 credits.

ENGL 555. Graduate Study in Rhetoric of Scientific Literature**3 Credits (3)**

Intensive study of the rhetoric of selected works of scientific literature.

ENGL 558. Latino/a Literature and Culture**3 Credits (3)**

Focuses on established and emergent Latino/a literary and cultural production. Incorporates both literary and sociocultural readings of texts. Repeatable under different subtitles. May be repeated up to 6 credits.

ENGL 560. Proposal and Grant Writing**3 Credits (3)**

Developing proposals and grants in a workshop setting.

ENGL 561. Topics in Writing Program Administration**3 Credits (3)**

Explores issues, theories, and research underlying the design of writing programs and the administration of writing centers. Repeatable for a maximum of 6 credits. Taught with ENGL 661.

ENGL 563. Graduate Study in English Literature**3 Credits (3)**

Covers selected works for a particular period of English literary history. Repeatable under different subtitles.

ENGL 564. History and Theory of Composition Studies**3 Credits (3)**

Studies in the history and theory of composition as a discipline. Taught with ENGL 664.

ENGL 565. Intercultural Rhetoric and Professional Communication**3 Credits (3)**

Examines rhetorical traditions in intercultural professional, technical, academic, and governmental contexts. Taught with ENGL 665.

ENGL 567. Documentary Film Theory and Criticism**3 Credits (3+3P)**

Course offers critical survey of documentary film theory and criticism including considerations of the epistemological assumptions, rhetorical choices, aesthetic approaches, political circumstances of historical and contemporary documentary film.

ENGL 568. Rhetoric and Cultural Studies**3 Credits (3)**

Explores intersections between rhetoric and cultural studies. Examines theories and practices of texts and discourses in political and cultural contexts. Taught with ENGL 668.

ENGL 569. Graduate in American Literature**3 Credits (3)**

A group of works from a particular period of American literary history. Repeatable under different subtitles.

ENGL 570. Graduate Study in Approaches to Composition**3 Credits (3)**

Theory and practice of teaching writing, including classroom practices, definition of standards, and evaluation of student writing. Requirements include independent directed research.

ENGL 571. Composition Pedagogy and Practicum**3 Credits (3)**

Examines the pedagogical implications of contemporary composition theory and research. Focuses on teaching composition at the college level. Consent of instructor required.

ENGL 572. Technical-Professional Communication Pedagogies**3 Credits (3)**

Combines theoretical and practical attention to the pedagogies that underwrite the teaching of technical and professional communication; culminates in the development of a TPC course proposal, syllabus, and rationale. For Graduate students only.

Learning Outcomes

1. Engage with research and scholarship that reflects a range of approaches to conceptualize the purposes and goals of technical and professional communication courses;
2. Articulate a range of possibilities for and responsibilities of technical and professional communication pedagogy;
3. Compose and substantiate a teaching philosophy and course plan for teaching technical and professional communication.

ENGL 574. Workshop: Advanced Writing Prose**3 Credits (3)**

Intensive practice in prose writing, primarily fiction, in a workshop environment with peer criticism. Repeatable for a total of 15 credits. Consent of instructor required.

ENGL 575. Workshop: Advanced Writing Poetry**3 Credits (3)**

Intensive practice in poetry writing in a workshop environment with peer criticism. Repeatable for a total of 15 credits. Consent of instructor required.

ENGL 576. Workshop: Advanced Writing Playwriting**3 Credits (3)**

Intensive practice in dramatic writing in a workshop environment with peer criticism. Repeatable for a total of 9 credits. Consent of instructor required.

ENGL 577. Workshop: Advanced Technical and Professional Writing**3 Credits (3)**

Intensive practice in technical and professional writing and editing in a workshop environment. May be repeated for a total of 6 credits. Consent of instructor required.

ENGL 578. Topics in Rhetoric and Technology**3 Credits (3)**

Explores intersections between rhetoric and technology, approaches may highlight theory, media production, and/or research. Repeatable for a maximum of 6 credits. Taught with ENGL 678.

ENGL 579. Computers and Writing**3 Credits (3)**

This course will trace the history of computers and composition as a field by looking at the work of important scholars including Selfe, Hawisher, Johnson-Eilola, and Wysocki. We will then focus on specific ways new media might be integrated into composition classrooms. The course will include discussions, student facilitations, and experimentation with technologies.

ENGL 580. Graduate Problems in Creative Writing**3 Credits (3)**

Independent study in creative writing. Consent of instructor required. Repeatable for a total of 9 credits.

ENGL 581. Women's Literature**3 Credits (3)**

Intensive study of literature by women, in particular historical, aesthetic, cultural, or intellectual contexts. Repeatable under different subtitles.

ENGL 582. Gender and Popular Culture**3 Credits (3)**

Intensive study of the representations of gender in popular culture. Examines the historical, aesthetic, and cultural contexts of these representation and the various critical and theoretical lenses we use to understand them. Repeatable under different subtitles. May be repeated up to 6 credits.

ENGL 583. Critical Writing Studies**3 Credits (3)**

Overview of current and historical approaches to the critical study of gender and language: how gender theoretically manifests in linguistic, social, cultural, academic, and professional contexts.

ENGL 584. Workshop: Advanced Academic Writing for International Students**3 Credits (3)**

This workshop-based course is for graduate-level multilingual writers from all disciplines who want to improve their English academic writing in an intensive and collaborative environment. Students will propose a major writing project to workshop throughout the semester, such as dissertation, thesis, comprehensive exams, etc. Some of the topics covered will be academic language, cohesion/coherence, organization, and supporting academic arguments. Other topics to be determined by needs of the class.) 4.Consent of instructor.

Prerequisite(s): 1.Be classified as a graduate student by the Graduate School 2.Be classified as an international student whose first language is not English 3.Have a major writing project in progress (comprehensive exams, thesis, dissertation, conference paper, etc.

ENGL 585. Advanced Writing Workshop: RPC Capstone**3 Credits (3)**

Students work to develop and revise their chosen Master's program Capstone Project (a portfolio, thesis or master essay) in consultation with instructor and classmates. Students provide and receive feedback on their work-in-progress. Consent of Instructor required.

ENGL 589. Cultural Studies: Literature and Theory**3 Credits (3)**

Examines the theory and practice of cultural studies in relation to the variety of discourse describable as literary, including autobiography, avant-garde writing, nonfiction prose, the essay, online writing, folklore, and popular genre fiction (such as mystery, romance, thriller, or horror). Repeatable under different subtitles. May be repeated up to 6 credits.

ENGL 590. Master's Seminar in Rhetoric**3 Credits (3)**

Studies in theories of and issues in rhetoric. Topics may vary from year to year. Repeatable for a total of 9 credits.

ENGL 592. Master's Theory, Practice, and Profession**3 Credits (3)**

Students will study major poetics/narratology pieces in the field and other related professional topics such as literary citizenship, publishing, and job seeking skills. Students will also propose and develop a year-long project in one of the above categories, such as a community reading or workshop, a conference panel proposal, a paper presentation, a chapbook press launch, writing/placing literary book reviews, or work on an outreach project. Must be taken in each of the last two semesters of the MFA and currently with ENGL 594 (Master's Workshop). Restricted to MFA-Creative Writing students, or by consent of instructor.

Learning Outcomes

1. Understand, analyze, and effectively use the critical discourse of poetics/narratology/craft in the field of creative writing
2. Design and execute an outreach or professional project that contributes to a creative writing community
3. Explore applications of their training in professional contexts.
4. Analyze how students' own reading, writing, and research respond to existing leadership in professional creative writing communities, help provide new leadership, and answer community needs.

ENGL 594. Master's Workshop**3 Credits (3)**

Students will submit a draft of their thesis project, in their major genre, for workshop critique. Revision of the thesis draft will be submitted to the instructor. Restricted to MFA Creative Writing students, or by consent of instructor. Must be taken in each of the last two semesters of the MFA, and concurrently with ENGL 592 (Master's Theory, Practice, and Profession).

Learning Outcomes

1. Understand, analyze, and effectively use the critical discourse of the field of creative writing to discuss a thesis.
2. Examine how their thesis operates with the genre and within the context of contemporary literature.
3. Critically contextualize their thesis and those of their peers
4. Apply various revision strategies across a thesis-length manuscript, responding to the critiques of the instructor and their peers
5. Achieve the standards of publication of the University's thesis editor and learn those of the publishing environment in their genre.

ENGL 595. Master's Workshop: Poetry**3-6 Credits (3-6)**

Students will submit a draft of thesis project for workshop critique. Revision of the thesis draft submitted to the instructor. Restricted to MFA CW majors.

Prerequisite(s): Enrolled in MFA penultimate semester.

ENGL 596. Master's Workshop: Fiction

3-6 Credits (3)

Students will submit a draft of thesis project for workshop critique. Revision of the thesis draft submitted to the instructor. Restricted to MFA CW majors.

Prerequisite(s): Enrolled in MFA penultimate semester.

ENGL 597. Internship in Technical and Professional Communication

3-6 Credits (3-6)

Supervised technical and professional communication in business, industry, government, or the university. May be repeated for a total of 6 credits. Consent of instructor required.

ENGL 598. Master's Essay

3 Credits (3)

Students electing the master essay option complete revision of a scholarly essay of 25-30 pages, the approximate length of a journal article, and reformulation of this essay to the 7-8 pages appropriate for presentation at a conference. This option also requires research of appropriate publication venues and a final oral defense of the project. A supervising faculty member will approve the selected essay, guide revision, and help students form an examining committee, which consists of at least two members of the graduate English faculty and one member of the graduate faculty from outside the department. Students are encouraged to undertake the Master Essay process in the first half of their third semester of full time graduate work, or soon after completing 18 hours of course work. This option is the preferred exam option, particularly for those students who intend to pursue Ph.D. study. Consent of instructor required.

ENGL 599. Master's Thesis

1-15 Credits

Thesis.

ENGL 600. Doctoral Research

1-15 Credits

Assigns credit for research performed prior to the doctoral comprehensive examination.

ENGL 601. Qualitative Research

3 Credits (3)

Theory and practice of designing research studies and of collecting and analyzing data. Emphasis on qualitative methods of research in composition, professional communication, and rhetoric.

ENGL 604. Digital Research Methods

3 Credits (3)

This course will serve as one of the core methods courses in the RPC PhD program, focusing on "digital" methods in rhetorical studies. As such, the aim of this class is to help you begin to gain confidence in conducting research in rhetoric, professional communication, and composition using digital methods. In this course we will assume that digital methods in rhetoric take broadly two forms: first, digital methods of acquisition, processing, and presentation of research data. And second, digital methods of production and circulation of rhetorical objects. The former closely resembles the methods of "digital humanities" while the latter will be closer to media archaeology and "critical making" practices. In all cases, we will relate these tools and methods to key questions and theories in our field, asking how and why we might apply digital methods in rhetorical scholarship.

Prerequisite(s): graduate standing.

ENGL 610. Proseminar in Rhetoric and Professional Communication

3 Credits (3)

Introduction to research in rhetoric and professional communication. Required of and limited to students enrolled in the Ph.D. program in Rhetoric and Professional Communication.

ENGL 643. Multimedia Theory and Production

3 Credits (3)

Issues, theories, and production practices underlying design of multimedia, including rhetorical choices, aesthetic approaches, usability concerns, and diverse academic and popular discourses contributing to continued development of digital texts. Taught with ENGL 543.

ENGL 649. Graduate Study in Writing

3 Credits (3)

Close study of a topic in composition, rhetoric, and/or technical and profession communication. Repeatable for a total of 6 credits.

ENGL 650. Graduate Study in Literacy

3 Credits (3)

Studies in literacy theory and literacy research. Topics may vary. Taught with ENGL 550.

ENGL 661. Topics in Writing Program Administration

3 Credits (3)

Explores issues, theories, and research underlying writing programs and the administration of writing centers. Repeatable for a maximum of 6 credits. Taught with ENGL 561.

ENGL 664. History and Theory of Composition Studies

3 Credits (3)

Studies in the history and theory of composition as a discipline. Taught with ENGL 564.

ENGL 665. Intercultural Rhetoric and Professional Communication

3 Credits (3)

Examines rhetorical traditions in intercultural professional, technical, academic, and governmental contexts. Taught with ENGL 565.

ENGL 668. Rhetoric and Cultural Studies

3 Credits (3)

Explores intersections between rhetoric and cultural studies. Examines theories and practices of texts and discourses in political and cultural contexts. Taught with ENGL 568.

ENGL 678. Topics in Rhetoric and Technology

3 Credits (3)

Explores intersections between rhetoric and technology, approaches may highlight theory, media production, and/or research. Repeatable for a maximum of 6 credits. Taught with ENGL 578.

ENGL 683. Critical Writing Studies

3 Credits (3)

This course investigates the field of Writing Studies as a distinct field of study, related to but not synonymous with Composition Studies. While debates surrounding the relationships among Writing Studies and Composition Studies flourish, this course centers on the former—investigating writing as a practice, process, and object that merits attention in its own right. Such attention will be grounded in contemporary critical and cultural theory that contests writing as a positive or neutral sign (i.e. activity theory, posthumanism, ecocriticism, new materialism, new media studies; feminist, queer, critical race or decolonial theory). Crosslisted with: ENGL 583.

Prerequisite(s): graduate standing.

ENGL 690. Doctoral Seminar in Rhetoric

3 Credits (3)

Studies in theories of and issues in rhetoric. Topics may vary from year to year. Repeatable for a maximum of 9 credits.

ENGL 700. Doctoral Dissertation

1-15 Credits

Dissertation.

English (Creative Writing) - Bachelor of Arts

In addition to meeting the English basic skills requirement, the student majoring in Creative Writing must complete 42 credits in English beyond ENGL 1110G Composition I satisfying the following requirements.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Prefix	Title	Credits
General Education		
<i>Area I: Communications</i>		10
	<i>English Composition - Level 1</i> ¹	
	<i>English Composition - Level 2</i> ¹	
	<i>Oral Communication</i> ¹	
<i>Area II: Mathematics</i> ^{1,2}		3-4
<i>Area III/IV: Laboratory Sciences and Social/Behavioral Sciences</i>		10-11
	<i>Area III: Laboratory Sciences Course (4 credits)</i> ¹	
	<i>Area IV: Social/Behavioral Sciences Course (3 credits)</i> ¹	
	<i>Either an Area III/IV: Laboratory Sciences Course or Social/Behavioral Sciences Course (4 or 3 credits)</i> ¹	
<i>Area V: Humanities</i> ¹		3
<i>Area VI: Creative and Fine Arts</i> ¹		3
<i>General Education Elective</i> ¹		3-4
Viewing A Wider World ³		6
Departmental/College Requirements		
ENGL 310	Critical Writing ⁴	3
Select three from the following: ^{4,5}		9
ENGL 2521	The Bible as Literature	
ENGL 2610	American Literature I	
ENGL 2620	American Literature II	
ENGL 2280	History of Argument	
ENGL 2630	British Literature I	
ENGL 2640	British Literature II	
Select one from the following: ⁴		3
ENGL 301	Theory and Criticism: Rhetoric and Culture	
ENGL 302	Theory and Criticism: Literature and Culture	

ENGL 303	Theory and Criticism: Film, Media and Culture	
Select a minimum of two different Creative Writing workshops from the following:		6
ENGL 304	Creative Writing: Prose	
ENGL 306	Creative Writing: Poetry	
ENGL 307	Creative Writing: Creative Nonfiction	
ENGL 308	Creative Writing: Playwriting	
ENGL 309	Screenwriting I	
Select two advanced Creative Writing Workshops from the following (300-level workshops are prerequisites for 400-level workshops in the same genre):		6
ENGL 413	Advanced Creative Writing: Prose Workshop	
ENGL 414	Advanced Creative Writing: Poetry Workshop	
ENGL 446	Advanced Creative Writing: Nonfiction Prose	
Select two from the following:		6
ENGL 354	Form and Technique in Fiction	
ENGL 356	Form and Technique in Poetry	
Select 9 additional credits from English courses numbered 400-499.		9
Second Language Requirement: (required- see the section at the bottom of the page)		0-8
Electives, to bring the total credits to 120 ⁶		29-40
Total Credits		120

- ¹ See the General Education (p. 227) section of the catalog for a full list of courses
- ² A Mathematics course is required for the degree but students may need to take any prerequisites needed to enter the course first.
- ³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
- ⁴ Students may make 1 or 2 of the following substitutions:
 - HNRS 2160G New Testament as Literature for ENGL 2521 The Bible as Literature;
 - HNRS 2171G The Worlds of Arthur, or HNRS 2117G The World of the Renaissance: Discovering the Modern for ENGL 2630 British Literature I;
- ⁵ These 18 credits should be completed before the student enrolls in 400 level courses.
- ⁶ Elective credit may vary based on second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Arts in the English, with a Concentration in Creative Writing, there is a one year second language requirement; the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120	French I and French II	4-8

GRMN 1110 & GRMN 1120	German I and German II	4-8
JAPN 1110 & JAPN 1120	Japanese I and Japanese II	4-8
SPAN 1110 & SPAN 1120	Spanish I and Spanish II	4-8
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6
<i>For Heritage Speakers:</i>		
SPAN 1210 & SPAN 1220 or SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II Spanish for Heritage Learners III	3-6

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3

Option 3:

Prefix	Title	Credits
Challenge the 1120 level for the following courses:		
FREN 1120 or GRMN 1120 or JAPN 1120 or SPAN 1120	French II German II Japanese II Spanish II	4
<i>OR</i>		
Challenge the 1120/1220/2210 level for the following courses:		
PORT 1120 or SPAN 1220 or SPAN 2210	Portuguese II Spanish for Heritage Learners II Spanish for Heritage Learners III	3

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for

students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Freshman		Credits

Students may count 1 or 2 of the following Honors courses towards the requirement of 6 hours of 300-level electives:		
HNRS 348V	Comparative Mythology: Myth, Ritual, and the Life Cycle ⁶	
Students may count the following Honors course towards the requirement of 6 hours of 300-level electives		
Select one from the following (The following courses may fulfill this requirement at the discretion of the Director of Undergraduate Studies, if their content is primarily American literature: ENGL 422, 423, 445, 481, 489, 500):		3
ENGL 442	Modern and Contemporary American Poetry	
ENGL 458	Latino/a Literature and Culture	
ENGL 469	Advanced Study in American Literature	
ENGL 405	Chaucer	3
or ENGL 407	Milton	
ENGL 408	Shakespeare I	3
or ENGL 409	Shakespeare II	
Select 9 additional credits from English courses numbered 400-499.		9
Second Language Requirement: (required- see the section at the bottom of the page)		0-8
Electives, to bring the total credits to 120 ⁷		29-40
Total Credits		120

- ¹ See the General Education (p. 227) section of the catalog for a full list of courses
- ² A Mathematics course is required for the degree but students may need to take any prerequisites needed to enter the course first.
- ³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
- ⁴ Students may make 1 or 2 of the following substitutions:
- HNRS 2160G New Testament as Literature for ENGL 2521 The Bible as Literature;
 - HNRS 2171G The Worlds of Arthur, or HNRS 2117G The World of the Renaissance: Discovering the Modern for ENGL 2630 British Literature I;
- ⁵ These 15 credits should be completed before the student enrolls in 400-level courses.
- ⁶ Students may not take both ENGL 392V Mythology and HNRS 348V Comparative Mythology: Myth, Ritual, and the Life Cycle.
- ⁷ Elective credit may vary based on second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Arts in the English, with a Concentration in English, there is a one year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120	French I and French II	4-8
GRMN 1110 & GRMN 1120	German I and German II	4-8
JAPN 1110 & JAPN 1120	Japanese I and Japanese II	4-8
SPAN 1110 & SPAN 1120	Spanish I and Spanish II	4-8
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6
<i>For Heritage Speakers:</i>		
SPAN 1210 & SPAN 1220 or SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II Spanish for Heritage Learners III	3-6

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3

Option 3:

Prefix	Title	Credits
Challenge the 1120 level for the following courses:		
FREN 1120 or GRMN 1120 or JAPN 1120 or SPAN 1120	French II German II Japanese II Spanish II	4
<i>OR</i>		
Challenge the 1120/1220/2210 level for the following courses:		
PORT 1120 or SPAN 1220 or SPAN 2210	Portuguese II Spanish for Heritage Learners II Spanish for Heritage Learners III	3

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Gender and Sexuality Studies - Bachelor of Arts

The undergraduate major in Gender and Sexuality Studies specializes in the examination of gender; gender identity; queer and transgender studies; feminisms; and social justice from interdisciplinary perspectives. Students develop a strong understanding of how interconnected social formations such as race, class, age, nation, citizenship, ability, and other categories of difference are constructed and intersect with gender and sexuality. Our courses equip students with analytical skills and knowledge to engage power structures critically and transform lives and communities.

Gender and Sexuality Studies readies students for further study in the field at the graduate level as well as advanced study in a variety of disciplines. We offer a plan of study that integrates humanities and social sciences methods and objects of study, including areas of concentration such as human rights and transnational migration; socially engaged literature, film, and other creative media; and transnational and decolonial methodologies.

Gender and Sexuality Studies students prepare for careers in such fields as advocacy and social organizing, community development, creative writing, criminal justice, education, filmmaking and video production, health care, human resources, journalism, law, music production, social services, and visual arts. Many students declare a double major in Gender and Sexuality Studies with another discipline to enhance career opportunities and learning.

Courses are offered both online and on campus. In addition to the B.A., Gender and Sexuality Studies offers an undergraduate minor and graduate minor.

Degree requirements for the major include

- 9 credit hours of required Gender & Sexuality Studies courses;
- 18 credit hours of Gender & Sexuality Studies electives; and
- 9 credit hours from a number of cross-listed courses offered both by Gender & Sexuality Studies and by other programs/departments.
- The total credit hour requirement for the major is 36 credit hours with 21 hours at the upper division level. All requirements must be completed with a grade of C- or higher.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

12 credits must be Upper - Division		
Total Credits		120

- ¹ MATH 1130G Survey of Mathematics is required for the degree but students may need to take any prerequisites needed to enter MATH 1130G first.
- ² See the General Education (p. 227) section of the catalog for a full list of courses.
- ³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
- ⁴ Elective credit may vary based on General Education course selection, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Arts with a major in Gender & Sexuality Studies, there is no second language requirement for the degree.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Rhetoric and Composition. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

GNDR or Cross-listed Elective Course (any level) (C- or better) ⁵		3
Elective Course(s) ³		3
Elective Course(s) - Upper Division ³		13
Credits		28
Total Credits		120-122

¹ MATH 1130G Survey of Mathematics is recommended for the degree but students may need to take any prerequisites needed to enter MATH 1130G (or an alternative relevant Area II MATH course) first.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ Elective credit may vary based on General Education course selections, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

⁴ GNDR 2110G Introduction to Women, Gender, and Sexuality Studies and GNDR 2120G Representing Women Across Cultures count towards Area V.

⁵ Students must take 6 credits of Upper-Division W S Cross-listed Elective coursework

⁶ Students cannot take the same course multiple times to fulfill this requirement.

⁷ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

English - Undergraduate Minor

Students not earning a bachelor's degree in English are eligible to pursue a minor in English. Students must earn 18 credits from the approved course lists below. Students may request approval for other courses clearly related to the minor from the undergraduate advisor in the Department of English.

Prefix	Title	Credits
Requirements		
Select 6 credits from the following: ¹		6
ENGL 2310G	Introduction to Creative Writing	
ENGL 2521	The Bible as Literature	
ENGL 2610	American Literature I	
ENGL 2620	American Literature II	
ENGL 2280	History of Argument	
ENGL 2630	British Literature I	
ENGL 2640	British Literature II	
Select one from the following:		3
ENGL 301	Theory and Criticism: Rhetoric and Culture	
ENGL 302	Theory and Criticism: Literature and Culture	
ENGL 303	Theory and Criticism: Film, Media and Culture	
ENGL 310	Critical Writing	
Select 6 credits from English courses numbered 300-499.		6
Select three additional credits from English courses numbered 400-499.		3
Total Credits		18

¹ Students may make 1 or 2 of the following substitutions:

- HNRS 2160G New Testament as Literature for ENGL 2521 The Bible as Literature;
- HNRS 2171G The Worlds of Arthur, HNRS 2173G Middle Ages, or HNRS 2117G The World of the Renaissance: Discovering the Modern for ENGL 2630 British Literature I;

Gender & Sexuality Studies - Undergraduate Minor

A minor in Gender & Sexuality Studies consists of 18 credit hours of approved course work in Gender & Sexuality Studies of which at least 12 are upper division (300 level or above).

Prefix	Title	Credits
Required Core Courses		
GNDR 2110G	Introduction to Women, Gender, and Sexuality Studies	3
or GNDR 2120G	Representing Women Across Cultures	
Select one from the following:		3
GNDR 471	Seminar in Feminist and Queer Theories	
GNDR 402	Transnational Feminisms	
GNDR 455	Feminist Research Methodologies	
GNDR 465	Sex, Gender and the Body	
Select 12 credits from the following:		12
GNDR 360	Masculinities Studies	
GNDR 401	Women & Immigration	
GNDR 403	Gender & Horror	
GNDR 405	Alternative Genders and Sexualities	
GNDR 407	Gender and Graphic Narrative	
GNDR 411	Gender and Migration	
GNDR 412	Gender and Film Studies	
GNDR 450	Special Topics	
GNDR 451	Practicum in Gender and Sexuality Studies	

GNDR 454	Women Crossing Borders	
Total Credits		18

Note: A student may not earn a bachelor's degree in Gender & Sexuality Studies and also earn a minor in Gender & Sexuality Studies.

Literature - Undergraduate Minor

Students not earning a bachelor's degree in English with a concentration in Literature, Language and Culture are eligible to pursue a minor in Literature. Students must earn 18 credits from the approved course lists below. At least 12 credits must be upper division. Students may request approval for other courses clearly related to the minor from the undergraduate advisor in the Department of English. Students earning a BA in English must earn at least 6 credits approved by the Department of English undergraduate advisor beyond those earned for the major in order to earn a minor in Literature.

Prefix	Title	Credits
Requirements		
Select two from the following: ¹		6
ENGL 2521	The Bible as Literature	
ENGL 2610	American Literature I	
ENGL 2620	American Literature II	
ENGL 2280	History of Argument	
ENGL 2630	British Literature I	
ENGL 2640	British Literature II	
Select one from the following:		3
ENGL 301	Theory and Criticism: Rhetoric and Culture	
ENGL 302	Theory and Criticism: Literature and Culture (recommended)	
ENGL 303	Theory and Criticism: Film, Media and Culture	
ENGL 310	Critical Writing	
Select one from the following:		3
ENGL 323	American Drama	
ENGL 326	Cultural Identity and Representation Across the Media	
ENGL 328V	Literature of Science Fiction and Fantasy	
ENGL 339V	Chicana/o Literature	
ENGL 363	Literature for Children and Young Adults	
ENGL 380V	Women Writers	
ENGL 392V	Mythology	
ENGL 394V	Southwestern Literature	
ENGL 399	Special Topics (with advisor approval)	
Substitutions Allowed		
HNRS 348V	Comparative Mythology: Myth, Ritual, and the Life Cycle	
Select two from the following:		6
ENGL 405	Chaucer	
ENGL 407	Milton	
ENGL 408	Shakespeare I	
ENGL 409	Shakespeare II	
ENGL 417	Advanced Study in Critical Theory	
ENGL 422	Advanced Study in a Literary Form or Genre	
ENGL 423	Advanced Study in a Major Author	
ENGL 433	Victorian Literature	
ENGL 442	Modern and Contemporary American Poetry	
ENGL 445	Postmodern Fiction	
ENGL 453	World Literatures	

ENGL 458	Latino/a Literature and Culture	
ENGL 469	Advanced Study in American Literature	
ENGL 481	Women's Literature	
ENGL 489	Cultural Studies: Literature and Theory	
Total Credits		18

¹ Students may make 1 or 2 of the following substitutions:

- HNRS 2160G New Testament as Literature for ENGL 2521 The Bible as Literature;
- HNRS 2171G The Worlds of Arthur, HNRS 2173G Middle Ages, or HNRS 2117G The World of the Renaissance: Discovering the Modern for ENGL 2630 British Literature I;

Medieval and Early Modern Studies - Undergraduate Minor

Students must earn 18 credits from the approved course lists below. At least 9 credits must be upper division. No more than 9 credits may be taken under faculty in any department. Students may request approval for other courses clearly related to Medieval and/or Early Modern Studies from the undergraduate advisor in the Department of English in consultation with faculty in medieval and early modern studies.

Prefix	Title	Credits
Requirements		
Select three from the following:		9
ARTH 2110G	History of Art I	
ENGL 2521	The Bible as Literature	
ENGL 2630	British Literature I	
ENGL 2650G	World Literature I	
HIST 1150G	Western Civilization I	
HIST 2250G	East Asia to 1600	
HIST 2245G	Islamic Civilization to 1500	
HNRS 2120G	Foundations of Western Culture	
HNRS 2160G	New Testament as Literature	
HNRS 2171G	The Worlds of Arthur	
HNRS 2175G	Introduction to Communication Honors	
Select 9 credits from the following:		9
ARTH 300	Special Topics in Art History ¹	
ARTH 477	Independent Research in Art History ¹	
ARTH 478	Seminar in Art History ¹	
ENGL 380V	Women Writers ¹	
ENGL 392V	Mythology	
ENGL 405	Chaucer	
ENGL 407	Milton	
ENGL 408	Shakespeare I	
ENGL 409	Shakespeare II	
ENGL 422	Advanced Study in a Literary Form or Genre ¹	
ENGL 423	Advanced Study in a Major Author ¹	
ENGL 481	Women's Literature ¹	
GNDR 484	Women's Literature	
FREN 381	Survey of French Literature I	
FREN 451	Special Topics in French ¹	
HIST 311V	Colonial Latin America	
HIST 323	Cultural History of Later Imperial China	
HIST 372	Roman Civilization	

HIST 383	Germany
HIST 387	Spain in the New World: Conquest, Conflict, and Cultural Exchange
HIST 400	Special Topics ¹
HIST 434	Urban History
HIST 471	China through the Ming Dynasty
HNRS 326V	Art and Mythology
HNRS 400	Honors Capstone ¹
MUSC 302	Music History and Literature: Classic through Romantic
MUSC 421	Music of the Baroque Era
PHIL 344	Modern Philosophy
PHIL 363	Independent Studies ¹
PHIL 463	Independent Studies ¹
SPAN 306	Special Topics ¹
Total Credits	18

¹ Courses are approved for the minor only when their topics are appropriate. Students must seek approval to count these courses for the minor from the undergraduate advisor in the Department of English.

Rhetoric and Professional Communication - Undergraduate Minor

Students not earning a bachelor's degree in English with a concentration in Rhetoric, Digital Media, and Professional Communication are eligible to pursue a minor in Rhetoric and Professional Communication. Students must earn 18 credits from the approved course lists below. Students may request approval for other courses clearly related to the minor from the undergraduate advisor in the Department of English. Students earning a BA in English must earn at least 6 credits approved by the Department of English undergraduate advisor beyond those earned for the major in order to earn a minor in Rhetoric and Professional Communication.

Prefix	Title	Credits
Requirements		
Select one from the following: ¹		3
ENGL 2310G	Introduction to Creative Writing	
ENGL 2521	The Bible as Literature	
ENGL 2610	American Literature I	
ENGL 2620	American Literature II	
ENGL 2280	History of Argument	
ENGL 2630	British Literature I	
ENGL 2640	British Literature II	
Select one from the following:		3
ENGL 2130G	Advanced Composition	
ENGL 2210G	Professional and Technical Communication Honors	
ENGL 2210H	Professional and Technical Communication Honors	
ENGL 2215G	Advanced Technical and Professional Communication	
ENGL 2221G	Writing in the Humanities and Social Science	
Select 12 credits from the following:		12
ENGL 301	Theory and Criticism: Rhetoric and Culture	
ENGL 315	Writing for the Web	

ENGL 2215G	Advanced Technical and Professional Communication
ENGL 326	Cultural Identity and Representation Across the Media
ENGL 412	Writing in the Workplace
ENGL 431	Technical Editing
ENGL 449	Advanced Study in Writing
ENGL 460	Proposal Writing
ENGL 470	Approaches to Composition
ENGL 478	Document Design
ENGL 497	Internship
Total Credits	18

¹ Students may make 1 or 2 of the following substitutions:

- HNRS 2160G New Testament as Literature for ENGL 2521 The Bible as Literature;
- HNRS 2171G The Worlds of Arthur, HNRS 2173G Middle Ages, or HNRS 2117G The World of the Renaissance: Discovering the Modern for ENGL 2630 British Literature I;

Geography & Environmental Studies

The Department of Geography & Environmental Studies offers undergraduate, master's, and doctoral geography degree programs with concentrations in environmental studies and geographic information science and technology.

Geographers study how and why human activities, natural features, and interactions between people and the environment vary across space and through time, and why this matters. Geographers thus address complex challenges ranging from poverty, ethnic conflict, and economic competition to environmental degradation, natural disasters, and climate change. They enter jobs in private, public, or non-profit settings in diverse areas, including and not limited to urban and regional planning, environmental consulting, natural resource management, public health, data and information management, and geospatial intelligence.

Students in the Department of Geography & Environmental Studies can choose from a wide range of courses in physical geography, human geography, human-environment geography, regional geography, and geographic information science and technology, tailoring their educational journey to align with their individual interests and career goals. Within physical geography, we offer classes such as Biogeography, Geomorphology, and Climatology, which focus on plants and animals, landforms, and climate, respectively. Challenges of Globalization, The City, and Geohumanities are among our human geography course offerings. With respect to human-environment geography, Planning a Sustainable World, Field Explorations, and U.S. National Parks are excellent choices. Regional geography classes address the human, physical, and human-environment geography of world regions such as Latin America, Europe, and New Mexico and the American West. Finally, in geographic information science and technology, students have opportunities to solve geographic problems using tools such as Remote Sensing, Geographic Information Systems (GIS), and Global Navigation Satellite Systems (GNSS). Maps are a common output of these efforts.

To support student educational and research needs, the Department of Geography & Environmental Studies has a computer teaching laboratory and a contracts and grants research laboratory (Spatial Applications Research Center – SpARC), both of which are equipped with state-of-

the-art workstations that run a wide array of software packages. The Department also has unoccupied aerial systems (aka drones), a field spectroradiometer, survey-grade GPS units, and other equipment to foster research and research training. Excellent working relationships with various units on campus (e.g., the Water Resources Research Institute and Jornada Experimental Range) moreover provide students with opportunities for interdisciplinary and multidisciplinary exchanges.

Undergraduate Program Information

The Department of Geography & Environmental Studies offers a Bachelor of Science degree in Geography with concentrations in Environmental Studies (ES) (p. 657) and Geographic Information Science and Technology (GIS&T) (<https://catalogs.nmsu.edu/nmsu/arts-sciences/geography/geography-gis-tech-bachelor-science/>). Both concentrations require students to develop a broad geographic foundation by completing core courses in human, physical, and human-environment geography. Both concentrations also address the range of geographic challenges noted above and complement each other. In fact, some students may wish to pursue both concentrations. However, some students may prefer more quantitative or more qualitative approaches to geographic problem solving and focus on only one of these two concentrations. In those cases, the GIS&T concentration is most suitable for students interested in computers, science, technology, statistics, and spatial analysis and modeling, while the ES concentration is most optimal for students interested in the overlapping cultural, social, and policy-related aspects of environmental issues.

The Department also offers Undergraduate Minors in Geography (<https://catalogs.nmsu.edu/nmsu/arts-sciences/geography/geography-undergraduate-minor/>) and Geographic Information Science and Technology (<https://catalogs.nmsu.edu/nmsu/arts-sciences/geography/geographic-information-science-technology-undergraduate-minor/>).

For more information about the undergraduate programs, please visit the Department of Geography & Environmental Studies home page (<https://geography.nmsu.edu/>). For additional questions, please contact any of the faculty members (<https://geography.nmsu.edu/about-us/faculty.html>) of the Department.

Graduate Program Information

The Department of Geography & Environmental Studies offers graduate study leading to a Master of Applied Geography (MAG) (<https://catalogs.nmsu.edu/nmsu/graduate-school/geography-master-applied-geography/>) degree and to a Doctor of Philosophy (PhD) (<https://catalogs.nmsu.edu/nmsu/graduate-school/geography-doctor-philosophy/>) in Geography degree. The MAG program offers thesis and non-thesis (i.e., residency) paths for earning the master's degree. The PhD program is offered collaboratively with the Department of Geography & Environmental Studies at the University of New Mexico. The MAG and PhD programs both focus on applied approaches for understanding complex environmental issues, with students' choices of research design ranging from qualitative to quantitative and mixed methods.

The Department also offers a Graduate Minor in Geographic Information Science and Technology (p. 222).

The Department participates in the Western Regional Graduate Program (WRGP), which is supported by the Western Interstate Commission of Higher Education (WICHE). The WRGP is a tuition-reciprocity arrangement that enables students that are legal residents in WICHE states (Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, North Dakota, Oregon, South Dakota, Utah, Washington, and

Wyoming) to attend NMSU and pay the resident tuition rate, instead of the nonresident rate that an out-of-state student would normally pay.

The Department offers some teaching and research assistantships, which are usually allocated during the admission process based on student qualifications and departmental needs.

For more information about the graduate programs, please visit the Department of Geography & Environmental Studies home page (<https://geography.nmsu.edu/>). For additional questions, please contact any of the faculty members (<https://geography.nmsu.edu/about-us/faculty.html>) of the Department.

Degrees for the Department

Bachelor Degree(s)

- Geography (Environmental Studies) - Bachelor of Science (p. 657)
- Geography (Geographic Information Science & Tech) - Bachelor of Science (p. 660)

Master Degree(s)

- Geography - Master of Applied Geography (p. 151)

Doctoral Degree(s)

- Geography - Doctor of Philosophy (p. 198)

Minors for the Department

- Geographic Information Systems - Graduate Minor (p. 222)
- Geographic Information Systems - Undergraduate Minor (p. 662)
- Geography (Environmental Studies) - Bachelor of Science (p. 657)
- Geography - Undergraduate Minor (p. 663)

Professor, Michaela Buenemann, Department Head

Professors Brown, Buenemann; **Associate Professors** Campbell, Magrane; **Assistant Professors** Dugas, Fan; **Professors Emeriti** Czerniak, DeMers, Wright

C. P. Brown, Ph.D. (University of California, Santa Barbara / San Diego State University) – US-Mexico and US-Canada border environment and water resources research, GIS, comparative environmental analysis; M. Buenemann, Department Head, Ph.D. (University of Oklahoma) – remote sensing, GIS, spatial modeling, human-environment geography, land system science, landscape ecology, drylands; C. L. Campbell, Ph.D. (University of California, Los Angeles) – avian ecology, biogeography and ecology, remote sensing, sustainability, National Parks, human-environment relationships; D. Dugas, Ph.D. (University of Oregon) – geomorphology, landscape ecology, paleoclimate and climate change, geographic education; Chao Fan, Ph.D. (Arizona State University) – GIScience, spatial analysis and modeling, remote sensing, climate change, land cover land use change; E. Magrane, Ph.D. (University of Arizona) – climate & culture, art & environment, human-environment geography, geopoetics, geohumanities, critical methodologies.

Professors Emeriti: R. J. Czerniak, Ph.D. (University of Colorado, Boulder) – land use and transportation planning, Europe, urban geography; M. N. DeMers, Ph.D. (University of Kansas) – geographic information science, landscape ecology, geographic education; J. B. Wright, Ph.D. (University of California, Berkeley) – environmental conservation, cultural geography, American West.

Geography Courses

GEOG 1110G. Physical Geography

4 Credits (3+3P)

This course introduces the physical elements of world geography through the study of climate and weather, vegetation, soils, plate tectonics, and the various types of landforms as well as the environmental cycles and the distributions of these components and their significance to humans.

Learning Outcomes

1. Define, describe, illustrate, distinguish among or explain the use of maps, map scale, globes, map projections, and remote sensing.
2. Define, describe, illustrate, distinguish among or explain the various elements of the earth's atmosphere, earth's relation to the sun, incoming solar radiation, the ozone layer, the primary temperature controls, and the unequal heating of land and water.
3. Define, describe, illustrate, distinguish among or explain the weather makers (air temperature, air pressure, humidity, clouds, precipitation, visibility, and wind [including pressure gradient, the Coriolis force, and friction]).
4. Define, describe, illustrate, distinguish among or explain air masses, pressure systems, the various fronts and associated types of storms, weather symbols, monsoons, the various forms of precipitation, along with causes and effects of lightning.
5. Define, describe, illustrate or explain the hydrologic cycle, the characteristics and influences of the oceans and continents on the weather, the Southern Oscillation (i.e., El Nino), the effects of land/water distribution, and climates and their global distribution.
6. Define, describe, illustrate or explain the biosphere, including organisms (flora and fauna), food chains, ecosystems and relationships. Define, describe, illustrate or explain soils in terms of soil-forming processes, components, properties, and classification.
7. Define, describe, illustrate or explain the structure of the earth, the internal processes, weathering and mass wasting, fluvial processes, characteristics and processes of arid regions, processes of coastal and Karst topographical regions, the processes and characteristics of glaciation (mountainous and continental).
8. Define, describe, illustrate, distinguish among or explain specific impacts by humans on weather, climate, and on the ecosystem at large.
9. Perform tests and collect data to analyze and classify weather, climate and landforms characteristics, processes, and impacts both quantitatively and qualitatively. This includes reading and extracting basic information from maps, diagrams, remote sensing devices, graphs, and tables. 1
10. Apply critical thinking skills such as inductive, deductive, and mathematical reasoning to solve problems using the scientific method. This includes interpreting maps, graphs and photos. 1
11. Recognize and discuss the effect of human activity on climate, climate change, the greenhouse effect, and on landforms at large. 1
12. Synthesize information from external, current sources and personal observations and discuss their relationships to class material.

GEOG 1120G. World Regional Geography

3 Credits (3)

Overview of the physical geography, natural resources, cultural landscapes, and current problems of the world's major regions. Students will also examine current events at a variety of geographic scales.

Learning Outcomes

1. Identify, describe, illustrate, distinguish among or explain the basic concepts of geography, the major world regions, areal differences and similarities, the processes that shape geography natural

and human, the use of maps, and the key topics of geographical interpretation (e.g., location, world importance, population, political status, resources, etc.).

2. Identify, describe, illustrate, distinguish among or explain the regional groups of Europe, its historical background, its languages and religions, major features, the diversified economy, political structures, and impact on globalization.
3. Identify, describe, illustrate, distinguish among or explain the regional groups of Russia and its satellite nations, its historical background, their languages and religions, major features, their diversified economies, political structures, current problems, and impact on globalization.
4. Identify, describe, illustrate or explain the regional nations of Middle East, their historical background, their languages and religions, the major features, the diversified economies and political structures, the current problems.
5. Identify, describe, illustrate, distinguish among or explain the regional groups of Asia, their historical background its languages and religions, major features, the diversified economy and political structures, current problems, and impact on globalization.
6. Identify, describe, illustrate, distinguish among or explain the regional groups of the Pacific World, their historical background its languages and religions, major features, the diversified economy and political structures, current problems, and impact on globalization.
7. Identify, describe, illustrate, distinguish among or explain the regional groups of Africa, their historical background its languages and religions, major features, the diversified economy and political structures, current problems, and impact on globalization.
8. Identify, describe, illustrate, distinguish among or explain the regional groups of Latin America, their historical background its languages and religions, major features, the diversified economy and political structures, current problems, and impact on globalization.
9. Identify, describe, illustrate, distinguish among or explain the regional groups of Anglo-America, their historical background its languages and religions, major features, the diversified economy and political structures, current problems, and impact on globalization. 1
10. Collect data to analyze or classify the region various historical developments and trends relating to globalization 1
11. Apply critical thinking skills in predicting future developments and impacts in economics, cultural diversity, and political stability globally. 1
12. Recognize and discuss current political "hot-spots," their causes, and potential results with regards to globalization. 1
13. Synthesize information the data into a comprehensive world-view.

GEOG 1130G. Human Geography

3 Credits (3)

This course serves as an introduction to the study of human geography. Human geography examines the dynamic and often complex relationships that exist between people as members of particular cultural groups and the geographical "spaces" and "places" in which they exist over time and the world today.

Learning Outcomes

1. Locate on maps, globes, and other technologies various geo-political spaces and places around the world, including in the United States.
2. Describe the primary concepts, theories, methods and terms prevalent in the field of human geography.
3. Apply core geographic concepts to the spatial patterns demonstrated in real-world scenarios.

- Identify the relationships that influence human-environment interaction in a specific location at a specific time.
- Define and utilize key concepts to explain human social and cultural change over time and across geographical space.
- Explain the geographic context of a current event or conflict.
- Identify a current event that illustrates a core cultural geographic concept.
- Think critically, discuss, and write about the relationships of the natural world to human geography.

GEOG 2130. Map Use and Analysis**3 Credits (2+3P)**

Exploration of the cartographic medium. Development of critical map analysis and interpretation skills, and map literacy. Comprised of traditional lecture, labs, and map use projects.

Learning Outcomes

- Accurately measure bearings and distances on maps.
- Read and interpret terrain and landform representation.
- Utilize a magnetic compass for basic land navigation and basic map making.
- Utilize a GPS instrument for basic land navigation.
- Recognize and describe basic physical and cultural spatial patterns portrayed on maps.
- Analyze and interpret the significance of spatial patterns portrayed on maps.
- Perform elementary spatial statistical analysis on geographic data.
- Appreciate and utilize the significance of place names and cultural patterns.
- Critically examine maps for evidence of information misuse or propagandist motives.
- Recognize and utilize appropriate map categories, symbols, projections, and coordinate systems to effectively and accurately portray, read, analyze, and interpret geographic data.

GEOG 2996. Special Topics**1-3 Credits**

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

Learning Outcomes

- Varies

GEOG 315V. World Agriculture and Food Problems**3 Credits (3)**

Survey of food and agricultural issues in the U.S. and other countries. Covers: role of agriculture in economic development; trade in food and agricultural products; global food production, consumption, and marketing patterns; economics of technical change and food assistance; agriculture and the environment. Same as AEEC 315V.

GEOG 325V. New Mexico and the American West**3 Credits (3)**

In this course, we will examine the human and cultural geography of New Mexico and the American West. We will explore cultural and historical patterns, economic activities, and environmental and physical characteristics of the region, as well as current challenges in the region.

Learning Outcomes

- Explain the human and cultural geography of New Mexico and the American West.

- Critically examine narratives of the American West and different ways of defining the region, as well as the processes that create the cultural landscapes of the West.
- Discuss and analyze contemporary environmental and cultural challenges in the West.
- Articulate an understanding of the landscapes of the West through critically "reading" the landscapes of the West.

GEOG 326. U.S. National Parks**3 Credits (3)**

Exploration of origins, landscapes, ecosystems, management issues, and conflicts in U.S. National Parks. The regional geography of the United States as seen through the creation and protection of biologically and culturally significant lands. We discuss current park issues and ideology, beginning with the conception of the first national park, the National Park System, current administrative structure, and the goals of the "double mandate". We will explore the parks as commons wherein humans use, and have a duty to protect, these public lands for future generations.

Learning Outcomes

- Describe the different types/categories of parks included in the National Park System (NPS).
- Provide general statistics about the NPS and parks in the NPS.
- Recognize influential persons and legislation for establishing of the NPS, and agency of the U.S. federal government.
- Locate and access data about parks.
- Search job announcements and positions with the NPS.

GEOG 328V. Environment and Society of Latin America**3 Credits (3)**

Explores Latin America from a geographical perspective, integrating environmental, cultural and socioeconomic factors in an in-depth study of the development of the region and contemporary issues and challenges facing the region. Special focus is given to examining applied problems facing Latin America at a range of scales.

Learning Outcomes

- Apply key geographic perspectives and concepts to Latin America.
- Discuss the basic physical and human geography of specific countries and sub-regions of Latin America.
- Describe how the spatial processes of development and globalization occur in Latin America and how they impact the region.
- Explore the root causes of contemporary development and environmental challenges facing Latin America.
- Demonstrate how the geographic concepts we cover in class can be applied to these challenges to develop insights into how they may be solved.
- Demonstrate an improved ability to engage in critical thinking and writing about the physical and human geography of the region and the challenges the region faces.

GEOG 331V. Europe**3 Credits (3)**

The purpose of this course is to introduce you to the cultural region of Europe. In this regional course, we will explore how various physical and cultural elements integrate to give a unique identity to a place or group of places such as Europe. During the semester we will study the "continent" from a variety of geographic perspectives including physical, environmental, economic, social, and political. We will discuss current issues of Europe, with a particular focus on the European Union.

Learning Outcomes

1. Critically evaluate conceptions of Europe as both a physical place and a cultural idea.
2. Locate, identify, and explain the importance of the major countries, cities, and physical features of Europe.
3. Discuss the major regional and international issues facing Europe.
4. Develop knowledge of the European Union (EU) and current challenges to the EU.
5. Demonstrate knowledge of Europe through a variety of forms, including critical discussions on contemporary issues, a writing assignment, and a plan for a detailed European trip.

GEOG 351. Biogeography**3 Credits (3)**

Exploration of life in space and time. Floristic and physiognomic characteristics of the Earth's major ecosystems and their distributions, ecosystem dynamics, evolution, and physical environment. Includes an individual research project resulting in a poster presentation. Taught with GEOG 557.

Learning Outcomes

1. Provide background information about researchers who quantify patterns of biodiversity in space and time.
2. Evaluate species and biodiversity patterns based on the abiotic template.
3. Describe global patterns in the shape and size of species geographical ranges.
4. Apply biogeographic terminology to effectively describe and explain patterns of life across Earth's surface.
5. Identify resources for an analysis of biogeographic data, including satellite imagery, aerial photography, and field survey records.
6. Document your sources by including proper citations and references in your writing.
7. Conduct original research and present research findings in written and oral formats.

GEOG 353. Geomorphology**3 Credits (2+3P)**

Examination of the principal theories and concepts of landform creation; exploration of the roles of structure, processes, climate, and time in the formation of various types of landforms. Cross-listed with GEOG 553 and GEOL 353.

Learning Outcomes

1. Outline the basic history of geomorphic theory and research methods.
2. Describe the trends and probable causes of Cenozoic climate change and its links to basic landform processes.
3. Describe the main landform processes including weathering, soil formation, hillslope evolution and associated natural hazards, fluvial processes, arid land processes, glacial/interglacial climates and processes.
4. Integrate field observations into basic landscape evolution reconstructions.
5. Design and implement a fluvial system experiment and analyze the data.

GEOG 357. Climatology**3 Credits (3)**

Elements and controls of climate. Energy and hydrologic cycles, general circulation, climate classification, distribution of climate types, microscale effects, applications.

Learning Outcomes

1. Explain the fundamental processes that create climate on Earth.
2. Discuss the physical laws that comprise the climate system.
3. Describe the trends in Earth's climate system.
4. Summarize our current knowledge of climate change.

GEOG 361V. Challenges of Globalization**3 Credits (3)**

Challenges of Globalization focuses on the spatial configuration of the global economy and its many regional variations. In doing so, the class has a special focus on exploring how the variables involved in globalization yield the geography of uneven development that exists across spatial scales, from the local to the global. We do this through a combination of relevant course readings, in class discussion exercises, and short, focused writing assignments on current issues of relevance in economic geography.

Learning Outcomes

1. Define the process of globalization, and describe the drivers and impacts involved.
2. Define the concept of uneven development and explore the regional geographies that this process yields.
3. Define the roles of The State, private sector capital, and multi-national corporations, and apply these concepts to understand the landscape of uneven development.
4. Articulate key variables in the global production networks and discuss how these processes drive the economic geographies of regions we study.
5. Explore and critique alternate models of economic geography, especially those involving free versus fair trade arguments and gender and power roles in the economy.
6. Demonstrate an improved ability to engage in critical thinking about economic geography and write coherent narratives about issues we examine.
7. Review basic geographic concepts and demonstrate a "geographic eye" in looking at issues,

GEOG 363V. Cultural Geography**3 Credits (3)**

In this course, we will consider the intersections between geography and culture, and explore key cultural geographic concepts such as landscape, place, nature, and environment. We will consider multiple ways of doing cultural geography, focusing on cultural geography as both a critical and creative practice. Key topics and themes that we will focus on include the cultural geography tradition, critical cultural geographies, and cultural geography and creativity. May be repeated up to 3 credits.

Learning Outcomes

1. Describe and explain critical approaches to the cultural geographic concepts of landscape, place, space, nature, and environment.
2. Discuss contemporary cultural geographic approaches to topics such as place and capitalism, place and nature, environmental narratives, and the Anthropocene.
3. Discuss and articulate the connections between geography and artistic/literary practices.
4. Articulate and apply their own practice of cultural geography through multiple forms of output, such as essays, discussions, story maps, or visual essays.

GEOG 365V. The City**3 Credits (3)**

The global historical development of urban areas, as well as the changing functions of today's cities. A comparison between the North American city system and cities in Europe, Asia, and South America, including the development of the city form, the internal spatial organization of commercial, residential, and industrial areas, and socio-economic and political factors.

Learning Outcomes

1. Define the concept of a city from various statistical and historical perspectives.
2. Analyze how the historical formation of cities affects their form and function.
3. Relate how the spatial processes of globalization, migration, transportation, informationalization, and development impact form and function of urban areas.
4. Articulate how cultural and economic landscapes of cities impact residents and their quality of life.
5. Conduct library research on key concepts from class and articulate your results through clear and concise writing.
6. Synthesize research findings to solve contemporary real-world problems in urban areas.

GEOG 373. Introduction to Remote Sensing

4 Credits (3+3P)

Introduction to the theory, techniques, and applications of remote sensing. Topics include electromagnetic radiation; remote sensing systems; remote sensing of the biosphere, hydrosphere, atmosphere, lithosphere, and cultural landscapes. Course includes lectures and also labs focused on the basic analysis and interpretation of remote sensing products. Taught with GEOG 573.

Learning Outcomes

1. Explain basic remote sensing concepts and methods.
2. Analyze remotely sensed data.
3. Interpret remotely sensed data.
4. Evaluate the quality of remote sensing products.
5. Produce information about the built and natural environments using remote sensing data and methods.

GEOG 381. Cartography and GIS

4 Credits (3+3P)

This course introduces you to the fundamental concepts and methods of cartography and geographic information systems (GIS) through both lectures and labs. In the lectures, you will learn about key principles of cartography such as map scale, projections, and symbolization. In the labs, you will apply those principles to create functional and aesthetically pleasing maps. Taught with GEOG 571.

Learning Outcomes

1. Explain key cartographic concepts and methods.
2. Analyze maps.
3. Interpret maps.
4. Evaluate the quality of maps.
5. Create functional and aesthetically pleasing maps.

GEOG 401. Internship/Co-op

1-3 Credits (1-3)

Provides an opportunity whereby students work with a local, regional, or federal agency, or private sector firm on applied geographic work, under the supervision of an agency or firm professional and a geography faculty member. Consent of instructor required.

GEOG 435. Planning a Sustainable World

3 Credits (3)

Exploration of planning tools that advance the management of land and water resources, meeting current societal needs, while also minimizing damage to nature and society. Class activities include applied exercises that explore contemporary planning issues, including land conservation, natural hazards, biophysical analysis, water resource management, Federal land issues, and remediation of Superfund sites. Taught with GEOG 535. May be repeated up to 6 credits.

Learning Outcomes

1. Describe the basic elements of traditional urban planning and articulate how traditional tools are used.
2. Unpack the many layers of sustainable development and link this to the emerging practices of environmental planning.
3. Explore current planning issues and how environmental planning ideas can inform them.
4. Through focused library research, explore and discuss current environmental planning issues that are of interest to YOU.
5. Through both written article reviews and a presentation you make to the class, critically review research articles you discovered in your literature review.
6. Working in teams, conduct a focused research project that explores an environmental planning scenario.

GEOG 441. GIS Design

3 Credits (3)

This course introduces you to the diverse considerations that are necessary to develop a Geographic Information System (GIS) in a governmental or other institutional setting. Taught with GEOG 581.

Learning Outcomes

1. Discuss concepts of GIS development and use.
2. Explain GIS design and implementation processes.
3. Apply principals of GIS design and implementation to meet local needs.

GEOG 442. Programming for GIS

3 Credits

This course will introduce you to the fundamental concepts of programming for geographic information systems (GIS). Topics to be mastered include and are not limited to the basics of GIS software environments; the syntax and styles of various programming languages; and ways to create GIS programming applications, customizations, automations, and extensions. With this foundation in place, we will then use these tools to solve applied geographic riddles through a series of hands-on exercises.

Learning Outcomes

1. Explain fundamental programming concepts for GIS applications
2. Employ different programming languages to conduct spatial analyses.
3. Develop an original GIS programming application, customization, automation, and/or extension.
4. Implement an original GIS programming application, customization, automation, and/or extension.
5. Communicate an original GIS programming application, customization, automation, and/or extension.

GEOG 452. Landscape Ecology

4 Credits (3+3P)

Analysis of the structure, function, and change of natural and anthropogenic landscapes. Patches, corridors, matrix and network, spatial organization, landscape dynamics, and role of disturbance in

overall functioning of landscapes. Role of landscape heterogeneity in landscape management.

Learning Outcomes

1. Apply a vocabulary of terms and phrases employed by landscape ecologists.
2. Demonstrate familiarity with articles and researchers in landscape ecology.
3. Identify influences of scale and spatial configuration on ecosystem processes.
4. Discuss approaches, tools, and techniques to describe, quantify, and analyze landscape characteristics.
5. Demonstrate knowledge of various landscape ecology approaches by accurately applying landscape ecology terms and concepts in answers to a select group of the end-of-chapter questions as well as in discussion posts.

GEOG 455. Southwest Environments

3 Credits (3)

This course introduces you to the U.S. Southwest, including its physical and human geography, coupled human-environment interactions, causes and consequences of environmental issues, and implications for sustainable development. Taught with GEOG 555.

Learning Outcomes

1. Describe physical and human geographic patterns of the U.S. Southwest.
2. Discuss coupled human-environment interactions in the U.S. Southwest.
3. Explain how these interactions have produced a series of societal and/or ecological problems in the U.S. Southwest.
4. Assess critically the challenges and potentials of sustainability in the U.S. Southwest.

GEOG 473. Advanced Remote Sensing

4 Credits (3+3P)

Introduction to advanced topics in digital image processing, analysis, interpretation, and visualization. Topics include geometric and radiometric correction, image enhancement, image classification, change detection, and accuracy assessment. Lectures focus on the discussion of advanced remote sensing concepts, techniques, and applications; labs are applications-oriented. Taught with GEOG 573.

Prerequisite: C- or better in GEOG 373.

Learning Outcomes

1. Explain advanced remote sensing concepts and methods.
2. Acquire remote sensing images.
3. Process remote sensing images to obtain spatio-temporal information about the environment.
4. Evaluate remote sensing products.
5. Communicate the data, methods, and findings of remote sensing investigations.

GEOG 481. Fundamentals of GIS

4 Credits (3+3P)

This course introduces you to concepts and methods of geographic information systems (GIS) and teaches you how to use a GIS to manage, integrate, analyze, and visualize geospatial data and information. Taught with GEOG 578.

Learning Outcomes

1. Explain fundamental concepts, data, methods, applications, and software used in GIS.
2. Apply diverse GIS methods for analyzing and modeling spatial data.

3. Interpret the results of spatial data analysis and modeling efforts.
4. Evaluate the quality of spatial data analysis and modeling efforts.
5. Communicate GIS analysis and modeling investigations.

GEOG 482. Geodatabase Design

3 Credits (2+3P)

A practical introduction to designing geodatabases. The course takes you through the eleven steps of geodatabase design divided into four stages: thematic characterization; developing the database elements, relationships and properties; capture and collection; and finally, implementation and documentation. Taught with GEOG 572.

Prerequisite(s): C- or better in GEOG 481.

GEOG 483. Field Explorations in Geography

3 Credits (6P)

A field-based class where students complete exercises in physical, human, and environmental geography in the Southwest. May be offered as a two-week intensive class where students are away from Las Cruces and camping; or may be offered with weekend field trips depending on the instructor. A lab fee for transportation and other expenses is required. Taught with GEOG 583.

GEOG 488. GIS and Water Resources

3 Credits (3)

Explores a range of GIS tools, routines, and data structures and then applies them to a range of research questions and management issues in the area of Water Resources. The class has both a lecture and laboratory component, and students will have opportunities to explore a range of GIS tools in formal lab exercises and a project in the student area of interest. Taught with GEOG 588.

GEOG 491. Special Topics

1-3 Credits

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

GEOG 493. Special Problem Research

1-3 Credits

For advanced and exceptional students. Research, and preparation of a paper in some phase of geography. A maximum of 6 credits may be earned. Consent of instructor required.

GEOG 495. Directed Readings

1-3 Credits

Individual study through selected readings. A maximum of 6 credits may be earned. Consent of instructor required.

GEOG 501. Introduction to Geographic Theory and Application

3 Credits (3)

Overview of geographic philosophies and methodologies, with emphasis on relationship between theory and practice. Includes virtual and in-person meetings with students from both UNM and NMSU. Taught with GEOG 601.

Learning Outcomes

1. Compare, contrast, and evaluate contemporary philosophies and methodologies in major areas of geographical research.
2. Discuss diverse contemporary applications of geographic research.
3. Communicate effectively in written and oral formats.

GEOG 502. Integrative Research Design

3 Credits (3)

Introduction to research design in geography, with emphasis on integration of qualitative and quantitative methods. Includes virtual and in-person meetings with students from both UNM and NMSU. Taught with GEOG 602.

Prerequisite: GEOG 501.

Learning Outcomes

1. Design a significant and feasible research project.
2. Communicate effectively in written and oral formats.
3. Identify and engage key stakeholders to the successful execution of the proposed research project.

GEOG 505. GIS&T Capstone I - Geospatial Research Design

3 Credits

This course is designed to support the professional development of students with an interest in conducting research using Geographic Information Science and Technology (GIS&T). More specifically, the course asks you to dig into the literature in an area of geospatial research of interest to you and to develop a plan for a research project that aligns with your interests and/or professional work.

Learning Outcomes

1. Conceptualize an independent geospatial research project.
2. Plan an independent geospatial research project.
3. Propose an independent geospatial research project.

GEOG 506. GIS&T Capstone II - Geospatial Research Implementation

3 Credits

This course is designed to support the professional development of students with an interest in conducting research using Geographic Information Science and Technology (GIS&T). The course provides you an opportunity to implement the geospatial work you proposed in Capstone I. You will then share the results of this research through oral presentations and a written document that supports your professional portfolio and work.

Prerequisite: GEOG 505.

Learning Outcomes

1. Implement an independent geospatial research project.
2. Present orally the rationale, data, methods, results, and implications of this independent geospatial research project.
3. Present in writing the rationale, data, methods, results, and implications of this independent geospatial research project.

GEOG 512. Geohumanities

3 Credits (3)

In recent years, artists, writers, and humanities scholars have increasingly engaged with geographic concerns, and geographers have incorporated humanities-based approaches to their work. Broadly known as the geohumanities, these interdisciplinary endeavors offer exciting ways to engage with key geographic concepts such as place, landscape, and nature. This graduate level seminar will examine both critical and creative approaches to the geohumanities.

Learning Outcomes

1. Articulate an understanding of the geohumanities as an interdisciplinary field, including its practices and its histories that draw on geography's intersection with multiple humanities fields.
2. Identify key texts, thinkers, and practices in the geohumanities, as well as spaces (such as both scholarly and public-facing journals and digital spaces) where geohumanities work is currently being advanced and developed.
3. Analyze, critique, and engage with current debates and directions within the geohumanities.
4. Develop and produce a creative and/or critical project that uses geohumanities approaches and advances your research/scholarly/creative interests.

GEOG 535. Planning a Sustainable World

3 Credits (3)

Exploration of planning tools that advance the management of land and water resources, meeting current societal needs, while also minimizing damage to nature and society. Class activities include applied exercises that explore contemporary planning issues, including land conservation, natural hazards, biophysical analysis, water resource management, federal land issues, and remediation of Superfund sites. Taught with GEOG 435.

Learning Outcomes

1. Describe the basic elements of traditional urban planning and articulate how traditional tools are used.
2. Unpack the many layers of sustainable development and link this to the emerging practices of environmental planning.
3. Explore current planning issues and how environmental planning ideas can inform them.
4. Through focused library research, explore and discuss current environmental planning issues that are of interest to YOU.
5. Through both written article reviews and a presentation you make to the class, critically review research articles you discovered in your literature review.
6. Working in teams, conduct a focused research project that explores an environmental planning scenario.

GEOG 542. Programming for GIS

3 Credits

This course will introduce you to the fundamental concepts of programming for geographic information systems (GIS). Topics to be mastered include and are not limited to the basics of GIS software environments; the syntax and styles of various programming languages; and ways to create GIS programming applications, customizations, automations, and extensions. With this foundation in place, we will then use these tools to solve applied geographic riddles through a series of hands-on exercises.

Learning Outcomes

1. Explain fundamental programming concepts for GIS applications.
2. Employ different programming languages to conduct spatial analyses.
3. Develop an original GIS programming application, customization, automation, and/or extension.
4. Implement an original GIS programming application, customization, automation, and/or extension.
5. Communicate an original GIS programming application, customization, automation, and/or extension.

GEOG 544. GIS&T Professional Portfolio

1 Credit

This course provides students with the opportunity to develop their GIS&T professional portfolio and disseminate it via multiple platforms. The portfolio will showcase students' experience, knowledge and skills, and potential for professional development and employment in the geospatial workforce.

Learning Outcomes

1. Identify content for a GIST professional portfolio.
2. Visualize the portfolio content.
3. Describe the portfolio content.
4. Reflect on the portfolio content.
5. Create a compelling static document and interactive web versions of the portfolio.

GEOG 545. Geospatial Professionalism**2 Credits**

Geospatial data, technologies, and applications are influenced by and shape our social, political, and legal environments in numerous ways. This course introduces you to these environments and provides opportunities to explore them through a series of readings, writing exercises, and class discussions. We also examine in detail the moral and ethical implications of geospatial data, technologies, and applications. With this grounding in place, we develop skills to communicate the results of our geospatial work in a professional, effective, and morally and ethically responsible manner.

Learning Outcomes

1. Discuss the moral and ethical implications of geospatial data, technologies, and applications.
2. Examine the social, political, and legal implications of geospatial data, technologies, and applications.
3. Communicate geospatial work in a professional, effective, and morally and ethically responsible manner.

GEOG 552. Landscape Ecology**4 Credits (3+3P)**

Analysis of the structure, function, and change of natural and anthropogenic landscapes. Patches, corridors, matrix and network, spatial organization, landscape dynamics, and role of disturbance in overall functioning of landscapes. Role of landscape heterogeneity in landscape management.

Learning Outcomes

1. Apply a vocabulary of terms and phrases employed by landscape ecologists.
2. Demonstrate familiarity with articles and researchers in landscape ecology.
3. Identify influences of scale and spatial configuration on ecosystem processes.
4. Discuss approaches, tools, and techniques to describe, quantify, and analyze landscape characteristics.
5. Demonstrate knowledge of various landscape ecology approaches by accurately applying landscape ecology terms and concepts in answers to a select group of the end-of-chapter questions as well as in discussion posts.

GEOG 553. Geomorphology**3 Credits (2+3P)**

Examination of the principal theories and concepts of landform creation; exploration of the roles of structure, processes, climate, and time in the formation of various types of landforms. Cross-listed with GEOG 553 and GEOL 353.

Learning Outcomes

1. Outline the basic history of geomorphic theory and research methods.
2. Describe the trends and probable causes of Cenozoic climate change and its links to basic landform processes.
3. Describe the main landform processes including weathering, soil formation, hillslope evolution and associated natural hazards, fluvial processes, arid land processes, glacial/interglacial climates and processes.
4. Integrate field observations into basic landscape evolution reconstructions.
5. Design and implement a fluvial system experiment and analyze the data.

GEOG 555. Southwest Environments**3 Credits (3)**

This course introduces you to the U.S. Southwest, including its physical and human geography, coupled human-environment interactions, causes and consequences of environmental issues, and implications for sustainable development. Taught with GEOG 455.

Learning Outcomes

1. Describe physical and human geographic patterns of the U.S. Southwest.
2. Discuss coupled human-environment interactions in the U.S. Southwest.
3. Explain how these interactions have produced a series of societal and/or ecological problems in the U.S. Southwest.
4. Assess critically the challenges and potentials of sustainability in the U.S. Southwest

GEOG 557. Biogeography**3 Credits (3)**

Exploration of life in space and time. Floristic and physiognomic characteristics of the Earth's major ecosystems and their distributions, ecosystem dynamics, evolution, and physical environment. Includes an individual research project resulting in a poster presentation. Taught with GEOG 351.

Learning Outcomes

1. Provide background information about researchers who quantify patterns of biodiversity in space and time.
2. Evaluate species and biodiversity patterns based on the abiotic template.
3. Describe global patterns in the shape and size of species geographical ranges.
4. Apply biogeographic terminology to effectively describe and explain patterns of life across Earth's surface.
5. Identify resources for an analysis of biogeographic data, including satellite imagery, aerial photography, and field survey records.
6. Document your sources by including proper citations and references in your writing.
7. Conduct original research and present research findings in written and oral formats.

