Student Teaching is the final semester of the degree, and is a requirement for licensure. Student Teaching (<https://tpal.nmsu.edu/degree-programs/undergraduate-programs/stia.html>) (STEP) portfolios are submitted one semester prior to the actual student teaching semester, and students must be admitted to the TEP in order to apply for student teaching. STEP Portfolio deadlines are 1st Friday in October for fall student teaching and 1st Friday in March for spring student teaching. STEP Portfolios are submitted electronically to the Teacher Education Program (TEP) office. For more information, visit the Student Teaching (<https://tpal.nmsu.edu/degree-programs/undergraduate-programs/stia.html>) website.

Non-Licensure Bachelor Programs

Two additional Bachelor degrees are available to undergraduate students who do not wish to obtain teacher licensure.

Bachelor of Applied Studies (Early Childhood Education Zero-Four Non-Licensure)

There is an identified need for prepared educators to serve young children from birth to four years of age in settings outside of the public school in childcare centers, Head Start, and other agencies. The School of TPAL offers a non-licensure concentration, with the Bachelor of Applied Studies degree for the Zero to Four years old Early Childhood Tract (<https://catalogs.nmsu.edu/nmsu/health-education-social-transformation/tpal/applied-studies-ztf-bas/>). This non-licensure concentration serves private and public childcare, early intervention programs, and Head Start.

The entry requirements and early coursework for the ECED Licensure and ECED Non-Licensure tracts are identical. During the first two years of the ECED programs, students concentrate on their general education requirements while also taking early childhood education classes. This professional education component acquaints students with the psychological, social, cultural, developmental, and cognitive aspects of early childhood. Students also begin to take field experience courses with child study requirements. Once students reach the 60 credit threshold,

they can either opt for the Licensure tract by applying to the TEP or continue on with the Non-Licensure coursework.

Applied Studies students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. All ECED courses must be successfully completed with a grade of C- or better. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Bachelor of Science (Educational Leadership)

The Bachelor of Science (BS) in Educational Leadership (<https://ela.nmsu.edu/>) prepares students to work at the bachelor's level in areas such as university or community college career services, admissions, financial aid, and advising. This program develops educational leaders who are passionate about strengthening their leadership to improve student achievement and helps foster positive and sustained relationships with students, institutions, school districts and surrounding communities. This is a social justice-driven program geared to strengthen leadership skills for individuals involved in various educational disciplines. The non-licensure degree will provide graduates with abilities to lead in all facets of higher education. The program offers an innovative, structured approach to leadership in higher educational programs.

Undergraduate Minors

In addition to the Bachelor degrees, the School of TPAL also offers the following three undergraduate minors:

- Educational Leadership – Undergraduate Minor (<https://ela.nmsu.edu/academic-programs/under-grad-minor.html>)
- Early Childhood Education – Undergraduate Minor (<https://catalogs.nmsu.edu/nmsu/health-education-social-transformation/tpal/early-childhood-education-ug-minor/>)
- Secondary Education - Undergraduate Minor (p. 1278)

School of TPAL Graduate Programs

The School of TPAL offers numerous graduate programs and pathways for post-baccalaureate students. The following programs are listed in the order of Master of Arts degrees, Graduate Certificates, and Doctoral degrees.

Master of Arts Degrees

Master of Arts in Education

- MA/MAT in Education Programs Page (General information)
 - Master of Arts in Education Plus Licensure Concurrently (earn a teaching license in the areas of **Early Childhood, Elementary** or **Secondary Education** while earning a Master of Arts in Education degree)
 - Alternative Licensure
 - Master of Arts in Education (For licensed PK-12 teachers)
 - Master of Arts in Education (Non-Licensure)
 - Concentrations (for Non-Licensure):
 - Bilingual Education (BLED)
 - Early Childhood Education (ECED)
 - Education and Design with Learning Technology (EDLT)
 - Elementary Mathematics & Science Specialist (EMSS)
 - Multicultural Education (MCED)

- Language, Literature and Culture (LLAC)
- Teaching English to Speakers of Other Languages (TESOL)

Master of Arts in Special Education

- Master of Arts in SPED

Master of Arts in Educational Administration

- Master of Arts (M.A.) PLUS Licensure Program in Educational Administration- PK-12 program
- Master of Arts (M.A.) in Educational Administration – Community College and University Administration program

Master of Arts in Teaching

Concentration:

- Spanish

Graduate Certificates

Alternative Licensure

Graduate Certificate in Education and Design in Learning Technology

Visual Impairment Program

Graduate Certificate in Autism

Graduate Certificate in Autism

PK-12 licensure program

Doctoral Degrees

Doctor of Education

- Educational Administration (with concentration areas):
 - PK-12
 - Higher Education & University / Community College

Doctor of Philosophy

- Curriculum and Instruction (with concentration areas):
 - Bilingual Education
 - Multicultural Education
 - Early Childhood Education
 - Education and Design in Learning Technology
 - Language, Literature and Culture
 - Teaching English to Speakers of Other Languages (TESOL)
 - Special Education
- Educational Administration (with concentration areas):
 - PK-12
 - Higher Education & University / Community College

Degrees for the Department

Bachelor Degree(s)

- Applied Studies (Zero-to-Four (Early Childhood)) - Bachelor of Applied Studies (p. 1245)

- Early Childhood Education - Bachelor of Science in Education (p. 1247)
- Educational Leadership - Bachelor of Science (p. 1249)
- Elementary Education (Language Arts K-8) - Bachelor of Science in Education (p. 1250)
- Elementary Education (Math K-8) - Bachelor of Science in Education (p. 1253)
- Elementary Education (Science K-8) - Bachelor of Science in Education (p. 1254)
- Elementary Education (Social Studies K-8) - Bachelor of Science in Education (p. 1256)
- Secondary Education (Secondary Education General Science) - Bachelor of Science in Education (p. 1257)
- Secondary Education (Secondary Education Language Arts) - Bachelor of Science in Education (p. 1259)
- Secondary Education (Secondary Education Math) - Bachelor of Science in Education (p. 1262)
- Secondary Education (Secondary Education Social Studies) - Bachelor of Science in Education (p. 1264)
- Special Education (Elementary Education) - Bachelor of Science in Education (p. 1266)
- Special Education (Secondary Education) - Bachelor of Science in Education (p. 1268)
- Special Education (Secondary Education) - Bachelor of Science in Education (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/special-education-secondary-education-bsed-online/>)
- Education (Secondary Licensure Prep) - Master of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/education-secondary-licensure-prep-ma-online/>)
- Education (Spanish) - Master of Arts in Teaching (<https://catalogs.nmsu.edu/nmsu/graduate-school/education-spanish-master-arts-teaching/>)
- Education (Teaching English to Speakers of Other Languages) - Master of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/education-teaching-english-speakers-other-languages-master-arts-online/>)
- Educational Leadership & Administration (Higher Education Administration) - Master of Arts (p. 137)
- Educational Leadership & Administration (Pk-12 Administration) - Master of Arts (p. 138)
- Educational Leadership & Administration (Higher Education Administration) - Master of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/educational-leadership-administration-higher-ed-admin-ma-online/>)
- Educational Leadership & Administration (Pk-12 Administration) - Master of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/educational-leadership-administration-pk12-admin-ma-online/>)
- Reading - Specialist in Education (p. 212)
- Special Education - Master of Arts (p. 171)
- Special Education - Master of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/special-education-ma-online/>)

Master Degree(s)

- Education (Bilingual Education) - Master of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/education-bilingual-education-master-arts-online/>)
- Education (Curriculum & Instruction) - Master of Arts (p. 134)
- Education (Curriculum & Instruction) - Master of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/education-curriculum-instruction-ma-online/>)
- Education (Early Childhood Education Plus Licensure) - Master of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/education-early-childhood-ed-plus-licensure-ma-online/>)
- Education (Early Childhood Education Plus Licensure) - Masters of Arts (p. 134)

- Education (Secondary Licensure Prep) - Master of Arts (p. 136)

Doctorate Degree(s)

- Curriculum and Instruction - Doctor of Philosophy (p. 186)
- Curriculum and Instruction - Doctor of Philosophy (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/curriculum-instruction-phd-online/>)
- Educational Leadership & Administration (Higher Education Administration) - Doctor of Education (p. 188)
- Educational Leadership & Administration (Higher Education) - Doctor of Philosophy (p. 189)
- Educational Leadership & Administration (Pk-12 Administration) - Doctor of Education (p. 190)
- Educational Leadership & Administration (Pk-12 Education) - Doctor of Philosophy (p. 191)

Minors for the Department

- Africana Studies - Undergraduate Minor (p. 1277)
- Early Childhood Education - Undergraduate Minor (p. 1277)
- Educational Administration (Doctoral) - Graduate Minor (p. 220)
- Educational Administration (Higher Ed.) - Graduate Minor (p. 220)
- Educational Administration (Pk-12) - Graduate Minor (p. 221)
- Educational Leadership and Administration - Undergraduate Minor (p. 1277)
- Secondary Education - Undergraduate Minor (p. 1278)
- Special Education - Graduate Minor (p. 227)

Graduate Certificate(s)

- Autism and Spectrum Disorders - Graduate Certificate (p. 213)
- Bilingual Education - Graduate Certificate (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/bilingual-education-gr-certificate-online/>)
- Early Childhood Alternative Licensure - Graduate Certificate (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/early-childhood-alt-licensure-gr-cert-online/>)
- Elementary Education Alternative Licensure - Graduate Certificate (p. 214)
- Online Teaching and Learning - Graduate Certificate (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/online-teaching-learning-gr-certificate-online/>)
- Principal Licensure - Graduate Certificate (p. 216)
- Secondary Education Alternative Licensure - Graduate Certificate (p. 217)
- Special Education Alternative Licensure - Graduate Certificate (<https://catalogs.nmsu.edu/nmsu/graduate-school/special-education-alternative-licensure-graduate-certificate/>)
- Teaching English to Speakers of Other Languages - Graduate Certificate (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/tesol-gr-certificate-online/>)

School of Teacher Preparation, Administration, and Leadership (TPAL):

Professor, Rick Marlatt, M.F.A., Ph.D., Director, School of Teacher Preparation, Administration, and Leadership

Professors: Araujo, Baptiste, Flores Carmona, Haynes Writer, A. Hernandez, Marlatt, Osanloo; **Associate Professors:** Fahrenbruck, Guillaume, Huerta-Charles, Kew, Lucero, Parra, Rutledge, Salas; **Assistant Professors:** Alvidrez, Armijo Romero, Chatterjee, Gray, Ibarra Johnson, Matute-Chavarria, Pedraza, Peel, Thomas, Warr, Wiegand; **College Professor;** **College Associate Professors:** Gorham-Blanco, C. Hernandez, Moreno; **College Assistant Professors:** Henderson, Mason, Owens; **College Instructors;** **Emeritus Professors:** Armendáriz, Cahill, Chavez-Chavez, Dominguez, González, Ivory, Reyes, Torres, Townley, Wiburg

M. Alvidrez, Ph.D. (University of Texas at El Paso) - mathematics education, Teacher education, Latina, o, e students in mathematics and computer science, errors as learning opportunities in mathematics and computer science; **B. Araujo**, Ph.D. (New Mexico State University) - teacher education, social studies, bilingual education; **Minea Armijo Romero**, Ph.D. specializes in bilingual education and transnational Indigenous Intercultural secondary education in México and US Southwest, translanguaging, border theory, decolonial studies, and visual literacy practices; **H. P. Baptiste**, Ed.D. (Indiana University) – science elementary; **S. Chatterjee**, **M.L. Fahrenbruck**, Ph.D. (University of Arizona) – language, reading & culture; **J. Flores Carmona**, Ph.D. (University of Utah) - culture and society, sociology of education; **T. Gorham Blanco**, Ph.D. (University of Wyoming) - mathematics education and pre-service teacher preparation; **P. Gray**, Ed.D. (University of Texas-San Antonio) - principalship, culturally responsive leadership, race and leadership; **R. Guillaume**, Ph.D. (New Mexico State University) - student development theory, biracial/multicultural identity development, higher education administration; for distance education students; **J.L. Haynes Writer**, Ph.D. (University of New Mexico) – critical multicultural & social justice education, Indigeneity, Native American education teacher preparation; **V. Henderson**, Ph.D. (New Mexico State University)-teacher education; language, literacy, and culture; bilingual education; **A. Hernandez**, (Stanford University) – elementary literacy, sociolinguistics, biliteracy-multiliteracy, and teacher

professional development; **C.M. Hernandez**, Ph.D. (Kansas State University) – science education; **L. Huerta-Charles**, Ph.D. (New Mexico State University) – multicultural/bilingual education; **S. Ibarra-Johnson**, Ph.D. (University of New Mexico) - bilingual education, bi/multilingual development, translanguaging pedagogy; **K. Kew**, Ph.D. (Boston College) – educational change and reform, educational leadership, school culture, micro-politics; **L. Lucero** (University of Texas-El Paso) – teaching, learning, and culture, with a concentration in math/science, technology/LGBTQ+studies; **R. Marlatt**, Ph.D. (University of Nebraska-Lincoln) - language, literacy and culture; **L. Mason**, Ed.D. (University of Northern Colorado) - visual impairment, orientation and mobility, literacy; **M. Matute-Chavarria**, Ph.D. (University of Nevada, Las Vegas) - special education, culturally responsive practices, and the intersections of race, disability, and family; **Y. Moreno**, Ph.D. (New Mexico State University) - low incidence disabilities, Autism, classroom management, and transition; **A.F. Osanloo**, Ph.D. (Arizona State University) – educational equity, educational leadership and policy, social justice leadership; critical race theory; **A. Owens**, Ph.D. (University of Texas at El Paso) - literacy/bi-literacy, educational equity in special education awareness for teachers and principals; **J.L. Parra**, Ed.D. (Pepperdine University) – online teaching & learning; technology integration; teacher/ faculty professional development, innovative & transformative education; **C. A. A. Pedraza**, Ph.D. (New Mexico State University) - Asians and Asian Americans in higher education, reflexivity and positionality, racial and ethnic identity construction, and master narratives; **A. Peel**, Ph.D. (University of Missouri) - Science education, computational thinking (CT) integration, and socio-scientific issues teaching and learning; **D. Rutledge**, Ph.D. (University of Colorado-Boulder) – learning technologies, international education, bilingual education/TESOL; **L. Salas**, Ph.D. (New Mexico State University) – bilingual and multicultural special education, early childhood special education; **R. Thomas**, Ph.D. (University of Missouri-Kansas City) - early childhood education, critical literacy; auto-ethnography; **M. Warr**, Ph.D. (Arizona State University) - teacher education, design, creativity, and technology; **S. Wiegand**, Ph.D. (University of Georgia) - autism spectrum disorder, early intervention, and professional development

Emeritus Professors

A.L. Armendáriz, Ph.D. (University of New Mexico - emeritus)– school administration, leadership development, organizational theory; **E. Cahill**, Ph.D. (Kent State University)– early childhood education, community education; **R. Chavez Chavez**, Ph.D. (New Mexico State University - emeritus)– curriculum theory, foundations, and multicultural education; **R. Dominguez**, Ph.D. (New Mexico State University - emeritus)- educational administration, higher education, community college administration, leadership development; **M.L. González**, Ph.D. (New Mexico State University)– leadership in public school administration, multicultural organizations; **L.V. Reyes**, Ph.D. (New Mexico State University - emeritus)– early childhood education and critical pedagogy; **C.T. Townley**, Ph.D. (University of Michigan - emeritus)– knowledge management, higher education; **M. Torres**, Ph.D. (University of New Mexico - emeritus)– critical theory, research as praxis; **K. Wiburg**, Ed.D. (International University - emeritus)– technology, learning design, mathematics education.

Early Childhood Education Courses

ECED 1110. Child Growth, Development, and Learning

3 Credits (3)

This basic course in the growth, development, and learning of young children, prenatal through age eight, provides students with the theoretical foundation for becoming competent early childhood professionals. The course includes knowledge of how young children grow, develop and learn. Major theories of child development are integrated with all domains of development, including biological-physical, social, cultural, emotional, cognitive and language. The adult's role in

supporting each child's growth, development and learning is emphasized. May be repeated up to 3 credits.

Learning Outcomes

1. Incorporate understanding of developmental stages, processes, and theories of growth, development, and learning into developmentally appropriate practice. A.one
2. Demonstrate knowledge of the interaction between maturation and environmental factors that influence physical, social, emotional, cognitive, and cultural domains in the healthy development of each child. A.two
3. Demonstrate knowledge of the significance of individual differences in development and learning.
4. Demonstrate knowledge of how certain differences may be associated with rate of development and developmental patterns associated with developmental delays and/or specific disabilities. A.three
5. Demonstrate knowledge of the similarities between children who are developing typically and those with diverse abilities. A.four
6. Demonstrate knowledge of the many functions that language serves in the cognitive, social, and emotional aspects of development in the formative years. A.seven
7. Demonstrate knowledge of the developmental sequence of language and literacy, including the influence of culture and home factors. A.eight
8. Demonstrate knowledge of how children acquire and use verbal, non-verbal, and alternative means of communication. A.nine
9. Demonstrate knowledge of the relationship among emotions, behaviors, and communication skills to assist children in identifying and expressing their feelings in appropriate ways. A.ten 1
10. Use appropriate guidance to support the development of self-regulatory capacities in young children. A.eleven

ECED 1115. Health, Safety, and Nutrition

2 Credits (2)

This course provides information related to standards and practices that promote children's physical and mental well-being sound nutritional practices, and maintenance of safe learning environments. It includes information for developing sound health and safety management procedures for indoor and outdoor learning environments for young children. The course examines the many scheduling factors that are important for children's total development, healthy nutrition, physical activity, and rest. May be repeated up to 2 credits.

Learning Outcomes

1. Recognize and respond to each child's physical health, intellectual and emotional well-being, and nutritional and safety needs. B.one
2. Articulate an understanding of indoor and outdoor learning environments that provide opportunities for children to put into practice healthy behaviors (physically, socially and emotionally). B.two
3. Use appropriate health appraisal and management procedures and makes referrals when necessary. B.three
4. Recognize signs of emotional distress, child abuse, and neglect in young children and use procedures appropriate to the situation, such as initiating discussions with families, referring to appropriate professionals, and, in cases of suspected abuse or neglect, reporting to designated authorities. B.four
5. Establish an environment that provides opportunities and reinforcement for children's practice of healthy behaviors that

promote appropriate nutrition and physical and psychological well-being. B.five

6. Provide a consistent daily schedule for rest/sleep, as developmentally appropriate. B.six
7. Implement health care and educational activities for children and families based on health and a.nutritional information that is responsive to diverse cultures. B.seven
8. Assist young children and their families, as individually appropriate, in developing decision-making and interpersonal skills that enable them to make healthy choices and establish health-promoting behaviors. B.eight

ECED 1120. Guiding Young Children

3 Credits (3)

This course explores various theories of child guidance and the practical applications of each. It provides developmentally appropriate methods for guiding children and effective strategies and suggestions for facilitating positive social interactions. Strategies for preventing challenging behaviors through the use of environment, routines and schedule will be presented Emphasis is placed on helping children become self-responsible, competent, independent, and cooperative learners and including families as part of the guidance approach. May be repeated up to 3 credits.

Learning Outcomes

1. Apply knowledge of cultural and linguistic diversity and the significance of socio-cultural and political contexts for development and learning and recognize that children are best understood in the contexts of family, culture and society. A.six
2. Demonstrate knowledge of the many functions that language serves in the cognitive, social, and emotional aspects of development in the formative years. A.seven
3. Demonstrate knowledge of the relationship among emotions, behaviors, and communication skills to assist children in identifying and expressing their feelings in appropriate ways. A.ten
4. Use appropriate guidance to support the development of self-regulatory capacities in young children. A.eleven
5. Recognize and respond to each child's physical health, intellectual and emotional well-being, and nutritional and safety needs. B.one
6. Demonstrate knowledge and skill in building positive, reciprocal relationships with families. C.one
7. Demonstrate knowledge of and respect for variations across cultures, in terms of family strengths, expectations, values, and child-rearing practices. C.four
8. Demonstrate the ability to incorporate the families' desires and goals for their children into classroom or intervention strategies. C.seven
9. Demonstrate knowledge and skills in developmentally appropriate guidance techniques and strategies that provide opportunities to assist children in development positive thoughts and feelings about themselves and others through cooperative interaction with peers and adults. E.three 1
10. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.seven 1
11. Demonstrate knowledge of assessment techniques, interpretation of assessment information in the application of this

ECED 1125. Assessment of Children and Evaluation of Programs

3 Credits (3)

This basic course familiarizes students with a variety of culturally appropriate assessment methods and instruments, including systematic observation of typically and non-typically developing children. The course addresses the development and use of formative and summative assessment and evaluation instruments to ensure comprehensive quality of the total environment for children, families, and the community. Students will develop skills for evaluating the assessment process and involving other teachers, professionals and families in the process. May be repeated up to 3 credits.

Prerequisite: ECED 1110 and (ENGL 1110G or ENGL 1110H or ENGL 1110M).

Learning Outcomes

1. Demonstrate ability to choose valid tools that are developmentally, culturally, and linguistically appropriate; use the tools correctly; make appropriate referrals; and interpret assessment results, with the goal of obtaining valid, useful information to inform practice and decision making. F.one
2. Demonstrate knowledge of maintaining appropriate records of children's development and behavior that safeguard confidentiality and privacy. F.two
3. Demonstrate knowledge of the educator's role as a participating member of the assessment process as described and mandated by state and federal regulations for Individual family service plans (IFSP) and individual education plans (IEP). F.three
4. Demonstrate understanding of the influences of environmental factors, cultural/linguistic differences, and diverse ways of learning on assessment outcomes. F.four
5. Involve the family and, as appropriate, other team members in assessing the child's development, strengths, and needs in order to set goals for the child. F.five
6. Articulate an understanding of the distinctions and definitions of assessment concepts (e.g., screening, diagnostic assessment, standardized, testing, accountability assessment). F.six
7. Apply understanding of assessment concepts toward selection of appropriate formal assessment measures, critiquing the limitations of inappropriate measures, and discussing assessment issues as part of interdisciplinary teams. F.seven
8. Articulate an understanding that responsible assessment is legally and ethically grounded and guided by sound professional. Its standards is collaborative and open with the goal of supporting diverse children and families. F.eight
9. Demonstrate knowledge of assessment techniques, interpretation of assessment information in the Application of this data to curriculum development and/or intervention planning. F.nine 1
10. Demonstrate knowledge of a variety of techniques and procedures to evaluate and modify program goals for young children and their families. F.ten 1
11. Demonstrate knowledge and use of program evaluation to ensure comprehensive quality of the total Environment for children, families, and the community. F.eleven 1
12. Use both self and collaborative evaluations as part of ongoing program evaluations. F.twelve

ECED 1130. Family and Community Collaboration 3 Credits (3)

This beginning course examines the involvement of families and communities from diverse cultural and linguistic backgrounds in early childhood programs. Ways to establish collaborative relationships with families in early childhood settings is discussed. Families' goals and

desires for their children will be supported through culturally responsive strategies. May be repeated up to 3 credits.

Prerequisite: ECED 1110 and (ENGL 1110G or ENGL 1110H or ENGL 1110M).

Learning Outcomes

1. Demonstrate knowledge and skill in building positive, reciprocal relationships with families. C.one
2. Articulate an understanding of a safe and welcoming environment for families and community members. C.two
3. Develop and maintain ongoing contact with families through a variety of communication strategies. C.three
4. Demonstrate knowledge of and respect for variations across cultures, in terms of family strengths, expectations, values, and child-rearing practices. C.four
5. Articulate understanding of the complexity and dynamics of family systems. C.five
6. Demonstrate understanding of the importance of families as the primary educator of their child. C.six
7. Involve families and community members in contributing to the learning environment. C.nine
8. Demonstrate ability to communicate to families the program's policies, procedures, and those procedural safeguards that are mandated by state and federal regulations. C.eleven
9. Apply knowledge of family theory and research to understand family and community characteristics including socioeconomic conditions; family structures, relationships, stressors, and supports (including the impact of having a child with diverse abilities); home language and ethnicity. C.twelve 1
10. Demonstrate knowledge of and skill to access community resources that assist families and contribute directly or indirectly to children's positive development such as mental health services, health care, adult education, English language instruction, and economic assistance. C.thirteen 1
11. Demonstrate effective written and oral communication skills when working with children, families, and early care, education, and family support professionals. E.fourteen 1
12. Demonstrate a commitment to leadership and advocacy for excellence in programs and services for young children and their families. G.six

ECED 2110. Professionalism

2 Credits (2)

This course provides a broad-based orientation to the field of early care and education. Early childhood history, philosophy, ethics and advocacy are introduced. Basic principles of early childhood systems are explored. Multiple perspectives on early care and education are introduced. Professional responsibilities such as cultural responsiveness and reflective practice are examined. May be repeated up to 2 credits.

Learning Outcomes

1. Recognize signs of emotional distress, child abuse, and neglect in young children and use procedures appropriate to the situation, such as initiating discussions with families, referring to appropriate professionals, and, in cases of suspected abuse or neglect, reporting to designated authorities. B.four
2. Demonstrate ability to communicate to families the program's policies, procedures, and those procedural safeguards that are mandated by state and federal regulations. C.eleven
3. Use both self and collaborative evaluations as part of ongoing program evaluations. F.twelve

4. Demonstrate ability to adhere to early childhood professional codes of ethical conduct and issues of confidentiality. G.one
5. Demonstrate awareness of federal, state, and local regulations, and public policies regarding programs and services for children birth through eight years of age. G.two
6. Demonstrate understanding of conditions of children, families, and professionals; the historical and current issues and trends; legal issues; and legislation and other public policies affecting children, families, and programs for young children and the early childhood profession. G.three
7. Demonstrate critical reflection of one's own professional and educational practices from community, state, national, and global perspectives. G.four
8. Demonstrate understanding of the early childhood profession, its multiple historical, philosophical, and social foundations, and how these foundations influence current thought and practice. G.five
9. Demonstrate knowledge in technology resources to engage in ongoing professional development. G.seven

ECED 2115. Introduction to Language, Literacy, and Reading
3 Credits (3)

This course is designed to prepare early childhood professionals for promoting children's emergent literacy and reading development. Through a developmental approach, the course addresses ways in which early childhood professionals can foster young children's oral language development, phonemic awareness, and literacy problem solving skills, fluency, vocabulary, and comprehension. . This course provides the foundation for early childhood professionals to become knowledgeable about literacy development in young children. Instructional approaches and theory-based and research based strategies to support the emergent literacy and reading skills of native speakers and English language learners will be presented. May be repeated up to 3 credits.

Prerequisite: ECED 1110 and (ENGL 1110G or ENGL 1110H, or ENGL 1110M).

Learning Outcomes

1. Demonstrate knowledge of the many functions that language serves in the cognitive, social, and emotional aspects of development in the formative years. A.seven
2. Demonstrate knowledge of the developmental sequence of language and literacy, including the influence of culture and home factors. A.eight
3. Demonstrate knowledge of how children acquire and use verbal, non-verbal, and alternative means of communication. A.nine
4. Develop partnerships with family members to promote early literacy in the home. C.eight
5. Establish partnerships with community members in promoting literacy. C.ten
6. Demonstrate knowledge of the reading and writing components of emergent literacy at each developmental level. D.four
7. Provide and use anti-bias materials/literature and experiences in all content areas of the curriculum. D.seven
8. Create and manage a literacy-rich environment that is responsive to each child's unique path of development. E.nine
9. Use a variety of strategies during adult-child and child-child interactions and facilitate communication and dialogue of expressive language and thought. E.ten 1
10. Demonstrate a variety of developmentally appropriate instructional strategies that facilitate the development of literacy skills. E.eleven

ECED 2120. Curriculum Development through Play Birth through Age 4 (PreK)

3 Credits (3)

The beginning curriculum course places play at the center of curriculum in developmentally appropriate early childhood programs. It addresses content that is relevant for children birth through age four in developmentally and culturally sensitive ways of integrating content into teaching and learning experiences. Information on adapting content areas to meet the needs of children with special needs and the development of IFSPs is included. Curriculum development in all areas, including literacy, numeracy, the arts, health, science, social skills, and adaptive learning for children, birth through age four, is emphasized. Consent of instructor required. May be repeated up to 3 credits.

Prerequisite: ECED 1110 and (ENGL 1110G or ENGL 1110H or ENGL 1110M).

Corequisite: ECED 2121.

Learning Outcomes

1. Use appropriate guidance to support the development of self-regulatory capacities in young children. A.eleven
2. Demonstrate knowledge of relevant content for young children and developmentally appropriate ways of integrating content into teaching and learning experiences for children from birth to four years of age. D.one
3. Demonstrate the integration of knowledge of how young children develop and learn with knowledge of the concepts, inquiry tools, and structure of content areas appropriate for different developmental levels. D.two
4. Adapt content to meet the needs of each child, including the development of individualized family service plans (IFSP) or individualized education plans (IEP) for children with diverse abilities through the team process with families and other team members. D.six
5. Demonstrate knowledge of varying program models and learning environments that meet the individual needs of all young children, including those with diverse abilities. E.one
6. Create environments that encourage active involvement, initiative, responsibility, and a growing sense of autonomy through the selection and use of materials and equipment that are suitable to individual learning, developmental levels, diverse abilities, and the language and cultures in New Mexico. E.two
7. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.four
8. Demonstrate understanding that each child's creative expression is unique and can be encouraged through diverse ways, including creative play. E.five
9. Plan blocks of uninterrupted time for children to persist at self-chosen activities, both indoors and outdoors. E.six 1
10. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.seven 1
11. Use and explain the rationale for developmentally appropriate methods that include play, small group projects, open-ended questioning, group discussion, problem solving, cooperative learning and inquiry experiences to help young children develop intellectual curiosity, solve problems, and make decisions. E.eight 1

12. Demonstrate a variety of developmentally appropriate instructional strategies that facilitate the development of emergent literacy skills. E.eleven 1
13. Demonstrate knowledge of assessment techniques, interpretation of assessment information in the application of this data to curriculum development of intervention planning. F.