GEOG 571. Cartography and GIS**4 Credits (3+3P)**

This course introduces you to the fundamental concepts and methods of cartography and geographic information systems (GIS) through both lectures and labs. In the lectures, you will learn about key principles of cartography such as map scale, projections, and symbolization. In the labs, you will apply those principles to create functional and aesthetically pleasing maps. Taught with GEOG 381.

Learning Outcomes

1. Explain key cartographic concepts and methods.
2. Analyze maps.
3. Interpret maps.
4. Evaluate the quality of maps.
5. Create functional and aesthetically pleasing maps.

GEOG 572. Geodatabase Design**3 Credits (2+3P)**

Graduate level introduction to designing geodatabases. The course takes you through the eleven steps of geodatabase design divided into four stages: thematic characterization; developing the database

elements, relationships and properties; capture and collection; and finally implementation and documentation. Taught with GEOG 482.

GEOG 573. Introduction to Remote Sensing

4 Credits (3+3P)

Graduate level introduction to the theory, techniques, and applications of remote sensing. Topics include electromagnetic radiation; remote sensing systems; remote sensing of the biosphere, hydrosphere, atmosphere, lithosphere, and cultural landscapes. Course includes lectures and also labs focused on the basic analysis and interpretation of remote sensing product. Taught with GEOG 373.

Learning Outcomes

1. Explain basic remote sensing concepts and methods.
2. Analyze remotely sensed data.
3. Interpret remotely sensed data.
4. Evaluate the quality of remote sensing products.
5. Produce information about the built and natural environments using remote sensing data and methods.

GEOG 578. Fundamentals of GIS

4 Credits (3+3P)

This course introduces you to concepts and methods of geographic information systems (GIS) and teaches you how to use a GIS to manage, integrate, analyze, and visualize geospatial data and information. Taught with GEOG 481.

Learning Outcomes

1. Explain fundamental concepts, data, methods, applications, and software used in GIS.
2. Apply diverse GIS methods for analyzing and modeling spatial data.
3. Interpret the results of spatial data analysis and modeling efforts.
4. Evaluate the quality of spatial data analysis and modeling efforts.
5. Communicate GIS analysis and modeling investigations.

GEOG 581. GIS Design

3 Credits (3)

This course introduces you to the diverse considerations that are necessary to develop a Geographic Information System (GIS) in a governmental or other institutional setting. Taught with GEOG 441.

Learning Outcomes

1. Discuss concepts of GIS development and use.
2. Explain GIS design and implementation processes.
3. Apply principals of GIS design and implementation to meet local needs.

GEOG 582. Advanced Remote Sensing

4 Credits (3+3P)

Graduate level introduction to advanced topics in digital image processing, analysis, interpretation, and visualization. Topics include geometric and radiometric correction, image enhancement, image classification, change detection, and accuracy assessment. Lectures focus on the discussion of advanced remote sensing concepts, techniques, and applications; labs are applications-oriented. May be repeated up to 4 credits.

Learning Outcomes

1. Explain advanced remote sensing concepts and methods.
2. Acquire remote sensing images.
3. Process remote sensing images to obtain spatio-temporal information about the environment.
4. Evaluate remote sensing products.

5. Communicate the data, methods, and findings of remote sensing investigations.

GEOG 583. Field Explorations in Geography

3 Credits (6P)

A graduate level field-based class where students complete exercises in physical, cultural, and environmental geography in the Southwest. May be offered as a two-week intensive class where students are away from Las Cruces and camping; or may be offered with weekend field trips depending on the instructor. A lab fee for transportation and other expenses is required. May be repeated up to 3 credits.

GEOG 584. Critical Methodologies

3 Credits (3)

This course explores critical, qualitative, and creative methods within human geography and related fields. We will examine epistemology, methodology, ethics, and critical reflexivity in research, as well as particular methods such as interviews, oral histories, questionnaires, participant observation, focus groups, archival research, visual methodologies, textual and discourse analysis, and arts-based approaches.

Learning Outcomes

1. Discuss the relationship between epistemology, methodology, and methods.
2. Develop and articulate a nuanced understanding of multiple critical, qualitative, and/or creative methods within human geography and related fields.
3. Demonstrate knowledge of research ethics and the role of NMSU's Institutional Review Board (IRB) in human subjects research, including the completion of the CITI Human Subjects training.

GEOG 585. Spatial Analysis and Modeling

3 Credits (3)

Introduction to aspatial and spatial analysis and modeling techniques for geographic investigations. Includes several hands-on assignments and an independent research project.

Learning Outcomes

1. Explain aspatial and spatial tools for geospatial analysis and modeling.
2. Apply diverse aspatial and spatial tools for geographic problem solving.
3. Develop an original spatial analysis and/or modeling investigation.
4. Implement an original spatial analysis and/or modeling investigation.
5. Communicate in written and oral formats an original spatial analysis and/or modeling investigation.

GEOG 588. GIS and Water Resources

3 Credits (3)

This is a graduate level class that explores a range of GIS tools, routines, and data structures and then applies them to a range of research questions and management issues in the area of Water Resources. The class has both a lecture and laboratory component, and students will have opportunities to explore a range of GIS tools in formal lab exercises and a project in the student's area of interest. Taught with GEOG 488.

GEOG 595. Directed Readings

1-3 Credits

Advanced individual study through selected readings. May be repeated for a maximum of 6 credits.

GEOG 596. Residency

1-12 Credits (1-12)

A contractual learning experience in the public or private sector under the supervision of a field supervisor and two faculty members. May be repeated up to 12 credits. Consent of Instructor required. Restricted to: Geography majors.

GEOG 598. Selected Topics

1-3 Credits

Readings, discussions, lectures or laboratory studies of selected geographic themes. May be repeated for unlimited credit.

GEOG 599. Master's Thesis

1-12 Credits (1-12)

Supervised individual study of a student's thesis topic. May be repeated for an unlimited number of credits. Thesis/Dissertation Grading.

GEOG 601. Introduction to Geographic Theory & Application

3 Credits (3)

This course is intended to introduce Ph.D. and Masters level students to the history, theory, methods, and contemporary literature of Geography as a discipline. It also serves to prepare incoming students to engage in an integrative, theoretically informed and applied research project.

Crosslisted with: GEOG 501.

Learning Outcomes

1. Students will be able to demonstrate a clear understanding of multiple themes and topics in Geography.
2. Students will be able to demonstrate a clear understanding of multiple methods suitable for geographic research
3. Students will be able to identify and summarize recent scholarship relevant to the student's own research interests.
4. Students will be able to communicate clearly and effectively in an oral format.
5. Students will be able to communicate clearly and effectively in a written format.
6. Students will be able to identify a committee chairperson who will guide her or his graduate work.
7. Students will be able to design an integrative program of studies for the remainder of her or his graduate work.

GEOG 602. Integrative Research Design

3 Credits (3)

Introduction to research design in geography, with emphasis on integration of qualitative and quantitative methods. Includes virtual and in-person meetings with students from both UNM and NMSU. Taught with GEOG 502.

Prerequisite: GEOG 601.

Learning Outcomes

1. Design a significant and feasible research project.
2. Communicate effectively in written and oral formats.
3. Identify and engage key stakeholders to the successful execution of the proposed research project.

GEOG 603. Professional Geographic Practice

3 Credits (3)

This core course focuses on a variety of professional development topics that prepare students for teaching and applied community engagement projects. All students in this course will receive training in professional communication, professional ethics, and grant proposal writing. Depending on their individual professional goals, the course will allow students to undertake practical training in a variety of areas that range from academic teaching to applied policy work to scientific communication. All students in the joint doctoral program are expected to engage in applied projects as part of their research design, and this course will lay the foundation for these pursuits. Unlike GEOG 601 and

GEOG 602, the final core course will be taught independently on each campus, to maximize the potential for faculty-student interaction on specific location-based project planning. This course will be offered every fall semester.

Prerequisite: GEOG 602.

Learning Outcomes

1. Identify professional geography as it relates to project management.
2. Explore professional communication in various settings in a variety of workplace settings.

GEOG 700. Doctoral Dissertation

1-18 Credits (1-18)

This highly individualized independent study course is for students who have completed their comprehensive exams and are currently working on their doctoral dissertation. May be repeated up to 18 credits. Thesis/Dissertation Grading.

Learning Outcomes

1. Expand their knowledge in a specific area of interest in the discipline of geography.
2. Develop their skills in analyzing, synthesizing, and interpreting geographic data and information.
3. Develop their skills in technical and/or professional writing.
4. Develop their skills in the management and completion of a professional research project.

Name: Geography and Environmental Studies Office

Office Location: Breland Hall, Room 137

Phone: (575) 646-3509

Geography (Environmental Studies) - Bachelor of Science

The Human Environment Relationships Concentration offers a solid foundation in geographic thought and geospatial analysis and provides students with advanced knowledge and skills for assessing human and environmental systems and the coupled and complex interactions between people and the environment. Preparation for advanced graduate studies is also provided.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework. *Note: A grade of "C-" or better is required for all courses taken for the major. Students may not take any of these courses S/U.*

Prefix	Title	Credits

<i>Additional HG, HEG, & PG Course ⁵</i>		6
Select 2 additional courses from either the Human Geography, Human Environment Geography or Physical Geography Courses above		
Second Language Requirement: (required - see below)		6-8
Electives, to bring the total credits to 120 ⁶		42-45
15 credits must be Upper Division		
Total Credits		120

¹ MATH 1220G College Algebra is required for the degree but students may need to take any prerequisites needed to enter MATH 1220G first.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ A ST 311 Statistical Applications is also an acceptable course to meet the departments Statistics course requirement, however it will not satisfy the General Education (GE) Elective requirement. If a student takes A ST 311 Statistical Applications, they will need to take an additional General Education course to complete the GE Elective requirement.

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁵ For all Human Geography, Human Environment Geography and Physical Geography course requirements, students cannot repeat the courses multiple times to fulfill the requirement.

Courses that have the "V" distinction and are a Human-Environment Geography and Human Geography courses will not count towards both the Viewing a Wider World and Human-Environment Geography and Human Geography requirements.

⁶ Elective credit may vary based on second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Science in Geography with a Concentration in Human Environment Relationships there is a one year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120	French I and French II	4-8
GRMN 1110 & GRMN 1120	German I and German II	4-8
JAPN 1110 & JAPN 1120	Japanese I and Japanese II	4-8
SPAN 1110 & SPAN 1120	Spanish I and Spanish II	4-8
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6
<i>For Heritage Speakers:</i>		
SPAN 1210 and SPAN 1220 or SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II Spanish for Heritage Learners III	3-6

Option 2:

Prefix	Title	Credits
Complete 6 additional upper-division Geography courses (beyond major requirements)		6

Option 3:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3

Option 4:

Prefix	Title	Credits
Challenge the 1120 level for the following courses:		
FREN 1120 or GRMN 1120 or JAPN 1120 or SPAN 1120	French II German II Japanese II Spanish II	4

OR

Challenge the 1120/1220/2210 level for the following courses:		
PORT 1120	Portuguese II	3
or SPAN 1220	Spanish for Heritage Learners II	
or SPAN 2210	Spanish for Heritage Learners III	

Option 5:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 6:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 7:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 8:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 9:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

First Year		Credits
ENGL 1110G	Composition I (C- or better)	4
Area V: Humanities Course ¹		3
GEOG 1110G	Physical Geography (C- or better)	4
Elective Course(s) or FYEX 1112 ²		7
MATH 1220G	College Algebra (C- or better) ³	3
Area VI: Creative and Fine Arts Course ¹		3
GEOG 1120G	World Regional Geography (C- or better)	3
GEOG 1130G	Human Geography (C- or better)	3
Credits		30
Second Year		
ENGL 2210G	Professional and Technical Communication Honors (C- or better)	3
Choose one from the following:		3
MATH 1350G	Introduction to Statistics (Recommended Gen. Ed & C- or better)	
A ST 311	Statistical Applications (C- or better) ⁴	
GEOG 2130	Map Use and Analysis (C- or better)	3
Choose one from the following:		3
ACOM 1130G	Effective Leadership and Communication in Agriculture	
COMM 1115G	Introduction to Communication	

COMM 1130G	Public Speaking	
HNRS 2175G	Introduction to Communication Honors	
Second Language: either 1110-level or Upper Division GEOG course (C- or better) ⁵		3-4
Choose one from the following Human Geography Courses: ⁶		3
GEOG 361V	Challenges of Globalization (C- or better)	
GEOG 363V	Cultural Geography (C- or better)	
GEOG 365V	The City (C- or better)	
GEOG 381	Cartography and GIS (C- or better)	4
Elective Course ²		9
Credits		31-32

Third Year

VWW - Viewing a Wider World Course(s) ⁷		6
Second Language: either 1120-level or Upper Division GEOG course (C- or better) ⁵		3-4

However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Science in Geography with a Concentration in GIS&T there is a one year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120	French I and French II	8
GRMN 1110 & GRMN 1120	German I and German II	8
JAPN 1110 & JAPN 1120	Japanese I and Japanese II	8

SPAN 1110 & SPAN 1120	Spanish I and Spanish II	8
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	6
<i>For Heritage Speakers:</i>		
SPAN 1210 & SPAN 1220 or SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II or Spanish for Heritage Learners III	3-6

Option 2:

Prefix	Title	Credits
Complete 6 additional upper-division Geography courses (beyond major requirements)		
		6

Option 3:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3

Option 4:

Prefix	Title	Credits
Challenge the 1120 level for the following courses:		
FREN 1120 or GRMN 1120 or JAPN 1120 or SPAN 1120	French II German II Japanese II Spanish II	4
<i>OR</i>		
Challenge the 1120/1220/2210 level for the following courses:		
PORT 1120 or SPAN 1220 or SPAN 2210	Portuguese II Spanish for Heritage Learners II Spanish for Heritage Learners III	3

Option 5:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 6:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 7:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 8:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 9:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1430G Applications of Calculus I or MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may

vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Choose one from the following GIS&T Area Courses:		3-4
GEOG 441	GIS Design (C- or better)	
GEOG 473	Advanced Remote Sensing (C- or better)	
Elective Course - Upper Division ²		6
GEOG 482	Geodatabase Design (C- or better)	3
Elective Course(s) ²		12
GEOG 488	GIS and Water Resources (optional)	
Credits		27-29
Total Credits		120-128

¹ See the General Education (p. 227) section of the catalog for a full list of courses

² Elective credit may vary based on General Education course selection, second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

³ Math Placement: MATH 1220G College Algebra or MATH 1350G Introduction to Statistics or MATH 2350G Statistical Methods is the starting Math course for the degree, however, students may need to complete any prerequisites prior to enrolling into one of these courses.

⁴ Students should take courses to either complete the two semester Second Language Requirements with either Option 1 or Option 2 (see the requirements tab (p. 660) for this degree, the Second Language section)

⁵ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁶ Students must have 9 credits total between Human Geography and Physical Geography courses. The requirement must be completed with either two Human Geography and one Physical Geography course(s) OR with one Human Geography and two Physical Geography course(s). *students cannot take all nine credits in one area.

Human Geography Courses: GEOG 361V Challenges of Globalization, GEOG 363V Cultural Geography, GEOG 365V The City

Physical Geography Courses: GEOG 351 Biogeography, GEOG 353 Geomorphology, GEOG 357 Climatology, GEOG 452 Landscape Ecology

⁷ Courses that have the "V" distinction and are a Human Geography or Human-Environment Geography course will not count towards both the Viewing a Wider World and Human Geography or Human-Environment Geography requirements.

Geographic Information Systems - Undergraduate Minor

The Department of Geography at NMSU offers a minor in Geographic Information Science and Technology (GIS&T) to interested undergraduate students (non-geography majors). The minor in GIS&T requires 21-22 credits.

Note: A grade of C- or better is required for all courses taken for the minor. Students may not take any of these courses S/U.

The Department of Geography at New Mexico State University offers a minor in Geographic Information Science and Technology (GIS&T) to interested undergraduate students (non-geography majors). To earn a minor in GIS&T, the following courses are required. *Note: A grade of C- or better is required for all courses taken for the minor.* Students may not take any of these courses S/U.

To earn a minor in GIS&T, the following courses are required.

Prefix	Title	Credits
Departmental Requirements		
GEOG 373	Introduction to Remote Sensing	4
GEOG 381	Cartography and GIS	4
GEOG 481	Fundamentals of GIS	4
GEOG 482	Geodatabase Design	3
Select 6-7 credits from the following:		6-7
GEOG 441	GIS Design	
GEOG 473	Advanced Remote Sensing	
GEOG 488	GIS and Water Resources	
Total Credits		21-22

Geography - Undergraduate Minor

The Department of Geography & Environmental Studies offers a minor in Geography to interested undergraduate students from departments outside of Geography & Environmental Studies. To earn a minor in Geography, the following courses are required. *Note: A grade of C- or better is required for all courses taken for the minor. Students may not take any of these courses S/U.*

Prefix	Title	Credits
Departmental Requirements		
GEOG 1110G	Physical Geography	4
GEOG 1120G	World Regional Geography	3
or GEOG 1130G	Human Geography	
Select 3-4 credits from the following:		3-4
GEOG 2130	Map Use and Analysis	
GEOG 381	Cartography and GIS	
GEOG 481	Fundamentals of GIS	
<i>Physical Geography (PG)</i>		
Select one from the following:		3-4
GEOG 351	Biogeography	
GEOG 353	Geomorphology	
GEOG 357	Climatology	
GEOG 452	Landscape Ecology	
<i>Human Geography (HG)</i>		
Select one from the following:		3
GEOG 361V	Challenges of Globalization	
GEOG 363V	Cultural Geography	
GEOG 365V	The City	
<i>Human-Environment Geography (HEG)</i>		
Select one from the following:		3
GEOG 325V	New Mexico and the American West	
GEOG 326	U.S. National Parks	
GEOG 328V	Environment and Society of Latin America	
GEOG 331V	Europe	
GEOG 483	Field Explorations in Geography	
Total Credits		19-21

Geological Sciences

Undergraduate Program Information

A degree in geology leads to a wide variety of career choices.

Students can access careers in the geosciences through one of three concentrations in the BS Geology degree. The first concentration is Geological Sciences. This is a traditional geology curriculum, in which students take geology classes, augmented with calculus, physics, and chemistry; this concentration leads to graduate study in the geosciences and careers in industry, academia, government, and policy. The second concentration is Earth and Environmental Systems. Students take geology classes, augmented with a variety of environmental, economic, and political classes; this concentration leads to careers in the environmental industry. The third concentration is Earth Science Education. Students take geology and education classes, and are certified to teach science at New Mexico middle and high schools after completing the BS and one year of graduate work in the College of Education.

Students earning the BS in Geology, any concentration, may also earn the Undergraduate Research Certificate in the Department of Geological Sciences. Completion of the Undergraduate Research Certificate includes completion of an undergraduate research project, participation in the department's undergraduate research meetings and one of the following:

1. a senior thesis;
2. a manuscript submitted for a publication; or
3. an oral or poster presentation at a national or regional meeting.

Undergraduate Research Certificates are presented at the department's annual awards ceremony.

Graduate Program Information

The Department of Geological Sciences offers graduate study leading to the Master of Science degree in geology. The department offers excellent laboratory facilities for research in mineralogy, igneous petrology, geochemistry, stratigraphy, geochronology, and sedimentology. Available are a large, fully equipped rock preparation laboratory, mineral separation laboratory, plus computer, geochemical and petrographic labs. Major equipment includes a Gemini heavy mineral separation table, a class 1000 clean lab, Thermal Ionization Mass Spectrometry (TIMS) and Laser-Ablation Multi-Collector Inductively Coupled Plasma Mass Spectrometry (LA-MC-ICP-MS). The department maintains its own fleet of field vehicles. Also available are computing facilities that include an HP color plotter and GIS system. Financial support is available to graduate students in geology through teaching and research assistantships and scholarships. Inquiries regarding financial aid should be directed to the graduate advisor. Admission to the program is in accord with the general regulations of the Graduate School.

Degrees for the Department Bachelor Degree(s)

- Geology (Earth and Environmental Sciences) - Bachelor of Science (p. 667)
- Geology (Earth Science Education) - Bachelor of Science (p. 670)
- Geology (Geological Sciences) - Bachelor of Science (p. 672)

Master Degree(s)

- Geology - Master of Science (p. 152)

Minors for the Department

- Geology - Undergraduate Minor (p. 675)

Professor, Nancy J. McMillan, Department Head

Professors Amato, McMillan, Ramos; **Associate Professor** Hampton;
Assistant Professor Thines **Adjunct Professors** K. Davis, J. Witcher;
Emeritus Faculty Lawton, Mack

N. J. McMillan, Department Head, Ph.D. (Southern Methodist)– igneous petrology, geochemistry; J. M. Amato, Ph.D. (Stanford)– structural geology, tectonics; F. C. Ramos, Ph.D. (California- Los Angeles)– isotope geochemistry, petrology; B.A. Hampton, Ph.D. (Purdue)- sedimentology, tectonics; J. Thines, Ph.D. (U. Iowa)- volcanology, mineralogy, petrology; T.F. Lawton, Ph.D. (Emeritus) (Arizona)- stratigraphy, basin analysis; G.H. Mack, Ph.D. (Emeritus) (Indiana-Bloomington)- sedimentary petrology, sedimentology.

Geology Courses

GEOL 1110G. Physical Geology

4 Credits (3+3P)

Physical Geology is an introduction to our dynamic Earth introducing students to the materials that make up Earth (rocks and minerals) and the processes that create and modify the features of our planet. The course will help students learn how mountains are formed, how volcanoes erupt, where earthquakes occur, and how water, wind, and ice can shape landscapes. Students will also develop a basic understanding of the ways humans have altered the planet including our impact on natural resources and global climate change.

Learning Outcomes

1. Recall, describe or explain geologic vocabulary.
2. Identify or explain aspects of the geologic time scale and compare the uses and limitations of relative and absolute dating.
3. Recognize or explain the evidence used to support the theory of plate tectonics. Describe or identify how plate tectonics is related to the structure and features of the Earth.
4. Describe the formation of, and describe, compare, and classify minerals.
5. Identify or describe the three main rock types, how each forms in the context of the rock cycle and what each indicates about its environment of formation.
6. Recognize or explain the fundamentals of surface and groundwater hydrology and discuss the impact of human activities on water quality and quantity.
7. Describe or discuss the processes that are responsible for specific geologic hazards (e.g., earthquakes, volcanic eruptions, mass movement, flooding, etc.).
8. Recognize or describe the geologic processes involved in the formation and concentration of geologic resources.

GEOL 1150. Introduction to Rocks and Minerals

3 Credits (2+3P)

This course is an introduction to the characteristics and the formation of the three main types of rocks, the rock-forming minerals, and important ore minerals. An outline of Plate Tectonics will give students the basis to understand how many of these rocks and minerals form. In laboratory exercises, students will gain practice in describing and identifying hand-specimens of the main types of rocks and minerals.

Prerequisite(s)/Corequisite(s): GEOL 1110G.

Learning Outcomes

1. The student Identify the main rock-forming minerals from each mineral group as demonstrated by scoring a total of 70% or more on the relevant laboratory exercise component. Studying minerals, the student will: Identify the main minerals in hand specimens; Describe the environments in which these minerals form; Identify the rock types in which these minerals are found.
2. The student will understand the structure, composition, and genesis of rocks by identifying the principal igneous, sedimentary, and metamorphic rocks, as demonstrated by scoring a total of 70% or more on the relevant laboratory exercise components.
3. Studying rocks, the student will: Define the principal igneous processes and features, identify the most common igneous rocks and their constituting minerals in hand specimens, and discuss their origin and interpretation; Describe the principles of sedimentary processes and features, identify the most common sedimentary rocks in hand specimens, and discuss their origin and interpretation; Describe the principles of metamorphic processes and features, identify the most common metamorphic rocks and constituting minerals in hand specimens, and discuss their origin and interpretation.

GEOL 2996. Special Topics

1-3 Credits

Specific subjects to be announced in the Schedule of Classes.

Community Colleges only. May be repeated for a maximum of 12 credits.

Learning Outcomes

1. Varies

GEOL 305V. Fossils and the Evolution of Life

3 Credits (3)

Examination of the fossil record within the context of geologic time. Special emphasis on critical evaluation of possible terrestrial and extra-terrestrial causes for the evolution of plants and animals and for periods of mass extinction.

GEOL 310. Mineralogy

3 Credits (2+3P)

Crystallography and the physical and chemical aspects of minerals.

Prerequisite(s): GEOL 1110G and CHEM 1215G.

GEOL 312. Mineralogy and Optics

3 Credits (2+3P)

Principles of crystallography, optical mineralogy, and mineral chemistry as applied to the identification and characterization of rock-forming minerals. May be repeated up to 3 credits.

Prerequisite(s): GEOL 1110G and GEOL 1150.

Learning Outcomes

1. Students will understand how polarized light interacts with isotropic, uniaxial, and biaxial crystals.
2. Students will be able to recognize optical phenomena resulting from the interaction of polarized light with minerals.
3. Students will become proficient in the recognition of the major rock-forming minerals in thin section.
4. Students will recognize crystal faces according to the Miller Indices.
5. Students will be able to calculate the structural formula of any mineral.

GEOL 320. Special Topics

1-3 Credits

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

GEOL 335V. Earthquakes, Volcanoes, Hurricanes, and Floods: The Role of Natural Hazards in Civ Past and Present

3 Credits (3)

This class will provide an introduction to geologic hazards and natural disasters, their effects on society and the attempts at preparation and mitigation for these events. Hazards to be covered include earthquakes, volcanic eruptions, floods, landslides, hurricanes, tsunamis and others.

GEOL 353. Geomorphology

3 Credits (2+3P)

Examination of the principal theories and concepts of landform creation; exploration of the roles of structure, processes, climate, and time in the formation of various types of landforms. Cross-listed with GEOG 553 and GEOG 353.

Learning Outcomes

1. Outline the basic history of geomorphic theory and research methods.
2. Describe the trends and probable causes of Cenozoic climate change and its links to basic landform processes.
3. Describe the main landform processes including weathering, soil formation, hillslope evolution and associated natural hazards, fluvial processes, arid land processes, glacial/interglacial climates and processes.
4. Integrate field observations into basic landscape evolution reconstructions.
5. Design and implement a fluvial system experiment and analyze the data.

GEOL 360. General Geochemistry

3 Credits (3)

The chemistry of the earth and its parts, with emphasis on geochemical systems and cycles, distribution of the elements, and mineral equilibria. Crosslisted with: CHEM 360

Prerequisite(s): CHEM 1215G or CHEM 1120G.

GEOL 399. Igneous and Metamorphic Petrology

3 Credits (2+3P)

Mineralogical composition, classification, and genesis of igneous and metamorphic rocks. May be repeated up to 3 credits.

Prerequisite: GEOL 312 for geology majors, GEOL 1150 for majors other than geology.

Learning Outcomes

1. Students will learn to identify minerals and rocks in hand sample and using the petrographic microscope. Students will be expected to score above 70% on a set of eight laboratory exercises and a laboratory final exam.
2. Students will learn to understand the environments, sources, and processes involved in generating igneous rocks and metamorphic rocks in a range of geologic/tectonic environments.
3. Students will learn to write within the field of geology using Geological Society of America format. A 6-10 page paper will be required and will be graded using the Ramos writing rubric. Revisions will also be required.
4. Students will learn to present in standard GSA format (12 minute oral presentations using Powerpoint). Presentation will be graded using a rubric that evaluates presentation materials, presentation effectiveness, and presenter skills/behaviors related to their presentations.

GEOL 401. Geology Colloquium

1 Credit (1)

Presentations by visiting speakers and students. May be repeated up to 6 credits.

GEOL 420. Stratigraphy and Sedimentology

3 Credits (2+3P)

Identification and interpretation of sedimentary rocks with emphasis on classification, deposition, and stratal geometry. May be repeated up to 3 credits.

Prerequisite: GEOL 1150.

Learning Outcomes

1. Recognize patterns associated with physical and chemical weathering and erosion.
2. Identify and classify siliciclastic and chemical sedimentary rock and sediment.
3. Compare and contrast sedimentologic processes recorded in depositional, erosional, deformational, and biogenic sedimentary structures (i.e., facies).
4. Identify specific sedimentary facies associated with specific depositional environments.
5. Delineate between nonmarine, marginal marine, and deep marine environments.
6. Correlate stratigraphic successions and environments along strike and place in a tectonic and basin-scale context.

GEOL 424. Soil Chemistry

3 Credits (3)

Same as SOIL 424, CHEM 424.

GEOL 441. Tutorial Geology

2 Credits (1+3P)

Participation in teaching lower-division laboratories and conducting tutorial sessions. May be repeated for a total of 4 credits.

Prerequisite: junior or above standing and nomination by faculty.

GEOL 442. Zuhl Collection Internship

1-3 Credits (3-9P)

Applied experience with the NMSU Zuhl Collection, under supervision of the Zuhl Collection Director. Possible activities include developing displays, giving tours, developing outreach materials, etc. May be repeated up to 6 credits. Consent of Instructor required.

GEOL 444. GIS for Geology

3 Credits (3)

Tools-based introduction to using GIS software for solving problems in geology. Emphasis on effectively portraying and analyzing geologic maps. One required field trip. Crosslisted with: GEOG 544.

Prerequisite(s): GEOL 470.

GEOL 449. The Geological Profession

1 Credit (1)

Outcomes assessment exit exams. For graduating seniors only. May be repeated up to 1 credits.

Prerequisite(s): Graduating seniors only.

GEOL 452. Geohydrology

4 Credits (3+2P)

Origin, occurrence, and movement of fluids in porous media assessment of aquifer characteristics. Development and conservation of ground water resources, design of well fields. May be repeated up to 4 credits. Crosslisted with: ENVS 452 and C E 452.

GEOL 455. Undergraduate Research

1-3 Credits

Geological research and field projects for the advanced student. May be repeated for a total of 6 credits. May be repeated up to 6 credits. Consent of Instructor required.

Prerequisite(s): Consent of instructor.

GEOL 465. Isotope Geochemistry
3 Credits (3)

Geochemistry of stable and radiogenic isotopes and its application to a wide range of problems in the earth and planetary sciences.

Prerequisite(s): CHEM 1225G, GEOL 360, GEOL 399.

GEOL 470. Structural Geology
3 Credits (2+3P)

Deformation of rocks of the earth. May be repeated up to 3 credits.

Prerequisite: GEOL 1150.

Learning Outcomes

1. Describe and analyze features in rocks produced by deformation, such as folds and faults.
2. Describe regional phases of structural geology and their relationship to plate tectonic processes.
3. Describe how understanding of deformational features informs plate tectonic models.
4. Describe how practical knowledge of structural geology is related to all fields of geology.

GEOL 471. Volcanology
3 Credits (3)

Identification and interpretation of volcanic deposits (including air fall, ash flow tuffs, surges, lava flows), with focus on how the characteristics of these deposits can reveal eruption styles and eruption dynamics.

Other topics covered include: magma migration and storage, volcanic hazards, volcano monitoring and volcanoes and climate. Crosslisted with: GEOL 571.

Prerequisite(s): GEOL 399.

GEOL 477. Special Problems
1-3 Credits

Selected advanced topics of current interest or importance. May be repeated for a total of 6 credits.

Prerequisite: consent of instructor.

GEOL 478. Petroleum Systems and Stratigraphy
3 Credits (2+3P)

Sedimentation, stratigraphy, depositional environments, and tectonics in relation to the occurrences and exploration of hydrocarbons. Course includes two off-campus field trips. May be repeated up to 3 credits.

Prerequisite(s): GEOL 420.

GEOL 480. Seminar
1-3 Credits

Supervised study of a subject not covered by regular courses. For organized group meetings treating selected advanced topics. May be repeated for a maximum of 6 credits.

Prerequisite: consent of instructor.

GEOL 482. Zuhl Collection Internship
1-3 Credits (1-3)

Applied experience working with the Zuhl Collection of rocks, minerals, fossils, and petrified wood, supervised by the Director of the Zuhl Collection. Activities include tours, display development, research on aspects of the collection, and other work in the museum. May be repeated up to 6 credits. Consent of Instructor required. Restricted to: GEOL majors.

GEOL 490. Field Geology
3 Credits (9P)

Mapping, instrumentation, and interpretation of geology in the field.

Prerequisites: either GEOL 420 and GEOL 470.

GEOL 491. Tectonic Evolution of North America
3 Credits (3)

Current ideas regarding the plate-tectonic evolution of North America from Archean through Holocene time, emphasizing the use of regional stratigraphy and structural geology to interpret mountain building, magmatism, and basin development.

Prerequisites: GEOL 1110G, GEOL 399, GEOL 420 and GEOL 470.

GEOL 495. Geology Field Camp
4 Credits (12P)

Three week intensive summer course. Geologic mapping in a site-based setting, emphasizing spatial relations, cross-section construction, and preparation of geologic reports. Prerequisite: GEOL 490

GEOL 499. Senior Thesis
1-3 Credits

Writing a formal paper describing original geologic research conducted under supervision of a faculty advisor. Restricted to majors.

Prerequisite: consent of instructor.

GEOL 501. Geology Colloquium
1 Credit (1)

Presentations by visiting speakers and graduate students.

GEOL 520. Selected Topics
1-3 Credits (1-3)

Selected topics in geology. Students must be in graduate standing to enroll. Consent of instructor required. May be repeated up to 99 credits.

Learning Outcomes

1. Varies

GEOL 534. Tectonics of Sedimentary Basins
3 Credits (3)

Origin of sedimentary basins with emphasis on subsidence mechanisms, geometry of basin fill, depositional systems and tectonic setting. Course includes two off-campus field trips. Restricted to: GEOL majors May be repeated up to 3 credits. Prerequisite: .

Learning Outcomes

1. To be able to recognize sedimentary basin types in geologic and geomorphic environments.
2. To understand these aspects of sedimentary basins: plate tectonic setting/context, basement to basins (continental vs. oceanic/transitional lithosphere), structure and structural vergence, sedimentologic and stratigraphic signatures in the rock record, depositional systems, and basin-scale provenance.

GEOL 537. Topics in Volcanology
3 Credits (3)

A seminar-style class exploring volcanic processes. Course topics vary by semester and include: magmatism and volcanism at different tectonic settings (subduction zones, intraplate) and plumbing systems and eruptions of volcanoes (calderas, monogenetic volcanoes).

GEOL 544. GIS for Geology
3 Credits (3)

Tools-based introduction to using GIS software for solving problems in geology. Emphasis on effectively portraying and analyzing geologic maps. One required field trip. Taught with: GEOL 444. May be repeated up to 3 credits.

Learning Outcomes

1. A tools-based introduction to Geographic Information Systems software, specifically the ArcGIS package developed by ESRI.

- Hands-on use of GIS software to make maps and analyze datasets that are commonly used by geoscientists.
- Compiling and analyzing geologic mapping datasets collected from the field and from published literature.
- Development of an awareness of how to find publicly accessible datasets and solutions to problems beyond the sample exercises presented in class.
- Application of GIS to solve a problem.

GEOL 558. Neotectonics**3 Credits (3)**

Recognition, measurement, and dating of deformation related to earthquakes in the Quaternary geologic record.

GEOL 562. Analytical Geochemistry**3 Credits (3)**

Techniques used to determine the major element, trace element and isotopic composition of rocks and minerals and the determination of mineral structure.

GEOL 565. Isotope Geochemistry**3 Credits (3)**

Trace element partitioning and isotope systematics applied to problems in petrology and ore genesis.

GEOL 571. Volcanology**3 Credits (3)**

Identification and interpretation of volcanic deposits (including air fall, ash flow tuffs, surges, lava flows), with focus on how the characteristics of these deposits can reveal eruption styles and eruptions dynamics. Other topics covered include: magma migration and storage, volcanic hazards, volcano monitoring and volcanoes and climate. Crosslisted with: GEOL 471.

GEOL 578. Petroleum Systems and Stratigraphy**3 Credits (2+3P)**

Sedimentation, stratigraphy, depositional environments and tectonics in relation to the occurrences and exploration of hydrocarbons. Course includes two off-campus field trips.

GEOL 582. Plate Tectonics**3 Credits (3)**

Plate tectonics as a fundamental model for geological activity on a dynamic earth. Focuses on plate tectonic theory development and mechanisms, plus modern analogs of ancient processes.

GEOL 585. Geochronology**3 Credits (3)**

The principles, analytical methods, and interpretation of the most common geochronologic methods.

GEOL 598. Special Research Programs**1-3 Credits**

Investigations into contemporary geological problems. May be repeated for unlimited credit.

Prerequisites: graduate standing and consent of instructor.

GEOL 599. Master's Thesis**15 Credits**

Thesis research. May be repeated up to 88 credits.

Name: Nancy J. McMillan (nmcmillan@nmsu.edu), **Department Head**

Office Location: Gardiner Hall, Room 171

Phone: (575) 646-2708

Website: <http://geology.nmsu.edu>

Geology (Earth and Environmental Sciences) - Bachelor of Science

The concentration in geological sciences provides students with scientific insight as a foundation for careers in environmental earth science, environmental policy and resource management. Qualified students are also prepared for graduate study in these areas. This concentration does not prepare students for graduate study in the geological sciences; these students should follow the curriculum in the Geological Sciences Concentration.

Students must complete all University degree requirements, which include: **General Education requirements**, **Viewing a Wider World requirements**, and elective credits to total at least 120 credits with 48 credits in courses numbered 300/3000 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Students must receive a C- or better in courses.

Prefix	Title	Credits

GEOL courses: 300-400 level GEOL courses other than those used to satisfy the departmental requirements and electives

Electives, to bring the total credits to 120⁵ 8-11**Total Credits** 120¹ See the General Education (p. 227) section of the catalog for a full list of courses² For any Mathematics course selection students may need to take any prerequisites needed to enter the class(es) first.³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses⁴ May not be taken S/U and a grade of C- or better must be earned.⁵ Elective credit may vary based on Math course selection, second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-

case basis and students should discuss elective requirements with their advisor.

Students must work closely with their advisors in order to plan programs that allow them to meet all requirements and earn sufficient upper-division credit.

Second Language Requirement

For the Bachelor of Science in the Geology there is a one year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
--------	-------	---------

Complete one of the following sequences:

FREN 1110 & FREN 1120	French I and French II	8
-----------------------	------------------------	---

GRMN 1110 & GRMN 1120	German I and German II	8
-----------------------	------------------------	---

JAPN 1110 & JAPN 1120	Japanese I and Japanese II	8
-----------------------	----------------------------	---

SPAN 1110 & SPAN 1120	Spanish I and Spanish II	8
-----------------------	--------------------------	---

PORT 1110 & PORT 1120	Portuguese I and Portuguese II	6
-----------------------	--------------------------------	---

For Heritage Speakers:

SPAN 1210 & SPAN 1220	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II	3-6
-----------------------	---	-----

or SPAN 2210	Spanish for Heritage Learners III	
--------------	-----------------------------------	--

Option 2:

Prefix	Title	Credits
--------	-------	---------

Complete the following sequence for American Sign Language (with a C- or better):

SIGN 1110	American Sign Language I	3
-----------	--------------------------	---

SIGN 1120	American Sign Language II	3
-----------	---------------------------	---

Option 3:

Prefix	Title	Credits
--------	-------	---------

Challenge the 1120 level for the following courses:

FREN 1120	French II	4
-----------	-----------	---

or GRMN 1120	German II	
--------------	-----------	--

or JAPN 1120	Japanese II	
--------------	-------------	--

or SPAN 1120	Spanish II	
--------------	------------	--

*OR***Challenge the 1120/1220/2210 level for the following courses:**

PORT 1120	Portuguese II	3
-----------	---------------	---

or SPAN 1220	Spanish for Heritage Learners II	
--------------	----------------------------------	--

or SPAN 2210	Spanish for Heritage Learners III	
--------------	-----------------------------------	--

Option 4:

Pass a three-credit, upper-division course (numbered 300/3000 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in ENGL 1110G Composition I and MATH 1220G College Algebra. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

First Year

Semester 1		Credits
GEOL 1110G or HNRS 2116G	Physical Geology or Earth, Time and Life	4
MATH 1220G	College Algebra (or higher)	3
Choose one from the following:		3
COMM 1115G	Introduction to Communication	
COMM 1130G	Public Speaking	
ACOM 1130G	Effective Leadership and Communication in Agriculture	
HNRS 2175G	Introduction to Communication Honors	
Area V: Humanities Course ¹		3
Area VI: Creative and Fine Arts Course ¹		3
Credits		16
Semester 2		
Choose one from the following:		4
ENGL 1110G	Composition I	
ENGL 1110H	Composition I Honors	
ENGL 1110M	Composition I	
CHEM 1215G	General Chemistry I Lecture and Laboratory for STEM Majors	4
CHEM 1121	General Supplemental Instruction I (or elective)	1
BIOL 2610G & BIOL 2610L	Principles of Biology: Biodiversity, Ecology, and Evolution and Principles of Biology: Biodiversity, Ecology, and Evolution Laboratory	4
ECON 2120G	Principles of Microeconomics	3
Credits		16

Second Year

Semester 1		
GEOL 1150	Introduction to Rocks and Minerals	3

GEOL 305V	Fossils and the Evolution of Life	3
PHYS 1230G or PHYS 2230G	Algebra-Based Physics I or General Physics for Life Science I	3
PHYS 1230L or PHYS 2230L	Algebra-Based Physics I Lab or Laboratory to General Physics for Life Science I	1
PHYS 2231	Supplemental Instruction to General Physics for Life Sciences I	1
Second Language, first course in sequence ²		4
Credits		15

Semester 2		
GEOL 335V	Earthquakes, Volcanoes, Hurricanes, and Floods: The Role of Natural Hazards in Civ Past and Present	3
GEOL 420	Stratigraphy and Sedimentology	3
Second language, second course in sequence ²		4
Non-Departmental Elective Course ³		3
Elective Course ⁴		3
Credits		16

Third Year		
Semester 1

Semester 2		
GEOL 449	The Geological Profession	1
Geology Departmental Elective course ⁵		3
Non-Departmental Elective Course ³		3
Elective Course ⁴		3
Credits		10
Total Credits		120

¹ See the General Education (p. 227) section of the catalog for a full list of courses.

² See the Second Language section of the Requirements Tab (p. 667) for this degree for more information.

³ **Non-Departmental Elective Courses:**

- SOIL 2110 Introduction to Soil Science/SOIL 2110L Introduction to Soil Science Laboratory
- SOIL 370 Environmental Soil Science
- CHEM 1225G General Chemistry II Lecture and Laboratory for STEM Majors
- CHEM 2115 Survey of Organic Chemistry and Laboratory
- POLS 320 Making Public Policy
- GEOG 373 Introduction to Remote Sensing
- GEOG 473 Advanced Remote Sensing
- EPWS 380V Science & Society
- RGSC 2110 Introduction to Rangeland Management
- RGSC 302V Forestry and Society
- GEOL courses: 300-400 level courses other than those used to satisfy the Departmental Requirements and Departmental Electives

⁴ Elective credit may vary depending on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The elective credit in the requirement list is the amount needed to bring the total to 120 credits and may vary based on the degree. Students may need to complete more or less courses on a case-by-case basis and each student should discuss this with their advisor.

⁵ **Departmental Electives:**

- GEOL 312 Mineralogy and Optics
- GEOL 399 Igneous and Metamorphic Petrology
- GEOL 465 Isotope Geochemistry
- GEOL 478 Petroleum Systems and Stratigraphy
- GEOL 480 Seminar
- GEOL 490 Field Geology
- GEOL 491 Tectonic Evolution of North America
- GEOL 495 Geology Field Camp

⁶ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Geology (Earth Science Education) - Bachelor of Science

The concentration in earth science education is a collaboration between the Department of Geological Sciences and the Department of Curriculum and Instruction in the College of Education. In this option, students earn a Secondary Licensure as well as a BS in Geology, and become qualified to teach the Broad Sciences at the middle and high school levels. Students take one year of graduate classes in the College of Education to complete the Secondary Licensure.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Second Language Requirement: (required- see below)		
Select 8 credits from two semesters of a second language (see section at the bottom of the page)		8
Electives, to bring the total credits to 120⁶		1
Total Credits		120

- ¹ See the General Education (p. 227) section of the catalog for a full list of courses
- ² For any Mathematics course selection students may need to take any prerequisites needed to enter the class(es) first.
- ³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses
- ⁴ May not be taken S/U and a grade of C- or better must be earned.
- ⁵ CHEM 1215G General Chemistry I Lecture and Laboratory for STEM Majors and CHEM 1225G General Chemistry II Lecture and Laboratory for STEM Majors: Preferred
- ⁶ Elective credit may vary based on Math course selection, second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Students must work closely with their advisors in order to plan programs that allow them to meet all requirements and earn sufficient upper-division credit.

After completing the BS in Geology, Concentration Earth Science Education, students should apply and be admitted to the Graduate School in the Department of Curriculum and Instruction, and be admitted to the Teacher Education Program (TEP). For additional details, see the School of Teacher Preparation, Administration and Leadership (p. 1191) portion of the NMSU Catalog.

Second Language Requirement

For the Bachelor of Science in the Geology there is a one year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120	French I and French II	8
GRMN 1110 & GRMN 1120	German I and German II	8
JAPN 1110 & JAPN 1120	Japanese I and Japanese II	8
SPAN 1110 & SPAN 1120	Spanish I and Spanish II	8

PORT 1110 & PORT 1120	Portuguese I and Portuguese II	6
<i>For Heritage Speakers:</i>		
SPAN 1210 & SPAN 1220 or SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II Spanish for Heritage Learners III	6

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3

Option 3:

Prefix	Title	Credits
Challenge the 1120 level for the following courses:		
FREN 1120 or GRMN 1120 or JAPN 1120 or SPAN 1120	French II German II Japanese II Spanish II	4

OR

Prefix	Title	Credits
Challenge the 1120/1220/2210 level for the following courses:		
PORT 1120 or SPAN 1220 or SPAN 2210	Portuguese II Spanish for Heritage Learners II Spanish for Heritage Learners III	3

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

¹ See the General Education (p. 227) section of the catalog for a full list of courses.

² Elective credit may vary depending on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The elective credit in the requirement list is the amount needed to bring the total to 120 credits and may vary based on the degree. Students may need to complete more or less courses on a case-by-case basis and each student should discuss this with their advisor.

³ See the Second Language section of the Requirements Tab (p. 667) for this degree for more information.

⁴ Departmental Electives:

- GEOL 312 Mineralogy and Optics
- GEOL 335V Earthquakes, Volcanoes, Hurricanes, and Floods: The Role of Natural Hazards in Civ Past and Present
- GEOL 360 General Geochemistry
- GEOL 399 Igneous and Metamorphic Petrology
- GEOL 444 GIS for Geology
- GEOL 470 Structural Geology
- GEOL 491 Tectonic Evolution of North America

⁵ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Geology (Geological Sciences) - Bachelor of Science

The concentration in geological sciences is a broad field of study that prepares students for employment by energy and mineral industries, environmental and water resource companies, federal, state and local

governments, as well as service companies that utilize earth resources. Qualified students are also prepared for graduate study in the geological sciences.

Students must complete all University degree requirements, which include: **General Education requirements, Viewing a Wider World requirements**, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Students must receive a C- or better in courses.

Total Credits		121-120

¹ See the General Education (p. 227) section of the catalog for a full list of courses

² *For either Mathematics course selection students may need to take any prerequisites needed to enter the class(es) first.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses

⁴ May not be taken S/U and a grade of C- or better must be earned.

⁵ Elective credit may vary based on Math course selection, second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Students must work closely with their advisors in order to plan programs that allow them to meet all requirements and earn sufficient upper-division credit.

Second Language Requirement

For the Bachelor of Science in the Geology there is a one year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120	French I and French II	8
GRMN 1110 & GRMN 1120	German I and German II	8
JAPN 1110 & JAPN 1120	Japanese I and Japanese II	8
SPAN 1110 & SPAN 1120	Spanish I and Spanish II	8
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	6
<i>For Heritage Speakers:</i>		
SPAN 1210 & SPAN 1220 or SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II Spanish for Heritage Learners III	6

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3

Option 3:

Prefix	Title	Credits
Challenge the 1120 level for the following courses:		
FREN 1120 or GRMN 1120 or JAPN 1120 or SPAN 1120	French II German II Japanese II Spanish II	4
<i>OR</i>		
Challenge the 1120/1220/2210 level for the following courses:		
PORT 1120 or SPAN 1220 or SPAN 2210	Portuguese II Spanish for Heritage Learners II Spanish for Heritage Learners III	3

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1250G Trigonometry & Pre-Calculus and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

First Year

Semester 1		Credits
Area I: Communications - Level 1 Course		4
ENGL 1110G	Composition I (Recommended) ¹	
Area II: Mathematics Course ¹		3-4
MATH 1250G	Trigonometry & Pre-Calculus (Recommended) ²	
GEOL 1110G or HNRS 2116G	Physical Geology or Earth, Time and Life	4
Area IV: Social and Behavioral Science Course ¹		3
Credits		14-15

Semester 2

CHEM 1215G	General Chemistry I Lecture and Laboratory for STEM Majors ²	4
MATH 1430G or MATH 1511G	Applications of Calculus I ² or Calculus and Analytic Geometry I	3-4
Area I: Communications - Oral Communication Course		3
COMM 1115G	Introduction to Communication (Recommended)	
Area VI: Creative and Fine Arts Course ¹		3
Elective Course ³		1
Credits		14-15

Second Year

Semester 1		Credits
GEOL 1150	Introduction to Rocks and Minerals	3

¹ See the General Education (p. 227) section of the catalog for a full list of courses.

² These courses may have prerequisites and/or co-requisites, and it is the students responsibility for checking and fulfilling all those requirements.

³ Students whose Financial Aid requires enrollment in at least 15 credits each semester, may need to take additional elective credit than what is listed. Students should discuss their electives with their advisor. *Elective credit may vary based on Math course selection, second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis.

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁵ GEOL 495 Geology Field Camp, is only taught in the summer of odd-numbered years. Students should take GEOL 490 Field Geology, during the spring semester before taking GEOL 495. GEOL 495 Geology Field Camp should be taken the summer after the third or fourth year. In cases where it is impossible to fit this class into a schedule, students may take a field camp at another university and transfer the credits. It is the student's responsibility to have the department head verify that the field camp is acceptable before taking the course.

Geology - Undergraduate Minor

A student cannot earn a BS in Geology and also earn a minor in Geology.

Prefix	Title	Credits
Required Courses		
GEOL 1110G	Physical Geology	4
or HNRS 2116G	Earth, Time and Life	
GEOL 305V	Fossils and the Evolution of Life	3

GEOL 491	Tectonic Evolution of North America ¹	
GEOL 495	Geology Field Camp ¹	
Total Credits		19

¹ Courses with Geology prerequisites other than GEOL 1110G Physical Geology or HNRS 2116G Earth, Time and Life.

Government

Undergraduate Program Information

The study of government and political science blends the strengths of a liberal arts education while preparing students for a career in their field. Career opportunities can include positions in: federal, state, and local government; public administration and public service; and in public policy analysis.

The government major program calls for a thorough preparation in the study of government as described below with the opportunity for those interested in specific careers to concentrate in one of the subfields:

- American government and politics,
- public law,
- public administration and policy,
- comparative politics,
- political theory and
- international relations.

The department also offers a supplementary major in law and society, which is supportive of law-related careers.

A government minor program involving 18 credits of course work is also offered. A subfield minor or a general minor may be selected. In addition, the department participates in an interdisciplinary minor in Contemporary Social Studies.

Graduate Program Information

The Department of Government offers two degrees:

- the Master of Arts (MA) in government and
- the Master of Public Administration (MPA) and
- a graduate minor in Security Studies.

The programs are designed to prepare students both for diverse careers in the public sector and for further training at the doctoral level. The MPA program is accredited by the Network of Schools of Public Policy, Affairs and Administration (NASPAA), a distinction held by fewer than one-quarter of MPA programs nationwide. The MPA program offers joint degrees

- with the Department of Criminal Justice (MPA/MCJ) and
- with the Department of History (MPA/ MA in Public History).

Students in a joint degree program can earn two master's degrees with fewer credits than would be required to earn those degrees independently.

Admission

Prospective graduate students in either the MA or MPA should demonstrate a 3.0 grade point average for the second half of their undergraduate course work. For students with a GPA of less than 3.0, GRE scores are required, though this requirement may be waived if the undergraduate degree was awarded more than five years before applying. Applicants to either program are required to submit an application online. See instructions at: <https://apply.nmsu.edu/apply/>. Applications include three letters of recommendation, a writing sample, and a personal statement concerning their interest in pursuing a graduate degree. Additional information concerning program requirements and the admission process can be obtained from either the department's MA

chair or MPA director. Under exceptional circumstances the department may exempt students from the minimal requirements. Application for admission to the Graduate School should clearly indicate the program in which the student wishes to enroll. Applications for admission to the MPA program are reviewed twice a year, once in the Fall semester and once in the Spring semester.

Students interested in a joint degree option must apply and be accepted in to the two departments separately, and indicate their interest on their applications in one of the joint degree programs.

General Requirements

Students in both the MA and MPA programs select either a thesis or non-thesis option. Students planning on continuing their studies in a doctoral program or wishing to establish expertise related to a specific career objective are strongly encouraged to select the thesis option. The non-thesis option is suggested for students desiring immediate employment or seeking to enhance their current employment situations. Course work outside the department must have prior advisor approval to ensure a well-integrated program of study. Complete information on the requirements for either program should be obtained directly from the department. Most MA and MPA courses are offered in the evening.

Minors

The Department of Government offers a general undergraduate Government minor and specialized sub field minors. In addition, the department participates in an interdisciplinary minor in Contemporary Social Studies with History and other departments.

A student cannot earn both a B.A. in Government and a general minor in Government. Government majors may pursue a subfield minor in the department, however, they cannot double count any upper division courses in Government toward the minor.

Degrees for the Department

Bachelor Degree(s) & Supplemental Major(s)

- Law and Society - Supplemental Major (p. 688)
- Political Science - Bachelor of Arts (p. 685)

Master Degree(s) & Dual Degree(s)

- MPA-MCJ Program - Dual Degree (p. 160)
- Political Science - Master of Arts (p. 162)
- Public Administration - Master of Public Administration (p. 162)

Doctoral Degree(s)

- Transborder and Global Human Dynamics - Doctor of Philosophy (p. 206)

Minors for the Department

- American Government and Politics - Undergraduate Minor (p. 686)
- Comparative Politics - Undergraduate Minor (p. 687)
- International Relations - Undergraduate Minor (p. 687)
- Political Science - Undergraduate Minor (p. 687)
- Political Theory - Undergraduate Minor (p. 687)
- Public Administration - Undergraduate Minor (p. 687)
- Public Law - Undergraduate Minor (p. 688)
- Security Studies - Graduate Minor (p. 225)

Professor, Neil Harvey, Department Head

Professors Harvey, Medina; **Associate Professors** Conner, Hirschauer, Kang; **Assistant Professors** Gomez, Lee, Sukala, Ter-Mkrtchyan; **College Professor** Seckler; **Emeritus Professors** Baker, Hynes, Lapid, Slaton, Taggart, Winn.

N. Harvey, Ph.D., Department Head (Univ. Essex) - Mexican politics, comparative politics, Latin America, migration and border politics; N. Baker, (emerita) Ph.D. (Tulane Univ.) - public law, American politics, presidency; T. Conner, Ph.D., (Univ. Oklahoma) - public administration, Native American politics, public budgeting; D. Gomez, Ph.D., (Univ. California-Santa Barbara) - American politics, public opinion, social media, presidency, race and politics; S. Hirschauer, Ph.D., (Old Dominion University) - international relations, security studies, gender, migration and identity, comparative politics; P. Hynes (emerita) Ph.D., (New Mexico State University) - Commercial Space Research, Personal and Commercial Spaceflight; S. Kang, Ph.D., (Univ. Georgia) - public and non-profit management, organizational theory and behavior, public sector volunteering; Y. Lapid, (emeritus) Ph.D., (Columbia Univ.) - international relations theory, comparative foreign policy, international organizations; C. Lee, Ph.D., (Rutgers University) - public management, non-profit management, civil society and political participation, equity and social justice; C. Medina, Ph.D., (Univ. Colorado, Denver) - public administration, public policy, education policy, qualitative methods; K. Seckler, J.D. (Univ. of New Mexico) - Law and Society, New Mexico state and local government, US Supreme Court, US and NM Constitutions; C. Slaton (emerita) Ph.D., (Hawaii) - American politics, American political thought, university and community engagement, public administration, conflict resolution; W. Taggart, (emeritus) Ph.D., (Florida State) - public administration, public policy, American politics; A. Ter-Mkrtchyan, Ph.D., (Univ. Oklahoma) - nonprofit governance and accountability, environmental policy and administration, energy policy; R. G. Winn, (emeritus) Ph.D., (Arizona State) - public administration, policy analysis, environmental policy

Political Science Courses

POLS 1110G. Introduction to Political Science

3 Credits (3)

This course covers fundamental concepts in political science, such as political theories, ideologies, and government systems.

Learning Outcomes

1. Construct reasoned civic discourse to advocate a stance or examine alternate positions.
2. Identify fundamental concepts and theories in political science.
3. Analyze data and information in order to gain a deeper understanding of the material.
4. Articulate how the public influence and are influenced by politics.
5. Identify and compare government systems from democracy to authoritarian, as well as models of analysis of contemporary international relations.

POLS 1111. Introductory Government Seminar

1 Credit (1)

Introduction to the government major. Designed to assist students in planning college experience and preparing for upper division course work and research. May be repeated up to 1 credit.

Learning Outcomes

1. This course is designed for the beginning government major.
2. Its goal is to improve your educational experience at the university and within the Department of Government. In this class we hope to develop some basic skills necessary for successful completion of a degree in Government.

3. These include the skills of critical reading, critical writing, oral presentation and research methods.
4. Additionally, we will use this seminar to introduce you to Government faculty, to plan your government degree and to acquaint you with the services and opportunities the department and the university has to offer.
5. Finally, we hope to begin the discussion of where you will go next, when you complete your degree in Government.

POLS 1120G. American National Government

3 Credits (3)

This course explains the role of American national government, its formation and principles of the Constitution; relation of state to the national government; political parties and their relationship to interest groups. This course also explains the structure of the legislative, executive, and judicial branches.

Learning Outcomes

1. Explain the historical and political foundations of the government of the United States;
2. Explain the precursors to, and the development and adoption of the United States Constitution;
3. Explain the United States federal system, the basics of federalism, and the changing relationship of state and federal power;
4. Describe the power, structure and operation of the main institutions of government, namely the legislative, executive, judicial, and the federal bureaucracy;
5. Explain the development and role of political parties and interest groups;
6. Identify the constitutional basis of civil rights and civil liberties and their changing interpretation; and
7. Describe the role of demographics, public opinion and the media in American politics.

POLS 1130G. Issues in American Politics

3 Credits (3)

This course is designed to introduce the students to the contemporary study of American political issues. The course analysis of government policies, examining various approaches to the economy, democracy and the structure and the function of American political institutions.

Learning Outcomes

1. Explain the basic themes and concepts of political science and their application to contemporary issues.
2. Explain the major forces, interests, and institutions of American democratic politics.
3. Describe and define how beliefs, assumptions, and values are influenced by factors such as politics, geography, economics, culture, biology, history, and social institutions.

POLS 2120G. International Relations

3 Credits (3)

This course covers the analysis of significant factors in world politics, including nationalism, national interest, political economy, ideology, international conflict and collaboration, balance of power, deterrence, international law, and international organization.

Learning Outcomes

1. Explain the interrelationships between countries and people in the world,
2. Demonstrate an awareness of current events in the world.
3. Describe several theories of International Relations

4. Explain and identify theories of power and decision making among states in the world.
5. Describe and evaluate issues that relate to International Politics, and how individuals are affected by them.
6. Describe the role of Intergovernmental Organizations in International Politics.
7. Identify the role war plays in International Politics.
8. Explain how economics is intertwined with International Politics.
9. Demonstrate an understanding of role of international terrorism and its impacts on global diplomacy. 1
10. Articulate how beliefs, assumptions, and values are influenced by factors such as politics, geography, economics, culture, history, government, and social institutions.

POLS 2996. Special Topics**3 Credits (3)**

Specific topics to be announced in Schedule of Classes. Community Colleges only. May be repeated for a maximum of 12 credits.

Learning Outcomes

1. Varies

POLS 300. Political Research Skills**3 Credits (3)**

Introduction to methods of political analysis and fundamentals of research design, including basic methods for the collection and analysis of political data.

POLS 308. Prepping for Law School Admissions Test**1 Credit (1)**

This workshop helps students understand the law school application process and prepare to take the Law School Admissions Test (LSAT). May be repeated up to 2 credits.

Learning Outcomes

1. To prepare students to do well in the Law School Admissions Test (LSAT).
2. To help students understand the law school application process.

POLS 313. Model United Nations**3 Credits (3)**

Issues related to the United Nations and international law/organizations through simulations, discussions and research projects.

Prerequisites: GPA of 2.5 or better and consent of instructor.

POLS 314. Advanced Model UN**3 Credits (3)**

Advanced topics, research and preparation for Model United Nations activities. Consent of instructor required. Restricted to: Main campus only.

Prerequisite(s): POLS 313, minimum GPA 2.5.

POLS 315. Politics and Film**3 Credits (3)**

Exploration of political themes, images, and representation in film and other media. May be repeated for a maximum of 6 credits under different subtitles.

POLS 320. Making Public Policy**3 Credits (3)**

The course examines how U.S. public policy is made, including the examination of the major institutional and non-institutional players, politics, issues and power critical to the policy process. Interactive discussion sessions bridge theory to policy-making and political action

in substantive policy issues. Restricted to: Main campus only. May be repeated up to 3 credits.

Learning Outcomes

1. Develop knowledge of how public policy is made in the United States at various levels of government (federal, state and local) and in relation to demands from interest groups and other stakeholders
2. Develop knowledge of specific public policy areas (such as environmental policy, energy policy, etc.)
3. Develop excellence in research skills as well as written and oral communication of topics in the area of domestic policy

POLS 321. Topics in Public Policy**3 Credits (3)**

Course examines issues in public policy. May be repeated up to 6 credits.

Learning Outcomes

1. Develop knowledge and analytical skills with regard to particular topics within the subfield of public policy

POLS 324. Environmental Policy & Administration**3 Credits (3)**

This course introduces students to the history, development and formation of the central dimensions of environmental policy, politics and administration in the United States. Students also explore key substantive environmental policy issues (energy policy, natural resource and waste management policies, national parks and wildlife protection, and air and water pollution), and the global dimensions of climate change, environmental justice and sustainability. May be repeated up to 3 credits.

Learning Outcomes

1. Develop knowledge of historical and contemporary aspects of environmental policy, politics and administration in the United States
2. Develop ability to critically analyze environmental policy debates
3. Develop ability to effectively communicate analysis of environmental policy and administration in oral and written forms

POLS 325. Education Policy and Politics**3 Credits (3)**

Overview of current pressing policy issues and political debates on education in the U.S., including school choice, vouchers, accountability, and affirmative action. Multiple topics and perspectives covered, with political economy as the main approach. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the historical development and changing federal role in education policy, including major federal education laws and reforms.
2. Examine critical issues and trends in federal education policy, as well as the various actors and perspectives involved in education debates and decision-making.
3. Explore policy process theories and apply them to the analysis of federal education events.
4. Study in depth a federal education policy issue by examining its progress through the various stages of the policy process.

POLS 326. Public Policy & Indigenous Communities**3 Credits (3)**

Study of historical and contemporary public policy and law that deals with the special legal status of Native American tribes and tribal members.

Learning Outcomes

1. Become familiar with the body of public policy and the area of law that deals with the special legal status of Native American tribes and tribal members

2. Examine the history, the public policy and the law that has impacted the ability of these indigenous communities to exercise their inherent sovereignty
3. Investigate the history, legislation, policies and landmark cases that have shaped this important area of government in the United States

POLS 330. Introduction to Public Administration

3 Credits (3)

Public administration involves the full range of government agencies, non-profit organizations, and private contractors involved in the implementation of public policy at the federal, state, and local level. This course introduces students to the formal study of public administration and will explore major challenges in public service, the management of public and non-profit organizations, administrative ethics and law, leadership theory, and financial and personnel management. Restricted to: Main campus only. May be repeated up to 3 credits.

Learning Outcomes

1. Gain a strong foundation in the the major issues, theories and challenges of public administration
2. Develop skills to critically analyze key problems in public administration
3. Develop ability to effectively communicate the main issues, theories and challenges of public administration in both oral and written form

POLS 331. Special Topics in Public Administration

3 Credits (3)

Special topics in public administration. May be repeated for a maximum of 6 credits under different subtitles.

POLS 335. Management of Nonprofit Organizations

3 Credits (3)

This course provides an introduction to the nonprofit sector, its nature, scope, and functions, and an overview of a range of nonprofit management concerns and practices. Students will confront the critical issues facing the sector. Activities are designed to expand the management skills of students by offering analytical tools and knowledge, and providing opportunities to test the application of these skills. May be repeated up to 3 credits.

Learning Outcomes

1. Gain a strong foundation in the study of nonprofit organizations and management issues
2. Expand students' management skills
3. Gain experience in application of management skills

POLS 343. Congress and the Legislative Process

3 Credits (3)

This class reviews the history, structure, membership, operation, power and culture of the American Congress. Restricted to: Main campus only.

Learning Outcomes

1. Develop knowledge of the functions and goals of the US Congress, specifically how federal legislation is drafted, debated and passed.
2. Develop skills in debating legislative bills through in-class simulations
3. Develop excellence in research and written and oral communication of significant topics in the study of the US Congress and legislative processes

POLS 345. The Supreme Court

3 Credits (3)

This class studies the history and operation of the Supreme Court, as well as landmark cases that have shaped American government and the Court.

POLS 348. Political Parties and Interest Groups

3 Credits (3)

Organization, principles, and functions of political parties and interest groups in the U.S.

POLS 350. Special Topics in American Government

3 Credits (3)

Special topics in American government. May be repeated for a maximum of 6 credits under different subtitles.

POLS 353. Women and Politics

3 Credits (3)

An examination of women's participation in U.S. electoral politics as voters, candidates, and officeholders; political activism in issue-based movements and strategies for affecting public policy; leadership as administrators and managers in public service agencies. Also explores the influence of feminism in changing women's roles socially, legally, and politically.

POLS 354. Native American Politics

3 Credits (3)

This course explores the rights of Native Americans and the politics, policy, and administration of tribal governments with a focus on the history and current relationship between Native Nations and the US political system. Students will learn about Native peoples' cultural responses, forms of resistance, and adaptations to colonization. Restricted to: Main campus only.

Learning Outcomes

1. Develop a strong understanding of historical and contemporary issues in Native American policy in the United States
2. Develop skills to critically analyze debates over Native American policy
3. Develop skills to effectively communicate analysis of Native American policy in oral and written forms

POLS 360. International Relations Theory

3 Credits (3)

Introduction to major theories and concepts for understanding fundamental problems and issues in international relations May be repeated up to 3 credits.

Learning Outcomes

1. Identify and critically evaluate the major concepts (theory) and practices (reality) of International Relations
2. Identify, define, and critically think about themes and key issues unique to International Relations and evaluate their pros and cons
3. Develop knowledge, analytical ability and critical thinking about global efforts and challenges to International Relations

POLS 361. Special Topics in International Relations

3 Credits (3)

Course examines contemporary issues in international relations. May be repeated under different subtitles.

POLS 362. International Political Economy

3 Credits (3)

Political factors in international economic relations; theories of political economy.

POLS 364. National Security

3 Credits (3)

Analysis of theories, concepts, historical development and current issues of significance for US national security

Learning Outcomes

1. Analyze international issues from a National Security policy perspective and examine major theoretical approaches (or “paradigms”) of National Security
2. Critically examine the historical evolution and the most prominent and contemporary challenges of National Security
3. Acquire abilities to synthesize and articulate important debates in the National Security literature and connect them to current national, regional, and global crises.

POLS 365. Introduction to Security Studies**3 Credits (3)**

Introduction to the field of security studies, with focus on theories and issues in the study of security in international politics, including emerging 21st century security challenges related to cyberspace, A.I., information warfare and virtual deterrence.

Learning Outcomes

1. Analyze international issues from a security studies perspective and examine major theoretical approaches (or “paradigms”) of security studies
2. Critically examine the historical evolution and the most prominent and contemporary challenges of security studies
3. Synthesize and articulate important debates in the security studies literature and connect them to current national, regional, and global challenges and crises.

POLS 366. American Foreign Policy**3 Credits (3)**

Formulation, content and rationale of current foreign policies of the U.S. May be repeated up to 3 credits.

Learning Outcomes

1. Develop knowledge of the historical development and current practice of US foreign policy
2. Develop the skills necessary to conduct independent research and written and oral communication of significant topics in US foreign policy

POLS 367. Terrorism**3 Credits (3)**

An introductory course using an interdisciplinary framework to explore definitions, historical roots, contemporary manifestations and future trends in political terrorism.