ECED 2121. Curriculum Development through Play Birth through Age 4 (PreK) Practicum
2 Credits (2)

The beginning practicum course is a co-requisite with the course Curriculum Development through Play – Birth through Age 4. The field based component of this course will provide experiences that address curriculum content that is relevant for children birth through age four in developmentally and culturally sensitive ways of integrating content into teaching and learning experiences. Information on adapting content areas to meet the needs of children with special needs and the development of IFSPs is included. Curriculum development in all areas, including literacy, numeracy, the arts, health, science, social skills, and adaptive learning for children, birth through age four, is emphasized. Consent of instructor required. May be repeated up to 2 credits.

Prerequisite: ECED 1110 and (ENGL 1110G or ENGL 1110H or ENGL 1110M).

Corequisite: ECED 2120.

Learning Outcomes

1. Provide a variety of activities that facilitate development of the whole child in the following areas: Physical/motor, social/emotional, language/cognitive and adaptive/living skills. A.five
2. Develop, implement and evaluate an integrated curriculum that focuses on children's development and interests, using their language, home experiences, and cultural values. D.five
3. Provides and uses anti-bias materials and literature, and experiences in all content areas of the curriculum. D.seven
4. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.four
5. Demonstrate understanding that each child's creative expression is unique and can be encouraged through diverse ways, including creative play. E.five
6. Plan blocks of uninterrupted time for children to persist at self-chosen activities, both indoors and outdoors. E.six
7. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.seven
8. Use and explain the rationale for developmentally appropriate methods that include play, small group projects, open-ended questioning, group discussion, problem solving, cooperative learning and inquiry experiences to help young children develop intellectual curiosity, solve problems, and make decisions. E.eight

ECED 2130. Curriculum Development and Implementation Age 3 (PreK) through Grade 3
3 Credits (3)

The curriculum course focuses on developmentally appropriate curriculum content in early childhood programs, age 3 through third grade. Development and implementation of curriculum in all content areas, including literacy, numeracy, the arts, health and emotional wellness, science, motor and social skills, is emphasized. Information on adapting content areas to meet the needs of children with special needs

and the development of IEP's is included. Consent of instructor required. May be repeated up to 3 credits.

Prerequisite: ECED 1110, ECED 2120 and ECED 2121 (ENGL 1110G or ENGL 1110H or ENGL 1110M).

Corequisite: ECED 2131.

Learning Outcomes

1. Use appropriate guidance to support the development of self-regulatory capacities in young children. A.Eleven
2. Demonstrate the integration of knowledge of how young children develop and learn with knowledge of the concepts, inquiry tools, and structure of content areas appropriate for different developmental levels. D.Two
3. Demonstrate knowledge of what is important in each content area, why it is of value, and how it links with early and later understandings within and across areas. D.Three
4. Demonstrate knowledge of the language, reading and writing components of emergent literacy at each developmental level. D.Four
5. Adapt content to meet the needs of each child, including the development of individualized family service plans (IFSP) or individualized education plans (IEP) for children with diverse abilities through the team process with families and other team members. D.Six
6. Demonstrate knowledge of varying program models and learning environments that meet the individual needs of all young children, including those with diverse abilities. E.One
7. Create environments that encourage active involvement, initiative, responsibility, and a growing sense of autonomy through the selection and use of materials and equipment that are suitable to individual learning, developmental levels, diverse abilities, and the language and cultures in New Mexico. E.Two
8. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.Four
9. Demonstrate understanding that each child's creative expression is unique and can be encouraged through diverse ways, including creative play. E.Five 1
10. Plan blocks of uninterrupted time for children to persist at self-chosen activities, both indoors and outdoors. E.Six 1
11. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.Seven 1
12. Demonstrate knowledge of developmentally appropriate uses of technology, including assistive technology. E.Twelve 1
13. Demonstrate knowledge of assessment techniques, interpretation of assessment information in the application of this data to curriculum development of intervention planning. F.Nine

ECED 2131. Curriculum Development and Implementation Age 3 (PreK) through Grade 3 Practicum
2 Credits (2)

The beginning practicum course is a co-requisite with the course Curriculum Development and Implementation: Age 3 through Grade 3. The field based component of this course will provide experiences that address developmentally appropriate curriculum content in early childhood programs, age 3 through third grade. Development and implementation of curriculum in all content areas, including literacy, numeracy, the arts, health and emotional wellness, science, motor and social skills is emphasized. Information on adapting content areas to

meet the needs of children with special needs and the development of IEPs is included. Consent of instructor required. May be repeated up to 2 credits.

Prerequisite: ECED 1110 (ENGL 1110G or ENGL 1110H or ENGL 1110M), ECED 2120, and ECED 2121.

Corequisite: ECED 2130.

Learning Outcomes

1. Provide a variety of activities that facilitate development of the whole child in the following areas: Physical/motor, social/emotional, language/cognitive and adaptive/living skills. A.Five
2. Develop, implement and evaluate an integrated curriculum that focuses on children's development and interests, using their language, home experiences, and cultural values. D.Five
3. Provides and uses anti-bias materials and literature, and experiences in all content areas of the curriculum. D.Seven
4. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.Four
5. Demonstrate understanding that each child's creative expression is unique and can be encouraged through diverse ways, including creative play. E.Five
6. Plan blocks of uninterrupted time for children to persist at self-chosen activities, both indoors and outdoors. E.Six
7. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.Seven
8. Use and explain the rationale for developmentally appropriate methods that include play, small group projects, open-ended questioning, group discussion, problem solving, cooperative learning and inquiry experiences to help young children develop intellectual curiosity, solve problems, and make decisions. E.Eight

ECED 2140. Effective Program Development for Diverse Learners and their Families

3 Credits (3)

This course addresses the role of a director/administrator in the implementation of family-centered programming that includes individually appropriate and culturally responsive curriculum in a healthy and safe learning environment for all children and their families. May be repeated up to 3 credits.

Learning Outcomes

1. Describe important aspects of leadership that an administrator in an early childhood setting must demonstrate.
2. Identify and describe ways in which classrooms can have a multicultural environment.
3. Observe a classroom and identify, using photographs good practice with classroom environment.
4. Describe important aspects of a good early childhood curriculum
5. Describe how culture and socioeconomic factors influence classroom environment.

ECED 2141. Effective Program Development for Diverse Learners and their Families Practicum

2 Credits (2)

Provides opportunities for students to apply knowledge gained from Curriculum for Diverse Learners and their Families in a practicum setting. Consent of instructor required. Restricted to ECED majors. May be repeated up to 2 credits.

Corequisite: ECED 2140.

Learning Outcomes

1. Describe the requirements to maintain and enhance the physical and mental health, safety, and nutrition components of a program: Demonstrate knowledge of facility management to include evaluation, maintenance, security, and meeting applicable codes; Demonstrate knowledge of planning for appropriate indoor and outdoor environments; Identify ways to support early childhood educators in the selection of appropriate materials and equipment for the environment; Demonstrate knowledge of the impact of the environment on children's learning and development.
2. Demonstrate knowledge of early care and education curriculum that is individually, culturally, linguistically, and developmentally responsive: Describe a variety of curriculum goals and teaching strategies; Describe the importance of ongoing curriculum assessment and planning, and collaboration with teachers, families and community entities; Identify ways to support early childhood educators in curriculum assessment and planning.
3. Demonstrate knowledge of family/community involvement in effective program development: Describe the importance of supporting families as partners in early care and education program development; Describe both informal and formal communication systems with families that encourage information sharing and joint decision making; Identify strategies for resolving conflicts and supporting families with diverse backgrounds and parenting expectations; Identify the range of family needs including transitional periods; Identify within the community the network to support families with their special needs; Describe a "family friendly" inclusive philosophy
4. Demonstrate knowledge of a director's role as an educational leader in an inclusive setting: Describe what a director does in supporting the instructional component of the program for children, staff, and families; Identify resources that a director might use to keep current with information relating to the instructional component of the program; Describe ways to involve teachers in instructional decision making.

ECED 2215. Program Management

3 Credits (3)

This course emphasizes the technical knowledge necessary to develop and maintain an effective early care and education program. It focuses on sound financial management and vision, the laws and legal issues that affect programs, and state and national standards such as accreditation. Consent of instructor required. May be repeated up to 3 credits.

Learning Outcomes

1. Develop a comprehensive program philosophy.
2. Demonstrate the ability to develop systems that are effective for quality program operation.
3. Create a program budget and understand the Income and Expense sides and what affects each part.
4. Model best practices that integrate various leadership styles.

ECED 2280. Professional Relationships

3 Credits (3)

This course addresses staff relations that will foster diverse professional relationships with families, communities and boards. Topics of staff recruitment, retention, support and supervision will lay the foundation for positive personnel, family and community relationships. Consent of instructor required. May be repeated up to 3 credits.

Corequisite: ECED 2281.

Learning Outcomes

1. Interview an administrator and write a paper describing personnel management, staff support, supervision, and professional development.
2. Identify and describe ethical and legal requirements in maintaining a professional relationship with subordinates, the community, clients, and fellow administrators.
3. Identify and describe technologies which may be used in an early childhood setting.
4. Identify and describe legal and ethical considerations in the employment of others.

ECED 2281. Professional Relationships Practicum**2 Credits (2)**

Practical experience in the development of staff relationship that will foster professional relationships with families, communities and boards. Issues of staff recruitment, retention, support and supervision will lay a foundation for positive personnel management. Consent of instructor required. Restricted to ECED majors.

Corequisite(s): ECED 2280.

Learning Outcomes

1. Demonstrate knowledge of personnel management, staff support, supervision, and professional development within a diverse and inclusive organization: Describe methods for recruiting and retaining a diverse staff; Describe job descriptions for each position; Review a sampling of personnel policies and procedures; Review a variety of staff handbooks; Explain why on-going system of supervision should include regular meetings for professional goal setting, self-assessment, and feedback; Review program needs to effectively manage the work of the program including scheduling, covering ratios, initial orientation, in-service, staff meeting, etc.
2. Demonstrate an awareness of appropriate communication and collaboration skills: Improve written and oral communication skills; Describe strategies for resolving conflicts; Explain how to promote consensus building as a decision making process.
3. Demonstrate knowledge that promotes effective professional relationships with families, communities, and board members: Describe methods for demonstrating respect, understanding, and appreciation for all people; Identify the aspects of culture that facilitate relationship building among people; Describe how to build a common vision and develop long range program plans with parents, staff, board, and the community; Communicate program goals to visitors, prospective parents, volunteers, and board members; Describe how public relations and marketing strategies can impact programs; Review assessment tools that identify needs for early care, education and family support; Develop a personal professional development plan; Describe methods to work effectively with a board and advisory group.
4. Demonstrate knowledge of technology uses and skill acquisition: Describe how to use technology resources to engage in ongoing professional development and lifelong learning; Describe how you will use technology to communicate and collaborate in your leadership role

ECED 3110. Research in Child, Growth, Development and Learning**3 Credits (3)**

This advanced course in child growth, development, and learning builds upon the foundational material covered in the basic course in child growth, development, and learning. An integration of major theories of child development is provided by focusing on contemporary research in all aspects of development, including bio-ecological, social-affective,

cognitive, language, and the methodological aspects of research in early childhood development and education. Restricted to ECED majors (TEP and Zero-to-Four) and ECED minors. May be repeated up to 3 credits.

Prerequisite: ECED 1110;.

Learning Outcomes

1. Incorporate understanding of developmental stages, processes and theories of growth, development, and learning into developmentally appropriate practice. (I.A)
2. Demonstrate knowledge of the interaction between maturation and environmental factors that influence physical, social, emotional, cognitive, and cultural domains in the healthy development of each child

ECED 3120. Family, Language, and Culture**3 Credits (3)**

This course analyzes the interrelationships between family, language, and culture as connected to children's development and learning. In this course, language is understood as a human activity and higher mental process which build on the children's families, community, and cultural background. Restricted to: ECED majors (TEP and Zero-to-Four) and ECED minors. May be repeated up to 3 credits.

Prerequisite: ECED 1130.

Learning Outcomes

1. Apply knowledge of cultural and linguistic diversity and the significance of socio-cultural and political contexts for development and learning and recognize that children are best understood in the contexts of family, culture, and society. A.6
2. Demonstrate knowledge of the many functions that language serves in the cognitive, social, and emotional aspects of development in the formative years. A.7

ECED 3210. Emergent Literacy**3 Credits (3)**

This advanced course is designed to prepare early childhood professionals to study literacy development, specifically oral language, writing and reading. This course focuses on children from birth through age 4, including children with special needs. Through a developmental approach, the course addresses: 1) recent theory and research that translates into practical strategies, assessment materials and preparation of rich literacy environments, 2) the socio-cultural contexts in which children develop literacy, 3) culturally, linguistically and developmentally appropriate literacy curricula, 4) processes used to determine the appropriateness of various literacy strategies, 5) assessment, evaluation, and accountability and 5) literacy leadership. Restricted to: Zero-to-Four majors. May be repeated up to 3 credits.

Prerequisite: ECED 2115.

Learning Outcomes

1. Demonstrate knowledge of the developmental sequence of language and literacy, including the influence of culture and home factors. A. eight
2. Knowledge of how children acquire and use verbal, non-verbal and alternative means of communication. A. nine
3. Develop partnerships with family members to promote early literacy in the home. C. eight
4. Establish partnerships with community members in promoting literacy. C.ten
5. Knowledge of the language, reading and writing components of emergent literacy at each developmental level. D. four
6. Create and manage a literacy-rich environment that is responsive to each child's unique path of development. E. nine

7. Use a variety of language strategies during adult-child and child-child interactions and facilitate dialogue of expressive language and thought. E. ten
8. A variety of developmentally appropriate instructional strategies that facilitate the development of emergent literacy skills. E. eleven
9. Demonstrate and facilitate conceptual understanding of family roles in the development of their infant and toddler, including support for family acquisition of knowledge concerning infant and toddler's growth, learning and development and cultural and linguistic diversity represented within the home setting. H. one 1
10. Apply theoretical knowledge and ability to provide screening and assessment unique for infants and toddlers. H. two 1
11. Articulate and demonstrate conceptual understanding of respectful, responsive, and reciprocal interactions that serve as basis for infant/toddler curriculum and learning environments. H. five 1
12. An understanding and applications of flexible teaching approaches that span a continuum from child-initiated to adult-directed and from free exploration to scaffolded support or teacher modeling. I. three 1
13. Link child characteristics, needs, and interests with informal opportunities to build children's language, concept development, and skills. I. five 1
14. Establish priorities for high-quality and meaningful language and pre-literacy experiences across the developmental continuum, using language, pre-reading and pre-writing to facilitate skill development while strengthening children's cultural identity. I. eleven 1
15. Knowledge of second- language acquisition and bilingualism including the diversity of home language environments. I. twelve
Conceptual knowledge of the principles and standards derived from professional organizations for curriculum decision- making. I. fifteen

ECED 3996. Special Topics**1-3 Credits (1-3)**

Each course will be identified by a qualifying subtitle. A maximum of 3 credits in any one semester and a grand total of 6 credits. May be repeated up to 6 credits.

Learning Outcomes

1. Engage in the study of an ECED topic.

ECED 4110. Young Children with Diverse Abilities**3 Credits (3)**

Addresses competencies for working with young children with exceptionalities, ages three-eight, and their families. Public school, private school, Head Start and other models are included. Taught with ECED 5110. Restricted to ECED majors (TEP and Zero-to-Four) and ECED Minors. May be repeated up to 3 credits.

Prerequisite: SPED 3105.

Corequisite: ECED 4120.

Learning Outcomes

1. Demonstrate knowledge of the significance of individual differences in development and learning.
2. Demonstrate knowledge of how certain differences may be associated with rate of development and developmental patterns associated with developmental delays or specific disabilities.
3. Demonstrate knowledge of the similarities between children who are developing typically and those with diverse disabilities.

ECED 4120. Assessment of Young Children, Birth-Eight**3 Credits (3)**

Covers instruments and procedures for assessing young children and their families in order to determine atypical development. Screening,

diagnosis, program planning, placement and evaluation issues are covered. Restricted to ECED Majors (TEP and Zero-to-Four) and ECED Minors. May be repeated up to 3 credits.

Prerequisite: SPED 3105.

Corequisite: ECED 4110.

Learning Outcomes

1. Understand the technical aspects of early childhood assessments
2. Conduct and utilize assessments
3. Collaborate with other professionals

ECED 4210. Integrated Early Childhood Curriculum**4 Credits (4)**

This advanced course focuses on developmentally appropriate content, learning environments, and curriculum implementation for children birth through age 4. It emphasizes integration of content areas (the arts, literacy, math, health/emotional wellness, science, social studies, motor, and adaptive living skills) and the development of rich learning environments for infants, toddlers, and preschool children. Restricted to: Zero-to-Four majors. May be repeated up to 4 credits.

Prerequisite: ECED 1115, ECED 2120, ECED 2121, ECED 2130, ECED 2131, ECED 2110, and ECED 1120.

Corequisite: ECED 4211.

Learning Outcomes

1. Develop, implement and evaluate an integrated curriculum that focuses on children's development and interests, using their language, home experiences, and cultural values. D.five
2. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.four

ECED 4211. Integrated Curriculum Practicum**2 Credits (2)**

The advanced practicum course is a field based course that will provide opportunities for the integration of content areas (the arts, literacy, math, health/emotional wellness, science, social studies, motor, and adaptive living skills) and the development of rich learning environments for infants, toddlers, and preschool children. Restricted to Zero-to-Four majors. May be repeated up to 2 credits.

Prerequisite: ECED 1115, ECED 2120, ECED 2121, ECED 2130, ECED 2131, ECED 2110, ECED 1120.

Corequisite: ECED 4210.

Learning Outcomes

1. Develop, implement and evaluate an integrated curriculum that focuses on children's development and interests, using their language, home experiences, and cultural values. D.five
2. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.four
3. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.seven
4. Use and explain the rationale for developmentally appropriate methods that include play, small group projects, open-ended questioning, group discussion, problem solving, cooperative learning and inquiry experiences to help young children develop intellectual curiosity, solve problems, and make decisions. E.eight
5. Demonstrate an understanding and application of flexible teaching approaches that span a continuum from child-initiated to adult-

directed and from free exploration to scaffolded support or teacher modeling. I.three

ECED 4220. Advanced Caregiving for Infants and Toddlers **3 Credits (3)**

The advanced field-based course is intended to assist students to define and implement advanced elements of quality programming for all infants, toddlers in safe, healthy, responsive caring environments. The experiences in the approved setting will support strong nurturing relationships, cultural competence, diverse learning needs and styles of every child, appropriate guidance techniques and partnership with the families, cultures, and community represented. Students are assisted through the course in advancing their ability to observe, discuss, and implement elements of quality programming for infants and toddlers in home, small-group or whole-group care situations. Restricted to: Zero-to-Four majors. May be repeated up to 3 credits.

Prerequisite: ECED 2120 and ECED 2121; ECED 2130 and ECED 2131.

Learning Outcomes

1. The primary goal of your participation in this course is to develop an increased understanding of infant/toddler (Birth through age three) development and developmentally appropriate care/education practices.

ECED 4250. Teaching and Learning Math and Science **4 Credits (4)**

Standards, principles, and practices in teaching mathematics and science to young children in preschool through grade 3. An emphasis is placed on developing a content-rich integrated math and science curriculum that focuses on children's development and interests, includes appropriate content, processes, environment, and materials with an emphasis on problem-solving as the major means of constructing basic concepts. Field experience required. Restricted to: TEP-ECED majors. May be repeated up to 4 credits.

Corequisite: ECED 4310, ECED 4260, ECED 4320.

Learning Outcomes

1. The arithmetic of real numbers and their subsets of rational numbers, integers, and whole numbers including a large repertoire of interpretations of the four basic operations and ways they can be applied, and an understanding of place value and its implications for ordering numbers and estimation. H.two.a.i
2. Three dimensional geometry based on the concept of distance, and two dimensional geometry as a method of drawing plans and representing three dimensional objects H.two.a.ii
3. Measurement of length, perimeter, area, time, weights, and temperature H.two.a.iii
4. Handling money problems such as cost and unit price. H two.a.iv
5. Demonstrate understanding and skill in the constructions of solids, measurements of their volumes and surface areas, drawing their projections, and making plans for their construction; defining relevant variables and writing formulas describing their relationships in problem-solving activities; and using measurement tools and appropriate techniques for recording data and displaying results. H two.b
6. Facilitate curriculum with open-ended activities that promote children's expansion of the material learned, and in which children learn to use a variety of mathematical skills and concepts, including problem solving, reasoning, and logic. H.two.c
7. Provide opportunities for children to learn how to use tools, technology, and manipulatives in problem solving. H two.d
8. Establish a classroom environment of respect for cultural diversity and gender equity in which all children develop skills in

communicating, discussing, and displaying mathematical ideas. H two.e

9. Demonstrate understanding and apply the fundamental concepts in the subject matter of science including physical, life, and earth and space sciences as well as concepts in science and technology, science in personal and social perspectives, the history and nature of science, the unifying concepts of science, and the inquiry process scientists use in discovery of new knowledge to build a base for scientific inquiry. H two.a 1
10. Apply the scientific method to develop children's abilities to identify and communicate a problem, and to design, implement, and evaluate a solution. H three.b 1
11. Demonstrate the ability to integrate a variety of technologies into planned science activities. H three.c 1
12. Establish a classroom environment of respect for cultural diversity and gender equity where all children participate fully in science learning. H three.d Support play in young children's learning and development from age Pre-K-grade three. I.six 1
13. Demonstrate sound knowledge and skills in using technology as a teaching and learning tool. I.seven 1
14. Demonstrate the ability to analyze and critique early childhood curriculum experiences in terms of the relationship of the experiences to the research base and professional standards. I.nine 1
15. Facilitate family involvement so that families are engaged with curriculum planning, assessing of children's learning, and planning for children's transitions to new programs. I.twelve 1
16. Demonstrate conceptual knowledge of the principles and standards derived from professional content organizations (zero to three, NAEYC, DEC) for curriculum-decision making. I.thirteen 1
17. Demonstrate the use of reflective practice. I.fourteen

ECED 4260. Teaching and Learning Social Studies, Fine Arts and Movement **3 Credits (3)**

The course focuses on the aims, scope, and integration of methods of teaching social studies, the fine arts and movement across the curriculum. This course emphasizes an integrated approach to teaching the what and why of social studies; assessing student learning; planning units, lessons, and activities; effective instructional strategies; and knowledge of social studies content. Concepts of expressive art include the visual arts, music, movement and drama. Restricted to: TEP-ECED majors. May be repeated up to 3 credits.

Corequisites: ECED 4310, ECED 4250, ECED 4320.

Learning Outcomes

1. Demonstrate an understanding of the principles of teaching and learning processes that underscore social studies concepts and can translate these into meaningful learning activities focusing on inquiry, authenticity, and collaboration. H.four.a
2. Demonstrate understanding that social studies encompass history, geography, anthropology, archeology, economics, political science, psychology, sociology, and the interdisciplinary relationship of all facets of social studies. H.four.b
3. Demonstrate understanding that the definition of social studies requires that children be socially aware of and are active participants in local, state, national, and global issues; and that children recognize and respect diverse local and global perspectives concerning cultures other than their own. H.four.c
4. Implement a variety of teaching strategies to assist children to use multiple resources including primary (e.g., documents, artifacts/regalia, direct observation, human resources, personal background)

and secondary (e.g., books, newspapers, internet) as part of the inquiry/research process. H.four.d

5. Create curriculum experiences that provide opportunities for children to appreciate the historical development of democratic values, institutions, nations, and cultures. H.four.e
6. Demonstrate the ability to plan for and engage children in activities that require them to formulate, analyze, synthesize, and critique issues by using well-reasoned, clearly supported arguments, policies, and positions. H.four.f
7. Demonstrate the ability to plan for and engage children in the presentation of social studies knowledge using a variety of sign systems including writing, charts, graphs, maps, art, music, drama, dance, and technology. H.four.g
8. Demonstrate an understanding and implementation of arts activities such as history, art making, appreciation, and criticism through dance, music, theater, and the visual arts, appropriate to young children's developmental levels interests. H.five.
9. Demonstrate knowledge of the distinctions, connections, and integration between arts disciplines and arts experiences and encourages study and active participation that leads to skill development and appreciation. H.five.b 1
10. Facilitate curriculum in which children communicate at a basic level in the four (4) art disciplines of dance, music, theater, and visual arts, including knowledge and skills in the use of basic vocabularies, materials, tools, techniques, and thinking processes of each discipline. H.five.c 1
11. Create a classroom environment with exemplary works of art from a variety of cultures and historical periods and provide opportunities for students to discuss and respond to them. H.five.d 1
12. Demonstrate an understanding of motor skill development in young children and apply knowledge of age and developmentally appropriate psychomotor and cognitive activities. H.five.e 1
13. Create and use appropriate instructional cues and prompts for motor skills, rhythms, and physical activity. H.five.f 1
14. Apply an understanding of child development knowledge coupled with child performance data to make informed instructional decisions. H.five.g 1
15. Support play in young children's learning and development from age Pre-K - grade three. I.six 1
16. Demonstrate sound knowledge and skills in using technology as a teaching and learning tool. I.seven 1
17. Demonstrate the ability to analyze and critique early childhood curriculum experiences in terms of the relationship of the experiences to the research base and professional standards. I.nine 1
18. Facilitate family involvement so that families are engaged with curriculum planning, assessing of children's learning, and planning for children's transitions to new programs. I.twelve 1
19. Demonstrate conceptual knowledge of the principles and standards derived from 139 professional content organizations (zero to three, NAEYC, DEC) for curriculum decision making. I.thirteen 2
20. Demonstrate the use of reflective practice. I.fourteen

ECED 4310. Early Primary Field Placement 2 Credits (4P)

The field practicum is a co-requisite course with Teaching and Learning Reading and Writing; Teaching and Learning Math and Science; Teaching and Learning Social Studies, Fine Arts and Movement. The field based component will provide experiences that address curriculum content and practice teaching that is relevant for early primary children in

developmentally and culturally sensitive ways. Graded: S/U Grading (S/U, Audit). Restricted to: TEP-ECED majors. May be repeated up to 2 credits.

Corequisite: ECED 4250, ECED 4260, ECED 4320.

Learning Outcomes

1. Demonstrate the ability to work collaboratively with educational assistants, volunteers, and others to individualize the curriculum and to meet program goals.
2. Demonstrate skill in collaboration with professionals from other disciplines (e.g., mental health, psychology, speech and language) when planning curriculum and teaching strategies for young children with diverse abilities.
3. Demonstrate an understanding and application of flexible teaching approaches that span a continuum from child-initiated to an adult-directed and from free exploration to scaffolded support or teacher modeling.
4. Apply an understanding of young children's need for balance, order, depth, variety, and challenge through curriculum planning, routines, and scheduling (e.g., daily, weekly, and longer-term).
5. Link child characteristics, needs, and interests with informal opportunities to build children's language, concept development, and skills.
6. Apply knowledge to create environments that enrich and extend children's play including intervention strategies (i.e., questioning), respect of cultural diversity and gender equity. Support play in young children's learning and development from age Pre-K - grade three.
7. Demonstrate the ability to promote positive social interactions and engage children in learning activities while actively working to increase social and emotional competence of all children.
8. Demonstrate the ability to analyze and critique early childhood curriculum experiences in terms of the relationship of the experiences to the research base and professional standards.
9. Facilitate family involvement so that families are engaged with curriculum planning, assessing of children's learning, and planning for children's transitions to new programs. 1
10. Demonstrate conceptual knowledge of the principles and standards derived from professional content organizations (zero to three, NAEYC, DEC) for curriculum-decision making. Demonstrate the use of reflective practice.

ECED 4320. Teaching and Learning Reading and Writing 3 Credits (3)

The foundation of this course is on understanding the reading process including the relationship between reading, writing, listening, and speaking; individual needs and abilities in reading instruction; and how to organize classrooms and select materials to support literacy development. Concepts of phonemic awareness, phonic instruction, vocabulary development, fluency and comprehension are integrated with the developmentally appropriate use of authentic assessment techniques, language/literacy immersion, and multicultural children's literature. Restricted to: TEP-ECED majors. May be repeated up to 3 credits.

Prerequisite: ECED 2115.

Corequisite: ECED 4310, ECED 4250, ECED 4260.

Learning Outcomes

1. This course will focus on the following New Mexico early childhood teacher education competencies and New Mexico State University's conceptual framework for teacher preparation.
2. Articulate an understanding of developmental theories and processes and their implications for appropriate methods of teaching reading in the K-third grade classroom.

3. Demonstrate knowledge of various instructional approaches and strategies for promoting literacy within an integrated curriculum framework.
4. Provide and use anti-bias literacy materials and experiences, including primary language materials.
5. Plan appropriate whole group, small group, and individual activities that include appropriate accommodations for working with children with special needs.
6. Understand and articulate the concept of emergent literacy and the processes toward becoming an authentic reader and writer.
7. Understand the role of family in literacy development.
8. Respect and promote the use of the child's home language for learning.
9. Demonstrate knowledge of, and use effectively, a wide range of literacy assessment strategies and instruments to determine a child's strengths and areas of need. 1
10. Engage in reflection on current theoretical perspectives on the reading process and the role of print literacy in schools and our society. Our focus will be on rigorous inquiry about literacy education in U.S. schools and methods of literacy instruction. We will be examining how invisible cultural, historical, political, and social contexts have influenced and continue to influence teachers and schools. In your observations of reading and literacy education in your field experience it is critical that you become aware of these subtle but pervasive influences. To achieve this, we will focus our inquiry this semester on the following questions: What is literacy in early childhood education? ; Is that different from literacy outside of school?; How do young children use and pursue literacy? How do I promote literacy for all the children with whom I work?