POLS 368. Human Security**3 Credits (3)**

Introduction to human security, its focus on security of the individual as opposed to the security of the state since the end of the Cold War and the emergence of global challenges such as environmental crises, public health, and cybersecurity of the virtual self.

Learning Outcomes

1. Identify and critically evaluate the major concepts and practices in human security
2. Define, identify and critically think about key issue areas in human security
3. Develop a coherent body of research in regard to a human security topic of your interest; engage with complex knowledge about human security and apply your analysis to a specific phenomenon.
4. Investigate current, global efforts and challenges in regard to human security.

POLS 370. Comparative Politics**3 Credits (3)**

Comparative study of similarities and differences to be found in political systems across the world, with emphasis on the structure and performance of modern states, accountability of government institutions, parties and elections, social movements, and public policies. May be repeated up to 3 credits.

Learning Outcomes

1. Develop knowledge of main issues and concepts in the study of comparative politics.
2. Increase analytical ability to explain similarities and differences between political systems
3. Promote critical thinking regarding the human and environmental consequences of government policies in addressing common public policy problems.

POLS 371. Latin American Politics**3 Credits (3)**

Comparative study of government systems and political change in Latin American countries, with focus on challenges of social inequality, democratization, regional integration, relations with the United States, and the rights of women, LGBTQ* community, Indigenous and Afro-descendent peoples. May be repeated up to 3 credits.

Learning Outcomes

1. Develop knowledge of how historical legacies, domestic politics, and global relations shape contemporary politics in Latin America
2. Increase analytical ability to explain similarities and variation in contemporary politics in Latin America
3. Develop critical thinking regarding how to explain the persistence and political implications of socioeconomic inequalities and discrimination in Latin America
4. Develop oral and written communication skills in expressing knowledge, concepts, and comparative analysis

POLS 372. Special Topics in Comparative Politics**3 Credits (3)**

Course examines contemporary issues in comparative politics. May be repeated under different subtitles. Restricted to: Main campus only.

POLS 373. Resistance Movements in World Politics**3 Credits (3)**

Comparative study of contemporary resistance movements and social protests around the world with a focus on their origins, demands, ideologies, strategies and impacts. May be repeated up to 3 credits.

Learning Outcomes

1. Develop knowledge of concepts of power and resistance movements and their applicability in many parts of the world.
2. Increase analytical ability to explain variation in the motives, strategies and impacts of resistance movements.
3. Promote critical thinking regarding how we choose to address inequalities, injustices and dissent.
4. Develop oral and written communication skills of key concepts and original research.

POLS 378. U.S.-Mexico Border Politics**3 Credits (3)**

Analysis of contemporary challenges facing the U.S.-Mexican border, including immigration, binational cooperation, drug trafficking, corruption, human rights violations and security. May be repeated up to 3 credits.

Learning Outcomes

1. Develop knowledge of the main issues and controversies in US-Mexico border politics.

2. Increase analytical ability to explain the implementation and results of border policies for local communities and the environment.
3. Promote critical thinking regarding the merits of alternative policies and future possibilities.

POLS 379. Mexican Politics**3 Credits (3)**

Study of the politics and government of contemporary Mexico with focus on challenges of democratization, human rights, public policies, Mexico-US relations, and internal security. May be repeated up to 3 credits.

Learning Outcomes

1. Develop knowledge of main issues and concepts in the study of Mexican politics.
2. Develop ability to conduct online research on current issues in Mexican politics.
3. Promote critical thinking regarding the causes and consequences of criminal violence in Mexican politics and how it may be best addressed.

POLS 380V. Contemporary World Political Ideologies**3 Credits (3)**

Introduction to the prevailing political ideologies in the modern world and the ways in which modern nations operating under one or more of these ideologies attempt to answer fundamental questions about the allocation and distribution of rights, liberties, and other things of value. In addition, the course work and discussions attempt to address recent political, social, and economic events in various areas of the world.

POLS 382. Classical Political Thought**3 Credits (3)**

Analysis of main currents in political thought from ancient Greece and Rome to the high Middle Ages.

POLS 383. Modern Political Thought**3 Credits (3)**

Historical and theoretical examination of political ideas and ideologies from Machiavelli to Nietzsche. Topics include liberalism, conservatism, romanticism, communism, and Nihilism.

POLS 385. American Political Thought**3 Credits (3)**

Introduction to major American thinkers and historical currents from colonial time to the present. May be repeated up to 3 credits.

Learning Outcomes

1. To understand the nature of the specifically American form of constitutionalism, as compared to its alternatives;
2. To understand the idea of progress in American history, including its colonial origins and its contemporary manifestation under the terms of progressivist ideology;
3. To understand the meaning and origin of American conservatism, and its place in contemporary political life;
4. To understand the dynamics of shifting political and institutional power relationships (including issues of centralization and decentralization) in relation to the above; and
5. To understand the general relationship between cultural phenomena and questions of political order.

POLS 387. Religion and Politics**3 Credits (3)**

Survey of major points of interaction between politics and religion in the U.S., using theoretical, historical, and institutional analysis.

POLS 390. Special Topics in Public Law**3 Credits (3)**

Course examines various issues in public law. May be repeated under different subtitles.

POLS 391. Constitutional Law**3 Credits (3)**

The class explores the reasoning and political context of the Supreme Court cases that define the distribution and limits of governmental powers and duties under the U.S. Constitution, including separation of powers and federalism. Restricted to: Main campus only.

POLS 392. Civil Liberties**3 Credits (3)**

The course examines the reasoning and political context of major Supreme Court cases defining constitutional rights of free speech, religious liberty, free press and criminal procedural rights.

POLS 394. Judicial Process**3 Credits (3)**

Class examines the structure, function and purpose of the American judicial system. Restricted to: Main campus only.

POLS 395. Law and Society**3 Credits (3)**

Class critically explores the development, role and impact of law on society, covering different philosophies and theories of law, different world legal systems, and different issue areas of law and society. Restricted to: Main campus only. May be repeated up to 3 credits.

Learning Outcomes

1. To understand the development, role and impact of law on society
2. To gain knowledge of different philosophies and theories of law
3. To gain knowledge of different legal systems around the world and key issues in law and society
4. To gain skills in critical analysis of debates in law and society
5. To gain skills in effective communication of analysis of law and society in oral and written forms

POLS 396. International Law**3 Credits (3)**

Nature, growth, and scope of law of nations, rights and obligations of states in peace and war, current issues.

POLS 399. New Mexico Law**3 Credits (3)**

Examination of the history, development and implementation of law in New Mexico with an emphasis on legal issues unique to New Mexico. Crosslisted with: CJUS 399. May be repeated up to 3 credits.

Learning Outcomes

1. To understand the unique legal issues of New Mexico through critical examination of the history, development and implementation of law in the state.
2. To develop skills to critically analyze debates over legal issues in New Mexico.
3. To develop skills to effectively communicate analysis of legal issues in New Mexico in oral and written forms.

POLS 405. Directed Readings**1-3 Credits**

Individualized readings. Course subtitled. May be repeated for a maximum of 6 credits. Graded S/U. Consent of instructor required.

POLS 406. Independent Study**1-3 Credits**

Individualized research. Course subtitled. May be repeated for a maximum of 6 credits. Consent of instructor required.

POLS 407. Workshop

1-6 Credits (1-6)

Focus on skills related to careers in government and political science. Specific topics announced in the Schedule of Classes; Only three credits apply toward government major or minor requirements. May be repeated up to 6 credits.

Learning Outcomes

1. Develop skills related to careers in government and public service

POLS 410. Internship

1-12 Credits

Hands-on experience working with public agencies, political campaigns, elected officials & non-profits. May be repeated for a maximum of 12 credits; only 3 credits apply toward government major or minor requirements. Consent of instructor required. Graded: S/U.

Prerequisite(s): Completion of 12 government credits, 2.5 GPA, junior and above standing.

POLS 411. Service Learning Experience

3 Credits (3)

Experiential learning through a community service project. May be subtitled to reflect service activity. May be repeated for a total of 6 credits; only 3 credits apply toward government major or minor requirements.

Prerequisites: completion of 12 government credits, junior or above standing, and consent of instructor.

POLS 412. Practicum in Student Government

3 Credits (3)

Research of issues in student government. Consent of instructor required. Graded: S/U.

Prerequisite(s): Student government participation, completion of 12 POLS credits, junior or senior standing.

POLS 415. Senior Seminar

2 Credits (2)

Review and integration of political skills acquired in the Government Department. Students will focus on critical essay writing and oral presentation of a synthesis of knowledge gained from prior departmental coursework. May be repeated up to 2 credits.

Learning Outcomes

1. To integrate knowledge from various classes during the students' coursework as a Government major.
2. To effectively communicate in oral and written forms a synthesis of main issues, theories, scholars and actors in the various sub-fields of the government major.

POLS 469. Globalization

3 Credits (3)

Analysis of the globalization process. Covers theories of globalization, the global economy, political globalization, global culture, transnational social movements, transnational migration and world labor market, global cities, and local-global linkages. Same as SOCI 4460. May be repeated up to 3 credits.

POLS 493. Mass Communications Law

3 Credits (3)

Examination of legal issues relating to mass media in the United States. Invasion of privacy, libel, sedition, copyright, and advertising regulation. Same as JOUR 493 and COMM 493.

POLS 502. Research Methods in Government

3 Credits (3)

Contemporary methods of political analysis, including mathematical and statistical techniques and computer applications. MPA students must complete this class with a B- or better. MA students must complete either POLS 502 or POLS 503 with a B- or better.

POLS 503. Qualitative Research Methods

3 Credits (3)

An overview of qualitative research methods such as fieldwork, ethnography, content analysis, case studies, focus groups and grounded theory. Introduces students to epistemology (the study of knowledge) and to basic components of research design. Explores activist scholarship, ethical dilemmas in research, and software tools for computer assisted analysis. Especially useful for students preparing theses, dissertation, or other research projects. MA students must complete either POLS 503 or POLS 502 with a B- or better.

POLS 505. Directed Readings

1-3 Credits

Selected topics in government. May be repeated for a total of 6 credits. Graded S/U.

Prerequisite: consent of instructor.

POLS 510. Internship

1-6 Credits

Assignment with a public agency and research report. Only 3 credits apply toward degree requirements. Graded S/U.

Prerequisite: approval of graduate advisor.

POLS 517. Selected Topics in Government

3 Credits (3)

Selected issues which may cross sub-fields of the discipline. May be repeated for a total of 6 credits.

POLS 519. Proseminar in Public Administration

3 Credits (3)

Review of classic and contemporary theory and practice in public administration. Application of written and oral skills to the presentation and defense of essays on various aspects of public administration. To be completed with a B- or better.

Prerequisite(s): 30 credits of M.P.A.

POLS 522. Public Sector Economics I

3 Credits (3)

Introduction to the economic rationale for government intervention in the economy and the effects of that intervention on economic agents and the economy in general. Emphasis on the expenditure side of government policies. Same as AEEC 522.

POLS 524. Introduction to the Nonprofit Sector

3 Credits (3)

Advanced study of the nature and operation of the nonprofit sector and how it interacts with public policy. The course provides an overview of the nonprofit sector, its scope, structure, history, values, distinct contributions to society, place in the government service delivery systems, and selected public policy issues that affect it.

Learning Outcomes

1. Demonstrate an understanding of the unique nature of the nonprofit sector, and distinguish it from the public (government) and private (business, for-profit) sectors in form and delivery systems.
2. Provide a description of the historical, theoretical, and legal perspectives on nonprofit organizations, as well as current trends and challenges facing the sector.
3. Evaluate the scope of the nonprofit activity in the U.S. and demonstrate an understanding of the major nonprofit subsectors, such as health care, arts, social service, and religious organizations.

- Determine how nonprofit organizations and business firms can constructively learn from one another.
- Explain and justify the role and function of nonprofit organizations and the myriad ways in which nonprofit organizations serve our communities and enhance our society.

POLS 525. Seminar in the Nonprofit and Philanthropic Sector
3 Credits (3)

Advanced study of the role of philanthropy and nonprofit organizations in society. Addresses the theoretical and academic foundations of research literature in the field from a variety of disciplines.

Learning Outcomes

- A better understanding of the various issues and topics of the Nonprofit/Philanthropic sector studied by scholars in the field.
- An ability to discuss major findings and theories in the field of Nonprofit and Philanthropic Studies.
- The knowledge to discuss and critique research designs and methods that have been utilized in Nonprofit/Philanthropic Studies.
- An ability to frame new research questions (and/or, extend knowledge) related to nonprofit organizations and philanthropy.

POLS 526. Performance Management of Public and Nonprofit Organizations
3 Credits (3)

Advanced study of the theory and practice of performance measurement and management, how to select key performance indicators, implement a performance management system and use performance measures. Examines importance of leadership roles and accountability in managing public and nonprofit organizations.

Learning Outcomes

- To understand the inextricable connection between performance measurement and strategic planning in developing effective organizations.
- To develop the skills to implement performance management systems in organizations, regardless of level of authority within these organizations.
- To gain skills to adeptly navigate organizational challenges that impede implementation of performance management systems.

POLS 527. Issues in Public Management
3 Credits (3)

Selected issues in public management. May be repeated under different subtitles for a total of 6 credits.

POLS 530. Seminar in Public Policy
3 Credits (3)

Survey of the political, administrative, and technical aspects of policy making in government. MA students taking POLS 530 as part of their core requirements must complete the class with a B- or better.

POLS 536. Public Policy and Indigenous Communities
3 Credits (3)

Indigenous communities are found throughout North, Central and South America. This course addresses the history, development and governance of these communities. Different sections of the course may choose to focus on different indigenous communities. All courses will consider the principles of governance internal to indigenous communities as well as the governing relationships between indigenous communities and modern states.

POLS 537. Issues in Public Policy
3 Credits (3)

Selected issues in public policy. May be repeated under a different subtitle for a total of 6 credits.

POLS 540. Seminar in Public Administration
3 Credits (3)

Survey course on the theory and practice of program, personnel, and financial management in government and the private, nonprofit sector. MA students taking POLS 540 as part of their core requirements must complete the class with a B- or better.

POLS 541. Public Budgeting
3 Credits (3)

Budgetary processes; budget classification, analysis, and evaluation. MPA students must complete this class with a B- or better.

POLS 542. Public Sector Human Resources Management
3 Credits (3)

Exploration of public personnel systems and practices, including job analysis, compensation, performance evaluation, recruitment, and labor-management relations. MPA students must complete this class with a B- or better.

POLS 543. Skills Workshop
1-6 Credits (1-6)

Focus on management of task skills in selected areas of public administration. Specific topics will appear in the Schedule of Classes. May be repeated up to 6 credits.

Learning Outcomes

- Develop specific skills related to the practice of public administration

POLS 544. Public Policy Analysis
3 Credits (3)

Environment of policy analysis; various descriptive and quantitative designs for analyzing and evaluating public policy. Problems of policy analysis. MPA students must complete this class with a B- or better.

Prerequisite(s): POLS 502 or consent of instructor.

POLS 547. Government Organizations
3 Credits (3)

Historical overview and present applications of organization theory in public management. MPA students must complete this class with a B- or better.

POLS 548. Public Sector Leadership
3 Credits (3)

Theories and styles of leadership.

POLS 549. Ethics in Government
3 Credits (3)

Examination of standards, perspectives, and issues for ethical decision-making in public agencies. MPA students must complete this class with a B- or better.

POLS 550. Seminar in American Politics
3 Credits (3)

Overview of American political institutions. Includes study of American constitutional theory; legislative, executive, and judicial functions and processes; political parties and interest groups; and public policy formulation. MA students taking POLS 550 as part of their core requirements must complete the class with a B- or better.

POLS 560. Seminar in International Relations Theory
3 Credits (3)

A critical overview of leading approaches and controversies in international relations theory. The purpose of the course is to introduce students to contending theoretical perspectives and conceptual frameworks that help make sense of contemporary world politics. MA

students taking POLS 560 as part of their core requirements must complete the class with a B- or better.

POLS 563. Issues in International Relations

3 Credits (3)

Selected issues in international relations. May be repeated under a different subtitle for a total of 6 credits.

POLS 564. Advanced National Security Policy

3 Credits (3)

Major topical, theoretical, and regional issues in national security policy.

POLS 565. Advanced Issues in Security Studies

3 Credits (3)

Advanced study of theories, concepts and key issues in the area of security studies, including historical security problems and emerging 21st century challenges related to cyberspace, A.I., information warfare and virtual deterrence.

Learning Outcomes

1. Analyze international issues from a security studies perspective and examine major theoretical approaches (or "paradigms") of security studies.
2. Critically examine the historical evolution and the most prominent and contemporary challenges of security studies.
3. Synthesize and articulate important debates in the security studies literature and connect them to current national, regional, and global challenges and crises.

POLS 567. Advanced Issues in Terrorism

3 Credits (3)

Advanced study of theories of the causes of terrorism, responses to varieties of terrorism, and major issues in the study of terrorism, historically and today

Learning Outcomes

1. Examine core ideas in studies of terrorism (theoretically and factually)
2. Introduce and develop an understanding about the causes of terrorism and possible solutions
3. Acquire abilities to gain knowledge, think critically, analytically, and synthetically of countries and violence, and varieties of terrorism over time and throughout the world.

POLS 568. Advanced Issues in Human Security

3 Credits (3)

Advanced study of major theories, concepts and issues in the study of human security, such as environmental crises, public health, and cybersecurity of the virtual self.

Learning Outcomes

1. Identify and critically evaluate the major concepts and practices in human security;
2. Define, identify and critically think about key issue areas in human security.
3. Develop a coherent body of research in regard to a human security topic of your interest; engage with complex knowledge about human security and apply your analysis to a specific phenomenon.
4. Investigate current, global efforts and challenges in regard to human security.

POLS 569. Advanced Issues in Globalization

3 Credits (3)

Analysis of the globalization process. Covers theories of globalization; global economy; political globalization; global culture; transnational social movements; transnational migration and world labor market;

global cities; local-global linkages. Same as SOCI 5460. May be repeated up to 3 credits.

POLS 570. Seminar in Comparative Politics

3 Credits (3)

Examination of methods used for comparing various types of political entities. Investigation of criteria needed to examine a concept across cultures or national boundaries. MA students taking POLS 570 as part of their core requirements must complete the class with a B- or better.

POLS 574. Contemporary Comparative Studies

3 Credits (3)

Major topical, theoretical, and regional issues in international politics. May be repeated once.

POLS 578. Seminar in the U.S.-Mexican Border

3 Credits (3)

An analysis of the political environment along the United States-Mexico border and a survey of the literature available for a number of contemporary issues.

POLS 579. Seminar in Mexican Politics

3 Credits (3)

Advanced research on politics and government of Mexico.

POLS 580. Seminar in Political Theory

3 Credits (3)

Examination of major issues in political theory, including democracy, sovereignty, classical and modern traditions of thought. May be repeated with different subject matter. MA students taking POLS 580 as part of their core requirements must complete the class with a B- or better.

POLS 587. Seminar in Religion and Politics

3 Credits (3)

Historical, theoretical and comparative analyses of the interaction between politics and religion.

POLS 593. Issues in Public Law

3 Credits (3)

Selected issues in public law. May be repeated under a different subtitle for a total of 6 credits.

POLS 596. International Law

3 Credits (3)

Nature, growth and scope of law of nations; rights and obligations of states in peace and war; current issues.

POLS 598. Special Research Programs

1-3 Credits

Individual investigations either theoretical, analytical or experimental. Three credits may be taken per semester for a total of 6 credits for thesis students, and 9 credits for non-thesis students. Consent of instructor required.

POLS 599. Master's Thesis

1-15 Credits

Thesis.

Political Science - Bachelor of Arts Requirements

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Prefix	Title	Credits
General Education		
Area I: Communications		10
English Composition - Level 1 ¹		
English Composition - Level 2 ¹		
Oral Communication ¹		
Area II: Mathematics ^{1,2}		3-4
Area III/IV: Laboratory Sciences and Social/Behavioral Sciences		11
POLS 1120G	American National Government	
POLS 1110G	Introduction to Political Science	
or HNRS 2180G Citizen and State Great Political Issues		
Area III: Laboratory Sciences Course (4 credits) ¹		
Area V: Humanities ¹		3
Area VI: Creative and Fine Arts ¹		3
General Education Elective ¹		3-4
Viewing A Wider World ⁴		6
Departmental/College Requirements		
The department requires (POLS 1120G) and (POLS 1110G or HNRS 2180G) as degree requirements. These courses will count towards the General Education and Departmental requirements ³		
POLS 1111	Introductory Government Seminar ³	1
POLS 300	Political Research Skills	3
or		
Another social science research methods course ⁵		
Select one upper-division course from four of six subfields:		12
Public Administration and Policy (POLS 20/30 series)		
American Government and Politics (POLS 40/50 series)		
International Relations (POLS 60 series, may include HNRS 304V)		
Comparative Politics (POLS 70 series may include HNRS 307V)		
Political Theory POLS 80 series may include POLS 380V)		
Public Law (POLS 90 series)		
POLS 415	Senior Seminar (take in final year)	2
Select additional credits in government to bring total credits in major to 33, including 20 upper-division.		9
Second Language: (required - see below)		0-14
Electives, to bring the total credits to 120⁶		38-54
Total Credits		120

¹ See the General Education (p. 227) section of the catalog for a full list of courses

² A Mathematics course is required for the degree but students may need to take any prerequisites needed to enter the Mathematics course of their course first.

³ Majors should complete these lower level requirements before registering for upper-division government credits.

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses

⁵ A list of approved options is available in the department office.

⁶ Elective credit may vary based on General Education course selection, second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Note: Students may not count S/U grades taken in their major unless the particular course is regularly graded S/U. All courses must be passed with grades of C- or better. In addition, while research methods courses taken outside of the department may count toward the methods requirement, only POLS 300 Political Research Skills counts toward the 33 credits in the major.

Up to twelve hours of internship credit are available. However, only three hours count toward the major. Internship guidelines are available in the department office and on the Government Department web page, <http://deptofgov.nmsu.edu/>.

Second Language Requirement

For the Bachelor of Arts in Government there is a two year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120 & FREN 2110 & FREN 2120	French I and French II and French III and French IV	3-14
GRMN 1110 & GRMN 1120 & GRMN 2110 & GRMN 2120	German I and German II and German III and German IV	3-14
JAPN 1110 & JAPN 1120 & JAPN 2110 & JAPN 2120	Japanese I and Japanese II and Japanese III and Japanese IV	3-14
SPAN 1110 & SPAN 1120 & SPAN 2110 & SPAN 2120	Spanish I and Spanish II and Spanish III and Spanish IV	3-14
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6
<i>For Heritage Speakers:</i>		
SPAN 1210 & SPAN 1220 & SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II and Spanish for Heritage Learners III	3-9

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3
SIGN 2110	American Sign Language III	3

Option 3:

Prefix	Title	Credits
Challenge the 2120 level for the following courses:		
OR		
Challenge the 1120/2210 level for the following courses:		
PORT 1120	Portuguese II	3
or SPAN 2210	Spanish for Heritage Learners III	

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Freshman		Credits

or HNRS 2180G	Citizen and State Great Political Issues	
Select 12 additional credits, of which at least 9 are upper division, including 3 upper division courses from the same subfield.		12
Total Credits		18

The subfield series include courses in the 20/30 series (public administration and policy), 40/50 series (American government and politics), 60 series and HNRS 304V Dilemmas of War and Peace (international relations), 70 series (comparative politics), 80 series, including POLS 380V Political Ideologies (political theory), and 90 series (public law).

Public Law - Undergraduate Minor

Students pursuing a subfield minor may count a maximum of 3 credits in an independent studies course or an internship. Students may request permission to substitute courses between subfields, subject to approval of the Department of Government undergraduate committee.

Prefix	Title	Credits
Required Courses		
POLS 1120G	American National Government	3
POLS 1110G	Introduction to Political Science	3
or HNRS 2180G	Citizen and State Great Political Issues	
Select 12 additional credits, of which at least 9 are upper division, including 3 upper division courses from the same subfield.		12
Total Credits		18

The subfield series include courses in the 20/30 series (public administration and policy), 40/50 series (American government and politics), 60 series and HNRS 304V Dilemmas of War and Peace (international relations), 70 series (comparative politics), 80 series, including POLS 380V Political Ideologies (political theory), and 90 series (public law).

Law and Society - Supplemental Major

The Department of Government also coordinates a supplementary major in law and society that may be taken in addition to a regular major. The program is designed to allow students to combine law-related classes offered across a range of departments and disciplines. It is of particular interest to undergraduates interested in law school or who contemplate careers in fields closely related to the legal profession, such as government, politics, social work or law enforcement.

Requirements

The supplementary major consists of 24 credits chosen from the courses listed below. At least 18 credits must be earned in upper-division courses and 6 credits must be earned from listed courses outside the student's primary major. Candidates for the Law and Society degree must declare their supplementary major prior to completing the last 9 credits of the program.

Prefix	Title	Credits
Core Courses		
Select three from the following four courses, or two from this group and any one from the next group immediately below it:		9
CJUS 1120	Criminal Law	
POLS 395	Law and Society	
POLS 391	Constitutional Law	
POLS 394	Judicial Process	

You may choose one of the following three classes to count as a core course:

CJUS 306	Criminal Procedural Law
POLS 392	Civil Liberties
JOUR 493	Media Law

Communication Skills

Select one from the following:		3
COMM 3120	Persuasion Theory and Practice	
ENGL 2130G	Advanced Composition	

PHIL 448	Writing Philosophy	
Critical Thinking Skills		
Select one from the following:		3
POLS 382	Classical Political Thought	
PHIL 1120G	Logic, Reasoning, & Critical Thinking	
PHIL 312	Formal Logic	
Jurisprudence		
Select one from the following:		3
CJUS 307	Law of Evidence	
CJUS 424	Forensic Law	
POLS 385	American Political Thought	
PHIL 376	Philosophy of Law	
PSYC 330	Psychology and the Law	
SOCI 3510	Crime and Society	
Legal Policy Issues		
Select two from the following:		6
BLAW 316	Legal Environment of Business	
BLAW 385V	Employment and Consumer Law	
CJUS 2120	Criminal Courts and Procedure	
CJUS 332	Correctional Law	
POLS 345	The Supreme Court	
POLS 387	Religion and Politics	
POLS 390	Special Topics in Public Law	
POLS 396	International Law	
HNRS 335V	Legal Issues in Modern Society	
HRTM 3220	Hospitality and Travel Law	
PHIL 1145G	Philosophy, Law, and Ethics	
PHIL 320	Social and Political Philosophy	
SOCI 3520	Juvenile Delinquency	
Or either one of the following:		
CJUS 399	New Mexico Law	
POLS 399	New Mexico Law	
Total Credits		24

History

Undergraduate Program Information

An undergraduate degree in history prepares students for careers in: teaching; law; public service; management; journalism; education; communications; travel counseling; and library, museum and archival staff work. Students master skills including the ability to read critically, to formulate arguments, to conduct historical research, and to synthesize arguments and create novel interpretations.

Graduate Program Information

The Department of History offers graduate work leading to the Master of Arts degree. In addition to fulfilling the basic requirements for admission to the Graduate School, applicants must present undergraduate passage of at least 12 credits in history with grades of B or higher, including 6 upper division history credits. Those lacking this preparation must normally make up deficiencies before beginning graduate course work. Candidates who choose a course of study requiring a foreign language will be responsible for their own language preparation.

Students applying for admission to the graduate program in history are required to submit an application form and a transcript to the Graduate School and a strong writing sample, three letters of recommendation ideally from History faculty members at NMSU or other institutions, and

a two-to-three page statement of purpose to the Department of History, approximately four months in advance of the desired enrollment date. Applicants for graduate assistantships and fellowships must submit a letter of application, a transcript, and three letters of recommendation to the department by February 15 for the fall semester, and by October 15 for the spring semester. Students who are not applying for graduate assistantships and fellowships may apply at any time for acceptance into the graduate program.

Degrees for the Department

Bachelor Degree(s)

- History - Bachelor of Arts (p. 698)

Master Degree(s) & Dual Degree(s)

- History (Public History) - Master of Arts (p. 153)
- History - Master of Arts (p. 153)
- Public History and Public Administration - Dual M.A. Degree (p. 166)

Minors for the Department

- History - Graduate Minor (p. 222)
- History - Undergraduate Minor (p. 700)

Elizabeth Horodowich, Department Head

Professors Bronstein, Brooks, Cioc-Ortega, Garcia-Bryce, Hammond, Horodowich; **Associate Professors** Orzoff; **Assistant Professors** J. Wallace; **College Professors** E. Masson

J. L. Bronstein, Ph.D. (Stanford)– U.S., Britain; N. M. Brooks, Ph.D. (Columbia)– Russia/Soviet Union, modern Europe, modern science; M. Cioc-Ortega, Ph.D. (California-Berkeley)- Europe, US, public history; I. Garcia-Bryce, Ph.D. (Stanford)– Latin America, Peru; K. J. Hammond, Ph.D. (Harvard)– China, East Asia; E. Horodowich, Ph.D. (Michigan-Ann Arbor)– early modern Europe, Mediterranean; A. Orzoff, Ph.D. (Stanford)– twentieth-century Europe, Eastern Europe, intellectual history; J. D. Wallace, Ph.D. (University of New Mexico)– U.S., public history.

History Courses

HIST 1105G. Making History

3 Credits (3)

General introduction to history: how historians carry out research and develop interpretations about the past.

Learning Outcomes

1. Understand and articulate the differences and similarities between history and memory;
2. Analyze and critically interpret primary sources and understand how others might interpret and use the same material in different ways;
3. Recognize and appreciate the diversity of historical experiences and the uses of historical memory in various societies;
4. Understand how historical experiences that include political, geographical, social, cultural, religious and intellectual experiences have been expressed across historical periods;
5. Understand how historical experiences and memories have shaped contemporary societies;
6. Identify and understand the degree to which history has been used and misused in the past;
7. Demonstrate improvement in their ability to read critically, think logically, and express themselves clearly in writing.

HIST 1110G. United States History I

3 Credits (3)

The primary objective of this course is to serve as an introduction to the history of the United States from the pre-colonial period to the immediate aftermath of the Civil War. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the development of the United States within the context of world societies.

Learning Outcomes

1. Students will be able to explain in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of the United States from the pre-colonial period to the immediate aftermath of the Civil War. Bloom Taxonomy's Cognitive Process: Remember and Understand
2. Students will distinguish between primary and secondary sources, identify and evaluate evidence and empathize with people in their historical context. Bloom Taxonomy's Cognitive Process: Analyze, Remember, Evaluate, Create
3. Students will summarize and appraise different historical interpretations and evidence in order to construct past events. Bloom Taxonomy's Cognitive Process: Understand, Evaluate, Apply
4. Students will identify historical arguments in a variety of sources and explain how they were constructed, evaluating credibility, perspective, and relevance. Bloom Taxonomy's Cognitive Process: Remember, Understand, Evaluate
5. Students will create well-supported historical arguments and narratives that demonstrate an awareness of audience. Bloom Taxonomy's Cognitive Process: Create, Apply 8
6. Students will APPLY historical knowledge and historical thinking "in order to infer what drives and motivates human behavior in both past and present." Bloom Taxonomy's Cognitive Process: Apply, Analyze 9

HIST 1120G. United States History II

3 Credits (3)

The primary objective of this course is to serve as an introduction to the history of the United States from reconstruction to the present. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the development of the United States within the context of world societies.

Learning Outcomes

1. Students will be able to explain in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of the United States from the reconstruction to the present. Bloom Taxonomy's Cognitive Process: Remember and Understand
2. Students will distinguish between primary and secondary sources, identify and evaluate evidence and empathize with people in their historical context. Bloom Taxonomy's Cognitive Process: Analyze, Remember, Evaluate, Create
3. Students will summarize and appraise different historical interpretations and evidence in order to construct past events. Bloom Taxonomy's Cognitive Process: Understand, Evaluate, Apply
4. Students will identify historical arguments in a variety of sources and explain how they were constructed, evaluating credibility, perspective, and relevance. Bloom Taxonomy's Cognitive Process: Remember, Understand, Evaluate

- Students will create well-supported historical arguments and narratives that demonstrate an awareness of audience. Bloom Taxonomy's Cognitive Process: Create, Apply
- Students will apply historical knowledge and historical thinking "in order to infer what drives and motivates human behavior in both past and present." Bloom Taxonomy's Cognitive Process: Apply, Analyze 10 11

HIST 1130G. World History I

3 Credits (3)

The primary objective of this course is to serve as an introduction to global history from ancient times to the 16th century. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the development of world societies. May be repeated up to 3 credits.

Learning Outcomes

- Students will be able to explain in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for global history from ancient times to the 16th century. Bloom Taxonomy's Cognitive Process: Remember and Understand
- Students will distinguish between primary and secondary sources, identify and evaluate evidence and empathize with people in their historical context. Bloom Taxonomy's Cognitive Process: Analyze, Remember, Evaluate, Create
- Students will summarize and appraise different historical interpretations and evidence in order to construct past events. Bloom Taxonomy's Cognitive Process: Understand, Evaluate, Apply
- Students will identify historical arguments in a variety of sources and explain how they were constructed, evaluating credibility, perspective, and relevance. Bloom Taxonomy's Cognitive Process: Remember, Understand, Evaluate
- Students will create well-supported historical arguments and narratives that demonstrate an awareness of audience. Bloom Taxonomy's Cognitive Process: Create, Apply
- Students will apply historical knowledge and historical thinking "in order to infer what drives and motivates human behavior in both past and present." Bloom Taxonomy's Cognitive Process: Apply, Analyze

HIST 1140G. World History II

3 Credits (3)

The primary objective of this course is to serve as an introduction to global history from the 16th century to the present. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the development of world societies. May be repeated up to 3 credits.

Learning Outcomes

- Students will be able to explain in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of global history from the 16th century to the present. Bloom Taxonomy's Cognitive Process: Remember and Understand
- Students will distinguish between primary and secondary sources, identify and evaluate evidence and empathize with people in their historical context. Bloom Taxonomy's Cognitive Process: Analyze, Remember, Evaluate, Create

- Students will summarize and appraise different historical interpretations and evidence in order to construct past events. Bloom Taxonomy's Cognitive Process: Understand, Evaluate, Apply
- Students will identify historical arguments in a variety of sources and explain how they were constructed, evaluating credibility, perspective, and relevance. Bloom Taxonomy's Cognitive Process: Remember, Understand, Evaluate
- Students will create well-supported historical arguments and narratives that demonstrate an awareness of audience. Bloom Taxonomy's Cognitive Process: Create, Apply
- Students will Apply historical knowledge and historical thinking "in order to infer what drives and motivates human behavior in both past and present." Bloom Taxonomy's Cognitive Process: Apply, Analyze

HIST 1150G. Western Civilization I

3 Credits (3)

This course is a chronological treatment of the history of the western world from ancient times to the early modern era. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the development of western civilization within the context of world societies. Selective attention will be given to "non-western" civilizations which impact and influence the development of "western" civilization.

Learning Outcomes

- Students will be able to explain in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of the western world from ancient times to the early modern era. Bloom Taxonomy's Cognitive Process: Remember and Understand
- Students will distinguish between primary and secondary sources, identify and evaluate evidence and empathize with people in their historical context. Bloom Taxonomy's Cognitive Process: Analyze, Remember, Evaluate, Create
- Students will summarize and appraise different historical interpretations and evidence in order to construct past events. Bloom Taxonomy's Cognitive Process: Understand, Evaluate, Apply
- Students will identify historical arguments in a variety of sources and explain how they were constructed, evaluating credibility, perspective, and relevance. Bloom Taxonomy's Cognitive Process: Remember, Understand, Evaluate
- Students will create well-supported historical arguments and narratives that demonstrate an awareness of audience. Bloom Taxonomy's Cognitive Process: Create, Apply
- Students will apply historical knowledge and historical thinking "in order to infer what drives and motivates human behavior in both past and present." Bloom Taxonomy's Cognitive Process: Apply, Analyze 14

HIST 1160G. Western Civilization II

3 Credits (3)

This course is a chronological treatment of the history of the western world from the early modern era to the present. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the development of western civilization within the context of world societies. Selective attention will be given to "non-western" civilizations which impact and influence the development of "western" civilization.

Learning Outcomes

- Students will be able to explain in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course

of the centuries for the history of the western world from the early modern era to the present. Bloom Taxonomy's Cognitive Process: Remember and Understand

2. Students will distinguish between primary and secondary sources, identify and evaluate evidence and empathize with people in their historical context. Bloom Taxonomy's Cognitive Process: Analyze, Remember, Evaluate, Create
3. Students will summarize and appraise different historical interpretations and evidence in order to construct past events. Bloom Taxonomy's Cognitive Process: Understand, Evaluate, Apply
4. Students will identify historical arguments in a variety of sources and explain how they were constructed, evaluating credibility, perspective, and relevance. Bloom Taxonomy's Cognitive Process: Remember, Understand, Evaluate
5. Students will create well-supported historical arguments and narratives that demonstrate an awareness of audience. Bloom Taxonomy's Cognitive Process: Create, Apply
6. Students will apply historical knowledge and historical thinking "in order to infer what drives and motivates human behavior in both past and present." Bloom Taxonomy's Cognitive Process: Apply, Analyze

HIST 1180. MODERN LATIN AMERICA

3 Credits (3)

The primary objective of this course is to serve as a survey of the history of Latin America from independence to the present. This course will explore the contributions of Indigenous peoples, Africans, and Europeans to the creation of Latin America's diverse societies. The elements of this course are designed to inform students on the major events and trends that are essential to the understanding of the history of Latin America within the context of world societies.

Learning Outcomes

1. Students will be able to explain in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of Latin America from independence to the present. Bloom Taxonomy's Cognitive Process: Remember and Understand
2. Students will distinguish between primary and secondary sources, identify and evaluate evidence and empathize with people in their historical context. Bloom Taxonomy's Cognitive Process: analyze, remember, evaluate, create
3. Students will summarize and appraise different historical interpretations and evidence in order to construct past events. Bloom Taxonomy's Cognitive Process: understand, evaluate, apply
4. Students will identify historical arguments in a variety of sources and explain how they were constructed, evaluating credibility, perspective, and relevance. Bloom Taxonomy's Cognitive Process: remember, understand, evaluate
5. Students will create well-supported historical arguments and narratives that demonstrate an awareness of audience. Bloom Taxonomy's Cognitive Process: create. apply
6. Students will apply historical knowledge and historical thinking "in order to infer what drives and motivates human behavior in both past and present." Bloom Taxonomy's Cognitive Process: apply, analyze

HIST 2110. Survey of New Mexico History

3 Credits (3)

The primary objective of this course is to serve as an introduction to the history of New Mexico from the pre- Columbian times to the present day. The elements of this course are designed to inform students on the

major events and trends that are essential in the understanding of the development of New Mexico within the context of the Americas.

Learning Outcomes

1. Students will be able to explain in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of New Mexico from pre-Columbian times to the present day. Bloom Taxonomy's Cognitive Process: Remember and Understand
2. Students will distinguish between primary and secondary sources, identify and evaluate evidence and empathize with people in their historical context. Bloom Taxonomy's Cognitive Process: Analyze, Remember, Evaluate, Create
3. Students will summarize and appraise different historical interpretations and evidence in order to construct past events. Bloom Taxonomy's Cognitive Process: Understand, Evaluate, Apply
4. Students will identify historical arguments in a variety of sources and explain how they were constructed, evaluating, credibility, perspective, and relevance. Bloom Taxonomy's Cognitive Process: Remember, Understand, Evaluate
5. Students will create well-supported historical arguments and narratives that demonstrate an awareness of audience. Bloom Taxonomy's Cognitive Process: Create, Apply
6. Students will apply historical knowledge and historical thinking "in order to infer what drives and motivates human behavior in both past and present." Bloom Taxonomy's Cognitive Process: Apply, Analyze 16

HIST 2245G. Islamic Civilizations to 1800

3 Credits (3)

History of Islamic civilizations to 1800.

Learning Outcomes

1. By the conclusion of the course, the student will be able to demonstrate a knowledge of the history of cultural encounters, exchanges, and conflicts between the Islamic world and the West from the seventh to the sixteenth century;
2. Be able to evaluate the major themes of cultural contact, conflict, and interchange between the Islamic world and the West;
3. Critically read and evaluate historical evidence with the goal of forming an argument about historical evidence
4. Communicate a historical argument logically, clearly, and effectively in writing.

HIST 2246G. Islamic Civilizations since 1800

3 Credits (3)

History of Islamic civilizations since 1800.

Learning Outcomes

1. By the conclusion of the course, the student will be able to demonstrate a knowledge of the history of cultural encounters, exchanges, and conflicts between the Islamic world and the West from the sixteenth century;
2. Be able to evaluate the major themes of cultural contact, conflict, and interchange between the Islamic world and the West;
3. Critically read and evaluate historical evidence with the goal of forming an argument about historical evidence
4. Communicate a historical argument logically, clearly, and effectively in writing.

HIST 2250G. East Asia to 1600

3 Credits (3)

History of China, Korea, Vietnam, and Japan from earliest times through the sixteenth century. Emphasis on cultural and political developments and their social and economic contexts, and the interaction between East Asian societies.

Learning Outcomes

1. Students will learn the analytic skills of interpreting historical changes and continuity.
2. They will assess and use historical documents, and learn how to evaluate varying historical interpretations.
3. Students will understand the chronological and geographic context of important historical events, and will understand the social, technological, economic, cultural and political components of the society under study in this course.
4. Students will understand how people shape their culture and its beliefs, and the way in which prevailing cultures and beliefs shape them.
5. They will understand the historical origins of present-day societies, to learn about their own historical roots.
6. They will learn about the development of structures of power, the production of and distribution of goods, and the relationship between science and technology and human values and behavior.

HIST 2251G. East Asia since 1600

3 Credits (3)

History of China, Korea, Vietnam, and Japan from the sixteenth through the twentieth centuries. Emphasis on internal development of each country, as well as the social and political impact of Western Imperialism, and the emergence of each country's unique version of modern society.

Learning Outcomes

1. Students will learn the analytical skills of interpreting historical changes and continuity.
2. They will assess and use historical documents, and learn how to evaluate varying historical interpretations.
3. Students will understand the chronological and geographic context of important historical events, and will understand the social, technological, economic, cultural and political components of the society under study in this course.
4. Students will understand how people shape their culture and its beliefs, and the way in which prevailing cultures and beliefs shape them.
5. They will understand the historical origins of present-day societies, to learn about their own historical roots.
6. They will learn about the development of structures of power, the production of and distribution of goods, and the relationship between science and technology and human values and behavior.

HIST 2996. Special Topics

1-3 Credits

Specific subjects to be announced in the Schedule of Classes. Community Colleges only. May be repeated for a maximum of 12 credits.

Learning Outcomes

1. Varies

HIST 300. Special Topics

1-9 Credits (1-9)

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 18 credits.

HIST 302V. Science in Modern Society

3 Credits (3)

The social impact of scientific activity and thought from Newton to the present. The growth of modern scientific institutions; the political and social context of modern science. ENGL 1110G recommended.

HIST 308V. The History of Food

3 Credits (3)

From the earliest uses of fire for cooking up through our modern age of fast food and organic gardening, human culinary traditions have long shaped and been shaped by the forces of history. This course offers a general overview of the history of food production and consumption in the West from prehistoric times through the 21st century, with a special focus on the various ways in which social and political history have impacted dining, taste, and cooking. Among a great variety of topics, we will focus on the origins of cooked food; ancient Hebrew dietary laws; the "spice revolution" and the great influence of Arabic cuisine on the kitchens of medieval Europe; emerging ideas about etiquette and table manners including the use of the fork; the advent of print and the first printed cookbooks; the Columbian Exchange and the arrival of foods from the New World; the rise of French cuisine; food and immigration; the global dominance of fast food; and sustainable food production and consumption in the modern era. We will pay a special emphasis throughout the course to the myriad ways in which food production and consumption in history have always been gendered, as well as influenced by ideas about social class.

Learning Outcomes

1. Master a general master narrative about the history of food in the Western World, including a variety of European countries;
2. Analyze the relationship between food and culture in a variety of countries and traditions;
3. Critically read and learn to evaluate secondary historical literature, grasping the strengths and weaknesses of historical monographs; and
4. Communicate a historical argument logically and effectively in a 20-page original research paper.

HIST 311V. Colonial Latin America

3 Credits (3)

Social, political, and economic development from Columbus to the Wars of Independence. Research paper required.

HIST 312V. Modern Latin America

3 Credits (3)

Post-revolutionary developments in the nineteenth and twentieth centuries; the role of Latin America in world affairs and the Inter-American system. Research paper required.

HIST 313. Making the American West

3 Credits (3)

Development of the American West from 1803 to 1900 with emphasis on conquest, federal and corporate roles in western development, environmental change, and the Mythic West. Includes meetings outside regular class time to view feature-length films.

HIST 320. American History Through Film

3 Credits (3)

This course uses feature films as texts to examine the depiction of major themes and events in American history and society. It considers both the accuracy of these depictions, and the way in which the historical viewpoint of feature films is influenced by factors including directorial point of view and popular memory. It also examines the influence of feature films on popular understandings of the American past. May be repeated up to 3 credits.

Learning Outcomes

1. Students will critically analyze and evaluate the accuracy and truthfulness of cinematic representations of episodes in U.S. history, and convey these analyses and evaluations orally and in writing.
2. Students will evaluate contemporary claims made concerning the value of films for historical understanding, and convey these analyses and evaluations orally and in writing.
3. Students will assess the ways in which films serve as historical documents that illuminate the cultural, social, and political history of the eras in which they were produced, and convey these analyses and evaluations orally and in writing.

HIST 321V. History of Korea**3 Credits (3)**

Social, political, and cultural history of Korea from earliest times through twentieth century. Emphasis on the interaction between Korean traditions and influences from China and the West. May be repeated up to 3 credits.

Learning Outcomes

1. Students will learn the analytical skills of interpreting historical changes and continuity.
2. They will assess and use historical documents, and learn how to evaluate varying historical interpretations.
3. Students will also understand the chronological and geographic context of important historical events, and will understand the social, technological, economic, cultural and political components of the society under study in this course.
4. Students will examine how people shape their culture and beliefs, and the way in which prevailing cultures and beliefs shape them.
5. They will understand the historical origins of present-day societies, to learn about their own historical roots.
6. They will learn about the development of structures of power, the production of and distribution of goods, and the relationships between science and technology and human values and behavior.

HIST 323. Cultural History of Later Imperial China**3 Credits (3)**

Covers art and literature of China from the Tang Dynasty (618-907) through the eighteenth century. Developments in cultural theory and practice are traced in the context of the social and economic changes fostering an understanding of Chinese cultural history and its legacy in East Asia today.

HIST 329. History of Egypt**3 Credits (3)**

History of Egypt from ancient times to the present.

HIST 330V. Introduction to Religious Studies**3 Credits (3)**

Provides an overview of old and new methods and theories for the study of religion. Exposure to the ways groups of people in diverse cultural systems construct and change their religious traditions to serve practical and meaningful ends. May be repeated up to 3 credits.

HIST 331. Rebels, Guerrillas, and Terrorists in Modern Latin America**3 Credits (3)**

Explores history of rebels in Latin America. Examines guerilla struggles attaining national dimension. Focus on modern events, including Peru's Shining Path, Colombia's FARC, and Mexico's Zapatistas. Same as POLS 468.

HIST 333. Renaissance Europe**3 Credits (3)**

This course explores the cultural, social, and political developments of early modern Europe between 1350-1650. This period witnessed a dramatic transformation between the medieval and modern worlds: a transition marked by new historical and artistic visions, the invention of the printing press, the discovery of the New World, the permanent fracturing of Christianity during the Protestant Reformation, the scientific revolution, and the rise of capitalism as a world system. We will consider these and other transformations in this time period both as they were understood by elite society as well as the impact of these innovations upon the daily lives of everyday people and women in particular.

Learning Outcomes

1. Identify the key historical facts, values, and ideas that shaped the history of Europe between 1400-1650;
2. Analyze the causes and effects of the Renaissance, the Age of Encounters, the Reformation, and the Scientific Revolution;
3. Identify the major artistic, literary, and technological contributions of individuals during this time period;
4. Describe how cultural exchanges reveal the global context of events in early modern Europe; and
5. Create well-supported historical arguments based on primary and secondary source evidence.

HIST 338. World War I**3 Credits (3)**

Cultural, social, and intellectual background and impact of World War I. Military and diplomatic events of the war. Consequences of the war.

HIST 339. World War II**3 Credits (3)**

Social, cultural and political aspects of World War II, in addition to traditional military events. Emphasis on U.S. involvement.

HIST 343. Recent American Military History**3 Credits (3)**

Emphasis on American wars since the Civil War, and on factors contributing to the development of modern military systems.

HIST 347. Civil War Era 1840-1877**3 Credits (3)**

Mexican-American War, development of secession, American Civil War, Reconstruction.

HIST 361. African American History to 1877**3 Credits (3)**

African background, slave trade, slavery; Civil War and Reconstruction; free blacks in a white society to about 1900. May be repeated up to 3 credits.

Learning Outcomes

1. Students will evaluate and employ primary and secondary sources in order to understand varying historical interpretations and craft their own interpretations of historical evidence in discussions and essays.
2. Students will analyze and compare political, economic, social and intellectual institutions, structures and processes over the period from the great African Empires (circa 900CE) to the end of the period of Reconstruction (1877), with particular focus on the experiences of African Americans.
3. Students will strengthen their argumentative skills through online class discussions and written assignments.
4. Students will demonstrate an understanding of academic honesty and the ability to cite, paraphrase, and quote sources.
5. Students will demonstrate an ability to think about the interaction between present and past issues presented in the class.

HIST 362. African American History, 1865-present**3 Credits (3)**

Black Americans in the United States in the twentieth century; segregation; black leaders, organizations, methods and goals; white reaction; the struggle for equality. May be repeated up to 3 credits.

Learning Outcomes

1. Students will evaluate and employ primary and secondary sources in order to understand varying historical interpretations and craft their own interpretations of historical evidence in discussions and essays.
2. Students will analyze and compare political, economic, social and intellectual institutions, structures and processes over the period of the Civil Rights Movement through readings, interaction with primary source documents, essays, and discussions.
3. Students will strengthen their argumentative skills through online class discussions and written assignments.
4. Students will demonstrate an understanding of academic honesty and the ability to cite, paraphrase, and quote sources.
5. Students will demonstrate an ability to think about the interaction between present and past issues presented in the class.

HIST 366V. British Imperialism**3 Credits (3)**

Survey of the activities of the British empire from the 16th century through the 20th century, with emphasis on Ireland, North America and India. Assesses the impact of imperial activities on British domestic politics, culture and social history, and the process and impact of decolonization.

HIST 368. Teaching History**3 Credits (3)**

Philosophical and practical issues of teaching history are explored. Designed to help prospective teachers at all levels clarify their views about studying history. A variety of pedagogical strategies for teaching history are explored.

HIST 371. Greek Civilization: From Helen of Troy to Alexander the Great**3 Credits (3)**

This course provides a survey of Greek history from the Trojan War through the conquests of Alexander the Great. Topics include the formation of the Greek city-states with a focus on Sparta and Athens and the wars between them, the invention of democracy in Athens, the birth of the discipline of history, the development of philosophy, the trial and death of Socrates, and the spread of Greek culture to the borders of India because of the conquests of Alexander the Great. We will explore most aspects of Greek society, using Greek authors and artists to introduce much of the material. Attention is paid to the everyday life of ancient Greeks not just power politics. May be repeated up to 3 credits.

Learning Outcomes

1. Students will define, explain, and analyze the major political, social and cultural transformations of Greek history through a variety of primary sources, including works of literature and art.
2. Students will distinguish between primary and secondary sources, identify and evaluate evidence and empathize with people in their historical context.
3. Students will critically read and evaluate historical evidence with the goal of forming an historical argument.
4. Students will communicate a historical argument logically, clearly, and effectively in writing.

HIST 372. Roman Civilization**3 Credits (3)**

In this course we will explore the growth of Rome from a village in the Italian peninsula to a global empire stretching from Spain to Syria and Britain to the sands of the Sahara. We will focus on the development of political, social, and cultural institutions in the construction of the Roman Republic and the enormous military conquests of that period. We then examine the transformation of the Republic into an empire, governed by an emperor. Finally, we analyze the rise of Christianity in the Roman world and the Roman empire's decline in the 5th century C.E. Attention is paid to the everyday life of ancient Romans not just power politics. May be repeated up to 3 credits.

Learning Outcomes

1. Students will define, explain, and analyze the major political, social and cultural transformations of Roman history through a variety of primary sources.
2. Students will distinguish between primary and secondary sources, identify and evaluate evidence and empathize with people in their historical context.
3. Students will critically read and evaluate historical evidence with the goal of forming an historical argument.
4. Students will communicate a historical argument logically, clearly, and effectively in writing.

HIST 373. Islam and the West: Cultural Contacts, Conflicts, and Exchanges**3 Credits (3)**

This course examines interactions, encounters, and cross-fertilization between the Islamic world and the West from the 7th– 21st century. Topics include the relationship of Islam to Judaism and Christianity, the rise of an Islamic empire and the development of Islamic civilization, the Crusades, the impact of Islamic culture on Europe and the Italian Renaissance. It also explores the shifting relationships between Muslims, Christians, and Jews throughout this period.

Learning Outcomes

1. Student will be able to demonstrate a knowledge of the history of cultural encounters, exchanges, and conflicts between the Islamic world and the West from the seventh to the early twenty-first century.
2. Students will be able to evaluate the major themes of cultural contact, conflict, and interchange between the Islamic world and the West.
3. Students will critically read and evaluate historical evidence with the goal of forming an argument about historical evidence.
4. Students will communicate a historical argument logically, clearly, and effectively in writing.

HIST 379V. The History of Italy from the Etruscans to the Mafia**3 Credits (3)**

Italy is beloved by many, for its food, language, and art; however, we often understand it only superficially, and often fail to grasp the darker elements of its history. This class will consider the history of the Italian peninsula from the time of its earliest inhabitants, the Etruscans, up through the twenty-first century. We will consider topics such as the Roman world and its legacy, the rise of Christianity, the growth of medieval towns and their economies, Renaissance, the Risorgimento or the formation of the modern nation of Italy, Italian fascism, the wars of the twentieth century, Italian film, the history of Italian food including pizza and pasta, Italian communism, and the growth of organized crime and the mafia. Special attention will be paid throughout to the relationship between Northern and Southern Italy, as well as the special city of Venice and its relationship to the rest of the peninsula.

Learning Outcomes

1. Master a general master narrative about the history of Italy from its earliest inhabitants through the twenty-first century
2. Identify a variety of developments in the history of Italian culture, including art, literature, food, and film;
3. Critically read and evaluate primary and secondary historical sources and
4. Communicate a historical argument logically and effectively in a 15-page original research paper.

HIST 382V. Modern Russia**3 Credits (3)**

Domestic policies and foreign relations from mid-nineteenth century to the present with emphasis on the Soviet period.

HIST 383. Germany**3 Credits (3)**

Political, social, and cultural developments from the eighteenth century to the present, with emphasis on the Nazi era. Same as POLS 473.

HIST 386. New Mexico History**3 Credits (3)**

Economic, political and social development of New Mexico from exploration to modern times.

HIST 387. Spain in the New World: Conquest, Conflict, and Cultural Exchange**3 Credits (3)**

The history of Spain, with a focus on Spain's interaction with the New World. May be repeated up to 3 credits.

Learning Outcomes

1. The student will be able to demonstrate a knowledge of the history of Spanish contacts, conquests, and influences in the New World from the late fifteenth century until the early twenty first century;
2. Be able to evaluate the major themes of cultural contact, conflict, and interchange between the Spain and the New World; Critically read and evaluate historical evidence in order to construct past events;
3. Communicate a historical argument logically, clearly, and effectively in writing.

HIST 390V. The Holocaust**3 Credits (3)**

The attack upon European Jews by Adolf Hitler and the National Socialist Party in Germany and occupied Europe from his accession to chancellor in 1933 until the end of the Third Reich in 1945.

HIST 397. Introduction to Public History**3 Credits (3)**

Surveys how historians do history in museums, archives, government agencies, and in communities. Hands-on experience provides students a better understanding of history and how historians work outside of the classroom. Seminar project required.

HIST 398. Historians and History**3 Credits (3)**

General historiography and philosophy of history; historical methodology, research, and writing; bibliographical aids and their uses. May be repeated up to 3 credits. Restricted to: HIST majors.

HIST 400. Special Topics**1-9 Credits (1-9)**

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 18 credits.

HIST 402. Special Topics in European History**3 Credits (3)**

Special topics in European history to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

HIST 403. Special Topics in Middle Eastern History**3 Credits (3)**

Special topics in Middle Eastern history to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

HIST 404. Special Topics in Asian History**3 Credits (3)**

Special topics in Asian history to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

HIST 406. Special Topics in United States History**3 Credits (3)**

Special topics in United States history to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

HIST 413. Native American History**3 Credits (3)**

Seminar explores the history of Native Americans, including tribal conflicts, interactions with Europeans and Euro-Americans, land loss, degradation of natural resources, federal Indian policy, pan-Indian movements, cultural resistance and revitalization, and modern tribal economies.

HIST 414. The Constitution and U.S. History**3 Credits (3)**

This seminar examines the history and political context of the ideas that coalesced in the U.S. Constitution, from 1603 to the writing of the Constitution and into the Early Republic.

Learning Outcomes

1. Students will evaluate and employ primary and secondary sources in order to understand varying historical interpretations and craft their own interpretations of historical evidence in discussions and essays.
2. Students will analyze the relationship between historical events in the Atlantic world and the development of key political concepts including divine right monarchy, constitutional monarchy, individual representation, the social contract theory, checks and balances, and the theoretical and practical processes of constitution-writing and ratification.
3. Students will strengthen their critical thinking argumentative skills through class discussions.
4. Students will demonstrate public speaking and class leadership skills by preparing and leading class discussions.
5. Students will demonstrate an understanding of academic honesty and the ability to cite, paraphrase, and quote sources.
6. Students will demonstrate an ability to think about the interaction between present and past issues presented in the class.
7. Students will undertake a major project of historical synthesis at the end of the semester.

HIST 431. History of Race and Ethnicity**3 Credits (3)**

Seminar explores the historical social construction of race and ethnicity, and their relationship to other systems of social difference such as class and gender. Course will examine popular and academic theories of race and ethnicity as well as historical concrete effects of racial and ethnic differences in society.

HIST 433. United States Labor History Since 1877**3 Credits (3)**

Seminar discussions explore United States labor and working-class history since 1877, including such topics as industrial labor, debt peonage, and housework. May explore the history of labor organization,

working-class culture and leisure activities, and responses to labor issues by the state. May be repeated up to 3 credits.

HIST 434. Urban History

3 Credits (3)

Seminar discusses cities as complex catalysts for cultural, political, and scientific development, both within cities themselves and more broadly for their nations and regions. Course deals with such topics as the relationship between social organization and physical space; city development, morphology and dynamics; and the cultural and intellectual history of cities.

HIST 435. History of War and Revolution

3 Credits (3)

Seminar covers historical dynamics of violent social, political, and economic transitions. May focus upon a particular war or upheaval, such as World War II or the French Revolution, or may examine more generic characteristics of conflict and radical change across many historical examples. Extensive readings in scholarly literature. Research projects relating to specific course contents.

HIST 438. Antiquity and Modernity

3 Credits (3)

Seminar explores links between earlier and more recent historical periods. Examples may include the Renaissance rediscovery of ancient Rome or the early modern Chinese reassessment of its classical Confucian heritage. Readings include ancient sources and the modern reception of such works, and the scholarly assessment of these processes. Individual research projects required in areas of student interests.

HIST 443. The Cold War in Latin America

3 Credits (3)

Seminar discusses Latin American political history during the Cold War. Course focuses on how Latin Americans (individuals, parties, militaries, states) acted in an increasingly politicized arena defined by growing United States concerns over Cuban and Soviet influence in the area.

HIST 449. Readings

1-3 Credits

Individual study of selected readings and problems. May be repeated for a maximum of 6 credits.

Prerequisite: consent of instructor.

HIST 471. China through the Ming Dynasty

3 Credits (3)

History of China from origins to Ming dynasty, (1368-1644). Cultural and political development with emphasis on social and economic contexts and long term trends.

HIST 472. China in the Modern World

3 Credits (3)

History of China from seventeenth through twentieth centuries. Rise and fall of the Manchu Qing dynasty, internal dynamics of social and political change in nineteenth and twentieth centuries, impact of Western Imperialism, and development of the Peoples Republic since 1949.

Learning Outcomes

1. Students will learn the basic narrative of modern Chinese history.
2. Students will learn to understand and evaluate historical arguments and interpretations.
3. Students will learn to work with primary sources and to analyze and interpret their contents.
4. Students will complete a research paper combining primary and secondary sources and making a sustained historical argument.

HIST 473. History of Japan

3 Credits (3)

History of Japan through twentieth century. Political and cultural developments and their social and economic contexts. Chinese influence on early Japan, rise of Samurai and Shogunate, impact of Western Imperialism, and emergence of modern Japan.

HIST 474. Gender in East Asian History

3 Credits (3)

Examines the position of women and the social roles of both sexes in traditional China and Japan, and traces the changes taking place in those societies in the course of modernization in the last century and a half. Scholarly literature and works of Chinese and Japanese literature in translation and cinema used. Same as GNDR 474.

HIST 475. History of the Global Political Economy

3 Credits (3)

Traces development of global systems of economic interaction and the rise of European military and political dominance in the 18th and 19th centuries. Emphasis on East and South Asian roles in early modern history, and on challenges to European dominance in the 20th and 21st centuries.

HIST 478. History of Transportation: Planes, Trains and Automobiles

3 Credits (3)

The course examines the impact of changes in transportation technology on society from the 19th century to the present, with a focus on the Americas, both the United States and Latin America. Revolutionary changes such as the railroad, the steamship, and later the automobile and the airplane changed the way that people lived, worked and interacted with others.

Learning Outcomes

1. Analyze primary sources by placing them into historical context.
2. Improve writing skills using Chicago style of writing.
3. Explain the nature of technological change in history and its impact in society.
4. Relate historical events to current-day debates about transportation.
5. Practice team-work through Team Based Learning method.

HIST 479. Oral History

3 Credits (3)

Oral history through readings, discussions, and interviews. Semester project required that includes an interview and transcript.

HIST 483. Historic Preservation

3 Credits (3)

Study of community development, the historic preservation movement, and the built environment. Field project.

HIST 486. Interpreting Historic Places for the Public

3 Credits (3)

Explores historic site interpretation, the scholarship and philosophy of historic interpretation, and the nature of heritage interpretation for historic places.

HIST 489. Projects in History

3 Credits (3)

Individual projects in history. May be repeated for a maximum of 6 credits.

Prerequisite: consent of instructor.

HIST 500. Special Topics

1-9 Credits (1-9)

Specific subjects to be announced in the Schedule of Classes. Graduate research paper required. May be repeated for a maximum of 12 credits.

HIST 504. Civil War Era, 1840-1877**3 Credits (3)**

Mexican-American War, development of secession, American Civil War, Reconstruction. Graduate research paper required.

HIST 511. Making the American West**3 Credits (3)**

Development of the American West from 1803 to 1900, with emphasis on conquest, federal and corporate roles in western development, environmental change, and the mythic West. Includes extra class meetings to view feature-length films. Graduate research paper required.

HIST 514. The Constitution and U.S. History**3 Credits (3)**

This seminar examines the history and political context of the ideas that coalesced in the U.S. Constitution, from 1603 to the writing of the Constitution and into the Early Republic.

Learning Outcomes

1. Students will evaluate and employ primary and secondary sources in order to understand varying historical interpretations and craft their own interpretations of historical evidence in discussions and essays.
2. Students will analyze the relationship between historical events in the Atlantic world and the development of key political concepts including divine right monarchy, constitutional monarchy, individual representation, the social contract theory, checks and balances, and the theoretical and practical processes of constitution-writing and ratification.
3. Students will strengthen their critical thinking argumentative skills through class discussions.
4. Students will demonstrate public speaking and class leadership skills by preparing and leading class discussions.
5. Students will demonstrate an understanding of academic honesty and the ability to cite, paraphrase, and quote sources.
6. Students will demonstrate an ability to think about the interaction between present and past issues presented in the class.
7. Students will undertake a 10-12 page research paper in which they will integrate and extend learned material.

HIST 523. The History of Food**3 Credits (3)**

Considers the history of the production and consumption of food in the West from the Neolithic Age to the present with an emphasis on the historical relationships between food, gender, social class, social identity and nationalism.

HIST 527. Labor History**3 Credits (3)**

Seminar discussions explore labor and working-class history, including such topics as pre-industrial labor, slavery, debt peonage, indentured servitude, and housework. May explore the history of labor organization, working-class culture and leisure activities, and responses to labor issues by the state.

HIST 535. War and Revolution**3 Credits (3)**

Seminar covers historical dynamics of violent social, political and economic transitions. May focus upon a particular war or upheaval, such as World War II or the French Revolution, or may examine more generic characteristics of conflict and radical change across many historical examples. Extensive readings in scholarly literature. Research projects relating to specific course contents.

HIST 538. Special Topics in European History**3 Credits (3)**

Advanced special topics in European history to be announced in the schedule of classes. May be repeated for a maximum of 12 credits.

HIST 540. Special Topics in Middle Eastern History**3 Credits (3)**

Advanced special topics in Middle Eastern history to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

HIST 543. Special Topics in Asian History**3 Credits (3)**

Advanced special topics in Asian history to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

HIST 545. Special Topics in United States History**3 Credits (3)**

Advanced special topics in United States history to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

HIST 549. Graduate Readings**1-3 Credits**

Individual study of selected readings and problems. May be repeated for a maximum of 6 credits.

Prerequisite: consent of instructor.

HIST 568. Urban History**3 Credits (3)**

Seminar discusses cities as complex catalysts for cultural, political, and scientific development, both within cities themselves and more broadly for their nations and regions. Course deals with such topics as the relationship between social organization and physical space; city development, morphology and dynamics; and the cultural and intellectual history of cities.

HIST 570. The Cold War in Latin America**3 Credits (3)**

Seminar discusses Latin American political history during the Cold War. Course focuses on how Latin Americans (individuals, parties, militaries, states) acted in an increasingly politicized arena defined by growing United States concerns over Cuban and Soviet influence in the area.

HIST 571. China through the Ming Dynasty**3 Credits (3)**

History of China from origins to Ming Dynasty, 1368-1644. Cultural and political development with emphasis on social and economic contexts and long term trends. Research paper required.

HIST 572. China in the Modern World**3 Credits (3)**

Covers the history of China from 17th through 20th centuries. Rise and fall of the Manchu Qing dynasty, internal dynamics of social and political change in the 19th and 20th centuries, impact of Western imperialism, and development of the Peoples Republic since 1949. Research paper required. May be repeated up to 3 credits.

Learning Outcomes

1. Students will learn the basic narrative of modern Chinese history.
2. Students will learn to understand and evaluate historical arguments and interpretations
3. Students will learn to work with primary sources and to analyze and interpret their contents.
4. Students will complete a research paper combining primary and secondary sources and making a sustained historical argument.

HIST 573. History of Japan**3 Credits (3)**

Covers the history of Japan through the 20th century. Political and cultural developments and their social and economic contexts. Chinese

influence on early Japan, rise of Samurai and Shogunate, impact of Western imperialism, and the emergence of modern Japan. Research paper required.

HIST 575. History of the Global Political Economy
3 Credits (3)

Traces development of global systems of economic interaction and the rise of European dominance in the 18th and 19th centuries. Emphasis on East and South Asian roles in early modern history, and on challenges to European dominance in the 20th and 21st centuries.

HIST 579. Oral History
3 Credits (3)

Oral history through readings, discussion, and interviews. Course project required that includes an interview and transcription.

HIST 580. Graduate Research Projects
1-6 Credits (1-6)

Intensive investigation of a selected area of history, including the completion of a research paper or a public history project. Consent of instructor required.

HIST 583. Advanced Historic Preservation
3 Credits (3)

Covers the community development, the historic preservation movement, and the built environment. Field project and additional graduate work.

HIST 585. Public History Internship
3 Credits (3)

Individual project in an area of public history, including a final written report. Research project required. May be repeated for a maximum of 9 credits.

Prerequisite: consent of instructor.

HIST 586. Interpreting Historic Places for the Public
3 Credits (3)

Advanced study of historic site interpretation, the scholarship and philosophy of historic interpretation, and the nature of heritage interpretation for historic places.

HIST 590. Reading Seminar: Borders, Boundaries and Frontiers
3 Credits (3)

Explores questions and issues concerning different kinds of borders, boundaries and frontiers. Introduces relevant theoretical literature and considers specific places and times through case studies, including U.S.-Mexico border. Restricted to students in HIST program.

HIST 591. Reading Seminar: Modernity and its Discontents
3 Credits (3)

Examines the problem of modernization and the meaning of becoming and being modern, including positive and negative effects on individuals, cultures, environments and societies.

HIST 592. Reading Seminar: Nature and Society
3 Credits (3)

Considers how humans and nature have reshaped each other, how people have perceived nature, how different cultures have understood their relationships to nature, and how social groups and nations have struggled over natural resources. Takes a comparative, transnational approach.

HIST 593. Reading Seminar: History, Myth and Memory
3 Credits (3)

Course analyzes the complex and often contested process of writing national histories, creating national heroes, and forging collective memories. Students assess written texts, memorials, parades and celebrations.

HIST 594. Public History Seminar
3 Credits (3)

Introduction to the discipline of public history, including its methodology and literature. Fieldwork is required.

HIST 596. Research Seminar
3 Credits (3)

Research seminar teaches students the process of conducting original historical research with primary source documents. Students will then use these research skills to produce a polished chapter or article-length manuscript. Restricted to HIST majors.

HIST 597. Public History Article
1-9 Credits (1-9)

Researching and writing an article suitable for publication about a student's public history internship or other topic of interest within the field of public history.

HIST 598. Craft of History: Historical Theories, Methods, and Criticism (f)
3 Credits (3)

Introduction to historical theories, methodologies, criticism, and skills essential to graduate study in history. Required for all history graduate students; restricted to history majors.

HIST 599. Master's Thesis
1-15 Credits (1-15)

Thesis.

History - Bachelor of Arts

The undergraduate history major consists of at least 36 credits in the major field, 21 credits of which must be numbered 300 or above. All courses must be passed with grades of C- or higher, and none may be taken on an S/U basis. Electives must be carefully selected by the student and approved by a Department of History advisor so that the student's program is well tailored to individual goals. All majors must be advised prior to registration.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Prefix	Title	Credits
General Education		
<i>Area I: Communications</i>		10
	<i>English Composition - Level 1</i> ¹	
	<i>English Composition - Level 2</i> ¹	
	<i>Oral Communication</i> ¹	
<i>Area II: Mathematics</i> ^{1,2}		3-4
<i>Area III/IV: Laboratory Sciences and Social/Behavioral Sciences</i>		10-11
	<i>Area III: Laboratory Sciences (4 credits)</i> ¹	
	<i>Area IV: Social/Behavioral Sciences Course</i> ¹	

Either an Area III/IV: Laboratory Sciences or Social/Behavioral Sciences Course (4 credits or 3 credits) ¹

Area V: Humanities

Choose one HIST course from the following to satisfy the Area V requirement and another one to satisfy the General Education elective requirement: 3

HIST 1105G	Making History
HIST 1130G	World History I
HIST 1140G	World History II
HIST 1150G	Western Civilization I
HIST 1160G	Western Civilization II
HIST 1110G	United States History I
HIST 1120G	United States History II
HIST 2245G	Islamic Civilization to 1500
HIST 2246G	Islamic Civilizations since 1800
HIST 2250G	East Asia to 1600
HIST 2251G	East Asia since 1600

Area VI: Creative and Fine Arts ¹ 3

General Education Elective 3

Viewing A Wider World ³ 6

Departmental/College Requirements

A total of 15 credits of lower-division HIST courses are required. 15

HIST 1105G	Making History
HIST 1150G	Western Civilization I
HIST 1160G	Western Civilization II
HIST 1130G	World History I
HIST 1140G	World History II
HIST 1110G	United States History I
HIST 1120G	United States History II
HIST 2250G	East Asia to 1600
HIST 2251G	East Asia since 1600
HIST 2245G	Islamic Civilization to 1500
HIST 2246G	Islamic Civilizations since 1800
HIST 311V	Colonial Latin America
HIST 312V	Modern Latin America

Required Course

Students should take HIST 398 in their Junior year, if possible.

HIST 398 Historians and History ⁵ 3

Select at least 18 credits of upper-division courses, excluding HIST 398. At least 6 credits of upper-division courses must be at the 400 or above level. ⁵ 18

Second Language Requirement: (not required)

Electives, to bring the total credits to 120

Select sufficient electives to bring total credits to 120, including 48 upper-division credits. ⁶ 44-46

Total Credits 120

¹ See the General Education (p. 227) section of the catalog for a full list of courses.

² A Mathematics course is required for the degree but students may need to take any prerequisites needed to enter the course first.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁴ Students who complete their Humanities General Education requirements with courses outside of the HIST prefix will need to take an additional 6 credits of lower-division HIST, in order to complete the requirement with a total of 12 credits

⁵ **Majors must pass a total of 21 upper division History credits** (including HIST 398 Historians and History) with at least 6 at the 400 level.

HIST 311V Colonial Latin America and HIST 312V Modern Latin America cannot be counted towards this requirement.

⁶ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Arts in History there is no second language requirement for the degree.

Secondary Licensure

History majors who are planning on pursuing certification as public school teachers should take the following six courses in preparation. These six courses will complete approximately half of the course work necessary for students to earn teaching licensure in New Mexico. After completing the undergraduate degree in History with a grade point average of 2.5 or above, the student should apply to the Graduate School for admission to the Department of Curriculum and Instruction and the Teacher Education Program in the College of Education to pursue the remaining courses needed to complete secondary licensure.

Prefix	Title	Credits

HIST 1110G	United States History I	
HIST 1120G	United States History II	
HIST 2250G	East Asia to 1600	
HIST 2251G	East Asia since 1600	
HIST 2245G	Islamic Civilization to 1500	
HIST 2246G	Islamic Civilizations since 1800	
Select 12 additional credits in History (at least 9 credits must be numbered 300 and above)		12
Total Credits		18

Note: All courses must be passed with grades of C- or above. No courses may be taken S/U.

Individualized Studies - Bachelor of Individualized Studies

The Bachelor of Individualized Studies (BIS) prepares students for 21st century challenges. This degree serves students desiring an academic degree not already offered at NMSU. Students served by the BIS are those with extensive, comprehensive or eclectic academic and career interests. Self-motivated and self-directed students work closely with an advisor to select classes each semester with the intent of graduating in a timely manner, ideally with at least one minor. Recommended and chosen courses should be organized to meet the unique educational needs of the student, be it professional advancement within an existing career, academic preparation for graduate or professional programs, a strategy for career change, or a plan for efficiently utilizing prior university credits to complete a Bachelor Degree.

A well-designed individualized curriculum emphasizes the value of approaching complex issues from multiple perspectives, equipping students with the requisite critical and analytical skills to become effective problem solvers in their chosen fields of study or career. Each student should select courses designed to integrate academic and career goals into a cohesive degree program.

Extensive flexibility in program design implies increased individual responsibility for the BIS student. BIS students must be active participants in their academic experience, simultaneously pursuing a skill-set demonstrating:

- Coherent expression of ideas in writing;
- Capacity to conduct systematic and objective inquiry within their program of study;
- Ability to tolerate ambiguity within the design and implementation of a program of study;
- Proactive communication with the academic advisor;
- Commitment to effective follow-through on tasks related to program of study design and implementation.

To Declare a BIS

Students entering the BIS degree program work in consultation with a BIS advisor and complete a series of courses building on the applicant's existing coursework and complementing the applicant's education or career goals.

Deadline for Declaring BIS Major: Students must declare the BIS degree by the last date to drop with a "W" in a student's final semester of study (*see NMSU Academic Calendar for date*).

Degree Requirements

To graduate with the Bachelor of Individualized Studies degree, you must complete a minimum 120 credit hours (or more, as determined in consultation with your academic advisor). (*Note: The NMSU College of Business allows a maximum of 30 business credit hours to count towards the BIS degree. Also, the only College of Business minor allowed is the Business Administration Minor.*)

BIS students must also

- Complete a minimum of 48 credit hours of upper-division courses (300-499 level), including six credits of Viewing a Wider World (VWW) (p. 231) from courses in two separate colleges at NMSU. You may substitute three credits of VWW with credits taken in study abroad. A minimum of 36 of the 48 required upper-division credits must have a grade of C- or better.
- Complete the University's General Education Core Requirements (minimum of 32 credit hours of approved New Mexico General Education courses (p. 227)).
- Not have completed the requirements, or be a candidate, for another baccalaureate degree.

In addition, it is strongly recommended that students take one or more of the Interdisciplinary Studies courses designed specifically for the Bachelor of Applied Studies and the Bachelor of Individualized Studies degrees: INTR 300 Foundations of Interdisciplinary Studies and/or INTR 301 Interdisciplinary Research: Theory & Practice. These courses prepare BAS and BIS students to better plan and conceptualize their degree as they prepare to move into their professional careers or graduate school.

Second Language Requirement

For the Bachelor of Individualized Studies there is no second language requirement for the degree.

Individualized Studies (Pre-Pharmacy) - Bachelor of Individualized Studies

The Pre-Health minor is designed to be useful for undergraduate students interested in attending health-related professional schools (i.e., medical, dental, physical therapy, etc.). The courses selected for the minor represents content that will help prepare students to apply and attended health-related professional schools.

Requirements

A minor in Pre-Health must include 22 credits from the listed courses work below.

Prefix	Title	Credits
Core Courses ¹		
BCHE 395	Biochemistry I	3
BIOL 354 or SPMD 3210	Physiology of Humans Anatomy and Physiology II	3
BIOL 305 or GENE 320	Principles of Genetics Hereditary and Population Genetics	3
<i>Choose one of the following:</i>		4
PHYS 2240G & PHYS 2240L	General Physics for Life Science II and Laboratory to General Physics for Life Science II ²	
PHYS 1240G & PHYS 1240L	Algebra-Based Physics II and Algebra-Based Physics II Lab	
PHYS 2140 & 2140L	Electricity and Magnetism and Electricity & Magnetism Laboratory	
PHYS 1320G & PHYS 1320L	Calculus -Based Physics II and Calculus -Based Physics II Lab	
Biology, Genetics, Anthropology, Kinesiology and Public Health area courses		

Choose one of the following: 3-4

BIOL 311	General Microbiology
BIOL 377	Cell Biology
BIOL 385	An Introduction to Cancer
BIOL 474	Immunology
BCHE 396	Biochemistry II, Lecture and Laboratory
GENE 320	Hereditary and Population Genetics
GENE 315	Molecular Genetics
TOX 361	Basic Toxicology
SPMD 3050	Therapeutic Modalities
SPMD 4450	Pathophysiology and Human Function(s)
SPMD 4510	Neurophysiology and Human Function
PHLS 4610	Health Disparities: Determinants and Interventions
ANTH 355	Biological Anthropology
ANTH 402	Contemporary Medical Anthropology
ANTH 435	Human Health and Biological Variation
Statistics and Math area courses	
<i>Choose one of the following:</i> 3	
MATH 1350G	Introduction to Statistics
A ST 311	Statistical Applications
Experiential Learning area courses	
<i>Choose one of the following:</i> 3	
CHEM 441	Advanced Research
BCHE 441	Advanced Research in Biochemistry
HNRS 413	Medical Shadowing
HNRS 400	Honors Capstone
SPMD 4610	Research Seminar
SPMD 4997	Problems
PHLS 4515	Problems in Health Education
PHLS 4998	Community Health Education Field Experience
ANTH 486	Community Engagement and Service Learning
Total Credits	22-23

¹ Any prerequisites for courses on the list must be satisfied before taking listed courses.

² PHYS 2230G General Physics for Life Science I/PHYS 2230L Laboratory to General Physics for Life Science I should be taken in the fall semester before taking PHYS 2240G General Physics for Life Science II/PHYS 2240L Laboratory to General Physics for Life Science II in the following spring semester.

Recommendations for VWW courses (not required):

- PHLS 3130V Global Environmental Health Issues
- PHLS 4620V Cross-Cultural Aspects of Health
- ANTH 357V Medical Anthropology
- GNDR 381V Women's Health Issues/PHLS 3120V Women's Health Issues (cross-listed class)
- GNDR 433V Sex, Gender and Culture
- SOCI 3245V Comparative Family Systems

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1220G College Algebra and ENGL 1110G Composition I. This plan only counts those credits earned while in residence at NMSU, not the credits to be earned subsequently in the UNM PharmD program and transferred back to NMSU. The contents and order of this roadmap may vary depending on initial math and English placement and other factors. While students need to satisfy prerequisites to enroll in math and science courses, there is flexibility in when other degree requirements are satisfied. Many courses are offered only once per year. Students are strongly encouraged to consider this when planning for the year ahead.

Freshman

Fall		Credits
FYEX 1112	The Freshman Year Experience	3
MATH 1220G	College Algebra ¹	3
COMM 1115G	Introduction to Communication	3
PHIL 1115G	Introduction to Philosophy (or other Philosophy General Education course)	3
ECON 2110G or ECON 2120G	Macroeconomic Principles or Principles of Microeconomics	3
Credits		15

Spring

MATH 1430G	Applications of Calculus I ¹	3
CHEM 1215G & CHEM 1121	General Chemistry I Lecture and Laboratory for STEM Majors and General Supplemental Instruction I	5
ENGL 1110G	Composition I	4
ARSC 2996	Interdisciplinary Topics (Intro to Pharmacy)	2
ARTH 2110G	History of Art I (or other Area VI General Education course) ²	3
Credits		17

Sophomore

Fall		Credits
PHYS 1230G	Algebra-Based Physics I	3
BIOL 2110G & BIOL 2110L	Principles of Biology: Cellular and Molecular Biology and Principles of Biology: Cellular and Molecular Biology Laboratory	4
ENGL 2221G or ENGL 2210G	Writing in the Humanities and Social Science or Professional and Technical Communication Honors	3
CHEM 1225G & CHEM 1122	General Chemistry II Lecture and Laboratory for STEM Majors and General Supplemental Instruction II	5
Selective A or B		3
Credits		18

Spring

BIOL 353	Pre-Professional Human Anatomy	4
BIOL 305 or SPMD 2210	Principles of Genetics or Anatomy and Physiology I	3
CHEM 313 & CHEM 303	Organic Chemistry I and Organic Supplemental Instruction I	4
CHME 395V	Brewing Science and Society (or other VWW course outside Arts and Sciences) ³	3
Non-professional elective		3
Credits		17

Junior

Fall		Credits
CHEM 314 & CHEM 304	Organic Chemistry II and Organic Supplemental Instruction II	4
PHYS 1240G	Algebra-Based Physics II	3
BIOL 354 or SPMD 3210	Physiology of Humans or Anatomy and Physiology II	3
CHEM 315	Organic Chemistry Laboratory	2
ANTH 357V	Medical Anthropology (or other VWW course) ³	3
Selective A or B		3
Credits		18

Spring

BIOL 311 L	General Microbiology Laboratory	2
BIOL 311 or BIOL 2320	General Microbiology or Public Health Microbiology	3
MATH 1350G or A ST 311	Introduction to Statistics or Statistical Applications	3
BCHE 395	Biochemistry I (or Non-professional elective)	3
Non-professional electives totalling at least 4 credits		4
Credits		15
Total Credits		100

¹ MATH 1430G or MATH 1511G is required for the degree but students may need to take any prerequisites needed to enter MATH 1430G first.

² See the General Education (p. 227) section of the catalog for a full list of courses

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses

Students interested in other activities related to pre-pharmacy studies should consider joining the NMSU Pre-Pharmacy society. Please contact Amy Buesing, abuesing@nmsu.edu

Journalism and Media Studies

Undergraduate Program Information

Studies in Journalism and Media Studies prepare students for careers in mass media, including news/editorial (print and online), broadcasting, advertising, public relations and photojournalism. Students study these disciplines and learn the trends and changes in the industry, such as how they converge on the internet. The curriculum emphasizes the skills of gathering, evaluating, writing and disseminating information and related skills. Students also are instructed in the theory, law, history and professional guidelines of mass media.

Degrees for the Department

- Journalism and Media Studies - Bachelor of Arts (p. 708)
- Journalism and Media Studies - Bachelor of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/journalism-media-studies-ba-online/>)

Minors for the Department

- Journalism and Media Studies - Undergraduate Minor (p. 713)
- Social Media Management - Undergraduate Minor (p. 713)
- Strategic Communications - Undergraduate Minor (p. 713)

Interim Department Head: Lanasa

Professor Lamonica; **Associate Professors** Berman; **Assistant Professors** Park, Hunter; **College Full Professor** Miller; **College Associate Professors** Perez, Phillips; **Professor Emeritus** McCleneghan, Mellen, Thayer; **News22 Director** Miller; **Spanish News22 Director** Perez

Journalism and Media Studies Courses

JOUR 105G. Media and Society

3 Credits (3)

Functions and organization of the mass media system in the United States; power of the mass media to affect knowledge, opinions, and social values; and the impact of new technologies.

JOUR 110. Media Writing I

3 Credits (2+2P)

Introduction to media writing basics including news writing for print and web, feature writing, sports writing and writing for public relations. Course emphasizes fundamental news values, journalism ethics and Associated Press style. Restricted to all Campuses. May be repeated up to 3 credits.

Learning Outcomes

1. Know and put into practice news writing basics including the five W's, inverted pyramid, basic news leads, quotations, interviews, attributions and cutlines.
2. Know how to cover scheduled and breaking news events, and put knowledge into practice.
3. Know how to write for different media, including print, web and broadcast, and put knowledge into practice.
4. Know fundamentals of writing news stories, features, editorials, obituaries, and press releases, and put knowledge of each into practice.
5. Develop and practice basic copy editing skills.

JOUR 201. Introduction to Multimedia Journalism

3 Credits (2+2P)

Introduction to journalistic storytelling using text, photos, audio, video and infographics. Students produce their own multimedia stories in intensive, hands-on environment using digital cameras and audio recorders, mobile phones, external microphones and digital editing software applications including Adobe Premiere Pro, Audition and Photoshop. May be repeated up to 3 credits.

Learning Outcomes

1. Learn how to recognize and accurately define multimedia journalism.
2. Improve visual literacy by viewing and analyzing a variety of work produced by professional multimedia journalists.
3. Know the basic requirements and parts of a story, and know how to map and structure a story.
4. Know and put into practice news writing basics including the five W's.
5. Know what makes a good image, and put into practice composing and framing photographs and videos.
6. Understand and put into practice still photography, video and audio capture and editing fundamentals using a variety of tools.
7. Know how to combine different media to create a logical and effective story.

JOUR 210. Copyediting

3 Credits (2+2P)

Introduction to various aspects of copyediting with an emphasis on accuracy and style. Includes hands-on, directed practice in editing for Associated Press style, punctuation and grammar. Includes headline and cutline writing. May be repeated up to 3 credits.

Prerequisite: JOUR 110.

Learning Outcomes

1. Know and put into practice news writing basics including the five W's, inverted pyramid, basic news leads, quotations, interviews and attributions.
2. Know fundamentals of writing news stories, sports stories, features and editorials, and put knowledge of each into practice.
3. Know how to write for different media, including print, web and social media, and put knowledge into practice.
4. Develop and practice basic copy editing skills.
5. Understand fundamentals of media law and ethics, and know basic press rights.
6. Understand basic math principles used by reporters.
7. Practice and understand the importance of meeting deadlines.
8. Develop a habit of consuming news and monitoring daily headlines.

JOUR 300. Introduction to Advertising

3 Credits (3)

Role of IMC (integrated marketing communications) in marketing of goods, services, and organizations. Creative process, strategic planning media, message design, consumer behavior, and social issues of IMC.

JOUR 302. Television Videography & Editing

3 Credits (3)

Classroom instruction on basic studio and single camera video productions. The focus is placed on introductory practical aspects of news and videography, reporting and storytelling. Lab experience in camera basics, studio functions and digital video editing. Includes practical experience through crew assignments on the live student-produced newscast, News22, which airs on KRWG-TV, a PBS affiliate station. May be repeated up to 3 credits.

Learning Outcomes

1. The students will be able to have a broader introductory understanding of video production for broadcasting media
2. The students will be able to edit video and digital production
3. The students will be able to create media reporting for News and Sports

JOUR 305. Visual Communication in Media

3 Credits (3)

How one sees, perceives, interprets, creates and applies visual language. Explores the history, techniques, application and practice of the various visual media. May be repeated up to 3 credits.

Learning Outcomes

1. Give students an understanding of the historical, critical, theoretical and practical aspects of visual culture in digital media era.
2. Sharpen students' visual acuity
3. Enhance students' understanding of point of view
4. Help students to broaden their perspective of visual communication from the storytelling perspective in social and digital media
5. Enlarge students appreciation of visual culture

JOUR 306. Sports Writing and Reporting

3 Credits (3)

Fundamental principles of sports writing and reporting with an emphasis on accuracy and style. Includes a mix of classroom instruction and hands-on, directed practice in game coverage sports feature writing, sports commentary and sports statistics. Students have the opportunity to produce sports content for Kokopelli online news outlet. May be repeated up to 6 credits.

Prerequisite: JOUR 210 or consent of instructor.

Learning Outcomes

1. Know how to recognize and accurately define sports journalism and different sports story types
2. Improve sports journalism literacy by reading, viewing and analyzing a variety of work produced by professional sports writers and reporters
3. Know the basic parts of a sports story, and know how to structure and package various types of sports stories
4. Know and put into practice sports writing basics including the five W's, leads, interviews, quotations and attributions
5. Know how to write sports stories for different media, including print, web and social media, and put knowledge into practice
6. Know basic sports terminology, and know how to compile, compute and interpret a wide variety of sports statistics

JOUR 310. Media Writing II**3 Credits (3)**

Field reporting and writing for web and print publication. Includes a mix of classroom instruction and hands-on, directed practice in local news and sports reporting, feature writing, opinion writing and social media content creation. Students produce written and visual content for Kokopelli online news outlet. Course emphasizes accuracy, news values and ethics in fast-paced, deadline-oriented environment. May be repeated up to 3 credits. May be repeated up to 3 credits.

Prerequisite: JOUR 210.

Learning Outcomes

1. Write an inverted pyramid on deadline.
2. Use AP style in all written assignments.
3. Incorporate news writing conventions in all stories.
4. Identify the differences between hard news stories and features.
5. Conduct interviews using best journalistic practices and professionalism.
6. Demonstrate news judgment in pitching, reporting, and writing stories.
7. Build a personal website and use digital media to report, publish and promote stories.
8. Understand basic libel law and journalistic ethics.

JOUR 312. Advertising/Copywriting**3 Credits (3)**

Creative process, strategic thinking, and principles of advertising in execution of copy, storyboards, and layouts for clients.

Prerequisite(s): JOUR 110 or consent.

JOUR 314. Broadcast Reporting**3 Credits (3)**

Students learn the techniques of reporting and writing news stories for broadcast, including how to incorporate video and natural sound so all elements work together for good storytelling. May be repeated up to 3 credits.

Prerequisite: JOUR 302.

Learning Outcomes

1. Students will learn the basics of television reporting.
2. Students will learn and practice the skills of broadcast news reporting, especially, broadcast writing, reporting, interviewing, videography and audio recording, editing, and how to tell stories with video and audio.

JOUR 315. News 22**1-3 Credits (1-3)**

Students will report news stories for live, student-produced television newscast that airs on KRWG-TV, public television for Southern New Mexico. May be repeated up to 3 credits.

Prerequisite: JOUR 314 or JOUR 330.

Learning Outcomes

1. Students will learn to report professional news stories for News twenty-two
2. Students will learn the fundamentals of live broadcast news production.

JOUR 319. Intro Photography**3 Credits (3)**

Introduction to photography emphasizing composition, camera techniques, post-production skills in Photoshop, Lightroom, and InDesign and storytelling skills. History of photography overview. This class is the starting point for students interested in a photojournalism emphasis. May be repeated up to 3 credits.

Learning Outcomes

1. Students will be able to use "visual language" for use across multiple platforms including print, video and web.
2. Students will acquire post-production skills used in various industries.
3. Students will be able to produce powerful and effective communication through image-making.

JOUR 320. Photojournalism**3 Credits (3)**

Communication photography on multiple platforms for sports, news, advertising/public relations and other editorial and commercial needs. Photography lighting techniques, photo-editing software, and website skills will be expanded and further developed. May be repeated up to 3 credits.

Prerequisite: JOUR 319 or Consent of instructor.

Learning Outcomes

1. Students will be able to use specialty techniques, especially sports photography and studio/portraiture/product photography.
2. Students will expand skills needed in editorial, advertising and other communication industries.

JOUR 321. Media Graphic Design**3 Credits (3)**

Introduction to graphic design fundamentals for print and web publication including page layout, typography, color theory and photo editing. Students produce their own print and web-based design pieces using Adobe InDesign and Photoshop. May be repeated up to 3 credits.

Learning Outcomes

1. Know and put into practice fundamental design principles including proximity, alignment, repetition and contrast.
2. Know fundamentals of color theory and typography, and apply this knowledge to a variety of media design projects.
3. Know fundamental rules of photography composition and cropping.
4. Know fundamental rules and principles of printed newspaper and magazine design and put knowledge into practice.
5. Know fundamental rules and principles of printed newsletter and brochure design and put knowledge into practice.

JOUR 330. TV News Shooting & Editing**3 Credits (2+4P)**

Advanced technical and aesthetic skills and journalism basics needed for videography and editing on-location news stories. Single camera

videography and nonlinear/digital editing. May be repeated up to 3 credits.

Prerequisite: JOUR 314 or permission of instructor.

Learning Outcomes

1. Learn or continue exploring and mastering the concept of video sequencing in the field, gathering great natural sound, opening and closing shots and improve your overall storytelling process in the field and during the edit process.
2. Learn or continue exploring the fundamentals of non-linear digital editing, using Adobe Premier.
3. Expand knowledge of field sound recording.
4. Learn and distinguish the difference between uncontrolled action and controlled action.

JOUR 350V. Media History

3 Credits (3)

Historical overview of media including newspapers, magazines, radio, television, photography, entertainment media, advertising, public relations, and digital media. The history of American media development is directly intertwined with American history. Newspapers, magazines, television, and radio have not just reported on news and events; by virtue of what facts and sources editors and reporters have chosen to use, journalists have framed how the public should think about events. Editorials also provided further framing guidance on issues to readers and viewers. Students will study media history from social, intellectual, and cultural history perspectives. Students will examine the historical relationship of the media to American social, political, economic, and cultural patterns and developments. And, conversely, students will examine how these same forces impacted and changed all forms of media through a multi-cultural approach. May be repeated up to 3 credits.

Learning Outcomes

1. Survey the development of various forms of media and the changes in the media as they relate to the larger social, economic, and political sphere
2. Learn the methods and processes of historical research and engage in historical research.
3. Learn that the development of all fields of communication are interrelated
4. Discover how American media have attempted to influence how Americans perceive the world around them (including perceptions of other nations) via their coverage and portrayal of global events.
5. Learn that America's historical events played out through the media. As such, students will gain a deeper understanding of how media personnel helped "frame" the discussion and debate about news and information from the 1600s to present day
6. Discover that the ethical and professional foundations of media industries have adjusted and changed over time due to external and internal forces, including the rise of the professionalism movement across the nation in the late nineteenth century, the internal response to public demands for licensing of news media following World War I, and modern pressures caused by digitization of the industry and the parallel fragmentation of audiences
7. Learn how to determine how various groups outside the mainstream contributed to overall press development. This includes an examination of how women and ethnic minorities influenced how and why the press became a force for social, cultural, political, and economic change in society.
8. Discover and appreciate that history is NOT just the study of names, dates, and places, but of people

9. Discover that the history of media is not the province of any one individual, corporation, or entity. Instead, a variety of factors: social, economic, political, legal, ethical, and cultural, helped shape the media's development

JOUR 360. Media Literacy

3 Credits (3)

This course is designed to help students develop an informed, critical, and practical understanding of media including analysis of online and social media and to help students develop their media literacy and analytical skills.

Learning Outcomes

1. Write clearly, precisely, and in a well-organized manner.
2. Demonstrate critical thinking, reading, and viewing skills.
3. Research, develop, evaluate, and present arguments grounded in research-based knowledge.
4. Apply analytical, precise, and elaborated terms and concepts for talking and writing about media and the ways in which they communicate meaning.
5. Demonstrate how images are constructed via specific formal and technical elements and how those images construct meaning about national and global communities.
6. Interpret media texts (film, television, etc.) to expand experience and understanding of the self and society.

JOUR 374. Introduction to Public Relations

3 Credits (3)

This course is designed to familiarize students with the basic concepts, principles, practices, and professions of public relations (PR). It is the foundation course for other PR courses in Journalism and a supplemental course for students majoring in other fields.

Learning Outcomes

1. The role and functions of public relations in contemporary society.
2. The contingency views of public relations practice in the worlds of managing competition and conflict.
3. The historical evolution of public relations, career opportunities in the field, and professional/ethical/legal responsibilities.
4. The basic process of public relations—research, planning, communication, evaluation—and the use of communications strategies and tactics to achieve organizational goals and objectives.
5. The persuasion of public opinion and audience analyses and how to reach diverse audiences.
6. Practical guidelines for utilizing written, spoken, and visual techniques to reach selected audiences.
7. An understanding of how public relations is a global phenomenon.
8. How the Internet and social media are changing the way public relations professionals build and sustain relationships between an organization and its constituents.
9. An understanding of public relations activities in business, sports, tourism, entertainment, nonprofit, education, and government organizations.

JOUR 377V. Mass Media Ethics

3 Credits (3)

Philosophical and moral examination of problems relating to mass media. Use of case study method to analyze media situations; development of framework for media professionalism.

JOUR 380. Women and the Media

3 Credits (3)

Portrayal and participation of women in mass media from colonial to contemporary times. Same as GNDR 450. May be repeated up to 3 credits.

JOUR 384. Public Relations Storytelling
3 Credits (3)

This course will help students understand the concept of using storytelling as a tool for public relations, branding, and social change. Students will learn how to use storytelling on traditional and social media platforms. Upon completion of this course, students should have attained knowledge of essential elements of storytelling, audience-led narratives, transmedia storytelling, etc.

Learning Outcomes

1. Students will attain knowledge and understanding of the essential elements of branding through storytelling.
2. Students will attain knowledge and understanding of the assessment of brand stories and customer-led narratives.
3. Students will attain knowledge and understanding of integrating brand storytelling into the marketing mix.
4. Students will attain knowledge and understanding of data-driven storytelling.
5. Students will attain knowledge and understanding of personal branding of leaders and brand storytelling success.
6. Students will attain knowledge and understanding of research skills for brand storytelling.
7. Students will attain knowledge and understanding of the future of brand storytelling.

JOUR 407. Media Internship
1-3 Credits (1-3)

Supervised work with a media organization. 1-3 credits. May be repeated up to 3 credits. Consent of Instructor required. Restricted to: JOUR majors.

Prerequisite(s): Consent of internship coordinator.

JOUR 408. Media Practicum
1-3 Credits

Advanced supervised work with a media organization. May be repeated up to 3 credits. Consent of Instructor required.

Prerequisite(s): Consent of internship coordinator.

JOUR 412. Documentary Photojournalism
3 Credits (3)

Production of documentary photography for web, print, broadcasting and exhibition emphasizing deep visual storytelling. Multimedia, social media distribution and website techniques including WordPress website design and maintenance. Discussion of notable photographers. Multiple Field Trips to produce material for the Small Village New Mexico term project (SVNM). Students produce an individual Term Project book and multimedia show. May be repeated up to 3 credits.

Prerequisite: JOUR 319.

Learning Outcomes

1. Students will learn "slow photojournalism," and be able to produce visual stories done with deep immersion in whatever community or subject they work in.
2. Students will be able to use photography for communication, giving deeper meaning to subjects than transitory "news" type photography allows.

JOUR 414. Broadcast Reporting Portfolio
3 Credits (3)

This is course is designed to help students who are preparing for a career in broadcasting. Students will refine reporting, shooting and editing

skills and build a professional website containing a reporter reel, resume and proof of other skills needed for success in broadcasting. The class also features guest speakers throughout the semester who work in the broadcast and digital world of media. May be repeated up to 3 credits.

Prerequisite: JOUR 314.

Learning Outcomes

1. To practice, hone, and improve scriptwriting skills, especially news writing.
2. To practice and improve audio announcing skills and on-camera announcing skills.
3. To practice and improve overall videography and digital editing skills.
4. To learn more and prepare for related careers.

JOUR 425. Media Planning and Buying
3 Credits (3)

Covers the principles of media planning for an IMC campaign and procedures for purchasing ad time or space.

Prerequisite(s): JOUR 300 or consent of instructor.

JOUR 427. Media Writing III
3 Credits (3)

Advanced field reporting and writing for web and print publication. Includes hands-on, directed practice in local news and sports reporting, feature writing, opinion writing, social media content creation and web publishing. Students produce written and visual content for Kokopelli online news outlet, and prepare final portfolio. Course emphasizes accuracy news values and ethics in fast-paced, deadline-oriented environment. May be repeated up to 3 credits.

Prerequisite: JOUR 310.

Learning Outcomes

1. Sharpen and expand advanced reporting, interviewing, writing, and editing skills for print and online publication.
2. Sharpen multimedia reporting and storytelling skills including photography skills.
3. Improve and expand professional portfolio through online publication of original work.
4. Demonstrate effective use of social media platforms.
5. Demonstrate understanding of fundamentals of journalism ethics.
6. Learn to work effectively under deadline pressure.
7. Produce a final portfolio or "string book" of published work.

JOUR 457. Social Media Management and Analytics
3 Credits (3)

This course is designed to help students to understand how marketing has (and has not) changed due to the rise of social media and changes in various underlying contextual factors, such as dramatically increased speed of information dissemination across consumers and brands. The overarching goal is to obtain a clear perspective on what's really going on in digital/social/mobile marketing so that you can begin to appreciate its true value to consumers, to managers, and to other corporate stakeholders. It will equip students with the relevant knowledge, perspectives, and practical skills required to develop marketing strategies that leverage the opportunities inherent in social media and consumer-to-consumer social interactions for achieving business and marketing goals.

Prerequisite: JOUR 374.

Learning Outcomes

1. Understand what social media is and how this new type of media and communications technology influences how business and marketing is done
2. Develop skill in using the predominant social media tools currently available for business/marketing communication

3. Understand how to use various social media channels to publish and disseminate relevant branded content in order to engage consumers and to increase social impact, influence, and value
4. Develop a strategic plan for identifying opportunities for using social media in a company

JOUR 460V. Sports & Entertainment P.R.

3 Credits (3)

This course aims to provide a basic understanding of sports and entertainment PR and its industry trends, theories, techniques, case studies, global trends, and future directions. Upon completion of this course, students will be able to use the theories and techniques to plan, implement, and evaluate sports and entertainment PR campaigns and activities. May be repeated up to 3 credits.

Learning Outcomes

1. Describe the nature of public relations practice in sports
2. Practice the primary research methods employed in sports public relations.
3. Recognize the major steps involved in planning a public relations campaign and the key considerations at each step in the process.
4. Identify the various types of paid/earned/shared/owned media commonly utilized in the profession
5. Comprehend the different tactics used to generate publicity.
6. Become proficient in writing news releases.
7. Distinguish among the various response strategies sports managers may employ in a crisis.
8. Describe unique aspects of social responsibility in the sports and entertainment industry
9. Identify legal issues in sports PR, anticipate emerging ethical issues, evaluate ethical dilemmas present in sports PR, and recognize the need for ethical decision-making in sports PR. 1
10. Describe current global trends and multicultural issues, which have impacted the global sports and entertainment industry.

JOUR 463. Public Relations for Social Impact

3 Credits (3)

This course aims to provide a basic understanding of the role of PR in influencing public behavior and creating positive social impact. This course offers different approaches to solving a range of social problems in the areas of health, safety, environmental protection, and community involvement.

Learning Outcomes

1. Apply social marketing theories for developing, implementing, and evaluating social marketing campaigns
2. Utilize nudge techniques to improve decisions about health, wealth, and happiness in both personal and societal levels
3. Prepare a prosocial campaign plan using social media and public relations strategies
4. Identify examples of successful social marketing campaigns

JOUR 470. Environmental, Social, & Governance Public Relations

3 Credits (3)

This course will explore how organizations create values by investigating the concept of environmental, social, and governance (ESG) and social responsibility campaigns in the light of public relations. Students will learn about philanthropy, sustainability, reputation building, and ESG for the media and entertainment industry.

Learning Outcomes

1. Understand the basic concepts and elements of Strategic Corporate Social Responsibility (Strategic CSR).

2. Understand company's value-creating activities through strategic CSR.
3. Understand company's CSR strategy under the context of economical and social exchanges
4. Understand the process of creating comprehensive strategic CSR communications plan

JOUR 476. Advertising & Public Relations Campaigns

3 Credits (3)

In this capstone course, students will utilize the principles and techniques of advertising and public relations to research and develop a comprehensive campaign plan. Students will develop a portfolio to demonstrate their skills to prospective employers. Restricted to Journalism and Media Studies Majors. May be repeated up to 3 credits.

Prerequisite: JOUR 374.

Learning Outcomes

1. Students will independently work on two projects to practice how to promote themselves and develop a professional point of view.
2. Students will create a portfolio at the end of the course that can be used to help demonstrate their skills to prospective employers.
3. Students' projects will demonstrate that they understand how to utilize the principles and techniques of advertising and PR to research and develop a comprehensive campaign plan.

JOUR 489. Media Research

3 Credits (3)

Examination of the role of empirical research in solving mass communication problems. Survey techniques, field studies, content analysis, data analysis. May be repeated up to 3 credits.

JOUR 490. IMC Campaign

3 Credits (3)

Capstone course utilizing all previous instruction to create and develop plans for a long-term national or local IMC (Integrated Marketing Communications) campaign. May be repeated up to 3 credits. Consent of Instructor required.

Prerequisite(s): JOUR 300 and 312 or consent of instructor.

Learning Outcomes

1. Students will learn how to create IMC campaign for client or for brands, and will be able to apply this for the real world when they apply for job.

JOUR 493. Media Law

3 Credits (3)

Examination of legal issues relating to mass media in the United States. Invasion of privacy, libel, sedition, copyright, and advertising regulation. Same as COMM 493, POLS 493. May be repeated up to 3 credits.

JOUR 494. Special Topics

3 Credits (3)

Specific subjects to be announced in the Schedule of Classes.

JOUR 495. Media Theory

3 Credits (3)

Theoretical approaches to media communications. Examination of media effects, audiences, and media socialization May be repeated up to 3 credits.

JOUR 499. Independent Study in Media

1-3 Credits

Individual study directed by consenting instructor with prior approval of department head. May be repeated up to 6 credits. Consent of Instructor required.

Prerequisite(s): 2.5 GPA and consent of instructor.

JOUR 501. Global Strategic Communications: Cultural Perspective
3 Credits (3)

This course is set up to combine both theory and practice, regarding global communications, especially from cultural perspectives. Also, this course is designed for students to understand persuasive strategic communications in different nations. Markets are no longer bound with their physical locations because of the communication technologies. To successfully address the strategic communications in global market, marketers and advertisers need to fully understand "local" challenges coming "deep" from cultural, economic, regulatory and competitive differences. Based on theoretical and practical understanding of the dynamic interplay between global and local forces, students will acquire theoretical as well as practical understandings of how to accomplish the goals of strategic communications in global markets. Thus, the core objective of this class is to develop an ability to analyze and map out persuasive communication strategies that are effective in global markets.

Learning Outcomes

1. Know how to analyze cultural norms and recognize strategic communications practices that are congruent to such cultural norms.
2. Identify similarities and differences in different consumer segments according to dimensions of culture.
3. Develop a deeper understanding of cultural dimensions.
4. Implement effective market research applications in different regions of the world.
5. Conceptualize and operationalize theoretical frameworks.

Second Language Requirement: (required- see below)		4-8
Electives, to bring the total credits to 120 ⁷		23-39
15 credits must be Upper Division		
Total Credits		120

- ¹ See the General Education (p. 227) section of the catalog for a full list of courses
- ² See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses
- ³ Students must complete 27 credits of non-core courses, including at least one course from each category listed above, introductory professional course, intermedia professional course, capstone course, and media course. Number of credits listed next to each category is recommended, not required. Entry into courses is subject to successful completion of appropriate prerequisites.
- ⁴ All introductory classes, except JOUR 310 Media Writing II and JOUR 374 Introduction to Public Relations, do not require any prerequisite class to get into these classes. Students must successfully finish JOUR 210 Copyediting to get into JOUR 310 Media Writing II and JOUR 110 Media Writing I to get into JOUR 374 Introduction to Public Relations.
- ⁵ Students should take at least one class from media courses. For Ad/PR students, JOUR 457 Social Media Management and Analytics, JOUR 470 Environmental, Social, & Governance Public Relations and JOUR 489 Media Research are recommended.
- ⁷ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Arts in Journalism and Media Studies there is a one year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120	French I and French II	4-8
GRMN 1110 & GRMN 1120	German I and German II	4-8
JAPN 1110 & JAPN 1120	Japanese I and Japanese II	4-8

SPAN 1110 & SPAN 1120	Spanish I and Spanish II	4-8
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6
<i>For Heritage Speakers:</i>		
SPAN 1210 & SPAN 1220 or SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II or Spanish for Heritage Learners III	3-6

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3

Option 3:

Prefix	Title	Credits
Challenge the 1120 level for the following courses:		
FREN 1120 or GRMN 1120 or JAPN 1120 or SPAN 1120	French II German II Japanese II Spanish II	4
<i>OR</i>		
Challenge the 1120/1220/2210 level for the following courses:		
PORT 1120 or SPAN 1220 or SPAN 2210	Portuguese II Spanish for Heritage Learners II Spanish for Heritage Learners III	3

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Below are the roadmaps for the Bachelor of Arts with a Major in Journalism and Media Studies, the department has four focus areas that students can follow to complete their degree in an area of study that benefits them: a general journalism and media studies, advertising, broadcasting and multimedia/photojournalism focuses. **These are not considered official concentrations and will not appear on a student's transcript or within their student record.**

General Focus

JOUR 490	IMC Campaign
Total Credits	
18	

¹ Total of 18 credits with the grade of C- or better are required to get a minor of Strategic Communications.

Languages and Linguistics Undergraduate Program Information

Programs of study in the Department of Languages and Linguistics prepare students for a diverse number of professions and provide them with critical skills that compliment many careers in an increasingly interdependent and global marketplace. Students also increase their awareness of the important role language plays in human interaction on individual and global levels.

Major curriculum plans in each language include balanced groups of courses in language, linguistics, literature and culture. Students may choose to major, double major or minor in French, German or Spanish.

For the undergraduate program in Spanish, students may earn credit by receiving the following scores on the AP exams: More specifically, for the AP Spanish Language and Culture Exam, with a score of 3, students receive 3 credits for either SPAN 316 or 318. With scores of 4 or 5, students receive 6 credits (SPAN 316 or 318) and SPAN 325. For the AP Spanish Literature and Culture Exam, with a score of 3, students receive 3 credits (SPAN 380) and for scores of 4 or 5, they receive 6 credits (SPAN 380 and SPAN 305).

Graduate Program Information

The Department of Languages and Linguistics offers a Master of Arts in Spanish, which may be completed through our program on the main campus or completely online. Students are asked to indicate an area of interest in either linguistics or literature. The degree requires a total of 36 credit hours. It is recommended that students focus at least 27 credit hours of that total in their selected area of interest. Main campus students may select either a thesis or a non-thesis option. Students selecting to follow the thesis option, may count up to 6 credit hours towards their degree total. Online students are limited to the non-thesis option only at this time.

Admission Requirements

Admission requirements include a BA in Spanish. An undergraduate Grade Point Average (GPA) of 3.0 or above, which includes at least 12 semester hours of upper-division undergraduate courses in Spanish with a GPA of at least 3.0. Students must also satisfy general requirements of the Graduate School and submit the proper electronic online application and transcripts at the Graduate School website. Students must also complete a secondary admission packet (also submitted online through the Graduate School electronic application portal), which should include:

- A current resume (C.V.) in Spanish
- Three (3) letters of recommendation from qualified professionals (written within the last six months), preferably from past professors, that address the applicant's academic record.
- A writing sample in Spanish (critical or creative writing texts). If you do not have a six-page paper, you may submit multiple shorter works totaling six pages.
- A Language Evaluation Form (available for download at the departmental website) completed and signed by a qualified language

evaluator. If you have an official ACTFL OPI rating certificate, this may be submitted in lieu of the Language Evaluation Form.

- An introductory letter in Spanish to include:
 - A brief biography of one or two paragraphs along with your goals and objectives for obtaining a Master's degree in Spanish
 - A statement of interest in either the residential (on-campus) program or the online program
 - A statement of your prospective area of interest (Linguistics or Literature), and
 - Your declaration of interest in being considered for a Graduate Teaching Assistantship (this option is only available for the residential [on-campus] program).

Only completed applications will be reviewed. Again, all materials should be submitted via the Graduate School electronic application portal. No materials should be sent directly to the department. Applying to the program does not guarantee admission to the program. It is the applicant's responsibility to ensure that all materials have been submitted correctly.

Application deadlines: September 15 for admission for the following Spring semester (which begins in January), and January 15 for admission for the following Fall semester (which begins in August). Students will be advised upon their formal acceptance into the program.

Degrees for the Department

Bachelor Degree(s) & Supplemental Major(s)

- Chicano Studies - Supplemental Major (p. 746)
- Foreign Languages (French) - Bachelor of Arts (p. 733)
- Foreign Languages (German) - Bachelor of Arts (p. 735)

Chinese Courses

CHIN 311. Advanced Chinese Language I 3 Credits (3)

This course emphasizes the development of advanced oral, aural, reading and writing skills in Mandarin Chinese. Expanding of vocabulary and development of reading comprehension will be through different genres of authentic texts. Students will be trained to write short essays on a variety of topics.

CHIN 312. Advanced Chinese Language II 3 Credits (3)

This course emphasizes the development of advanced oral, aural, reading and writing skills in Mandarin Chinese. Expanding of vocabulary and development of reading comprehension will be through different genres of authentic texts. Students will be trained to write short essays on a variety of topics.

Prerequisite(s): Grade of C or better in CHIN 311.

French Courses

FREN 1110. French I 4 Credits (4)

Intended for students with no previous exposure to French, this course develops basic listening, speaking, reading, and writing skills aiming toward the ACTFL novice-high level. This is an introductory course designed to teach the student to communicate in French in everyday situations and to develop an understanding of French and Francophone cultures through the identification of cultural products and practices, of cultural perspectives, and the ability to function at a survival level in an authentic cultural content. This course will also develop the student's sense of personal and social responsibility through the identification of social issues.

Learning Outcomes

1. Students can communicate and exchange information about familiar topics using phrases and simple sentences, sometimes supported by memorized language.
2. Students can usually handle short social interactions in everyday situations by asking and answering simple questions
3. Students can write short messages and notes on familiar topics related to everyday life.
4. Students can often understand words, phrases, and simple sentences related to everyday life.
5. Students can recognize pieces of information and sometimes understand the main topic of what is being said.
6. Students can understand familiar words, phrases, and sentences within short and simple texts related to everyday life.
7. Students can sometimes understand the main idea of what they have read.
8. Students can identify beliefs, behaviors and cultural artifacts of the French-speaking world.
9. In English, students will engage with social issues confronting the French-speaking world to develop their sense of personal and social responsibility.

FREN 1120. French II 4 Credits (4)

A continuation of French I, students will develop a broader foundation in skills gained during the first semester, including understanding, speaking, reading and writing French aiming toward the ACTFL intermediate-low

level. This course is designed to increase student fluency in French as applied to everyday situations. Students will also learn to recognize and understand various French and Francophone products, practices, and perspectives, identifying common cultural patterns, describing basic cultural viewpoints, and further developing their sense of personal and social responsibility through the investigation of cultural issues. May be repeated up to 4 credits.

Learning Outcomes

1. Students can participate in conversations on a number of familiar topics using simple sentences.
2. Students can handle short social interactions in everyday situations by asking and answering simple questions.
3. Students can write briefly about most familiar topics and present information using a series of simple sentences.
4. Students can understand the main idea in short, simple messages and presentations on familiar topics.
5. Students can understand the main idea of simple conversations that they overhear.
6. Students can understand the main idea of short and simple texts when the topic is familiar.
7. Students can describe and make comparisons between decisions about beliefs, behaviors and cultural artifacts of the French-speaking world.
8. Students will engage with social issues confronting the French-speaking world to continue to develop their sense of personal and social responsibility

FREN 2110. French III

3 Credits (3)

In this third semester course, students will continue to develop a broader foundation in skills gained during the first year, including understanding, speaking, reading and writing French aiming toward the ACTFL intermediate-mid level. This course is designed to teach the student to communicate in a more sustained way in areas of personal interest and in everyday situations. Students will engage in and analyze various French and Francophone products, practices, and perspectives, as well as continue to develop their sense of personal and social responsibility through comparison and contrast of cultural perspectives. May be repeated up to 3 credits.

Learning Outcomes

1. Students can participate in conversations on familiar topics using sentences and series of sentences.
2. Students can engage in short social interactions in everyday situations by asking and answering a variety of questions. Students can usually say what they want to say about themselves and their everyday life.
3. Students can write on a wide variety of familiar topics using connected sentences.
4. Students can understand the main idea in messages and presentations on a variety of topics related to everyday life and personal interests and studies.
5. Students can understand the main idea of conversations that they overhear.
6. Students can understand the main idea of texts related to everyday life and personal interests or studies.
7. Students can analyze beliefs, behaviors and cultural artifacts of the French-speaking world, and discuss the nature and value of French and Francophone products, practices, and perspectives.

8. Students will engage with social issues confronting the French-speaking world to continue to develop their sense of personal and social responsibility

FREN 2120G. French IV

3 Credits (3)

In this fourth semester course, students will continue to broaden and refine skills gained during previous semesters, including understanding, speaking, reading and writing French aiming at the ACTFL intermediate-high level. This course is designed to teach the student to communicate in a more sustained way in situations that go beyond the everyday. Students will evaluate various French and Francophone products, practices, and create ways to demonstrate their sense of personal and social responsibility through participation in cultural interaction. May be repeated up to 3 credits.

Learning Outcomes

1. Students can participate with ease and confidence in conversations on familiar topics. They can usually describe people, places, and things. They can usually talk about events and experiences in various time frames.
2. Students can handle social interactions in everyday situations, sometimes even when there is an unexpected complication.
3. Students can write about topics related to school, work, and community in a generally organized way. They can write some simple paragraphs about events and experiences in various time frames.
4. Students can easily understand the main idea in messages and presentations on a variety of topics related to everyday life and personal interests and studies.
5. Students can usually understand a few details of what I overhear in conversations, even when something unexpected is expressed. The student can sometimes follow what they hear about events and experiences in various time frames.
6. Students can understand the main idea of texts with topics related to everyday life, personal interests, and studies, as well as sometimes follow stories and descriptions about events and experiences in various time frames.
7. Students can analyze beliefs, behaviors and cultural artifacts of the French-speaking world, and recognize and discuss the representations and controversies of French and Francophone products, practices, and perspectives.
8. Students demonstrate the essential skills of Critical Thinking, Personal and Social Responsibility, and Information and Digital Literacy, as per the New Mexico General Education Curriculum

FREN 2135G. Frontiers and Border Crossings in the French-Speaking World

3 Credits (3)

An exploration of frontiers and borders in the French-speaking world: geographical, linguistic, cultural, and symbolic

Learning Outcomes

1. Articulate the diversity of boundaries (geographical, literal, gender, cultural, symbolic) and the role they play in negotiating cultural identities in the Francophone world.
2. Critically analyze and communicate orally and in writing the nuances of frontiers, border crossings, and their expressions in the course texts.
3. Describe, through the study of French and Francophone borders and frontiers, how cultural contexts and human practices influence individuals and societies.

4. Apply the knowledge and skills gained through the study of boundaries in the francophone world to analogous settings and to students' personal academic goals.
5. Demonstrate information literacy and technological skills in researching and presenting themes related to the readings and to the films screened
6. Reflect on the effects of geographical, social, linguistic, and symbolic boundaries and crossings as expressed in the course content on individuals.

FREN 306. Topics in French Culture and Civilization
1-3 Credits (1-3)

Selected topics focusing on French culture and civilization. This course is linked to FLIP (Faculty-Led International Programs) when applicable. May be repeated up to 4 credits.

Learning Outcomes

1. Recognize the arrondissements of Paris and describe their identifying characteristics.
2. Navigate through Paris effectively and knowingly.
3. Communicate effectively with native speakers of the language.
4. Exemplify qualities of a good guest in a francophone culture.
5. Talk knowledgeably about a topic related to Paris and Parisians.

FREN 315. French Grammar
3 Credits (3)

A thorough review of French grammar through the study of grammatical elements and the use of grammatical exercises. May be repeated up to 3 credits.

Learning Outcomes

1. By the end of the course, students should be familiar with a review of grammar for all tenses, pronouns, adverbs, adjectives.
2. Students should attain the intermediate high level in all areas (Listening, Speaking, Reading, Writing, Attitudinal / Cultural) on the American Council on the Teaching of Foreign Languages (ACTFL) scale.
3. By the end of the course, students should be familiar with spoken speech at paragraph level.
4. By the end of the course, students should be familiar with writing a narrative in the past and future tenses.

FREN 316. Writing for Expression and Communication
3 Credits (3)

Examination of writing in French for various purposes and development of interpersonal, presentational, and interpretative skills of written communication. May be repeated up to 6 credits.

Prerequisite: FREN 2120G or permission of the instructor.

Learning Outcomes

1. To assimilate strategies to develop the discipline of writing.
2. To develop critical thinking to self-correct and to refine one's skills.
3. To develop familiarity with tools (dictionaries, style manuals, grammars) needed to improve one's writing.
4. To develop awareness of grammatical and syntactical accuracy.
5. To develop confidence in one's writing so to acquire professional skills.

FREN 325. Intermediate Conversation
3 Credits (3)

French conversation through intensive oral practice with emphasis on vocabulary acquisition and pronunciation. May be repeated up to 3 credits.

Learning Outcomes

1. To enhance active vocabulary acquisition.
2. To provide opportunities for the learner's speech to progress from short utterances to more connected, sustained speech.
3. To address pronunciation issues.
4. To enhance presentation skills.
5. To improve auditory proficiency.
6. Based on the scale established by the American Council on the Teaching of Foreign Languages (ACTFL), the performance goals for the course are: (A) Listening Intermediate High, (B) Speaking Intermediate High, (C) Reading Advanced Low, (D) Writing Intermediate High.

FREN 330. Business French
3 Credits (3)

An introduction to standard language within the corporate world in French-speaking countries. Students practice reading, writing, listening, speaking and expanding their vocabulary in professional fields related to business.

Learning Outcomes

1. Use business and legal vocabulary.
2. Demonstrate basic competency in French corporate etiquette.
3. Interact in a culturally appropriate manner in common business situations, including meetings, sales calls, business letters, and e-mails.
4. Demonstrate familiarity in using French in business-related situations.

FREN 352. French Phonetics
3 Credits (3)

Systematic description of modern French pronunciation. Corrective exercises for foreign learners. Formal study of spelling/pronunciation relationships. May be repeated up to 6 credits.

Learning Outcomes

1. By the end of the semester, students will have acquired a systematic, comprehensive review and enhancement of French pronunciation, and an elevated aural comprehension. Non-native speakers of French will be able to participate more easily in verbal communication; and the intermediate high level in all areas (Listening, Speaking, Reading, Writing, Attitudinal / Cultural) on the American Council on the Teaching of Foreign Languages (ACTFL) scale.
2. Students will be able to pronounce words, using the International Phonetic alphabet.
3. Students will be able to read short texts and be understood by non-sympathetic speakers of French.
4. Students will sharpen their aural skills in language recognition.

FREN 362. Contemporary French Culture
3 Credits (3)

Institutions, lifestyles and popular attitudes in modern France.

Prerequisite: FREN 2120 or consent of instructor.

FREN 365V. Perspectives in French Culture
3 Credits (3)

Examines components of French culture through literature, films and other sources. Taught in English. Does not satisfy Arts and Sciences second language requirement. Does not satisfy French major or minor requirements.

FREN 378. Studies in Francophone Cultures
3 Credits (3)

Studies of representative Francophone cultures through their history, literature, music and films.

Prerequisite: FREN 2120 or consent of instructor.

**FREN 380. Readings in French Literature
3 Credits (3)**

Selected readings in the literature of France, from the Middle Ages to the twentieth century. May be repeated up to 6 credits.

Prerequisite: FREN 2120G or permission of the instructor.

Learning Outcomes

1. To introduce students to readings from a variety of genres, from the Middle Ages to the twentieth century.
2. To teach students to make the transition from intermediate language courses to upper-level literature courses, not only by historical overview, but by offering reading strategies, including pre-reading and post-reading exercises.
3. To afford students plenty of opportunity to improve reading skills.
4. To enhance speaking and listening skills necessary for more in-depth study of literature.
5. To increase general literary, culture and attitudinal expertise for those intending to major/minor in French.

**FREN 381. Survey of French Literature I
3 Credits (3)**

Literary movements, authors and selected texts of the Middle Ages through the eighteenth century.

Prerequisite: FREN 2120 or consent of instructor.

**FREN 382. Survey of French Literature II
3 Credits (3)**

Literary movements, authors and selected texts of the nineteenth and twentieth centuries.

Prerequisite: FREN 2120 or consent of instructor.

**FREN 386. Contemporary Women Writers in French
3 Credits (3)**

Exploration of literary texts by contemporary women writers in France and the Francophone world; emphasizes the cultural contexts that have defined women's relationship to writing. Selections will vary from year to year.

Prerequisite: FREN 2120 or consent of instructor.

**FREN 410. Paris: History and Cultures
3 Credits (3)**

An in-depth look at history and culture of Paris from its origins to the present.

Prerequisite(s): FREN 212 or consent of instructor.

**FREN 425. Advanced French Conversation
3 Credits (3)**

Mastery of spoken French language through discussion of personal readings and group work to develop vocabulary, syntactical and conversational skills. The class is conducted entirely in French.

Prerequisite(s): FREN 325 or consent of instructor.

**FREN 449. French for Specific Purposes
3 Credits (3)**

Directed reading for students to satisfy language requirement for master's or doctoral programs. May be repeated up to 6 credits.

**FREN 451. Special Topics in French
1-3 Credits**

Selected topics relating to the cultures or literatures of the countries where French is spoken will be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

Prerequisite: consent of instructor.

**FREN 453. Independent Studies in French
1-3 Credits**

Individualized, self-paced projects for advanced students. May be repeated for a maximum of 6 credits.

Prerequisite: consent of instructor.

**FREN 478. Studies in Francophone Cultures Around the World
3 Credits (3)**

Advanced studies of representative Francophone cultures through their history, literature, music and films.

Prerequisite: FREN 2120 or consent of instructor.

**FREN 486. Advanced Contemporary Women Writers in French
3 Credits (3)**

Advanced study of literary texts by contemporary women writers in France and the Francophone world; emphasizes the cultural contexts that have defined women's relationship to writing. Selections will vary from year to year.

Prerequisite: FREN 2120 or consent of instructor.

**FREN 649. Readings in Transborder and Global Human Dynamics
3 Credits (3)**

Individualized study of selected readings and topics in French and francophone transborder and global human dynamics. Admission to the PhD program in Transborder and Global Human Dynamics required for enrollment. May be repeated up to 9 credits.

Learning Outcomes

1. Identification of a topic for further study, involving French or francophone-related transborder issues.
2. Compilation of a biography to comprise the readings.
3. Demonstration of knowledge of contexts and issues raised by the readings.
4. Articulation of pertinence of readings to course of study.

German Courses

**GRMN 1110. German I
4 Credits (4)**

Intended for students with no previous exposure to German, this course develops basic listening, speaking, reading, and writing skills aiming toward the ACTFL novice-mid level. This is an introductory course designed to teach the student to communicate in German in everyday situations and to develop an understanding of German cultures through the identification of cultural products and practices, of cultural perspectives, and the ability to function at a survival level in an authentic cultural content. This course will also develop the student's sense of personal and social responsibility through the identification of social issues.

Learning Outcomes

1. Students can communicate on very familiar topics using a variety of words and phrases that they have practiced and memorized.
2. Students can write lists and memorized phrases on familiar topics.
3. Students can recognize some familiar words and phrases when they hear them spoken.
4. Students can recognize some letters or characters.
5. Students can understand some learned or memorized words and phrases when they read.
6. Students can identify beliefs, behaviors and cultural artifacts of the German-speaking world.

- In English, students will engage with social issues confronting the German-speaking world to develop their sense of personal and social responsibility

GRMN 1120. German II

4 Credits (4)

A continuation of German I, students will develop a broader foundation in skills gained during the first semester, including understanding, speaking, reading and writing German aiming toward the ACTFL novice-high level. This course is designed to increase student fluency in German as applied to everyday situations. Students will also learn to recognize and understand various German products, practices, and perspectives, identifying common cultural patterns, describing basic cultural viewpoints, and further developing their sense of personal and social responsibility through the investigation of cultural issues.

Prerequisite(s): C or better in GRMN 1110.

Learning Outcomes

- Students can communicate and exchange information about familiar topics using phrases and simple sentences, sometimes supported by memorized language.
- Students can usually handle short social interactions in everyday situations by asking and answering simple questions.
- Students can write short messages and notes on familiar topics related to everyday life.
- Students can often understand words, phrases, and simple sentences related to everyday life.
- Students can recognize pieces of information and sometimes understand the main topic of what is being said.
- Students can understand familiar words, phrases, and sentences within short and simple texts related to everyday life.
- Students can sometimes understand the main idea of what they have read.
- Students can describe and make comparisons between decisions about beliefs, behaviors and cultural artifacts of the German-speaking world.
- Students will engage with social issues confronting the German-speaking world to continue to develop their sense of personal and social responsibility.

GRMN 2110. German III

3 Credits (3)

In this third semester course, students will continue to develop a broader foundation in skills gained during the first two semesters, including understanding, speaking, reading and writing German aiming toward the ACTFL intermediate-low level. This course is designed to teach the student to communicate in a more sustained way in areas of personal interest and in everyday situations. Students will engage in and analyze various German products, practices, and perspectives, as well as continue to develop their sense of personal and social responsibility through comparison and contrast of cultural perspectives.

Prerequisite(s): C or better in GRMN 1120.

Learning Outcomes

- Students can participate in conversations on a number of familiar topics using simple sentences.
- Students can handle short social interactions in everyday situations by asking and answering simple questions.
- Students can write briefly about most familiar topics and present information using a series of simple sentences.
- Students can understand the main idea in short, simple messages and presentations on familiar topics.

- Students can understand the main idea of simple conversations that they overhear.
- Students can understand the main idea of short and simple texts when the topic is familiar.
- Students can analyze beliefs, behaviors and cultural artifacts of the German-speaking world, and discuss the nature and value of German products, practices, and perspectives.
- Students will engage with social issues confronting the German-speaking world to continue to develop their sense of personal and social responsibility.

GRMN 2120. German IV

3 Credits (3)

In this fourth semester course, students will continue to broaden and refine skills gained during previous semesters, including understanding, speaking, reading and writing German aiming at the ACTFL intermediate-mid level. This course is designed to teach the student to communicate in a more sustained way in situations that go beyond the everyday. Students will evaluate various German products, practices, and create ways to demonstrate their sense of personal and social responsibility through participation in cultural interaction.

Prerequisite(s): C or better in GRMN 2110.

Learning Outcomes

- Students can participate in conversations on familiar topics using sentences and series of sentences.
- Students can engage in short social interactions in everyday situations by asking and answering a variety of questions. Students can usually say what they want to say about themselves and their everyday life.
- Students can write on a wide variety of familiar topics using connected sentences.
- Students can understand the main idea in messages and presentations on a variety of topics related to everyday life and personal interests and studies.
- Students can understand the main idea of conversations that they overhear.
- Students can understand the main idea of texts related to everyday life and personal interests or studies.
- Students can analyze beliefs, behaviors and cultural artifacts of the German-speaking world, and recognize and discuss the representations and controversies of German products, practices, and perspectives.
- Students will engage with social issues confronting the German-speaking world to create ways to demonstrate their sense of personal and social responsibility.

GRMN 305. Topics in German Culture

3 Credits (3)

Group study of selected topics focusing on German culture and civilization. This course is linked to FLiP courses (Faculty-Led international Programs) when applicable. Topics identified by subtitle in the Schedule of Classes. GRMN 2120 or equivalent is recommended. May be repeated for up to 6 credits with different topics.

Learning Outcomes

- (Language) Students will show more confidence in their German speaking, listening and writing abilities.
- (Culture) Students will demonstrate knowledge of the culture of German institutions, of Berlin (through reflection and discussion sessions) after visits to historical, architectural and cultural sites as well as direct interaction with the locals.

- (Culture): Students will demonstrate competence at navigating a culture different from their own.
- (Culture): Students will demonstrate (through reflection and discussion sessions) a greater appreciation for the diversity of German identity.

GRMN 313. Intermediate Composition and Grammar

3 Credits (3)

A review of the rules of German grammar. Development of written German skills. GRMN 2120 or equivalent is recommended. May be repeated up to 3 credits.

Learning Outcomes

- Students will show their improvement in writing skills in German through the application of accurate grammar rules practiced in the course.
- Students will show their improvement in vocabulary usage in German by using more varied and appropriate vocabulary in their writing.
- Students will show their improvement in writing organization.

GRMN 326V. Transnational German Film

3 Credits (3)

The film industry has kept abreast of globality, glocality, cultural, and linguistic diversity. In this course we will cover examples of German film from its impressionist beginnings to the current globally influenced, and technologically advancing style and will look at palpable transnational aspects, including Turkish-German cinema and refugees on- and off-screen. We will focus on how the turn towards a transnational understanding of film provides a space for a more globally connected and inclusive cinema and world

Learning Outcomes

- Students analyze how ideas are represented, interpreted, or valued in various expressions of human culture.
- Students examine relevant primary source materials as understood by the humanities area under study and interpret the material in writing assignments (or alternatives that require equally coherent and sustained analysis).
- Students examine the messages embedded in images and relate them to their own culture(s).
- Students will be conversant in film techniques, film genres, film history, politics, and culture of the time in which the film was made.
- Students will practice and express aesthetic judgement in the form of analysis and assessment of film as an art form, both through discussion and through writing.
- Students will be expected to identify and interpret key themes and topics related to Transnational 'German' Cinema.

GRMN 340. Introduction to Translation

3 Credits (3)

General aspects of Translation from German to English and English to German. GRMN 2120 or equivalent is recommended. May be repeated up to 3 credits.

Learning Outcomes

- Demonstrate understanding of the concept of translation by reading translation theory.
- Demonstrate an enhanced knowledge of German as related to translation practices.
- Demonstrate the ability to use specialized vocabulary and concepts in various professional areas.
- Demonstrate knowledge of the translator's place as a professional.

- Develop and enhance their linguistic competence and cultural awareness.

GRMN 341. German Folklore and Culture

3 Credits (3)

Customs, traditions, mythology, folk literature and art. Special focus on Grimms' fairy tales. GRMN 2120 or equivalent is recommended. May be repeated up to 3 credits.

Learning Outcomes

- Demonstrate improvement in reading skills in German by one ACTFL level by augmenting vocabulary, grammatical accuracy, and reading comprehension skills.
- Describe the 5 basic motifs in folktales (FT) and where they supposedly come from.
- List and define the 9 types of FT (Teverson) according to their functions.
- Discuss the impact of the enlightenment in the structure of FT, Evaluate the influence of the industrial revolution and the development of a bourgeois society in FT.
- Critique the position of the present-day, pop-cult media in its recently created versions of FT.

GRMN 350. Introduction to German Literature

3 Credits (3)

Basic literary genres and major figures in German language literature from its beginnings to the 19th century. GRMN 2120 or equivalent is recommended. To be followed by GRMN 471 - Studies in German Literature. May be repeated up to 3 credits. Consent of Instructor required.

Learning Outcomes

- Demonstrate an improvement on reading skills in German by one ACTFL level by augmenting active vocabulary, grammatical accuracy and reading comprehension skills.
- Describe the authors, styles and basic discourses of 3 periods of German-language literature (old and middle high German from early the medieval literature, the protestant reformation; High German and literature academies: the fifteenth to seventeenth Centuries; and the Eighteenth Century).

GRMN 399. Intermediate Independent Study in German

1-3 Credits (1-3)

Tutorial in reading, writing and oral expression for intermediate-level students of German. Topics identified in the Schedule of Classes. GRMN 2120 or equivalent is recommended. May be repeated for up to 6 credits with different topics. May be repeated up to 6 credits. Consent of Instructor required.

Learning Outcomes

- Objectives for independent study courses will depend on the study/research interests of the student; they will always vary.

GRMN 410. Practicum in Conversational German

1-3 Credits

Intensive oral communication practice for students with a strong German language foundation. May be repeated up to 6 credits.

Prerequisite(s): GRMN 325 or consent of instructor.

Learning Outcomes

- Objectives for independent study courses will depend on the study/research interests of the student; they will always vary.

GRMN 413. Advanced Composition and Grammar

3 Credits (3)

Exercises in written German with emphasis on stylistic features.

Prerequisite: GRMN 313 or consent of instructor.

GRMN 451. Special Topics in German

1-3 Credits

Selected topics to be identified by subtitle in the Schedule of Classes. May be repeated for up to 6 credits with different topic. May be repeated up to 12 credits.

Learning Outcomes

1. Objectives for independent study courses will depend on the study/research interests of the student; they will always vary.

GRMN 453. Independent Studies in German

1-3 Credits (1-3)

Individualized, self-paced research projects for advanced-level students of German. Topics identified by subtitle in the Schedule of Classes.