ECED 4810. Student Teaching/Seminar Early Childhood

3 Credits (3)

Discussion of early childhood school issues related to student teaching. May be repeated up to 3 credits.

Learning Outcomes

1. Synthesis of knowledge and skills appropriate to teaching in PreK - 3rd grade educational settings.

ECED 4996. Topics

3 Credits (3)

Offered under various subtitles which indicate the subject matter to be covered. May be repeated up to 9 credits.

Learning Outcomes

1. Engage in the study of an ECED topic.

ECED 4998. Field Experience (Infants Pre-K)

1 Credit (1)

Supervised field experiences in early childhood settings: infants, toddlers, and pre-K programs. May be repeated up to 1 credit.

Learning Outcomes

1. Engage in an ECED field experience.

ECED 5110. Working with Young Children with Special Needs, Ages 3-8

3 Credits (3)

Addresses competencies for working with young children with exceptionalities, ages three eight, and their families. Public school, private school, Head Start and other models are included. Taught with ECED 4110 with differentiated assignments for graduate students. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate knowledge of the significance of individual differences in development and learning.
2. Demonstrate knowledge of how certain differences may be associated with rate of development and developmental patterns associated with developmental delays or specific disabilities. A.three
3. Demonstrate knowledge of the similarities between children who are developing typically and those with diverse disabilities. A.four
4. Demonstrate knowledge of how children acquire and use verbal, non-verbal, and alternative means of communication. A.nine
5. Demonstrate understanding of the importance of families as the primary educator of their child. C.six
6. Demonstrate the ability to incorporate the families' desires and goals for their children into classroom or intervention strategies. C.seven
7. Demonstrate ability to communicate to families the program's policies, procedures, and those procedural safeguards that are mandated by state and federal regulations. C.eleven
8. Apply knowledge of family theory and research to understand family and community characteristics including socioeconomic conditions, family structures, relationships, stressors, and supports (including the impact of having a child with divers abilities), home language, and ethnicity. C.tweleve
9. Adapt content to meet the needs of each child, including the development of individualized family service programs (IFSP) or individualized education programs (IEP) for children with diverse abilities through the team process with families and other team members. D.six 1
10. Create environments that encourage active involvement, initiative, responsibility, and a growing sense of autonomy through the selection and use of materials and equipment that are suitable to individual learning, developmental levels, diverse abilities, and the language and cultures in New Mexico. E.two 1
11. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.four 1
12. Demonstrate knowledge of developmentally appropriate uses of technology, including assistive technology. E.tweleve 1
13. Demonstrate knowledge of maintaining appropriate records of children's development and behavior that safeguards confidentiality and privacy. F.two 1
14. Demonstrate knowledge of the educator's role as a participating member of the assessment process as described and mandated by state and federal regulations for individual family service programs (IFSP) and individual service programs (IEP). F.three 1
15. Articulate an understanding that responsible assessment is legally and ethically grounded and guided by sound professional standards. It is collaborative and open with the goal of supporting diverse children and families. F.eight 1
16. Demonstrate knowledge of a variety of techniques and procedures to evaluate and modify program goals for young children and their families. F.ten 1
17. Demonstrate ability to work collaboratively as an advocate with families and IFSP and IEP team members to provide developmentally supportive environments. H.three 1
18. Demonstrate content knowledge (e.g., art, music, movement, science, math, literacy, social studies, and technology) and familiarity with a wide variety of resources in academic disciplines and apply that

knowledge in the development, implementation, and evaluation of curriculum. I.one

ECED 5120. Assessment of Young Children, Birth Eight
3 Credits (3)

Covers instruments and procedures for assessing young children and their families in order to determine atypical development. Screening, diagnosis, program planning, placement and evaluation issues are covered. Same as ECED 4120. May be repeated up to 3 credits.

Prerequisite: ECED 5110 or consent of instructor.

Learning Outcomes

1. UNDERSTAND THE TECHNICAL ASPECTS OF EARLY CHILDHOOD ASSESSMENTS-Define and understand the benefits and concerns of assessment, types of assessment, and best practices for early childhood assessments and their targeted populations.
2. CONDUCT AND UTILIZE ASSESSMENTS- Demonstrate proficiency in using a variety of assessment tools to: screen children; assess current skill levels; determine strengths and weaknesses; supplement assessments when warranted; and incorporate data for instructional plans.
3. COLLABORATE WITH OTHER PROFESSIONALS – Utilize transdisciplinary practices with all vested participants when conducting screenings, evaluations, and making recommendations.
4. COLLABORATE WITH FAMILIES- Demonstrate proficiency in obtaining information from parents about their expectations, needs, and priorities when assessing and making early childhood instructional recommendations.
5. EVALUATE PROGRAMS- Implement best practices in program design, advocate for children's services, and articulate/safeguard student IFSP/IEPs according to each child's developmental needs.

ECED 5130. Working with Parents of Young Children
3 Credits (3)

Techniques for setting up home and classroom visitations, communicating with parents, and establishing special programs. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate a deep understanding of the theory, philosophy and goals of multicultural education
2. Develop a knowledge base of the essential concepts to address language, culture, class, gender, and exceptionalities within the theoretical constructs of multicultural education.
3. Develop a personal and social astuteness to the characteristics of culturally, linguistically, and ethnically distinct students while keeping in mind the uniqueness of their persona within a contextually rich school and community milieu.
4. Explore multicultural education strategies that well enhance one's future pedagogical repertoire.
5. Provide learning opportunities to develop multicultural and cross-cultural perspectives for application into future learning environments.
6. Develop an active sense of commitment to collaborative efforts in order to best meet our goals as committed learners and educators who will teach with and facilitate multicultural curriculum in a variety of pluralistic settings.
7. Develop an array of perspective skills in order to accommodate the dynamics of culture change, pluralism, cultural sensitivity, and cultural democracy that occur within classrooms.

8. Demonstrate growth in the dispositions identified in the "Teacher Candidate Disposition" document.

ECED 5210. Leadership and Advocacy in Early Childhood
3 Credits (3)

The course explores a multidisciplinary approach to early childhood educational leadership, advocacy and change. The course focuses on leadership in its many forms: in teaching, administration, policy, research, and ethics. In addition, we will examine the theory and practice of change to gain an understanding of what contributes to advocating for policy and community change. Students will gain a deeper understanding of themselves as leaders, and ways to improve early education to promote social justice in programs and systems serving families and young children. May be repeated up to 3 credits.

Learning Outcomes

1. Examine and evaluate a multidisciplinary approach to early childhood educational leadership.
2. Examine leadership in its many forms: in teaching, administration, policy, research, and ethics.
3. Utilize theory and practice of advocacy leadership for policy and community change.
4. Develop a statement of leadership philosophy.

ECED 5220. Play in the Early Childhood Curriculum
3 Credits (3)

Advanced exploration of the development of curriculum based on children's play. A means of exploring and learning the patterns of human living, communications, and experiences congruous with developing interests and capacities. Restricted to majors. May be repeated up to 3 credits.

Learning Outcomes

1. Incorporate understanding of play stages, development, and theories of play in early childhood education into developmentally appropriate practice. (I.A)
2. Demonstrate knowledge of the different types of play (sociodramatic, constructive, rough tumble, games with rule) and their uses in classrooms to promote learning. (I.B)
3. Demonstrate knowledge of the significance of guiding young children's play to enhance learning in early childhood classrooms. (I.C)
4. Demonstrate knowledge of social influences on play and young children's development of gender identity. Provide and use anti-bias materials and experiences in all areas of the curriculum. (I.D)
5. Provide a variety of play activities that facilitate development of the whole child in all areas, physical/motor, social/emotional, language/cognitive and adaptive/living skills. (I.E)
6. Apply knowledge of cultural and play diversity and the significance of socio-cultural political contexts for development and learning and recognize that children are best understood in the contexts of family, culture, and society. (I.F)
7. Demonstrate knowledge of the many functions play serves in the cognitive, social, and emotional aspects of development in the formative years.
8. Develop and demonstrate skills in selecting quality play activities for young children. (I.G)
9. Demonstrate knowledge of the developmental sequences of play development, including the influence of culture and home factors. (I.H) 1
10. Demonstrate knowledge of how young children acquire and use technology play to promote learning. (I.I) 1

11. Demonstrate knowledge of how play is used to support standards and assessment in early childhood education. (I.J)

ECED 5230. Curriculum in Early Childhood Education

3 Credits (3)

Development and implementation of curriculum and materials for teaching young children. May be repeated up to 3 credits.

Learning Outcomes

1. Understand and implement appropriate ECED curriculum.

ECED 5310. Issues in Early Childhood Education

3 Credits (3)

Examines current trends and problems through readings of theoretical, empirical, and applied literature. May be repeated up to 3 credits.

Learning Outcomes

1. Examine the foundations of literacy development in early childhood.
2. Analyze sociocultural and critical perspectives in early literacy research, theory, and practice.
3. Apply grounded perspectives on topical issues in literacy development in early childhood.
4. Evaluate the literacies embedded in your own teaching/learning and the ones embedded in the communities in which they work.
5. Create sound theoretical and methodological frameworks in an early literacy project. Identify and use various genres in children's literature.

ECED 5410. Seminar on Child Development, Assessment and Well-being of Young Children

3 Credits (3)

This course will reintroduce you to the world of young children in a variety of early childhood settings. It focuses on early childhood development, observation of young children and evaluation of classrooms, child well-being, and the many ways in young children learn. Sessions will bridge theory to practice as we explore your internship experiences and gain deeper understanding of your role as an early care and education professional. May be repeated up to 3 credits.

Learning Outcomes

1. Incorporate understanding of developmental stages, process, and theories of growth, development, and learning into developmentally appropriate practice.
2. Demonstrate knowledge of the interaction between maturation and environmental factors that influence physical, social, emotional, cognitive, and cultural domains in the healthy development of each child.
3. Demonstrate knowledge of the similarities between children who are developing typically and those with special needs.
4. Provide a variety of activities that facilitate development of the whole child in the following areas: physical/motor, social/emotional, language/cognitive, and adaptive/living skills. (I.E)
5. Demonstrate knowledge of the many functions that language serves in the cognitive, social, and emotional aspects of development in the formative years. (I.G)
6. Demonstrate knowledge of the developmental sequence of language and literacy, including the influence of culture and home factors. (I.H)
7. Recognize signs of emotional distress, child abuse, and neglect in young children and use procedures appropriate to the situation, such as initiating discussions with families, referring to appropriate professionals, and, in cases of suspected abuse or neglect, reporting to designated authorities. B.four

8. Demonstrate ability to adhere to early childhood education professional codes of ethical conduct and issues of confidentiality. G.one

9. Demonstrate awareness of federal, state, and local regulations, and public policies regarding programs and services for children birth through eight years of age. G.two 1

10. Demonstrate critical reflection of one's own professional and educational practices from community, state, national, and global perspectives. G.four 1

11. Demonstrate knowledge in technology resources to engage in ongoing professional development. G.seven 1

12. Articulate an understanding of indoor and outdoor learning environments that provide opportunities for children to put into practice healthy behaviors (physically, socially, and emotionally). B.two 1

13. Use appropriate health appraisal and management procedures and make referrals when necessary. B.three 1

14. Establish an environment that provides opportunities and reinforcement for children's practice of healthy behaviors that promote appropriate nutrition and physical and psychological well-being. B.five 1

15. Implement health care and educational activities for children and families based on health and nutritional information that is responsive to diverse cultures. B.seven

ECED 5420. Science/Math Curriculum

3 Credits (2+2P)

Methods and materials for developmentally appropriate practices in teaching science and math for young children. May be repeated up to 3 credits.

Learning Outcomes

1. Synthesis of knowledge and skills appropriate to teaching in PreK - third grade educational settings.

ECED 5510. Advanced Teaching and Learning of Literacy

3 Credits (3)

This advanced graduate early literacy course reviews the reading process including the relationship between reading, writing, listening, and speaking; individual needs and abilities in reading instruction; and how to organize classrooms and select materials to support literacy development. Concepts of phonemic awareness, phonic instruction, vocabulary development, fluency and comprehension are integrated with the developmentally appropriate use of authentic assessment techniques, language/literacy immersion, and multicultural children's literature.

Learning Outcomes

1. This course will focus on the following New Mexico early childhood teacher education competencies and New Mexico State University's conceptual framework for teacher preparation.
2. Articulate an understanding of developmental theories and processes and their implications for appropriate methods of teaching reading in the K-third grade classroom.
3. Demonstrate knowledge of various instructional approaches and strategies for promoting literacy within an integrated curriculum framework.
4. Provide and use anti-bias literacy materials and experiences, including primary language materials.
5. Plan appropriate whole group, small group, and individual activities that include appropriate accommodations for working with children with special needs.

6. Understand and articulate the concept of emergent literacy and the processes toward becoming an authentic reader and writer.
7. Understand the role of family in literacy development.
8. Respect and promote the use of the child's home language for learning.
9. Demonstrate knowledge of, and use effectively, a wide range of literacy assessment strategies and instruments to determine a child's strengths and areas of need. 1
10. Engage in reflection on current theoretical perspectives on the reading process and the role of print literacy in schools and our society. Our focus will be on rigorous inquiry about literacy education in U.S. schools and methods of literacy instruction. We will be examining how invisible cultural, historical, political, and social contexts have influenced and continue to influence teachers and schools. In your observations of reading and literacy education in your field experience it is critical that you become aware of these subtle but pervasive influences. To achieve this, we will focus our inquiry this semester on the following questions: What is literacy in early childhood education? Is that different from literacy outside of school? How do young children use and pursue literacy? How do I promote literacy for all the children with whom I work?

ECED 5520. Literacy Development in Early Childhood
3 Credits (3)

Advanced theory, research, and practice relating to early childhood reading. May be repeated up to 3 credits.

Learning Outcomes

1. This course will focus on the following New Mexico early childhood teacher education competencies and New Mexico State University's conceptual framework for teacher preparation.
2. Articulate an understanding of developmental theories and processes and their implications for appropriate methods of teaching reading in the K-third grade classroom.
3. Demonstrate knowledge of various instructional approaches and strategies for promoting literacy within an integrated curriculum framework.
4. Provide and use anti-bias literacy materials and experiences, including primary language materials.
5. Plan appropriate whole group, small group, and individual activities that include appropriate accommodations for working with children with special needs.
6. Understand and articulate the concept of emergent literacy and the processes toward becoming an authentic reader and writer.
7. Understand the role of family in literacy development.
8. Respect and promote the use of the child's home language for learning.
9. Demonstrate knowledge of, and use effectively, a wide range of literacy assessment strategies and instruments to determine a child's strengths and areas of need. 1
10. Engage in reflection on current theoretical perspectives on the reading process and the role of print literacy in schools and our society. Our focus will be on rigorous inquiry about literacy education in U.S. schools and methods of literacy instruction. We will be examining how invisible cultural, historical, political, and social contexts have influenced and continue to influence teachers and schools. In your observations of reading and literacy education in your field experience it is critical that you become aware of these subtle but pervasive influences. To achieve this, we will focus our inquiry this semester on the following questions: What is literacy in early childhood education? Is that different from literacy outside of

school? How do young children use and pursue literacy? How do I promote literacy for all the children with whom I work?

ECED 5810. Student Teaching/Seminar
3 Credits (3)

Provides student teaching experience in a variety of settings with young children ages birth 8. Restricted to: TEP-ECED majors. Students must be Admitted into student teaching to enroll. May be repeated up to 3 credits.

Learning Outcomes

1. Our mission is to serve the people of New Mexico through education, research, extension education, and public service with specific emphasis on innovative practices, overcoming barriers to learning, international activities, technology, and literacy for the diverse populations of New Mexico, surrounding states and border communities.

ECED 6110. History and Philosophy of Early Childhood Education
3 Credits (3)

Critical analysis of the historical development and philosophical underpinnings of the field of early childhood education as it relates to current practice. Restricted to doctoral-level students of any major. May be repeated up to 3 credits.

Learning Outcomes

1. Examine the historical figures in early childhood education that have influenced current practices and discourses.
2. Identify theoretical, scientific, and philosophical foundations in early childhood education that have defined childhood learning and development.
3. Critically examine the history of institutions and federal policies of early childhood education within the context of multiculturalism

ECED 6996. Selected Topics in Early Childhood Education
1-6 Credits (1-6)

Offered under various subtitles. May be repeated up to 6 credits.

Learning Outcomes

1. Engage in the study of an ECED topic.

Education Courses

EDUC 1110. Freshman Orientation
1 Credit (1)

Introduction to the university and to the College of Education. Discussion of planning for individualized education program and field experience. Restricted to Las Cruces campus only. May be repeated up to 1 credit.

Learning Outcomes

1. Demonstrates knowledge of and uses theories, approaches, methods, and techniques for teaching, reading, writing, and other academic skills in English and the native language.
2. Demonstrates knowledge of and applies management techniques appropriate to classrooms containing students who have varying levels of proficiency and academic experience in both languages.
3. Community/Family Involvement- The bilingual teacher: (a) Recognizes the importance of parental and community involvement for facilitating the learner's successful integration to his/her school environment. (b) Demonstrates knowledge of the teaching and learning patterns of the students' home environment and incorporates these into the instructional areas of program.
4. Assessment- The bilingual teacher: (a) Assesses oral and written language proficiency in academic areas in both languages utilizing the results for instructional placement, prescription, and evaluation. (b) Evaluates the growth of the learner's native and second language in the context of the curriculum. (c) Continuously assesses and

adjusts her or his own language use in the classroom in order to maximize learner comprehension and verbal participation

EDUC 1120. Introduction to Education

2 Credits (2)

Introduction to the historical, philosophical, sociological foundations of education, current trends, and issues in education; especially as it relates to a multicultural environment. Students will use those foundations to develop effective strategies related to problems, issues and responsibilities in the field of education. Restricted to Las Cruces campus only. May be repeated up to 2 credits.

Learning Outcomes

1. Describe the teaching and learning of various American education settings including early childhood, elementary, middle school, high school, and special education.
2. Describe how teachers use educational theory and the results of research of students' learning.
3. Explain the techniques for establishing a positive and supportive environment in the classroom
4. Identify and describe instructional strategies supported by current research to promote thinking skills of all learners.
5. Recognize the teachers' role and responsibilities in an increasingly diverse, multicultural society.

EDUC 1140. Math for Paraprofessionals

3 Credits (3)

Applied math skills for paraprofessionals working with children. May be repeated up to 3 credits.

Prerequisite: CCDM 103 N.

Learning Outcomes

1. Students will plan developmentally appropriate math activities for young children.
2. Students will plan adaptations to math activities for children with diverse abilities.
3. Students will demonstrate understanding of recent research in methods of teaching mathematics.
4. Students will demonstrate understanding of early childhood theories as they relate to the teaching of mathematics.
5. Students will demonstrate understanding of unique needs of children from diverse economic or cultural backgrounds.

EDUC 1150. Math for Paraprofessionals II

3 Credits (3)

Applied math skills for paraprofessionals working under the direction of a teacher. May be repeated up to 3 credits.

Prerequisite: EDUC 1140.

Learning Outcomes

1. Students will plan developmentally appropriate math activities for young children.
2. Students will plan adaptations to math activities for children with diverse abilities.
3. Students will demonstrate understanding of recent research in methods of teaching mathematics.
4. Students will demonstrate understanding of early childhood theories as they relate to the teaching of mathematics.
5. Students will demonstrate understanding of unique needs of children from diverse economic or cultural backgrounds.

EDUC 1185. Introduction to Secondary Education and Youth

3 Credits (3)

Introductory course for students considering a career in secondary education. Includes historical, philosophical, and sociological foundations, program organization, critical dispositions, and understanding the context of schools and youth. Practicum required. Restricted to: Secondary Ed majors. Traditional Grading with RR.

Learning Outcomes

1. Articulate the attributes of an education professional entering the field.
2. Differentiate and summarize the major educational philosophies and historical events that have influenced the progression of educational practice.
3. Describe the role of law in education with emphasis on the rights and responsibilities of teachers and learners.
4. Develop a preliminary personal philosophy of teaching and learning.
5. Discuss the characteristics and roles of the teacher, the student, and the school in today's education.
6. Identify effective teaching methods, instructional strategies and learning styles.
7. Evaluate the Lesson Planning Process using various lesson planning templates, formats, and rubrics.
8. Explain classroom management techniques.
9. Identify different types of diversity in the classroom environment, particularly in high-needs schools. 1
10. Describe how learning differences are manifested in schools, particularly in high-needs schools. 1
11. Describe how teachers use multiple methods of assessment to engage learners in their own growth, to monitor learner progress. 1
12. Describe how teachers use multiple methods of assessment to modify instruction and inform decision making. 1
13. Identify the role of Standards and High Stakes Testing in the life of an educational professional. 1
14. Complete 24 hours internship in a classroom, preferably a bilingual classroom in a high-needs school. 1
15. Document and reflect on your observations throughout your internship. 1
16. Construct an individualized map to teacher licensure in the State of New Mexico.

EDUC 1995. Field Experience I

1 Credit (1)

Introduction to public school teaching, school visits, classroom observations and discussion seminar. May be repeated up to 1 credit.

Learning Outcomes

1. Demonstrate an understanding of personal attitudes and motivations for entering the field of education.
2. Identify effective teaching strategies that enhance student learning outcomes.
3. Identify classroom management techniques and learning styles.
4. Develop observational skills and reflective thinking skills.
5. Evaluate instructional methods that enhance upper level thinking skills in children.

EDUC 1996. Special Topics in Education

1 Credit (1)

Supervised study in a specific area of interest. Each course shall be designated by a qualifying subtitle. May be repeated up to 9 credits.

Learning Outcomes

1. Varies

EDUC 1998. Internship I

3 Credits (3)

Supervised experience in elementary education settings. May be repeated up to 3 credits.

Learning Outcomes

1. Varies

EDUC 2710. Pre-Teacher Preparation

3 Credits (3)

Assists students in developing the necessary competencies needed for acceptance to the Teacher Education Program. Course content includes basic skill development, test taking skills, and completion of teacher preparation packet. May be repeated up to 6 credits.

Learning Outcomes

1. Investigate the process and requirements of the Teacher Education Program
2. Read critically about teacher's experiences and write brief reactions
3. Discuss philosophies of education and draft a written personal philosophy of education
4. Discuss the nature of education for students with diverse languages, cultures and abilities
5. Draft personal position statements concerning education for students with disabilities and diverse cultures

EDUC 2998. Internship II

3 Credits (3)

Supervised experience in junior high settings. May be repeated up to 3 credits.

Prerequisite: must be a co-op student.

Learning Outcomes

1. Varies

EDUC 3110V. Multicultural Issues in Society

3 Credits (3)

Conceptual manifestations of culture, race, ethnicity, class, gender, exceptionalities, language, and bilingualism within and across society. May be repeated up to 3 credits.

Learning Outcomes

1. Understand what is meant by "multicultural education" and respond to the issues and challenges involved as learners, educators, and education stakeholders;
2. Reflect on definitions of power and privilege, critique understandings of difference, and examine the multi-faceted ways in which multicultural education can be enacted in pedagogy, curriculum, and educational organizations;
3. Examine the intersections between race, class, gender, sexuality, language, and citizenship status and try to assess their impact on teaching and learning;
4. Evaluate their own identities, biases, and position in the curricula and schooling experience.

EDUC 3120. Multicultural Education

3 Credits (2+2P)

The conceptual manifestations of culture, race and ethnicity, class, gender, sexual orientation, exceptionalities, language, bilingualism, and global citizenship within the schooling process. May be repeated up to 3 credits.

Learning Outcomes

1. Understand what is meant by "multicultural education" and respond to the issues and challenges involved as learners, educators, and education stakeholders;

2. Reflect on definitions of power and privilege, critique understandings of difference, and examine the multi-faceted ways in which multicultural education can be enacted in pedagogy, curriculum, and educational organizations;
3. Examine the intersections between race, class, gender, sexuality, language, and citizenship status and try to assess their impact on teaching and learning;
4. Evaluate their own identities, biases, and position in the curricula and schooling experience.

EDUC 3210. Sheltered English Instruction for the ESL Classroom

3 Credits (3)

Addresses the acquisition of English proficiency by speakers of other languages. May be repeated up to 3 credits.

EDUC 3220. Language, Literacy, and Culture in the ESL Classrooms

3 Credits (3)

Framework and strategies for developing the written abilities of second language learners. May be repeated up to 3 credits.

EDUC 3996. Special Topics in Education

1-3 Credits (1-3)

Offered under various subtitles in the Schedule of Classes. May be taken for a maximum of 3 cr. per semester and a total of 6 credits overall. May be repeated up to 6 credits.

Learning Outcomes

1. Engage in the study of a specific education topic.

EDUC 3997. Secondary Field Experience

3 Credits (2+2P)

Develop professional skills, dispositions, and understanding of secondary bilingual youth, content, and pedagogy through discussion seminar and interactions with public education mentor teachers. Focused observations, study of classroom language and culture, introduction to lesson planning and student assessment. Requires 32 hours of practicum field experience. Taught with: BLED 3110. May be repeated up to 3 credits.

Learning Outcomes

1. Understand and implement effective practices in secondary education.

EDUC 4310. Methods of Teaching Elementary School Science

3 Credits (2+2P)

Methods and materials for teaching elementary school science. Includes components of lessons and the use of multimedia. Students must complete 9 hours of science from biology, chemistry, physics, and earth sciences, with no more than 3 hours from any one department. Restricted to: TEP-EED majors. May be repeated up to 3 credits.

Learning Outcomes

1. Create, teach, and assess research based, hands-on, elementary science lessons;
2. Create, teach, and assess research based, hands-on, elementary science lessons that meet the diverse needs of all learners in all aspects of science instruction;
3. Develop assessment tools to evaluate learner's science knowledge;
4. Identify and use appropriate NMSTEM Ready!State science standards for lesson planning;
5. Integrate science with all subjects;
6. Discuss the advantages and the importance of membership in national/international professional organizations(e.g. NSTA) as well as subscribing to professional journals;

7. Identify science educational resources available using a variety of technological tools to enhance learning;
8. Demonstrate competence and confidence in teaching science;
9. Demonstrate basic classroom management skills.

EDUC 4320. Methods of Teaching Elementary School Mathematics
3 Credits (3)

Content, theories of cognition, and instructional approaches for the teaching of mathematics in the elementary grades.

Prerequisite: MATH 1134.

Learning Outcomes

1. Identify what makes a 'good mathematical task', and how a good task can support students' learning;
2. Understand how children make sense of key mathematics concepts;
3. Understand how tools (including manipulatives, calculators, and other technology) assist children in their thinking and problem solving;
4. Identify your role as a teacher in a math classroom;
5. Practice teaching elementary mathematics activities using a constructivist approach and reflect upon your teaching;
6. Adjust lessons and instruction based on students' needs;
7. Develop a stance of inquiry, explore habits of mind, examine and your own mathematical knowledge and develop the mathematical knowledge needed for effective teaching;
8. Experience mathematics through thinking, reasoning, discourse/communicating, and developing math ideas with understanding so that as teachers you can facilitate learning as you work with students in this process;
9. Begin to develop your knowledge and skills to effectively support ALL learners; in particular students with special needs and bilingual/English Language Learners in mathematics

EDUC 4330. Methods of Teaching Elementary School Social Studies
3 Credits (2+2P)

Focus on social studies curriculum and instruction including student-centered approaches, active learning, educational technology, nontextual curriculum, integration, multicultural education, authentic assessment, and practical applications. May be repeated up to 3 credits.

Learning Outcomes

1. Understanding of equity and social justice through Social Studies education;
2. Navigating the public-schools and how to integrate Social Studies lessons;
3. Lesson planning and delivering Social Studies instruction;
4. How to evaluate information found online for quality and truth; and
5. Critiquing instructional materials and resources.

EDUC 4410. Teaching Science at the Middle and High School Level
3 Credits (2+2P)

Integrating content knowledge and pedagogy for the middle and high school teacher in science. The focus will be on a variety of instructional strategies and pedagogical skills that will enhance the learning of science for students in grades 6-12. Practicum required. Taught with EDUC 5410. May be repeated up to 3 credits.

Learning Outcomes

1. Understand and implement effective practices for teaching and learning in the secondary science classroom.

EDUC 4420. Teaching Mathematics at the Middle and High School Level
3 Credits (2+2P)

Integrating content knowledge and pedagogy for the middle and high school teacher in mathematics. The focus will be on a variety of instructional strategies and pedagogical skills that will enhance the learning of mathematics. Practicum required. Taught with EDUC 5420. May be repeated up to 3 credits.

Learning Outcomes

1. Understand and implement effective practices for teaching and learning in the secondary mathematics classroom.

EDUC 4430. Teaching Social Studies at the Middle and High School Level
3 Credits (2+2P)

Integrating content knowledge and pedagogy for the middle and high school teacher in social studies. The focus will be on a variety of instructional strategies and pedagogical skills that will enhance the learning of social studies. Practicum required. Taught with EDUC 5430. May be repeated up to 3 credits.