GRMN 2120 or equivalent is recommended. May be repeated up to 12 credits.

Learning Outcomes

1. Objectives for independent study courses will depend on the study/research interests of the student; they will always vary.

Language Courses

LANG 111. Beginning Language I

4 Credits (4)

Developing language skills through study abroad for languages not offered at NMSU main campus. Specific languages to be identified with course subtitles. Main campus only.

Prerequisite: Language placement exam or consent of the instructor.

LANG 451. Special Topics

1-3 Credits

Selected topics relating to cultures or literatures of a specific country. Credit can be applied only towards fulfilling second language requirement. Credit is not accepted towards any graduate level major or minor. May be repeated for a maximum of 12 credits. Consent of instructor required.

LANG 453. Independent Studies

1-3 Credits

Individualized, self-paced projects for advanced students. May be repeated under different subtitles for a maximum of 6 credits.

Prerequisite: consent of instructor.

Linguistics Courses

LING 2110G. Introduction to the Study of Language and Linguistics

3 Credits (3)

This course presents an introduction to the study of language through the basic aspects of linguistic analysis: the sound system (phonetics and phonology), the structure of words and sentences (morphology and syntax), and the ways in which language is used to convey meaning (semantics and pragmatics). In addition, the course will investigate how language is acquired and stored in the brain, and how differences in speech styles and dialects reflect different social and cultural backgrounds of individual speakers.

Learning Outcomes

1. Understand the basic concepts and terminology associated with phonetics, phonology, morphology, syntax, semantics, and pragmatics.
2. Comprehend how language evolves over history and over an individual's lifespan.
3. Describe some common, but mistaken, beliefs about language and to distinguish between descriptive and prescriptive approaches to language.

4. Describe the social, psychological, geographic and historical influences that lead to language dominance or language endangerment.
5. Be aware of the relations among various languages in the world, between dialects and slang, and between human and non-human languages.
6. Apply methods of linguistic analysis as introduced in the course.
7. Critically engage with the works of linguistic researchers.
8. Stimulate curiosity about language and what it reveals about the human mind.

LING 302V. Language and Society

3 Credits (3)

Study of how social identity including such factors as ethnicity, age, sex, education, power and socio-economic class is expressed in language systems and how misunderstandings arise between groups. Research skills are emphasized.

LING 303. Exploring Language Systems

3 Credits (3)

Forms of linguistic semantic, syntactic and phonological organization.

Prerequisite(s): LING 2110G.

LING 405. Topics in Linguistics

3 Credits (3)

Selected linguistics topics subtitled in the Schedule of Classes. May be repeated for a maximum of 6 credits under different subtitles.

Prerequisite: consent of instructor.

LING 425. Language and the Mind: Introduction to Psycholinguistics

3 Credits (3)

This course is an introduction to psycholinguistics; the study of how humans learn, represent, comprehend and produce language. Throughout this course, we address a variety of questions on the psychology of language most of which are still being answered. These include: What does it mean to know a language? What are the cognitive processes involved in language use? How do we produce and recognize speech? How can we improve texts and make them easier to read? How can we control speech in special situations to avoid errors?

Prerequisite(s): LING 2110G or consent of instructor.

LING 451. Independent Studies in Linguistics

1-3 Credits

Individual or group study of selected topics to be identified by subtitle. May be repeated for a maximum of 6 credits.

Prerequisites: LING 2110G and prior arrangement with faculty supervisor.

LING 455. Research in Linguistics

3 Credits (3)

This course will provide a capstone experience for students who have progressed through the program in linguistics and provide the foundation for further study at the post-graduate level in a linguistics-related field. Students will apply their foundation of knowledge and skills in linguistics through the realization of an individualized, inquiry-based project. Consent of instructor may enroll student only in case of elective credit shortfall with concurrent enrollment.

Prerequisite(s): LING 2110G, LING 301, LING 302V, LING 303, plus 9 credit hours of related electives.

LING 500. Introduction to Linguistics

3 Credits (3)

Survey of the main branches of linguistics: phonology, morphology, syntax, semantics, language acquisition, sociolinguistics, historical linguistics and some of the theoretical issues in the field.

LING 502. Graduate Study in Sociolinguistics**3 Credits (3)**

Study of how social identity including factors such as ethnicity, age, gender education and socio-economic class is expressed in language systems.

Prerequisites: LING 2110G or LING 500 recommended.

LING 503. Exploring Language Systems- Grad**3 Credits (3)**

Students will be responsible for all requirements of LING 303 and will undertake independent, directed research.

Prerequisite(s): LING 2110G or LING 500.

LING 505. Selected Topics**3 Credits (3)**

Studies, varying from year to year, in linguistics.

Portuguese Courses**PORT 1110. Portuguese I****3 Credits (3)**

Designed for students with no previous exposure to Portuguese, this course develops basic listening, speaking, reading, and writing skills. This is an introductory course aimed at teaching the student to communicate in Portuguese in everyday situations.

Learning Outcomes

1. Students can communicate and exchange information about familiar topics using phrases and simple sentences, sometimes supported by memorized language.
2. Students can handle most short social interactions in everyday situations by asking and answering simple questions.
3. Students can write short messages and notes on familiar topics related to everyday life.
4. Students can often understand words, phrases, and simple sentences related to everyday life.
5. Students can recognize pieces of information and sometimes understand the main topic of what is being said.
6. Students can understand familiar words, phrases, and sentences within short and simple texts related to everyday life.
7. Students can sometimes understand the main idea of what they have read.
8. Students can make connections between beliefs, behaviors and cultural artifacts of the Portuguese-speaking world, and make informed cross-cultural comparisons.

PORT 1120. Portuguese II**3 Credits (3)**

A continuation of Portuguese I, students will develop a broader foundation in skills gained during the first semester, including understanding, speaking, reading and writing Portuguese. Students will also gain more in-depth knowledge of Portuguese-speaking cultures.

Prerequisite: C or better in PORT 1110 or consent of instructor.

Learning Outcomes

1. Students can participate in conversations on a number of familiar topics using simple sentences.
2. Students can handle short social interactions in everyday situations by asking and answering simple questions.
3. Students can write about familiar topics and present information using a series of simple sentences.
4. Students can understand the main idea in short, simple messages and presentations on familiar topics.

5. Students can understand the main idea of simple conversations that they overhear.
6. Students can understand the main idea of short and simple texts when the topic is familiar.
7. Students can begin to narrate and describe simple events in the past.
8. Students can make broader connections between beliefs, behaviors and cultural artifacts of the Portuguese-speaking world, and make informed cross-cultural comparisons.

PORT 364V. Brazilian Culture Through Popular Music**3 Credits**

This course will present students with an overview of Brazilian popular music, from the late nineteenth century to the present day, concentrating on the 60s, 70s, 80s of the 20th Century. It aims to discuss topics about cultural aspects and current issues in Brazil. It is designed to give students some introductory experience in Portuguese language and emphasizes skill development and refinement in the area of critical reading and writing.

Learning Outcomes

1. Be able to identify and distinguish the Brazilian musical styles including in the course.
2. Informatively discuss the main historical events in Brazil from the XVI to the XXI Century.
3. Be able to link the different musical styles to specific periods and events in Brazilian history.
4. Evaluate Brazil's the triple heritage (Indigenous, European, and African) and how it reflects on the notion of being Brazilian.
5. Demonstrate insight of how globalization has influenced Brazilian music, as well as of the transnational aspects of Brazilian music.
6. Be able to use the previous knowledge to discuss current notions of Brazilian identity, as well as recent developments in Brazilian music and society.
7. Be able to informatively relate Brazilian culture to their own.

PORT 453. Independent Luso-Brazilian Studies**1-3 Credits (1-3)**

Individualized, self-paced projects for advanced students in Luso-Brazilian studies. May be repeated up to 12 credits. Consent of Instructor required.

PORT 513. Graduate Portuguese for Romance Language Students I**3 Credits (3)**

Portuguese for beginners at the graduate level. May be completed on campus or via Study Abroad. Credit can be applied towards fulfilling the second language requirement. Credit is not accepted towards any graduate level major or minor.

PORT 514. Graduate Portuguese for Romance Language Students II**3 Credits (3)**

Portuguese for beginners at the graduate level. May be completed on campus or via Study Abroad. Credit can be applied towards fulfilling the second language requirement. Credit is not accepted towards any graduate level major or minor.

Prerequisite(s): Language placement exam or C or better in PORT 513, or consent of instructor.

Spanish Courses**SPAN 1110. Spanish I****4 Credits (4)**

Designed for students with little exposure to Spanish, this course develops basic listening, speaking, reading, and writing skills and basic intercultural competence in interpretive, interpersonal and presentational

modes of communication at the Novice Level of proficiency based on ACTFL guidelines. During this course, students perform better and stronger in the Novice Mid level while some abilities emerge in the Novice High range. This is an introductory course aimed at helping the student to communicate in Spanish in everyday familiar situations via recognition and production of practiced or memorized words, phrases, and simple sentences.

Prerequisite(s): language placement and/or assessment by departmental examination.

Learning Outcomes

1. Students can communicate on very familiar topics using a variety of words and phrases that they have practiced and memorized.
2. Students can present information about myself and some other very familiar topics using a variety of words, phrases, and memorized expressions.
3. Students can write short messages and notes on familiar topics related to everyday life.
4. Students can often understand words, phrases, and simple sentences related to everyday life.
5. Students can recognize pieces of information and some-times understand the main topic of what is being said.
6. Students can understand familiar words, phrases, and sentences within short and simple texts related to everyday life.
7. Students can sometimes understand the main idea of what they have read.

SPAN 1120. Spanish II

4 Credits (4)

Designed for students with some degree of exposure to Spanish in high school and/or at home, this course continues to develop basic listening, speaking, reading, and writing skills and basic intercultural competence in interpretive, interpersonal and presentational modes of communication based at the Novice High Level of proficiency based on ACTFL guidelines, although a few abilities may emerge in the Intermediate Low Level. Students in this course communicate in Spanish in familiar topics using a variety of words, phrases, simple sentences and questions that have been highly practiced and memorized.

Prerequisite: language placement and/or assessment by departmental examination or a C- or better in SPAN 1110.

Learning Outcomes

1. Students can participate in conversations on a number of familiar topics using simple sentences.
2. Students can handle short social interactions in everyday situations by asking and answering simple questions.
3. Students can present basic information on familiar topics using language they have practiced using phrases and simple sentences.
4. Students can write briefly about most familiar topics and present information using a series of simple sentences.
5. Students can understand the main idea in short, simple messages and presentations on familiar topics.
6. Students can understand the main idea of simple conversations that they overhear.
7. Students can understand the main idea of short and simple texts when the topic is familiar.

SPAN 1210. Elementary Spanish for Heritage Learners I

3 Credits (3)

This is a beginning-level Spanish course designed for students who have a cultural connection to the Spanish language. Some students have had very little exposure to the language and enter the class to

develop beginning-level skills. Other students may have grown up hearing the heritage language in the community and may understand some Spanish and speak at a basic level as a result. The objective is to draw upon the connection to the heritage language as a source of motivation and engagement for our learning communities. At the same time, we build upon the language base that students may already have as a result of their heritage learner experience in order to develop new proficiencies in Spanish and reactivate the Spanish that students have learned previously. By the end of this course, students will be able to describe their home, campus surroundings and common activities including cultural traditions. At the same time, students gain cultural competency and develop a critical understanding of their linguistic and cultural background. Students who have previously earned a C or better in SPAN 1110 or SPAN 1120 may not receive credit for this course.

Learning Outcomes

1. Interpersonal Communication: Students can engage in exchanges in culturally appropriate ways using understandable pronunciation on familiar topics using contextualized words, phrases, common idiomatic expressions, and simple sentences.
2. Written expression: Students can write an essay/poem/story/creative sketch/lyric in the target language that describes a past/present/future (fictional) event to the reader.
3. Interpretive listening: Students can understand familiar questions and statements from simple sentences in conversations.
4. Interpretive reading: Students can identify the topic and some isolated facts from simple sentences in informational and fictional texts.
5. Critical cultural awareness: Students can recognize and explain some of the issues facing bilingual communities in accordance to the instructor expertise and articulation with subsequent courses.

SPAN 1220. Spanish for Heritage Learners II

3 Credits (3)

Spanish as a Heritage Language II is a second semester class designed for students who have developed some basic Spanish proficiency from previous classes and/or from community experiences. This course provides students with the opportunity to develop their proficiency in the four language skills (speaking, listening, reading, and writing). Class activities are designed to strengthen oral communication skills (speaking and listening) through a variety of group activities. By the end of the course students will be able to understand and produce narrations of past events in oral and written Spanish. In order to foster a desire to revitalize and maintain the Spanish language in the US context we attempt to raise students' critical awareness of what it means to be part of a specific speech community.

Learning Outcomes

1. Interpersonal Communication: Students can engage in basic but authentic conversations through providing and obtaining information, expressing likes and dislikes, describing their daily lives, and narrating simple events in the past.
2. Written expression: Students can write an essay/poem/story/creative sketch/lyric in the target language, and that describes a past (fictional) event to the reader.
3. Interpretive listening: can identify the main idea in short conversations.
4. Interpretive reading: Students can identify the topic and related information from simple sentences in short informational and fictional texts.
5. Critical cultural awareness: Students can recognize and explain some of the issues facing bilingual communities in accordance to the

instructor expertise and articulation with previous and subsequent courses.

SPAN 2110. Spanish III
3 Credits (3)

This course is based on the integration of learning outcomes across Interpersonal, Interpretive, and Presentational Modes of Communication at the Intermediate Low Level of proficiency based on ACTFL guidelines. Students accomplish real-world communicative tasks in culturally appropriate ways as they gain familiarity with the target culture(s). This is an intermediate course aimed at helping the student to communicate in Spanish on familiar topics about self, others and everyday life at the same time that they recognize and handle short social interactions in interactions in everyday situations by asking and answering a variety of questions.

Prerequisite: language placement and assessment by departmental examination or C or better in SPAN 1120.

Learning Outcomes

1. Students can participate in conversations on familiar topics using sentences and series of sentences.
2. Students can handle short social interactions in everyday situations by asking and answering a variety of questions.
3. Students can usually say what they want to say about themselves and their everyday life.
4. Students can make presentations on a wide variety of familiar topics using connected sentences
5. Students can write on a wide variety of familiar topics using connected sentences.
6. Students can understand the main idea in messages and presentations on a variety of topics related to everyday life and personal interests and studies.
7. Students can understand the main idea in conversations that they overhear.
8. Students can understand the main idea of texts related to everyday life and personal interests or studies.

SPAN 2120. Spanish IV
3 Credits (3)

This course is based on the integration of learning outcomes across Interpersonal, Interpretive, and Presentational Modes of Communication at the Intermediate Low Level of proficiency based on ACTFL guidelines. Students accomplish real-world communicative tasks in culturally appropriate ways as they gain familiarity with the target culture(s). This is an intermediate course aimed at helping the student to communicate in Spanish on familiar topics about self, others and everyday life at the same time that they recognize and handle short social interactions in interactions in everyday situations by asking and answering a variety of questions.

Prerequisite: language placement and assessment by departmental examination or C or better in SPAN 2110.

Learning Outcomes

1. Students can participate with ease and confidence in conversations on familiar topics.
2. Students can usually talk about events and experiences in various time frames.
3. Students can usually describe people, places, and things.
4. Students can handle social interactions in everyday situations, sometimes even when there is an unexpected complication.

5. Students can make presentations in a generally organized way on school, work, and community topics, and on topics they have researched.
6. Students can make presentations on some events and experiences in various time frames.
7. Students can write on topics related to school, work, and community in a generally organized way.
8. Students can write some simple paragraphs about events and experiences in various time frames.
9. Students can easily understand the main idea in messages and presentations on a variety of topics related to everyday life and personal interests and studies. 1
10. Students can usually understand a few details of what they overhear in conversations, even when something unexpected is expressed. 1
11. Students can sometimes follow what they hear about events and experiences in various time frames. 1
12. Students can easily understand the main idea of texts related to everyday life, personal interests, and studies. 1
13. Students can sometimes follow stories and descriptions about events and experiences in various time frames.

SPAN 2210. Spanish for Heritage Learners III
3 Credits (3)

Intermediate Spanish for Heritage Speakers I is a third semester course designed for students who have been raised in a Spanish-speaking environment and speak, or understand, some Spanish as a result of hearing it in the home, and in the community by family, friends, and neighbors. Students in this course will continue to develop their ability to narrate events in the past and will be able to describe hypothetical situations. Students will also develop their ability to express wishes, desires, and necessities. This course will help the student build confidence in their Spanish abilities and expand the language use in the areas of writing, reading, oral production and listening comprehension. In order to foster a desire to revitalize and maintain the Spanish language we attempt to raise students' critical awareness of wider issues facing Spanish speakers in the US context. May be repeated up to 3 credits.

Learning Outcomes

1. Interpersonal Communication: Students can exchange information on a wide variety of familiar topics in which the students use appropriate vocabulary to describe their daily lives and narrate events in the past with some degree of ease and confidence.
2. Written expression: Students can write an essay/poem/story/creative sketch/lyric in the target language, and that effectively conveys a series of past (fictional) events to the reader that may include recent and distant past.
3. Interpretive listening: Students can identify the main idea and key information in short straightforward conversations.
4. Interpretive reading: Students can understand the main idea and key information in short straightforward informational and fictional texts.
5. Critical cultural awareness: Students can recognize and explain some of the issues facing bilingual communities in accordance to the instructor expertise and articulation with previous and subsequent courses.

SPAN 305. Topics in Hispanic Civilization
3 Credits (3)

Group study of selected topics focusing on Hispanic culture and civilization. Topics announced in the Schedule of Classes. May be repeated for a maximum of 6 credits.

Prerequisite: SPAN 2120 or SPAN 2210 or consent of instructor.

SPAN 306. Special Topics

3 Credits (3)

Group study of Spanish for specialized purposes (e.g. court interpreting, professional language for bilingual teachers, technical writing for the business community). Course subtitled in the Schedule of Classes. May be repeated for a maximum of 12 credits.

Prerequisite: SPAN 2120 or SPAN 2210 or consent of instructor.

SPAN 316. Grammar for Non-Native Speakers of Spanish

3 Credits (3)

For students who did not grow up speaking Spanish. A review of the rules of Spanish grammar. Students cannot receive credit for both SPAN 316 and SPAN 318.

Prerequisite(s): SPAN 2120 or SPAN 2210 or consent of instructor.

Learning Outcomes

1. Students will be better equipped academically to continue into upper-division Spanish courses.
2. Students will be better equipped to communicate in Spanish by becoming more adept at using a variety of grammatical structures.
3. Students will gain an appreciation for diverse languages and cultures that exist in the borderlands and will be able to contribute to the diversity.
4. Students will gain critical thinking skills as they develop their bilingual abilities.
5. Students will be encouraged after becoming bilingual and will desire to make language learning life-long goal.

SPAN 317. Composition for Non-Native Speakers of Spanish

3 Credits (3)

For students who did not grow up speaking Spanish. Development of professional and academic writing skills in Spanish. Students cannot receive credit for both SPAN 317 and SPAN 319.

Prerequisite(s): SPAN 2120 or SPAN 2210 or consent of instructor.

Learning Outcomes

1. Students will be better equipped academically to continue into upper-division Spanish courses.
2. Students will be better equipped to communicate in written Spanish by employing a more clear and structured writing style.
3. Students will gain an appreciation for diverse languages and cultures that exist in the borderlands and will be able to contribute to the diversity.
4. Students will gain critical thinking skills as they develop their bilingual abilities.
5. Students will be encouraged after becoming bilingual and will desire to make language learning life-long goal.

SPAN 318. Grammar for Heritage/Native Speakers of Spanish

3 Credits (3)

For students who speak or have been exposed to Spanish at home or in the community. A review of grammatical concepts and analysis of both spoken and written Spanish. Students cannot receive credit for both SPAN 316 and SPAN 318.

Prerequisite(s): SPAN 2120 or SPAN 2210 or consent of instructor.

Learning Outcomes

1. Students will be better equipped academically to continue into upper-division Spanish courses.
2. Students will be better equipped to communicate in written and spoken Spanish by using a variety of grammatical structures.

3. Students will sharpen their Spanish communication skills, which will assist them in securing employment as bilingual speakers.
4. Students will develop a stronger appreciation for the Spanish communication skills and cultural awareness which will assist them in contributing to their communities in meaningful ways.
5. Students will gain critical thinking skills as they sharpen their bilingual abilities.

SPAN 319. Composition for Heritage/Native Speakers of Spanish

3 Credits (3)

For students who speak or have been exposed to Spanish at home or in the community. Development of writing strategies, styles and techniques in the Spanish language. Students cannot receive credit for both SPAN 317 and SPAN 319.

Prerequisite(s): SPAN 2120 or SPAN 2210 or consent of instructor.

Learning Outcomes

1. Students will be better equipped academically to continue into upper-division Spanish courses.
2. Students will be better equipped to communicate in written Spanish by employing a more clear and structured writing style.
3. Students will gain an appreciation for diverse languages and cultures that exist in the borderlands and will be able to contribute to the diversity.
4. Students will gain critical thinking skills as they develop their bilingual abilities.
5. Students will be encouraged after becoming bilingual and will desire to make language learning life-long goal.

SPAN 325. Advanced Conversation

3 Credits (3)

Intensive oral practice. Not open to heritage/native speakers of Spanish.

Prerequisite(s): SPAN 2120 or consent of instructor.

SPAN 327. Spanish in the Community

3 Credits (3)

Emphasis on use of Spanish outside the classroom in the local communities. Activities include but are not limited to oral histories, language mentoring in schools, assisting with cultural activities and language research.

Prerequisite: SPAN 2120 or SPAN 2210 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will learn how to apply bilingual and bicultural skills to serve the community.

SPAN 330. Variations in Spanish

3 Credits (3)

The study of social variation within the Spanish language, examining both social and linguistic factors that affect language change.

Prerequisite: SPAN 316 or SPAN 318 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.

- Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
- Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
- Students will develop comprehension of the terms and concepts related to linguistic variations.
- Students will learn about variations in the Spanish language and how to apply these ideas to a greater linguistics body of knowledge.

SPAN 340. Introduction to Spanish Linguistics

3 Credits (3)

General aspects of Spanish linguistics: traditional, descriptive, historical and dialectal.

Prerequisite: SPAN 316 or SPAN 318 or consent of instructor.

Learning Outcomes

- Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
- Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
- Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
- Students will develop comprehension of the terms and concepts related to Spanish linguistics.
- Students will learn about a wide range of linguistics topics and how to apply these ideas to a greater linguistics body of knowledge.

SPAN 350. Introduction to Chicano Studies

3 Credits (3)

Covers Mexican-American life including language, history, education, politics and literature.

Learning Outcomes

- Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
- Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
- Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
- Students will develop comprehension of the basic terms and concepts of Chicano Studies.
- Students will learn about various Chicano cultural and historical themes and how they affect the Chicano community today.

SPAN 361. US-Mexico Border Culture & Literature

3 Credits (3)

Study of major authors and/or cultural trends in the U.S.-Mexico border. Selected subject to be identified by subtitle in the Schedule of Classes. May be repeated up to 6 credits.

Learning Outcomes

- Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
- Students will improve their critical thinking skills through deep-level readings and engaged dialogue.

- Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
- Students will develop comprehension of the basic terms and concepts of border literature and culture.
- Students will learn about the value of US-Mexico border culture and literature and how they help form unique border communities.

SPAN 364V. Culture and Civilization of Mexico

3 Credits (3)

Familiarization with culture, civilization and regions of Mexico. History, geography, art, literature, folklore, customs, economics and politics of each region. Impact of Mexican culture and civilization on the Southwest United States. Taught in English. Does not satisfy Arts and Sciences second language requirement.

SPAN 365V. Culture and Civilization of Spanish America

3 Credits (3)

Familiarization with culture, civilization and regions of Spanish America. Study of history, geography, art, literature, folklore, customs, economics and politics of each region. Impact of Spanish American culture and civilization on the Southwest United States. Taught in English. Does not satisfy College of Arts and Sciences second language requirement.

SPAN 380. Introduction to Hispanic Literature

3 Credits (3)

Works in Spanish, all genres and periods. How to read literature in all forms.

Learning Outcomes

- Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
- Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
- Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
- Students will develop comprehension of the basic terms and concepts of Hispanic literature.
- Students will read foundational Hispanic texts of various genres and periods and learn how they create and inform Hispanic histories, identities, and nations.

SPAN 385. Introduction to Chicano/US-Mexican Literature

3 Credits (3)

Introduction to the study of major works by Chicano/US-Mexican authors.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

- Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
- Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
- Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
- Students will develop comprehension of the basic terms and concepts of Chicano literature.
- Students will read foundational Chicano texts of various genres and learn how they create and sustain a national Chicano consciousness.

SPAN 388. Contemporary Hispanic Literature**3 Credits (3)**

Study of Peninsular and Spanish-American literature from the 20th century to the present.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the basic terms and concepts of Hispanic literature.
5. Students will read foundational Hispanic texts of various genres from the 20th and 21st centuries and learn how they create and inform Hispanic histories, identities, and nations.

SPAN 393. Introduction to Translation and Interpretation**3 Credits (3)**

General aspects of translation and interpretation from English to Spanish and Spanish to English. Selected subject to be identified by subtitle in the Schedule of Classes.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the basic terms, concepts, and strategies related to translation and interpretation.
5. Students will learn how to translate written texts and/or interpret live communication between the Spanish and English languages. However, other languages may be included at instructor's discretion.

SPAN 399. Independent Studies in Literature, Language, or Culture**1-3 Credits**

Individualized, self-paced projects for advanced students. Students must present formal proposal of study.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will learn how to connect the value between literature, language, and culture and how to apply this knowledge to serve their community.

SPAN 411. Creative Writing**3 Credits (3)**

Creative writing in Spanish.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the basic terms and concepts of creative writing and the publication process.
5. Students will read and learn about the process and types of creative writing and publication, how to create original texts, and how to edit and publish creating works.

SPAN 412. Spanish-American Poetry**3 Credits (3)**

Study of major works by Spanish-American poets.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the basic terms and concepts of the poetry genre.
5. Students will read foundational Hispanic poetry from different periods and learn how poets and poetry create and inform Hispanic histories, identities, and nations.

SPAN 414. Coyolxauhqui: La literatura chicana femenil**3 Credits (3)**

This course is designed to introduce students to Chicano Studies through the exploration of literature and cultural representations. Students will examine the history of Chican@s and discuss contemporary issues affecting their life, work, and expressions. The study of cultural representations such as Coyolxauhqui, La Malinche, La Virgen de Guadalupe, La Llorona, La Maqui-Loca, and La Chican@ Queer through a feminist perspective will allow a closer look at the work done by Chicana writers, poets, and artists who share a locus of enunciation. Most importantly, this course helps situating the individual experiences in relationship and connection to other Chican@s in the world.

Learning Outcomes

1. Become familiar with the main theoretical and pedagogical aspects of Chican@ Studies through a feminist perspective.
2. Reflect on the diversity of Chican@ scholars.
3. Observe the uniqueness in Chican@ Studies as compared to other fields.
4. Critically examine current research areas involving the interdisciplinary field.
5. Explore innovative theoretical research in history, politics and cultural topics.

SPAN 418. Spanish-American Short Story**3 Credits (3)**

Study of major short stories by Spanish-American authors.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the basic terms and concepts of the short story genre.
5. Students will read foundational Hispanic short stories from various periods and learn how this genre creates and informs Hispanic histories, identities, and nations.

SPAN 419. Spanish American Drama

3 Credits (3)

Study of major works by Spanish-American dramatists.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the basic terms and concepts of the drama genre.
5. Students will read foundational Hispanic short stories from various periods and learn how this genre creates and informs Hispanic histories, identities, and nations.

SPAN 420. The Art of Storytelling

3 Credits (3)

The study of the genesis of storytelling and its structure, learning how and why to apply oral storytelling in our personal and professional lives, and practicing the art of storytelling in front of an audience.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the basic terms and concepts of oral storytelling and the significance of this skill in creating personal and national narratives.
5. Students will learn how to write and present original oral stories, myths, and other forms of oral storytelling for a public audience.

SPAN 421. New Mexico Culture and Literature

3 Credits (3)

The study of the development and flourishing of New Mexican culture and literature.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will learn about key cultural, literary, and historical elements of New Mexico.
5. Students will learn how to apply knowledge about New Mexico to serve their communities.

SPAN 422. Cultural Production of Hispanic Revolutions and Wars

3 Credits (3)

The study of Hispanic literature, art, and film dealing with revolutionary movements and wars.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the basic terms and concepts of revolutions and wars as they relate to literary production and other modes of cultural expression.
5. Students will learn about various revolutions and wars throughout Spain and Latin America and how they have helped form our regional and national identities, especially through a cultural production lens.

SPAN 423. Colonial Legacy: Representations in Chican@ Literature & Culture

3 Credits (3)

The course offers an overview of the research surrounding the legacy of colonial practices. Presents key concepts in colonial studies (colonialism, colonies, colonization, enclosures, exploitation, settlements), along with the ideologies of colonialism, to build the theoretical framework that will help analyze our colonial legacy through the exploration of Chican@ literature and cultural representations of writers, poets, and artists. Students will reflect on their own colonial/postcolonial ideologies and practices. The course helps situate the individual experiences in relationship and connection to others in the world.

Learning Outcomes

1. Become familiar with the main theoretical and pedagogical aspects of colonial studies.
2. Reflect, observe and explore the colonial practices and approaches.
3. Critically examine current research areas involving the interdisciplinary field.
4. Explore innovative theoretical research in history, politics, literature and culture.

SPAN 424. Post-Modern Hispanic Literature**3 Credits (3)**

The study of Post-Modern experimental literary genres, from Post-boom to the present.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the basic terms and concepts of post-modernism, especially in relation to Hispanic literary production.
5. Students will read a variety of post-modern Hispanic texts from various genres and learn how they help develop regional and national identities.

SPAN 426. Spanish-American Novel**3 Credits (3)**

Study of major works by Spanish-American novelists.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the basic terms and concepts of the novel genre.
5. Students will read foundational Hispanic novels from various periods and learn how this genre creates and informs Hispanic histories, identities, and nations.

SPAN 427. Chicano Literature**3 Credits (3)**

Study of Chicano/US-Mexican authors.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop advanced comprehension of the terms and concepts of Chicano literature.
5. Students will read foundational Chicano texts of various genres, but with a focus on narratives, and learn how they create and sustain a national Chicano consciousness.

SPAN 439. Topics in Applied Spanish Linguistics**3 Credits (3)**

Group study of selected topics to be identified by subtitle in the Schedule of Classes. May be repeated once under different subtitle for a maximum of 6 credits.

Prerequisite: SPAN 340.

SPAN 442. Formation of Hispanic National Identities**3 Credits (3)**

Study of seminal texts on the formation of Hispanic national identities and counternarratives against homogenous notions of nationhood.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Improve critical thinking skills through deep-level readings and class discussions.
2. Strengthen academic research and writing skills through high-level research and writing projects.
3. Understand how Hispanic identities were formed through various narrative practices and how that informs media representations of Hispanic people and culture.
4. Analyze how Hispanic identities were formed and with what motivations.
5. Assess national narratives and counter-narratives to understand their political-social worlds better.

SPAN 444. Body Studies**3 Credits (3)**

Interdisciplinary study of the body in Hispanic societies and others and its associated political meaning.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Improve critical thinking skills through deep-level readings and class discussions.
2. Strengthen academic research and writing skills through high-level research and writing projects.
3. Understand how the Hispanic body became a cultural and political object and how it is changing by the means of new media.
4. Analyze how the understanding of the Hispanic body has changed throughout history and how local politics affect it.
5. Learn how the body has served as the locus of culture and the principle of social interaction and politics.

SPAN 446. Speculative Fiction**3 Credits (3)**

Study of Hispanic speculative fiction and its related utopian/dystopian societies.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Improve critical thinking skills through deep-level readings and class discussions.
2. Strengthen academic research and writing skills through high-level research and writing projects.
3. Understand how social anxieties produced a Hispanic literary corpus to deal with the past, the present, and the future.
4. Analyze and compare how genre fiction challenges or supports hegemonic national discourses.
5. Learn how speculative fiction serves as an expression of social desires.

SPAN 447. Hispanic Film**3 Credits (3)**

Study of major films from Spain and Spanish-America. Restricted to: Main campus only.

SPAN 448. U.S.-Hispanic Film

3 Credits (3)

Study of major films about and/or by Hispanics of the U.S. Restricted to: Main campus only.

SPAN 449. Special Problems

1-3 Credits

Directed reading for graduate students in their specific fields to satisfy language requirement for master's or doctoral programs. May be repeated for a maximum of 6 credits.

SPAN 451. Hispanic Cultures

3 Credits (3)

Issues in Hispanic cultures of the U.S., Spanish-America and Spain. Also focuses on U.S.-Mexico border culture. Selected topics to be identified by subtitle in the Schedule of Classes.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will learn about various modes of Hispanic cultural production and how they create regional and national Hispanic identities.

SPAN 461. Introduction to Spanish Phonetics

3 Credits (3)

An introduction to Spanish phonetics including basic dialectal variation and comparison with English.

Prerequisite: SPAN 340.

SPAN 474. Pragmatics

3 Credits (3)

The study of theory and pragmatic notions such as implicatures, presuppositions, deixis, speech acts, and politeness.

Prerequisite(s): SPAN 340.

SPAN 476. Semantics

3 Credits (3)

The investigation of language from a semantic-pragmatic perspective and the use of formal logic to communicate meaning.

Prerequisite(s): SPAN 340.

SPAN 483. Literature and Law

3 Credits (3)

The advanced study of Latin American and Latino literature and its historical and cultural connections to the development of laws and the influence of both on modern society.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.

3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the basic terms and concepts of legal themes as found in literature.
5. Students will read foundational Hispanic texts of various genres and learn how they create a narrative that embodies or implies legal issues that affect the Hispanic community.

SPAN 485. Literature and Mental Health

3 Credits (3)

The advanced study of Latin American and Latino literature and how storytelling, through various literary genres, can inform our understanding of mental health issues and propose possible solutions to improve our quality of mental health.

Prerequisite: SPAN 380 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the basic terms and concepts of mental health themes as found in literature.
5. Students will read foundational Hispanic texts of various genres and learn how they create a narrative that embodies or implies mental health issues that affect the Hispanic community.

SPAN 490. Special Topics

3 Credits (3)

Selected topic to be identified by subtitle in the Schedule of Classes.

Prerequisite: SPAN 316 or SPAN 318 or consent of instructor.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will learn about various topics of Hispanic literature or linguistics that can be applied to advanced research projects.

SPAN 491. History of the Spanish Language

3 Credits (3)

The development of Spanish from its origins.

Prerequisite(s): SPAN 340.

SPAN 492. Structure of Spanish

3 Credits (3)

Topics in Spanish linguistics including phonology, morphology, syntax and semantics.

Prerequisite: SPAN 316 or SPAN 318 or SPAN 340.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.

2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the terms and concepts related to the structure of Spanish.
5. Students will learn about the formation of the structure of Spanish and how to apply these ideas to a greater linguistics body of knowledge.

SPAN 493. Español de los Estados Unidos**3 Credits (3)**

Linguistic issues and studies of U.S. Spanish-speaking communities.

Taught with SPAN 593. May be repeated up to 3 credits.

Prerequisite(s): SPAN 340.

SPAN 500. Methods of Research and Literary Criticism**3 Credits (3)**

Advanced methods of research and literary criticism.

SPAN 502. Sentipensar Pedagogy: Anzaldúa and Other Theorists**3 Credits (3)**

The course offers an overview of the theory, research and practice concerning Sentipensar pedagogy. Through the exploration of literature and cultural representations, students will interpret the works of theorist that promote the connections between the body, mind, and heart in their academic research and curriculum. The course will also discuss contemporary issues affecting our life, work, and expressions. The study of Gloria Anzaldúa's Coatlicue state, linguistic terrorism, Nepantla and Consciencia Mestiza, are only some of the approaches to academia that will be discussed in this course. We will also have a closer look at the work done by writers, poets, and artists who share a locus of enunciation. Most importantly, this course helps situating the individual experiences in relationship and connection to others in the world. This course focuses on strategies and techniques in curriculum development appropriate for teaching students at different levels. The materials and resources for the class are mostly written in English because the field research is done in this language. However, all work turned in for this class (discussions, quizzes, homework, presentations, etc.) must be written and developed in Spanish.

Learning Outcomes

1. Become familiar with the main theoretical and pedagogical aspects of Sentipensar pedagogy.
2. Reflect and explore on the diversity in the approaches and methodologies in Sentipensar pedagogy.
3. Observe the uniqueness in the field as compared to others.
4. Critically examine current research areas involving the interdisciplinary field.
5. Explore innovative theoretical research in history, politics and culture.

SPAN 503. Critical Language Awareness in Teaching SHL**3 Credits (3)**

This course is designed to introduce students to the theory, research, and practice of Critical Language Awareness. Students will read about the theoretical framework established when teaching heritage language learners. The study of Critical Language Awareness will allow educators to take a closer look at their own sociocultural concerns and influences in their education. Most importantly, this course will help us understand how our individual experiences connect in relationship to other heritage and native language users in the world. The materials and resources for the class are mostly written in English because the field research is done

in this language. However, all work turned in for this class (discussions, quizzes, homework, presentations, etc.) must be written and developed in Spanish.

Learning Outcomes

1. Become familiar with the main theoretical and pedagogical aspects of Critical Language Awareness.
2. Reflect on the diversity in the writings of scholars in the field.
3. Observe the uniqueness of Critical Language Awareness in heritage language pedagogy.
4. Critically examine current research areas involving the interdisciplinary field.
5. Explore innovative theoretical research in history, politics, and cultural topics.

SPAN 504. Culturally Sensitive Teaching in SHL: Teaching Spanish as a Heritage Language in the United States**3 Credits (3)**

This course focuses on presenting the theories, strategies and techniques in curriculum development appropriate for teaching Spanish for Native Speakers (SNS/EHN) and Heritage Language Speakers (HLS/EHH) in a culturally and linguistically sensitive environment. Students will conduct classroom observations and prepare presentations on aspects of CLR and SHL instruction in addition to preparing a research project to illustrate all their preparation towards creating a more sensitive and responsive curriculum.

Learning Outcomes

1. Become familiar with the main theoretical and pedagogical aspects of culturally and linguistically responsive teaching of SHL.
2. Reflect on the linguistic diversity of SHL speakers.
3. Observe the uniqueness in the use of SHL as compared to the Spanish in other parts of the world.
4. Critically examine current research areas involving U.S. Spanish, family and community settings, policies, programs and curriculum.
5. Explore innovative techniques, materials and activities in culturally and linguistically responsive SHL instruction.
6. Design new evaluation practices in all four skills.

SPAN 507. Technology Enhanced Language Learning**3 Credits (3)**

Strategies for enhancing language learning with emerging technologies. Course is taught in Spanish.

SPAN 508. Teaching Literature with Technology**3 Credits (3)**

Strategies and techniques for enhancing the teaching of all literature genres using emerging technologies. Course is taught in Spanish. Co/**Prerequisite(s):** SPAN 507, and/or consent of instructor.

SPAN 509. Teaching Culture with Technology**3 Credits (3)**

Strategies and techniques for enhancing the teaching of culture using emerging technologies. Course is taught in Spanish. Co/**Prerequisite(s):** SPAN 507, and/or consent of instructor.

SPAN 510. Assessing the National Standards**3 Credits (3)**

Analysis of the National Standards for Foreign Language Learning (the 5 Cs) in the 21st Century. Course will also cover the Integrated Performance Assessment as applied to the national standards. Other assessments will be reviewed to evaluate effectiveness in all levels of Spanish language classrooms.

SPAN 512. Contemporary Spanish-American Poetry**3 Credits (3)**

Readings and interpretation of Spanish-American poetry from the 20th century to the present.

SPAN 514. Coyolxauhqui: La literatura chicana femenil**3 Credits (3)**

This course is designed to introduce students to Chicano Studies through the exploration of literature and cultural representations. Students will examine the history of Chican@s and discuss contemporary issues affecting their life, work, and expressions. The study of cultural representations such as Coyolxauhqui, La Malinche, La Virgen de Guadalupe, La Llorona, La Maqui-Loca, and La Chican@ Queer through a feminist perspective will allow a closer look at the work done by Chicana writers, poets, and artists who share a locus of enunciation. Most importantly, this course helps situating the individual experiences in relationship and connection to other Chican@s in the world.

Learning Outcomes

1. Become familiar with the main theoretical and pedagogical aspects of Chican@ Studies through a feminist perspective.
2. Reflect on the diversity of Chican@ scholars.
3. Observe the uniqueness in Chican@ Studies as compared to other fields.
4. Critically examine current research areas involving the interdisciplinary field.
5. Explore innovative theoretical research in history, politics and cultural topics.

SPAN 520. Adv. The Art of Storytelling**3 Credits (3)**

The study of the genesis of storytelling and its structure, learning how and why to apply oral storytelling in our personal and professional lives, and practicing the art of storytelling in front of an audience.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.
2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the terms and concepts of storytelling and the significance of this skill in creating personal and national narratives.
5. Students will learn how to write and present original oral stories, myths, and other forms of oral storytelling for a public audience.

SPAN 521. Advanced Culture and Literature of New Mexico**3 Credits (3)**

The advanced study of the development and flourishing of New Mexican culture and literature.

SPAN 522. Adv. Cultural Production of Hispanic Revolutions and Wars**3 Credits (3)**

The study of Hispanic literature, art, and film dealing with revolutionary movements and wars.

Learning Outcomes

1. Students will strengthen their written and oral communication in Spanish for personal, academic, and professional success to serve as conduits for a bilingual community.

2. Students will improve their critical thinking skills through deep-level readings and engaged dialogue.
3. Students will improve their academic research, writing, and presentation skills through advanced investigative and writing projects.
4. Students will develop comprehension of the basic terms and concepts of revolutions and wars as they relate to literary production and other modes of cultural expression.
5. Students will learn about various revolutions and wars throughout Spain and Latin America and how they have helped form regional and national identities, especially through a cultural production lens

SPAN 523. Colonial Legacy: Representations in Chican@ Literature & Culture**3 Credits (3)**

The course offers an overview of the research surrounding the legacy of colonial practices. Presents key concepts in colonial studies (colonialism, colonies, colonization, enclosures, exploitation, settlements), along with the ideologies of colonialism, to build the theoretical framework that will help analyze our colonial legacy through the exploration of Chican@ literature and cultural representations of writers, poets, and artists. Students will reflect on their own colonial/postcolonial ideologies and practices. The course helps situate the individual experiences in relationship and connection to others in the world.

Learning Outcomes

1. Become familiar with the main theoretical and pedagogical aspects of colonial studies.
2. Reflect, observe and explore the colonial practices and approaches.
3. Critically examine current research areas involving the interdisciplinary field.
4. Explore innovative theoretical research in history, politics, literature and culture.

SPAN 528. Advanced U.S. Latino Culture and Literature**3 Credits (3)**

The advanced study of major works by Latino writers in the U.S.

SPAN 540. Introduccion a la Linguistica**3 Credits (3)**

Introduces students to the foundational topics of linguistic study with particular reference given to the Spanish language: properties of language and communication, morphology, syntax, phonetics, phonology, language variation and change.

Prerequisite(s): Eligibility to take graduate level courses.

SPAN 542. Adv. Formation of Hispanic National Identities**3 Credits (3)**

Study of seminal texts on the formation of Hispanic national identities and counternarratives against homogenous notions of nationhood.

Learning Outcomes

1. Improve critical thinking skills through deep-level readings and class discussions.
2. Strengthen academic research and writing skills through high-level research and writing projects.
3. Understand how Hispanic identities were formed through various narrative practices and how that informs media representations of Hispanic people and culture.
4. Analyze how Hispanic identities were formed and with what motivations.
5. Assess national narratives and counter-narratives to understand their political-social worlds better.

SPAN 544. Adv. Body Studies**3 Credits (3)**

Interdisciplinary study of the body in Hispanic societies and others and its associated political meaning.

Learning Outcomes

1. Improve critical thinking skills through deep-level readings and class discussions.
2. Strengthen academic research and writing skills through high-level research and writing projects.
3. Understand how the Hispanic body became a cultural and political object and how it is changing by the means of new media.
4. Analyze how the understanding of the Hispanic body has changed throughout history and how local politics affect it.
5. Learn how the body has served as the locus of culture and the principle of social interaction and politics.

SPAN 545. Advanced Dialectos del Espanol**3 Credits (3)**

Advanced research of Spanish dialects including their formal characteristics, historical formation and regional variation.

SPAN 546. Adv. Speculative Fiction**3 Credits (3)**

Study of Hispanic speculative fiction and its related utopian/dystopian societies.

Learning Outcomes

1. Improve critical thinking skills through deep-level readings and class discussions.
2. Strengthen academic research and writing skills through high-level research and writing projects.
3. Understand how social anxieties produced a Hispanic literary corpus to deal with the past, the present, and the future.
4. Analyze and compare how genre fiction challenges or supports hegemonic national discourses.
5. Learn how speculative fiction serves as an expression of social desires.

SPAN 547. Advanced Hispanic Film**3 Credits (3)**

Advanced study of major films from Spain and Spanish-America. Restricted to: Main campus only.

SPAN 548. Advanced U.S.-Hispanic Film**3 Credits (3)**

Advanced study of major films about and/or by Hispanics of the U.S. Restricted to: Main campus only.

SPAN 550. Advanced Chicana and Chicano Studies**3 Credits (3)**

Multidisciplinary examination of issues that have historically affected/influenced the Chicana/o community regionally, in the borderlands, and beyond borders.

Learning Outcomes

1. Students will become better equipped to teach this material at the high school or community college levels.
2. Students will become better equipped to attend a PhD program in a related field.
3. Students will gain access to a more diverse curriculum which broaden their educational and cultural perspectives.
4. Students will be able to develop their scholarship on a more creative level.

5. Students will strengthen their academic writing, which will help in their graduate studies and/or post-graduate careers.

SPAN 551. Advanced Hispanic Cultures**3 Credits (3)**

Advanced study on Hispanic cultures of the U.S., Spanish-America and/or Spain. Selected topic to be identified by subtitle. Taught with SPAN 451. May be repeated up to 6 credits.

SPAN 558. Bilinguismo**3 Credits (3)**

Examines the topics of bilingualism from a psycholinguistic perspective including the development of the bilingual brain, lexical acquisition, retrieval and storage, and experimental techniques in measuring language competence.

Prerequisite(s): SPAN 540 or consent of instructor.

SPAN 561. Advanced Spanish Phonetics**3 Credits (3)**

Advanced study of Spanish phonetics, including basic dialectal variation and comparisons with English.

SPAN 562. Advanced Spanish Phonology**3 Credits (3)**

An advanced formal examination of the sound system of Spanish including formal characterizations, dialectal variation and laboratory data. May be repeated up to 3 credits.

Prerequisite(s): SPAN 561 or consent of instructor.

SPAN 563. Advanced Study in Mexican Literature**3 Credits (3)**

Mexican literature from the Pre-Columbian period to the present.

SPAN 564. Advanced Post-Modern Hispanic Literature**3 Credits (3)**

The advanced study of Post-Modern experimental literary genres, from Post-boom to the present.

SPAN 566. Contemporary Spanish-American Novel**3 Credits (3)**

The Spanish-American novel from the 20th century to the present.

SPAN 567. Advanced Study in Chicano Literature**3 Credits (3)**

Study of all genres of Chicano literature.

SPAN 570. Advanced Study in Technical Translation**3 Credits (3)**

Translation of a variety of non-literary texts from English to Spanish and from Spanish to English. Course is taught in Spanish.

SPAN 573. Advanced Study in Creative Writing**3 Credits (3)**

Advanced creative writing in Spanish.

SPAN 574. Advanced Pragmatics**3 Credits (3)**

The study of theory and pragmatic notions such as implicatures, presuppositions, deixis, speech acts, and politeness.

Prerequisite(s): SPAN 540 or consent of instructor.

SPAN 576. Advanced Semantics**3 Credits (3)**

The investigation of language from a semantic-pragmatic perspective and the use of formal logic to communicate meaning.

Prerequisite(s): SPAN 540 or consent of instructor.

SPAN 580. Research Methodology in Spanish Linguistics**3 Credits (3)**

Study and practical application of techniques in linguistic research.

SPAN 583. Advanced Study in Spanish-American Women Writers
3 Credits (3)

All genres of Spanish-American literature written by women. Research paper required.

SPAN 584. Spanish Morphosyntax
3 Credits (3)

Examination of the morphological and syntactic structure of the Spanish language as well as their interaction. Practical applications are also explored.

SPAN 586. Contemporary Spanish-American Essay
3 Credits (3)

Main currents in the Spanish-American thought from the 20th century to the present.

SPAN 587. Contemporary Spanish-American Short Story
3 Credits (3)

The Spanish-American short story from the 20th century to the present.

SPAN 588. Contemporary Spanish-American Drama
3 Credits (3)

The Spanish-American drama from the 20th century to the present.

SPAN 589. Spanish Sociolinguistics
3 Credits (3)

Relationship between language and society in the Spanish-speaking world.

SPAN 590. Advanced Special Topics
3 Credits (3)

Specific subject to be announced in the Schedule of Classes. May be repeated up to 6 credits.

SPAN 591. Advanced Study in History of the Spanish Language
3 Credits (3)

The development of Spanish from its origins.

SPAN 592. Advanced Structure of Spanish
3 Credits (3)

Advanced study of Spanish linguistics topics such as phonology, morphology, syntax and semantics.

SPAN 594. Theory and Methodology of Spanish Pedagogy
3 Credits (3)

Advanced studies in current theories and methodologies of Spanish language pedagogy. Taught as a practicum.

SPAN 595. Advanced Topics in Applied Spanish Linguistics
3 Credits (3)

Selected topics to be identified by subtitle in the Schedule of Classes. May be repeated for a total of 9 credits under a different subtitle.

SPAN 597. Advanced Strategies for Teaching Spanish for Heritage/Native Speakers
3 Credits (3)

Advanced overview of the main theories, research, pedagogical approaches, assessment and practice concerning the teaching of Spanish to heritage learners and native speakers.

SPAN 598. Independent Reading, Research, and/or Creative Writing
1-3 Credits

Individual study of selected readings and problems; or individual research, either analytical or experimental, or creative writing. May be repeated for unlimited credits.

SPAN 599. Master's Thesis
15 Credits

Thesis.

Phone: (575) 646-4541

Foreign Languages (French) - Bachelor of Arts

Departmental Requirements Single Major in Foreign Languages with a Concentration in French

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Students who are pursuing only a major in Foreign Languages with a Concentration in French are considered single major students. Single major students are required to complete:

Prefix	Title	Credits
General Education		
<i>Area I: Communications</i>		
<i>English Composition - Level 1</i>		
ENGL 1110G	Composition I	4
<i>English Composition - Level 2</i>		
Select one from the following:		3
ENGL 2210G	Professional and Technical Communication Honors	
ENGL 2221G	Writing in the Humanities and Social Science	
<i>Oral Communication</i>		
Select one from the following:		3
ACOM 1130G	Effective Leadership and Communication in Agriculture	
COMM 1115G	Introduction to Communication	
COMM 1130G	Public Speaking	
HNRS 2175G	Introduction to Communication Honors	
<i>Area II: Mathematics</i>		
MATH 1130G	Survey of Mathematics ¹	3
<i>Area III/IV: Laboratory Sciences and Social/Behavioral Sciences</i>		10-11
LING 2110G	Introduction to the Study of Language and Linguistics	
Area III: Laboratory Sciences Course (4 credits) ²		
Either an Area III/IV: Laboratory Sciences Course or Social/Behavioral Sciences Course (4 or 3 credits) ²		
<i>Area V: Humanities</i> ²		3
<i>Area VI: Creative and Fine Arts</i> ²		3
<i>General Education Elective</i> ²		3-4
Viewing a Wider World ³		6
These courses do not satisfy this requirement: (FREN 365V, SPAN 364V, SPAN 365V)		
Departmental/College Requirements		
<i>Linguistics Requirement</i>		

The Linguistics requirement is completed with LING 2110G which also counts towards Area IV of the General Education requirements

Select 24 additional credits from FREN courses (300-level or higher) selected with the help of an advisor from the department⁴ 24

Second Language Requirement (see below)⁶ 0-14

Electives, to bring the total credits to 120⁵ 58

Total Credits 120-136

¹ MATH 1130G Survey of Mathematics is required for the degree but students may need to take any prerequisites needed to enter MATH 1130G Survey of Mathematics first.

² See the General Education (p. 227) Section of the catalog to view the full list of courses that can be selected to complete this requirement.

³ See the Viewing a Wider World (p. 231) Section of the catalog to view the full list of courses that can be selected to complete this requirement.

⁴ Entrance into the French sequence is determined by placement. Additional FREN courses may be needed to meet prerequisites of 300+ level GRMN courses.

⁵ Elective credit may vary based on second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

⁶ The number of credits needed to complete the Second Language Requirement may vary depending on language placement. As well, this requirement may be waived via conditions further described below.

Second Language Requirement

For the Bachelor of Arts in Foreign Languages with a concentration in French there is a two year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
GRMN 1110 & GRMN 1120 & GRMN 2110 & GRMN 2120	German I and German II and German III and German IV	3-14
JAPN 1110 & JAPN 1120 & JAPN 2110 & JAPN 2120	Japanese I and Japanese II and Japanese III and Japanese IV	3-14
SPAN 1110 & SPAN 1120 & SPAN 2110 & SPAN 2120	Spanish I and Spanish II and Spanish III and Spanish IV	3-14
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6
<i>For Heritage Speakers:</i>		
SPAN 1210 & SPAN 1220 & SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II and Spanish for Heritage Learners III	3-9

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3
SIGN 2110	American Sign Language III	3

Option 3:

Prefix	Title	Credits
Challenge the 2120 level for the following courses:		
GRMN 2120	German IV	3
or JAPN 2120	Japanese IV	
or SPAN 2120	Spanish IV	
<i>OR</i>		
Challenge the 1120/2210 level for the following courses:		
PORT 1120	Portuguese II	3
or SPAN 2210	Spanish for Heritage Learners III	

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

Double Major in Foreign Languages with a Concentration in French

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Students who are completing a different major in a different department can double major in Foreign Languages with a concentration in French. Double major students are required to complete:

Prefix	Title	Credits
General Education (from other major):¹		32-35
Viewing a Wider World (from other major):¹		6

These courses do not satisfy this requirement: (FREN 365V, SPAN 364V, SPAN 365V)

Departmental/College Requirements	
Select 24 credits from FREN courses (300-level or higher) selected with the help of an advisor from the department	24
Electives, to bring the total credits to 120³	58
Total Credits	120-123

- ¹ General Education and Viewing a Wider World requirements are solidified by completing the requirements for the other major in a different department, as part of the double major program.
- ² Entrance into the French sequence is determined by placement and some courses may not be needed if a student is placed into a higher level.
- ³ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Intermediate Algebra and ENGL 1110G Rhetoric and Composition. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Freshman	Credits
ENGL 1110G Composition I (C- or better)	4
MATH 1130G Survey of Mathematics (C- or better)	3
Elective Course ²	3
FREN 1110 French I (For students who need to complete the lower-division sequence for prereqs.)	
Elective Course ²	3-4

<i>Select 24 additional credits from GRMN courses (300-level or higher) selected with the help of an advisor from the department ⁴</i>		24
Second Language Requirement (see below) ⁶		0-14
Electives, to bring the total credits to 120 ⁵		58
18 credits must be upper division		
Total Credits		120-136

¹ MATH 1130G Survey of Mathematics is required for the degree but students may need to take any prerequisites needed to enter MATH 1130G first.

² See the General Education (p. 227) Section of the catalog to view the full list of courses that can be selected to complete this requirement.

³ See the Viewing a Wider World (p. 231) Section of the catalog to view the full list of courses that can be selected to complete this requirement.

⁴ Entrance into the German sequence is determined by placement. Additional GRMN courses may be needed to meet prerequisites of 300+ level GRMN courses.

⁵ Elective credit may vary based on second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

⁶ The number of credits needed to complete the Second Language Requirement may vary depending on language placement. As well, this requirement may be waived via conditions further described below.

Second Language Requirement

For the Bachelor of Arts in Foreign Languages with a concentration in German there is a two year second language requirement, the options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120 & FREN 2110 & FREN 2120	French I and French II and French III and French IV	3-14
JAPN 1110 & JAPN 1120 & JAPN 2110 & JAPN 2120	Japanese I and Japanese II and Japanese III and Japanese IV	3-14
SPAN 1110 & SPAN 1120 & SPAN 2110 & SPAN 2120	Spanish I and Spanish II and Spanish III and Spanish IV	3-14
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6

For Heritage Speakers:

SPAN 1210 & SPAN 1220 & SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II and Spanish for Heritage Learners III	3-9
---	---	-----

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3
SIGN 2110	American Sign Language III	3

Option 3:

Prefix	Title	Credits
Challenge the 2120 level for the following courses:		
FREN 2120 or JAPN 2120 or SPAN 2120	French IV Japanese IV Spanish IV	3
<i>OR</i>		

Challenge the 1120/2210 level for the following courses:

PORT 1120	Portuguese II	3
or SPAN 2210	Spanish for Heritage Learners III	

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

Double Major in Foreign Languages with a Concentration in German

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Students who are completing a different major in a different department can double major in Foreign Languages with a concentration in German. Double major students are required to complete:

Prefix	Title	Credits
General Education (from other major): ¹		32-35
Viewing a Wider World (from other major): ¹		6
These courses do not satisfy this requirement: (FREN 365V, SPAN 364V, SPAN 365V)		
Departmental/College Requirements		
<i>Select 24 additional credits from GRMN courses (300-level or higher) selected with the help of an advisor from the department</i>		24
Second Language: (not required)		
Electives, to bring the total credits to 120 ³		58
Total Credits		120-123

¹ General Education and Viewing a Wider World requirements are solidified by completing the requirements for the other major in a different department, as part of the double major program.

² Entrance into the German sequence is determined by placement and some courses may not be needed if a student is placed into a higher level.

³ Elective credit may vary based on second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the

amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Prefix	Title	Credits
Complete one of the following sequences:		
CHIN 1110 & CHIN 1120 & CHIN 2110 & CHIN 2120	and and and	3-14
FREN 1110 & FREN 1120 & FREN 2110 & FREN 2120	French I and French II and French III and French IV	3-14
GRMN 1110 & GRMN 1120 & GRMN 2110 & GRMN 2120	German I and German II and German III and German IV	3-14
JAPN 1110 & JAPN 1120 & JAPN 2110 & JAPN 2120	Japanese I and Japanese II and Japanese III and Japanese IV	3-14
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6

Option 2:

Prefix	Title	Credits
Complete the following sequence for American Sign Language (with a C- or better):		
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3
SIGN 2110	American Sign Language III	3

Option 3:

Prefix	Title	Credits
Challenge the 2120 level for the following courses:		
CHIN 2120 or FREN 2120 or GRMN 2120 or JAPN 2120	French IV German IV Japanese IV	3
<i>OR</i>		
Challenge the 1120/2210 level for the following courses:		
PORT 1120 or SPAN 2210	Portuguese II Spanish for Heritage Learners III	3

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of a second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

Double Major in Foreign Languages with a Concentration in Spanish

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Students who are completing a different major in a different department can double major in Foreign Languages with a concentration in Spanish. Double major students are required to complete:

Prefix	Title	Credits
General Education (from other major): ¹		36
Viewing a Wider World (from other major): ¹		6
These courses do not satisfy this requirement: (FREN 365V, LING 302V, SPAN 364V, SPAN 365V)		
Departmental/College Requirements		
SPAN 316 or SPAN 318	Grammar for Non-Native Speakers of Spanish Grammar for Heritage/Native Speakers of Spanish	3
SPAN 317 or SPAN 319	Composition for Non-Native Speakers of Spanish Composition for Heritage/Native Speakers of Spanish	3
SPAN 340	Introduction to Spanish Linguistics	3
SPAN 380	Introduction to Hispanic Literature	3
SPAN Upper-Division Electives ³		12
Electives (to bring the total credits to 120) ⁴		54
Total Credits		120

¹ General Education and Viewing a Wider World requirements are solidified by completing the requirements for the other major in a different department, as part of the double major program.

² Entrance into the Spanish sequence is determined by placement; some courses may not be needed if a student is placed into a higher level.

³ SPAN 364V Culture and Civilization of Mexico and **SPAN 365V Culture and Civilization of Spanish America** will not count toward the double major.

⁴ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However

students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Freshman		Credits

- ¹ MATH 1130G Survey of Mathematics is required for the degree but students may need to take any prerequisites needed to enter MATH 1130G first.
- ² Elective credit may vary based on second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
- ³ See the General Education (p. 227) section of the catalog for a full list of courses
- ⁴ Students who double major in Foreign Languages with a concentration in French are not required to take LING 2110G or fulfill a second language requirement.
- ⁵ See the Viewing a Wider World (p. 231) section of the catalog to see a full list of courses, please note that FREN 365V, SPAN 364V and SPAN 365V do not fulfill this requirement.
- ⁶ Credit will not be given for both SPAN 316 and SPAN 318
- ⁷ Credit will not be given for both SPAN 317 and SPAN 319
- ⁸ A total of 24 credits of Upper-Division Spanish is required
- ⁹ Both SPAN 340 and SPAN 380 must be taken

Linguistics - Bachelor of Arts

Departmental Requirements

Single Major in Linguistics

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

The strong interdisciplinary nature of the major in Linguistics lends itself to combining with other programs. Students fulfilling the requirements for the major in Linguistics are encouraged to complete either a minor or an additional major to enhance their academic pursuits.

Prefix	Title	Credits	Electives
General Education			Select 12 credits from the following: 12

Second Language Requirement (required - see below)	0-14
Electives (to bring the total credits to 120) ⁴	43-58
Total Credits	155-163

¹ MATH 1130G Survey of Mathematics is required for the degree but students may need to take any prerequisites needed to enter MATH 1130G first.

² See the **General Education** Section of the catalog to view the full list of courses that can be selected to complete this requirement.

³ See the **Viewing a Wider World** Section of the catalog to view the full list of courses that can be selected to complete this requirement.

⁴ Elective credit may vary based on second language requirements, prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Arts in Linguistics, there is a two-year second language requirement. The options to complete this requirement are listed below. The number of credits that a student needs to take may vary depending on what level they come in with. Please speak with an advisor for more information as to which courses you will need to take to fulfill the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
<i>French</i>		
FREN 1110 & FREN 1120 & FREN 2110 & FREN 2120	French I and French II and French III and French IV	
<i>German</i>		
GRMN 1110 & GRMN 1120 & GRMN 2110 & GRMN 2120	German I and German II and German III and German IV	
<i>Japanese</i>		
JAPN 1110 & JAPN 1120 & JAPN 2110 & JAPN 2120	Japanese I and Japanese II and Japanese III and Japanese IV	
<i>Portuguese</i>		
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	
<i>Spanish</i>		
For Non-heritage Speakers		
SPAN 1110 & SPAN 1120 & SPAN 2110 & SPAN 2120	Spanish I and Spanish II and Spanish III and Spanish IV	

For Heritage Speakers

SPAN 1210 & SPAN 1220 & SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II and Spanish for Heritage Learners III
---	---

Option 2:

Prefix **Title** **Credits**

Complete the following sequence for American Sign Language (with a C- or better):

SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3
SIGN 2110	American Sign Language III	3

Completing SIGN 2110 fulfills second language requirement (with a C- or better).

Option 3:

Prefix **Title** **Credits**

Challenge one of the following courses:

FREN 2120 or GRMN 2120 or JAPN 2120 or PORT 1120 or SPAN 2120 or SPAN 2210	French IV German IV Japanese IV Portuguese II Spanish IV Spanish for Heritage Learners III	3
---	---	---

Option 4:

Pass a three-credit, upper-division course (numbered 300 or above) taught in a second language by the department of Languages and Linguistics.

Option 5:

Obtain college certification of completion of three years of a second language at the high school level with a grade of C- or higher in the second-year level.

Option 6:

By obtaining certification of a working knowledge of a Native-American language from the American Indian program director.

Option 7:

By obtaining, from the head of the Department of Languages and Linguistics, certification of a working knowledge of second language if such language is not taught at NMSU.

Option 8:

In the case of a foreign student who is required to take the TOEFL exam admission, the dean will automatically waive the second language requirement.

Double Major in Linguistics

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Students who are completing a different major in a separate field of study can double major in Linguistics and this program may serve students by completing this program as a double major. Double major students are required to complete the same course sequence as single majors in Linguistics except that there is no requirement to take LING 455 or similar Linguistics course with a research component, rather this is an option for double majors in Linguistics. At least 3 elective credits must be at the 400 level. No more than 6 credits may be from the department where the student is obtaining his/her major.

A Suggested Plan of Study for Students

This roadmap assumes student placement in ENGL 1110G Composition I and MATH 1130G Survey of Mathematics. The contents and order of this roadmap may vary depending on initial student placement in English and Mathematics. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

¹ See list of electives for the supplementary major in Linguistics.

Spanish - Undergraduate Minor

Students must pass at least 18 credits of SPAN courses of which at least 12 credits are at either the 300 or 400 level. Students may not count SPAN 1110 Spanish I, SPAN 1120 Spanish II and SPAN 1210 Elementary Spanish for Heritage Learners I, but may count SPAN 2110 Spanish III and/or SPAN 2120 Spanish IV or SPAN 1220 Spanish for Heritage Learners II and/or SPAN 2210 Spanish for Heritage Learners III. A student whose primary language for a Bachelor of Arts in Foreign Languages is Spanish may not also earn a minor in Spanish.

Prefix	Title	Credits
Required Courses		
SPAN 316	Grammar for Non-Native Speakers of Spanish	3
or SPAN 318	Grammar for Heritage/Native Speakers of Spanish	
SPAN 317	Composition for Non-Native Speakers of Spanish	3
or SPAN 319	Composition for Heritage/Native Speakers of Spanish	
Electives		

Additional 12 SPAN credits of which at least 6-credits are upper-division ¹ 12

Total Credits 18

¹ SPAN 364V Culture and Civilization of Mexico and SPAN 365V Culture and Civilization of Spanish America do not count for a minor in Spanish as they are taught in English.

Latin American Studies - Supplemental Major

This program consists of 24 credits drawn from the lists below of which 18 credits must be numbered 300 or above. In addition, students must satisfy the College of Arts and Sciences Second Language Requirement.

Options

There are two options based on the section chosen by the student:

Option 1

Concentration in Latin American Language, Culture and Literature (Spanish or Portuguese):

- 12 credits from Section 1
- 12 credits from Section 2, (*Note: No more than 6 credits may be taken in a single department*)

Option 2

Concentration in one major (e.g., history, government, economics, health science, anthropology, sociology) included in Latin American Social Sciences and Art:

- 12 credits in the chosen area of Section 2
- 6 credits from another area (or areas) of Section 2
- 6 credits from Section 1

Both options require that the student take at least two Spanish or Portuguese courses above 300-level.

Section 1: Latin American Language, Culture and Literature

Only 3 credits will count.

Prefix	Title	Credits
Spanish/Portuguese Language		
Select one from the following:		3
SPAN 325	Advanced Conversation	
SPAN 327	Spanish in the Community	
PHLS 4610	Health Disparities: Determinants and Interventions	
Culture		
SPAN 305	Topics in Hispanic Civilization	3
SPAN 306	Special Topics	3
SPAN 491	History of the Spanish Language	3
Literature		
SPAN 388	Contemporary Hispanic Literature	3

Section 2: Latin American Social Sciences and Art

Prefix	Title	Credits
Course List		
ANTH 306V	Peoples of Latin America	3
ANTH 312	The Ancient Maya	3
ANTH 313V	Ancient Mexico	3
ARTH 344	Gender, Sexuality, and Art in the Americas	3
ECON 324V	Developing Nations	3
GEOG 328V	Environment and Society of Latin America	3
POLS 371	Latin American Politics	3
POLS 378	U.S.-Mexico Border Politics	3
POLS 379	Mexican Politics	3
HIST 311V	Colonial Latin America	3
HIST 312V	Modern Latin America	3
HIST 331	Rebels, Guerrillas, and Terrorists in Modern Latin America	3
HIST 387	Spain in the New World: Conquest, Conflict, and Cultural Exchange	3
PHLS 4630	International Health Problems	3
PHLS 4660	U.S.-Mexico Border Health Issues	3
PORT 453	Independent Luso-Brazilian Studies	1-3
SOCI 3310V	Social Issues in the Rural Americas	3
SPAN 364V	Culture and Civilization of Mexico	3
SPAN 365V	Culture and Civilization of Spanish America	3
SPAN 412	Spanish-American Poetry	3
SPAN 418	Spanish-American Short Story	3
SPAN 419	Spanish American Drama	3
SPAN 421	New Mexico Culture and Literature	3
SPAN 422	Cultural Production of Hispanic Revolutions and Wars	3
SPAN 424	Post-Modern Hispanic Literature	3
SPAN 426	Spanish-American Novel	3
SPAN 447	Hispanic Film	3

In both sections, independent studies, honors or special topics courses may be chosen with the approval of the Supplementary Major in Latin American Studies advisor, the head of the Department of Languages and Linguistics, and the College of Arts and Sciences. As departments add new courses they may be included in the program.