Learning Outcomes

1. Understand and implement effective practices for teaching and learning in the secondary social studies classroom.

EDUC 4440. Teaching Language Arts at the Middle and High School Level
3 Credits (2+2P)

Implications of cognition and language development for appropriate secondary instructional practices. Focus on construction of meaning, student-centered response to literature, writing process, print and oral language development, based on socio-psycholinguistic research and theory. Practicum required. Taught with EDUC 5440. May be repeated up to 3 credits.

Learning Outcomes

1. Students will evaluate ELA and SS resources and synthesize important domains of education, including history, seminal texts, current events/trends, and formative learning theories such as global learning.
2. Students will summarize classroom literacy, language, and culture of ELA/SS classrooms.
3. Students will identify authentic assessment and effective instructional strategies and materials that can be used to deliver engaging lessons in ELA/SS reading, writing, and literature study.
4. Students will justify their personal teaching philosophy in relation to the study of the history of ELA/SS education, literacy learning theories, teaching pedagogy, and field experiences.
5. Students will assemble a professional, culminating reflective portfolio that demonstrates the ability to self-assess strengths and needs based on the NM-Teach standards.

EDUC 4510. Data Literacy and Assessment
3 Credits (3)

Methods for selecting, constructing, and using multiple methods of assessment to monitor learner progress and improve student learning. Students will learn to analyze and use classroom and standardized assessment data to understand patterns and gaps in learning, to guide planning and instruction, and employ technology to support practice. May be repeated up to 6 credits.

Learning Outcomes

1. Understand and implement effective data literacy and assessment procedures.

EDUC 4520. Contemporary Issues in Education
3 Credits (2+2P)

Discussion of contemporary issues including: classroom management, motivation, conferences, professional organizations, professional ethics, community influences, cultural pluralism, reform movements,

instructional influences, and educational technology. Requires field experience component in a school or community setting. May be repeated up to 3 credits.

Learning Outcomes

1. Understand important issues and practices in contemporary education.

EDUC 4530. Science for Educators

3 Credits (3)

This course will focus on the exploration of key central science concepts and how to connect learners to resources, tools of inquiry, and collaborative problem solving related to authentic local and global issues in classroom, lab, and digital science environments. Topics include: The nature of science, Physical Science, Life Science, Earth and Space Science.

Learning Outcomes

1. Understand primary science content and knowledge for K-12 classrooms.

EDUC 4540. Teaching History

3 Credits (3)

Philosophical and practical issues of teaching history and social studies are explored. Designed to help prospective teachers at all levels clarify their views about studying history and social studies. A variety of pedagogical strategies for teaching history and social studies are explored. This course offers a review of the New Mexico Social Studies Standards for teaching.

Learning Outcomes

1. Rethink and teach students to rethink history through multiple perspectives.
2. Utilize Bloom's Taxonomy and level of questioning.
3. Build essential questioning versus comprehensive questioning.
4. Utilize Webb's Depth of Knowledge.
5. Develop strong objectives for teaching and learning.
6. Initiate discussion in a classroom setting.
7. Build a Google classroom.
8. Create unit-based assigned on a topic in history (lesson and assessment development).
9. Utilize web resources that will include Open Education Resources or OER's.
10. Appraise the NM standards for Social Studies to develop lessons that actualize the standards.

EDUC 4810. Elementary Student Teaching

9 Credits (9)

Synthesis of knowledge and skills appropriate to teaching in elementary schools. May be repeated up to 9 credits.

Learning Outcomes

1. Synthesis of knowledge and skills appropriate to teaching in PreK - 3rd grade educational settings.

EDUC 4811. Elementary Student Teaching Seminar

3 Credits (3)

Discussion of elementary school issues related to student teaching. Taken concurrently with EDUC 4810. May be repeated up to 3 credits.

Learning Outcomes

1. Candidates demonstrate an understanding of the critical concepts and principles in their discipline and of the pedagogical content knowledge necessary to engage students' learning of concepts and principles in the discipline;

2. Candidates create and implement learning experiences that motivate K-8 students, establish a positive learning environment, and support K-8 students' understanding of the central concepts and principles in the content discipline;
3. Candidates design, adapt, and select a variety of valid and reliable assessments and employ analytical skills necessary to inform ongoing planning and instruction, as well as to understand, and help students understand their own, progress and growth;
4. Candidates engage students in reasoning and collaborative problem solving related authentic local, state, national, and global issues, incorporating new technologies and instructional tools appropriate to such tasks. Candidates use research and evidence to continually evaluate and improve their practice, particularly the effects of their choices and actions on others, and they adapt their teaching to meet the needs of each learner;
5. Candidates design and implement appropriate and challenging learning experiences, based on an understanding of how children learn and develop. They ensure inclusive learning environments that encourage and help all K-8 students reach their full potential across a range of learner goals;
6. Candidates work with K-8 students and families to create classroom cultures that support individual and collaborative learning and encourage positive social interaction, engagement in learning, and independence;
7. Candidates build strong relationships with students, families, colleagues, other professionals, and community members, so that all are communicating effectively and collaborating for student growth, development, and well-being;
8. Candidates reflect on their personal biases and access resources that deepen their own understanding of cultural, ethnic, gender, sexual orientation, language, and learning differences to build stronger relationships and to adapt practice to meet the needs of each learner.

EDUC 4820. Secondary Student Teaching

9 Credits (9)

Synthesis of knowledge and skills appropriate to teaching in secondary schools. May be repeated up to 9 credits.

Learning Outcomes

1. Carry out effective student teaching in a secondary classroom.

EDUC 4821. Middle and High School Student Teaching Seminar

3 Credits (3)

Discussion of secondary school issues related to student teaching. Taken concurrently with EDUC 4820. May be repeated up to 3 credits.

Learning Outcomes

1. Carry out effective student teaching in a secondary classroom.

EDUC 4992. Directed Study Courses in Education

1-3 Credits (1-3)

Each course shall be identified by a qualifying subtitle. Maximum of 3 credits in any one semester and a grand total of 6 credits. May be repeated up to 6 credits.

Learning Outcomes

1. Engage in the study of a specific education topic.

EDUC 4996. Topics

1-3 Credits (1-3)

Offered under various subtitles which indicate the subject matter to be covered. A maximum of 3 credits in any one semester and a grand total of 3 credits. May be repeated up to 3 credits.

Learning Outcomes

1. Engage in the study of a specific education topic.

EDUC 5110. Exploration in Education**3 Credits (3+3P)**

Overview of elementary and secondary schooling. Includes opportunities to gain teaching experience in diverse settings.

Learning Outcomes

1. Explore important concepts and knowledge necessary to carry out effective practices in K-12 classroom settings.

EDUC 5120. Multicultural Education**3 Credits (2+2P)**

Conceptual manifestations of culture, race, and ethnicity, class, gender, exceptionalities, language and bilingualism within the schooling process. Taught with EDUC 3120 with differentiated assignments for graduate students. May be repeated up to 3 credits.

Learning Outcomes

1. Analyze the influence on learning of such social identities as race, class, sexual orientation, language, and gender.
2. Deconstruct tacit knowledges about learners and the learning process.
3. Distinguish among the structural and discursive forces that hamper particular students' educational attainment.
4. Evaluate one's own personal response to oppression in educational settings.
5. Support a pedagogical perspective and school level strategies targeted towards a more just and equitable education in your classroom.

EDUC 5130. Technology and Pedagogy**3 Credits (3)**

Critical analysis, design, and evaluation of computer-based technologies in teaching and learning for diverse communities. Students must be in Graduate standing. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the relationship between curriculum and pedagogy.

EDUC 5140. Research in Curriculum and Pedagogy**3 Credits (3)**

An introduction to qualitative and quantitative designs for research in curriculum and instruction, with emphasis on action research. May be repeated up to 3 credits.

Learning Outcomes

1. Locate metrics useful for evaluating the quality of published research;
2. Identify the claims and supportive evidence presented in published empirical research;
3. Weigh the evidence presented in published empirical research;
4. Analyze the alignment of methods used in published empirical research with associated frameworks and research questions;
5. Synthesize a narrow body of literature in their field of interest.

EDUC 5150. Classroom Management**3 Credits (3)**

Strategies for managing classroom settings and determining appropriate modification of instructional approaches to meet changing classroom situations. May be repeated up to 3 credits.

Learning Outcomes

1. Understand effective practices in K-12 classroom management.

EDUC 5160. Curriculum and Pedagogy**3 Credits (3)**

Introduction, reconstruction, and other connections among historical, philosophical, sociocultural, psychological, and theoretical foundations of curriculum and pedagogy and their application to culturally and linguistically diverse teaching and learning settings. May be repeated up to 3 credits.

Learning Outcomes

1. Describe the historical development of standards, curriculum, and assessment in the USA;
2. Critically analyze the major influences on the historical development of standards, curriculum, and assessment;
3. Explain the positive and negative impacts these major influences have had on current standards, curriculum, and assessment;
4. Students will be able to express attainable planned actions to advocate for socially just and equitable systems within their school, district, community, and profession;
5. Construct a coherent pedagogical perspective that draws on the theories and perspectives discussed throughout the course;
6. Create a plan for a lesson that puts into action the curricular and pedagogical perspectives that place value in, and make space for, the diversity of individual social development within and between cultures.

EDUC 5170. Action Research Projects**3 Credits (3)**

Deeper explorations and connections among foundations of curriculum and pedagogy and their application to culturally and linguistically diverse teaching and learning settings through action research projects, approaches to assessment, and agency. May be repeated up to 3 credits.

Prerequisite: EDUC 5120, EDUC 5140.

Learning Outcomes

1. Understanding of Action Research
2. Develop an Action Research plan: Question Development; Data collection plan; Analysis
3. Analysis to Action for teaching: Applying data results to planning; Decision-making for changes in teaching
4. Presentation of Research: Research writing process

EDUC 5210. Sheltered English Instruction for the ESL Classroom**3 Credits (3)**

Addresses the acquisition of English proficiency via the SIOP (Sheltered Instruction Observational Protocol) a research validated model for lesson planning and implementation that provides English learners with access to grade-level standards.

EDUC 5220. Language, Literacy and Culture in the ESL Classrooms**3 Credits (3)**

Framework and strategies for developing the written abilities of second language learners. Explore different theories of language, culture and literacy by analyzing the interconnections between language, culture and literacy.

EDUC 5310. Methods of Teaching Elementary School Science**3 Credits (2+2P)**

Methods and materials for teaching elementary school science. Includes components of lessons, planning and teaching lessons in schools, and multimedia. Students should have 9 hours of science from biology, chemistry, physics, and earth science with no more than 3 hours from any one department to enroll in this course. Taught with EDUC 4310 with differentiated assignments for graduate students. May be repeated up to 3 credits.

Corequisite: ECED 5810; EDUC 5320; READ 5310.

Learning Outcomes

1. Create, teach, and assess research based, hands-on, elementary science lessons;
2. Create, teach, and assess research based, hands-on, elementary science lessons that meet the diverse needs of all learners in all aspects of science instruction;
3. Develop assessment tools to evaluate learner's science knowledge;
4. Identify and use appropriate NMSTEM Ready!State science standards for lesson planning;
5. Integrate science with all subjects;
6. Discuss the advantages and the importance of membership in national/international professional organizations(e.g. NSTA) as well as subscribing to professional journals;
7. Identify science educational resources available using a variety of technological tools to enhance learning;
8. Demonstrate competence and confidence in teaching science;
9. Demonstrate basic classroom management skills.

**EDUC 5320. Methods of Teaching Elementary School Mathematics
3 Credits (2+2P)**

Content, theories of cognition, and instructional approaches for the teaching of mathematics in the elementary grades. Taught with EDUC 4320 with differentiated assignments for graduate students. May be repeated up to 3 credits.

Prerequisite: MATH 1134.

Corequisite: ECED 5810; EDUC 5310; READ 5310.

Learning Outcomes

1. Identify what makes a 'good mathematical task', and how a good task can support students' learning;
2. Understand how children make sense of key mathematics concepts;
3. Understand how tools (including manipulatives, calculators, and other technology) assist children in their thinking and problem solving;
4. Identify your role as a teacher in a math classroom;
5. Practice teaching elementary mathematics activities using a constructivist approach and reflect upon your teaching;
6. Adjust lessons and instruction based on students' needs;
7. Develop a stance of inquiry, explore habits of mind, examine and your own mathematical knowledge and develop the mathematical knowledge needed for effective teaching;
8. Experience mathematics through thinking, reasoning, discourse/communicating, and developing math ideas with understanding so that as teachers you can facilitate learning as you work with students in this process;
9. Begin to develop your knowledge and skills to effectively support ALL learners; in particular students with special needs and bilingual/English Language Learners in mathematics

**EDUC 5330. Methods of Teaching Elementary School Social Studies
3 Credits (2+2P)**

Focus on social studies curriculum and instruction including student-centered approaches, active learning, educational technology, nontextual curriculum, integration, multicultural education, authentic assessment, and practical applications. Taught with EDUC 4330 with differentiated assignments for graduate students. May be repeated up to 3 credits.

Corequisite: READ 5320.

Learning Outcomes

1. Understanding of equity and social justice through Social Studies education;

2. Navigating the public-schools and how to integrate Social Studies lessons;
3. Lesson planning and delivering Social Studies instruction;
4. How to evaluate information found online for quality and truth; and
5. Critiquing instructional materials and resources.

**EDUC 5410. Teaching Science at the Middle and High School Level
3 Credits (2+2P)**

Integrating content knowledge and pedagogy for the middle and high school teacher in science. The focus will be on a variety of instructional strategies and pedagogical skills that will enhance the learning of science for student in grades 6-12. Practicum required. Same as EDUC 463 with differentiated assignments for graduate students. TEP required May be repeated up to 3 credits.

Prerequisite: EDUC 5120 & EDUC 5110.

Learning Outcomes

1. Understand and implement effective practices for teaching and learning in the secondary science classroom.

**EDUC 5420. Teaching Mathematics at the Middle and High School Level
3 Credits (2+2P)**

Integrating content knowledge and pedagogy for the middle and high school teacher in mathematics. The focus will be on a variety of instructional strategies and pedagogical skills that will enhance the learning of students in 6-12 setting settings for mathematics. Same as EDUC 4420 with differentiated assignments for graduate students. TEP required May be repeated up to 3 credits.

Prerequisite: EDUC 5120 & EDUC 5110.

Learning Outcomes

1. Understand and implement effective practices for teaching and learning in the secondary mathematics classroom.

**EDUC 5430. Teaching Social Studies at the Middle and High School Level
3 Credits (2+2P)**

Integrating content knowledge and pedagogy for the middle and high school teacher in social studies. The focus will be on a variety of instructional strategies and pedagogical skills that will enhance the learning of social studies for student in grades 6-12. Practicum required. Same as EDUC 4430 with differentiated assignments for graduate students. TEP required May be repeated up to 3 credits.

Prerequisite: EDUC 5120 & EDUC 5110.

Learning Outcomes

1. Understand and implement effective practices for teaching and learning in the secondary social studies classroom.

**EDUC 5440. Teaching Language Arts at the Middle and High School Level
3 Credits (2+2P)**

Implications of cognition and language development for appropriate secondary instructional practices. Focus on construction of meaning, student-centered response to literature, writing process, print and oral language development, based on socio-psycholinguistic research and theory. Practicum required. Same as EDUC 4440 with differentiated assignments for graduate students. TEP required. May be repeated up to 3 credits.

Prerequisite: EDUC 5120 & EDUC 5110.

Learning Outcomes

1. Students will evaluate ELA and SS resources and synthesize important domains of education, including history, seminal texts, current events/trends, and formative learning theories such as global learning.
2. Students will summarize classroom literacy, language, and culture of ELA/SS classrooms.

3. Students will identify authentic assessment and effective instructional strategies and materials that can be used to deliver engaging lessons in ELA/SS reading, writing, and literature study.
4. Students will justify their personal teaching philosophy in relation to the study of the history of ELA/SS education, literacy learning theories, teaching pedagogy, and field experiences.
5. Students will assemble a professional, culminating reflective portfolio that demonstrates the ability to self-assess strengths and needs based on the NM-Teach standards.

EDUC 5510. Elementary Science Development

3 Credits (3)

Understanding of the research on elementary development of science and its application in the classroom. Focus on how elementary students come to understand topics in the physical sciences, life sciences, and earth and space sciences. Includes applications to engineering and technology. Course assignments require working with elementary students. Consent of Instructor required. Restricted to: Master of Arts in Education: Elementary Mathematics and Science majors.

Learning Outcomes

1. To put current research on elementary students' development of science into practice.
2. To analyze student thinking to construct models of cognitive structures.
3. To select, sequence, and administer tasks to test models of students' cognitive structures.
4. To develop and facilitate a classroom lesson plan to build on models of students' cognitive structures.
5. To reflect on observations of student learning in relation to current research on elementary students' development of science.

EDUC 5520. Elementary Mathematics Development I

3 Credits (3)

Understanding of the research on elementary development of mathematics and its application in the classroom. Focus on how elementary students come to understand counting, the base 10 number system, and connections between early number understanding, geometric representations, fractions, and operations in later grades. Course assignments require working with elementary students. Consent of Instructor required. Restricted to: Master of Arts in Education: Elementary Mathematics and Science majors.

Learning Outcomes

1. To put current research on elementary students' development of mathematics into practice.
2. To analyze student thinking to construct models of cognitive structures.
3. To select, sequence, and administer tasks to test models of students' cognitive structures.
4. To develop and facilitate a classroom lesson plan to build on models of students' cognitive structures.
5. To reflect on observations of student learning in relation to current research on elementary students' development of mathematics.

EDUC 5530. Elementary Mathematics Development 2

3 Credits (3)

Understanding of the research on elementary development of mathematics and its application in the classroom. Focus on how elementary students develop multiplicative reasoning from a foundation of additive reasoning, connections to geometric representations, and how multiplicative reasoning supports development of understanding of

fractions, ratios, and rate—which leads to proportional reasoning. Course assignments require working with elementary students. Consent of Instructor required. Restricted to: Master of Arts in Education: Elementary Mathematics and Science majors.

Learning Outcomes

1. To put current research on elementary students' development of science into practice.
2. To analyze student thinking to construct models of cognitive structures.
3. To select, sequence, and administer tasks to test models of students' cognitive structures.
4. To develop and facilitate a classroom lesson plan to build on models of students' cognitive structures.
5. To reflect on observations of student learning in relation to current research on elementary students' development of science.

EDUC 5540. Leadership Advocacy in Elementary Mathematics and Science

3 Credits (3)

This course focuses on development of elementary mathematics and science specialists' leadership qualities necessary to promote and advocate for positive change through active participation with other professionals and in their own professional growth that draws upon current research in their respective fields, development of professional development programs, evaluation of educational structures that impact equitable access to high quality instruction, and communication with stakeholders directly and indirectly associated with education institutions. Consent of Instructor required. Restricted to: Master of Arts in Education: Elementary Mathematics and Science majors.

Learning Outcomes

1. To leverage current research on elementary students' development of mathematics science to enact change in teaching practice and education policy.
2. To make use of leadership skills to facilitate discussion with education stakeholders, school and district administrators, and teaching professionals.
3. To make use of leadership skills to collaborate with education stakeholders, school and district administrators, and teaching professionals.
4. To examine current mathematics and science teaching practice within a school or district and create a professional development plan that aligns with current research on best practices.
5. To examine current mathematics and science teaching practice within a school or district and create a professional development plan that aligns with district and/or school mission and vision.

EDUC 5810. Student Teaching

6 Credits (6)

Integrated with EDUC 5811. Student is assigned to an elementary or secondary classroom for 14-16 weeks. Elementary or secondary.

Corequisite: EDUC 5811.

Learning Outcomes

1. The teacher candidate seeks appropriate leadership roles and opportunities to take responsibility for student learning, to collaborate with learners, families, colleagues, other school professionals, and community members to ensure learner growth, and to advance the profession.
2. The teacher candidate uses understanding of individual differences and diverse cultures and communities to ensure inclusive learning environments that enable each learner to meet high standards.

3. The teacher candidate works with others to create environments that support individual and collaborative learning, and that encourage positive social interaction, active engagement in learning, and self-motivation.
4. The teacher candidate understands the central concepts, tools of inquiry, and structures of the discipline(s) he or she teaches and creates learning experiences that make these aspects of the discipline accessible and meaningful for learners to assure mastery of the content.
5. The teacher candidate understands how learners grow and develop, recognizing that patterns of learning and development vary individually within and across the cognitive, linguistic, social, emotional, and physical areas, and designs and implements developmentally appropriate and challenging learning experiences.
6. The teacher candidate understands how to connect concepts and use differing perspectives to engage learners in critical thinking, creativity, and collaborative problem solving related to authentic local and global issues
7. The teacher candidate understands and uses multiple methods of assessment to engage learners in their own growth, to monitor learner progress, and to guide the teacher's and learner's decision making.
8. The teacher candidate plans instruction that supports every student in meeting rigorous learning goals by drawing upon knowledge of content areas, curriculum, cross-disciplinary skills, and pedagogy, as well as knowledge of learners and the community context.
9. The teacher candidate understands and uses a variety of instructional strategies to encourage learners to develop deep understanding of content areas and their connections, and to build skills to apply knowledge in meaningful ways. 1
10. The teacher candidate engages in ongoing professional learning and uses evidence to continually evaluate his/her practice, particularly the effects of his/her choices and actions on others (learners, families, other professionals, and the community), and adapts practice to meet the needs of each learner.

EDUC 5811. Teaching Methods Laboratory

3 Credits (3)

Practical application of previously learned content. Students must have a Bachelors degree and admission to the Graduate School and departmental special program. May be repeated up to 3 credits.

Learning Outcomes

1. Candidates demonstrate an understanding of the critical concepts and principles in their discipline and of the pedagogical content knowledge necessary to engage students' learning of concepts and principles in the discipline;
2. Candidates create and implement learning experiences that motivate K-8 students, establish a positive learning environment, and support K-8 students' understanding of the central concepts and principles in the content discipline;
3. Candidates design, adapt, and select a variety of valid and reliable assessments and employ analytical skills necessary to inform ongoing planning and instruction, as well as to understand, and help students understand their own, progress and growth;
4. Candidates engage students in reasoning and collaborative problem solving related authentic local, state, national, and global issues, incorporating new technologies and instructional tools appropriate to such tasks. Candidates use research and evidence to continually evaluate and improve their practice, particularly the effects of their

choices and actions on others, and they adapt their teaching to meet the needs of each learner;

5. Candidates design and implement appropriate and challenging learning experiences, based on an understanding of how children learn and develop. They ensure inclusive learning environments that encourage and help all K-8 students reach their full potential across a range of learner goals;
6. Candidates work with K-8 students and families to create classroom cultures that support individual and collaborative learning and encourage positive social interaction, engagement in learning, and independence;
7. Candidates build strong relationships with students, families, colleagues, other professionals, and community members, so that all are communicating effectively and collaborating for student growth, development, and well-being;
8. Candidates reflect on their personal biases and access resources that deepen their own understanding of cultural, ethnic, gender, sexual orientation, language, and learning differences to build stronger relationships and to adapt practice to meet the needs of each learner.

EDUC 5990. Master's Thesis

1-6 Credits (1-6)

Thesis. A minimum of four credits and a maximum of six credits (thesis hours) can be counted toward the MA degree. The thesis hours require the permission of the course instructor. May be repeated up to 15 credits. May be repeated up to 15 credits.

Learning Outcomes

1. Graduate students at the Master of Arts level pursuing a research focus degree learn how to prepare for basic research study.
2. Graduate students at the Master of Arts level pursuing a research focus degree learn how to submit IRB for a research study.
3. Graduate students at the Master of Arts level pursuing a research focus degree learn how to conduct a comprehensive study.
4. Graduate students at the Master of Arts level pursuing a research focus degree learn how to summarize the research and write the results in a thesis.
5. Graduate students at the Master of Arts level pursuing a research focus degree learn how to present results from research and defend the results.

EDUC 5991. Special Research Programs

1-3 Credits (1-3)

Individual investigations either analytical or experimental. Maximum of 3 credits per semester and a total of 6 credits overall. May be repeated up to 6 credits.

Learning Outcomes

1. Engage in a specific research topic.

EDUC 5992. Directed Study Courses in Education

1-3 Credits (1-3)

Each course will be identified by a qualifying subtitle. Maximum of 3 credits in any one semester and a total of 6 credits overall. May be repeated up to 6 credits.

Learning Outcomes

1. Engage in a specific education topic.

EDUC 5996. Special Topics

1-3 Credits (1-3)

Course subtitled in the Schedule of Classes. A maximum of 3 credits per semester and a total of 6 credits overall. May be repeated up to 6 credits.

Learning Outcomes

1. Engage in the study of a specific education topic.

EDUC 5997. Capstone Research Project**1-3 Credits (1-3)**

Capstone project. Maximum of 3 credits per semester and a total of 6 credits overall. Consent of Instructor required. Restricted to: Admittance into the Master of Arts in Education: Elementary Mathematics and Science program.

Learning Outcomes

1. To investigate a problem or issue in education.
2. To communicate results of the investigation in a scholarly manner.

EDUC 5998. Social Studies/Language Arts Methods Internship**3 Credits (3)**

Elementary alternative licensure process course designed to introduce intern licensed teachers to methods of instruction of social studies and language arts. University supervision provided simultaneously with EDUC 5998. Restricted to CI and HSS non-degree students. May be repeated up to 3 credits.

Learning Outcomes

1. Carry out a successful intership in social studies and language arts teaching methods.

EDUC 6110. Curriculum for a Diverse Society**3 Credits (3)**

Builds upon knowledge of the foundations of curriculum and professional experience in an educational setting. Focus on the role of the curriculum leader in understanding curriculum theory, designing curriculum, and implementing curriculum in various settings. May be repeated up to 3 credits.

Learning Outcomes

1. Reflect on the significance of the teachers' professional role in schools;
2. Analyze the notion of curriculum in a broader sense along with the concepts of culture and diversity;
3. Develop understanding of the fundamental theoretical constructs in organizing the way we interact and live in our society;
4. Assume the commitment to challenge the taken for granted assumptions that have led schools to be places where inequities have been perpetuated;
5. Take on the challenge of transforming schools into public social spheres where hope is promoted, looked for, and risks are taken and faced.

EDUC 6120. Pedagogy of Learning in a Diverse Society**3 Credits (3)**

Builds upon knowledge of the foundations of instruction and professional experience in teaching and learning. Focus on diverse theories of instruction with relevant practices in pluralistic settings and multicultural interactions of teaching and learning. May be repeated up to 3 credits.

Learning Outcomes

1. Instill a personal discipline that will establish clarity into your plan of studies to operationalize the direction of your research project;
2. Develop a deeper and thicker knowledge base, language facility, and chronological understanding that impact contemporary theoretical/philosophical paradigms;
3. Create a critical reflection on many of the contemporary issues/findings of recent brain research, its implications for pedagogy and andragogy and central to teaching and learning;

4. Articulate several of the diverse historical forces that legitimate certain teaching and learning practices, theories/issues in contemporary schooling life, and delegitimize other theories/issues just as easily;
5. Create a sense of collegiality and community with your seminar colleagues inside and outside of this course

EDUC 6210. Curricular Mediation for Democratic Communities**3 Credits (3)**

Problematization of the various relationships, roles, and leadership considerations which emerge within educational institutions, their structures, and their culturally democratic practices in the classroom, community, and society. Restricted to doctoral-level students of any major. Same as BLED 6210. May be repeated up to 3 credits.

EDUC 6220. Praxis and Reflexivity**3 Credits (3)**

The cyclical research processes of continuous self and systemic (re)evaluation vis-a-vis classroom, community, and society with an eye toward reflection, growth, change, and larger forms of social agency. Restricted to doctoral-level students of any major. Same as BLED 6220, READ 6220. May be repeated up to 3 credits.

Learning Outcomes

1. Students develop a more sound understanding of their research agenda.
2. Students will gain a better understanding of research in society, generally, and in education, specifically.
3. Students will work as a community of learners that struggles to understand our influence on educational policy and practice.
4. Students will synthesize reading material and create discussion opportunities for the entire class.
5. Students will complete writing assignments the social, ethical, legal, and human issues surrounding the use of technology uses, data literacy, and PreK-12 schools and apply that knowledge into future research.

EDUC 6230. Research in Praxis: Qualitative Research II**3 Credits (3)**

This course offers a more in-depth view of research and research paradigms, theories, methods, approaches, and tools and is a sequential next step beyond Qualitative Research I. Concepts are developed to encourage research from problem formulation to interpretation of results as reflected by students' own scholarly engagements. Course activities can include alternative community-or-school-based research aimed at investigating and transforming educational realities with the participants for their own scholarly growth and development. Students will experience the dynamic between research theory and practice in education.

Learning Outcomes

1. Develop processes required for research problems within educational settings, design relevant qualitative research strategies.
2. Examine research problems, determine relevant sources, practice data collection/analysis methods, and assess the results of such efforts.

EDUC 6310. Critical Theory and Pedagogy**3 Credits (3)**

Covers the various schools of thought on pedagogy, the historical and philosophical foundations embedded in these schools, and their impact on educational settings. Restricted to doctoral-level students of any major. Same as BLED 6310. May be repeated up to 3 credits.

EDUC 6320. Social Justice Issues in Education**3 Credits (3)**

Covers the systems of oppression located within the constructs of power and hegemony and their impact on schooling. Restricted to doctoral-level students of any major. Same as BLED 6320. May be repeated up to 3 credits.

EDUC 6330. Critical Race Theory & Storytelling in Educational Spaces**3 Credits (3)**

An upper-level doctoral course focusing on the philosophical, theoretical, and methodological origins and practices of CRT and the sister frameworks that emerged from CRT, i.e., AsianCrit, BlackCrit, FemCrit, LatCrit, QueerCrit, TribalCrit, and WhiteCrit within educational spaces. May be repeated up to 3 credits.

Learning Outcomes

1. Articulate the major tenets and assumptions of critical race theory (CRT);
2. Evaluate CRT's usefulness in educational research and what makes a CRT analysis unique or different from other analyses;
3. Synthesize research conducted by CRT scholars and the effect of racial injustice on students of color;
4. Analyze and disrupt majoritarian narratives (stories) that perpetuate racial injustice in the U.S., with a focus on institutions that intersect with educational systems.

EDUC 6340. Theoretical Frameworks and Research Design Topics**3 Credits (3)**

This course offers an in-depth view of research and research paradigms, theories, methods, approaches, and tools. This course strives to encourage development of a research paradigm from problem formulation to interpretation of results. May be repeated up to 3 credits.

Learning Outcomes

1. Identify frameworks of research including affordances and challenges based on research goals.
2. Develop concepts related to previous explorations of research paradigms, approaches, methods, and tools reflect on your own research activity.
3. Conceptualize the tasks and processes of research problems within educational settings, design relevant research strategies.
4. Examine problems via heuristics to consider select pertinent data sources, data collection methods, and data analysis methods.

EDUC 6410. Current Research in Educational Practice**3 Credits (3)**

A seminar for doctoral and education specialist students emphasizing current research and educational practices. May be repeated up to 3 credits.

Learning Outcomes

1. Engage in the study of a specific education research topic.

EDUC 6420. Evaluation of Quantitative Research in Education**3 Credits (3)**

A doctoral-level exploration of a broad range of quantitative research designs and methodologies for collection and analysis of data as applied to critical review of the literature. May be repeated up to 3 credits.

Learning Outcomes

1. Identify the tasks and processes required to formulate appropriate research problems within educational settings, design relevant qualitative research strategies; for examining such problems, select pertinent data sources, data collection methods, and data analysis methods, and assess the results of such efforts.

EDUC 6430. Advanced Statistics**3 Credits (3)**

An intermediate course focusing on more advanced theories and techniques of inferential statistics as applied to education and psychology. Includes ANOVA, planned contrasts, ANCOVA, simple regression, and non-parametrics. A computer package will be the primary tool for data analysis.

Prerequisite: EDUC 6420 or equivalent course work.

Learning Outcomes

1. Demonstrates knowledge of and uses theories, approaches, methods, and techniques for research in education.
2. Demonstrates knowledge of and applies research techniques appropriate to a research problem.

EDUC 6440. Qualitative Research I**3 Credits (3)**

This course offers an examination of qualitative research approaches used in educational and social settings, with a focus upon research design, field relations, data collection and analysis, and writing from a qualitative perspective. May be repeated up to 3 credits.

Learning Outcomes

1. Identify the tasks and processes required to formulate appropriate research problems within educational settings, design relevant qualitative research strategies; for examining such problems, select pertinent data sources, data collection methods, and data analysis methods, and assess the results of such efforts.

EDUC 6910. Dissertation Seminar**3 Credits (3)**

Dissertation seminar course for doctoral students utilizing a qualitative research design. May be repeated up to 3 credits.

Learning Outcomes

1. To investigate a problem or issue in education.
2. Prepare the first three chapters of a dissertation.

EDUC 6990. Practicum**2-6 Credits (2-6)**

Provision for field inquiries and experiences designed to prepare the doctoral student for assuming responsibilities in the areas of curriculum and instruction. Students must be in post-master's standing. May be repeated up to 6 credits.

Learning Outcomes

1. Plan course of study with with faculty advisor or instructor.
2. Set practicum expectations for semester.

EDUC 6991. Doctoral Research**1-15 Credits (1-15)**

Research. May be repeated up to 88 credits.

Learning Outcomes

1. Engage in a specific research topic.

EDUC 6996. Selected Topics**1-6 Credits (1-6)**

Offered under various subtitles which indicate the subject matter to be covered. A maximum of 6 credits per semester and a total of 6 credits overall. May be repeated up to 6 credits.

Learning Outcomes

1. Engage in the study of an ECED topic.

EDUC 6997. Independent Study Topics**1-3 Credits (1-3)**

A problem and seminar course for those pursuing an advanced graduate degree. Course subtitled in the Schedule of Classes. May be repeated up to 99 credits.

Learning Outcomes

1. Plan course of study with with faculty advisor or instructor
2. Set course expectations.

EDUC 6998. Internship in Curriculum and Instruction 3-6 Credits (3-6)

For those pursuing an advanced graduate degree to meet the requirement for field work. Each course to bear an appropriate subtitle. May be repeated up to 6 credits.

Learning Outcomes

1. Complete an educational internship.

EDUC 6999. Ed.S. Thesis 1-15 Credits (1-15)

Offered primarily for those pursuing the research requirements for the Ed.S. degree. Course may be repeated up to a maximum allowed for this degree. Each research project will be designated by a qualifying subtitle. May be repeated up to 88 credits.

Learning Outcomes

1. To investigate a problem or issue in education.
2. Prepare the a complete doctoral project.

EDUC 7000. Doctoral Dissertation 1-15 Credits (1-15)

Dissertation. May be repeated up to 88 credits.

Learning Outcomes

1. Complete all phases of dissertation.
2. Defend dissertation

Educational Learning Technology Courses

EDLT 2110. Integrating Technology with Teaching 3 Credits (3)

Considers impact of technology on communication and knowledge development; engages students in the design of technology-integrated lessons with a constructivist approach.

Prerequisite: ENGL 1110G.

Learning Outcomes

1. Students will demonstrate a sound understanding of technology operations and concepts.
2. Students will plan and design effective learning environments and experiences supported by technology.
3. Students will implement curriculum plans that include methods and strategies for applying technology to maximize learning.
4. Students will apply technology to facilitate a variety of effective assessment and evaluation strategies.
5. Students will use technology to enhance their productivity and professional practice.
6. Students will better understand the social, ethical, legal, and human issues surrounding the use of technology on PreK-12 schools and apply that knowledge into future practice.

EDLT 3110. Integrating Technology with Teaching 3 Credits (3)

Considers impact of technology on communication and knowledge development; engages students in the design of technology-integrated lessons with a constructivist approach. May be repeated up to 3 credits.

Learning Outcomes

1. Students will demonstrate a sound understanding of technology operations and concepts.
2. Students will plan and design effective learning environments and experiences supported by technology.
3. Students will implement curriculum plans that include methods and strategies for applying technology to maximize learning.
4. Students will apply technology to facilitate a variety of effective assessment and evaluation strategies.
5. Students will use technology to enhance their productivity and professional practice.
6. Students will better understand the social, ethical, legal, and human issues surrounding the use of technology on PreK-Tweleve schools and apply that knowledge into future practice.

EDLT 5110. Foundations of Learning Design & Technology 3 Credits (3)

This course covers how to access, use, design, and evaluate instructional resources on the Internet, for blended and online learning environments. May be repeated up to 3 credits.

Learning Outcomes

1. Provide a rationale for using a systematic approach to learning design. Identify and summarize the major elements commonly included in instructional development models.
2. Define terms used to describe the phases and strategies of the learning design process. Conduct a needs assessment.
3. Demonstrate the following competency in the completion of an instructional development project: a) identify an instructional problem, b) analyze learners and learning contexts, c) plan and implement a goal analysis, d) specify terminal and enabling learning objectives, e) design criterion measures, f) prepare appropriate testing instruments and procedures, g) select appropriate instructional strategies, h) select appropriate instructional media (delivery systems), i) construct a prototype product, j) plan and conduct formative evaluations, and k) specify revisions resulting from formative evaluation.
4. Compare and contrast various instructional design perspectives and philosophies. Develop effective and efficient instructional products.

EDLT 5120. Critical Digital Literacy 3 Credits (3)

Explore, evaluate and use a variety of multimedia authoring tools including website, video, audio, image editing and apps (iOS/Android) for educational applications. May be repeated up to 3 credits.

Learning Outcomes

1. Considers impact of technology on communication and knowledge development; engages students in the design of technology-integrated lessons with a constructivist approach.

EDLT 5130. Technology and Language Learning 3 Credits (3)

Use of technology to enhance second language and dual language programs. Organized around technology enhanced communicative and interactive language learning environments. May be repeated up to 3 credits.

Learning Outcomes

1. Considers use of technology to enhance second language and dual language programs. Organized around technology enhanced communicative and interactive language learning environments

EDLT 5140. Fostering Online Learning Communities**3 Credits (3)**

Examines theoretical and practical aspects of communication and collaboration and their impact on the formation of online learning communities for those teaching adults in higher education, business, or government settings. May be repeated up to 3 credits.

Learning Outcomes

1. Examine theoretical and practical aspects of communication and collaboration and their impact on the formation of online learning communities for those teaching adults in higher education, business, or government settings.

EDLT 5210. Social Media in Blended and Online Learning Environments**3 Credits (3)**

This course will explore the role of social media in online and blended learning environments through practical hands-on activities, critical dialogue, and collaborative projects which will prepare you to utilize social media personally and pedagogically. May be repeated up to 3 credits.

Learning Outcomes

1. Describe and give examples of social media for use in your blended and online learning environments.
2. Actively engage, communicate and collaborate using social media, both inside the classroom and in appropriate social media-based learning environments.
3. Evaluate, analyze, and synthesize readings, research, and other information about social media in education.
4. Access, utilize, design, evaluate, and assess learning activities using social media.

EDLT 5220. Culturally Responsive Teaching with Technology**3 Credits (3)**

Use of inquiry and problem-based learning supported by computer-based applications. Critical analysis of multiple forms of electronic media. May be repeated up to 3 credits.

Learning Outcomes

1. Engage in culturally responsive teaching with technology.

EDLT 5230. Designing and Organizing Online Learning Environments**3 Credits (3)**

Explores the theories, models, approaches, technologies, and methods of online teaching and adult learning. Provides a foundation for examining the roles and characteristics of the online teacher and learner for those teaching adults in higher education, business, or government settings. May be repeated up to 3 credits.

Learning Outcomes

1. Design and organize effective online learning.

EDLT 5240. Online Teaching and Learning**3 Credits (3)**

This course provides a survey of theories, models and methods used to design and deliver online education through the use of technologies in K-12, higher education, business/industry, and continuing education. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate an awareness of equity social justice issues related to online education.
2. Critique and reflect upon diverse design frameworks,
3. Develop online resources for use in your professional and personal educational pursuits,

4. Explore and participate in the use of emerging technologies for online education.
5. Identify and discuss the impact of different technological innovations on society with particular emphasis on education,
6. Analyze and evaluate the use of technologies for teaching and learning in culturally relevant and responsive ways.

EDLT 5250. Tools and Techniques for Online Teaching**3 Credits (3)**

Examines the theoretical and practical implications of various asynchronous and synchronous tools and their impact on teaching and learning through research and hands-on experience. May be repeated up to 3 credits.

Learning Outcomes

1. Implement effective online teaching.

EDLT 5310. Design and Delivery of Webconferences and Webinars**3 Credits (3)**

This course provides hands-on experiences with web conferencing and examines the theory and research of webconferencing's impact on teaching and learning. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate the skillful use of the technology tools for a synchronous webconferencing system.
2. Evaluate best practices of interaction and engagement in the design and delivery webconferencing events.
3. Develop a variety of webconferencing strategies to engage and manage webconferencing attendees.
4. Design, develop, and implement the delivery of a web conference, first with a partner or team and individually by the end of the course.
5. Use self- and peer-evaluation for continuous improvement of web conferencing sessions.

EDLT 5320. Universal Design in Online Course Design**3 Credits (3)**

Examines theory, practical application of strategies, and global and policy implications of universal design (UD) in online learning environments. May be repeated up to 3 credits.

Learning Outcomes

1. Understand and implement universal design.

EDLT 5330. Emerging Technology Tools and Techniques**3 Credits (3)**

This course examines the theory, research, and practice of emerging technologies for educational practice and their impact on online teaching and learning. May be repeated up to 3 credits.

Learning Outcomes

1. Implement effective techniques.

EDLT 5992. Directed Study**3 Credits (3)**

Supervised academic work. Consent of Instructor required. May be repeated up to 3 credits.

Learning Outcomes

1. Engage in the study of an EDLT topic.

EDLT 5999. Capstone**3 Credits (3)**

The capstone course provides an opportunity to demonstrate teaching and learning in blended and fully online environments. Demonstrate competencies with best practices in culturally responsive teaching, learning/educational technology, online pedagogy, portfolio creation, and

curriculum development for blended and online delivery using emerging technologies. May be repeated up to 3 credits.

Learning Outcomes

1. Apply teaching and learning standards to review blended or online courses for learning environments.
2. Demonstrate proficiency using the tools of learning management systems.
3. Apply best practices in instructional design for blended/online courses
4. Explain how research and practice inform your course instructional design decisions.
5. Create a blended or online learning course that meets online teaching standards
6. Demonstrate participation in an online learning community.

EDLT 6110. Foundations of Learning Design & Technology

3 Credits (3)

This course covers how to access, use, design, and evaluate instructional resources on the Internet, for blended and online learning environments. Includes a theoretical and research component for doctoral students.

May be repeated up to 3 credits.

Learning Outcomes

1. Provide a rationale for using a systematic approach to learning design. Identify and summarize the major elements commonly included in instructional development models.
2. Define terms used to describe the phases and strategies of the learning design process. Conduct a needs assessment.
3. Demonstrate the following competency in the completion of an instructional development project: a) identify an instructional problem, b) analyze learners and learning contexts, c) plan and implement a goal analysis, d) specify terminal and enabling learning objectives, e) design criterion measures, f) prepare appropriate testing instruments and procedures, g) select appropriate instructional strategies, h) select appropriate instructional media (delivery systems), i) construct a prototype product, j) plan and conduct formative evaluations, and k) specify revisions resulting from formative evaluation.
4. Compare and contrast various instructional design perspectives and philosophies. Develop effective and efficient instructional products.

EDLT 6120. Emerging Models for Learning Design & Technology

3 Credits (3)

Integration of technology into content areas. May be repeated up to 3 credits.

Learning Outcomes

1. Understand emerging EDLT models.

EDLT 6210. Current Research in Learning and Technology

3 Credits (3)

Explores models and methods for examining and researching the impact of technology on learning and education. May be repeated up to 3 credits.

Learning Outcomes

1. Understand current technology research.

EDLT 6220. Multimedia, Authoring and Curriculum Design

3 Credits (3)

Explore, evaluate and use a variety of multimedia authoring tools including website, video, audio, image editing and apps (iOS/Android) for educational applications. Includes additional theoretical research component for doctoral students. May be repeated up to 3 credits.

Learning Outcomes

1. Facilitate effective technology learning environments.

EDLT 6230. Technology, Society, and Education

3 Credits (3)

Investigates models of the change process, examines speculations related to the directions and dynamics of change in an era of electronic technologies, explores shifts in the cultural and personal activities and relations of humans, and speculates on concomitant educational implications. May be repeated up to 3 credits.

Learning Outcomes

1. Understand technology and pedagogy.

EDLT 6240. Online Teaching and Learning

3 Credits (3)

This course provides a survey of theories; models and methods used to design and deliver online education through the use of technologies in K-12, higher education, business/industry, and continuing education.

Topics covered include accreditation, assessment, culturally responsive course design, current trends and best practices, hybrid and blended learning, learning management systems, online support services, social justice issues in online education, learner engagement, and retention.

Learning Outcomes

1. Implement effective digital pedagogy.

EDLT 6998. Advanced Fieldwork

3 Credits (3)

Fieldwork in learning technologies provides opportunities to integrate theory and practice through research, teaching and/or development. May be repeated up to 3 credits.

Learning Outcomes

1. Examine the historical figures in early childhood education that have influenced current practices and discourses. Identify theoretical, scientific, and philosophical foundations in early childhood education that have defined childhood learning and development. Critically examine the history of institutions and federal policies of early childhood education within the context of multiculturalism

Educational Leadership Administration Courses

ELAD 2210. Leadership and Change in Education

3 Credits (3)

This course will introduce students to the challenges and key strategies in initiating, implementing, and sustaining educational change and reform. In the first part of the course, participants will learn about the challenges of educational change in the United States and the role that they as school leaders play in facilitating change and reform. The course continues with an examination of how culture, micro-politics, and power structures support or impede national and global change initiatives. The last part of the course offers suggestions for change agents including community organizing, culture building, and embracing sustainable leadership practices. Participants will learn how to apply the change theories and concepts introduced in the course to practice through course readings, online discussions with the instructor and colleagues, group work, active examination of daily practice in schools, and personal reflection. May be repeated up to 3 credits.

Learning Outcomes

1. Students will be able to communicate in clear manners that articulate, convey and deepen the understandings others have of issues affecting their communities.
2. Students will be able to collaborate on democratic processes.

- Students will be able to communicate engage in critical social analysis and how the status quo fits into a larger movement for social change.

ELAD 2340. Multicultural Leadership in Education

3 Credits (3)

Introduction to the social and cultural constructions of gender, class, and race. Students will critically apply theoretical constructs to everyday life and discuss the intersection of gender and race with class inequality in national and global contexts. Using a social justice framework, readings, and assignments integrate a variety of racial/ethnic groups while considering the effects of historically uneven resource distribution, unearned privilege, forms of domination and subordination, immigration status, and cultural representation and ideologies. Participants will learn how to apply the change theories and concepts introduced in the course to practice through course readings, online discussions with the instructor and colleagues, group work, active examination of daily practice in schools, and personal reflection. May be repeated up to 3 credits.

Learning Outcomes

- Students will develop awareness of their own social identities.
- Students will recognize differences among various communities, perspectives, and world-views.
- Students will describe how privilege and biases impact our communities and systems.
- Students will create meaningful peer-to-peer relationships.
- Students will understand the impact of their actions on community members.
- Students will identify their leadership skills to shape social change on and off campus.
- Students will act on opportunities to promote social change.
- Students will use academic resources including advising, computers, printing, library, and space.

ELAD 2996. Special Topics in Educational Leadership

1-3 Credits (1-3)

Special topics course in education for undergraduate students. Course will be identified by a subtitle. May be repeated up to 12 credits.

Learning Outcomes

- Students will be able to engage in systems thinking which aids in seeing how individual situations are shaped by a broader contexts
- Students will be able to understand how to apply theoretical frameworks for understanding social problems.
- Students will be able to help develop leadership capacity in others.
- Students will be able to gain an understanding of cultural competence, which recognizes that diverse perspectives strengthen the dialogue and approaches to solving social problems.

ELAD 3110V. Introduction to Educational Leadership in a Global Society

3 Credits (3)

Multinational educational systems covered through knowledge of the U.S. system of education promoting critical leadership roles every citizen plays in the success of educational systems. May be repeated up to 3 credits.

Learning Outcomes

- Students will share reflections on issues of national and global importance in the field of educational leadership.

ELAD 3210. Current Issues In Educational Leadership

3 Credits (3)

This course addresses issues such as the rise in international education, education's costs, social media's role and influence, changes in state and national funding trends, student and faculty/staff diversity, among others. The focus of this course is centered on the actions and responses of administrators to the current issues they are facing. May be repeated up to 3 credits.

Learning Outcomes

- Students will identify the overarching issues that leaders in educational institutions are or will be facing;
- Students will articulate a more multicultural perspective through which to view the possible impact of these current issues on both those within the institution and those who are impacted by these institutions;
- Students will reconstruct their perspective to allow for a greater awareness of the how these current issues might differentially impact culturally, linguistically, and socio-economically diverse populations;
- Students will criticize inequitable examples of unfair educational policy and explore ways in which to develop culturally responsive practices when addressing current issues

ELAD 3996. Special Topics in Education

1-3 Credits (1-3)

Special topics course in education for undergraduate students. Course will be identified by a subtitle. May be repeated up to 12 credits.

Learning Outcomes

- Objectives change based on course content.

ELAD 4110. Management of Student Services

3 Credits (3)

History and overview of student services (e.g., admissions, counseling, registration, financial aid, housing, food services, student organizations) for early entry level positions. This course will provide students with an examination of foundations and principals of student services. Important theories and essential competencies needed in order to be successful will be explored through a social justice perspective of leadership. May be repeated up to 3 credits.

Learning Outcomes

- Explain the origins of student services concerning social and historical events programs.
- Describe the theoretical foundations and development of student services.
- Evaluate the organizational and administrative models for the delivery of student services
- Critique inequity issues in student services as they relate to institutions of higher education and how social justice action might improve or eliminate such inequities.
- Explain the primary legal foundations, ethical standards, and daily operation of student services programs.

ELAD 4120. Principles of Education Law and Policy

3 Credits (3)

Overview of the use of law and policy in schools and higher education. May be repeated up to 3 credits.

Learning Outcomes

- Analyze the options on policy issues using the statutes, cases, regulations, and legislative history as their tools.
- Evaluate legal developments in higher education.
- Synthesis legal trends in their particular area of professional interest.
- Compare and contrast how higher education law differs between private and public higher education.

ELAD 4130. Principles of Education Budgeting and Finance**3 Credits (3)**

Analysis of budget and finance practices in education. Restricted to: E AD majors. May be repeated up to 3 credits.

Learning Outcomes

1. Identify opportunities to use research and individual projects to explore issues related to topics of interest to them
2. Describe ways in which budget and finance skills are important to administrators in college and university settings
3. Distinguish how financial and budgetary issues vary with respect to state, private, and various funding sources within higher education

ELAD 4410. Foundation for School Library Specialists**3 Credits (3)**

Elements of librarianship. Introduction to the history, purpose, and role of the school library. Overview of current issues and legislation affecting school libraries. Taught with ELAD 5410. May be repeated up to 3 credits.

Learning Outcomes

1. Understand basic competencies for library specialists.

ELAD 4420. Administration of the School Library**3 Credits (3)**

Principles and practices related to the function, structure, and management of school libraries. May be repeated up to 3 credits.

Learning Outcomes

1. Understand basic competencies for library administration.

ELAD 4510. Elements of Research**3 Credits (3)**

This course provides students with a foundation for understanding educational research. The course will also provide grounding in proper writing format for use in the education profession. Students will be introduced to various research paradigms and the symbiosis of theory and practice. Besides introducing students to the symbiosis of theory and practice, students will complete assignments and activities that demonstrate the use of that symbiosis. Ultimately, students will be able to use the knowledge they gain through the course to be able to critique educational research. May be repeated up to 3 credits.

Learning Outcomes

1. Define what good research entails
2. Critique journal articles dealing with educational leadership
3. Use proper APA format in writing papers and written discussion
4. Use ethical standards for decision making in research

ELAD 4998. Internship**3 Credits (3)**

The undergraduate Educational Leadership major requires that students complete two internships. Internships provide students with either experience working in an area of administration that is different from the student's regular job or experience conducting research for a program or project. Each internship placement site and scope of work is determined through consultation with the course instructor. Students must complete 120 hours of work with the selected internship site. Student must be an E AD major and be within (at least) one year of graduation. May be repeated up to 6 credits.

Learning Outcomes

1. Students will gain experience in a work/administrative setting under the supervision of a experienced administrator.

ELAD 5110. The Principalship**3 Credits (3)**

Key issues surrounding the role of school-site leaders. The course must be passed with a grade of "B" or higher. Consent of Instructor required.

Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or better; .

Learning Outcomes

1. Students will examine the complexities of school leadership.
2. Students will create a school culture representative of their own core values.
3. Students will assess the role and importance of the principal in facilitating change, managing conflict, promoting an active anti-racist environment, celebrating diversity, and establishing accountability for all students' learning.

ELAD 5120. Leadership and Administration of Bilingual Education**3 Credits (3)**

Concepts and practical approaches to improving the education of English languages learners through higher education. The course must be passed with a grade of "B" or higher. Consent of Instructor required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or higher; .

Learning Outcomes

1. Examine the complexity and overarching issues encompassing the role of the school leader as it pertains to the broader and narrower goals of bilingual education
2. Develop critical understandings of educating equitably, involving the development and sustainability of bilingual education programs which focus on making schooling meaningful and comprehensible for the millions of children whose home languages are different from the dominant language of school and society

ELAD 5130. Basing Decision on Data: Pk-12**3 Credits (3)**

Analysis of accountability data and other evidence to support educational decision making. Disaggregating and interpreting assessment data to guide improvement of instruction. Moving from evidence to plans for action. The course must be passed with a grade of "B" or higher. Consent of instructor is required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or better.

Learning Outcomes

1. Identify various types of data and their uses in decision-making
2. Identify federal and state assessment programs, as well as local assessment requirements, and the policies that drive them
3. Explain how data from multiple sources is used to inform decision making about student achievement

ELAD 5140. Educational Financial Management**3 Credits (3)**

Educational finance and business applications. The course must be passed with a grade of "B" or higher. Consent of Instructor required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or better; .

Learning Outcomes

1. Understand and be able to use and explain to lay people the technical language used to discuss education finance issues.
2. Analyze, interpret, and present financial data, trends, and issues to various publics served by the schools and outline possible actions and their implications

ELAD 5150. Public School Law**3 Credits (3)**

Legal processes of education, major court decisions, and the legislative process will be studied. The course must be passed with a grade of "B" or better. Consent of Instructor required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or better; .

Learning Outcomes

1. Understand the critical issues involved in applying the law fairly and justly
2. Understand the complex nature of the federal, state, and local authority levels as they relate to applying statutory and constitutional law

ELAD 5160. Management of Educational Change: Public Schools

3 Credits (3)

Leadership in implementing innovations in education. The course must be passed with a grade of "B" or higher. Consent of instructor required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or better.

Learning Outcomes

1. Students will gain insight into how the structure of schools in the United States impacts the success of failure of educational change and reform.
2. Students will understand the role of implementing or resisting educational change efforts

ELAD 5170. Special Education Administration

3 Credits (3)

Competencies for the administration of special education programs with an emphasis upon New Mexico public school standards. The course must be passed with a grade of "B" or better. Consent of Instructor required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or better.

Learning Outcomes

1. Knowledge of interactive systems and sub-systems and the influence of internal and external environments on the supervisory and improvement processes.
2. Understanding of research and effective professional development practices tied to curriculum, improvement of instructional delivery and student achievement.

ELAD 5180. Internship Public Schools Part I

3 Credits (3)

First half of a practical internship in Pk-12 schools under supervision of school administrator. The course must be passed with a grade of "B" or higher. Consent of Instructor required. 3 years of Pk-12 teaching experience required. Restricted to: E AD majors. . May be repeated up to 3 credits.

Prerequisite: 18 cr. of ELAD course work; 3.0 GPA or better.

Learning Outcomes

1. A clear understanding of the roles and responsibilities of the school leader in an adaptive, culturally diverse and changing environment
2. Provide a platform for prospective leaders to analytically reflect on the complexity of ethical cases in which the school administrator is likely to confront in the scope of his/her administrative career in public education

ELAD 5185. Internship: Public Schools Part II

3 Credits (3)

Second half of a practical internship in Pk-12 administrative setting under supervision of experienced higher education administrator. Internship site determined by class instructor and graduate student. The class must

be passed with a grade of "B" or higher. Consent of Instructor required. Restricted to: E AD majors. May be repeated up to 3 credits.

Prerequisite: ELAD 5180; 3.0 GPA or better.

Learning Outcomes

1. A understanding of the roles and responsibilities of the school leader in an adaptive, culturally diverse and changing environment.
2. Provide a platform for prospective leaders to analytically reflect on the complexity of ethical cases in which the school administrator is likely to confront in the scope of his/her administrative career in public education.

ELAD 5210. Community College Administration

3 Credits (3)

An overview of the history, role, objectives and patterns governing the effectiveness of the community college. The course must be passed with a grade of "B" or higher. Consent of Instructor required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or better; .

Learning Outcomes

1. Understand the purpose of higher education and how this purpose has changed and affected various types of community colleges and universities and groups of people;
2. Consider how organization, governance, and finance in higher education vary by institutional type, control, and mission;

ELAD 5215. Higher Education Administration

3 Credits (3)

This course provides an overview of higher education in the United States including history, mission, and governance, in the context of organizational theory. The course must be passed with a grade of "B" or higher. Consent of Instructor required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or better.

Learning Outcomes

1. Understand the purpose of higher education and how this purpose has changed and affected various types of community colleges and universities and groups of people
2. Consider how organization, governance, and finance in higher education vary by institutional type, control and mission
3. Gain familiarity with major issues facing U.S. higher education

ELAD 5220. Management of Educational Change: Higher Education

3 Credits (3)

Leadership in implementing innovations in education in higher education. The course must be passed with a grade of "B" or higher. Consent of Instructor required. Restricted to: E AD majors.

Prerequisite: 3.0 GPA or better.

Learning Outcomes

1. Student will gain the insight into how the structure of schools in the United States impacts the success or failure of educational change.
2. Student will understand the role of implementing or resisting educational change efforts

ELAD 5230. Higher Education Finance and Funding

3 Credits (3)

This course examines the impact and process of financing and funding higher education. The course must be passed with a grade of "B" or higher. Consent of Instructor required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or better.

Learning Outcomes

1. Identify opportunities to use research and individual projects to explore issues related to issues of topics of interest
2. Describe the ways in which budget and finance skills are important to administrators in college and university settings
3. Distinguish how financial and budgetary issues vary with respect to state, private, and various funding sources within higher education

ELAD 5240. Management of Student Services in Higher Education**3 Credits (3)**

History and overview of student services (e.g., admissions, counseling, registration, financial aid, housing, food services, student organizations) and a review of management components used in student services.

The course must be passed with a grade of "B" or higher. Consent of Instructor required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or better.

Learning Outcomes

1. Explain the origins of student services in relationship to social and historical events
2. Describe the theoretical foundations and development of student services.
3. Evaluate the organizational and administrative models for the delivery of student services programs.