Chicano Studies - Supplemental Major

This program consists of 24 credits from the lists below. Advisor: Dr. Spencer R. Herrera, Languages and Linguistics.

Prefix	Title	Credits
Core Requirements		
Select three from the following:		9
SPAN 327	Spanish in the Community	
SPAN 448	U.S.-Hispanic Film	
SOCI 4420	Sociology of Latinos/as in the United States	
SPAN 350	Introduction to Chicano Studies	
Culture and Literature		
Select two from the following:		6
ENGL 339V	Chicana/o Literature	

ENGL 394V	Southwestern Literature	
ENGL 458	Latino/a Literature and Culture	
SPAN 361	US-Mexico Border Culture & Literature	
SPAN 385	Introduction to Chicano/US-Mexican Literature	
SPAN 427	Chicano Literature	
SPAN 451	Hispanic Cultures	
Applicable upper-division honors courses		
Applicable upper-division "special topics" courses		
Social Studies		
Select 6 credits from the following:		6
CJUS 414	Race, Crime and Justice	
POLS 378	U.S.-Mexico Border Politics	
POLS 399	New Mexico Law	
HIST 2110	Survey of New Mexico History	
HIST 400	Special Topics	
SOCI 3410	Race and Ethnic Relations	
SPAN 361	US-Mexico Border Culture & Literature	
SPAN 493	Espanol de los Estados Unidos	
Applicable upper-division honors courses		
Applicable upper-division "special topics" courses		
Electives		
Select one from the following:		3
ANTH 313V	Ancient Mexico	
CEPY 5130	Multicultural Counseling	
EDUC 3120	Multicultural Education	
ENGL 394V	Southwestern Literature	
GEOG 325V	New Mexico and the American West	
POLS 399	New Mexico Law	
HIST 311V	Colonial Latin America	
HIST 483	Historic Preservation	
PHLS 4660	U.S.-Mexico Border Health Issues	
GNDR 454	Women Crossing Borders	
Total Credits		24

¹ Only with prior written permission of instructor, department head and course dean.

Independent study, honors or special topics courses may be chosen with the approval of the advisor for Supplementary Majors in Chicano Studies, the head of the Department of Languages and Linguistics, and the College of Arts and Sciences. As departments add new courses they may be included in the program.

Linguistics - Supplemental Major

This program consists of 24 credits drawn from the lists below. In addition, students must satisfy the College of Arts and Sciences Second Language Requirement.

Prefix	Title	Credits
Core Requirements		
LING 2110G	Introduction to the Study of Language and Linguistics	3
LING 302V	Language and Society	3
LING 303	Exploring Language Systems	3
One additional LING course to be selected from the following:		3
LING 405	Topics in Linguistics	

LING 425	Language and the Mind: Introduction to Psycholinguistics	
LING 455	Research in Linguistics	
Electives		
Select 12 credits from the following: ¹		12
ANTH 320	Anthropological Linguistics	
BLED 4110	Second Language Acquisition	
C S 370	Compilers and Automata Theory	
C S 409	Independent Study ²	
C S 466	Compilers and Automata Transition	
C S 471	Programming Language Structure I	
C S 479	Special Topics ²	
COMM 3110	Communication Theory and Discovery	
COMM 3120	Persuasion Theory and Practice	
COMM 3510	Organizational Communication	
COMM 3710	Communication and Culture	
COMM 3530	Conflict Management	
COMM 3610	Interpersonal Communication	
COMM 4520	Small Group Communication	
COMM 4210	Political Communication	
COMM 4220	Communication Technologies	
COMM 4230	Strategic Communication	
COMM 4620	Deception and Communication	
COMM 4630	Family Communication	
COMM 4640	Nonverbal Communication	
COMM 4310	Sports Communication	
COMM 4730	Environmental Communication	
COMM 4998	Communication Internship	
COMM 4720	International Communication	
COMM 4750	Health Communication	
COMM 4996	Selected Topics	
COMM 4997	Independent Study	
FREN 352	French Phonetics	
FREN 451	Special Topics in French	
GRMN 451	Special Topics in German	
GRMN 453	Independent Studies in German	
LING 451	Independent Studies in Linguistics ²	
PHIL 312	Formal Logic	
PHIL 315	Philosophy of Language	
PHIL 346	Philosophy of Mind	
PORT 453	Independent Luso-Brazilian Studies ²	
PSYC 401	Directed Readings	
SPAN 340	Introduction to Spanish Linguistics	
SPAN 439	Topics in Applied Spanish Linguistics	
SPAN 461	Introduction to Spanish Phonetics	
SPAN 491	History of the Spanish Language	
SPAN 492	Structure of Spanish	
SPAN 493	Espanol de los Estados Unidos	
SPED 4340	Communication and Autism	
SPHS 4510	Phonetics	
SPHS 4520	Audiology	
SPHS 4610	Language Acquisition	
SPHS 4620	Speech and Hearing Science	
SPHS 4710	Speech Disorders Across the Lifespan	
SPHS 4720	Anatomy and Physiology of Speech Mechanisms	

SPHS 4820	Neural Bases of Communication Disorders	
Total Credits		24

¹ At least 3 hours must be at the 400 level. No more than 6 hours may be from the department where the student is obtaining his/her major.

² All Independent Study, Special topic, or Directed Reading courses must be approved by the Department of Languages and Linguistics to count toward Supplementary Major.

Mathematical Sciences

Undergraduate Program Information

In addition to meeting University and College requirements, students earning a Bachelor of Science in Mathematics must fulfill the core departmental requirements and choose from one of six concentrations:

- General,
- Applied Mathematics,
- Actuarial Science and Insurance,
- Foundations,
- Secondary Mathematics Education or
- Probability and Statistics.

Students must earn a grade of C- or better in all departmental and nondepartmental courses for any degree in the Department of Mathematical Sciences.

Math Sequence Information and Recommendations

Some students may be able to bypass one or more courses in the calculus sequence MATH 1511G Calculus and Analytic Geometry I - MATH 1521G Calculus and Analytic Geometry II - MATH 2530G Calculus III. The calculus sequence, MATH 1531 Introduction to Higher Mathematics, and MATH 2415 Introduction to Linear Algebra provide knowledge that is basic to further work, and students are advised to complete them or their equivalent as early as possible.

Students planning to enter a graduate program in Mathematics should select the General Emphasis. In any case, such students are strongly advised to take both MATH 3110 Introduction to Modern Algebra and MATH 3120 Introduction to Analysis, since these courses are required by most programs, and should take as many as possible of the following courses

Prefix	Title	Credits
MATH 4340	Abstract Algebra I: Groups and Rings	3
MATH 4350	Advanced Linear Algebra	3
MATH 4360	Introduction to Real Analysis I	3
MATH 4365	Introduction to Real Analysis II	3

Graduate Program Information

The Department of Mathematical Sciences offers graduate instruction leading to the Master of Science degree, and Doctor of Philosophy degree. Possible areas of study are various topics in pure mathematics and applied mathematics, statistics and mathematics education. Students may also pursue an interdisciplinary program of study. Most graduate students in Mathematical Sciences are supported either through teaching assistantships, research assistantships, fellowships, or job opportunities at nearby teaching or research units.

For more information on our programs and facilities, and to learn more about the research interests of the faculty, please see our web site at <https://math.nmsu.edu/>, phone us at (575) 646-3901, or write to:

Graduate Secretary
Department of Mathematical Sciences
NMSU
Las Cruces, NM 88003-8001
Email: gradcomm@nmsu.edu

Students applying for regular admission to graduate study in mathematics are expected to have 24 credits of upper-division courses in mathematics and statistics, including three-credit proof based courses in modern analysis and in modern algebra. Students who do not meet these requirements may be admitted with deficiencies and allowed to complete the requirements at New Mexico State University.

Applications must be submitted online, see <http://prospective.nmsu.edu/graduate/apply/> (<http://admissions.nmsu.edu/apply/>). The minimum application to be admitted as a regular graduate student in mathematics includes:

1. a completed Graduate School admission application
2. complete transcripts of all undergraduate and graduate work
3. application fee
4. three letters of recommendation from professors, employers, or others who are qualified to judge potential for graduate work in mathematics
5. a one-page statement of educational objectives

Although GRE subject test scores are not required for admission, applicants are encouraged to submit them, if available. The test scores may be used to help allocate available teaching assistantships among entering students.

To ensure full consideration for admission, candidates should submit their applications by the following deadlines.

Application Deadlines-Domestic Applicants

Semester	Admission Only	Admission/Financial Aid
Fall	July 1	February 1
Spring/Summer	October 1	October 1

Application Deadlines-International Applicants

Semester	Admission Only	Admission/Financial Aid
Fall	February 1	February 1
Spring/Summer	October 1	October 1

Degrees for the Department

Bachelor Degree(s) & Supplemental Major(s)

- Applied Mathematics - Supplemental Major (p. 772)
- Mathematics (Actuarial Science and Insurance) - Bachelor of Science (p. 761)
- Mathematics (Applied Mathematics) - Bachelor of Science (p. 763)
- Mathematics (Foundations) - Bachelor of Science (p. 765)
- Mathematics (General Mathematics) - Bachelor of Science (p. 767)

- Mathematics (Probability and Statistics) - Bachelor of Science (p. 768)
- Mathematics (Secondary Mathematics Education) - Bachelor of Science (p. 770)

Master Degree(s)

- Mathematics - Master of Science (p. 157)

Doctoral Degree(s)

- Mathematics - Doctor of Philosophy (p. 200)

Minors for the Department

- Mathematics - Undergraduate Minor (p. 773)

Professor, John Harding, Department Head

Professors Barany, Bezhanishvili, DeBlassie, Fouli, Harding, Lakey, Olberding, Smits, Wang; **Associate Professors** Ballyk, Contreras, Tian; **Assistant Professors** Bhattacharya, De Chenne, DiPasquale, Li, Oprisan, Shapirovskiy; **College Associate Professors** Villaverde; **College Assistant Professors** Archuleta, Cruz Quinones, Meek, O'Rourke; **College Instructors** Reece.

J. Harding Department Head, Ph.D. Ph.D. (McMaster)– applications of topological methods to ordered structures; M. Ballyk, Ph.D. (McMaster)– mathematical biology and ecology; E. Barany, Ph.D. (Ohio State)– mathematical physics; G. Bezhanishvili, Ph.D. (Tokyo Institute of Technology)– topology, algebra, and categories in logic; P. Bhattacharya, Ph.D. (Indiana)– algebraic topology; A. Contreras, Ph.D. (Indiana)– analysis and applied mathematics; D. DeBlassie, Ph.D. (MIT)– probability; A. De Chenne, Ph.D. (Oregon State)– mathematics education, combinatorial reasoning, computation education in mathematics; M. DiPasquale, Ph.D. (Illinois)– computational commutative algebra and algebraic geometry; L. Fouli, Ph.D. (Purdue)– commutative algebra; J. Lakey, Ph.D. (Maryland)– applied harmonic analysis; B. Li, Ph.D. (Waterloo)– functional analysis, operator theory and operator algebras; B. Olberding, Ph.D. (Wesleyan)– commutative algebra, valuation theory and module theory; A. Oprisan, Ph.D. (Texas–Arlington)– statistics, probability, and data science; I. Shapirovskiy, Ph.D. (IITP, Moscow, Russia) – foundations; R. Smits, Ph.D. (Purdue)– probability, harmonic analysis; J. Tian, Ph.D. (California–Riverside)– applied mathematics, mathematical biology, and biostatistics; T. Wang, Ph.D. (Windsor)– mathematical statistics.

Mathematics Courses

MATH 1130G. Survey of Mathematics 3 Credits (3)

This course will develop students' ability to work with and interpret numerical data, to apply logical and symbolic analysis to a variety of problems, and/or to model phenomena with mathematical or logical reasoning. Topics include financial mathematics used in everyday life situations, statistics, and optional topics from a wide array of authentic contexts. May be repeated up to 3 credits.

Prerequisite: Adequate scoring on the Mathematics Placement Exam, or any ACT/SAT and GPA combination that is considered equivalent, or a C- or better in CCDM 113 N or CCDM 114 N.

Learning Outcomes

1. Construct and analyze graphs and/or data sets: Gather and organize information; Understand the purpose and use of various graphical representations such as tables, line graphs, tilings, networks, bar graphs, etc.; Interpret results through graphs, lists, tables,

sequences, etc.; Draw conclusions from data or various graphical representations.

2. Use and solve various kinds of equations: Understand the purpose of and use appropriate formulas within a mathematical application; Solve equations within a mathematical application; Check answers to problems and determine the reasonableness of results.
3. Understand and write mathematical explanations using appropriate definitions and symbols: Translate mathematical information into symbolic form; Define mathematical concepts in the student's own words; Use basic mathematical skills to solve problems.
4. Demonstrate problem solving skills within the context of mathematical applications; Show an understanding of a mathematical application both orally and in writing; Choose an effective strategy to solve a problem; Gather and organize relevant information for a given application.

MATH 1134. Fundamentals of Elementary Mathematics I **3 Credits (3)**

Numbers and the four operations of arithmetic. Understanding and comparing multiple representations of numbers and operations, in particular how these representations build from whole numbers to integers to fractions and decimals. Applying properties of numbers and operations in contextual situations. Reasoning, communicating, and problem solving with numbers and operations. Applications to ratio, and connections with algebra. Taught primarily through student activities and investigations. Restricted to: EDUC,EPAR,E ED,ECED majors. May be repeated up to 3 credits.

Prerequisite: C- or better in ENGL 1110G; adequate scoring on the Mathematics Placement Exam, or any ACT/SAT and GPA combination that is considered equivalent, or a C- or better in MATH 1215.

Learning Outcomes

1. As future elementary teachers you will be teaching mathematics to children.
2. In order to teach a subject well you need not only to know the material that you will teach, but you need to know more than what you will teach, and know it well, in order to be able to answer questions, understand student reasoning, give alternate explanations when your students do not understand something, and be able to adjust to changes in the mathematical curriculum.
3. Furthermore, even if you hope to teach a given grade, you should be prepared to teach a variety of grades since what a person ends up teaching is often not what they planned to do.
4. We will explore ideas of arithmetic in a way to help you improve your mathematical ability, gain confidence in your ability, introduce to you different ideas and models, and to see a variety of mathematical activities that are appropriate for people of all ages.
5. Everything we study will be done with the aim of developing your ability to relate to the mathematics of elementary school and to help children develop mathematical understanding

MATH 1215. Intermediate Algebra **3 Credits (3)**

A study of linear and quadratic functions, and an introduction to polynomial, absolute value, rational, radical, exponential, and logarithmic functions. A development of strategies for solving single-variable equations and contextual problems. May be repeated up to 3 credits.

Prerequisite: Adequate scoring on the Mathematics Placement Exam, or any ACT/SAT and GPA combination that is considered equivalent, or a C- or better in CCDM 113 N or CCDM 114 N.

Learning Outcomes

1. Students will build on their knowledge of linear and quadratic functions and will begin to build an understanding of absolute value, polynomial, rational, power, radical, exponential and logarithmic functions in the following contexts: Demonstrate appropriate use of basic function language and notation; Convert between equivalent forms of algebraic expressions; Solve single-variable equations of the types listed above; Interpret and communicate algebraic solutions graphically and numerically; Demonstrate contextual problem-solving skills that include setting up and solving problems, and interpreting solutions in context; Apply appropriate problem solving methods from among algebraic, graphical, and numerical.

MATH 1217. General Supplemental Instruction I **1 Credit (2P)**

Collaborative workshop for students enrolled in Intermediate Algebra.

Corequisite: MATH 1215.

Learning Outcomes

1. Intermediate Algebra Workshop provides time for students to work on problems from Intermediate Algebra under the guidance of their instructor.

MATH 1220G. College Algebra **3 Credits (3)**

The study of equations, functions and graphs, reviewing linear and quadratic functions, and concentrating on polynomial, rational, exponential and logarithmic functions. Emphasizes algebraic problem solving skills and graphical representation of functions. May be repeated up to 3 credits.

Prerequisite: Adequate scoring on the Mathematics Placement Exam, or any ACT/SAT and GPA combination that is considered equivalent, or a C- or better in MATH 1215.

Learning Outcomes

1. Use function notation; perform function arithmetic, including composition; find inverse functions.
2. Identify functions and their transformations given in algebraic, graphical, numerical, and verbal representations, and explain the connections between these representations.
3. Graph and interpret key feature of functions, e.g., intercepts, leading term, end behavior, asymptotes.
4. Solve equations algebraically to answer questions about graphs, and use graphs to estimate solutions to equations.
5. Solve contextual problems by identifying the appropriate type of function given the context and creating a formula based on the information given.
6. Communicate mathematical information using proper notation and verbal explanations.

MATH 1221. General Supplemental Instruction II **1 Credit (1+2P)**

Collaborative workshop for students enrolled in College Algebra.

Corequisite: MATH 1220G.

Learning Outcomes

1. College Algebra Workshop provides time for students to work on problems from College Algebra under the guidance of their instructor.

MATH 1250G. Trigonometry & Pre-Calculus **4 Credits (3+2P)**

Trigonometry & Pre-Calculus includes the study of functions in general with emphasis on the elementary functions: algebraic, exponential, logarithmic, trigonometric and inverse trigonometric functions. Topics include rates of change, limits, systems of equations, conic sections,

sequences and series, trigonometric equations and identities, complex number, vectors, and applications. May be repeated up to 4 credits.

Prerequisite: Adequate scoring on the Mathematics Placement Exam, or any ACT/SAT and GPA combination that is considered equivalent, or a C- or better in MATH 1220G.

Learning Outcomes

- (Trigonometry) Students will be able to define and evaluate the trigonometric functions as functions of angle in both degree and radian measure using the definitions in terms of x , y , and r ; as the ratio of sides of a right triangle; using the unit circle; using reference angles, commonly used (0° , 30° , 45° , 60° , 90°) angles and using a calculator.
- (Trigonometry) Students will be able to solve right triangles. They will be able to draw a sketch in an applied problem when necessary.
- (Trigonometry) Students will be able to solve non-right triangles using the law of sines and the law of cosines.
- (Trigonometry) Students will be able to prove trigonometric identities and apply addition and subtraction, double-angle, half-angle and power reduction formulas.
- (Trigonometry) Students will be able to graph the six trigonometric functions, their transformations and their inverses.
- (Trigonometry) Students will be able to use algebraic methods, including the use of identities and inverses, to solve trigonometric equations and demonstrate connections to graphical and numerical representations of the solutions.
- (Trigonometry) Students will be able to add and subtract vectors in two dimensions. They will be able to use the dot product to project one vector onto another and to determine the angle between two vectors. They will be able to solve a variety of word problems using vectors.
- (Trigonometry) Students will be able to work with polar coordinates; this includes graphing in polar coordinates and transforming an equation with polar coordinates into one with rectangular coordinates, and vice versa.
- (Trigonometry) Students will be able to work with the trigonometric form of complex numbers, including using De Moivre's formula. 1
- (Pre-Calculus) Functions: Reinforce recognizing a function from its graph and from its algebraic expression; Reinforce identification of a one-to-one function graphically and from its algebraic expression; Reinforce identification of inverse functions graphically and algebraically; Reinforce combining functions arithmetically and compositionally; Be able to calculate the average rate of change of a function using the difference quotient and depict it graphically; Be able to find a limiting value of a function and be able to identify and use the notation that describes this. 1
- (Pre-Calculus) Graphing: Reinforce using key characteristics of functions to graph them; Be able to graph conic sections from their key characteristics such as foci, eccentricity and asymptotes; Be able to identify all functions mentioned from their graphs, describing their key aspects. 1
- (Pre-Calculus) Solving: Exponential/Logarithmic equations using the rules of exponents and logarithms; Systems of linear equations by elimination; Non-linear systems algebraically and graphically. 1
- (Pre-Calculus) Applications: Modeling with functions with an emphasis on exponential and logarithmic functions, growth and decay. 1
- (Pre-Calculus) Sequences and series: Understand the concept and notation of a sequence; Understand the concept and notation of a

series; Be able to find limits of basic sequences; Be able to find sums of basic series.

MATH 1350G. Introduction to Statistics

3 Credits (3)

This course discusses the fundamentals of descriptive and inferential statistics. Students will gain introductions to topics such as descriptive statistics, probability and basic probability models used in statistics, sampling and statistical inference, and techniques for the visual presentation of numerical data. These concepts will be illustrated by examples from a variety of fields.

Prerequisite: Adequate scoring on the Mathematics Placement Exam, or any ACT/SAT and GPA combination that is considered equivalent, or a C- or better in MATH 1215 or higher.

Learning Outcomes

- Explain the general concepts of statistics: Explain and evaluate statistics used in the real world (from a news article, research project, etc.); Use statistical vocabulary appropriately; Distinguish between descriptive and inferential statistics; Distinguish between qualitative and quantitative data; Distinguish between populations and samples, and parameters and statistics; Give examples of independent and dependent variables.
- Presentation and description of data: Present data graphically using histograms, frequency curves and other statistical graphs; Interpret graphs of data, including histograms and shapes of distributions.
- Summarize data using measures of central tendency and variation: Calculate and interpret the mean, median, and mode to describe data; Calculate and interpret range, variance, and standard deviation to describe data.
- Present the concepts of probability: Interpret basic probabilities; Calculate probabilities using compound probability rules and the binomial distribution; Calculate probabilities using the standard normal distribution and relate them to areas under the curve; Determine if the binomial distribution can be approximated with the normal distribution; Describe the relationship between the sampling distribution and the population distribution; Use the central limit theorem to approximate the probability distribution and calculate probabilities.
- Compute point and interval estimates: Determine the confidence interval for a parameter; Interpret the confidence level and margin of error; Determine whether a statistical technique is appropriate under stated conditions.
- Perform hypothesis tests: Determine whether a statistical test is appropriate under stated conditions; Identify null and alternative hypothesis; Perform and interpret statistical tests (e.g. z-test, t-test, one-tailed and two-tailed, one-sample, two-sample) and determine whether data is statistically significant; State the conclusion of a hypothesis test; Interpret a p-value as compared to a significance level; Explain why a test can lead us to reject a null hypothesis, not accept one; Distinguish between Type I and Type II errors.
- Analyze data using regression and correlation: Explain the difference between correlation and causation; Construct and interpret scatter plots; Calculate and interpret the linear correlation coefficient; Determine and use the equation of a least-squares regression line between two variables to make predictions; Interpret the meaning of the coefficient of determination.
- Optional topics: Inter-quartile range, box-plots, stem-and-leaf plots; Combinations and permutations; The Poisson distribution; Statistical power; Chi-square; Analysis of variance.

MATH 1430G. Applications of Calculus I**3 Credits (2+2P)**

An algebraic and graphical study of derivatives and integrals, with an emphasis on applications to business, social science, economics and the sciences. May be repeated up to 3 credits.

Prerequisite: Adequate scoring on the Mathematics Placement Exam, or any ACT/SAT and GPA combination that is considered equivalent, or a C- or better in MATH 1220G or higher.

Learning Outcomes

1. Find limits algebraically and graphically, and use limits to analyze continuity.
2. Find the derivative of a function by applying appropriate techniques (limit of the difference quotient, general derivative rules, product rule, quotient rule, chain rule, and higher order derivatives).
3. Perform implicit differentiation. Use implicit differentiation to solve related rate application problems.
4. Use the derivative to describe the rate of change and slope of a curve in general and at particular points. Compare and contrast average rates of change to instantaneous rates of change.
5. Find the maxima, minima, points of inflections, and determine concavity of a function by applying the first and second derivatives. Use these results to sketch graphs of functions and to solve optimization problems in context.
6. Find the antiderivative and indefinite integral functions to include integration by substitution. Apply the Fundamental Theorem of Calculus in computing definite integrals of functions.
7. Approximate the area under the curve using Riemann sums.
8. Use the integral to determine the area under a curve and to find the accumulated value of a function in context.
9. Solve contextual problems by identifying the appropriate type of function given the context, creating a formula based on the information given, applying knowledge of algebra and calculus, and interpreting the results in context. 1
10. Communicate mathematical information using proper notation and verbal explanations.

MATH 1435. Applications of Calculus I**3 Credits (3)**

Intuitive differential calculus with applications to engineering.

Prerequisite(s): C- or better in MATH 1250G.

Learning Outcomes

1. Find limits algebraically and graphically, and use limits to analyze continuity.
2. Find the derivative of a function by applying appropriate techniques (limit of the difference quotient, general derivative rules, product rule, quotient rule, chain rule, and higher order derivatives).
3. Learn derivative rules for polynomial, exponential, logarithmic, trigonometric and inverse trigonometric functions.
4. Perform implicit differentiation. Use implicit differentiation to solve related rate application problems.
5. Find the maxima, minima, points of inflections, and determine concavity of a function by applying the first and second derivatives. Use these results to sketch graphs of functions and to solve optimization problems in context.
6. Find partial derivatives and find maxima, minima in three dimensions.
7. Find the linear approximation of a function.
8. Find Maclaurin and Taylor series.
9. Find limits via L'Hospital's rule. 1

10. Communicate mathematical information using proper notation and verbal explanations.

MATH 1440. Applications of Calculus II**3 Credits (3)**

Topics in this second course of Applications of Calculus include functions of several variables, techniques of integration, an introduction to basic differential equations, and other applications.

Prerequisites: C or better in MATH 1435 or in MATH 1521G, or in MATH 1521H.

Learning Outcomes

1. Find definite and indefinite integrals using integration by parts, integral tables, and numerical integration.
2. Analyze multivariable functions using partial derivatives and double integrals, and apply these techniques to applications such as optimization, least squares, and volumes.
3. Solve differential equations graphically, numerically, and algebraically using separation of variables, and apply differential equations in context.
4. Apply differentiation and integration to other areas, for example to Taylor polynomials and Taylor series, probability, trigonometric functions, etc.

MATH 1511G. Calculus and Analytic Geometry I**4 Credits (4)**

Limits and continuity, theory and computation of derivatives, applications of derivatives, extreme values, critical points, derivative tests, L'Hopital's Rule. May be repeated up to 4 credits.

Prerequisite: Adequate scoring on the Mathematics Placement Exam, or any ACT/SAT and GPA combination that is considered equivalent, or a C- or better in MATH 1250G.

Learning Outcomes

1. The goals are to present the concepts of calculus, stressing techniques, applications, and problem solving, and emphasizing numerical aspects such as approximations and order of magnitude.
2. Overall, the goals are to illustrate the power of calculus as a tool for modeling situations arising in physics, science, engineering and other fields.
3. In fulfillment of these goals, this and later courses will stress topics such as polynomial approximation, setting up integrals, as well as the use of appropriate technology.

MATH 1511H. Calculus and Analytic Geometry I Honors**4 Credits (4)**

Limits and continuity, theory and computation of derivatives, applications of derivatives, extreme values, critical points, derivative tests, L'Hopital's Rule. This is an Honors version of MATH 1511G. It is taught with MATH 1511G with differentiated assignments.

Prerequisite: Adequate scoring on the Mathematics Placement Exam, or any ACT/SAT and GPA combination that is considered equivalent, or a C- or better in MATH 1250G or higher.

Learning Outcomes

1. The goals are to present the concepts of calculus, stressing techniques, applications, and problem solving, and emphasizing numerical aspects such as approximations and order of magnitude.
2. Overall, the goals are to illustrate the power of calculus as a tool for modeling situations arising in physics, science, engineering and other fields.
3. In fulfillment of these goals, this and later courses will stress topics such as polynomial approximation, setting up integrals, as well as the use of appropriate technology.

- Gain a deeper understanding of the mathematics behind Limits and Derivatives and be able to use mathematical ideas (such as the Intermediate Value Theorem, the Mean Value Theorem, and the Extreme Value Theorem) in applied contexts.

MATH 1521G. Calculus and Analytic Geometry II

4 Credits (4)

Riemann sums, the definite integral, antiderivatives, fundamental theorems, techniques of integration, applications of integrals, improper integrals, Taylor polynomials, sequences and series, power series and Taylor series. May be repeated up to 4 credits.

Prerequisite: C- or better in MATH 1511G.

Learning Outcomes

- Recognize the interplay between Riemann sums and definite integrals
- Use the Fundamental Theorem of Calculus to compute definite and indefinite integrals
- Demonstrate an understand of the relationship between the derivative and the definite integral
- Evaluate integrals numerically using standard rules (midpoint, trapezoid, Simpson's)
- Evaluate integrals analytically using standard methods (substitution, integration by parts, trigonometric substitution and identities, inverse functions and partial fractions
- Use integration to solve problems in geometry, physics, science, engineering and other fields
- Use appropriate methods such as L'Hopital's Rule to evaluate improper integrals
- Approximate functions using Taylor polynomials
- Apply standard tests to determine convergence or divergence of sequences and series 1
- Find a power series representation for a function and determine where it converges 1
- Identify and evaluate first order differential equations

MATH 1521H. Calculus and Analytic Geometry II Honors

4 Credits (4)

A more advanced treatment of the material of MATH 1521G with additional topics. Consent of Instructor required. Restricted to Las Cruces campus only.

Learning Outcomes

- Recognize the interplay between Riemann sums and definite integrals.
- Use the Fundamental Theorem of Calculus to compute definite and indefinite integrals.
- Demonstrate an understand of the relationship between the derivative and the definite integral.
- Evaluate integrals numerically using standard rules (midpoint, trapezoid, Simpson's).
- Evaluate integrals analytically using standard methods (substitution, integration by parts, trigonometric substitution and identities, inverse functions and partial fractions.
- Use integration to solve problems in geometry, physics, science, engineering and other fields.
- Use appropriate methods such as L'Hopital's Rule to evaluate improper integrals.
- Approximate functions using Taylor polynomials.
- Apply standard tests to determine convergence or divergence of sequences and series. 1

- Find a power series representation for a function and determine where it converges. 1
- Identify and evaluate first order differential equations.

MATH 1531. Introduction to Higher Mathematics

3 Credits (3)

Logic; sets, relations, and functions; introduction to mathematical proofs.

Prerequisite(s): C- or better in MATH 1521G or MATH 1521H.

Learning Outcomes

- The primary objective of this course is to serve as a bridge between the calculus courses you have taken, where the focus is on computations and solving problems, to more abstract mathematics courses.
- In particular, we will discuss logical reasoning, definitions, proofs, and certain basic building blocks such as sets, functions, and relations.
- By the end of the course, you should be able to understand and construct well-written proofs of basic mathematical arguments involving simple properties of the real numbers, integers, sets, functions, and relations using universal and existential quantifiers, absolute values and inequalities, modular arithmetic, and proof by induction.

MATH 1531H. Introduction to Higher Mathematics Honors

3 Credits (3)

Logic; sets, relations, and functions; introduction to mathematical proofs. A more advanced treatment of the material of MATH 1531 with additional topics and/or assignments. Consent of Instructor required. Restricted to Las Cruces campus only.

Prerequisite: C- or better in MATH 1521G or MATH 1521H.

Learning Outcomes

- The primary objective of this course is to serve as a bridge between the calculus courses you have taken, where the focus is on computations and solving problems, to more abstract mathematics courses.
- In particular, we will discuss logical reasoning, definitions, proofs, and certain basic building blocks such as sets, functions, and relations.
- By the end of the course, you should be able to understand and construct well-written proofs of basic mathematical arguments involving simple properties of the real numbers, integers, sets, functions, and relations using universal and existential quantifiers, absolute values and inequalities, modular arithmetic, and proof by induction.
- Since this is an honors course, you should be able to understand higher-level properties of the mathematical objects and ideas arising in the class. You should also be able to write, edit, revise, and ultimately construct well-written proofs and mathematical arguments.

MATH 1996. Topics in Mathematics

1-3 Credits

Topics to be announced in the Schedule of Classes. Maximum of 3 credits per semester. Total credit not to exceed 6 credits. Community Colleges only.

Prerequisite: consent of instructor.

Learning Outcomes

- Varies

MATH 2134G. Fundamentals of Elementary Math II

3 Credits (3)

Geometry and measurement. Multiple approaches to solving problems and understanding concepts in geometry. Analyzing and constructing

two- and three-dimensional shapes. Measurable attributes, including angle, length, area, and volume. Understanding and applying units and unit conversions. Transformations, congruence, and symmetry. Scale factor and similarity. Coordinate geometry and connections with algebra. Reasoning and communicating about geometric concepts. Taught primarily through student activities and investigations. May be repeated up to 3 credits.

Prerequisite: C- or better in MATH 1134.

Learning Outcomes

1. The primary objectives are mathematical: to understand some of the basic concepts of geometry, and measurement with an appropriate level of rigor; to appreciate the historical, cultural and educational contributions and potential applications in real life situations; and to gain problem solving skills using these concepts.
2. The secondary goal is to appreciate the importance of this material in the elementary school curriculum.

MATH 2350G. Statistical Methods

3 Credits (3)

Exploratory data analysis. Introduction to probability, random variables and probability distributions. Concepts of Central Limit Theorem and Sampling Distributions such as sample mean and sample proportion. Estimation and hypothesis testing single population parameter for means and proportions and difference of two population parameters for means and proportions. Analysis categorical data for goodness of fit. Fitting simple linear regression model and inference for regression parameters. Analysis of variance for several population means. Techniques in data analysis using statistical packages. May be repeated up to 3 credits.

Prerequisite: Adequate scoring on the Mathematics Placement Exam, or any ACT/SAT and GPA combination that is considered equivalent, or a C- or better in MATH 1215 or higher.

Learning Outcomes

1. Summarize Data through graphs and Descriptive statistics: Define qualitative and quantitative data; Provide examples of a population, a sample, independent and dependent variables, parameters and statistics; Construct and interpret histograms, stem plots, bar charts, and boxplot; Summarize distributions with numerical measures such as mean, median, standard deviation, percentiles, interquartile range.
2. Present the concepts of probability: Explain related to probability axioms (e.g. mutually exclusive events and independent events); Apply applications of probability rules; Apply Conditional probability and Bayes Rule.
3. Distinguish between discrete and continuous random variables: Calculate probabilities using Binomial and Poisson distributions; Calculate probabilities using the standard normal distribution by finding the area underneath the curve.
4. Explain the Central Limit Theorem: Introduce the concept of a sampling distribution; Discuss the distribution of the sample mean and sample proportion under repeated sampling; Generate and interpret a sampling distribution using repeated sampling; Determine if the Binomial and Poisson distribution can be approximated with the normal distribution.
5. Estimate a population parameter: Determine confidence interval for population mean, proportion, difference of means, and difference of proportions; Interpret the confidence interval and margin of error; Explain the dependence of margin of error on sample size and confidence level.
6. Perform hypothesis tests for population parameters (population mean, proportion, difference of means, and difference of proportions); Describe the logic and framework of the inference of hypothesis testing; Make a decision using a p-value and draw an appropriate

conclusion; Distinguish between Type I and Type II errors; Explain power of the test.

7. Perform Hypothesis Tests for Categorical data: Determine and analyze Chi-square test for Independence; Determine and analyze Chi-square test for Goodness of fit.
8. Analyze data using regression and correlation: Construct scatterplots and analyze the scatter plots; Calculate the linear correlation coefficient and determine whether a linear relationship exists between two variables; Fit the least-squares regression line between two variables; Predict the response variable from the regression line; Apply statistical inference to regression parameters.
9. Perform analysis of variance: State hypotheses for the test of several population means; Construct the AVOVA Table; Explain the significance of multiple comparisons. 1
10. Demonstrate the appropriate use of technology (e.g., Excel, an appropriate graphing calculator or other software (Minitab, SAS)

MATH 2415. Introduction to Linear Algebra

3 Credits (3)

Systems of equations, matrices, vector spaces and linear transformations. Applications to computer science.

Prerequisite(s): Grade of C- or better in MATH 1521G or MATH 1521H.

Learning Outcomes

1. Use row reduction and echelon forms of a matrix to solve linear systems of equations.
2. Use matrix operations, inverse matrices, and matrix factorizations to solve matrix equations.
3. Study the properties of vector spaces and subspaces (e.g., the null and column spaces of a matrix); linear transformations, isomorphisms and kernels; linear independence, bases, and dimension.
4. Apply appropriate matrix manipulations to perform a change of basis.
5. Understand determinants and their properties.
6. Find eigenvalues and eigenvectors and use them to diagonalize matrices.
7. Understand inner product spaces and apply them to real-world problems.

MATH 2530G. Calculus III

3 Credits (3)

Continuation of Calculus II including multivariate and vector calculus, level curves and surfaces, partial derivatives, gradient, directional derivatives, tangent planes, optimization, multiple integrals in Cartesian, cylindrical and spherical coordinate systems. May be repeated up to 3 credits.

Prerequisite: Grade of C- or better in MATH 1521G or MATH 1521H.

Learning Outcomes

1. Use vector notation correctly.
2. Perform vector operations, including dot product, cross product, differentiation and integration, and demonstrate their geometric interpretations.
3. Perform operations on vector valued functions and functions of a parameter.
4. Identify and graph the equations of cylinders and quadratic surfaces in 3-dimensional space.
5. Determine the domain of continuity of a vector valued function and of a function of multiple variables.
6. Compute partial derivatives, generally and at a point, and sketch their graphical representation on a surface in space.

7. Recognize when the chain rule is needed when differentiating functions of multiple variables, parametric equations and vector valued functions, and be able to use the chain rule in these situations.
8. Compute curvature of a parameterized vector representation of a curve in 2- and 3-dimensional space and be able to explain its meaning.
9. Compute the unit tangent and unit normal vectors to a curve and be able to sketch them with the curve. 1
10. Computationally move among position vector, velocity vector, speed, and acceleration vectors; recognize and demonstrate their use as applied to motion in space. 1
11. Determine the equation of the tangent plane to a surface at a point. 1
12. Use the tangent plane to a surface to approximate values on the surface and estimate error in approximation using differentials 1
13. Compute directional derivatives and represent them graphically relative to the inherent surface. 1
14. Compute the gradient vector; represent it graphically relative to the inherent surface and use it to maximize or minimize rate of change of the function. 1
15. Locate local and global maxima and minima of a function. 1
16. Use Lagrange multipliers to maximize output with one or two constraints. 1
17. Compute arc length and be able to explain its derivation as a limit. 1
18. Calculate double and triple integrals independently and with their geometric representations as surfaces, areas and volumes. 1
19. Calculate iterated integrals in polar, cylindrical and spherical coordinate systems.

MATH 2992. Directed Study**1-3 Credits**

May be repeated for a maximum of 6 credits. Graded S/U.

Prerequisite: consent of the instructor.

Learning Outcomes

1. Varies

MATH 3110. Introduction to Modern Algebra**3 Credits (3)**

Elements of abstract algebra, including groups, rings and fields. May be repeated up to 3 credits.

Prerequisite: C or better in MATH 1531 and MATH 2415.

MATH 3120. Introduction to Analysis**3 Credits (3)**

Development of the real numbers, a rigorous treatment of sequences, limits, continuity, differentiation, and integration. May be repeated up to 3 credits.

Prerequisite: C- or better in MATH 1531.

Learning Outcomes

1. Understand the Axiom of Completeness and be able to work with suprema and infima.
2. Know the basic definitions of sequences and be able to understand and construct rigorous epsilon-N proofs.
3. Understand the properties of convergent sequences and be able to construct related proofs.
4. Know the basic definitions of limits and be able to understand and construct epsilon-delta proofs.
5. Be familiar with the basic properties and topology of the reals.

MATH 3130. Introduction to Geometry**3 Credits (3)**

Building on ideas from high school geometry, an introduction to the axiomatic method, transformation groups, and non-Euclidean geometry.

Prerequisite: C- or better in MATH 1531 and MATH 2415.

Learning Outcomes

1. Demonstrate the ability to make conjectures in geometry, refine conjectures, and prove or refute conjectures.
2. Understand how transformations of the plane can be used to define and apply the concepts of congruence and similarity in Euclidean geometry.
3. Solve problems in geometry using different approaches (axioms, coordinates, transformations), and explain how the different approaches are related.
4. Compare the definitions and theorems of Euclidean geometry with the corresponding definitions and theorems in non-Euclidean geometry.

MATH 3140. Introduction to Numerical Methods**3 Credits (3)**

Basic numerical methods for interpolation, approximation, locating zeros of functions and integration; numerical linear algebra. Computer-oriented methods will be emphasized. Student must also have some programming experience in order to enroll.

Prerequisite: C- or better in one of MATH 2415, M E 228, or E E 200.

Learning Outcomes

1. Understand the limitations, advantages, and disadvantages of common numerical methods and how they are used to obtain approximate solutions.
2. Apply numerical methods to obtain approximate solutions to mathematical problems.
3. Analyze and evaluate the accuracy of common numerical methods.
4. Write efficient, well-documented code to implement numerical methods.

MATH 3160. Introduction to Ordinary Differential Equations**3 Credits (3)**

Introduction to differential equations and dynamical systems with emphasis on modeling and applications. Basic analytic, qualitative and numerical methods. Equilibria and bifurcations. Linear systems with matrix methods, real and complex solutions. May be repeated up to 3 credits.

Prerequisite: C or better in MATH 1521G or MATH 1521H or B or better in MATH 1440.

MATH 3997. Directed Readings**1-3 Credits**

A selection of readings and reports in the mathematical sciences, the breadth and depth of which is deemed to fit the needs of the student.

May be repeated up to 3 credits.

Prerequisite: consent of instructor.

MATH 400. Undergraduate Research**1-3 Credits**

May be repeated for a maximum of 6 credits. Graded S/U.

Prerequisite: consent of faculty member.

MATH 401. Special Topics**1-3 Credits (1-3)**

Specific subjects to be announced in the Schedule of Classes. May be used to fulfill a course requirement for the mathematics major. Consent of Instructor required.

MATH 4110V. Great Theorems in Mathematics**3 Credits (3)**

This course examines some significant mathematical achievements from antiquity to the modern era. Evolution of notions and methods in geometry, number theory, algebra, and calculus will be supplemented by cultural and biographical history, placing mathematics in a broad human context.

Prerequisite: Grade of C- or higher in MATH 1531, or grade of B or higher in any upper-division math or stat course, or consent of instructor.

Learning Outcomes

1. At the end of this course, students will be able to: Describe the history of the development of some key mathematical concepts.
2. Describe the connections between mathematical ideas in different historical periods and places.
3. Recognize the role of abstraction and logic in the progress of mathematics.
4. Describe the contribution of mathematics to culture and science in different historical eras.
5. Determine if a mathematical conjecture is correct and provide rigorous written mathematical justification.
6. Provide sound, complete and clear mathematical arguments involving simple calculations, geometric constructions, and/or written mathematical proofs.
7. Communicate mathematical ideas, both written and orally.

MATH 4210. Complex Variables

3 Credits (3)

A first course in complex function theory, with emphasis on applications. May be repeated up to 3 credits.

Prerequisite: C- or better in MATH 3150 or C- or better in both MATH 3160 and MATH 2530G.

MATH 4220. Fourier Series and Boundary Value Problems

3 Credits (3)

Fourier series and methods of solution of the boundary value problems of applied mathematics. May be repeated up to 3 credits.

Prerequisite: C- or better in MATH 3160.

MATH 4230. Applied Linear Algebra

3 Credits (3)

An application-driven course, whose topics may include the four fundamental subspaces, inner products, orthogonality, diagonalization, and complex matrices. Applications may include factorization, least squares, data compression, singular value decomposition, and discrete Fourier transform.

Prerequisite: C- or better in one of MATH 2415, E E 200, or M E 228.

Learning Outcomes

1. Understand higher-level linear algebra concepts for which matrix linear algebra is the basic tool.
2. Understand how to apply higher-level linear algebra concepts to problems that arise in real-world applications.

MATH 4310. Introduction to Topology

3 Credits (3)

Topological spaces: general spaces and specific examples such as metric spaces, Hausdorff spaces and/or normed vector spaces; separation axioms; continuity, compactness, connectedness; related theorems. Crosslisted with: MATH 5310.

Prerequisite: MATH 3120.

MATH 4320. Logic and Set Theory

3 Credits (3)

Same as MATH 4320 with additional assignments for graduate students.

MATH 4330. Elementary Number Theory

3 Credits (3)

Covers primes, congruences and related topics.

Prerequisite: Grade of C or better in MATH 3110 or consent of instructor.

MATH 4340. Abstract Algebra I: Groups and Rings

3 Credits (3)

Group theory, including cyclic groups, homomorphisms, cosets, quotient groups and Lagrange's theorem. Introduction to rings: ring homomorphisms, ideals, quotient rings, polynomial rings, and principal ideal domains. Taught with MATH 5340.

Prerequisite(s): MATH 3110 or consent of instructor.

MATH 4350. Advanced Linear Algebra

3 Credits (3)

Rigorous treatment of vector spaces and linear transformations including canonical forms, spectral theory, inner product spaces and related topics.

Prerequisite: grade of C or better in MATH 3110.

MATH 4360. Introduction to Real Analysis I

3 Credits (3)

Rigorous discussion of the real numbers for topics introduced in calculus: limits and continuity, followed by differentiation, integration, and series of functions.

Prerequisite: Grade of C- or better in MATH 3120 or consent of instructor.

Learning Outcomes

1. Understand two-sided limits, one-sided limits, limits at infinity, continuity and uniform continuity for functions on the real line.
2. Understand derivatives, differentiability theorems, the Mean Value Theorem, Taylor's Theorem, L'hospital's Rule and the Inverse Function Theorem for functions on the real line.
3. Understand integration on the real line: the Riemann integral, Riemann sums, the Fundamental Theorem of Calculus and improper Riemann integrals.
4. Understand sequences and infinite series of functions, including uniform convergence, limit supremum, limit infimum, power series and analytic functions.

MATH 4365. Introduction to Real Analysis II

3 Credits (3)

Extension of the ideas of Math 4360 to higher dimensions and more general contexts (metric spaces, differentiability on higher dimensional Euclidean space, integration on higher dimensional Euclidean space).

Prerequisite: C- or better in MATH 4360 or consent of instructor.

Learning Outcomes

1. Understand the algebraic structure, including planes and linear transformations, of Euclidean spaces.
2. Understand the fundamental notions of metric spaces: limits of functions, interior/closure/boundary of sets, compact sets, connected sets, continuous functions and the Stone-Weierstrass Theorem.
3. Understand derivatives, differentials, tangent planes, the Chain Rule, the Mean Value Theorem, Taylor's Formula and the Inverse Function Theorem for functions on n-dimensional Euclidean space.
4. Understand integration on n-dimensional Euclidean space: Jordan regions, Riemann integration on Jordan Regions, iterated integrals and change of variables.

MATH 452. Foundations of Geometry

3 Credits (3)

Topics in projective, axiomatic Euclidean or non-Euclidean geometries. Restricted to: Main campus only.

Prerequisite(s): C or better in MATH 331 or MATH 332.

MATH 454. Logic and Set Theory**3 Credits (3)**

Propositional and first order logic; axioms, proofs, models. Semantic and syntactic consequence. Soundness, completeness, compactness, and Loewenheim –Skolem theorems. The Zermelo-Fraenkel axioms for set theory. Well orderings, ordinals, cardinals, the axiom of choice, and the von Neumann hierarchy. Crosslisted with: MATH 524.

Prerequisite(s): C- or better in MATH 331 or MATH 332, or consent of instructor.

MATH 455. Elementary Number Theory**3 Credits (3)**

Covers primes, congruences and related topics.

Prerequisite: grade of C or better in MATH 331 or consent of instructor.

MATH 456. Abstract Algebra I: Groups and Rings**3 Credits (3)**

Group theory, including cyclic groups, homomorphisms, cosets, quotient groups and Lagrange's theorem. Introduction to rings: ring homomorphisms, ideals, quotient rings, polynomial rings, and principal ideal domains. Crosslisted with: MATH 526.

Prerequisite(s): MATH 331 or consent of instructor.

MATH 481. Advanced Linear Algebra**3 Credits (3)**

Rigorous treatment of vector spaces and linear transformations including canonical forms, spectral theory, inner product spaces and related topics.

Prerequisite: grade of C or better in MATH 331.

MATH 491. Introduction to Real Analysis I**3 Credits (3)**

Rigorous discussion of the real numbers for topics introduced in calculus: limits and continuity, followed by differentiation, integration, and series of functions.

Prerequisite: Grade of C- or better in MATH 332 or consent of instructor.

Learning Outcomes

1. Understand two-sided limits, one-sided limits, limits at infinity, continuity and uniform continuity for functions on the real line.
2. Understand derivatives, differentiability theorems, the Mean Value Theorem, Taylor's Theorem, L'hospital's Rule and the Inverse Function Theorem for functions on the real line.
3. Understand integration on the real line: the Riemann integral, Riemann sums, the Fundamental Theorem of Calculus and improper Riemann integrals.
4. Understand sequences and infinite series of functions, including uniform convergence, limit supremum, limit infimum, power series and analytic functions.

MATH 492. Introduction to Real Analysis II**3 Credits (3)**

Extension of the ideas of Math 491 to higher dimensions and more general contexts (metric spaces, differentiability on higher dimensional Euclidean space, integration on higher dimensional Euclidean space).

Prerequisite: C- or better in MATH 491 or consent of instructor.

Learning Outcomes

1. Understand the algebraic structure, including planes and linear transformations, of Euclidean spaces.
2. Understand the fundamental notions of metric spaces: limits of functions, interior/closure/boundary of sets, compact sets, connected sets, continuous functions and the Stone-Weierstrass Theorem.

3. Understand derivatives, differentials, tangent planes, the Chain Rule, the Mean Value Theorem, Taylor's Formula and the Inverse Function Theorem for functions on n-dimensional Euclidean space.

4. Understand integration on n-dimensional Euclidean space: Jordan regions, Riemann integration on Jordan Regions, iterated integrals and change of variables.

MATH 498. Directed Reading**1-6 Credits**

May be repeated for a maximum of 6 credits. Graded S/U.

MATH 4991. Undergraduate Research**1-3 Credits**

May be repeated for a maximum of 6 credits. Graded S/U.

MATH 4996. Special Topics**1-3 Credits (1-3)**

Specific subjects to be announced in the Schedule of Classes. May be used to fulfill a course requirement for the mathematics major.

MATH 4997. Directed Reading**1-6 Credits**

May be repeated for a maximum of 6 credits. Graded S/U.

MATH 505. Elementary Number Theory**3 Credits (3)**

Same as MATH 455 with additional assignments for graduate students.

MATH 5110. Fundamentals of Elementary Mathematics I**3 Credits (3+1P)**

Topics from real numbers, geometry, measurement, and algorithms, incorporating calculator technology. Intended for K-8 teachers. As part of course students mentor MATH 1134 undergraduates. Does not fulfill degree requirements for M.S. in mathematics.

MATH 512. Fundamentals of Elementary Mathematics II**3 Credits (3+1P)**

Real numbers, geometry, and statistics, incorporating calculator technology. Intended for K-8 teachers. Students serve as mentors to MATH 2134G undergraduates. Does not fulfill degree requirements for M.S. in mathematics.

MATH 5120. History and Theories of Mathematics Education**3 Credits (3)**

A study of the history of the mathematics taught in American schools, including an examination of authentic original textbooks and the changes in their content and the approach to the subject over time, together with writings of people who have influenced the development and changes of mathematics education. Theories of learning mathematics, and current issues in mathematics education.

Prerequisite(s): Restricted to graduate students.

MATH 5130. Algebra with Connections**3 Credits (3)**

Connections between Algebra and other K-12 curriculum strands, especially Geometry and Probability / Data Analysis. Apply algebraic modeling and reasoning to a variety of mathematical problem solving situations. Does not fulfill requirements for degrees in mathematics.

Prerequisite(s): Admittance into the MC2-LIFT program.

MATH 5140. From Number to Algebra**3 Credits (3)**

The progression from Number to Algebra in the K-12 curriculum as a concrete-to-abstract progression. Key concepts considered across the grade levels include the different uses of variables, equivalence in different contexts, patterns, and ratios. Does not fulfill requirements for degrees in mathematics. Consent of instructor required.

Prerequisite(s): Admittance into the MC2-LIFT program.

MATH 5150. Data Analysis with Applications

3 Credits (3)

Statistical concepts and terminology in professional uses of data by teachers, such as standardized test score reports and educational research; visual displays of data; measures of variation and central tendency; consideration of how K-12 topics in Data Analysis are developed from one grade level to the next. Does not fulfill requirements for degrees in mathematics. Consent of instructor required.

Prerequisite(s): Admittance into the MC2-LIFT program.

MATH 5160. From Measurement to Geometry

3 Credits (3)

The progression from Measurement to Geometry in the K-12 curriculum as a concrete-to abstract progression. Important concepts such as angle, length, and area progress from concrete, measurable situations to more abstract problems which require reasoning and proof. Does not fulfill requirements for degrees in mathematics. Consent of instructor required.

Prerequisite(s): Admittance into the MC2-LIFT program.

MATH 517. Complex Variables

3 Credits (3)

Same as MATH 471 with additional work for graduate students.

MATH 5170. Using Number Throughout the Curriculum

3 Credits (3)

Understand number concepts more deeply by seeing many examples of those concepts applied in other content strands. Develop mathematical knowledge and understanding to build a repertoire of ways for students to practice and review basic number skills and concepts as part of later, more advanced courses. Does not fulfill requirements for degrees in mathematics. Consent of instructor required.

Prerequisite(s): Admittance into the MC2-LIFT program.

MATH 518. Fourier Series and Boundary Value Problems

3 Credits (3)

Same as MATH 472 with additional work for graduate students.

MATH 5180. Geometry with Connections

3 Credits (3)

Connections between Geometry and other K-12 curriculum strands, especially Algebra and Probability / Data Analysis. Address key attributes of geometric concepts by considering their connections within and across grade levels. Does not fulfill requirements for degrees in mathematics. Consent of instructor required.

Prerequisite(s): Admittance into the MC2-LIFT program.

MATH 5210. Complex Variables

3 Credits (3)

Same as MATH 4210 with additional work for graduate students.

MATH 5220. Fourier Series and Boundary Value Problems

3 Credits (3)

Same as MATH 4220 with additional work for graduate students.

MATH 525. Advanced Linear Algebra

3 Credits (3)

Same as MATH 481 with additional work for graduate students. May be repeated up to 3 credits.

MATH 526. Abstract Algebra I: Groups and Rings

3 Credits (3)

Same as MATH 456 with additional work for graduate students. Crosslisted with: MATH 456.

Prerequisite(s): MATH 525 or consent of instructor.

MATH 527. Introduction to Real Analysis I

3 Credits (3)

Same as MATH 491 with additional work for graduate students.

Learning Outcomes

1. Understand two-sided limits, one-sided limits, limits at infinity, continuity and uniform continuity for functions on the real line.
2. Understand derivatives, differentiability theorems, the Mean Value Theorem, Taylor's Theorem, L'hospital's Rule and the Inverse Function Theorem for functions on the real line.
3. Understand integration on the real line: the Riemann integral, Riemann sums, the Fundamental Theorem of Calculus and improper Riemann integrals.
4. Understand sequences and infinite series of functions, including uniform convergence, limit supremum, limit infimum, power series and analytic functions.

MATH 528. Introduction to Real Analysis II

3 Credits (3)

Same as MATH 492 with additional work for graduate students.

Learning Outcomes

1. Understand the algebraic structure, including planes and linear transformations, of Euclidean spaces.
2. Understand the fundamental notions of metric spaces: limits of functions, interior/closure/boundary of sets, compact sets, connected sets, continuous functions and the Stone-Weierstrass Theorem.
3. Understand derivatives, differentials, tangent planes, the Chain Rule, the Mean Value Theorem, Taylor's Formula and the Inverse Function Theorem for functions on n-dimensional Euclidean space.
4. Understand integration on n-dimensional Euclidean space: Jordan regions, Riemann integration on Jordan Regions, iterated integrals and change of variables.

MATH 529. Complex Analysis

3 Credits (3)

Rigorous treatment of complex differentiation and integration, properties of analytic functions, series and Cauchy's integral representations.

Prerequisite: MATH 332.

MATH 530. Special Topics

1-3 Credits

Specific subjects to be announced in the Schedule of Classes. May be for unlimited credit with approval of the department.

MATH 5310. Introduction to Topology

3 Credits (3)

Topological spaces: general spaces and specific examples such as metric spaces, Hausdorff spaces and/or normed vector spaces; separation axioms; continuity, compactness, connectedness; related theorems. Crosslisted with: MATH 4310.

MATH 5320. Logic and Set Theory

3 Credits (3)

Same as MATH 4320 with additional assignments for graduate students.

MATH 5330. Elementary Number Theory

3 Credits (3)

Same as MATH 4320 with additional assignments for graduate students.

MATH 5340. Abstract Algebra I: Groups and Rings

3 Credits (3)

Same as MATH 4340 with additional work for graduate students. Taught with MATH 4340.

Prerequisite: MATH 5350 or consent of instructor.

MATH 5350. Advanced Linear Algebra

3 Credits (3)

Same as MATH 4350 with additional work for graduate students.

MATH 5360. Introduction to Real Analysis I

3 Credits (3)

Same as MATH 4360 with additional work for graduate students.

Learning Outcomes

1. Understand two-sided limits, one-sided limits, limits at infinity, continuity and uniform continuity for functions on the real line.
2. Understand derivatives, differentiability theorems, the Mean Value Theorem, Taylor's Theorem, L'hospital's Rule and the Inverse Function Theorem for functions on the real line.
3. Understand integration on the real line: the Riemann integral, Riemann sums, the Fundamental Theorem of Calculus and improper Riemann integrals.
4. Understand sequences and infinite series of functions, including uniform convergence, limit supremum, limit infimum, power series and analytic functions.

MATH 5365. Introduction to Real Analysis II

3 Credits (3)

Same as MATH 4365 with additional work for graduate students.

Learning Outcomes

1. Understand the algebraic structure, including planes and linear transformations, of Euclidean spaces.
2. Understand the fundamental notions of metric spaces: limits of functions, interior/closure/boundary of sets, compact sets, connected sets, continuous functions and the Stone-Weierstrass Theorem.
3. Understand derivatives, differentials, tangent planes, the Chain Rule, the Mean Value Theorem, Taylor's Formula and the Inverse Function Theorem for functions on n-dimensional Euclidean space.
4. Understand integration on n-dimensional Euclidean space: Jordan regions, Riemann integration on Jordan Regions, iterated integrals and change of variables.

MATH 540. Directed Reading

1-6 Credits

May be repeated for a maximum of 6 credits. Consent of instructor required. Graded: S/U.

MATH 5410. Complex Analysis

3 Credits (3)

MATH 542. Topology II

3 Credits (3)

Covering spaces and their classification, singular homology, degree theory, Brouwer's fixed point theorem, CW-complexes and cellular homology, and other applications.

Prerequisite(s): MATH 541 or consent of instructor.

MATH 5420. Topology I

3 Credits (3)

Connectedness and compactness of topological spaces, introduction to the quotient topology, elementary homotopy theory, the fundamental group, the Seifert-van Kampen theorem.

Prerequisite(s): MATH 5350 and MATH 5365, or consent of instructor.

MATH 5425. Topology II

3 Credits (3)

Covering spaces and their classification, singular homology, degree theory, Brouwer's fixed point theorem, CW-complexes and cellular homology, and other applications.

Prerequisite(s): MATH 5420 or consent of instructor.

MATH 5428. Topics in Topology

3 Credits

Topics in modern topology. The material covered will reflect current research topics in the field and may vary each time the course is offered.

To be taken up to 3 times. May be repeated up to 9 credits.

Learning Outcomes

1. Gain knowledge of advanced methods in the area of topology.
2. Develop potential to explore literature in the area of topology.
3. Develop potential to conduct supervised research in the area of topology.

MATH 5430. Mathematical Structures in Logic

3 Credits (3)

Lattices, distributive lattices, Boolean algebras, Heyting algebras.

Lindenbaum-Tarski algebras of classical and intuitionistic logics.

Representation theorems. Modal logics and their algebraic counterparts.

Kripke semantics. Goedel translation.

Prerequisite: MATH 5320.

MATH 5435. Universal Algebra and Model Theory

3 Credits (3)

Universal algebra, homomorphisms, subalgebras, products, congruences.

Varieties and class operators. Free algebras and Birkhoff's theorem.

Ultraproducts and Los's theorem. Congruence distributive varieties and

Jonsson's theorem. Universal classes and quasi-varieties.

Prerequisite: MATH 5320.

MATH 5438. Topics in Foundations

3 Credits

Topics in modern foundations. The material covered will reflect current research topics in the field and may vary each time the course is offered.

To be taken up to 3 times. May be repeated up to 9 credits.

Learning Outcomes

1. Gain knowledge of advanced methods in the area of foundations.
2. Develop potential to explore literature in the area of foundations.
3. Develop potential to conduct supervised research in the area of foundations.

MATH 5440. Partial Differential Equations I

3 Credits (3)

The basic equations of mathematical physics. Laplace, Heat and Wave Equations. The method of characteristics, introduction to conservation laws, special solutions.

Prerequisite(s): MATH 5220 and MATH 5365 or consent of instructor.

MATH 5445. Partial Differential Equations II

3 Credits (3)

Sobolev spaces theory: basic definitions and properties, embedding theorems, weak solutions of boundary value problems and variational methods for partial differential equations.

Prerequisite(s): MATH 5460 or consent of instructor.

MATH 5450. Abstract Algebra II: Fields, Rings and Modules

3 Credits (3)

Topics covered include field extensions; algebraic closure; polynomial rings; irreducibility criteria; Noetherian rings; algebraic sets; Nullstellensatz; modules; applications to linear algebra.

Prerequisite(s): MATH 5340 or consent of instructor.

MATH 5453. Module Theory and Homological Algebra

3 Credits (3)

Introductory concepts of homological algebra, including projective, injective and flat modules; projective and injective resolutions; exactness of functors; homology of chain complexes; derived functors.

Prerequisite(s): MATH 5450 or consent of instructor.

MATH 5455. Introduction to Commutative Algebra and Algebraic Geometry

3 Credits (3)

Introduction to the basic notions and techniques of modern algebraic geometry, including the necessary commutative algebra foundation. Topics likely to include algebraic and projective varieties, Nullstellensatz, morphisms, rational and regular functions, local properties. Other topics may include Noether normalization, dimension theory, singularities, sheaves, schemes, Grobner bases.

Prerequisite(s): MATH 5450 or consent of instructor.

MATH 5458. Topics in Algebra

3 Credits

Topics in modern algebra. The material covered will reflect current research topics in the field and may vary each time the course is offered. To be taken up to 3 times. May be repeated up to 9 credits.

Learning Outcomes

1. Gain knowledge of advanced methods in the area of algebra.
2. Develop potential to explore literature in the area of algebra.
3. Develop potential to conduct supervised research in the area of algebra.

MATH 5460. Measure and Integration

3 Credits (3)

Measure spaces, measurable functions, extension and decomposition theorems for measures, integration on measure spaces, absolute continuity, iterated integrals.

Prerequisite: MATH 5365 or consent of instructor.

MATH 5463. Real Analysis

3 Credits (3)

Differentiation, L_p spaces, Banach spaces, measure and topology, other selected topics.

Prerequisite: MATH 5460.

MATH 5465. Introduction to Functional Analysis

3 Credits (3)

Banach spaces. The three basic principles: uniform boundedness principle, closed graph/open mapping theorems, Hahn-Banach theorem.

Prerequisite(s): MATH 5463, or consent of instructor.

MATH 5468. Topics in Analysis

3 Credits

Topics in modern analysis. The material covered will reflect current research topics in the field and may vary each time the course is offered. To be taken up to 3 times. May be repeated up to 9 credits.

Learning Outcomes

1. Gain knowledge of advanced methods in the area of analysis.
2. Develop potential to explore literature in the area of analysis.
3. Develop potential to conduct supervised research in the area of analysis.

MATH 551. Mathematical Structures in Logic

3 Credits (3)

Lattices, distributive lattices, Boolean algebras, Heyting algebras. Lindenbaum-Tarski algebras of classical and intuitionistic logics. Representation theorems. Modal logics and their algebraic counterparts. Kripke semantics. Goedel translation.

Prerequisite(s): MATH 524.

MATH 563. Algebra with Connections

3 Credits (3)

Connections between Algebra and other K-12 curriculum strands, especially Geometry and Probability / Data Analysis. Apply algebraic modeling and reasoning to a variety of mathematical problem solving situations. Does not fulfill requirements for degrees in mathematics. Consent of instructor required.

Prerequisite(s): Admittance into the MC2-LIFT program.

MATH 564. From Number to Algebra

3 Credits (3)

The progression from Number to Algebra in the K-12 curriculum as a concrete-to-abstract progression. Key concepts considered across the grade levels include the different uses of variables, equivalence in different contexts, patterns, and ratios. Does not fulfill requirements for degrees in mathematics. Consent of instructor required.

Prerequisite(s): Admittance into the MC2-LIFT program.

MATH 567. From Measurement to Geometry

3 Credits (3)

The progression from Measurement to Geometry in the K-12 curriculum as a concrete-to abstract progression. Important concepts such as angle, length, and area progress from concrete, measurable situations to more abstract problems which require reasoning and proof. Does not fulfill requirements for degrees in mathematics. Consent of instructor required.

Prerequisite(s): Admittance into the MC2-LIFT program.

MATH 571. Partial Differential Equations I

3 Credits (3)

The basic equations of mathematical physics. Laplace, Heat and Wave Equations. The method of characteristics, introduction to conservation laws, special solutions.

Prerequisite(s): MATH 518 and MATH 528 or consent of instructor.

MATH 581. Abstract Algebra II: Fields, Rings and Modules

3 Credits (3)

Topics covered include field extensions; algebraic closure; polynomials rings; irreducibility criteria; Noetherian rings; algebraic sets; Nullstellensatz; modules; applications to linear algebra.

Prerequisite(s): MATH 526 or consent of instructor.

MATH 582. Module Theory and Homological Algebra

3 Credits (3)

Introductory concepts of homological algebra, including projective, injective and flat modules; projective and injective resolutions; exactness of functors; homology of chain complexes; derived functors.

Prerequisite(s): MATH 581 or consent of instructor.

MATH 583. Introduction to Commutative Algebra and Algebraic Geometry

3 Credits (3)

Introduction to the basic notions and techniques of modern algebraic geometry, including the necessary commutative algebra foundation. Topics likely to include algebraic and projective varieties, Nullstellensatz, morphisms, rational and regular functions, local properties. Other topics may include Noether normalization, dimension theory, singularities, sheaves, schemes, Grobner bases.

Prerequisite(s): MATH 581 or consent of instructor.

MATH 593. Measure and Integration

3 Credits (3)

Measure spaces, measurable functions, extension and decomposition theorems for measures, integration on measure spaces, absolute continuity, iterated integrals.

Prerequisite: MATH 528 or consent of instructor.

MATH 594. Real Analysis

3 Credits (3)

Differentiation, L_p spaces, Banach spaces, measure and topology, other selected topics.

Prerequisite: MATH 593.

MATH 595. Introduction to Functional Analysis

3 Credits (3)

Banach spaces. The three basic principles: uniform boundedness principle, closed graph/open mapping theorems, Hahn-Banach theorem.

Prerequisite(s): MATH 594, or consent of instructor.

MATH 599. Master's Thesis

1-15 Credits

Thesis.

MATH 5996. Special Topics

1-3 Credits

Specific subjects to be announced in the Schedule of Classes. May be for unlimited credit with approval of the department.

MATH 5997. Directed Reading

1-6 Credits

May be repeated for a maximum of 6 credits. Consent of instructor required. Graded: S/U.

MATH 5999. Master's Thesis

1-15 Credits

Thesis.

MATH 600. Doctoral Research

1-15 Credits

Research.

MATH 698. Selected Topics

1-15 Credits

Selected topics.

MATH 6991. Doctoral Research

1-15 Credits

Research.

MATH 6996. Special Topics

1-15 Credits

Selected topics.

MATH 700. Doctoral Dissertation

1-15 Credits

Dissertation.

MATH 7000. Doctoral Dissertation

1-15 Credits

Dissertation.

Statistics Courses

STAT 3110. Statistics for Engineers and Scientists

3 Credits (3)

Modern probability and statistics with applications to the engineering sciences.

Prerequisite(s): C- or better in MATH 1521G or MATH 1521H.

STAT 4210. Probability: Theory and Applications

3 Credits (3)

Basic probability distributions including binomial, normal; random variables, expectation; laws of large numbers; central limit theorem.

Prerequisite(s): C- or better in MATH 2530G and C- or better in at least one-3000 level MATH or STAT course.

Learning Outcomes

1. Be able to compute discrete probabilities using combinatorial methods.
2. Understand and use conditional probability, independence and Bayes' Formula to compute probabilities.

3. Demonstrate understanding and use of discrete and continuous random variables including Bernoulli, Binomial, Poisson, Geometric, Normal, Exponential and Gamma.

4. Understand joint and conditional probability distributions and use them to compute probabilities.

5. Learn about basic limit theorems such as the Central Limit Theorem and the Laws of Large Numbers.

STAT 4220. Statistics: Theory and Applications

3 Credits (3)

Point and interval estimation; sufficiency; hypothesis testing; regression; analysis of variance; chi-square tests. May be repeated up to 3 credits.