ELAD 5250. Higher Education Law**3 Credits (3)**

This course is designed to review the impact of the legal process and the judiciary on higher education. The course must be passed with a grade of "B" or higher. Consent of Instructor required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or better.

Learning Outcomes

1. Analyze the options on policy issues using the statutes, cases, regulations, and legislative history as their tool.
2. Evaluate legal developments in higher education.
3. Synthesis legal trends in their particular area of professional interest.

ELAD 5260. Administration of Adult and Continuing Education**3 Credits (3)**

Administration of programs in public schools, higher education, community and nontraditional educational settings. The class must be passed with a grade of "B" or higher. Consent of Instructor required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or higher; .

Learning Outcomes

1. Analyze adult education theory and the intersection of social justice to inform adult education program planning.
2. Assess the needs of specific populations for adult education programming

ELAD 5270. Basing Decision on Data: Higher Education.**3 Credits (3)**

Analysis of accountability data and other evidence to support educational decision making. Disaggregating and interpreting assessment data to guide improvement of instruction. Moving from evidence to plans for action. The course must be passed with a grade of "B" or higher. Consent of Instructor required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or higher; .

Learning Outcomes

1. Participants will understand the importance of using assessment data in decision-making and identify reasons why these skills are important to educational leaders in college and university settings.
2. Participants will evaluate the assessment structure of one institution or department in higher education, using a criteria-based measurement tool (rubric).
3. Participants will reflect on possibilities of using assessment data to further social justice outcomes in higher education.

ELAD 5280. Internship: Higher Education Part I**3 Credits (3)**

First half of practical internship in administrative setting under supervision of experienced higher education administrator. Internship site determined by class instructor and graduate student. The course must be passed with a grade of "B" or higher. Restricted to: E AD majors. May be repeated up to 3 credits.

Prerequisite: 15 credits of ELAD coursework and consent of instructor; .

Learning Outcomes

1. Understand the roles and responsibilities of the school leader in an adaptive, culturally diverse and changing environment
2. Will provide a platform for leaders to analytically reflect on the complexity of ethical cases in which the administrator will confront in the scope of administrative role

ELAD 5285. Internship: Higher Education Part II**3 Credits (3)**

Second half of a practical internship in an administrative setting under supervision of an experienced higher education administrator. Internship placement determined by class instructor and graduate student. The course must be passed with a grade of "B" or higher. Consent of Instructor required. Restricted to: E AD majors. May be repeated up to 3 credits.

Prerequisite: ELAD 5280; 3.0 GPA or better; .

Learning Outcomes

1. Enhance knowledge and practice of higher education administration, keeping in mind that experiences should provide opportunities for thoughtful examination of the diversity of the ways and manners in which office supervisors and staff conduct their work.
2. Provide practical experience and opportunity to examine and apply learned theoretical concepts within a supportive, supervised environment.
3. Develop skills related to higher education management and leadership.

ELAD 5310. Leadership for Social Justice and Equity**3 Credits (3)**

Examine cultural diversity and how appropriate understanding, leadership and instructional strategies can be used to reach all learners. Enhances understanding of what it means to be an educator in culturally diverse contexts. The course must be passed with a grade of "B" or higher. Consent of instructor required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or better; .

Learning Outcomes

1. Acquired knowledge of multicultural issues as they relate to race, ethnicity, class, and gender and how these factors intersect with current educational leadership trends;
2. Developed a more multicultural perspective which will lead to greater awareness of the needs of culturally, linguistically, and socio-economically diverse students and an ability to develop/enhance an

educational leadership lens designed to promote equity and access for all students;

ELAD 5320. Educational Leadership, Supervision, and Evaluation
3 Credits (3)

Leadership, supervision, and evaluation in Pk-12 and post secondary education. The course must be passed with a grade of "B" or better. Consent of Instructor required. Restricted to E AD majors May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or higher; .

Learning Outcomes

1. To acquire a basic knowledge of the processes, persons, and practices of educational leadership and supervision.
2. To develop personalized understandings of leadership and supervisory roles.
3. To relate leadership and supervision theory to practice.
4. To develop a concept of good administrative/supervisory practice.
5. To develop a diverse awareness of leadership and supervisory issues and techniques.

ELAD 5410. Foundation for School Library Specialists
3 Credits (3)

Elements of librarianship. Introduction to the history, purpose, and role of the school library. Overview of current issues and legislation affecting school libraries. Same as ELAD 4410. May be repeated up to 3 credits.

Learning Outcomes

1. Understand basic competencies for library specialists.

ELAD 5510. Elements of Research
3 Credits (3)

Survey and analysis of research methods and designs focusing on sound educational research and its presentation. The course must be passed with a grade of "B" or higher. Consent of Instructor required. Restricted to E AD majors. May be repeated up to 3 credits.

Prerequisite: 3.0 GPA or better; .

Learning Outcomes

1. Explain the purpose of research
2. Analyze the need for research by practicing educational administrators
3. Describe the differences between qualitative research and quantitative research

ELAD 5992. Special Problems.
1-3 Credits (1-3)

Offered under various subtitles which indicate the subject matter covered. May be taken for a maximum of 3 credits per semester and a total of 6 credits overall. May be repeated up to 6 credits.

Learning Outcomes

1. Objectives will vary based on course content.

ELAD 5996. Special Topics
1-6 Credits (1-6)

Offered under various subtitles which indicate the subject matter covered. May be taken for a maximum of 6 credits. May be repeated up to 6 credits.

Learning Outcomes

1. Objectives change based on course content.

ELAD 5997. Independent Studies
1-3 Credits (1-3)

Individual investigation in special topic areas. Requires prior approval of project advisor. May be repeated up to 9 credits.

Learning Outcomes

1. Objectives change based on course content.

ELAD 6110. Organizational Theory
3 Credits (3)

The overarching objectives of this class is to prepare educational leaders who comprehend the complexities of educational organizations, especially those with significant underrepresented populations; to initiate or maintain leaders' commitment to educational programs that embrace all learners; and to promote within leaders an understanding of the necessity of upholding social justice, primarily as it applies to issues, such as race, ethnicity, class, ability, religion, and gender. Consent of Instructor required. Restricted to: E AD majors.

Learning Outcomes

1. Understand and implement organizational theory.

ELAD 6120. Elements of Research
3 Credits (3)

Advanced survey and analysis of research methods and designs focusing on sound educational research and its presentation. Consent of Instructor required. May be repeated up to 3 credits.

Learning Outcomes

1. Evaluate self within educational research, Analyze what good research entails
2. Use proper APA (7th ed.) format in writing papers and in written discussions
3. Synthesize scholarly literature, Understand social justice in research and practice
4. Work on small pieces of active research to gain an understanding of what it entails

ELAD 6210. Quantitative Research I
3 Credits (3)

Explores quantitative research methods, the rationale and assumptions that guide statistical decisions, beginning level statistical analyses, and how all of these are applied in the field of educational leadership. May be repeated up to 3 credits.

Learning Outcomes

1. Identify the tasks and processes required to formulate appropriate research problems within educational settings, design relevant qualitative research strategies; for examining such problems, select pertinent data sources, data collection methods, and data analysis methods, and assess the results of such efforts.

ELAD 6220. Qualitative Research I
3 Credits (3)

Explores qualitative research methods and models and their application in the field of educational leadership. May be repeated up to 3 credits.

Learning Outcomes

1. Identify the tasks and processes required to formulate appropriate research problems within educational settings, design relevant qualitative research strategies; for examining such problems, select pertinent data sources, data collection methods, and data analysis methods, and assess the results of such efforts.

ELAD 6310. Concepts of Leadership in Education
3 Credits (3)

Survey of concepts of leadership in general and educational leadership in particular. Consideration of implications for practice. May be repeated up to 3 credits.

Learning Outcomes

1. Understand and implement important concepts central to effective educational leadership

ELAD 6320. Foundations of Educational Administration**3 Credits (3)**

Advanced course about the political, economic, and social forces on policy making and governance of Pk-12 and postsecondary education. May be repeated up to 3 credits.

Learning Outcomes

1. Students will gain an understanding of the concepts of school leadership, and the political, social and economic contexts that impact schools.

ELAD 6410. Quantitative Research II**3 Credits (3)**

Intermediate quantitative methods of research, statistical analyses, and their application in the field of educational leadership. Restricted to Doctoral students only. May be repeated up to 3 credits.

Prerequisite: ELAD 6210.

Learning Outcomes

1. Identify the tasks and processes required to formulate appropriate research problems within educational settings, design relevant qualitative research strategies; for examining such problems, select pertinent data sources, data collection methods, and data analysis methods, and assess the results of such efforts in more detail than in Qualitative Research I.
2. Students will conduct a mini study to prepare for dissertation seminar.

ELAD 6510. Qualitative Research II**3 Credits (3)**

Advanced qualitative methods of research and implementation in the field of educational leadership. May be repeated up to 3 credits.

Prerequisite: ELAD 6220.

Learning Outcomes

1. Identify the tasks and processes required to formulate appropriate research problems within educational settings, design relevant qualitative research strategies; for examining such problems, select pertinent data sources, data collection methods, and data analysis methods, and assess the results of such efforts in more detail than in Qualitative Research I.
2. Students will conduct a mini study to prepare for dissertation seminar.

ELAD 6520. Public School Law**3 Credits (3)**

Advanced course in which the legal processes of education, major court decisions, and the legislative process will be studied. Consent of Instructor required. May be repeated up to 3 credits.

Learning Outcomes

1. The student will articulate an understanding of basic legal concepts through examination and discussion of relevant court cases.

ELAD 6525. Higher Education Law**3 Credits (3)**

This advanced course is designed to review the impact of the judiciary on higher education. The legal standing of institutions of higher education on issues of staff rights, student rights, and tort liability will be addressed. In addition, the impact of local ordinances, state and federal laws and regulations will be examined. Consent of Instructor required. May be repeated up to 3 credits.

Learning Outcomes

1. Consider CRT's usefulness in educational research and what makes a CRT analysis unique or different from other analyses.

ELAD 6610. Scholarly Writing and the Southwest Border**3 Credits (3)**

This course is designed to provide doctoral-level students with an opportunity to engage with scholarly and academic writing in a meaningful manner. Scholarly writing and academic writing are often used interchangeably. They will be used in that manner for this course. Generally defined, academic writing refers to a particular style of expression that researchers use to define the intellectual boundaries of their disciplines and their areas of expertise. Scholarly writing is the specific genre of writing that is used in all academic fields. For this course, the scholarly writing is contained to the context of the Southwest Border and Borderland issues. This is designed in consideration of and relates to the Department and Program's mission, which takes into account social justice and border education issues. Additionally, the course will cover topics associated with scholarly writing that include, but not limited to: formal language, tone, precision, clarity, word choice, and assumptive statements versus research-supported rationale. Consent of Instructor required. Restricted to: E AD majors.

Learning Outcomes

1. Understand and implement place-based writing through and about the Southwest Border.

ELAD 6620. Evaluation Design in Education**3 Credits (3)**

Advanced course that focuses on evaluation and accountability models; application to educational programs. Consent of Instructor required. May be repeated up to 3 credits.

Learning Outcomes

1. Objectives change based on course content.

ELAD 6630. Educational Financial Management**3 Credits (3)**

This advanced course offers an overview of economic and financial concerns relating to the public school system of the United States. Consent of Instructor required. May be repeated up to 3 credits.

Learning Outcomes

1. Students will gain an understanding of the basic concepts of school budgeting and finance practices.

ELAD 6635. Higher Education Finance and Funding**3 Credits (3)**

This advanced course examines the impact and process of financing and funding higher education. The course is an examination of higher education finance as it relates to operational budgets, capital budgets, and policy issues which impact the financing of higher education. Consent of Instructor required. May be repeated up to 3 credits.

Learning Outcomes

1. Students will study the impact of the higher education budget on various departments and services at the university level.

ELAD 6710. The Professoriate**3 Credits (3)**

The purpose of this course is to explore the body of scholarly knowledge and research appropriate for the study of American higher education, the context in which teaching and learning occurs, and faculty's roles in the process. We will discuss the number, variety, and purpose of the various types of institutions; the different roles that faculty members play within these institutions; how faculty work is assessed and valued within the outside of the university; administrative regulations related to faculty

work; current issues related to the general state of the professoriate; as well as how does one prepare to enter the professoriate.

ELAD 6910. Dissertation Seminar

3 Credits (3)

Same as CEPY 6450. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. Consent of Instructor required. May be repeated up to 3 credits.

Learning Outcomes

1. Formulate a research purpose and driving question about a specific topic.

ELAD 6991. Doctoral Research

1-15 Credits (1-15)

Research. Consent of Instructor required. Thesis/Dissertation Grading. May be repeated up to 88 credits.

Learning Outcomes

1. Objectives for this course include submitting a pre-proposal, proposal, and final copy of the dissertation for committee consideration.

ELAD 6996. Selected Topics

1-6 Credits (1-6)

Offered under various subtitles which indicate the subject matter covered. May be repeated up to 6 credits.

Learning Outcomes

1. Objectives change based on course content.

ELAD 6998. Advanced Internship

1-6 Credits (1-6)

For those pursuing an advanced degree to meet the field work requirement. To bear an appropriate subtitle. May be repeated up to 6 credits.

Learning Outcomes

1. Students will gain experience in a work/administrative setting under the supervision of a experienced administrator.

ELAD 7000. Doctoral Dissertation

1-9 Credits (1-9)

Dissertation. Minimum of 3 credits per regular semester. May be taken for a maximum of 36 credits. Consent of instructor required. May be repeated up to 36 credits.

Learning Outcomes

1. Objectives for this course include submitting a pre-proposal, proposal, and final copy of the dissertation for committee consideration.

Reading Courses

READ 3110. Instruction for Special Reading Needs

3 Credits (3)

Emphasizes appropriate techniques for teaching reading to learners with special needs. Restricted to: TEP, EED, ECED, SED, and SPED majors. May be repeated up to 3 credits.

Learning Outcomes

1. Students will demonstrate basic knowledge of the five domains of reading;
2. Students will demonstrate knowledge of characteristics of reading disabilities (including dyslexia) and the cognitive and linguistic difficulties that may underlie these disabilities;
3. Students will recognize the cultural, environmental and social factors that can impact reading success;

4. Students will explore instructional practices in phonological awareness, phonics, spelling, vocabulary and comprehension that are consistent with current scientific research findings;
5. Students will use or analyze informal and/or criterion-based assessments for determining students' skills in phonological awareness, word identification, and reading fluency and for determining appropriate instructional goals for students;
6. Students will be able to develop a Professional Learning Community by researching and sharing the effectiveness of various strategies/methods/commercial programs for different domains of reading.

READ 3996. Special Topics

1-3 Credits (1-3)

Each course will be identified by a qualifying subtitle. A maximum of 3 credits in any one semester and a grand total of 6 credits. May be repeated up to 6 credits.

Learning Outcomes

1. Engage in the study of a specific literacy topic.

READ 4310. Elementary School Literacy I

3 Credits (2+2P)

Reading development, curriculum, and instruction in the elementary grades. Required of all elementary education majors. Restricted to: TEP-EED majors. May be repeated up to 3 credits.

Learning Outcomes

1. Articulate an understanding of developmental theories and processes and their implication for appropriate methods of teaching reading;
2. Demonstrate knowledge of various instructional approaches and strategies for promoting literacy within an integrated curriculum framework;
3. Provide and use anti-bias literacy materials and experiences, including primary language materials;
4. Plan appropriate whole group, small group and individual activities that include culturally and linguistically responsive instruction and appropriate accommodations for working with children with special needs;
5. Understand and articulate the concept of emergent literacy and the processes toward becoming an authentic reader and writer;
6. Understand the role of family and community in literacy development and respect and promote the use of the child's home language for learning;
7. Engage in reflection on current theoretical perspectives on the reading process and the role of print literacy in schools and our society;
8. Demonstrate knowledge of and use effectively, a wide range of literacy assessment strategies and instruments to determine a child's strengths and areas of need.

READ 4320. Elementary School Literacy II

3 Credits (2+2P)

Reading development in curriculum and instruction with assessment and evaluation in the elementary grades (K-8). Restricted to: TEP-EED majors. May be repeated up to 3 credits.

Prerequisite: READ 4310.

Learning Outcomes

1. Engage in reflection on current theoretical perspectives on the reading process, such as understanding linguistics, psycholinguistics, sociolinguistics and their relationships in the reading process, and the role of literacy in schools and our society;

2. Apply knowledge of various instructional approaches and strategies for promoting literacy within an integrated curriculum framework to include culturally and linguistically responsive instruction and appropriate accommodations for working with children with special needs;
3. Evaluate instructional materials in terms of their approach to reading, consider their possible use with children, and adapt the materials so that they reflect an appreciation for child-centeredness and cultural diversity in learning;
4. Use miscue analysis and other literacy assessment tools to understand, describe, and evaluate students' reading strategies and formulate an instructional plan tied to assessment;
5. Utilize children's literature, including multicultural, multilingual children's literature to plan, implement and reflect on innovative strategies for literacy scaffolding;
6. Define oneself as a literate person and revalue readers and writers, and users of language.

READ 4330. Content Area Literacy

3 Credits (2+2P)

Surveys integrated reading/writing/discursive practices in middle/secondary content areas. Taught with READ 5330. Restricted to: TEP-SED majors. May be repeated up to 3 credits.

Learning Outcomes

1. Analyze literacy processes, as they pertain to adolescent learners.
2. Discuss current trends and issues in content area literacy instruction with a specific focus on practices that promote achievement and equity.
3. Evaluate instructional practices that help students use reading, writing, speaking, listening, viewing and visually representing to learn the content areas.
4. Illustrate ethical reasoning and decision making in your approach to content area literacy education.
5. Integrate research, reflection, and best practices that positively impact students in a diverse society.

READ 5210. Language and Literacy Acquisition

3 Credits (3)

Framework and strategies of language and literacy acquisition with attention to bilingual learners and the interrelationship among reading, writing, and oral language. May be repeated up to 3 credits.

READ 5220. Sociopsycholinguistics of Reading

3 Credits (3)

Examines current research on reading process, learning to read, and teaching children to read and evaluates current programs and materials. May be repeated up to 3 credits.

READ 5310. Elementary School Literacy I

3 Credits (2+2P)

Reading development, curriculum, and instruction in the elementary grades. Same as READ 4310 with differentiated assignments for graduate students. May be repeated up to 3 credits.

Corequisite: ECED 5810, EDUC 5310, and EDUC 5320.

Learning Outcomes

1. Articulate an understanding of developmental theories and processes and their implication for appropriate methods of teaching reading;
2. Demonstrate knowledge of various instructional approaches and strategies for promoting literacy within an integrated curriculum framework;

3. Provide and use anti-bias literacy materials and experiences, including primary language materials;
4. Plan appropriate whole group, small group and individual activities that include culturally and linguistically responsive instruction and appropriate accommodations for working with children with special needs;
5. Understand and articulate the concept of emergent literacy and the processes toward becoming an authentic reader and writer;
6. Understand the role of family and community in literacy development and respect and promote the use of the child's home language for learning;
7. Engage in reflection on current theoretical perspectives on the reading process and the role of print literacy in schools and our society;
8. Demonstrate knowledge of and use effectively, a wide range of literacy assessment strategies and instruments to determine a child's strengths and areas of need.

READ 5320. Elementary School Literacy II

3 Credits (2+2P)

Reading development in curriculum and instruction with assessment and evaluation in the elementary grades (K-8). Same as READ 4320 with differentiated assignments for graduate students. May be repeated up to 3 credits.

Prerequisite: READ 5310.

Corequisite: EDUC 5330.

Learning Outcomes

1. Engage in reflection on current theoretical perspectives on the reading process, such as understanding linguistics, psycholinguistics, sociolinguistics and their relationships in the reading process, and the role of literacy in schools and our society;
2. Apply knowledge of various instructional approaches and strategies for promoting literacy within an integrated curriculum framework to include culturally and linguistically responsive instruction and appropriate accommodations for working with children with special needs;
3. Evaluate instructional materials in terms of their approach to reading, consider their possible use with children, and adapt the materials so that they reflect an appreciation for child-centeredness and cultural diversity in learning;
4. Use miscue analysis and other literacy assessment tools to understand, describe, and evaluate students' reading strategies and formulate an instructional plan tied to assessment;
5. Utilize children's literature, including multicultural, multilingual children's literature to plan, implement and reflect on innovative strategies for literacy scaffolding;
6. Define oneself as a literate person and revalue readers and writers, and users of language.

READ 5330. Content Area Literacy

3 Credits (3)

Surveys integrated reading/writing/discursive practices in middle/secondary content areas. "Master' plus Secondary Licensure students Only" and "TEP admission required" May be repeated up to 3 credits.

Prerequisite: SPED 5105, EDUC 5120, EDUC 5110.

Learning Outcomes

1. Define the purpose of schooling begin to articulate the implications for the teacher, youth, teaching, and learning.
2. Explore the historical dimensions of reading instruction in secondary education.

3. Explore the quality and character of life in schools along with the implications for all stakeholders.
4. Explore the roles of reading, writing, listening, and speaking in the content areas.
5. Discuss general pedagogical considerations that extend across all subject matter.
6. Promote the concept that learning in all areas is more authentic and meaningful when knowledge of diverse youth and their communities, content, and pedagogy are valued.
7. Practice strategies that integrate literacy, content, and knowledge of youth.
8. Explore literature in the content area.
9. Develop lesson plans that combine reading, writing, listening, and speaking in the content area that support diversity, integrate technology, and promote effective communication 1
10. Examine the needs of struggling readers. 1
11. Examine the Common Core Standards. 1
12. Engage in research and writing that supports the development of your professional identity as an educator and graduate-level student.

READ 5340. Literacy Assessment and Evaluation**3 Credits (3)**

Theoretical and practical aspects of using formal and informal assessment and evaluation procedures in literacy curriculum and instruction. May be repeated up to 3 credits.

Learning Outcomes

1. Students will be able to understand and implement various strategies for assessing and evaluating the literacy practices and knowledge of students.

READ 5350. Adult and Family Literacy**3 Credits (3)**

Principles, practices, and instructional materials for adult and family literacy. May be repeated up to 3 credits.

Learning Outcomes

1. Students will be able to understand and implement various strategies for engaging students and their families through literacy practices in a variety of classroom and home settings.

READ 5360. Digital Literacies**3 Credits (3)**

Digital Literacies study focuses on the multiple relationships between how we express ourselves to one another and the multiple technological systems and networks that provide context, meaning, and shape to those expressions in both social and academic spaces. This course is designed to examine new literacies theory as it applies to teaching applications and current research on digital literacies within K-12 education. As 21st Century practitioner scholars, we are concerned with both the social aspects of literacy practices, understanding that school-based operations are inseparable from the sociocultural contexts in which they are enacted. Must be an NMSU graduate student to participate in this course.

Prerequisite: READ 5340 with a B- or better.

Learning Outcomes

1. Critically assess K-12 implementation of digital literacies across content area curriculum and instruction.
2. Examine seminal and current research on digital literacies' theory, pedagogy, and practice.
3. Determine the level of cultural relevance in schools and pedagogies for 21st Century students.

4. Interpret how social categories relevant to digital literacy contribute to construction of identity.
5. Develop a critical digital pedagogy that addresses the literacy practices of all learners.

READ 5410. Theory and Pedagogy of Literature for Children and Adolescents**3 Credits (3)**

This course provides an in-depth exploration of pedagogy and theory related to literature for adolescents. Students must be in Graduate Standing. May be repeated up to 3 credits.

Learning Outcomes

1. Analyze literacy processes, as they pertain to adolescent learners.
2. Discuss current trends and issues in content area literacy instruction with a specific focus on practices that promote achievement and equity.
3. Evaluate instructional practices that help students use reading, writing, speaking, listening, viewing and visually representing to learn the content areas.
4. Illustrate ethical reasoning and decision making in your approach to content area literacy education.
5. Integrate research, reflection, and best practices that positively impact students in a diverse society.

READ 5420. Theory and Pedagogy of Writing**3 Credits (3)**

This course is designed to examine critical writing theory and pedagogy for K-12 teaching and learning, including inclusive and multicultural approaches, with an emphasis in constructive, collaborative practices, and the integration of digital tools across several genres of writing. Through sequential, thematic units, coursework will emphasize: 1) the study of formative theories along with the development of instructional practices to promote achievement and equity in writing education; 2) the application of these skills through pedagogy and curriculum building, and 3) the construction of broad understandings of craft within the context of the current policies and standards which impact education both regionally and nationally.

Learning Outcomes

1. Critically assess writing curriculum and instruction in K-12 learning environments.
2. Develop a critical writing pedagogy that addresses the literacy practices of all learners.
3. Measure the alignment of writing structures in schools with students' cultural literacies.
4. Interpret how social categories relevant to education contribute to construction of identity.
5. Formulate engaging strategies that develop writers who are competent in multiple genres.

READ 5990. Practicum in Literacy Education**1-6 Credits (1-6)**

Supervised laboratory experience with children with reading difficulties. The student implements a program of specific procedures to aid the disabled reader. May be repeated up to 6 credits.

Prerequisite: READ 5340.

Learning Outcomes

1. Students will be able to understand and implement various strategies for assessing and evaluating the literacy practices and knowledge of students.

READ 5992. Special Studies in Literacy**1-6 Credits (1-6)**

Each study will be designated by a qualifying subtitle. Taught with READ 6992. May be repeated up to 99 credits.

Learning Outcomes

1. Engage in a specific literacy topic.

READ 5996. Selected Topics in Literacy**1-6 Credits (1-6)**

Offered under different subtitles in the Schedule of Classes. Taught with READ 6996 with differentiated subjects for doctoral students. May be repeated up to 6 credits.

Learning Outcomes

1. Engage in the study of a specific literacy topic.

READ 6110. Critical Issues in Literacy Education**3 Credits (3)**

Critical issues from historical to current perspectives. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the multiple critical issues central to literacy education from both a historical and contemporary perspective.

READ 6120. Multiple Critical Literacies**3 Credits (3)**

An exploration of the multiple literacies that operate on the individual, classroom, community, cultural and societal levels. Same as BLED 6120. May be repeated up to 3 credits.

READ 6130. Multiculturalism, Literature, and Inquiry**3 Credits (3)**

Advanced exploration and examination of critical multicultural language education vis-a-vis children's adolescent, young adult, and adult literature, with an eye toward problematizing assumptions about literacy, articulating issues of social justice and enacting transactive, transformative pedagogy. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the theories and approaches necessary for conducting inquiry reading and writing.

READ 6210. Ethnography of Reading and Writing**3 Credits (3)**

Covers the dynamics of data interpretation and critical analysis in the study of literacy. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the theories and approaches necessary for conducting ethnographic studies in reading and writing.

READ 6320. Praxis and Reflexivity**3 Credits (3)**

The cyclical research processes of continuous self and systemic (re)evaluation vis-a-vis classroom, community, and society with an eye toward reflection, growth, change, and larger forms of social agency. Restricted to doctoral-level students of any major. Same as BLED 6220, EDUC 6220. May be repeated up to 3 credits.

READ 6991. Doctoral Research in Literacy**1-15 Credits (1-15)**

Research on topic of interest. May be repeated up to 88 credits.

Learning Outcomes

1. Engage in the study of a specific literacy topic at the doctoral level.

READ 6992. Special Studies in Literacy**1-6 Credits (1-6)**

Offered under different subtitles in the Schedule of Classes. Taught with READ 5992 with differentiated assignments for doctoral students. May be repeated up to 6 credits.

Learning Outcomes

1. Engage in the study of a specific literacy topic at the doctoral level.

READ 6996. Selected Topics in Literacy**1-6 Credits (1-6)**

Offered under various subtitles that indicate the subject matter. Same as READ 5996. May be repeated up to 99 credits.

Learning Outcomes

1. Engage in the study of a specific literacy topic at the doctoral level.

READ 6997. Independent Study Topics in Reading**1-6 Credits (1-6)**

A problem and seminar course for those pursuing an advanced degree. Each course will have an appropriate subtitle. May be repeated up to 99 credits.

Learning Outcomes

1. Engage in the study of a specific literacy topic at the doctoral level.

READ 6999. Research Project**1-15 Credits (1-15)**

Offered primarily for those pursuing the research requirement for the Ed.S. degree. Each research project will be designated by a qualifying subtitle. May be repeated up to 88 credits.

Learning Outcomes

1. Engage in the study of a specific literacy topic at the doctoral level.

Special Education Courses

SPED 2996. Topics**3 Credits (3)**

Offered under various subtitles that indicate the subject matter to be covered. May be repeated up to 9 credits.

Learning Outcomes

1. Varies

SPED 3105. Introduction to Special Education in a Diverse Society**3 Credits (3)**

Characteristics, identification, and educational needs of exceptional learners. Attention is given to the various types of programs serving exceptional learners. Designed for all professional personnel who work with exceptional learners. May be repeated up to 3 credits.

Learning Outcomes

1. Discuss historical and current legislation pertaining to exceptional learners and their families and its impact on professional practice in the field.
2. Discuss historical and current legislation pertaining to exceptional learners and their families and its impact on professional practice in the field.
3. Explain the major components of an IEP and its processes, as well as the roles of learners, families and professionals on the team.
4. Discuss the different service delivery models and discuss the principles, practices, and pragmatics of inclusion co-teaching.
5. Analyze the disability categories under (IDEA, 2004), (characteristics, etiology, and diagnostic criteria).
6. Examine educational considerations for exceptional learners (educational approaches [Universal design and differentiated instruction], assistive technology, accommodations/modifications, and related supports and services).

- Employ culturally responsive evidence-based practices to create family/school/community partnerships to promote academic achievement and prepare students for their post-school transitions.
- Evaluate and synthesize research literature on a selected topic from current special education research.

SPED 3110. Bilingual/Multicultural Special Education

3 Credits (3)

Introduction to issues related to the provision of services to culturally and linguistically diverse students with exceptionalities.

Learning Outcomes

- Students will identify implicit and explicit biases.
- Students will discuss the cultural characteristics of families from culturally and linguistically diverse backgrounds and the barriers of parent engagement in their child's education.
- Students will identify how privilege, power, and inequities exist in the school system and how it impacts the academic achievement of students from culturally linguistically diverse (CLD) backgrounds.
- Students will identify culturally relevant strategies to employ in the classroom to meet the individual learner needs of students from culturally and linguistically diverse backgrounds.
- Students will develop a lesson plan that embeds culturally responsive pedagogy that addresses the individual needs of students from culturally and linguistically diverse backgrounds.

SPED 3120. Elementary Curriculum, Methods, and Materials for Special Education in a Diverse Society

3 Credits (3)

Curriculum theory and development for special education programs. Various teaching methods utilized with elementary exceptional learners and techniques involved in identifying, adapting, and developing materials will be addressed. May be repeated up to 3 credits.

Learning Outcomes

- Evaluate historical and current legislation pertaining to exceptional learners and their families and its impact on professional practice in the field.
- Describe the RTI process and its role in determining eligibility for special education services.
- Discuss learner diversity (ability, exceptionality, developmental level, learning style, language, gender, ethnicity, etc.) and employ individualized evidence-based culturally responsive instructional practices that build on learners' strengths and interests.
- Create safe, inclusive, culturally responsive learning environments to engage learners with exceptionalities in meaningful learning activities and social interactions that develop communication, emotional well-being, positive social interactions, and self-determination.
- Apply classroom management techniques that support learners and focus, on routines, procedures, rules, and positive behavior supports to address behavior.
- Apply culturally responsive instructional practices to individualize learning for learners with exceptionalities; taking into consideration individual abilities, interests, learning environments, and cultural and linguistic factors in the planning, selection, development, and adaptation of learning experiences for learners with exceptionalities.
- Design differentiated lesson plans that employ the tenets of universal design.

SPED 4110. Low Incidence Disabilities in a Diverse Society

3 Credits (3)

Examines those disabilities that occur less frequently in the special education population, including hearing loss, visual disorders, autism, and other severe manifestations. May be repeated up to 3 credits.

Learning Outcomes

- Analyze Low Incidence Disabilities (characteristics, etiology, and diagnostic criteria) (IDEIA, 2004).
- Identify the types of related supports and services—assistive technology, environmental and instructional accommodations/modifications, and related services—available to students with low incidence disabilities to maximize participation in inclusive settings.
- Apply culturally responsive instructional practices to individualize learning for learners with low incidence disabilities, taking into consideration individual abilities, interests, learning environments, and cultural and linguistic factors in the planning, selection, development, and adaptation of learning experiences of learners with low incidence disabilities in inclusive environment.
- Employ culturally responsive strategies for creating effective family, school, community partnerships.
- Discuss culturally responsive strategies that promote collaboration between families, schools, and community agencies/organizations during the student's transition planning process.
- Identify current educational issues impacting students with low incidence disabilities.

SPED 4120. High Incidence Disabilities in a Diverse Society

3 Credits (3)

Examines those areas of disability that most frequently occur in the special education population, including intellectual disabilities, learning disabilities, communication disorders, and behavioral and emotional disorders. May be repeated up to 3 credits.

Learning Outcomes

- Describe and compare the major approaches to identifying, placement, assessing, planning for instruction, and classifying high incidence disabilities.
- Identify and discuss school-based, sociological, cultural, and economic differences as they relate to etiology and identification of mild disabilities.
- Describe and critically evaluate classroom instructional practices that can improve the educational success of students with high incidence disabilities.
- Describe and critically evaluate classroom management practices that can improve the educational success of students with high incidence disabilities.
- Describe how the educational experiences of persons with mild disabilities is shaped by their cognitive, perceptual, language, academic, and social / emotional characteristics.

SPED 4130. Reading for Elementary Exceptional Learners in a Diverse Society, K-6

3 Credits (3)

Emphasizes reading diagnosis and materials for students with special developmental and learning problems. Taught with SPED 5130. May be repeated up to 3 credits.

Learning Outcomes

- Evaluate the sources of reading difficulty
- Evaluate the characteristics exhibited by children with reading difficulties and reading disabilities.
- Demonstrate how to use non-biased, culturally responsive assessments and progress monitoring data to monitor and evaluate reading performance to drive instruction.

4. Discuss the stages in literacy development and the factors that influence development of student literacy in reading, writing, speaking, viewing, and listening, including phonological, orthographic, semantic, and syntactic processing.
5. Implement research-based reading strategies and instruction to promote the development of print awareness, phonological and phonemic awareness, fluency, vocabulary, spelling, comprehension, reading, and writing for learners with reading difficulties.
6. Evaluate research-based strategies, methods, and commercial programs for different domains of reading.
7. Create a lesson plan and teach an elementary level reading lesson.

SPED 4140. Reading for Elementary Exceptional Learners in a Diverse Society, 7-12

3 Credits (3)

Extends information covered in SPED 5130, which covers grades K 6. Strategies and materials are addressed. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate a knowledge of the major component of the reading process.
2. Increase their repertoire of reading instruction procedures which may be used with students of differing reading abilities and from diverse backgrounds at the middle and secondary levels.
3. Increase their knowledge of theory and related discipline-specific learning strategies designed to assist middle and secondary students in reading and learning through research based practices.
4. Participate in discussion of current literacy issues.
5. Explore the presentation of new teaching and learning strategies as they are related to content area literacy.

SPED 4150. Secondary Curriculum, Methods, and Materials for Special Education in a Diverse Society

3 Credits (3)

Curriculum theory and development for elementary special education programs. Various teaching methods utilized with secondary exceptional learners and techniques for identifying, adapting, and developing materials will be addressed. Taught with SPED 5150. May be repeated up to 3 credits.

Learning Outcomes

1. Discuss learner diversity (ability, exceptionality, developmental level, learning style, language, gender, ethnicity, etc.)
2. Apply effective methods for planning and implementing culturally responsive secondary differentiated content area instruction for exceptional learners in inclusive settings.
3. Identify demands of learning environments of secondary exceptional learners.
4. Identify basic classroom management theories and strategies for individuals with diverse learning needs in secondary environments.
5. Employ culturally responsive evidence-based practices to create family/school/community partnerships to promote academic achievement and prepare students for their post-school transitions.

SPED 4210. Introduction to Assessment of Diverse Exceptional Learners

3 Credits (3)

Theory and use of norm and criterion-referenced instruments and learning theories in the classroom; planning of prescriptive instructional programs. May be repeated up to 3 credits.

Learning Outcomes

1. Compare and contrast the different types of assessment and their purposes.

2. Identify legislation and litigation, which has impacted assessment.
3. Explain the applications and uses of assessments results.
4. Identify widely used (common) measures of psycho-educational assessment and their appropriate application.
5. Identify a variety of techniques for obtaining information regarding students' academic functioning and learning techniques.
6. Identify techniques for assessing students' socio-emotional functioning.
7. Outline the process for identifying exceptional learners and subsequent educational planning utilizing learning theories.
8. Analyze and identify assessment strategies for specific populations (Culturally and Linguistically Diverse, Preschool, Elementary School, etc.)
9. Integrate information gathered through comprehensive assessment procedures into a whole picture of the student's areas of strength, weakness and needs.

SPED 4220. Classroom Management for Diverse Learners

3 Credits (3)

Behavior-change strategies for exceptional learners. May be repeated up to 3 credits.

Learning Outcomes

1. Plan the organization of a classroom illustrating optimum use of instructional resources (computers, books, writing materials, reference material, manipulatives, creative constructive materials, etc.) that facilitates efficiency and effectiveness of access, use, maintenance, and storage of such resources.
2. Manage student progress data electronically for visual representation of performance for individual students and whole class averages.
3. Design the organization of the physical aspects of a classroom (furniture, areas, etc) for ease of transition, use, safety and traffic flow based on effective designs presented in the literature.
4. Establish classroom procedures and expectation (rules) to promote a positive, effective and efficient learning environment.
5. Construct the organization of a classroom schedule/time management plan that includes various content areas, instructional strategies, grouping strategies, levels of energy use, etc. Within large blocks of time or for an entire day school day.
6. Demonstrate knowledge and skill of affective domain-based theoretical models for (1) setting and managing the emotional tone of a classroom, (2) managing the psycho-social atmosphere of the classroom and individual students, and (3) managing motivation of students to succeed in learning academic content, social skills, self-responsibility skills, and inter-relationship skills with other class members.
7. Analyze a given classroom situation for legal, ethical and professional issues and concerns, by applying legal, ethical, and professional reactions to the situation and provide resolutions to align the classroom legally, ethically, and professionally. This will include all legal bases (state and federal) involving all students, including students with disabilities, ESL and at-risk students.
8. Observe, analyze and document student behavior to match an appropriate intervention strategy to change behavior in a desired direction. This will also include the successful implementation of behavior management strategies for entire classes, small groups, and individual students along with development and maintenance of electronic data collection graphing and analysis.

SPED 4310. Introduction to Autism**3 Credits (3)**

This course will provide an overview of autism spectrum disorders as a triad of impairments, including historical and theoretical perspectives, assessment issues, characteristics of autism, intervention programs, and family issues. Taught with SPED 5310 and SPED 6310. May be repeated up to 3 credits.

Learning Outcomes

1. Analyze Autism Spectrum Disorders ASD (characteristics, etiology, co-morbid conditions, differential diagnosis).
2. Describe the criteria used to screen and diagnose ASD.
3. Examine evidence-based practices used to effectively support students with ASD in accessing general education and grade level standards (classroom structure, differentiated instruction, peer mediated supports, structured teaching, and emotional supports).
4. Describe strategies related to promoting a successful transition from school to adult life for individuals with ASD.
5. Examine the strategies for effective collaboration and communication with families of children with ASD and key stakeholders for the purpose of information sharing and collaborative planning with families.
6. Identify and investigate current educational issues impacting students with ASD.

SPED 4320. Behavior and Autism**3 Credits (3)**

This course will cover the first of the triad of impairments. Students will gain an understanding of the behaviors of children with autism. Students will examine several behavior management philosophies and research based interventions and how they can be applied in the educational setting. Attention will also be given to play skills. The family perspective and participation in the proactive behavior management process will be incorporated throughout the course. Taught with SPED 532 with differentiated assignments. May be repeated up to 3 credits.

Prerequisite/Corequisite: SPED 4310 or SPED 5310 or SPED 6310.

Learning Outcomes

1. Explain the definition of Autism Spectrum Disorder (ASD) and associated characteristics of students with ASD as measured by required readings, discussions, and article reviews.
2. Explain behavior impairments and characteristics associated with students with ASD as measured by required readings, discussions, and article reviews
3. Explain Applied Behavior Analysis strategies as measured by completion of required paper(s) summarizing peer-reviewed journal article related to diversity, behavior management interventions, and/or behavior analysis.
4. Explain information related to individuals with ASD and behavior challenges as measured by participation in online chat with instructor or group power point presentation.
5. Discuss evidence-based treatment approaches that are useful in improving behavior management skills of students with ASD as measured by participation in required readings and discussions

SPED 4330. Social Skills and Autism**3 Credits (3)**

This course will cover the second of the triad of impairments. As a blend of researched based models and evidenced based practical applications, students will gain an understanding of the social skill deficits often associated with autism spectrum disorders. Review a variety of social cognition theories and explore effective social skill interventions for

children functioning at a variety of levels along the autism spectrum. Taught with SPED 5330 and SPED 6330 with differentiated assignments. May be repeated up to 3 credits.

Prerequisite/Corequisite: SPED 4310 or SPED 5310 or SPED 6310.

Learning Outcomes

1. Analyze Autism Spectrum Disorders ASD (definition, characteristics, etiology).
2. Evaluate Social Skills characteristics and difficulties often associated with ASD.
3. Appraise current tools and strategies used to assess Social Skills problems in children with ASD.
4. Use assessment results to identify the Social Skills needs of children with ASD
5. Analyze the types of evidence-based practices used to address the Social Skills needs of children with ASD.
6. Design an intervention plan to address the Social Skills needs of a child with ASD.
7. Incorporate family preferences and values into the educational process of students with ASD.
8. Employ data collection procedures to evaluate the effectiveness of evidence-based practices for students with ASD.

SPED 4340. Communication and Autism**3 Credits (3)**

This course will cover the third of the triad of impairments. Students will gain an overview of communication characteristics and difficulties often associated with autism spectrum disorders. Review current tools and strategies used to assess speech, language, and interaction skills. Use assessment results to identify needs and implement appropriate interventions. Explore a variety of intervention strategies aimed at building receptive, expressive, and pragmatic language of children functioning at a variety of levels along the autism spectrum. Taught with SPED 5340 and SPED 640 with differentiated assignments. May be repeated up to 3 credits.

Prerequisite: SPED 4310 or SPED 5310 or SPED 6310.

Learning Outcomes

1. Analyze Autism Spectrum Disorders ASD (definition, characteristics, etiology).
2. Evaluate communication characteristics and difficulties often associated with ASD.
3. Appraise current tools and strategies used to assess communication problems in children with ASD.
4. Analyze the types of interventions used to address the communication needs of children with ASD.
5. Design an intervention plan to address the communication needs of a child with ASD.
6. Employ data collection procedures to evaluate the effectiveness of research-based interventions for students with ASD.
7. Incorporate family preferences and values into the educational process of students with ASD.

SPED 4810. Early Childhood SPED Student Teaching**9 Credits (9P)**

Synthesis of knowledge and skills appropriate to teaching in PreK - 3rd grade educational settings. Restricted to: TEP-ECED majors. Grading (S/U, Audit). Students must be Admitted into student teaching May be repeated up to 9 credits.

Learning Outcomes

1. Varies

SPED 4811. Practicum in Education, Equity and Cultural Diversity
3 Credits (3)

This is a supervised experience in providing special education services to local preK-12 students. In the context of the public school classroom, teacher candidates are guided to apply content knowledge from the seminar meetings and from prior coursework. Restricted to: SPED majors.

Prerequisite: SPED 3105 and SPED 3120 or consent of instructor.

Learning Outcomes

1. Candidates demonstrate an understanding of the critical concepts and principles in their discipline and of the pedagogical content knowledge necessary to engage students' learning of concepts and principles in the discipline;
2. Candidates create and implement learning experiences that motivate K-8 students, establish a positive learning environment, and support K-8 students' understanding of the central concepts and principles in the content discipline;
3. Candidates design, adapt, and select a variety of valid and reliable assessments and employ analytical skills necessary to inform ongoing planning and instruction, as well as to understand, and help students understand their own, progress and growth;
4. Candidates engage students in reasoning and collaborative problem solving related authentic local, state, national, and global issues, incorporating new technologies and instructional tools appropriate to such tasks. Candidates use research and evidence to continually evaluate and improve their practice, particularly the effects of their choices and actions on others, and they adapt their teaching to meet the needs of each learner;
5. Candidates design and implement appropriate and challenging learning experiences, based on an understanding of how children learn and develop. They ensure inclusive learning environments that encourage and help all K-8 students reach their full potential across a range of learner goals;
6. Candidates work with K-8 students and families to create classroom cultures that support individual and collaborative learning and encourage positive social interaction, engagement in learning, and independence;
7. Candidates build strong relationships with students, families, colleagues, other professionals, and community members, so that all are communicating effectively and collaborating for student growth, development, and well-being;
8. Candidates reflect on their personal biases and access resources that deepen their own understanding of cultural, ethnic, gender, sexual orientation, language, and learning differences to build stronger relationships and to adapt practice to meet the needs of each learner.

SPED 4820. Student Teaching SPED
9 Credits (9)

Supervised teaching in a special education classroom and participation in a required seminar. Students must be admitted to student teaching program in order to enroll. Restricted to: SPED majors.

Prerequisite: SPED 4811.

Learning Outcomes

1. The teacher candidate understands how learners grow and develop, recognizing that patterns of learning and development vary individually within and across the cognitive, linguistic, social, emotional, and physical areas, and designs and implements developmentally appropriate and challenging learning experiences.

2. The teacher candidate uses understanding of individual differences and diverse cultures and communities to ensure inclusive learning environments that enable each learner to meet high standards.
3. The teacher candidate works with others to create environments that support individual and collaborative learning, and that encourage positive social interaction, active engagement in learning, and self-motivation.

SPED 4830. Special Education/Elementary Student Teaching Seminar
3 Credits (3)

Discussion of elementary Special Education school issues related to student teaching.

Prerequisite: SPED 4811.

Corequisite: SPED 4820.

Learning Outcomes

1. The teacher candidate understands how learners grow and develop, recognizing that patterns of learning and development vary individually within and across the cognitive, linguistic, social, emotional, and physical areas, and designs and implements developmentally appropriate and challenging learning experiences.
2. The teacher candidate uses understanding of individual differences and diverse cultures and communities to ensure inclusive learning environments that enable each learner to meet high standards.
3. The teacher candidate works with others to create environments that support individual and collaborative learning, and that encourage positive social interaction, active engagement in learning, and self-motivation.
4. The teacher candidate understands the central concepts, tools of inquiry, and structures of the discipline(s) he or she teaches and creates learning experiences that make these aspects of the discipline accessible and meaningful for learners to assure mastery of the content.
5. The teacher candidate understands how to connect concepts and use differing perspectives to engage learners in critical thinking, creativity, and collaborative problem solving related to authentic local and global issues.
6. The teacher candidate understands and uses multiple methods of assessment to engage learners in their own growth, to monitor learner progress, and to guide the teacher's and learner's decision making.
7. The teacher candidate plans instruction that supports every student in meeting rigorous learning goals by drawing upon knowledge of content areas, curriculum, cross-disciplinary skills, and pedagogy, as well as knowledge of learners and the community context.
8. The teacher candidate understands and uses a variety of instructional strategies to encourage learners to develop deep understanding of content areas and their connections, and to build skills to apply knowledge in meaningful ways.
9. The teacher candidate engages in ongoing professional learning and uses evidence to continually evaluate his/her practice, particularly the effects of his/her choices and actions on others (learners, families, other professionals, and the community), and adapts practice to meet the needs of each learner. 1
10. The teacher candidate seeks appropriate leadership roles and opportunities to take responsibility for student learning, to collaborate with learners, families, colleagues, other school professionals, and community members to ensure learner growth, and to advance the profession.

**SPED 4840. Special Education/ Secondary Student Teaching Seminar
3 Credits (3)**

Discussion of secondary school issues related to student teaching.

Prerequisite: SPED 4821.

Corequisite: SPED 4820.

Learning Outcomes

1. The teacher candidate understands how learners grow and develop, recognizing that patterns of learning and development vary individually within and across the cognitive, linguistic, social, emotional, and physical areas, and designs and implements developmentally appropriate and challenging learning experiences.
2. The teacher candidate uses understanding of individual differences and diverse cultures and communities to ensure inclusive learning environments that enable each learner to meet high standards.
3. The teacher candidate works with others to create environments that support individual and collaborative learning, and that encourage positive social interaction, active engagement in learning, and self-motivation.
4. The teacher candidate understands the central concepts, tools of inquiry, and structures of the discipline(s) he or she teaches and creates learning experiences that make these aspects of the discipline accessible and meaningful for learners to assure mastery of the content.
5. The teacher candidate understands how to connect concepts and use differing perspectives to engage learners in critical thinking, creativity, and collaborative problem solving related to authentic local and global issues.
6. The teacher candidate understands and uses multiple methods of assessment to engage learners in their own growth, to monitor learner progress, and to guide the teacher's and learner's decision making.
7. The teacher candidate plans instruction that supports every student in meeting rigorous learning goals by drawing upon knowledge of content areas, curriculum, cross-disciplinary skills, and pedagogy, as well as knowledge of learners and the community context.
8. The teacher candidate understands and uses a variety of instructional strategies to encourage learners to develop deep understanding of content areas and their connections, and to build skills to apply knowledge in meaningful ways.
9. The teacher candidate engages in ongoing professional learning and uses evidence to continually evaluate his/her practice, particularly the effects of his/her choices and actions on others (learners, families, other professionals, and the community), and adapts practice to meet the needs of each learner.
10. The teacher candidate seeks appropriate leadership roles and opportunities to take responsibility for student learning, to collaborate with learners, families, colleagues, other school professionals, and community members to ensure learner growth, and to advance the profession.

**SPED 4992. Directed Study courses in Special Education
1-3 Credits (1-3)**

Each course shall be identified by a qualifying subtitle. A maximum of 3 credits per semester and a grand total of 9 credits. May be repeated up to 9 credits.

Learning Outcomes

1. Varies

**SPED 4996. Topics
3 Credits (3)**

Offered under various subtitles which indicate the subject matter to be covered. May be repeated up to 9 credits.

Learning Outcomes

1. Varies

**SPED 5105. Introduction to Special Education in a Diverse Society
3 Credits (3)**

This course introduces the field of special education to regular educators. May be repeated up to 3 credits.

Learning Outcomes

1. Discuss historical and current legislation pertaining to exceptional learners and their families and its impact on professional practice in the field.
2. Discuss historical and current legislation pertaining to exceptional learners and their families and its impact on professional practice in the field.
3. Explain the major components of an IEP and its processes, as well as the roles of learners, families and professionals on the team.
4. Discuss the different service delivery models and discuss the principles, practices, and pragmatics of inclusion co-teaching.
5. Analyze the disability categories under (IDEA, 2004), (characteristics, etiology, and diagnostic criteria).
6. Examine educational considerations for exceptional learners (educational approaches [Universal design and differentiated instruction], assistive technology, accommodations/modifications, and related supports and services).
7. Employ culturally responsive evidence-based practices to create family/school/community partnerships to promote academic achievement and prepare students for their post-school transitions.
8. Evaluate and synthesize research literature on a selected topic from current special education research.

**SPED 5110. Low Incidence Disabilities in a Diverse Society
3 Credits (3)**

Examines those disabilities that occur less frequently in the special education population, including hearing loss, visual disorders, autism, and other severe manifestations. Taught with SPED 6110 with differentiated assignments. May be repeated up to 3 credits.

Learning Outcomes

1. Analyze Low Incidence Disabilities (characteristics, etiology, and diagnostic criteria) (IDEIA, 2004).
2. Identify the types of related supports and services—assistive technology, environmental and Instructional accommodations/modifications, and related services—available to students with low incidence disabilities to maximize participation in inclusive settings.
3. Apply culturally responsive instructional practices to individualize learning for learners with low incidence disabilities, taking into consideration individual abilities, interests, learning environments, and cultural and linguistic factors in the planning, selection, development, and adaptation of learning experiences of learners with low incidence disabilities in inclusive environment.
4. Employ culturally responsive strategies for creating effective family, school, community partnerships.
5. Discuss culturally responsive strategies that promote collaboration between families, schools, and community agencies/organizations during the student's transition planning process.
6. Identify current educational issues impacting students with low incidence disabilities.

SPED 5120. High Incidence Disabilities in a Diverse Society**3 Credits (3)**

Examines those areas of disability that most frequently occur in the special education population, including intellectual disabilities, learning disabilities, communication disorders, and behavioral and emotional disorders. May be repeated up to 3 credits.

Learning Outcomes

1. Describe and compare the major approaches to identifying, placement, assessing, planning for instruction, and classifying high incidence disabilities.
2. Identify and discuss school-based, sociological, cultural, and economic differences as they relate to etiology and identification of mild disabilities.
3. Describe and critically evaluate classroom instructional practices that can improve the educational success of students with high incidence disabilities.
4. Describe and critically evaluate classroom management practices that can improve the educational success of students with high incidence disabilities.
5. Describe how the educational experiences of persons with mild disabilities is shaped by their cognitive, perceptual, language, academic, and social / emotional characteristics.

SPED 5130. Reading for Elementary Exceptional Learners in a Diverse Society, K-6**3 Credits (3)**

Emphasizes reading diagnosis and materials for students with special developmental and learning problems. Taught with SPED 4130. May be repeated up to 3 credits.

Learning Outcomes

1. Evaluate the sources of reading difficulty
2. Evaluate the characteristics exhibited by children with reading difficulties and reading disabilities.
3. Demonstrate how to use non-biased, culturally responsive assessments and progress monitoring data to monitor and evaluate reading performance to drive instruction.
4. Discuss the stages in literacy development and the factors that influence development of student literacy in reading, writing, speaking, viewing, and listening, including phonological, orthographic, semantic, and syntactic processing.
5. Implement research-based reading strategies and instruction to promote the development of print awareness, phonological and phonemic awareness, fluency, vocabulary, spelling, comprehension, reading, and writing for learners with reading difficulties.
6. Evaluate research-based strategies, methods, and commercial programs for different domains of reading.
7. Create a lesson plan and teach an elementary level reading lesson.

SPED 5140. Reading for Secondary Exceptional Learners in a Diverse Society, 7-12**3 Credits (3)**

Extends information covered in SPED 5130, which covers grades K 6. Strategies and materials are addressed. Taught with SPED 4140. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate a knowledge of the major component of the reading process.
2. Increase their repertoire of reading instruction procedures which may be used with students of differing reading abilities and from diverse backgrounds at the middle and secondary levels.

3. Increase their knowledge of theory and related discipline-specific learning strategies designed to assist middle and secondary students in reading and learning through research based practices.
4. Participate in discussion of current literacy issues.
5. Explore the presentation of new teaching and learning strategies as they are related to content area literacy.

SPED 5150. Curriculum, Methods, and Materials for Secondary Special Education**3 Credits (3)**

Curriculum theory and development for elementary special education programs. Various teaching methods utilized with secondary exceptional learners and techniques for identifying, adapting, and developing materials will be addressed. May be repeated up to 3 credits.

SPED 5160. Technology and Exceptionality in a Diverse Society**3 Credits (3)**

This class will address the unique educational needs of learners with exceptionalities, and will provide information and practice in addressing those needs through the use of technology-based interventions. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate familiarity in variety of assistive technology devices and services that are available for students with diverse range of disabilities
2. Demonstrate an understanding of functional approaches to the assessment of assistive technology needs.
3. Describe and implement inter disciplinary approaches to the assessment, selection and the use of technology to meet the educational and transitional demands of individuals with diverse range of disabilities.
4. Identify and describe the function of the range of assistive technology devices and services in diverse settings.
5. Demonstrate an understanding of the legal obligations of different entities in providing training and services that are relevant to assistive technologies.

SPED 5210. Introduction to Assessment of Diverse Exceptional Learners**3 Credits (3)**

Required for students seeking licensure at graduate level. Theory and use of norm-and criterion-referenced instruments and learning theories in the classroom; planning of prescriptive instructional programs with differentiated assignments for graduate students. Restricted to: SPED majors.

SPED 5220. Classroom Management for Diverse Learners**3 Credits (3)**

Behavior-change strategies for exceptional learners. Taught with SPED 4220 with differentiated assignments for graduate students. May be repeated up to 3 credits.

SPED 5230. Advanced Curriculum for Diverse Exceptional Learners**3 Credits (3)**

Strategies for developing curricula appropriate to handicapped and gifted learners. May be repeated up to 3 credits.

Learning Outcomes

1. Evaluate historical and current legislation pertaining to exceptional learners and their families and its impact on professional practice in the field.
2. Describe the RTI process and its role in determining eligibility for special education services.
3. Discuss learner diversity (ability, exceptionality, developmental level, learning style, language, gender, ethnicity, etc.) and employ

individualized evidence-based culturally responsive instructional practices that build on learners' strengths and interests.

4. Create safe, inclusive, culturally responsive learning environments to engage learners with exceptionalities in meaningful learning activities and social interactions that develop communication, emotional well-being, positive social interactions, and self-determination.
5. Apply classroom management techniques that support learners and focus, on routines, procedures, rules, and positive behavior supports to address behavior.
6. Apply culturally responsive instructional practices to individualize learning for learners with exceptionalities; taking into consideration individual abilities, interests, learning environments, and cultural and linguistic factors in the planning, selection, development, and adaptation of learning experiences for learners with exceptionalities.
7. Design differentiated lesson plans that employ the tenets of universal design.

SPED 5310. Introduction to Autism

3 Credits (3)

This course will provide an overview of autism spectrum disorders as a triad of impairments, including historical and theoretical perspectives, assessment issues, characteristics of autism, intervention programs, and family issues. Taught with SPED 4310 and SPED 6310. Differentiated Assignments. May be repeated up to 3 credits.

Learning Outcomes

1. Analyze Autism Spectrum Disorders ASD (characteristics, etiology, co-morbid conditions, differential diagnosis).
2. Describe the criteria used to screen and diagnose ASD.
3. Examine evidence-based practices used to effectively support students with ASD in accessing general education and grade level standards (classroom structure, differentiated instruction, peer mediated supports, structured teaching, and emotional supports).
4. Describe strategies related to promoting a successful transition from school to adult life for individuals with ASD.
5. Examine the strategies for effective collaboration and communication with families of children with ASD and key stakeholders for the purpose of information sharing and collaborative planning with families.
6. Identify and investigate current educational issues impacting students with ASD.

SPED 5320. Behavior and Autism

3 Credits (3)

This course will cover the first of the triad of impairments. Students will gain an understanding of the behaviors of children with autism. Students will examine several behavior management philosophies and research based interventions and how they can be applied in the educational setting. Attention will also be given to play skills. The family perspective and participation in the proactive behavior management process will be incorporated throughout the course. Taught with SPED 4320 and SPED 6320 with differentiated assignments. May be repeated up to 3 credits.

Prerequisite: SPED 4310 or SPED 5310 or SPED 6310.