Prerequisite: C- or better in STAT 4210.

STAT 5210. Probability: Theory and Applications

3 Credits (3)

Same as STAT 4210 with additional work for graduate students.

STAT 5220. Statistics: Theory and Applications

3 Credits (3)

Same as STAT 4220 with additional work for graduate students. May be repeated up to 3 credits.

STAT 5230. Elementary Stochastic Processes

3 Credits (3)

Markov chains, Poisson processes, Brownian motion, branching processes, and queuing processes, with applications to the physical, biological, and social sciences. May be repeated up to 3 credits.

Prerequisite: STAT 5210 or consent of instructor.

STAT 5310. Foundations of Probability

3 Credits (3)

Probability spaces, expectation and conditional expectation, limit theorems and laws of large numbers. May be repeated up to 3 credits.

Prerequisite: MATH 5460.

STAT 5320. Advanced Topics in Stochastic Processes

3 Credits (3)

Markov processes, martingales, Brownian motion, the Ito calculus, stochastic differential equations.

Prerequisite: STAT 5310.

Learning Outcomes

1. Understand the notion of a stochastic process.
2. Learn the basic properties of special stochastic processes: Markov processes and martingales.
3. Study and assimilate the fine properties of a particular instance of the stochastic process known as Brownian motion that is both a Markov process and a martingale.
4. Understand the application of Brownian motion known the Ito calculus and become fluent in its use.
5. Apply the Ito calculus to study stochastic differential equations.

STAT 5330. Continuous Multivariate Analysis

3 Credits (3)

Theory and applications of the multivariate normal distribution. May be repeated up to 3 credits.

Prerequisite: STAT 5220, or consent of instructor.

STAT 5335. Linear Models

3 Credits (3)

Core topics include distribution of quadratic forms, theory of regression, analysis of variance and covariance in linear models. Advanced topics chosen from random and mixed linear models, generalized linear, growth curve, and nonlinear models, quartile and copula regression. May be repeated up to 6 credits.

Prerequisite(s): STAT 5330.

STAT 5340. Advanced Theory of Statistics I
3 Credits (3)

Testing hypotheses, probability and sufficiency, uniformly most powerful tests, unbiasedness, invariance, and minimax principle.

Prerequisite: STAT 5220 or consent of instructor.

STAT 5345. Advanced Theory of Statistics II
3 Credits (3)

Estimation of parameters; unbiased estimators; equivariance; Bayes properties; large sample theory and optimality. May be repeated up to 3 credits.

Prerequisite: STAT 5340 or consent of instructor.

STAT 5348. Topics in Probability and Statistics
3 Credits

Topics in modern probability and statistics. The material covered will reflect current research topics in the field and may vary each time the course is offered. To be taken up to 3 times. May be repeated up to 9 credits.

Learning Outcomes

1. Gain knowledge of advanced methods in the areas of probability and statistics.
2. Develop potential to explore literature in the areas of of probability and statistics.
3. Develop potential to conduct supervised research in the areas of of probability and statistics.

Mathematics (Actuarial Science and Insurance) - Bachelor of Science

The concentration in Actuarial Science and Insurance draws on courses from mathematics and business to prepare students for a mathematical career in insurance. The coursework in this emphasis focuses on the analysis of risk and its applications to insurance finance. Students fulfilling the requirements for the Actuarial Science and Insurance Concentration earn a minor in Risk Management and Insurance.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Prefix	Title	Credits
General Education		
<i>Area I: Communications</i>		
<i>English Composition - Level 1</i>		
ENGL 1110G	Composition I	4
<i>English Composition - Level 2</i>		
Choose one from the following:		3
ENGL 2130G	Advanced Composition	
ENGL 2210G	Professional and Technical Communication Honors	

ENGL 2215G	Advanced Technical and Professional Communication	
<i>Oral Communication</i>		
Choose one from the following:		3
ACOM 1130G	Effective Leadership and Communication in Agriculture	
COMM 1115G	Introduction to Communication	
COMM 1130G	Public Speaking	
HNRS 2175G	Introduction to Communication Honors	
<i>Area II: Mathematics</i>		
MATH 1511G	Calculus and Analytic Geometry I (Departmental/College Requirement) ¹	4
or MATH 1511H	Calculus and Analytic Geometry I Honors	
<i>Area III/IV: Laboratory Sciences and Social/Behavioral Sciences</i>		10
ECON 2110G	Macroeconomic Principles	
ECON 2120G	Principles of Microeconomics	
<i>Area III: Laboratory Science Course (4 credits) ²</i>		
<i>Area V: Humanities ²</i>		3
<i>Area VI: Creative and Fine Arts ²</i>		3
<i>General Education Elective</i>		
MATH 1521G	Calculus and Analytic Geometry II (Departmental/College Requirement)	4
or MATH 1521H	Calculus and Analytic Geometry II Honors	
Viewing a Wider World ³		3
Departmental/College Requirements

STAT 3110	Statistics for Engineers and Scientists	3
STAT 4210	Probability: Theory and Applications	3
STAT 4220	Statistics: Theory and Applications	3
<i>Departmental Electives</i>		
Select at least an additional 9 credits of approved upper-division courses prefixed MATH or STAT (6 credits must be 400-level), excluding the following:		9
MATH 3997	Directed Readings	
MATH 4991	Undergraduate Research	
MATH 4997	Directed Reading	
STAT 400	Undergraduate Research	
Non-Departmental Requirements (in addition to Gen.Ed/VWW) ⁴		
ACCT 2110	Principles of Accounting I	3
ACCT 2120	Principles of Accounting II	3
BLAW 316	Legal Environment of Business	3
or BLAW 385V	Employment and Consumer Law	
C S 172	Computer Science I	4
BFIN 322	Principles of Insurance	3
BFIN 341	Financial Analysis and Markets	3
Select one option from the following three:		9
OPTION 1		
BFIN 323	Life/Health/Employee Benefits	
Select two courses from the following:		
BFIN 303V	Personal Financial Planning and Investing in a Global Economy	
or BFIN 421	Personal Financial Planning for Professionals	
BFIN 324	Property and Liability Insurance	
BFIN 391	Finance Internship and Cooperative Education I	

OPTION 2

BFIN 324	Property and Liability Insurance
Select two courses from the following:	
BFIN 303V	Personal Financial Planning and Investing in a Global Economy
or BFIN 421	Personal Financial Planning for Professionals
BFIN 323	Life/Health/Employee Benefits
BFIN 391	Finance Internship and Cooperative Education I

OPTION 3

BFIN 326	Business Risk Management
Select two courses from the following:	
BFIN 303V	Personal Financial Planning and Investing in a Global Economy
or BFIN 421	Personal Financial Planning for Professionals
BFIN 323	Life/Health/Employee Benefits
BFIN 324	Property and Liability Insurance
BFIN 391	Finance Internship and Cooperative Education I

Second Language Requirement: (not required)

Electives, to bring the total credits to 120⁵	25
6 credits must be upper division	

Total Credits **120**

¹ MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses. Note one of the VWW requirements will be satisfied using the 9 hour rule with the FIN courses that are required for the degree.

⁴ A grade of C- or better must be earned.

⁵ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Science with a major in Mathematics with a Concentration in Actuarial Science and Insurance, there is no second language requirement for the degree.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Some students may be able to bypass one or more courses in the calculus sequence MATH 1511G - MATH 1521G - MATH 2530G. The calculus sequence, Introduction to Higher Mathematics, and Linear

Algebra provide knowledge that is basic to further work, and students are advised to complete them or their equivalent as early as possible.

First Year		Credits
ENGL 1110G	Composition I (C- or better)	4
MATH 1511G or MATH 1511H	Calculus and Analytic Geometry I (C- or better) ¹ or Calculus and Analytic Geometry I Honors	4
Area III: Laboratory Science Course ²		4
C S 172	Computer Science I	4
Choose one from the following:		3
ENGL 2130G	Advanced Composition	
ENGL 2210G	Professional and Technical Communication Honors	
ENGL 2215G	Advanced Technical and Professional Communication	
Choose one from the following:		3
ACOM 1130G	Effective Leadership and Communication in Agriculture	
COMM 1115G	Introduction to Communication	
COMM 1130G	Public Speaking	
HNRS 2175G	Introduction to Communication Honors	
MATH 1521G or MATH 1521H	Calculus and Analytic Geometry II (C- or better) or Calculus and Analytic Geometry II Honors	4
Area V: Humanities Course ²		3
ECON 2110G	Macroeconomic Principles	3
Credits		32

Second Year		Credits
ACCT 2110	Principles of Accounting I	3
MATH 1531	Introduction to Higher Mathematics (C- or better)	3
MATH 2530G	Calculus III (C- or better)	3
ECON 2120G	Principles of Microeconomics (C- or better, and will count towards Area IV, Gen.Ed))	3
BFIN 322	Principles of Insurance (C- or better)	3
Area VI: Creative and Fine Arts Course ²		3
MATH 2415	Introduction to Linear Algebra (C- or better)	3
STAT 3110	Statistics for Engineers and Scientists (C- or better)	3
ACCT 2120	Principles of Accounting II	3
BFIN 341	Financial Analysis and Markets	3
Credits		30

Third Year		Credits
VWW - Viewing a Wider World ³		3
MATH 3110 or MATH 3120	Introduction to Modern Algebra (C- or better, Fall Only) ⁴ or Introduction to Analysis	3
OPTION 1,2 or 3 Course (C- or better) ⁵		6
Elective Course(s) ⁶		12
MATH/STAT Elective Course: 300/3000-level or higher (C- or better) ^{7,8}		3
MATH/STAT Elective Course: 400/4000-level (C- or better) ⁸		3
Credits		30

Fourth Year		Credits
MATH/STAT Elective Course: 400/4000-level (C- or better) ⁸		3
Option 1,2 or 3 Course (C- or better) ⁵		3
STAT 4210	Probability: Theory and Applications (C- or better)	3

BLAW 316 or BLAW 385V	Legal Environment of Business (C- or better in either) or Employment and Consumer Law	3
Elective Course(s) ⁶		7-9
STAT 4220	Statistics: Theory and Applications (C- or better)	3
Elective Course - Upper Division ⁶		6
Credits		28-30
Total Credits		120-122

- ¹ Math Placement: MATH 1511G Calculus and Analytic Geometry I is the starting Math course for the degree, however, students may need to complete any prerequisites prior to enrolling into this course.
- ² See the General Education (p. 227) section of the catalog for a full list of courses.
- ³ See the Viewing a Wider World (p. 231) section for a full list of courses. Please note that the second VWW requirement will be satisfied by the 9 hour rule using the FIN courses that are required for the degree.
- ⁴ MATH 3110 Introduction to Modern Algebra is only offered in the Fall semesters, however MATH 3120 Introduction to Analysis is taught in the Spring and may be used as a substitute.
- ⁵ Do not mix options; pick one throughout.
 OPTION 1: BFIN 323 Life/Health/Employee Benefits; two courses from (BFIN 303V Personal Financial Planning and Investing in a Global Economy OR BFIN 421 Personal Financial Planning for Professionals); BFIN 324 Property and Liability Insurance; BFIN 391 Finance Internship and Cooperative Education I.
 OPTION 2: BFIN 324 Property and Liability Insurance; two courses from (BFIN 303V Personal Financial Planning and Investing in a Global Economy OR BFIN 421 Personal Financial Planning for Professionals); BFIN 323 Life/Health/Employee Benefits; BFIN 391 Finance Internship and Cooperative Education I.
 OPTION 3: BFIN 326 Business Risk Management; two courses from (BFIN 303V Personal Financial Planning and Investing in a Global Economy OR BFIN 421 Personal Financial Planning for Professionals); BFIN 323 Life/Health/Employee Benefits; BFIN 324 Property and Liability Insurance; BFIN 391 Finance Internship and Cooperative Education I.
- ⁶ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
- ⁷ MATH/STAT 300/3000-level courses that cannot be taken to fulfill this requirement: MATH 3997 Directed Readings.
- ⁸ MATH/STAT 400/4000-level courses that cannot be taken to fulfill this requirement: MATH 4991 Undergraduate Research, MATH 4997 Directed Reading, STAT 400 Undergraduate Research.

Mathematics (Applied Mathematics) - Bachelor of Science

The Applied Mathematics concentration is intended to prepare students planning a mathematically oriented career upon graduation. The coursework in this concentration provides a foundation in mathematics important in many scientific and engineering applications.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Non-Departmental Requirements (in addition to Gen.Ed/VWW)		
C S 172	Computer Science I (C- or better)	4
Select a minimum of 9 credit hours of electives to form a coherent cluster in an applied area from the following: ⁴		9
Examples of acceptable clusters:		
<i>Signals</i>		
E E 320	Signals and Systems I	
E E 395	Introduction to Digital Signal Processing	
E E 496	Introduction to Communication Systems	
<i>Structures</i>		
PHYS 1310G	Calculus -Based Physics I ⁵	
C E 233	Mechanics-Statics	
C E 315	Structural Analysis	
<i>Operations Research</i>		
I E 311	Engineering Data Analysis	
I E 365	Quality Control	
I E 413	Engineering Operations Research I	
I E 423	Engineering Operations Research II	
I E 460	Evaluation of Engineering Data	
<i>Algorithm Theory</i>		
C S 272	Introduction to Data Structures	
C S 370	Compilers and Automata Theory	
C S 372	Data Structures and Algorithms	
<i>Bioinformatics</i>		
BIOL 2110G	Principles of Biology: Cellular and Molecular Biology ⁵	
BIOL 2110L	Principles of Biology: Cellular and Molecular Biology Laboratory ⁵	
C S 486	Bioinformatics	
Choose one from the following:		
C S 272	Introduction to Data Structures	
C S 370	Compilers and Automata Theory	
C S 371	Software Development	
C S 372	Data Structures and Algorithms	
<i>Computer Systems</i>		
C S 271	Object Oriented Programming	
or C S 272	Introduction to Data Structures	
C S 371	Software Development	
C S 370	Compilers and Automata Theory	
C S 474	Operating Systems I	
C S 475	Artificial Intelligence I	
C S 476	Computer Graphics I	
C S 482	Database Management Systems I	
C S 484	Computer Networks I	
C S 485	Human-Centered Computing	
Second Language Requirement: (not required)		
Electives, to bring the total credits to 120⁶		34
9-15 credits must be Upper-Division		
Total Credits		120-121

¹ MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁴ A grade of C- or better must be earned. Students may propose clusters subject to departmental approval. A cluster must contain C S 172 Computer Science I. A major or minor in any of the following fields (along with C S 172 Computer Science I) will also fulfill the Cluster Electives requirement: Computer Science, Physics, Biology, Chemistry and Biochemistry, Chemical Engineering, Engineering Physics, Electrical and Computer Engineering, Industrial Engineering, Mechanical Engineering, Civil Engineering, Economics and Finance.

⁵ If these courses are selected, they could count towards the General Education Area III requirement.

⁶ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Science with a major in Mathematics with a Concentration in Applied Mathematics, there is no second language requirement for the degree.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Some students may be able to bypass one or more courses in the calculus sequence MATH 1511G - MATH 1521G - MATH 2530G. The calculus sequence, Introduction to Higher Mathematics, and Linear Algebra provide knowledge that is basic to further work, and students are advised to complete them or their equivalent as early as possible.

First Year		Credits
ENGL 1110G	Composition I (C- or better)	4
MATH 1511G or MATH 1511H	Calculus and Analytic Geometry I (C- or better) ¹ or Calculus and Analytic Geometry I Honors	4
Area III: Laboratory Science Course ²		4
C S 172	Computer Science I (C- or better)	4
Choose one from the following:		3
ENGL 2130G	Advanced Composition	
ENGL 2210G	Professional and Technical Communication Honors	
ENGL 2215G	Advanced Technical and Professional Communication	
MATH 1521G or MATH 1521H	Calculus and Analytic Geometry II (C- or better) or Calculus and Analytic Geometry II Honors	4
Either an Area III/IV: Laboratory Science Course or Social/Behavioral Science Course ²		3-4
Area V: Humanities Course ²		3
Elective Course ³		1
Credits		30-31

Second Year

Choose one from the following:		3
ACOM 1130G	Effective Leadership and Communication in Agriculture	
COMM 1115G	Introduction to Communication	
COMM 1130G	Public Speaking	
HNRS 2175G	Introduction to Communication Honors	
Area VI: Creative and Fine Arts Course ²		3
MATH 2415	Introduction to Linear Algebra (C- or better)	3
MATH 2530G	Calculus III (C- or better)	3
Elective Course(s) ³		6
Area IV: Social/Behavioral Science Course ²		3
MATH 1531	Introduction to Higher Mathematics	3
MATH 3160	Introduction to Ordinary Differential Equations	3
Cluster Course (C- or better)		3
Credits		30

Third Year

VWW - Viewing a Wider World Course ⁴		3
STAT 3110	Statistics for Engineers and Scientists (C- or better)	3
MATH 4210	Complex Variables (C- or better)	3
Cluster Course (C- or better)		6
Elective Course(s) ^{3,5}		9
MATH 3140	Introduction to Numerical Methods (C- or better)	3
MATH 4220	Fourier Series and Boundary Value Problems (C- or better)	3
Credits		30

Fourth Year

VWW - Viewing a Wider World ⁴		3
MATH/STAT Elective Course: 300/3000-level or higher (C- or better) ^{6,7}		3
STAT 4210	Probability: Theory and Applications (C- or better)	3
Elective Course - Upper Division ³		12
MATH/STAT Elective Course: 400/4000-level (C- or better) ⁷		3
Elective Course(s) ³		6
Credits		30
Total Credits		120-121

¹ Math Placement: MATH 1511G Calculus and Analytic Geometry I is the starting Math course for the degree, however, students may need to complete any prerequisites prior to enrolling into this course.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

⁴ See the Viewing a Wider World (p. 231) section for a full list of courses.

⁵ Students who plan to get a Masters in MATH should take MATH 3120 Introduction to Analysis as an elective.

⁶ MATH/STAT 300/3000-level courses that cannot be taken to fulfill this requirement: MATH 3997 Directed Readings.

⁷ MATH/STAT 400-level courses that cannot be taken to fulfill this requirement: MATH 4991 Undergraduate Research, MATH 4997 Directed Reading, STAT 400 Undergraduate Research.

Mathematics (Foundations) - Bachelor of Science

The concentration in Foundations draws on courses from mathematics and philosophy to provide a close look at the underlying logical and philosophical issues in mathematics.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Prefix	Title	Credits
General Education		
<i>Area I: Communications</i>		
<i>English Composition - Level 1</i>		
ENGL 1110G	Composition I	4
<i>English Composition - Level 2</i>		
Choose one from the following:		3

MATH 3130	Introduction to Geometry	3
MATH 4110V	Great Theorems in Mathematics	3
MATH 4320	Logic and Set Theory	3
<i>Departmental Electives</i>		
Select at least 9 additional upper-division credits of approved courses prefixed MATH or STAT (at least 3 must be 400-level), excluding the following:		9
MATH 3997	Directed Readings	
MATH 4991	Undergraduate Research	
MATH 4997	Directed Reading	
Non-Departmental Requirements (in addition to Gen.Ed/VWW) ⁴		13
C S 172	Computer Science I	
PHIL 312	Formal Logic	
Select two courses from the following, including at least one of PHIL 316:		
PHIL 316	Philosophy of Mathematics	
PHIL 350	Epistemology	
PHIL 351	Philosophy of Science	
Second Language Requirement: (not required)		
Electives, to bring the total credits to 120 ⁵		40
15 credits must be upper division.		
Total Credits		120-121

¹ MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.

² See the General Education (p. 227) section of the catalog for a full list of courses

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses. This course must come from outside the college. Note that one of the VWW requirements will be satisfied using the 9 hour rule with the PHIL courses that are required for the degree.

⁴ A grade of C- or better must be earned.

⁵ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Science in Mathematics with a Concentration in Foundations there is no second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Some students may be able to bypass one or more courses in the calculus sequence MATH 1511G - MATH 1521G - MATH 2530G. The calculus sequence, Introduction to Higher Mathematics, and Linear

Algebra provide knowledge that is basic to further work, and students are advised to complete them or their equivalent as early as possible.

First Year		Credits
ENGL 1110G	Composition I (C- or better)	4
MATH 1511G	Calculus and Analytic Geometry I (C- or better)	4
or MATH 1511H	¹ or Calculus and Analytic Geometry I Honors	
Area III: Laboratory Science Course ²		4
C S 172	Computer Science I (C- or better)	4

Elective Course(s) ³		13

MATH 4320 or MATH 3130	Logic and Set Theory or Introduction to Geometry	3
Credits		31
Total Credits		120-121

- ¹ Math Placement: MATH 1511G Calculus and Analytic Geometry I is the starting Math course for the degree, however, students may need to complete any prerequisites prior to enrolling into this course.
- ² See the General Education (p. 227) section of the catalog for a full list of courses.
- ³ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
- ⁴ MATH/STAT 3000-level courses that cannot be taken to fulfill this requirement: MATH 3997 Directed Readings.
- ⁵ See the Viewing a Wider World (p. 231) section for a full list of courses.
- ⁶ MATH/STAT 4000-level courses that cannot be taken to fulfill this requirement: MATH 4991 Undergraduate Research, MATH 4997 Directed Reading, STAT 400 Undergraduate Research.
- ⁷ MATH 3110 Introduction to Modern Algebra is only offered in the Fall semesters. However, MATH 3120 Introduction to Analysis is taught in the Spring and may be used as a substitute.
- ⁸ Choose from PHIL 350 Epistemology or PHIL 351 Philosophy of Science.

Mathematics (General Mathematics) - Bachelor of Science

Students seeking a foundation in pure mathematics and flexibility in the curriculum are encouraged to pursue the General Mathematics Concentration. Students choosing this emphasis should work closely with a faculty advisor to select courses appropriate to their interests.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Second Language Requirement: (not required)		
Electives, to bring the total credits to 120 ⁵		43
18 credits must be Upper-Division		
Total Credits		120-121

- ¹ MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.
- ² See the General Education (p. 227) section of the catalog for a full list of courses
- ³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
- ⁴ A grade of C- or better must be earned.
- ⁵ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Note: It is strongly recommended that mathematics majors in the General Mathematics Concentration consider a minor or second major in an area that uses mathematics, such as physics or computer science. All programs should be planned with the guidance of a departmental advisor. More information is available at www.math.nmsu.edu. (<https://math.nmsu.edu/>)

Second Language Requirement

For the Bachelor of Science in Mathematics with a Concentration in General Mathematics there is no second language requirement.

A Suggested Plan of Study

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Some students may be able to bypass one or more courses in the calculus sequence MATH 1511G Calculus and Analytic Geometry I - MATH 1521G Calculus and Analytic Geometry II, MATH 2530G Calculus III. The calculus sequence, Introduction to Higher Mathematics, and Linear Algebra provide knowledge that is basic to further work, and students are advised to complete them or their equivalent as early as possible.

First Year		Credits

Total Credits		120-121

¹ Math Placement: MATH 1511G Calculus and Analytic Geometry I is the starting Math course for the degree, however, students may need to complete any prerequisites prior to enrolling into this course.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

⁴ MATH/STAT 3000-level courses that cannot be taken to fulfill this requirement: MATH 3997 Directed Readings.

⁵ See the Viewing a Wider World (p. 231) section for a full list of courses.

⁶ MATH/STAT 400/4000-level courses that cannot be taken to fulfill this requirement: MATH 4991 Undergraduate Research, MATH 4997 Directed Reading, STAT 400 Undergraduate Research.

Mathematics (Probability and Statistics) - Bachelor of Science

The concentration in Probability and Statistics provides students with a strong background in mathematical, probabilistic, and statistical analysis. Students also develop skills in the analysis of problems that arise in science, engineering, and other areas. The program provides a path to graduate studies or a career in industry.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

- ² See the General Education (p. 227) section of the catalog for a full list of courses.
- ³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
- ⁴ A grade of C- or better must be earned.
- ⁵ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor. Students should also consult their advisor about choosing the courses A ST 503 SAS Basics and A ST 505 Statistical Inference I as electives.

Second Language Requirement

For the Bachelor of Science in Mathematics with a Concentration in Statistics there is no second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Some students may be able to bypass one or more courses in the calculus sequence MATH 1511G - MATH 1521G - MATH 2530G. The calculus sequence, Introduction to Higher Mathematics, and Linear Algebra provide knowledge that is basic to further work, and students are advised to complete them or their equivalent as early as possible.

First Year		Credits
ENGL 1110G	Composition I	4
MATH 1511G	Calculus and Analytic Geometry I ¹	4
or MATH 1511H	or Calculus and Analytic Geometry I Honors	
Area III: Laboratory Science Course ²		4
Choose one from the following:		3
C S 153	Python Programming I	
C S 158	R Programming I	
Choose one from the following:		3
ENGL 2130G	Advanced Composition	
ENGL 2210G	Professional and Technical Communication Honors	

ENGL 2215G	Advanced Technical and Professional Communication	
Area VI: Creative and Fine Arts Course ²		3
MATH 1521G or MATH 1521H	Calculus and Analytic Geometry II or Calculus and Analytic Geometry II Honors	4
Area V: Humanities Course ²		3
Elective Course ³		3
Credits		31
Second Year		
Choose one from the following:		3
ACOM 1130G	Effective Leadership and Communication in Agriculture	
COMM 1115G	Introduction to Communication	
COMM 1130G	Public Speaking	
HNRS 2175G	Introduction to Communication Honors	
Elective Course(s) ³		9
Area IV: Social/Behavioral Sciences Course ²		3
MATH 2415	Introduction to Linear Algebra	3
MATH 2530G	Calculus III	3
Either an Area III/IV: Laboratory Science Course or Social/Behavioral Sciences Course ²		3-4
STAT 3110	Statistics for Engineers and Scientists	3
MATH 3140	Introduction to Numerical Methods	3
Credits		30-31
Third Year		
MATH 1531	Introduction to Higher Mathematics	3
STAT 4210	Probability: Theory and Applications	3
Elective Course(s) ³		9
Elective Course - Upper Division ³		6
STAT 4220	Statistics: Theory and Applications	3
MATH 3120	Introduction to Analysis	3
VWW - Viewing a Wider World ⁵		3
Credits		30
Fourth Year		
MATH/STAT Elective Course: 400/4000-level ⁶		3
OPTION Course		6
VWW - Viewing a Wider World ⁵		3
Elective Course - Upper Division ³		6
MATH/STAT Elective Course: 300/4000- level or higher (C- or better) ^{4,6}		6
Elective Course(s) ^{3,6}		5
Credits		29
Total Credits		120-121

¹ Math Placement: MATH 1511G Calculus and Analytic Geometry I is the starting Math course for the degree, however, students may need to complete any prerequisites prior to enrolling into this course.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

⁴ MATH/STAT 300/3000-level or higher courses that cannot be taken to fulfill this req MATH 4991 Undergraduate Research, and STAT 400 Undergraduate Research.

⁵ See the Viewing a Wider World (p. 231) section for a full list of courses.

⁶ MATH/STAT 400/4000-level courses that cannot be taken to fulfill this requirement: MATH 4991 Undergraduate Research, MATH 4997 Directed Reading, STAT 400 Undergraduate Research.

Mathematics (Secondary Mathematics Education) - Bachelor of Science

The concentration in Secondary Mathematics Education allows a flexible program providing a student with a path to graduate studies in mathematics or a career in industry, as well as all the mathematics and education courses required for certification as a secondary education teacher in mathematics.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

3 hours must be upper division.	
Total Credits	120-121

¹ MATH 1511G Calculus and Analytic Geometry I is required for the degree but students may need to take any prerequisites needed to enter MATH 1511G first.

² See the General Education (p. 227) section of the catalog for a full list of courses

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses. Note that one of the VWW requirements will be satisfied using the 9 hour rule with the EDUC courses that are required for the degree.

⁴ A grade of C- or better must be earned.

⁵ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Notes for Minor in Education

Students must apply to the Teacher Education Program (TEP) before they can progress in the 400 level education courses. EDUC 3120 Multicultural Education, EDUC 3997 Secondary Field Experience, and SPED 3105 Introduction to Special Education in a Diverse Society are prerequisites for TEP entrance. Students can apply for TEP during the

semester in which they are completing the last of these prerequisites.

Students will also need to have declared the Minor in Secondary Education before applying to TEP.

Second Language Requirement

For the Bachelor of Science in Mathematics with a Concentration in General Mathematics there is no second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1511G Calculus and Analytic Geometry I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Some students may be able to bypass one or more courses in the calculus sequence MATH 1511G - MATH 1521G - MATH 2530G. The calculus sequence, Introduction to Higher Mathematics, and Linear Algebra provide knowledge that is basic to further work, and students are advised to complete them or their equivalent as early as possible.

I E 466	Reliability	

Applied Mathematics - Supplemental Major

The program consists of 24 credits in the designated list of courses. To earn a supplementary major in applied mathematics a student must earn 15 credits from Categories I.A and I.B of which at least 9 credits must be from Category I.B. A student must also earn 9 credits from the Category

M E 332	Vibrations
M E 333	Intermediate Dynamics
M E 338	Fluid Mechanics
M E 341	Heat Transfer
PHYS 395	Intermediate Mathematical Methods of Physics
PHYS 451	Intermediate Mechanics I
PHYS 454	Intermediate Modern Physics I
PHYS 455	Intermediate Modern Physics II
PHYS 461	Intermediate Electricity and Magnetism I
PHYS 462	Intermediate Electricity and Magnetism II
PHYS 476	Computational Physics
PHYS 480	Thermodynamics
PHYS 485	Independent Study
PHYS 495	Mathematical Methods of Physics I
SUR 351	Spatial Data Adjustment I
SUR 451	Spatial Data Adjustment II
SUR 461	GNSS Positioning
C S 510	Automata, Languages, Computability ¹
C S 570	Analysis of Algorithms ¹

Total Credits 24

¹ Student must be eligible to take 500-level courses.

Mathematics - Undergraduate Minor

A student must pass 18 or more credit hours in MATH and STAT courses, with at least 9 of the credits in upper division courses completed at NMSU and three of those 9 credits in courses numbered above 400.

Prefix	Title	Credits
Requirements		
Select 18 credits or more in MATH and STAT courses, with at least 9 of the credits in upper division courses and three of those 9 credits in courses numbered above 400. ¹		18
The following courses are excluded from the minor:		
Courses numbered below MATH 1350G		
MATH 2134G	Fundamentals of Elementary Math II	
MATH 2992	Directed Study	
MATH 3997	Directed Readings	
MATH 4991	Undergraduate Research	
MATH 4997	Directed Reading	
STAT 400	Undergraduate Research	
At most one can be selected from the following:		
MATH 1350G	Introduction to Statistics	3
MATH 2350G	Statistical Methods	
STAT 3110	Statistics for Engineers and Scientists	

Total Credits 18

¹ MATH 4996 Special Topics must be approved by the department for credit toward the minor. Any course taught outside the Department of Mathematical Sciences but cross-listed with a MATH or STAT course, must also be approved by the department for credit toward the minor. A student may not earn a bachelor's degree in mathematics or a supplementary major in applied mathematics and also earn a minor in mathematics.

Military Science

Undergraduate Program Information

The Military Science program leads to a commission as an officer in the Army Reserve, National Guard or Active Duty Army. The program consists of four parts:

1. the student's academic major,
2. nondepartmental courses of value to the military service,
3. courses in military science and
4. a six-week Leader Development and Assessment course.

The department offers a four-year program divided into two parts: the basic course (two years) and the advanced course (two years). Selected students may qualify for the two-year program with prior military service or successful completion of a six-week summer Leaders' Training Course. Financial assistance and scholarships are available for qualified individuals. Students should contact the Department of Military Science to obtain additional information.

Requirements

Courses should be taken in sequence, normally one per semester. The student's Military Science advisor will recommend course sequence. Military Science students must sign up for and attend courses plus laboratories. Departmental requirements may not be taken S/U.

Prefix	Title	Credits
Basic Course Freshman		
M SC 110	Introduction to Military Science	2
M SC 111	Introduction to Leadership	2
Basic Course Sophomore		
M SC 210	Self/Team Development	3
M SC 211	Leadership in Action and Team Building	3
M SC 225	Directed Studies	1-3
Advanced Course Junior		
M SC 310	Leading Small Organizations I	3
M SC 310 L	Leading Small Organizations I Lab	1
M SC 320	Leading Small Organizations II	3
M SC 320 L	Leading Small Organizations II Lab	1
M SC 325	Advanced Directed Studies	1-3
M SC 350	Cadet Summer Training Advanced Course	3
Advanced Course Senior		
M SC 401	Leadership Challenges and Goal Setting	3
M SC 401 L	Leadership Challenges and Goal Setting Lab	1
M SC 402	Transition to Lieutenant	3
M SC 402 L	Transition to Lieutenant Lab	1
M SC 425	Practicum	1-4
Nondepartmental Requirements		
Select one course in Military History to meet Professional Military Education requirements. ¹		3

Total Credits 35-42

¹ See your Military Science advisor for specific courses.

Minors for the Department

- Military Science - Undergraduate Minor (p. 775)

LTC Adam D. Buchanan, Department Head

Senior Military Science Instructor: MSG Keith Platt; **Assistant Professor of Military Science:** CPT Jay Kubler; **Military Science Instructors:** SFC Jesus Diaz; MSG Justin Spangler **National Guard Liaisons:** CPT Alfonso Orenday; **Logistics Technician:** Mr. Tony Scott; **Human Resources Assistant:** Mr. Julian Ramos; **Event Planner Senior:** Mrs. Monica Dunivan

Military Science Courses

M SC 110. Introduction to Military Science 2 Credits (2+1P)

Introduction to the Army, the Profession of Arms, and critical thinking. Students will examine the Army Profession and what it means to be a professional in the U.S. Army. The overall focus is on developing basic knowledge and comprehension of the Army Leadership Requirements Model while gaining a complete understanding of the Reserve Officers' Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Cadets also learn how resiliency and fitness supports their development as an Army leader. Includes a weekly lab facilitated by MSL III Cadets and supervised by Cadre. May be repeated up to 2 credits. Restricted to Las Cruces campus only.

M SC 111. Introduction to Leadership 2 Credits (2+1P)

Introduction to the personal challenges and competencies that are critical for effective leadership. Students learn how the personal development of life skills such as critical thinking, time management, goal setting, and communication contribute to effective leadership. Students learn the basics of the communications process and the importance for leaders to develop the essential skills to effectively communicate in the Army. Students will begin learning the basics of squad level tactics that will be reinforced during a weekly lab facilitated by MSL III Cadets and supervised by Cadre. May be repeated up to 2 credits. Restricted to Las Cruces campus only.

M SC 210. Self/Team Development 3 Credits (3+1P)

A focus on leadership and decision making. The course adds depth to the student's understanding of the Adaptability Army Learning Area. Outcomes are demonstrated through Critical and Creative Thinking and the ability to apply Troop Leading Procedures (TLP) to apply Innovative Solutions to Problems. The Army Profession is also stressed through leadership forums and a leadership self-assessment. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during a weekly lab facilitated by MSL III Cadets and supervised by Cadre and three physical fitness sessions per week. Restricted to Las Cruces campus only.

M SC 211. Leadership in Action and Team Building 3 Credits (3+1P)

A focus on Army doctrine and team development. The course begins the journey to understand and demonstrate competencies as they relate to Army doctrine. Army Values, Teamwork, and Warrior Ethos and their relationship to the Law of Land Warfare and philosophy of military service are also stressed. The ability to lead and follow is also covered through Team Building exercises at squad level. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during a weekly lab facilitated by MSL III Cadets and supervised by cadre and three physical fitness sessions per week. Restricted to Las Cruces campus only.

M SC 225. Directed Studies 1-3 Credits

Individual directed studies under supervision of the Professor of Military Science. May be repeated up to 12 credits. Restricted to Las Cruces campus only.

Prerequisite(s): GPA 2.5 or better.

M SC 310. Leading Small Organizations I 3 Credits (3)

Part of the Senior ROTC Advanced Course, this course provides a Focus on training management and the warfighting functions. It is an academically challenging course were Cadets study, practice, and apply the fundamentals of Training Management and how the Army operates through the Warfighting functions. At the conclusion of this course, Cadets will be capable of planning, preparing, and executing training for a squad conducting small unit tactics. Includes one lab meeting per week using peer facilitation overseen by MSL IVs, supervised by ROTC Cadre and three physical fitness sessions per week. Students must meet Basic Course of Military Science requirements to enroll in this course.

Corequisite(s): M SC 310 L.

M SC 310 L. Leading Small Organizations I Lab 1 Credit (1P)

Planning, coordination, execution and evaluation of training and activities with basic course students and ROTC program. Students develop and refine leadership skills in positions of responsibility. Open only to students taking M SC 310.

Corequisite(s): M SC 310.

M SC 320. Leading Small Organizations II 3 Credits (3)

Part of the Senior ROTC Advanced Course, this course provides a focus on applied leadership in small unit operations. It is an academically challenging course where Cadets study, practice, and apply the fundamentals of direct level leadership and small unit tactics at the platoon level. At the conclusion of this course, Cadets will be capable of planning, coordinating, navigating, motivating and leading a platoon in the execution of a mission Includes one lab meeting per week using peer facilitation overseen by MSL IVs, supervised by ROTC Cadre and three physical fitness sessions per week. Successful completion of this course is a requirement to Cadet Summer Training Advance Camp during the summer, at Fort Knox, KY. Prerequisite(s): M SC 310

Corequisite(s): M SC 320 L.

M SC 320 L. Leading Small Organizations II Lab 1 Credit (1P)

Practice and refinement of leadership skills. Different roles assigned for students at different levels in the program. Planning, coordination, execution and evaluation of training and activities with basic course students and ROTC program. Open to students taking M SC 320.

Corequisite(s): M SC 320.

M SC 325. Advanced Directed Studies 1-3 Credits

Directed individual study of advanced subjects under the guidance of the Professor of Military Science. May be repeated up to 12 credits.

Prerequisite(s): GPA 2.5 or better.

M SC 350. Cadet Summer Training Advanced Course 3 Credits (3)

Advanced Camp. Advanced Camp is a 31-day training event which takes place at Fort Knox, KY. It is designed to assess a Cadet's ability to demonstrate proficiency in basic officer leadership tasks. Cadets are evaluated on their ability to lead at the Squad and Platoon levels, both in garrison and tactical environments. Cadets are mentally and physically tested during a 12-day consequence driven field training exercise that replicates a combat training center rotation. Successful completion of

the Advanced Camp is a requirement for commissioning. Consent of Instructor required.

Prerequisite(s): M SC 310, M SC 310 L, M SC 320, and M SC 320 L.

M SC 401. Leadership Challenges and Goal Setting
3 Credits (3)

Part of the Senior ROTC Advanced Course, this course provides a focus on development of the Army Officer. It is an academically challenging course where Cadets develop knowledge, skills, and abilities to plan, resource, and assess training at the small unit level. Cadets also learn about Army programs that support counseling subordinates and evaluating performance, values and ethics, career planning, and legal responsibilities. At the conclusion of this course, Cadets will be familiar with how to plan, prepare, execute, and continuously assess the conduct of training at the company or field grade officer level. Includes a lab per week overseeing MSL III lesson facilitation and supervised by ROTC Cadre and three physical fitness sessions per week. May be repeated up to 3 credits. Prerequisite(s): M SC 320

Corequisite(s): M SC 401 L.

M SC 401 L. Leadership Challenges and Goal Setting Lab
1 Credit (1P)

Different roles assigned for students at different levels in the program. Practice and refinement of leadership skills. Planning coordination, execution and evaluation of training and activities with basic course students and ROTC program. Open only to students taking M SC 401. May be repeated up to 1 credits.

Corequisite(s): M SC 401.

M SC 402. Transition to Lieutenant
3 Credits (3)

The final course within the Senior ROTC Advanced Course, this course is an academically challenging course where Cadets further develop knowledge, skills, and abilities required of junior officers pertaining to the Army in Unified Land Operations and Company Grade Officer roles and responsibilities. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, practical exercises, a mid-term exam, and an Oral Practicum as the final exam. The Oral Practicum explores the Cadet's knowledge of how they will be prepared for the 20 Army Warfighting Challenges (AWFC) covered throughout the ROTC Advanced Course. Successful completion of this course will assist in preparing Cadets for their BOLC B course following graduation and commissioning. It is a mandatory requirement for commissioning. Includes a lab per week overseeing MSL III lesson facilitation and supervised by ROTC Cadre and three physical fitness sessions per week. May be repeated up to 3 credits. Prerequisite(s): M SC 401

Corequisite(s): M SC 402 L.

M SC 402 L. Transition to Lieutenant Lab
1 Credit (1)

Different roles assigned for students at different levels in the program. Practice and refinement of leadership skills. Planning, coordination, execution, and evaluation of training and activities with basic course students and ROTC program. Open only to students taking M SC 402. May be repeated up to 1 credits.

Corequisite(s): M SC 402.

M SC 425. Practicum
1-4 Credits

Independent projects conducted under the direction of the Professor of Military Science, and concerned with analysis of selected leadership or management problems. Course not eligible for S/U grade. May be repeated up to 16 credits.

M SC 465 L. Military Decision Making - Graduate Level Lab
1 Credit (1)

Students will work as part of a planning team in the application of the Military Decision Making Process to planning, coordination, and publish a comprehensive training plan and guidance which outlines all training and activities of the NMSU Army ROTC program for the semester following the semester of the course (i.e. the fall course develops the spring plan). Students develop and refine leadership skills in positions of responsibility. Open only to students taking M SC 465. May be repeated up to 1 credits. Consent of Instructor required. Consent of Professor of Military Science (PMS) is required and the PMS will interview all prospective students prior to enrolling into this course.

Corequisite(s): M SC 465.

Phone: (575) 646-4030

Website: <https://armyrotc.nmsu.edu/>

Military Science - Undergraduate Minor

The minor in Military Science is administered by the Department of Military Science (Army ROTC) in the College of Arts and Sciences. To obtain a minor in Military Science a student must complete a total of 19 credits, all of which must be upper division. A grade of C- or better must be obtained for each course. The only credits in which a grade of S will be accepted is M SC 350 Cadet Summer Training Advanced Course. Students should contact the Department of Military Science to obtain additional information.

Molecular Biology & Interdisciplinary Life Sciences

Graduate Program Information

Students of the molecular life sciences seek to reduce complex biological processes to a set of understandable molecular or chemical structure and function relationships. Integration of this knowledge into the context of complex living tissues interacting with the environment is the ultimate goal. This requires that the expertise from many diverse traditional disciplines be directed along converging experimental lines. The Ph.D. program in Molecular Biology & Interdisciplinary Life Sciences (MOLB-ILS) is designed to facilitate an interdisciplinary approach to graduate research, utilizing both traditional techniques and the latest advances in biotechnology, including the extraordinary power of recombinant DNA methodology. Participants in this program will take core courses in biochemistry, molecular biology and cell biology. Subsequent course work will be tailored for the individual student, depending upon his or her research emphasis. Participation in regular seminar programs will be expected to provide students with the widest possible scientific background. Financial aid, in the form of a limited number of MB teaching and research assistantships, is available on a competitive basis. Research Assistantships may also be available from individual faculty within the Molecular Biology & Interdisciplinary Life Sciences Graduate Program.

Only the most competitive students are admitted with assistantship support.

The MOLB-ILS program offers curricula leading to the M.S. and Ph.D. degrees in the areas of biochemistry, molecular genetics, molecular biology, cell biology, bioinformatics, and microbiology. Admission to the MOLB-

ILS Program without deficiency is based on an undergraduate program essentially equivalent to that pursued by an undergraduate major in chemistry, biology, agronomy, horticulture, biochemistry, or microbiology at this university. An entering student is required to complete the Graduate Record Examination (General Aptitude). Undergraduate deficiency courses must be passed with a minimum grade of B.

Applicants are strongly encouraged to contact at least three individual program faculty before applying to identify a prospective advisor and laboratory in which to pursue graduate research. Previous course records and GPA standings (typically minimum of 3.3/4.0), GRE scores (typically minimum of 300 combined verbal and quantitative), TOEFL scores of foreign applicants (typically minimum of 550 on the paper-based or 213 on the computer-based), a letter of interest from the applicant that identified faculty laboratories of interest, and three letters of reference regarding research performance or potential are weighted heavily during the selection process.

Students with a B.S. degree in one of the disciplines listed above can expect to earn the MS degree in about 30 credits, including at least 6 credits of thesis research. The Ph.D. degree can be earned in about 30 to 40 credits of formal course work, plus additional thesis research credits, for a minimum total of 75 credits beyond the B.S. because research is central in both the M.S. and Ph.D. curricula, early selection of a research advisor is required.

Ph.D. degree candidates will successfully complete a written and oral qualifying examination based on their proposed research and the subject matter in the core courses (below) at the end of the first year of study. Also at this time, the master's or doctoral committee is organized to assist in planning a program appropriate to the background and goals of the student. Ph.D. candidates will subsequently complete a comprehensive written examination and oral examination approximately at the end of the second year of study. A final, formal presentation and oral defense of the original research documented in the M.S. or Ph.D. thesis completes the degree requirements.

Master Degree(s)

- Molecular Biology - Master of Science (p. 159)

Doctoral Degree(s)

- Molecular Biology - Doctor of Philosophy (p. 201)

Minors

- Bioinformatics (with Computer Science) - Graduate Minor (p. 220)
- Molecular Biology - Graduate Minor (p. 224)
- Molecular Biology- Undergraduate Minor (p. 777)

A. Ashley, Ph.D. (Colorado State University)– Department of Chemistry and Biochemistry– cellular response to DNA replication stress and damage; maintenance of genomic integrity in eukaryotes; R. Ashley, Ph.D. (Colorado State University)– Department of Animal and Range Sciences– progesterone's actions mediated by membrane receptors, and chemokines' effects in early pregnancy and breast cancer; D. Bailey, Ph.D., (Cornell)– Department of Biology; S. Belteton, Ph.D. (Purdue University) - Dept of Botany and Plant Pathology - Plant tissue morphogenesis; R. Chinnasamy, Ph.D. (National Chemical Laboratory-Pune, India)– Department of Chemistry and Biochemistry; A. Corcoran, Ph.D. (University of California Los Angeles)– Molecular Biology Program; C. Cramer, Ph.D. (North Carolina State University) – onion breeding and horticulture; R. Creamer, Ph.D., (University of California-Davis)– Department of Entomology Plant and Weed Science– plant virology, fungal endophytes; J. Curtiss, Ph.D. (University of Colorado-Boulder)–

Department of Biology– molecular genetics of eye development; S. Fuentes-Soriano, Ph.D. (University of Missouri-Saint Louis)– Department of Animal and Range Science–; I. Guzman, Ph.D. (New Mexico State University)– Department of Plant and Environmental Sciences; K. A. Hanley, Ph.D. (University of California San Diego)– Department of Biology– emerging vector-borne viruses; I. Hansen, Ph.D. (University of Wurzburg, Germany)– Department of Biology– molecular vector biology; S. Hanson (Wisconsin)– Department of Entomology Plant and Weed Science– viral plant pathogens; J. Hernandez Gifford, Ph.D. (Washington State University)– Department of Animal and Range Sciences– reproductive physiology; O. Holguin, Ph.D. (New Mexico State University)– Department of Plant and Environmental Sciences– biochemistry including etabolomics and proteomics with a focus on chemical analysis technique; J. Houston, Ph.D. (Texas A&M University)– Department of Chemical & Materials Engineering– biomedical engineering, flow cytometry, fluorescence dynamics, biophotonics, and instrumentation development; K. Houston, Ph.D. (University of Texas)– Department of Chemistry and Biochemistry– hormonal carcinogenesis; E. Indriolo, Ph.D. (Purdue University) – Department of Biology – plant signaling, molecular biology; M. L. Kahn, Ph.D. (Stanford University) - Biophysics Program – Bacteriophage DNA Replication; G. Lopez-Martinez, Ph.D. (Ohio State University)– Department of Biology– short and long-term effects that single and repeated bouts of environmental stress can have on animals; D.N. Lozada, Ph.D. (University of Arkansas)– Department of Plant and Environmental Sciences; S. Lusetti, Ph.D. (University of Wisconsin-Madison)–Department of Chemistry and Biochemistry– DNA replication, recombination and repair; B. A. Lyons, Ph.D. (Cornell University)– Department of Chemistry and Biochemistry– structure and function relationships in breast and liver cancer cell signaling pathways; B.G. Milligan, Ph.D. (University of California-Davis)– Department of Biology– plant evolutionary biology; N. Pietrasiak, Ph.D. (University of California-Riverside)– Department of Plant and Environmental Sciences– cyanobacterial phylogenetics, molecular ecology of terrestrial algae, biocrusts; J. Randall, Ph.D., Program Director (New Mexico State University)– Department of Entomology Plant and Weed Science– molecular plant physiology, genetics, and plant/microbe interactions; I. Ray, Ph.D. (Wisconsin-Madison)– Department of Plant and Environmental Sciences– plant genetic engineering, primary and secondary metabolism, stress, legumes; L. Rodriguez-Urbe, Ph.D. (New Mexico State University)– Department of Plant and Environmental Sciences; A. Romero-Olivares, Ph.D. (University of California Irvine)– Department of Biology– impacts to our ecosystems; E. E. Serrano, Ph.D. (Stanford)– Department of Biology– neuroscience, genetics, science and ethics; C. B. Shuster, Ph.D., (Tufts University)– Department of Biology– regulation of mitosis and cytokinesis, role of the cytoskeleton during early development; G. Smith, Ph.D. (North Carolina State)– Department of Biology–environmental gene probes, microbial biodegradation; J. Song, Ph.D. (Washington)– statistical computing, systems biology, bioinformatics, computer vision; P. Trainor, Ph.D. (University of Louisville)– Department of Economics, Applied Statistics and International Business; J. Xu, Ph.D. (Second Military Medical University, China)– Department of Biology– functional genomics and population genetics of mosquito-malaria interactions; E. Yukl (Oregon Health and Science University) - Department of Chemistry and Biochemistry– structural biology and bioinorganic chemistry; J. Zhang, Ph.D. (University of Arkansas)– Department of Plant and Environmental Sciences– cotton genetics, genomics and molecular biology

Molecular Biology Courses

MOLB 448. Special Research Problems
1-3 Credits

Individual investigation, theoretical or experimental, under the supervision of a molecular biology faculty member. May be repeated for a maximum of 6 credits.

Prerequisite: consent of instructor.

MOLB 520. Molecular Cell Biology

3 Credits (3)

Same as BIOL 520.

MOLB 542. Biochemistry I

3 Credits (3)

Same as BCHE 542. B or better required.

MOLB 545. Molecular and Biochemical Genetics

3 Credits (3)

Same as BCHE 545 and BIOL 545.

MOLB 546. Biochemistry II

3 Credits (3)

Same as BCHE 546.

MOLB 550. Topics in Molecular Biology

1-3 Credits

Selected topics of current interest in field of molecular biology for master's level students. May be repeated up to 12 credits.

Learning Outcomes

1. Learning goals are dependent upon topic and instructor.

MOLB 590. Discussions in Molecular Biology

1 Credit (1)

Oral presentations of ongoing research and/or research proposal for the masters thesis. Must be repeated twice for masters and a minimum of three times for doctoral students. May be repeated up to 4 credits.

Learning Outcomes

1. To expose students to the fundamentals of speaking, including organization, and listening.
2. To understand and gain practice oral presentations.
3. Encourage critical thinking and discussion of scientific material during presentations.

MOLB 597. Laboratory Rotations/Research Discussions

1-3 Credits

All entering students are required to take at least one credit, during their first semester, in which they will circulate through at least three different labs working on assigned problems and discussing research programs. May be repeated for a maximum of 4 credits. Graded S/U.

MOLB 598. Special Research Programs

1-3 Credits

Individual investigation, experimental or theoretical, under the supervision of a molecular biology faculty member. Course may be repeated up to a total of 6 credits with committee approval.

MOLB 599. Master's Thesis

1-15 Credits (1-15)

Experimental and scholarly research leading to the preparation of a master's thesis.

MOLB 600. Molecular Biology Research

1-15 Credits

Laboratory research efforts prior to successful completion of doctoral comprehensive exam.

MOLB 650. Advanced Topics in Molecular Biology

1-3 Credits

Discussions and lectures on topics of current interest in molecular biology for doctoral students.

MOLB 698. Advanced Research Projects

1-9 Credits

Individualized special research assignments for doctoral-level students. Up to 9 credits, with approval of committee. Graded S/U.

MOLB 700. Doctoral Dissertation Research

1-15 Credits

Research for doctoral students after completing comprehensive exams.

Name: Molecular Biology & Interdisciplinary Life Sciences Graduate Program

Office Location: W361 Chemistry Building

Phone: (575) 646-3437

Molecular Biology- Undergraduate Minor

The Molecular Biology Program offers opportunities for students to gain theoretical training and hands-on experience in the methods of molecular biology, cellular biology, and/or bioinformatics. A formal undergraduate minor in Molecular Biology is offered and is described below; a grade of C or better is required to certify the courses. A minor in Bioinformatics is currently under development; for planning purposes, please refer to the program office for the most recent drafts of the Bioinformatics minor requirements.

This program consists of a minimum of 18 hours, distributed through five or six areas.

Prefix	Title	Credits
Organic Chemistry:		4-5
CHEM 314	Organic Chemistry II	
CHEM 315	Organic Chemistry Laboratory	
CHEM 2115	Survey of Organic Chemistry and Laboratory	
Introductory Genetics:		3
AGRO 305	Principles of Genetics	
ANSC 305	Principles of Genetics	
BIOL 305	Principles of Genetics	
HORT 305	Principles of Genetics	
Cell Biology:		3
BIOL 377	Cell Biology	
BIOL 490	Neurobiology	
Advanced Genetics:		3
BCHE 396	Biochemistry II, Lecture and Laboratory	
BIOL 478	Molecular Biology of Microorganisms	
Additional Advanced Courses: ¹		5
BCHE 424	Experimental Biochemistry I	
BIOL 474	Immunology	
BIOL 475	Virology	
BIOL 451	Physiology of Microorganisms	
BIOL 467	Evolution	
BIOL 477	Applied and Environmental Microbiology	
TOX 461	Toxicology I	

Total Credits

18-19

¹ Additional credit hours from the following, or additional courses from any of the above five areas, as needed to meet a minimum of 18 credit hours

Successful completion of the minor will be certified by the Molecular Biology Program. A grade of "C" or better is required of all minor courses.

Music

Undergraduate Program Information

MISSION, VISION, AND VALUES STATEMENTS

The mission of the NMSU Music Department is:

- To prepare students for professional careers and/or the pursuit of advanced degrees in music and music-related fields
- To empower our students to be life-long learners by providing a foundational education in music supported by our strong commitment to teaching, performance, scholarship and service
- To provide impactful opportunities for our diverse student body to perform, study, create and experience music
- To serve as an artistic destination for our community at an Hispanic-serving institution in the southwest U.S. border region

Vision Statement: We seek to elevate the role of music as essential to society, both as an expressive art form and an integral component of a universal education.

We will continue to:

- Enhance our public presence in the region as a destination for all students and for the community as a place of artistic and musical excellence
- Lead in the development of adaptive and relevant programs and curricula based on the needs of an ever-changing society
- Raise our profile through outstanding instruction, student success and retention, faculty scholarship and performance, and the engagement of our ensembles with the community, statewide and regionally, and with all students, regardless of major
- Foster a learning environment that recognizes the changing needs and special culture of our community, and promotes diversity and openness in our programs and instruction and in the music we study and perform.

The Department of Music values:

Access – we believe everyone in our community, regardless of background or experience, should have the opportunity to experience music in their lives

Elevation – we believe that by offering superior musical opportunities we can improve the quality of life for students and our community

Inclusion – we believe that individual expression and identity should be reflected in our musical experiences and is vital for both personal and institutional success

Admission into the Program

For a student to be officially accepted as a Music major or minor, he/she must do the following:

- perform an audition for a panel of no less than three Music faculty members
 - one of whom must be the director of his/her program area
 - one of whom must be the applied teacher of the student's principal instrument

Any student declaring Music as his/her major may be accepted for a one-semester probationary period. During that first semester, the Music faculty will determine if the student has the necessary skills and work ethic to continue as a major. The student's course work, ensemble participation and applied jury will be the basis for the decision to allow the student to continue or not.

Departmental Requirements for all Bachelor's Degrees (Music Core)

A student must earn a grade of C- or better in all departmental requirements for any degree in the Department of Music. All students wishing to pursue a music degree must audition. Contact the department for current audition requirements.

If students change major(s) or minor(s) or do not complete the requirements for the minor at the time of graduation, they may only count a maximum of 9 credits of the applied/occupational credits toward graduation.

Recital Requirements for Music Performance and Education Degrees

Bachelor of Music

All performance majors are required to give a half recital (30 minutes of music) in the junior year and a full recital (60 minutes of music) in the senior year.

Bachelor of Music Education

All music education majors will give a half recital (30 minutes of music) in their major performance area.

B.A. Degree Program of Study/Capstone Project

All B.A. Degree Students must submit and have approved a Program of Study by the end of their Sophomore year. Programs of study will be submitted to the B.A. Degree coordinator and will determine a focus for elective courses and the Capstone Project. The Capstone Project will be derived from the program of study.

Applied Music Requirements for All Music Degrees

Music Education and Music Performance degrees require at least two semesters of applied music study at the 430 level. Students pursuing a Bachelor of Arts Degree in Music (any track) must complete at least four semesters of applied music study at the 230 level and at least two semesters at the 330 level. B.A. students may take applied lessons at the 430 level, but it is not a requirement for this degree path.

All students enrolling in applied music will audition and obtain permission from an applied teacher before enrolling for applied music credit.

Students may obtain further information by contacting the music department.

Other Music Requirements, Fees and Regulations

1. A Piano Proficiency Examination is required of all music performance and music education majors. Each student must enroll in Functional Piano or Applied Piano every semester, until the Proficiency is passed. Detailed requirements may be obtained from the Department of Music office. Students must pass the piano Proficiency Exam before presenting a Senior Recital.
2. Qualitative grade-point average for graduation in music is 2.0 or higher. All grades in required music courses must be C- or better.
3. An instrument rental fee is charged each semester for students using university instruments. Consult the music department concerning these fees.
4. All applied students pay an additional fee. Consult the music department concerning these fees.
5. Outside groups and individuals must have special permission to use music department facilities. Contact the music office for additional information.

Music Ensemble

All students majoring or minoring in Music, must enroll and participate in the ensemble appropriate for their particular degree plan. The appropriate ensemble will be determined by degree requirements in consultation with the student's advisor and ensemble directors. The student must enroll each and every semester he/she is considered full-time until the degree requirements are met, for a minimum of 8 semesters (Music Performance), 7 semesters (Music Education), 6 semesters (B.A. Degrees). Any student receiving any kind of financial assistance through the Music Department must enroll each and every semester while he/she is attending NMSU. Music Education Students will not receive Music Scholarship funds during their semester of Student Teaching. For more information, contact the Music Office.

Music Scholarships and Awards

Scholarships and grants for music majors are administered through the performance areas. To be eligible for a music major scholarship or grant, students must first be admitted into the program. Program admission requirements include an audition for a panel of no less than three Music faculty members. One must be the major ensemble director of his/her program area (band, choir, opera, orchestra, keyboard). One must be the applied teacher of the student's principal instrument and the other must be a full-time Music faculty member from any area. Specific audition information and requirements for each performance area can be found on the Auditions page (<https://music.nmsu.edu/admissions/auditions.html>). (<https://theatre.nmsu.edu/auditions/audition-faqs.html>)

In order to have all paperwork processed before the beginning of the Fall semester, students are encouraged to have all scholarship and financial aid application materials in to the Office of Financial Aid by March 1.

The most up to date information on scholarships and grants can be obtained from the Coordinator of Scholar Dollars in the office of the Dean of Arts and Sciences in Breland Hall.

For more information on any of the following scholarships please call (575) 646-2421 or email music@nmsu.edu.

Service awards for non-majors are available based upon ensemble need and funding availability. For more information regarding these awards or to set up an audition, please contact one of the following:

- **Winds and Percussion:** (575) 646-2304
- **Vocal:** (575) 646-2304

- **Strings:** (575) 646-1647
- **Keyboard:** (575) 646-2228

Graduate Program Information

The Master of Music degree is offered in the following areas of study: Conducting, Music Education and Performance. Applicants are expected to have an undergraduate degree in music or music education equivalent to that represented by the BM or BME degree from New Mexico State University. The music department does not require the Graduate Record Exam, but does expect each applicant to possess graduate-level language and writing skills. For admission into the Master of Music degree program, all applicants must have an undergraduate GPA of at least 3.0 and submit at least two letters of recommendation from music professionals. An audition, either in person or by recording, is required for entrance into the Performance or Conducting programs. Auditions will be based upon, but not limited to, prescribed repertory.

For acceptance into the Music Education program, the applicant must have completed a Bachelor of Music Education degree comparable to the one offered by NMSU or take the requisite undergraduate courses at NMSU leading to state licensure before enrolling in graduate courses. (Contact the Music Department for details.)

Note: The degree offered is a Master of Music. The student's official transcript and diploma will only indicate that degree. The area of study (Conducting, Music Education, Performance) will not be included as part of the official degree title.

Recital Requirements for Performance and Conducting

A graduate recital plus an analytical paper are required of all candidates in Performance and Conducting. Students must be enrolled in their applied area during the semester the recital is given. A minimum of 60 minutes of music is required for all Performance recitals. A minimum of three major works for the appropriate ensemble is required for all Conducting recitals. The recital may only be given after at least 6 hours of graduate applied or conducting courses have been successfully completed.

Program of Study and Committee Selection

After admission, each student must successfully complete MUSC 471 Graduate Theory Review before subsequent enrollment in other music theory courses. He or she must also successfully complete MUSC 477 Graduate Music History Review before subsequent enrollment in other music history courses.

During the first semester of study, a tentative Program of Study is planned, documented and filed by the student in consultation with the advisor in his or her major field. The Program of Study is subject to approval by the Music Department Head and the Graduate Music Committee. The student will also select, in consultation with his or her advisor, an advisory committee consisting of the advisor, and two additional faculty members.

Candidacy

In order to qualify for candidacy the student (except those in the online Music Education program) must meet the Graduate School requirement of 12 credits of graduate work in residence and must show evidence of a satisfactory quality of work in the required courses, demonstrate the desired progress in his or her performance area and, where required, submit a recital program, thesis topic, or project proposal for approval.

Thesis

A thesis is optional in Music Education and is encouraged for students considering completion of a terminal degree. Music Education candidates not writing a thesis must develop and complete an approved project before the oral examination.

Final Examination

All Master of Music candidates must take a final comprehensive oral examination. The final oral examination may not be scheduled until the graduate recital (with analytical paper) is completed or a final draft of the Music Education project or thesis has been approved by the candidate's advisor.

Fees

Fees, in addition to tuition, will be assessed for all applied hours and recitals. (Consult the Music Department for details).

Degrees for the Department

Bachelor Degree(s)

- Music (Instrumental Performance) - Bachelor of Music (p. 796)
- Music (Piano Performance) - Bachelor of Music (p. 798)
- Music (Pre-Music Therapy) - Bachelor of Arts (p. 791)
- Music (Pre-Speech Language Pathology) - Bachelor of Arts (p. 793)
- Music (Theatre) - Bachelor of Arts (p. 795)
- Music (Vocal Performance) - Bachelor of Music (p. 800)
- Music - Bachelor of Arts (p. 790)
- Music Education (K12 Instrumental) - Bachelor of Music Education (p. 802)
- Music Education (K12 Vocal) - Bachelor of Music Education (p. 804)

Master Degree(s)

- Music (Conducting) - Master of Music (p. 160)
- Music (Music Education) - Master of Music (p. 160)
- Music (Music Education) - Master of Music (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/music-music-education-mm-online/>)
- Music (Performance) - Master of Music (p. 161)

Minors for the Department

- Music - Undergraduate Minor (p. 806)

Professor, Fred Bugbee, Department Head

Professors Chaffin, Kaplan, Shearer, Spitzer; **Associate**

Professors Daughtrey, Espinoza, Mapp, Martinez-Rios, Smyth, L. Van Winkle, Vega-Albela; **Assistant Professors** Moore, **College Associate Professors** R. Taylor

F. Bugbee, Department Head, D.M.A. (Eastman School of Music)– percussion, history; L. Chaffin, Ph.D. (Texas Tech)– theory, composition; S. Daughtrey, D.M. (Indiana University)– vocal coordinator, diction, pedagogy; J. Espinoza, M.M. (Carnegie Mellon)– viola, ear-training; A. Kaplan, Ph.D. (NYU Manhattan School of Music)– low brass; M. Mapp (Kansas University)- Director of Bands, conducting; J. Martinez-Rios, M.M (Western Michigan)– Orchestra Director, viola; M. Moore, D.M.A. (Kansas University)– clarinet, woodwind techniques; J. Shearer, D.M.A. (Eastman School of Music)– graduate coordinator, history; S. Smyth, D.M.A. (Kansas University)- Athletic Bands, music education; L. Spitzer, D.M.A. (USC)– piano, history; R. Taylor, D.M.A

(Arizona)– saxophone, theory; L. Van Winkle, D.M.A. (Arizona) flute, ear-training; D. Vega-Albela M.M. (Western Michigan)–violin

Music Courses

MUSC 1110G. Music Appreciation: Jazz

3 Credits (3)

This course explores the ideas of music in society and its cultural relevance and is designed to increase the students' appreciation of music as well as to enhance their listening skills. Students are introduced to various periods, styles, and composers of music and become acquainted with knowledge and appreciation of Jazz from various cultures and times.

Learning Outcomes

1. Develop a vocabulary of musical terms, and be able to describe music using those terms
2. Demonstrate knowledge of composers, their music and their relationship to historical periods
3. Recognize how music played and plays a political, social, and cultural function
4. Identify well-known pieces and the historical and social context in which they were composed
5. Demonstrate basic understanding of music notation and musical communication

MUSC 1130G. Music Appreciation: Western Music

3 Credits (3)

This course explores the ideas of music in society and its cultural relevance and is designed to increase the students' appreciation of music as well as to enhance their listening skills. Students are introduced to various periods, styles, and composers of music and become acquainted with knowledge and appreciation of Western music from various cultures and times.

Learning Outcomes

1. Develop a vocabulary of musical terms, and be able to describe music using those terms
2. Demonstrate knowledge of composers, their music and their relationship to historical periods
3. Recognize how music played and plays a political, social, and cultural function
4. Identify well-known pieces and the historical and social context in which they were composed
5. Demonstrate basic understanding of music notation and musical communication

MUSC 1210. Fundamentals of Music for Non-majors

3 Credits (3)

A beginning course in the fundamentals of music, this course includes notation, scales, key signatures and intervals. Aural comprehension is introduced through singing intervals, scales and triads and dictating simple rhythmic and melodic patterns and students explore the basic components of music. Traditional Grading with RR.

Learning Outcomes

1. Demonstrate and apply standard notation of pitch, rhythm, scales, intervals, key signatures, triads, and simple melodic and harmonic composition
2. Develop and improve basic aural skills
3. Read musical notation
4. Improve and expand understanding of fundamental musical techniques and concepts

MUSC 1310. Recital Attendance**0.5 Credits (.5+1P)**

This course is for music students to attend and participate in a good number of convocation, concert, and recital performances, creating a wider appreciation for the performing arts. May be repeated up to 4 credits. Restricted to: Music and Music Education majors. S/U Grading with RR. Restricted to Las Cruces campus only.

Learning Outcomes

1. Encourage student observation of serious music
2. Provide opportunities for public performances
3. To create a greater sense of community within the student body

MUSC 1410. Introduction to Music Education**2 Credits (2)**

This course is an overview of teaching in the music classroom through readings and observations. Students will be introduced to the skills needed to become a reflective educator, develop observation techniques, and demonstrate knowledge of the current state of the profession.

Restricted to Las Cruces campus only.

Learning Outcomes

1. Make observations and analyze the current state of musical education in public schools
2. Describe characteristics of good teaching in music
3. Articulate a personal philosophy of music education
4. Reflect on personal strengths and weaknesses as a teacher of music

MUSC 1440. Class Voice I**1 Credit (1)**

Group instruction in voice and vocal pedagogy for instrumental Music Education majors, offering basic principles of healthy vocal production with particular attention to diction, development of vocal range, and the ability to impart that knowledge to elementary, junior and/or high school age students. Restricted to: Music Education majors. Traditional Grading with RR. Restricted to Las Cruces campus only.

Learning Outcomes

1. Provide the basic understanding of healthy vocal production. Including, but is not limited to, the following topics: Expanding vocal range; Learning how to practice and learn songs effectively and efficiently; Provide basic understanding of vocal pedagogy; Introduction to diction
2. Aims to equip students with the ability to impart that knowledge to elementary, junior and/or high school age students.

MUSC 1450. Ear Training I**1 Credit (1)**

To develop the ability to accurately hear, identify, sing and notate musical elements including rhythm, melody, intervals and harmony Traditional Grading with RR. Restricted to Las Cruces campus only. May be repeated up to 1 credit.