Learning Outcomes

1. Explain the definition of Autism Spectrum Disorder (ASD) and associated characteristics of students with ASD as measured by required readings, discussions, and article reviews.
2. Explain behavior impairments and characteristics associated with students with ASD as measured by required readings, discussions, and article reviews

3. Explain Applied Behavior Analysis strategies as measured by completion of required paper(s) summarizing peer-reviewed journal article related to diversity, behavior management interventions, and/or behavior analysis.
4. Explain information related to individuals with ASD and behavior challenges as measured by participation in online chat with instructor or group power point presentation.
5. Discuss evidence-based treatment approaches that are useful in improving behavior management skills of students with ASD as measured by participation in required readings and discussions

SPED 5330. Social Skills and Autism

3 Credits (3)

This course will cover the second of the triad of impairments. As a blend of researched based models and evidenced based practical applications, students will gain an understanding of the social skill deficits often associated with autism spectrum disorders. Review a variety of social cognition theories and explore effective social skill interventions for children functioning at a variety of levels along the autism spectrum. Taught with SPED 4330 and SPED 6330 with differentiated assignments. May be repeated up to 3 credits.

Prerequisite: SPED 4310 or SPED 5310 or SPED 6310.

Learning Outcomes

1. Understand and explore the foundations of TESOL instruction.
2. Analyze the sociocultural theory of teaching English as a second/ foreign language.
3. Demonstrate an understanding of culturally responsive pedagogy in language teaching and academic achievement.
4. Evaluate principles of best practices instruction and applications of TESOL methods.
5. Explore assessment issues and concepts related to English Language Learners.
6. Examine the impact of policies, national laws, school and community partnerships, and personal professional development on TESOL instruction.
7. Develop, select, and implement second language teaching methods.

SPED 5340. Communication and Autism

3 Credits (3)

This course will cover the third of the triad of impairments. Students will gain an overview of communication characteristics and difficulties often associated with autism spectrum disorders. Review current tools and strategies used to assess speech, language, and interaction skills. Use assessment results to identify needs and implement appropriate interventions. Explore a variety of intervention strategies aimed at building receptive, expressive, and pragmatic language of children functioning at a variety of levels along the autism spectrum. Taught with SPED 4340 and SPED 6340 with differentiated assignments. May be repeated up to 3 credits.

Prerequisite: SPED 4310 or SPED 5310 or SPED 6310.

Learning Outcomes

1. Analyze Autism Spectrum Disorders ASD (definition, characteristics, etiology).
2. Evaluate communication characteristics and difficulties often associated with ASD.
3. Appraise current tools and strategies used to assess communication problems in children with ASD.
4. Analyze the types of interventions used to address the communication needs of children with ASD.

- Design an intervention plan to address the communication needs of a child with ASD.
- Employ data collection procedures to evaluate the effectiveness of research-based interventions for students with ASD.
- Incorporate family preferences and values into the educational process of students with ASD.

SPED 5405. Foundations of Visual Impairment

3 Credits (3)

This course provides an overview of the history and theory of teaching students with visual impairments, including those with additional disabilities. The impact of educational, legislative, and societal trends on the psychosocial adjustment, quality of life, and post-school outcomes of individuals with visual impairments is explored. May be repeated up to 3 credits.

Learning Outcomes

- Differentiate between the impact that visual impairment (both congenital and adventitious) has on a child's/youth's cognitive, language, communication, motor, social-emotional, and autonomous development.
- Predict the impact that familial, societal, cultural, and professional attitudes have on the self-esteem/self-identity of a child/youth who has a visual impairment and propose culturally responsive strategies to combat low self-esteem/lack of self-acceptance.
- Identify appropriate educational adaptations, including universal design for learning principles, for teaching students with visual impairments based on predominant sensory channel(s).
- Describe the prevalence and incidence of visual impairment, educational and legal classifications, service delivery options and regulations, and the roles of educational staff.
- Analyze how historical foundations shape current issues and trends in the education of students who are visually impaired.
- Locate sources of specialized materials, service networks, consumer/parent organizations, and professional associations and publications.

SPED 5410. Functional Implications of Low Vision

3 Credits (3)

This course examines the structure and function of the visual system in relation to associated diseases and syndromes with an emphasis on measuring functional vision and determining appropriate educational adaptations. Consent of Instructor required. May be repeated up to 3 credits.

Prerequisite: SPED 5405.

Learning Outcomes

- Use basic terminology to describe the structure and functions of the visual system and describe how the visual system typically develops.
- Identify the etiology and characteristics of the most common eye conditions and their impact on the development and education of individuals who have these conditions.
- Describe effects of medications on the visual system and on visual performance. Select, adapt, and use appropriate instruments for assessing functional vision. Follow legal, ethical, and technical procedures while conducting vision screenings or functional vision evaluations in order to determine educational services (including eligibility) and supports.
- Interpret the results of vision screenings, eye reports, and functional vision evaluations in ways that help students, families and other members of the educational team understand the impact the visual impairment has on learning, experience, and social-emotional well-being.

- Select individualized strategies for the enhancement of visual/sensory efficiency (including the use of environmental modifications, print material adaptations, optical aids, and non-optical aids) based on performance/assessment data

SPED 5420. Strategies for Teaching Students with Visual and Multiple Impairments

3 Credits (3)

This course defines the roles and responsibilities of the teacher of students with visual impairments as part of the transdisciplinary team that serves students with visual impairments and additional disabilities. Emphasis is on assessment, curricula (both academic and functional), communication, behavior management, assistive technologies, inclusion, transition, and independent living. Consent of Instructor required. May be repeated up to 3 credits.

Prerequisite: SPED 5410.

Learning Outcomes

- Describe the impact that a concomitant visual impairment and additional disability has on a child's/youth's cognitive, language, communication, motor, social-emotional, autonomous, and sensory development.
- Recommend appropriate educational and environmental adaptations, including access technologies, for students with concomitant disabilities (including a visual impairment) related to the core curriculum (especially literacy) that are based on their unique needs, which transcend the effects of each individual disability.
- Recommend appropriate educational and environmental adaptations, including access technologies, for students with concomitant disabilities (including a visual impairment) related to the expanded core curriculum that are based on their unique needs, which transcend the effects of each individual disability.
- Choose specialized assessment tools appropriate for learners with visual impairments and additional disabilities.
- Summarize special considerations related to eligibility determination, educational placement, and service delivery models for students with visual impairments and additional disabilities.
- Describe special considerations related to effective collaboration with educators, related service providers, educational assistants, community agencies, and families of students with visual impairments and additional disabilities

SPED 5430. Braille I: Literacy for Students with Visual Impairments

3 Credits (3)

This course facilitates an in depth study of the Uncontracted and Contracted Literary Braille codes as well as methods of teaching pre-braille, braille reading, and braille writing skills to tactual learners.

Consent of Instructor required. May be repeated up to 3 credits.

Prerequisite: SPED 5450.

Learning Outcomes

- Transcribe print content into Unified English Braille following appropriate formatting rules.
- Read, interline, and proof materials transcribed in Unified English Braille.
- Read, interline, and proof materials produced in English Braille American Edition.
- Transcribe, print content into a foreign language using the appropriate braille code.
- Read, interline, and proof materials produced in foreign language braille.
- Transcribe a simple score in music braille.

7. Read and interline a simple score in music braille.
8. Produce braille materials using various tools, including a Perkins Braille, slate and stylus, and six-key keyboard entry.
9. Delineate the ways that congenital and adventitious visual impairments impact literacy and the unique instructional strategies used with each of these groups. 1
10. Identify pre-braille activities that develop essential tactual, motor, and reading readiness skills. 1
11. Compare language arts and braille curricula/assessments for different types of tactual learners. 1
12. Identify sources for obtaining braille resources, services and supports

**SPED 5440. Braille II: Numeracy for Students with Visual Impairments
3 Credits (3)**

This course facilitates an indepth study of the Nemeth Braille Code for Mathematics and Science Notation as well as instructional strategies for using the abacus and developing numeracy. Specialized braille codes for computers, music, and foreign languages will be introduced. Consent of Instructor required. May be repeated up to 3 credits.

Prerequisite: SPED 5430.

Learning Outcomes

1. Transcribe mathematical and scientific notation into Nemeth Braille following appropriate rules.
2. Read, and proof materials transcribed in Nemeth Braille
3. Transcribe, print content into a foreign language using the appropriate braille code.
4. Read, interline, and proof materials produced in foreign language braille.
5. Transcribe a simple score in music braille.
6. Read and interline a simple score in music braille.
7. Produce braille materials, including tactile graphics, using various tools, including a Perkins Braille, six-key keyboard entry, braille translation software, and tactile graphics.
8. Create different task analysis on computational steps for solving problems with the Cranmer abacus using both the counting and indirect methods for beginning abacus users and aligning them to numeracy standards.
9. Delineate the ways that visual impairment impacts literacy and numeracy and describe adapted instructional and assessment materials and resources that make math meaningfully accessible. 1
10. Delineate the ways that visual impairment impacts scientific understandings and describe adapted instructional and assessment materials and resources that make science and social studies meaningfully accessible. 1
11. Delineate the ways that visual impairment impacts understanding of health and sexuality and describe adapted instructional and assessment materials and resources that make health and sex education meaningfully accessible

**SPED 5450. Strategies for Teaching Students with Visual Impairments
3 Credits (3)**

This course covers individualized educational programming in both the core and expanded core curriculums for children and youth with visual impairments with an emphasis on assessment, curricular adaptations, IFSP/IEP/ITP planning, and evidence-based practices. Restricted to: SPED majors. Consent of Instructor required. May be repeated up to 3 credits.

Prerequisite: SPED 5410.

Learning Outcomes

1. The learner will analyze core curriculum standards and benchmarks in order to determine necessary instruction in the expanded core curriculum so that learners with visual impairments can meaningfully participate in the common core curriculum.
2. The learner will describe professional roles and ethical responsibilities of the teacher of students with visual impairments in relation to effective collaboration with all members of the educational team (particularly families, para educators, and general educators).
3. The learner will select, adapt, and use appropriate assessments for determining effective and efficient primary and secondary learning modalities, literacy media, and access technologies needed for reading and writing.
4. The learner will follow legal, ethical, and technical procedures while conducting learning media assessments and access technology evaluations, reporting findings, and making recommendations regarding necessary educational services and supports.
5. The learner will demonstrate the procurement and use of different access technologies needed to make educational materials and learning activities accessible to learners with visual impairments

**SPED 5460. Introduction to Orientation and Mobility
3 Credits (3)**

This course provides an overview of the history and theory of formalized orientation and mobility instruction as it relates to the ability to live independently. The impact of visual impairment and concomitant impairments on the development of spatial concepts and motor skills in relation to independent locomotion is emphasized. Topics covered include mobility aids; navigation, familiarization, and protective techniques; structured pre-cane assessment and instruction; the development and use of tactual maps; and the relationship of orientation and mobility to other areas of the expanded core curriculum. Consent of Instructor required. Restricted to: SPED, EDUC majors. Consent of Instructor required. May be repeated up to 3 credits.

Prerequisite: SPED 5420.

Learning Outcomes

1. Describe components of orientation and mobility, the role of the certified orientation and mobility specialist, and the role of the teacher of students with visual impairments/developmental vision specialist in teaching travel skills to students who are blind and visually impaired, including those with additional disabilities.
2. Describe significant historical events and legal provisions related to the formalized profession of orientation and mobility and how this affects the provision of orientation and mobility services.
3. Identify the pros, cons, and prerequisite skills related to different modes of mobility and use of different mobility aids and transportation systems.
4. Describe the impact of impaired vision on cognitive, motor, language, social, and self-help skills and effective interventions that promotes the development of independent locomotion and personal autonomy.
5. Execute (and teach the execution of) basic orientation and mobility techniques under conditions that simulate various degrees of visual and additional impairments using all available sensory information (with and without optical aids) in a variety of environments.
6. Task analyze and adapt activities of daily living to allow individuals with visual impairments to lead productive and healthy lifestyles.
7. Identify sources of adapted products and specialized assessments related to the Expanded Core Curriculum that facilitate participation

in home, work, and community activities for employment, self-care, and leisure

SPED 5470. Beginning Orientation and Mobility

3 Credits (3)

This course provides an overview of the profession of orientation and mobility and how sensory, motor, and psychosocial function affects movement and spatial orientation. Consent of Instructor required.

Restricted to: SPED majors. May be repeated up to 3 credits.

Prerequisite: SPED 5460.

Learning Outcomes

1. Describe how perception and movement develops and is used to enhance safe and independent travel
2. Describe how a traveler is able to acquire, maintain and improve orientation
3. Describe the most common functional mobility problems for students with low vision and what a COMS should consider when providing OM instruction to students with low vision.
4. Describe how development impacts movement and describe issues that impact gait and posture. Describe ways to support and improve sensorimotor development.
5. Describe the psychosocial factors that impact behavior as one learns how to travel and describe ways to teach travelers to deal with
6. Describe the fundamentals of hearing including principles of sound, audition, localization and traffic sounds. Describe ways to develop and improve orientation using hearing
7. Describe the origins of the OM profession and its progression into the present, how OM services are provided around the world and the fundamentals of research in the profession.
8. Evaluate and synthesize literature (publications, research literature) on a selected topic of their choice

SPED 5480. Intermediate Orientation and Mobility

3 Credits (3)

This course focuses on strategies and methods for conducting assessments and appropriately sequencing skill acquisition for learners across the lifespan who may or may not have additional disabilities. Adaptive technology and other aids that assist with travel in a variety of environmental conditions using different mobility systems will also be covered. Consent of Instructor required. Restricted to: SPED majors. May be repeated up to 3 credits.

Prerequisite: SPED 5470.

Learning Outcomes

1. Determine how to modify orientation and mobility instruction, depending on the age of the students, in the following ways: A) describe ways to teach OM to very young children; B) describe ways to teach OM to school age children; C) describe ways to teach OM to adults; and D) describe ways to teach OM to older adults.
2. Demonstrate an understanding of mobility systems and adaptations used by blind and visually impaired travelers in the following ways: A) describe how adaptive technology is used in travel; B) describe how dog guides are used in travel; C) describe orientation aids that can be used for students with vision loss; D) describe issues around environmental accessibility for student with vision loss; and E) describe how to teach OM in adverse weather conditions
3. Demonstrate understanding of how to teach OM to students who have different disabilities in the following ways: A) describe ways to teach OM to learners with vision and hearing loss; B) describe ways to teach OM to learners with vision, physical and health impairments; C) describe ways to teach OM to learners with cognitive impairments

and vision loss; D) describe ways to teach OM to learners with cortical visual impairments; and E) describe how to teach travel skills to learners with nonvisual disabilities

4. Conduct an OM assessment and teach OM in the following ways:

- A) describe the components of a comprehensive OM assessment;
- B) describe creative ways to provide OM instruction;
- C) describe theories and best practices for teaching orientation and mobility; and
- D) describe ways to teach concepts creatively

SPED 5490. Advanced Orientation and Mobility

3 Credits (3)

This course focuses on the development and monitoring of cane skills needed for safe and efficient travel in indoor, residential, and business districts, including the use of public transportation systems. Development, administration, and supervision of orientation and mobility services is also covered. Consent of Instructor required. Restricted to: SPED majors. May be repeated up to 3 credits.

Prerequisite: SPED 5480.

Learning Outcomes

1. Use orientation and mobility techniques to travel independently, safely and efficiently in a variety of environments including indoor, residential, small business and business areas while blindfolded or under low vision simulator.
2. Provide appropriate and safe orientation and mobility instruction to fellow students, who are blindfolded or wearing low vision simulators, while traveling in indoor, residential, small business and business areas
3. Describe modifications to traditional OM techniques for diverse learners of various ages with different degrees of visual functioning and with a variety of additional disabilities
4. Use public transportation while blindfolded or under low vision simulator and provide instruction to fellow students who are blindfolded or wearing low vision simulators in the use of public transportation
5. Critically analyze one's teaching and monitoring through self-observation and reflective practices

SPED 5810. Student Teaching SPED

6 Credits (6)

Culminating course required for graduate level students seeking initial licensure. Students must have completed a Bachelor's degree and be admitted to student teaching program to enroll. Restricted to: SPED majors.

Prerequisite: SPED 5811.

Learning Outcomes

1. The teacher candidate understands how learners grow and develop, recognizing that patterns of learning and development vary individually within and across the cognitive, linguistic, social, emotional, and physical areas, and designs and implements developmentally appropriate and challenging learning experiences.
2. The teacher candidate uses understanding of individual differences and diverse cultures and communities to ensure inclusive learning environments that enable each learner to meet high standards.
3. The teacher candidate works with others to create environments that support individual and collaborative learning, and that encourage positive social interaction, active engagement in learning, and self-motivation.

SPED 5811. Field Experience in Education, Equity & Cultural Diversity

3 Credits (3)

This is a supervised experience in providing special education services to local preK-12 students. In the context of the public school classroom, teacher candidates are guided to apply content knowledge from the seminar meetings and from prior coursework. This experience is designed for both the practicing general education classroom teacher pursuing special education licensure and for graduate teacher candidates pursuing initial special education licensure. Restricted to: SPED majors.

Prerequisite: SPED 3105 and SPED 3120, or SPED 5105 and SPED 5230, or consent of instructor.

Learning Outcomes

1. Learners will demonstrate critical thinking skills and critical reflection and use current special education research to make and evaluate instructional decisions across the full range of learning tasks (including identifying appropriate learning objectives, selecting methods and materials, assessing student progress in relation to learning objectives, making classroom management decisions, and evaluating the results of decisions and implementation of lessons).
2. Learners will create access to grade level general education curriculum for a broad range of students with diverse learning needs. This will be accomplished by using grade level standards and extended standards (as appropriate), following the requirements expressed in IEP's, and designing and implementing appropriate instruction that addresses students' needs, learning styles, motivation, and cultural and linguistic differences. Universal design, differentiation, accommodation, and modification will be used to address diverse learning needs.
3. Learners will further develop, refine, and demonstrate the dispositions necessary to enter student teaching, with the ultimate goal of entering and advancing the teaching profession. This includes
 - a) building rapport, positive communication, and a cooperative work environment with students, families, teachers, supervisors, instructors, educational/instructional assistants, service providers, and others in the school community
 - b) demonstrating respectful and responsive attitudes toward individuals with exceptionalities from diverse backgrounds, as well as their families and service providers
 - c) demonstrating responsible task performance
 - d) adhering to the CEC code of ethics and university/site policies and procedures.
4. Learners will select and use appropriate technology to support student learning.
5. Learners will apply knowledge of the historical background and current laws and procedures within the field of special education to contextualize, explain, and evaluate special education services.

SPED 5820. Masters Degree Seminar

3 Credits (3)

Capstone review of current issues in special education. Each student will participate in a practice comprehensive oral exam. May be repeated up to 3 credits.

Learning Outcomes

1. Varies

SPED 5830. Special Education/Elementary Student Teaching Seminar

3 Credits (3)

Discussion of elementary Special Education school issues related to student teaching.

Prerequisite: SPED 5811.

Corequisite: SPED 5810.

Learning Outcomes

1. The teacher candidate understands how learners grow and develop, recognizing that patterns of learning and development vary individually within and across the cognitive, linguistic, social,

emotional, and physical areas, and designs and implements developmentally appropriate and challenging learning experiences.

2. The teacher candidate uses understanding of individual differences and diverse cultures and communities to ensure inclusive learning environments that enable each learner to meet high standards.
3. The teacher candidate works with others to create environments that support individual and collaborative learning, and that encourage positive social interaction, active engagement in learning, and self-motivation.

SPED 5840. Special Education/Secondary Student Teaching Seminar **3 Credits (3)**

Discussion of secondary Special Education school issues related to student teaching.

Prerequisite: SPED 5811.

Corequisite: SPED 5810.

Learning Outcomes

1. The teacher candidate understands how learners grow and develop, recognizing that patterns of learning and development vary individually within and across the cognitive, linguistic, social, emotional, and physical areas, and designs and implements developmentally appropriate and challenging learning experiences.
2. The teacher candidate uses understanding of individual differences and diverse cultures and communities to ensure inclusive learning environments that enable each learner to meet high standards.
3. The teacher candidate works with others to create environments that support individual and collaborative learning, and that encourage positive social interaction, active engagement in learning, and self-motivation.

SPED 5850. Current Research in Special Education

3 Credits (3)

Current investigations and research techniques. May be repeated up to 3 credits.

Learning Outcomes

1. Evaluate current research in special Education.
2. Read and evaluate original research articles published in peer reviewed academic journals.
3. Describe the elements of research.
4. Analyze the designs, methods, and applications of quantitative research in special education
5. Analyze the designs, methods, and applications of qualitative research in special education
6. Examine ethical issues and guidelines for conducting special education research.
7. Evaluate the elements of a research proposal.

SPED 5860. Current Issues in Special Education for Teaching in Culturally Responsive Society

3 Credits (3)

Theoretical and empirical bases for special education practices. Skill development in critical thinking, reading, and writing in relation to contemporary problems. Taught with SPED 6860. May be repeated up to 3 credits.

Learning Outcomes

1. Students will learn several concepts, issues, and theories in contemporary special education in order to be a more intelligent consumer of information about special education.
2. Students will analyze, evaluate, and make decisions concerning complex contemporary issues in special education.

- Students will demonstrate communications skills, both written and oral, in order to enhance their effectiveness in expressing their view on the issues related to special education.
- Students will examine issues related to the human experience as it relates to diversity and a culturally and linguistically diverse world.
- Students will debate the pros and cons of current special education issues

SPED 5870. Early Childhood SPED Student Teaching

6 Credits (6)

A student teaching experience designed for students studying early childhood special education. Restricted to TEP-ECED majors. Students must be admitted to student teaching to enroll. May be repeated up to 9 credits.

Learning Outcomes

- Our mission is to serve the people of New Mexico through education, research, extension education, and public service with specific emphasis on innovative practices, overcoming barriers to learning, international activities, technology, and literacy for the diverse populations of New Mexico, surrounding states and border communities.

SPED 5990. Practicum in Reading Disabilities

3 Credits (3)

Supervised experience in assessing a student with reading disability, developing and intervention plan, and implementing and monitoring the interventions across time. May be repeated up to 3 credits.

Learning Outcomes

- Varies

SPED 5991. Special Research Problems

1-3 Credits (1-3)

Individual investigation either analytical or experimental. May be repeated up to 6 credits.

Learning Outcomes

- Varies

SPED 5996. Topics in Special Education

1-3 Credits (1-3)

Offered under various subtitles which indicate the subject matter to be covered. Maximum of 6 credits, 3 credits per semester. May be repeated up to 6 credits.

Learning Outcomes

- Varies

SPED 5999. Master's Thesis

1-15 Credits (1-15)

Thesis. May be repeated up to 88 credits.

Learning Outcomes

- Varies

SPED 6110. Low Incidence Disabilities

3 Credits (3)

Examines those disabilities that occur less frequently in the special education population, including hearing loss, visual disorders, autism, and other severe manifestations. Taught with SPED 5110 with differentiated assignments. May be repeated up to 3 credits.

Learning Outcomes

- Analyze Low Incidence Disabilities (characteristics, etiology, and diagnostic criteria) (IDEIA, 2004).
- Identify the types of related supports and services—assistive technology, environmental and Instructional accommodations/

modifications, and related services—available to students with low incidence disabilities to maximize participation in inclusive settings.

- Apply culturally responsive instructional practices to individualize learning for learners with low incidence disabilities, taking into consideration individual abilities, interests, learning environments, and cultural and linguistic factors in the planning, selection, development, and adaptation of learning experiences of learners with low incidence disabilities in inclusive environment.
- Employ culturally responsive strategies for creating effective family, school, community partnerships.
- Discuss culturally responsive strategies that promote collaboration between families, schools, and community agencies/organizations during the student's transition planning process.
- Identify current educational issues impacting students with low incidence disabilities.

SPED 6120. High Incidence Disabilities in a Diverse Society

3 Credits (3)

Examines those areas of disability that most frequently occur in the special education population, including mental retardation, learning disabilities, communication disorders, and behavioral and emotional disorders. Taught with SPED 5120. Master's Degree. Restricted to SPED and C D majors. May be repeated up to 3 credits.

Learning Outcomes

- Describe and compare the major approaches to identifying, placement, assessing, planning for instruction, and classifying high incidence disabilities.
- Identify and discuss school-based, sociological, cultural, and economic differences as they relate to etiology and identification of mild disabilities.
- Describe and critically evaluate classroom instructional practices that can improve the educational success of students with high incidence disabilities.
- Describe and critically evaluate classroom management practices that can improve the educational success of students with high incidence disabilities.
- Describe how the educational experiences of persons with mild disabilities is shaped by their cognitive, perceptual, language, academic, and social / emotional characteristics.

SPED 6160. Technology and Exceptionality in a Diverse Society

3 Credits (3)

This class will address the unique educational needs of learners with exceptionalities, and will provide information and practice in addressing those needs through the use of technology-based interventions. Taught with SPED 5160.

Learning Outcomes

- Carry out effective practicum practices for using technology with diverse learners.

SPED 6170. School Intervention and Organization in a Diverse Society

3 Credits (3)

Introduces public school organization and laws and the psycho-sociological perspective of education. Curriculum and theory, teaching methods and materials will be presented and operationalized through a psycho-educational point of view. May be repeated up to 3 credits.

Learning Outcomes

- Understand and implement effective interventions in a variety of classroom and organizational settings.

SPED 6310. Introduction to Autism**3 Credits (3)**

This course will provide an overview of autism spectrum disorders as a triad of impairments, including historical and theoretical perspectives, assessment issues, characteristics of autism, intervention programs, and family issues. Differentiated Assignments. Taught with SPED 5310 and SPED 4310. May be repeated up to 3 credits.

Learning Outcomes

1. Analyze Autism Spectrum Disorders ASD (characteristics, etiology, co-morbid conditions, differential diagnosis).
2. Describe the criteria used to screen and diagnose ASD.
3. Examine evidence-based practices used to effectively support students with ASD in accessing general education and grade level standards (classroom structure, differentiated instruction, peer mediated supports, structured teaching, and emotional supports).
4. Describe strategies related to promoting a successful transition from school to adult life for individuals with ASD.
5. Examine the strategies for effective collaboration and communication with families of children with ASD and key stakeholders for the purpose of information sharing and collaborative planning with families.
6. Identify and investigate current educational issues impacting students with ASD.

SPED 6330. Social Skills and Autism**3 Credits (3)**

This course will cover the second of the triad of impairments. As a blend of researched based models and evidenced based practical applications, students will gain an understanding of the social skill deficits often associated with autism spectrum disorders. Review a variety of social cognition theories and explore effective social skill interventions for children functioning at a variety of levels along the autism spectrum. Taught with SPED 4330 and SPED 5330 with differentiated assignments. May be repeated up to 3 credits.

Prerequisite/Corequisite: SPED 4310 or SPED 5310 or SPED 6310.

Learning Outcomes

1. Analyze Autism Spectrum Disorders ASD (definition, characteristics, etiology).
2. Evaluate Social Skills characteristics and difficulties often associated with ASD.
3. Appraise current tools and strategies used to assess Social Skills problems in children with ASD.
4. Use assessment results to identify the Social Skills needs of children with ASD
5. Analyze the types of evidence-based practices used to address the Social Skills needs of children with ASD.
6. Design an intervention plan to address the Social Skills needs of a child with ASD.
7. Incorporate family preferences and values into the educational process of students with ASD.
8. Employ data collection procedures to evaluate the effectiveness of evidence-based practices for students with ASD.

SPED 6340. Communication and Autism**3 Credits (3)**

This course will cover the third of the triad of impairments. Students will gain an overview of communication characteristics and difficulties often associated with autism spectrum disorders. Review current tools and strategies used to assess speech, language, and interaction skills. Use assessment results to identify needs and implement appropriate

interventions. Explore a variety of intervention strategies aimed at building receptive, expressive, and pragmatic language of children functioning at a variety of levels along the autism spectrum. Taught with SPED 4340 and SPED 5340 and differentiated assignments. May be repeated up to 3 credits.

Prerequisite: SPED 4310 or SPED 5310 or SPED 6310.

Learning Outcomes

1. Analyze Autism Spectrum Disorders ASD (definition, characteristics, etiology).
2. Evaluate communication characteristics and difficulties often associated with ASD.
3. Appraise current tools and strategies used to assess communication problems in children with ASD.
4. Analyze the types of interventions used to address the communication needs of children with ASD.
5. Design an intervention plan to address the communication needs of a child with ASD.
6. Employ data collection procedures to evaluate the effectiveness of research-based interventions for students with ASD.
7. Incorporate family preferences and values into the educational process of students with ASD.

SPED 6810. Doctoral Seminar**1-4 Credits (1-4)**

The seminar will engage doctoral students in scholarly dialogue and production. It will assist in preparing them for future careers in leadership roles. May be repeated up to 4 credits.

Learning Outcomes

1. Varies

SPED 6830. Current Research in Special Education**3 Credits (3)**

Required for students seeking the Ed.D./Ph.D. M.A. degree. Restricted to majors. May be repeated up to 3 credits.

Learning Outcomes

1. Evaluate current research in special Education.
2. Read and evaluate original research articles published in peer reviewed academic journals.
3. Describe the elements of research.
4. Analyze the designs, methods, and applications of quantitative research in special education
5. Analyze the designs, methods, and applications of qualitative research in special education
6. Examine ethical issues and guidelines for conducting special education research.
7. Evaluate the elements of a research proposal.

SPED 6840. Current Issues in Special Education for Teaching in a**Culturally Responsive Society****3 Credits (3)**

Required for students seeking the Ed.D./Ph.D. May be repeated up to 3 credits.

SPED 6991. Doctoral Research**1-15 Credits (1-15)**

Research. May be repeated up to 88 credits.

Learning