Learning Outcomes

1. Counting rhythms at sight using the Eastman Counting System.
2. Singing melodies at sight using solfege syllables.
3. Writing out rhythmic patterns.
4. Writing out melodic patterns.
5. Identifying and singing intervals.
6. Identifying and singing chord / triad qualities.

MUSC 1451. Ear Training II**1 Credit (1)**

To develop the ability to accurately hear, identify, sing and notate musical elements including rhythm, melody, intervals and harmony Restricted to Las Cruces campus only.

Prerequisite(s): Grade of C- or better in MUSC 1450.

Learning Outcomes

1. Counting rhythms at sight using the Eastman Counting System
2. Singing melodies at sight using solfege syllables
3. Writing out rhythmic patterns
4. Writing out melodic patterns
5. Identifying and singing intervals
6. Identifying and singing chord / triad qualities

MUSC 1460. Music Theory I**3 Credits (3)**

Introduction to vocabulary and syntax of 4-voice 18th c. chorale music through study and harmonic analysis. May be repeated up to 3 credits.

Learning Outcomes

1. To learn the vocabulary and syntax of 4-voice 18th c. chorale music through study and harmonic analysis.

MUSC 1461. Music Theory II**3 Credits (3)**

Expansion of vocabulary and syntax of 4-voice 18th c. chorale music through study, harmonic analysis, and part writing.

Prerequisite(s): Grade of C or better in MUSC 1460.

Learning Outcomes

1. To expand and apply the vocabulary and syntax of 4-voice, 18th c. chorale music through study, harmonic analysis, and part writing.

MUSC 1470. Functional Piano I**2 Credits (2)**

Scales, chords, memorization. Harmonization of simple melodies with the ability to play simple melodies and rhythms. May be taken for unlimited credit. Restricted to music majors. No S/U option.

Learning Outcomes

1. 5 finger hand position in all keys
2. I-IV-I-V7-I cadences in all keys
3. One octave scales with hands together in C, G, D and F (major and minor)
4. Root position cross-over triads, solid and broken (major and minor)
5. Simple sight reading, harmonizing and transposition
6. Prepared pieces from the textbook
7. Simple improvisation
8. Play 2 simple vocal exercises
9. Identify intervals, key signatures and chords 1
10. Correct posture and hand position 1
11. Musical issues such as phrasing, slurs and dynamics 1
12. Good practice habits and techniques

MUSC 1471. Functional Piano II**2 Credits (2)**

Scales, chords, memorization. Harmonization of simple melodies with the ability to play simple melodies and rhythms. May be taken for unlimited credit. Restricted to music majors. No S/U option.

Prerequisite: MUSC 1470 or consent of instructor.

Learning Outcomes

1. Two octave scales with hands separate in C, G, D, A, E, B and F (major and minor)

2. HV-I-V-V7-I cadences in above mentioned keys in root position and 1st inversion
3. Simple sight reading, harmonization and transposition
4. Prepared pieces from the book
5. Simple improvisation
6. Identify intervals, key signatures and chords
7. Correct posture and hand position
8. Musical issues such as phrasing, slurs and dynamics
9. Good practice habits and techniques

MUSC 1472. Functional Piano III
2 Credits (2)

For music majors preparing for the Piano Proficiency Examination. May be taken for unlimited credit. Restricted to music majors. No S/U option.
Prerequisite: MUSC 1471 or consent of instructor.

Learning Outcomes

1. Keys learned in previous semesters, adding F# and C# (D flat)
2. Secondary dominant chords added to cadence patterns
3. Two-octave, , root position arpeggios, major and minor
4. Intro to chord charts, harmonization
5. More difficult sight-reading and transpositions
6. More difficult prepared pieces
7. Accompany a piece for any instrument on the Mid-Term Recital (required)

MUSC 1992. Applied Music
1-2 Credits (1-2)

Private or group instruction for non-music majors, secondary instruments, and music majors preparing for 2000-level applied music. May be taken for unlimited credit. May be repeated up to 99 credits.

Learning Outcomes

1. Development of Musical Abilities.
2. Development of Technical Abilities.

MUSC 2110. Chamber Ensemble
1 Credit (1)

This course is an exploration of chamber ensembles, allowing students to develop their abilities with their instruments in a group setting. Students will gain a broader understanding of chamber ensemble through study of musical history, as well as various practice exercises and performances. May be repeated up to 16 credits. Restricted to Las Cruces campus only.

Prerequisite(s): by audition only.

Learning Outcomes

1. Improve performance skills
2. Develop and improve performance skills in a group setting
3. Develop understanding and interpretation within the context of music history
4. Refine and improve technical ability
5. Demonstrate proper technique and usage

MUSC 2120. Major Ensemble
1 Credit (1)

This course is an exploration of major ensembles, allowing students to develop their abilities with their instruments in a group setting. Students will gain a broader understanding of major ensemble through study of musical history, as well as various practice exercises and performances. May be repeated up to 24 credits.

Prerequisite: by audition only.

Learning Outcomes

1. Improve performance skills
2. Develop and improve performance skills in a group setting
3. Develop understanding and interpretation within the context of music history
4. Refine and improve technical ability
5. Demonstrate proper technique and usage

MUSC 2130. Jazz Ensemble
1 Credit (1)

This course is an exploration of jazz ensembles, allowing students to develop their abilities with their instruments in a group setting. Students will gain a broader understanding of jazz ensemble through study of musical history, as well as various practice exercises and performances. May be repeated up to 10 credits. Restricted to Las Cruces campus only.

Prerequisite(s): By audition only.

Learning Outcomes

1. Improve performance skills
2. Develop and improve performance skills in a group setting
3. Develop understanding and interpretation within the context of music history
4. Refine and improve technical ability
5. Demonstrate proper technique and usage
6. Develop and improve improvisation skills

MUSC 2132. Percussion Ensemble
1 Credit (1)

Study and performance of contemporary percussion ensemble literature. May be repeated up to 5 credits. Restricted to Las Cruces campus only.

Prerequisite(s): by audition only.

Learning Outcomes

1. Improve performance skills
2. Develop and improve performance skills in a group setting
3. Develop understanding and interpretation within the context of music history
4. Refine and improve technical ability
5. Demonstrate proper technique and usage

MUSC 2151. An Introduction to World Music, Jazz and Music Research
3 Credits (3)

Introduces world music and jazz within a historical and cultural context, considering significant musical figures, forms, genres, styles, and representative works. A major component will be the development of effective research and scholarly writing skills for the music major or minor. May be repeated up to 3 credits. Restricted to: Music majors and minors. Restricted to Las Cruces campus only.

Learning Outcomes

1. This course will cover fundamental concepts and styles associated with world music (ethnomusicology), jazz and popular music, an overview of the Western European tradition, and an intense focus on research and writing about music.
2. Emphasis will be placed on writing skills as they apply to the college experience in general and the world of music education and performance in particular.
3. Students will become acquainted with the diverse ways cultures create and are affected by their respective musical arts.
4. Focus will be on style evolution, forms, genres, composers, literature, and, where appropriate, performers

MUSC 2210. Diction I**2 Credits (2)**

This course is designed to prepare students for singing in multiple languages using concepts of the International Phonetic Alphabet. Students will work to master the basics of phonetic singing to improve their overall musical abilities. Restricted to Las Cruces campus only.

Learning Outcomes

1. Correctly and consistently form vowel and consonant sounds when speaking and singing in multiple languages
2. Correctly and consistently transcribe texts in multiple languages using the International Phonetic Alphabet
3. Understand and explain the International Phonetic Alphabet's usage and symbols
4. Develop and apply the concept of lyric diction to singing
5. Gain fluency, accuracy, and confidence in pronunciation of sung text

MUSC 2220. Diction II**2 Credits (2)**

This course serves as a continuing study in the concepts of the International Phonetic Alphabet. Students will continue to improve and practice their diction to develop their singing and musical abilities in order to begin the mastery of lyric diction. Restricted to music majors. Restricted to Las Cruces campus only.

Prerequisite: MUSC 2210 or consent of instructor.

Learning Outcomes

1. Correctly and consistently form vowel and consonant sounds when speaking and singing in multiple languages
2. Correctly and consistently transcribe texts in multiple languages using the International Phonetic Alphabet
3. Understand and explain the International Phonetic Alphabet's usage and symbols
4. Develop and apply the concept of lyric diction to singing.
5. Gain fluency, accuracy, and confidence in pronunciation of sung text.
6. Demonstrate ability to notate song texts according to IPA standards

MUSC 2240. Music History and Literature: Antiquity through Baroque**3 Credits (3)**

Surveys Western art music within a historical and cultural context, considering significant musical figures, forms, genres, styles, and representative works from antiquity through the end of the Baroque era. An additional emphasis will be given to effective research and scholarly writing skills. May be repeated up to 3 credits.

Prerequisite: A grade of C- or better in MUSC 1450 and 1460.

Learning Outcomes

1. The purpose of the course is to survey the beginning history of music from the earliest ancient times through the Baroque period, ca.

MUSC 2310. Sound and Music Technology**1 Credit (1)**

This course serves as an overview of current technologies and principles for the recording and production of sound, and the use of computer-based technologies for the production of music. Restricted to: MUSC, M ED majors. Traditional Grading with RR. Restricted to Las Cruces campus only.

Prerequisite(s): MUSC 1460.

Learning Outcomes

1. Demonstrate fundamental knowledge of techniques and practices of music recording and production
2. Demonstrate ability to properly use computer-based technologies to produce and record music

3. Demonstrate ability to create music recordings
4. Work with a variety of recording, production, and sound reinforcement tools
5. Apply basic and mixed editing techniques
6. Use audio editing and file management techniques
7. Demonstrate knowledge of music technology vocabulary
8. Explain and understand the development of various music technologies

MUSC 2451. Ear Training III**1 Credit (1)**

Continuation of MUSC 1451, advanced sight singing, dictation. Restricted to Las Cruces campus only.

Prerequisite(s): Grade of C- or better in MUSC 1451.

Learning Outcomes

1. Count rhythms at sight using the Eastman Counting System
2. Sing melodies at sight and prepared using Solfege syllables
3. Write out rhythmic patterns
4. Write out melodic patterns
5. Identify and singing intervals
6. Identify and sing chord / triad qualities
7. Write out harmonic dictation

MUSC 2452. Ear Training IV**1 Credit (1)**

Continuation of MUS 2451, advanced sight singing, dictation. Restricted to Las Cruces campus only.

Prerequisite(s): Grade of C or better in MUSC 2451 and MUSC 2460.

Learning Outcomes

1. Count rhythms at sight using the Eastman Counting System
2. Sing scales and sequences as assigned for the level
3. Sing melodies at sight using solfege syllables
4. Write out rhythmic patterns in both simple and compound meters
5. Write out melodic patterns in both major and minor tonalities
6. Identify, label and sing intervals
7. Identify, label and sing chords and extended harmonic qualities, i.e. V7 and inversions
8. Write out harmonic progressions in both two and four part forms including secondary dominants and modulations.
9. Accurately detect melodic and rhythmic errors in dictation examples.

MUSC 2460. Music Theory III**3 Credits (3)**

Analysis of Baroque and Classical Music. Vocabulary and syntax of 18th and 19th c. Western art music through study, chordal/formal analysis, and composition. Restricted to Las Cruces campus only.

Prerequisite(s): Grade of C or better in MUSC 1461.

Learning Outcomes

1. To learn and apply the vocabulary and syntax of 18th and 19th c. Western art music through study, chordal/formal analysis, and composition.
2. Topics covered include: Two-Voice Eighteenth Century Counterpoint; Fugue; Borrowed Chords; Neapolitan 6th Chords; Augmented 6th Chords; Sonata Form; Rondo Form.

MUSC 2461. Music Theory IV**3 Credits (3)**

Analysis of Romantic, Post-Romantic, Impressionist, and Twelve-Tone Music. Vocabulary and syntax of late 19th and early 20th c. Western art

music through study, micro/macro analysis, and composition. Restricted to Las Cruces campus only.

Prerequisite(s): Grade of C or better in MUSC 2460.

Learning Outcomes

1. To learn and apply the vocabulary and syntax of late 19th and early 20th c. music through study, micro/macro analysis, and composition.

MUSC 2470. Functional Piano IV

2 Credits (2)

For music majors preparing for Piano Proficiency Examination. May be taken for unlimited credit. Restricted to music majors. No S/U option. May be repeated up to 99 credits.

Prerequisite: MUSC 1472 or consent of instructor.

Learning Outcomes

1. Keys learned in previous semesters, adding A flat, E flat, and B flat
2. Secondary dominant chords added to cadence patterns, all inversions
3. Arpeggios, all inversions
4. More difficult sight-reading and transpositions
5. More difficult prepared pieces
6. Four part pieces (hymns)
7. Accompany a piece for any instrument on the Mid-Term Recital (required) Score reading and transposition

MUSC 2510. Applied Music I

1-4 Credits

Individual instruction to develop technique, musicianship, performance and improvisational skills, as well as knowledge of significant repertoire. May be repeated up to 16 credits. Consent of Instructor required.

Restricted to: Music and Music Education majors. Traditional Grading with RR. Restricted to Las Cruces campus only.

Prerequisite(s): Audition.

Learning Outcomes

1. Varies

MUSC 2740. Pride Marching Band

1 Credit (1)

The Pride Marching Band performs at all NMSU home football games and select away games. The marching band is open to all students at NMSU and supports both instrumental and visual units. May be repeated up to 8 credits.

Learning Outcomes

1. To cultivate within the student a value system that encourages community service.
2. To provide the performer with experiences that will enable them to communicate thoughts/ideas/emotions in a unique and personal manner using his/her instrument, body, and physical motion.
3. To instill in students a commitment to life-long learning.
4. To promote personal growth through the rehearsal and performance of music, choreography, and drill of high quality.
5. To encourage students to continuously participate in and support artistic performances following graduation.

MUSC 2993. Opera Workshop

1 Credit (1)

Study, translation, analysis, rehearsal and performance of opera. May be repeated up to 10 credits. Restricted to Las Cruces campus only.

Prerequisite(s): by audition only.

Learning Outcomes

1. Varies

MUSC 2996. Special Topics I

1-3 Credits

Emphasis on special areas of music; designed for highly motivated students. May be taken for unlimited credit.

Learning Outcomes

1. Varies

MUSC 301. Marching Band Techniques

2 Credits (2)

This course will help students develop the techniques needed to administer and teach all aspects of a contemporary high school marching band. This includes drill conception and design, instruction, organization, and administration. Stylistic varieties of marching fundamentals, show conception, fundamentals of charting and teaching drill, computer-aided drill design, traditional show design, contemporary show design, rehearsal techniques, and organizational concepts. Restricted to: Music, Music Education majors. Traditional Grading with RR.

MUSC 302. Music History and Literature: Classic through Romantic

3 Credits (3)

Surveys Western art music within a historical and cultural context, considering significant musical figures, forms, genres, styles, and representative works from the beginnings of the Classic era through the end of the Romantic era. An additional emphasis will be given to effective research and scholarly writing skills. Restricted to: Music Majors and Minors majors.

Prerequisite(s): A grade of C- or better in MUSC 2240.

MUSC 303. Music History and Literature: 20th Century Through the Present

3 Credits (3)

Surveys Western art music within a historical and cultural context, considering significant musical figures, forms, genres, styles, and representative works from the beginning of the 20th Century through the Present. An additional emphasis will be given to effective research and scholarly writing skills. Restricted to: MUS minors and majors.

Prerequisite(s): A grade of C- or better in MUSC 302.

MUSC 315. Brass Techniques I

1 Credit (1)

Methods and techniques of teaching high brass instruments, for music education majors. Main campus only.

MUSC 316. Brass Techniques II

1 Credit (1)

Methods and techniques of teaching low brass instruments, for music education majors. Main campus only.

MUSC 317. Woodwind Techniques I

1 Credit (1)

Methods and techniques of teaching high woodwind instruments, for music education majors. Main campus only.

MUSC 318. Woodwind Techniques II

1 Credit (1)

Methods and techniques of teaching saxophone and double reed instruments, for music education majors. Main campus only.

MUSC 319. String Techniques I

1 Credit (1)

Methods and techniques of teaching low string instruments, for music education majors. Main campus only.

MUSC 321. Instrumental Techniques for Vocal Music Education Majors

2 Credits (2)

Methods of teaching brass, woodwind, percussion, stringed and fretted instruments for vocal music education majors. Restricted to: Music and Music Education majors. Traditional Grading with RR.

MUSC 322. Guitar Methods

1 Credit (1)

Methods and techniques of teaching guitar, for Music Education majors. Restricted to: Music and Music Education majors. Traditional Grading with RR.

MUSC 323. Percussion Technique I

1 Credit (1)

Methods and techniques of teaching fundamental percussion instruments (snare drum, timpani, keyboards and essential accessories). May be repeated up to 1 credits. Restricted to: MUS,M ED majors.

MUSC 324. Percussion Technique II

1 Credit (1)

Methods and techniques of teaching marching percussion, drum set, and a continuation of techniques discussed in MUS 323. May be repeated up to 1 credits. Restricted to: MUS,M ED majors. Traditional Grading with RR.

Prerequisite(s): A grade of C- or better in MUS 323.

MUSC 325. Beginning Conducting

1 Credit (1)

A study of the fundamentals of conducting and rehearsal strategies with an emphasis on beginning technique applicable to all ensembles. Reading of musical scores with application via laboratory ensemble experience is included. Restricted to: Music and Music Education majors. May be repeated up to 1 credit.

Prerequisite: A grade of C or better in MUSC 2451 and MUSC 2460.

Learning Outcomes

1. Develop the musicianship of the student.
2. Development of basic conducting techniques.
3. Develop a knowledge of appropriate terminology, tempi, and transpositions.
4. Establishment of a gestural (nonverbal) vocabulary.
5. Cultivation of self-awareness and effective interaction through nonverbal communication.

MUSC 326. Instrumental Conducting

3 Credits (3)

Will continue from MUSC 325 in the training for competent musicianship with a focus on conducting gestures and movements, score study, and rehearsal techniques as it relates to the instrumental ensemble. The class will focus primarily on the development of a non-verbal vocabulary that will allow each student to clearly and artistically communicate with the members of an ensemble to solicit a predetermined musical result. May be repeated up to 3 credits. Restricted to: MUS,M ED majors. Traditional Grading with RR.

Prerequisite(s): A grade of C- or better in MUSC 325.

MUSC 327. Choral Conducting

3 Credits (3)

Continuation of conducting study with emphasis on choral rehearsal techniques, ensemble management, and literature. Restricted to: Music and Music Education majors. Traditional Grading with RR.

Prerequisite(s): A grade of C or better in MUSC 325.

MUSC 330. Applied Music II

1-4 Credits

Continuation from MUS 230. Individual instruction to develop technique, musicianship, performance and improvisational skills, as well as knowledge of significant repertoire. May be repeated up to 16 credits.

Consent of Instructor required. Restricted to: Music and Music Education majors. Traditional Grading with RR.

Prerequisite(s): A grade of C or better in MUSC 2992 plus a juried audition.

MUSC 340. Junior Recital

1 Credit (1)

Public solo performance under the supervision of the appropriate applied instructor. 30 minutes of musical performance is required. Consent of Instructor required. Restricted to: Music and Music Education majors. Traditional Grading with RR.

Corequisite(s): MUSC 330.

MUSC 341. BA Capstone

1-2 Credits (1-2)

The objective of the Capstone course for the BA degree in Music is to demonstrate the accumulation, understanding and knowledge of the student's course of study. This will take the form of an analytical paper, recital, research paper, composition or other equally encompassing project approved by the Instructor of Record. This may involve coursework from the student's minor area of study and be a multi-disciplinary collaborative effort. Restricted to: Music majors.

Prerequisite(s): A B- or better in MUSC 2460 and MUSC 302.

MUSC 346. Elementary Music Methods

2 Credits (2)

Lesson planning, curriculum, teaching methodology, materials, and procedures for teaching music in an elementary school. Emphasis on methodology of Kodaly and Orff, teaching in a multicultural setting, and developing reflective practitioners. This course requires field experience in the public schools. May be repeated up to 2 credits.

Prerequisite: A grade of C or better in MUSC 1410.

Learning Outcomes

1. Students will identify and apply ideas from various music education pedagogical approaches including Orff and Kodaly.
2. The ability to develop lesson plans for primary school teaching.

MUSC 349. Secondary Music Methods

2 Credits (2)

Lesson planning, curriculum, teaching methodology, materials, and procedures for teaching music in the middle school and high school. Emphasis on teaching in a multicultural setting and developing reflective practitioners. Restricted to: Music Education majors.

Prerequisite(s): A grade of C or better in MUSC 346.

MUSC 350. Chamber Music

1 Credit (1)

Small performing ensembles that may include strings, woodwinds, brass, pianos, percussion, and voices. May be repeated up to 16 credits.

Prerequisite(s): by audition only.

MUSC 351. Opera Workshop

1 Credit (1)

Study, translation analysis, rehearsal and performance of opera. May be repeated up to 10 credits.

Prerequisite(s): by audition only.

MUSC 360. Special Topics II

1-3 Credits

Emphasis on special areas of music; designed for highly motivated students. May be taken for unlimited credit.

MUSC 361. Concert Choir II

1 Credit (1)

Composed of both music and nonmusic majors. Emphasis on vocal techniques, sight-singing, and basics of choral musicianship. Students must assume leadership role. May be repeated up to 88 credits.

Prerequisite(s): by audition only.

MUSC 362. Philharmonic Orchestra II

1 Credit (1)

The University Philharmonic Orchestra is open to all students and performs a wide variety of standard orchestral literature. The orchestra performs each semester and the objectives include refining technique, stylistic characteristics, intonation, balance, bowings, color, rhythmic integrity and dynamics. May be repeated up to 10 credits.

Prerequisite(s): by audition only.

MUSC 363. Jazz Ensembles II

1 Credit (1)

Performance ensemble that explore repertoire written for big band, including (but not limited to) dance band, swing, and contemporary compositions. May be repeated up to 10 credits.

Prerequisite(s): by audition only.

MUSC 365. Composition I

2 Credits (2)

Significant forms for various media. Emphasis on structural aspects of original composition. May be repeated up to 2 credits.

Prerequisite: A grade of B or better in MUSC 1460.

Learning Outcomes

1. Demonstrate the ability to analyze a variety of musical compositions
2. Demonstrate the ability to develop musical compositions from basic melodic, harmonic, rhythmic, and formal structures
3. Create new musical compositions from variety of perspectives for smaller chamber ensembles

MUSC 368. University Singers II

1 Credit (1)

Select concert and touring choir of undergraduate and graduate students performing a cappella and accompanied choral literature. May be repeated up to 10 credits. Consent of Instructor required.

Prerequisite(s): by audition only.

MUSC 370. Wind Symphony II

1 Credit (1)

This elite ensemble of 50 highly qualified graduate and undergraduate students performs a varied repertoire of the highest quality literature for winds. Members will also perform concerts of chamber winds literature each semester. This ensemble is dedicated to professional level performance while fostering the musical growth of its members. Conducted by the Director of Bands, this group serves as the flagship for the entire university bands program. May be repeated up to 10 credits.

Prerequisite(s): by audition only.

MUSC 372. Marching Band II

1 Credit (1)

Composed of both majors and nonmajors. Opportunity to perform all varieties of music in a contemporary style marching unit. May be repeated up to 5 credits. Consent of Instructor required. Traditional Grading with RR.

MUSC 374. Percussion Ensembles II

1 Credit (1)

Study and performance of contemporary percussion ensemble literature. Students must assume a leadership role. May be repeated up to 5 credits.

Prerequisite(s): by audition only.

MUSC 380. Symphonic Band II

1 Credit (1)

This is a select large ensemble, chosen by audition. It provides a challenging musical environment for skilled performers by programming repertoire that ranges from works for chamber winds, to standards of the wind band literature, to cutting edge literature. Conducted by the Associate Director of Bands, this ensemble is comprised of music majors and non-music majors alike and provides the less experienced student an opportunity to hone and refine performance skills. May be repeated up to 10 credits.

Prerequisite(s): by audition only.

MUSC 386. Applied Music Pedagogy and Literature I

2 Credits (2)

Methods, materials, problems, literature, and techniques in teaching individual lessons. Consent of Instructor required. Restricted to: Music and Music Education majors. Traditional Grading with RR.

MUSC 390. Survey of Wind Literature

2 Credits (2)

An examination of beginning to advanced literature for wind bands with an emphasis on the needs of middle and high school ensembles. It will include a means to determine the quality of a piece as well as the standardized level of difficulty (grading). Restricted to: Music and Music Education majors.

Prerequisite(s): A grade of C- or better in MUSC 2452 and MUSC 2461.

MUSC 391. Survey of Orchestral Literature

2 Credits (2)

An examination of beginning to advanced literature for both string orchestra and symphony orchestra with an emphasis on the needs of middle and high school ensembles. A means to determine the quality of a piece as well as the standardized level of difficulty (grading) will be included. May be repeated up to 2 credits.

Prerequisite: A grade of C- or better in MUSC 2452 and MUSC 2461.

Learning Outcomes

1. Identify significant composers and compositions that are appropriate for all grade levels and applicable to teaching music through a performance-based environment in an orchestral setting
2. Determine the quality of a work based on aesthetic ideals
3. Determine appropriate programming strategies and repertoire selection dependent upon level of difficulty and/or varying ability levels.

MUSC 392. Survey of Choral Literature

2 Credits (2)

An examination of beginning to advanced literature for choir with an emphasis on the needs of middle and high school ensembles. A means to determine the quality of a piece as well as the standardized level of difficulty (grading) will be included. Restricted to: Music and Music Education majors.

Prerequisite(s): A grade of C- or better in MUSC 2452 and MUSC 2461.

MUSC 393. Instructional Strategies I for Instrumentalists

2 Credits (2)

An examination of beginning to advanced literature for instrumentalists with an emphasis on the needs of middle and high school ensembles. The course includes a means to determine the quality of a piece as well as the standardized level of difficulty (grading). It also allows for full ensemble instrumentation to experience both playing the repertoire and peer teaching to better rehearsal skills.

Prerequisite: A grade of C- or better in MUSC 1410.

Learning Outcomes

1. The ability to assess the graded needs of middle and high school ensembles.
2. The development of rehearsal skills.

MUSC 394. Instructional Strategies II for Instrumentalists**2 Credits (2)**

The course focuses on rehearsal techniques for middle and high school ensembles. It includes a means to determine the quality of a piece of music as well as the standardized level of difficulty (grading). Students must also passing the TEP exam in order to enroll in this course.

Prerequisite: A grade of C- or better in MUSC 1410.

Learning Outcomes

1. The development of rehearsal techniques for middle and high school ensembles

MUSC 395. Instructional Strategies I for Vocalists**2 Credits (2)**

An examination of beginning to advanced literature for vocalists with an emphasis on the needs of middle and high school ensembles. The course includes a means to determine the quality of a piece as well as the standardized level of difficulty (grading). It also allows for full ensemble instrumentation to experience both playing the repertoire and peer teaching to better rehearsal skills. Students must also pass the TEP exam to enroll in this course.

Prerequisite: A grade of C- or better in MUSC 1410.

Learning Outcomes

1. The ability to assess the graded needs of middle and high school ensembles.
2. The development of rehearsal skills.

MUSC 396. Instructional Strategies II for Vocalists**2 Credits (2)**

The course focuses on rehearsal techniques for middle and high school ensembles. It includes a means to determine the quality of a piece of music as well as the standardized level of difficulty (grading). Students will also need to pass the TEP exam in order to enroll in the course.

Prerequisite: A grade of C- or better in MUSC 1410.

Learning Outcomes

1. The development of rehearsal techniques for middle and high school ensembles.

MUSC 397. Administrative Music Methods**1 Credit (1)**

Lesson planning, curriculum, teaching methodology, materials, and procedures for teaching music in the middle school and high school. Emphasis on administration. Students must also pass the TEP exam to enroll in this course.

Prerequisite: A grade of C- or better in MUSC 1410.

Learning Outcomes

1. Gain insight and experience with administrative strategies and procedures in secondary classroom
2. Work on interview skills as well as resume and cover letter composition
3. Collect a set of usable tools that a student can carry with them into their first job.
4. Gain familiarity with laws and regulations regarding programs and money spent

MUSC 413. Form and Analysis**3 Credits (3)**

Forms in tonal music and basic analytic techniques including music from diverse cultures and media.

Prerequisite(s): A grade of C- or better in MUSC 2452 and MUSC 2461.

MUSC 415. Orchestration**3 Credits (3)**

Scoring for full orchestra and various instrumental combinations with consideration of instrument timbres, strengths, weaknesses and ranges. May be repeated up to 3 credits. Restricted to: Music and Music Education majors.

Prerequisite: A grade of C- or better in MUSC 2452, MUSC 2461 and MUSC 2310.

Learning Outcomes

1. Write effectively and idiomatically for voice, orchestra, and Band.

MUSC 417. Studio Accompanying**2 Credits (2)**

Practical application of collaborative piano skills in a studio setting for Piano Performance majors. May be repeated up to 8 credits. Consent of Instructor required. Restricted to: Music and Music Education majors. Traditional Grading with RR.

MUSC 421. Music of the Baroque Era**3 Credits (3)**

An overview of the music of the Baroque era with an emphasis on history and literature. May be repeated up to 3 credits.

Prerequisite: MUSC 303.

Learning Outcomes

1. Discuss the historical and social context from which Baroque music developed.
2. Summarize the career of several well-known Baroque composers.
3. Outline the musical traits common and unique to different regions in the Baroque period and name the most important Baroque genres.
4. Describe the musical style of several well-known and lesser-known Baroque composers, citing examples from specific works.
5. Examine thirty-three Baroque musical works.
6. Write a term paper based on an analysis of a Baroque musical work.
7. Interpret and perform Baroque works with an understanding of historically-informed performance.
8. Describe Baroque string, wind, brass, keyboard, and percussion instruments: their appearance, construction, and manner of playing.

MUSC 422. Music of the Classic Era**3 Credits (3)**

An overview of the music of the Classic era with an emphasis on history and literature.

Prerequisite(s): MUSC 303.

MUSC 424. Music of the Twentieth Century**3 Credits (3)**

An overview of the music of the Twentieth Century with an emphasis on history and literature. Consent of Instructor required.

Prerequisite(s): MUSC 303.

MUSC 429. Opera: History and Literature**3 Credits (3)**

An overview of the operatic art form from the Florentine Camerata and Baroque opera through current 21st-century works, with an emphasis on historical context, composers, and significant works. Restricted to: Music, Music Education majors.

Prerequisite(s): MUSC 303 or consent of instructor.

Learning Outcomes

1. The student will be able to effectively identify and discuss operatic developments and traditions in historical context as well as demonstrate a knowledge of operatic composers and significant operatic works.

MUSC 430. Applied Music III**1-4 Credits**

Continuation from MUS 330. Individual instruction to develop technique, musicianship, performance and improvisational skills, as well as knowledge of significant repertoire. May be repeated up to 16 credits. Consent of Instructor required. Restricted to: Music and Music Education majors. Traditional Grading with RR.

Prerequisite(s): A grade of C or better in MUSC 330 plus a juried audition.

MUSC 440. Senior Recital**1-2 Credits (1-2)**

Public solo performance under the supervision of the appropriate applied instructor. 60 minutes of musical performance is required for enrollment of 2 hours credit. 30 minutes of musical performance is required for enrollment of 1 hour credit. Consent of Instructor required. Restricted to: Music and Music Education majors. Traditional Grading with RR.

Corequisite(s): MUSC 430.

MUSC 441. Supervised Studio Teaching**2 Credits (2)**

Teaching of private lessons under supervision. May be repeated up to 6 credits. Consent of Instructor required. Restricted to: Music and Music Education majors. Traditional Grading with RR.

MUSC 450. Research Methods**3 Credits (3)**

Introduction to methodology of music research. Emphasis on important scholarly resources and academic writing. Restricted to majors. Main campus only. No S/U option.

Prerequisite: consent of instructor.

MUSC 470. Special Topics III**1-3 Credits**

Designed for highly motivated students. Independent study and individual guidance. May be taken for unlimited credit.

MUSC 471. Graduate Theory Review**3 Credits (3)**

Comprehensive and accelerated study of modes, diatonic harmony, and classical form of the common practice period. Restricted to: Music majors. Traditional Grading with RR.

MUSC 475. Intermediate Conducting**3 Credits (3)**

Serves as a bridge from undergraduate conducting study to the graduate level. Advanced undergraduate students may enroll to learn how the graduate program in conducting functions. The course also serves as the introductory experience for newly admitted graduate conducting majors. After successful completion of this course, students will be able to: Study musical scores from a conducting perspective; Demonstrate effective predetermined gestures and movements; Lead an ensemble; Research and give presentations related to composers and their music; Demonstrate advanced knowledge of conducting practices.

Prerequisite(s): A grade of C- or better in MUSC 326 or MUSC 327.

MUSC 477. Graduate Music History Review**3 Credits (3)**

Comprehensive and accelerated study of music history from antiquity to the present. Restricted to: Music majors. Traditional Grading with RR.

MUSC 486. Applied Music Pedagogy and Literature II**2 Credits (2)**

Methods, materials, problems, literature, and techniques in teaching individual lessons. Consent of Instructor required. Restricted to: Music majors. Traditional Grading with RR.

MUSC 498. Independent Study**1-3 Credits**

For students with a strong musical background wishing to explore content beyond the traditional curriculum. Restricted to majors. May be repeated for a maximum of 6 credits.

Prerequisite: consent of instructor.

MUSC 511. Survey of Traditional Harmony**3 Credits (3)**

Tonal harmony in common practice and theory of the late 17th, 18th, and early 19th centuries. Restricted to: Music majors. Traditional Grading with RR.

Prerequisite(s): A grade of B or better in MUSC 471.

MUSC 513. Twentieth Century Art Music**3 Credits (3)**

Analytical techniques, structural design and compositional materials from Debussy to the Minimalist school in historical context. Restricted to: Music majors.

Prerequisite(s): A grade of B or better in MUSC 471.

MUSC 518. Seminar in Music Theory**3 Credits (3)**

Varying topics in Music Theory, providing a more specific and in-depth study of the particular topic. May be repeated up to 6 credits. Restricted to: Music majors. Traditional Grading with RR.

Prerequisite(s): A grade of B or better in MUSC 471.

MUSC 519. Seminar in Music History**3 Credits (3)**

Varying topics in Music History, providing a more specific and in-depth study of the particular topic. May be repeated up to 6 credits. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 477.

MUSC 521. Music of the Baroque Era: History and Literature**3 Credits (3)**

An overview of the music of the Baroque Era with an emphasis on history and literature. May be repeated up to 3 credits.

Prerequisite: A grade of B or better in MUSC 477.

Learning Outcomes

1. Discuss the historical and social context from which Baroque music developed.
2. Summarize the career of several well-known Baroque composers.
3. Outline the musical traits common and unique to different regions in the Baroque period and name the most important Baroque genres.
4. Describe the musical style of several well-known and lesser-known Baroque composers, citing examples from specific works.
5. Examine thirty-three Baroque musical works.
6. Write a term paper based on an analysis of a Baroque musical work.
7. Interpret and perform Baroque works with an understanding of historically-informed performance.
8. Describe Baroque string, wind, brass, keyboard, and percussion instruments: their appearance, construction, and manner of playing.

MUSC 522. Music of the Classical Era: History and Literature**3 Credits (3)**

An overview of the music of the Classical era with an emphasis on history and literature. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 477.

MUSC 523. Music of the Romantic Era: History and Literature
3 Credits (3)

An overview of Romantic era music, with an emphasis on history and literature. Restricted to MUS Majors. May be repeated up to 3 credits.

Prerequisite: A grade of B or better in MUSC 477.

Learning Outcomes

1. Develop an in depth knowledge of composers of the Romantic era
2. Develop the ability to Recognize Major compositions of the Romantic Era
3. Develop the ability to analyze works from the Romantic Era.

MUSC 529. Opera History and Literature
3 Credits (3)

An overview of the operatic art form from the Florentine Camerata and Baroque opera through current 21st-century works, with an emphasis on historical context, composers, and significant works. Restricted to: M ED, MUS majors.

Prerequisite(s): A grade of B or better in MUSC 477.

Learning Outcomes

1. The student will be able to effectively identify and discuss operatic developments and traditions in historical context as well as demonstrate a knowledge of operatic composers and significant operatic works.

MUSC 530. Seminar in Music Education
3 Credits (3)

Varying topics in Music Education, providing a more specific and in-depth study of the particular topic. Restricted to: MUS majors.

MUSC 531. Music Education in the Diverse Classroom
3 Credits (3)

This course is designed to provide an introduction to diverse and at-risk student groups in educational settings in the music classroom. It will help the course participants explore strategies and gain skills to enhance the musical growth of marginalized groups of students. There is an emphasis on identification, behavioral patterns, building interpersonal relationships, and will include a critical review of selected current research studies in music education. Armed with this knowledge, course participants will be better prepared to understand at-risk students and how best to implement strategies in the classroom. May be repeated up to 3 credits. Restricted to: MUS majors.

Learning Outcomes

1. Students will access and utilize the basic research journals and other sources of research reports and summaries, including those identified using computer technology in the field of music education.
2. Students will describe the structure of most qualitative research studies and their aide in identifying student traits.
3. Students will understand and use most of the language, terms and vocabulary found in qualitative research reports in discussing and identifying behavioral patterns of at-risk students.
4. Students will appraise qualitative research in a systematic way; analyze and review what the research produced in order to isolate the strategies available to incorporate in classroom teaching scenarios.
5. Students will independently retrieve, critique and summarize research related to at-risk students in music education.

MUSC 535. Current Issues in Music Education
3 Credits (3)

This course examines the rich and challenging complexities of music teaching and learning from a variety of perspectives. Educational theory to pedagogical inquiry of current educational practice will be examined, calling students to critically reflect on such professional activities as lesson planning, curriculum design, repertoire choice, program assessment, advocacy in the arts, and student evaluation. Restricted to: MUS (Music Ed track only) majors.

MUSC 540. Graduate Recital/Analytical Paper
4 Credits (4)

This course is for students completing a Master of Music with a Performance emphasis. A public recital will be given and an accompanying research paper will be submitted. Restricted to: MUS majors.

MUSC 574. Advanced Choral Conducting I
3 Credits (3)

This course will continue the training for competent musicianship with a focus on conducting gestures and movements, score study, and rehearsal techniques. Lessons will focus primarily on the development of a non-verbal vocabulary that will allow each student to clearly and artistically communicate with the members of an ensemble to solicit a predetermined musical result. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 475.

MUSC 575. Advanced Choral Conducting II
3 Credits (3)

This is the final course in preparation for the student's graduate conducting concert. It will continue the training for competent musicianship with a focus on conducting gestures and movements, score study, and rehearsal techniques. Lessons will focus primarily on the development of a non-verbal vocabulary that will allow each student to clearly and artistically communicate with the members of an ensemble to solicit a predetermined musical result. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 574.

MUSC 576. Advanced Instrumental Conducting I
3 Credits (3)

The role of the conductor is to lead, react to, alter, and reinforce the performance of the ensemble. This course will continue in the training for competent musicianship with a focus on conducting gestures and movements, score study, and rehearsal techniques. Lessons will focus primarily on the development of a non-verbal vocabulary that will allow each student to clearly and artistically communicate with the members of an ensemble to solicit a predetermined musical result. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 475.

MUSC 577. Advanced Instrumental Conducting II
3 Credits (3)

The role of the conductor is to lead, react to, alter, and reinforce the performance of the ensemble. This course will continue in the training for competent musicianship with a focus on conducting gestures and movements, score study, and rehearsal techniques. Lessons will focus primarily on the development of a non-verbal vocabulary that will allow each student to clearly and artistically communicate with the members of an ensemble to solicit a predetermined musical result. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 576.

MUSC 578. Advanced Choral Literature
2-3 Credits (2-3)

An examination of significant choral works from 1200 to the present, including composers, genres, and historical context May be repeated up to 3 credits. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 475.

MUSC 579. Advanced Instrumental Literature

2-3 Credits (2-3)

An examination of significant instrumental works from the Baroque period to the present, including composers, genres, and historical context. May be repeated up to 3 credits. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 475.

MUSC 580. Ensemble Performance

1 Credit (1)

Performance in university ensembles. May be repeated up to 99 credits.

Prerequisite(s): by audition only.

MUSC 582. Applied Music

2-4 Credits (2-4)

For music majors, individual instruction, including improvisation skills and techniques. Students may enroll for 2 or 4 credits. Students must audition in order to enroll. Consent of instructor required. May be repeated up to 24 credits.

Learning Outcomes

1. Develop of Musical Performance Attributes.
2. Development of technical Skills.
3. Development of Aural Skills.
4. Development of Musical Analytical Skills.
5. Development of Improvisatory Skills.

MUSC 586. Applied Music Pedagogy and Literature III

2 Credits (2)

Methods, materials, problems, literature, and techniques in teaching individual lessons. Restricted to: MUS majors.

Prerequisite(s): A grade of B or better in MUSC 486.

MUSC 598. Special Research Programs

1-4 Credits

May be taken for unlimited credit.

MUSC 599. Master's Thesis

15 Credits

Thesis.

Music - Bachelor of Arts

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Students that wish to pursue this degree would be best served in completing this program as an accompanying degree or double major to an already existing program, completing this program with one of the concentrations, or students judiciously select a minor to accompany the BA in Music

³ Students must complete this requirement for 1 credit for a total of 3 semesters.

⁴ Students must complete this requirement for 1 credit for a total of 4 semesters.

- ⁵ Students must complete this requirement for 1 credit for a total of 2 semesters.
- ⁶ Because of the number of credits required for a music degree, including required ensembles and applied lessons, music students are not required to meet the Second Language Requirements.
- ⁷ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Arts- Music there is no second language requirement for the degree.

A Suggested Plan of Study

Additional classes may be needed based on placement test results and course prerequisites. Visit with an advisor for help with creating a customized plan. This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Electives, to bring the total credits to 120 ⁸	9-10
Total Credits	120

¹ See the General Education Section (p. 227) of the catalog for a full list of courses

² See the Viewing a World Section (p. 231) of the catalog for a full list of courses

³ Students must complete this requirement for 1 credit for a total of 4 semesters.

⁴ Students must complete this requirement for 1 credit for a total of 2 semesters.

⁵ Students must complete this requirement for 1 credit for a total of 3 semesters.

⁶ Students must complete this requirement for .5 credit for a total of 4 semesters.

⁷ Because of the number of credits required for a music degree, including required ensembles and applied lessons, music students are not required to meet the Second Language Requirements.

⁸ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

A Suggested Plan of Study

Additional classes may be needed based on placement test results and course prerequisites. Visit with an advisor for help with creating a customized plan. This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Music (Instrumental Performance) - Bachelor of Music

The Bachelor of Music (BM) curriculum is designed to prepare students for performance careers and private studio teaching and serves as a foundation for advanced study toward master's and doctoral degrees: M.M., D.M.A., or Ph.D in Music. In addition, the BM degree may lead to positions as professional entertainers or teachers at the college and university levels, or lead to music related work in the business world.

Requirements - Basic Music and Performance

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World

requirements, and elective credits to total at least 129 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

³ See the Viewing a Wider World (p. 231) section for a full list of courses.

Music (Vocal Performance) - Bachelor of Music

The Bachelor of Music (BM) curriculum is designed to prepare students for performance careers and private studio teaching and serves as a foundation for advanced study toward master's and doctoral degrees: M.M., D.M.A., or Ph.D in Music. In addition, the BM degree may lead to positions as professional entertainers or teachers at the college and university levels, or lead to music related work in the business world.

Requirements - Basic Music and Performance

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 129 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective

credits, but may be needed in order to take the necessary English and Mathematics coursework.

- Students must pass Piano Proficiency before presenting a Senior Recital.
- Students must enroll for Functional Piano until Proficiency is passed.

Music Education Requirement

- Students must pass the TEP Exam before taking MUSC 346 Elementary Music Methods or MUSC 395 Instructional Strategies I for Vocalists.
- Students must present Senior Recital before student teaching.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Functional Piano is not a required course. Though not listed under the recommended coursework each term, it is recommended that students continue to take it at the appropriate level until ready to pass the required Piano Proficiency

Ensemble		2
Total Credits		24

Philosophy

Undergraduate Program Information

A major in philosophy serves not only as preparation for further graduate study in philosophy but also as an area of concentration in a liberal arts program. A philosophy major is appropriate for students planning to attend medical school as well as for those students interested in a career that requires critical reading and argument analysis. Such careers include business, theology and above all, law. For students who are especially interested in careers in law, politics, or public policy, the Department also offers a major in Justice, Political Philosophy, and Law.

While the course requirements for these majors should meet the ends of the liberal arts student, those students interested in graduate study in philosophy or in a career in law are encouraged to seek advice from a faculty advisor as early in their career as possible.

A minor program in philosophy requiring 18 hours of course work is also offered as well as a minor in Ethics and a minor in Justice, Political

Philosophy, and Law. For more information visit the Department of Philosophy's web page at philos.nmsu.edu (<http://philos.nmsu.edu>).

Degrees for the Department

- Justice, Political Philosophy, and Law - Bachelor of Arts (p. 809)
- Philosophy - Bachelor of Arts (p. 810)

Minors for the Department

- Ethics - Undergraduate Minor (p. 812)
- Justice, Political Philosophy, and Law - Undergraduate Minor (p. 812)
- Philosophy - Undergraduate Minor (p. 813)

Timothy Cleveland, Department Head

Professors Cleveland, Walker, Keleher **Associate Professors** Vessel, Klockseim **College Professor** Noonan

Philosophy Courses

PHIL 1115G. Introduction to Philosophy 3 Credits (3)

In this course, students will be introduced to some of the key questions of philosophy through the study of classical and contemporary thinkers. Some of the questions students might consider are: Do we have free will? What is knowledge? What is the mind? What are our moral obligations to others? Students will engage with and learn to critically assess various philosophical approaches to such questions.

Learning Outcomes

1. Comprehend and differentiate between various philosophical approaches to questions within fields such as metaphysics, epistemology, ethics, and aesthetics.
2. Critically evaluate various philosophical arguments and positions.

PHIL 1120G. Logic, Reasoning, & Critical Thinking 3 Credits (3)

The purpose of this course is to teach students how to analyze, critique, and construct arguments. The course includes an introductory survey of important logical concepts and tools needed for argument analysis. These concepts and tools will be used to examine select philosophical and scholarly texts.

Learning Outcomes

1. Comprehend components of arguments.
2. Acquire a general understanding of the essential logical concepts needed for argument analysis, such as validity, soundness, deduction, and induction.
3. Critically assess arguments with an aim toward identifying what constitutes effective and reasonable argument strategies.
4. Learn to identify common logical fallacies.
5. Apply knowledge of argumentation principles to philosophical and scholarly texts

PHIL 1140G. Philosophy and World Religions 3 Credits (3)

A philosophical enquiry into the religious life; an introduction to philosophical questions about religions focused on consideration of some of the traditional approaches to God and what it means to be religious. May be repeated up to 3 credits.

Learning Outcomes

1. Identify and describe philosophical theories regarding religion.
2. Develop and enhance your critical thinking skills, particularly in the evaluation of arguments about the truth or applicability of particular religious or secular viewpoints.
3. Analyze the teachings of world religions by describing their similarities and differences.
4. Explain the philosophical beliefs, practices, and ethical standards of the major world religions as well as emerging religious movements.
5. Explain how each religion evolved historically, philosophically, and spiritually as well as the contemporary ideas and practices each religion.

PHIL 1145G. Philosophy, Law, and Ethics**3 Credits (3)**

An introduction to practical problems in moral, social, political, and legal philosophy. Topics to be discussed may include ecology, animal rights, pornography, hate speech on campus, same-sex marriage, justice, abortion, terrorism, treatment of illegal immigrants, and New Mexican Aboriginal Peoples' land claims.

Learning Outcomes

1. The aim of this course is to familiarize students with some of the ethical and philosophical issues that arise in connection with laws/legality in general and criminal and constitutional law in the U.S. in particular.
2. It examines issues in moral philosophy, political philosophy, and philosophy of law.
3. A question to which we repeatedly return is whether the law does and/or ought to have some necessary relation to the demands of justice and morality. Among the topics we'll cover are: What is a law? Natural law vs. positive law and legal positivism vs. natural law theory; Utilitarian, divine command, Kantian, and natural law theories of moral rightness/wrongness; The distinction between the normative and the non-normative; Is there a moral duty to obey the law? Plato's Crito and R.P. Wolff's "philosophical anarchism."; J.S. Mill and classical liberalism; Mill's "harm principle" ("the state should restrict the liberty of competent adults via the criminal law only to prevent them from wrongfully harming other persons"); Legal paternalism. Should the state make it harder for citizens to smoke tobacco and/or marijuana, for their own good?; Should voluntary euthanasia be legal? Is there a constitutional "right to die"?; How should judges determine the meaning of vaguely worded constitutional requirements (e.g. "free exercise of religion," no "unreasonable search and seizure," no "cruel and unusual punishment," etc.)? Originalist vs. nonoriginalist approaches; The First Amendment, free speech, and freedom of religion; The death penalty and "cruel and unusual punishment"; The insanity defense in criminal law; Does the 14th Amendment's requirement of "equal protection" under the law compel states to recognize same sex marriage?; The Fourth Amendment and its prohibition of "unreasonable search and seizure."

PHIL 2110G. Introduction to Ethics**3 Credits (3)**

This course introduces students to the philosophical study of morality and will explore questions concerning our human obligations to others and related issues. Students may be asked to relate various approaches to ethics to present-day ethical debates and their own lives.

Learning Outcomes

1. Differential between various ethical theories, which may include virtue ethics, deontology, and consequentialism.
2. Critically evaluate various ethical theories and positions.

PHIL 2230G. Philosophical Thought**3 Credits (3)**

In this course, students will grapple with some of the key questions of philosophy through the study of classical and contemporary thinkers. Students will become familiar with the perennial problems in subfields of philosophy such as metaphysics, epistemology, ethics, and aesthetics. They will learn to approach these problems both critically and sympathetically.

Learning Outcomes

1. Comprehend and differentiate between various philosophical approaches to questions within fields such as metaphysics, epistemology, ethics, and aesthetics.
2. Critically evaluate various philosophical arguments and positions.
3. Identify the differences that characterize the major subfields of philosophy.

PHIL 305. Philosophy and Literature**3 Credits (3)**

Examination of philosophical ideas as presented in selected literary works and literary criticism.

PHIL 306. Philosophy Through Film**3 Credits (3)**

An exploration of a range of philosophical issues through the use of film. Topics include personal identity and memory, faith and the problem of evil, free will and moral responsibility, and the meaning of life. Films may include *The Prestige*, *Memento*, *The Third Man*, *A Clockwork Orange*, *Fight Club*, and *Synecdoche, New York*.

PHIL 312. Formal Logic**3 Credits (3)**

Introduction to symbolic logic and its application in the analysis of arguments in scientific and ordinary discourse.

PHIL 315. Philosophy of Language**3 Credits (3)**

A critical examination of philosophical inquiries into the syntactic, semantic, and pragmatic dimensions of language.

PHIL 316. Philosophy of Mathematics**3 Credits (3)**

Survey of traditional philosophical problems and views concerning the nature of mathematics including such questions as: What is the nature of mathematical knowledge? What is mathematical truth? What is a number? What is proof? What is the relationship between logic and mathematics?

PHIL 320. Social and Political Philosophy**3 Credits (3)**

This course critically examines such fundamental concepts as liberty, equality and human rights.

PHIL 322. Environmental Ethics**3 Credits (3)**

Explores the ethical and topical issues raised by mining and grazing, air and water pollution, factory farming, global warming, and treatment of animals. It also studies some recent ecological movements such as ecofeminism, social ecology, and deep ecology.

PHIL 328. Applied Ethics**3 Credits (3)**

Examines the implications of utilitarianism, Kantian ethics, natural law theory, and other moral theories for controversial moral issues such as the death penalty, euthanasia, abortion, genetic engineering, gay marriage, affirmative action, and pornography.

PHIL 331. Philosophy of Religion

3 Credits (3)

The nature, fundamental concepts, and problems of religion. Emphasis on the significance of religion for creative and practical value.

PHIL 332. Ethics and Global Poverty

3 Credits (3)

Philosophical scrutiny of and moral reflection on various aspects of global poverty and foreign aid. For example: Is poverty fundamentally a lack of income, or can it be understood as a failure to meet basic needs, or as a lack of valuable freedom? Do human rights exist? What, if any, are the moral obligations of rich countries to poor countries? Can foreign aid be immoral? How should the answers to these questions influence public policy? Restricted to: Main campus only.

PHIL 341. Ancient Philosophy

3 Credits (3)

Introduction to the philosophies of the pre-Socratics, Socrates, Plato, Aristotle, with brief discussion of the Epicureans and Stoics.

PHIL 344. Modern Philosophy

3 Credits (3)

Foundations of contemporary thought: introduction to the philosophies of Descartes, Bacon, Spinoza, Leibniz, Locke, Berkeley, Hume, Kant, and Hegel.

PHIL 346. Philosophy of Mind

3 Credits (3)

Examination of some of the most influential accounts of the mind, focusing on such issues as the relation between the mind and the body, mental causation and consciousness.

PHIL 350. Epistemology

3 Credits (3)

Introduction to epistemology. The philosophical critique of alleged ways of knowing. An examination of the nature of truth.

PHIL 351. Philosophy of Science

3 Credits (3)

Philosophical examination of the methodology of science. The logical, metaphysical, epistemological, and ethical critique of science and its impact on human affairs.

PHIL 361. Special Topics

3 Credits (3)

Specific subjects announced in the Schedule of Classes. May be repeated for a maximum of 9 credits.

PHIL 363. Independent Studies

1-3 Credits

For students with some background in philosophy. Independent work in a specific area. May be repeated for a maximum of 6 credits.

Prerequisite: consent of instructor.

PHIL 373. Ethical Theory

3 Credits (3)

The critical examination of the justification of ethical theories with particular attention to the language of moral discourse.

PHIL 376. Philosophy of Law

3 Credits (3)

Ethical, logical, and epistemological implications of law, together with an analysis of the rhetoric of legal practice.

PHIL 380. Metaphysics

3 Credits (3)

Introduction to metaphysics: a treatment of such issues as the meaning of existence, the mind-body problem, the problem of universals, and free will versus determinism.

PHIL 385. Human Nature and the Good Life

3 Credits (3)

An examination of some of the most historically and philosophically influential conceptions of human nature and corresponding accounts of the good life.

PHIL 397. Existentialism

3 Credits (3)

The origins of existentialist thought in philosophy and literature, including the thought of Nietzsche, Kierkegaard, Dostoyevsky, Camus, and Sartre. The course covers topics in ethics and political philosophy, metaphysics, philosophical psychology, philosophy of religion, and other sub-disciplines of philosophy.

PHIL 435. Internship in Philosophy and Law

3 Credits (3)

Supervised hands-on experience for Justice, Political Philosophy, and Law majors to gain professional expertise of the law working with lawyers or judges in law offices, court rooms, and other professional legal settings. Student must be in junior and above standing to enroll. May be repeated up to 6 credits.

Prerequisite: Completion of 12 Philosophy credits; 2.5 GPA.

Learning Outcomes

1. Demonstrate practical knowledge, analytical ability and critical thinking of professional legal work by becoming familiar with such legal tasks as: preparing pleadings; preparing discovery, responding to discovery; controlling and organizing documents, information; preparing trial notebooks; preparing motions; contacting and responding to clients, witnesses, courts.

PHIL 448. Writing Philosophy

3 Credits (3)

A workshop on writing philosophy papers. Includes how to read and understand philosophical writing, organize a paper effectively, present a clear and forceful argument, and avoid common mistakes.

Prerequisite(s): completed 18 hours of philosophy credit.

PHIL 463. Independent Studies

1-3 Credits

For students with a strong background in philosophy. Independent work in a specific area. May be repeated for a maximum of 6 credits.

Prerequisite: consent of instructor.

PHIL 532. Advance Studies in Ethics and Global Poverty

3 Credits (3)

Advanced philosophical scrutiny of and moral reflection on various aspects of global poverty and foreign aid. For example: Is poverty fundamentally a lack of income, or can it be understood as a failure to meet basic needs, or as a lack of valuable freedom? Do human rights exist? What, if any, are the moral obligations of rich countries to poor countries? Can foreign aid be immoral? How should the answers to these questions influence public policy? Restricted to: Main campus only.

Justice, Political Philosophy, and Law - Bachelor of Arts

The aim of a Justice, Political Philosophy, and Law (JPPL) arts major is to cultivate a reasoned understanding of law and legal institutions, as well as the moral theories that support the value and justice of these institutions. JPPL offers a sequence of courses totaling 36 credit hours in critical thinking, law, policy, global justice, ethical theory, political philosophy, moral theory, feminist philosophy, and human rights. The interdisciplinary component of the major ensures that students have a well-rounded understanding of issues of justice and law. JPPL students will be well-prepared for further studies or careers in law, philosophy, politics, public service, education, human rights, or public policy.

Admission to JPPL is open to any student in good standing in the College of Arts and Sciences.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Second Language Requirement: (not required)		
Electives, to bring the total credits to 120 ⁵		50-52
Select sufficient electives to bring total to 120, including 48 upper-division.		
Total Credits		120

¹ See the General Education section of the catalog for a full list of courses.

² A Mathematics course is required for the degree but students may need to take any prerequisites needed to enter the course first.

³ Students must take either PHIL 1115G Introduction to Philosophy, PHIL 1145G Philosophy, Law, and Ethics, or PHIL 2230G Philosophical Thought; PHIL 2110G Introduction to Ethics; and either PHIL 1120G Logic, Reasoning, & Critical Thinking or PHIL 312 Formal Logic to fulfill the Introductory courses requirement.

⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁵ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Arts in Justice, Political Philosophy, and Law there is no second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

¹ See the General Education section of the catalog for a full list of courses.
² A Mathematics is required for the degree but students may need to take any prerequisites needed to enter the course first.
³ The General Education Elective requirement will be satisfied with one of the "G" courses that are options under the Logic and history of Philosophy requirements listed under the Departmental/College Requirements section.
⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
⁵ For the Logic course requirement, students can take either PHIL 1120G Logic, Reasoning, & Critical Thinking or PHIL 312 Formal Logic.

If students select PHIL 312, it will not count towards the General Education Elective requirement.
⁶ PHIL 323V will not count towards the Viewing A Wider World requirement, students will need to select two other courses for that requirement.
⁷ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Arts in Philosophy there is no second language requirement.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Freshman		Credits
ENGL 1110G	Composition I ¹	4
MATH 1130G	Survey of Mathematics ¹	3
PHIL 2230G	Philosophical Thought	3
FYEX 1112	The Freshman Year Experience	3
Area IV: Social and Behavioral Science Course ²		3
Choose from one of the following:		3
COMM 1115G	Introduction to Communication	
HNRS 2175G	Introduction to Communication Honors	
ACOM 1130G	Effective Leadership and Communication in Agriculture	
Area III: Laboratory Science Course ²		4
Area VI: Fine Arts Course ²		3
General Education Elective Course ²		3
Elective Course		1
Credits		30
Sophomore		
Choose from one of the following:		3
ENGL 2210G	Professional and Technical Communication Honors ¹	
ENGL 2221G	Writing in the Humanities and Social Science ¹	
PHIL Elective Course		3
Area III: Laboratory Science Course OR Area IV: Social and Behavioral Science Course ²		3-4
Choose from one of the following:		3
PHIL 320	Social and Political Philosophy	
PHIL 373	Ethical Theory	
PHIL 376	Philosophy of Law	
VWW: Viewing a Wider World Course ³		3
Elective Courses		15
Credits		30-31

Junior		
Choose from one of the following:		3
PHIL 1120G	Logic, Reasoning, & Critical Thinking	
PHIL 312	Formal Logic	
Choose from one of the following:		3
PHIL 315	Philosophy of Language	
PHIL 316	Philosophy of Mathematics	
PHIL 346	Philosophy of Mind	
PHIL 350	Epistemology	
PHIL 351	Philosophy of Science	
PHIL 380	Metaphysics	
Choose from one of the following:		3
PHIL 315	Philosophy of Language	
PHIL 316	Philosophy of Mathematics	
PHIL 346	Philosophy of Mind	
PHIL 350	Epistemology	
PHIL 351	Philosophy of Science	
PHIL 380	Metaphysics	
Choose from one of the following:		3
PHIL 341	Ancient Philosophy	
PHIL 344	Modern Philosophy	
HNRS 2140G	Plato and the Discovery of Philosophy	
VWW: Viewing a Wider World Course ³		3
Upper-Division Elective Courses		9
Elective Courses		6
Credits		30
Senior		
PHIL 448	Writing Philosophy ¹	3
PHIL Applied Ethics Elective Course (choose from list)		3
PHIL Elective Course (any level)		3
PHIL Upper-Division Elective Course		6
Upper-Division Elective Courses		12
Elective Course		3
Credits		30
Total Credits		120-121

¹ These courses may have prerequisites and/or co-requisites, and it is the students responsibility for checking and fulfilling all those requirements.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Ethics - Undergraduate Minor

A student who earns a Bachelor of Arts in Philosophy may not also earn a minor in Ethics.

Prefix	Title	Credits
Required Courses		
PHIL 1115G	Introduction to Philosophy	3
or PHIL 2230G	Philosophical Thought	
PHIL 1120G	Logic, Reasoning, & Critical Thinking	3
or PHIL 312	Formal Logic	
PHIL 373	Ethical Theory	3
or PHIL 2110G	Introduction to Ethics	

Select three from the following, of which at least two must be upper division:¹ 9

CJUS 425	Issues in Ethics, Law, and Criminal Justice
HNRS 304V	Dilemmas of War and Peace
HNRS 306V	Science, Ethics and Society
JOUR 377V	Mass Media Ethics
PHIL 322	Environmental Ethics
PHIL 328	Applied Ethics
PHIL 332	Ethics and Global Poverty
SUR 401	Ethics and Professionalism in Surveying and Mapping

Total Credits 18

¹ Students may earn up to 3 credits in this category from special topics or Honors courses approved by the head of the Department of Philosophy.

Justice, Political Philosophy, and Law - Undergraduate Minor

The aim of Justice, Political Philosophy, and Law is to cultivate a reasoned understanding of law and legal institutions, as well as the moral theories that support the value and justice of these institutions. The JPPL minor offers a sequence of courses in critical thinking, law, policy, global justice, ethical theory, political philosophy, moral theory, and human rights. JPPL students will be well-prepared for further studies or careers in law, philosophy, politics, public service, education, human rights, or public policy.

Prefix	Title	Credits
<i>Introductory Courses</i>		
Select one from the following:		3
PHIL 1145G	Philosophy, Law, and Ethics	
PHIL 1115G	Introduction to Philosophy	
PHIL 2230G	Philosophical Thought	
PHIL 1120G	Logic, Reasoning, & Critical Thinking	3
or PHIL 312	Formal Logic	
PHIL 2110G	Introduction to Ethics	3
<i>Philosophy of Law</i>		
PHIL 376	Philosophy of Law	3
<i>Human Rights and Global Justice</i>		
Select one from the following:		3
PHIL 320	Social and Political Philosophy	
PHIL 322	Environmental Ethics	
PHIL 332	Ethics and Global Poverty	
PHIL 341	Ancient Philosophy	
PHIL 373	Ethical Theory	
PHIL 448	Writing Philosophy	
<i>Elective</i>		
Select one from the following:		3
PHIL 320	Social and Political Philosophy	
PHIL 322	Environmental Ethics	
PHIL 328	Applied Ethics	
PHIL 332	Ethics and Global Poverty	
PHIL 344	Modern Philosophy	
PHIL 373	Ethical Theory	
PHIL 376	Philosophy of Law	

PHIL 448	Writing Philosophy	
Total Credits		18

Philosophy - Undergraduate Minor

A student who earns a Bachelor of Arts in Philosophy may not also earn a minor in Philosophy.

Prefix	Title	Credits
Required Courses		
PHIL 1115G or PHIL 2230G	Introduction to Philosophy Philosophical Thought	3
PHIL 1120G or PHIL 312	Logic, Reasoning, & Critical Thinking Formal Logic	3
Select one from the following:		3
PHIL 2110G	Introduction to Ethics	
PHIL 328	Applied Ethics	
PHIL 373	Ethical Theory	
Select 9 credits from Philosophy at the 300 or above level		9
Total Credits		18

Physics

Undergraduate Program Information

A Bachelor's degree in Physics or Engineering Physics at New Mexico State University provides the basis for careers in industry, teaching, the military, government or for study toward advanced degrees in physics or engineering. It should also provide the skills that recipients of physics degrees have listed as among the most important in obtaining their current positions, including problem solving ability, computer skills, mathematical skills, and laboratory skills, as well as knowledge of physics. The undergraduate program has the following educational objectives:

1. **Competitiveness.** Graduates are competitive in internationally recognized academic, government and industrial environments.
2. **Adaptability.** Graduates exhibit success in solving complex technical problems in a broad range of disciplines subject to quality engineering processes.
3. **Collaboration/Teamwork and Leadership.** Graduates have a proven ability to function as part of and/or lead interdisciplinary teams.

Further information about the department may be found on the web at phys.nmsu.edu (<https://phys.nmsu.edu>). All incoming (new or transfer) students must schedule an orientation meeting with the department head and/or the undergraduate program head before their first semester at NMSU. All students will be assigned a faculty advisor in the physics department to discuss course selection, career resources, internships and coops, and other topics.

Graduate Program Information

The Department of Physics offers programs in many areas of emphasis leading to the MS and Ph.D. degrees. Admission to these programs is competitive and selection of applicants is based on undergraduate and/or previous graduate grade-point averages, performance on the general and subject Graduate Record Examination, other evidence of prior academic and research accomplishments submitted by the applicant, and reference letters, as well as, in the case of applicants for the doctoral program, matching of the applicant's research interests, as described

by the student's statement of purpose, to the Department's research activities.

All degree-seeking graduate students must satisfy the relevant Graduate School requirements, successfully complete a 3-credit, 500-level laboratory, and demonstrate or develop knowledge of computer programming. All Ph.D. students and non-thesis Master's students must pass a qualifying examination based on undergraduate physics courses at the 400 level. Additional course requirements are described below; courses taken S/U may not be used to satisfy any of the degree requirements, including the lab requirement for Master's and Ph.D. students.

The qualifying and comprehensive examination outcomes are decided by vote of the entire faculty, based on the recommendations of the corresponding examination committees. For the qualifying examination, the faculty may decide that

- a student pass at the doctoral level;
- pass at the master's level;
- be requested to retake the exam at the next available opportunity; or
- terminate graduate study.

For the written part of the comprehensive examination, the faculty may decide that

- a student be given an unconditional pass;
- be given a conditional pass, with the requirement that the student produce additional evidence of research accomplishments during the oral part of the exam before being granted admission to candidacy;
- repeat the written part the next time it is offered; or
- terminate graduate study.

In addition, the faculty may decide to discontinue financial support to a student based on the student's performance on the qualifying or comprehensive examination. Students will receive written notification of the exam's outcome from the Graduate Physics Program Head within 30 days of the exam. Appeals must be addressed to the Physics Department Head within 30 days of receiving written notification of the exam's outcome and will be decided by the physics faculty.

A student granted an unconditional or conditional pass on the written part of the comprehensive examination must take the oral part in the same semester that the written part was taken; the student's Ph.D. committee makes the final decision, following the oral part of the comprehensive examination, on admission of the student to the candidacy to the doctoral degree.

Students may choose areas of emphasis from a variety of experimental, theoretical and computational research programs in the department. The current major research areas of the department include condensed matter physics and materials science, geophysics, optics, particle and nuclear physics, and others. These research projects are supported by multimillion-dollar funding by various federal agencies and two national laboratories within the state of New Mexico: Los Alamos National Laboratory and Sandia National Laboratories. In addition to the in-house research, the department conducts collaborative research programs with

- The Brookhaven National Laboratory,
- The Center for Integrated NanoTechnologies,
- Los Alamos National Laboratory,
- Sandia National Laboratories,

- The Thomas Jefferson Laboratory,
- Fermilab,
- Air Force Research Laboratory and
- other national and international laboratories.

The MS in Physics with a concentration in Space Physics program provides students with a strong foundation in physics with an intensive focus on space physics. Graduate study in space physics at the master's level prepares graduates for continued and specialized study toward the doctorate program in space-related fields as well as for challenges they will confront in space industrial and government settings.

The department is housed in a newly-renovated building which contains research laboratories, classrooms, offices and a computational laboratory.

Degrees for the Department

Bachelor Degree(s)

- Physics - Bachelor of Arts (p. 824)
- Physics - Bachelor of Science (p. 826)

Master Degree(s)

- Physics (Space Physics) - Master of Science (p. 161)
- Physics - Master of Science (p. 161)

Doctoral Degree(s)

- Physics - Doctor of Philosophy (p. 203)

Minors for the Department

- Physics - Graduate Minor (p. 225)
- Physics - Undergraduate Minor (p. 829)

Professor, Stefan Zollner, Department Head

Professor, Michael Engelhardt, Undergraduate Program Head

Professor, Vassili Papavassiliou, Graduate Program Head

Professor, Boris Kiefer, Engineering Physics Program Head
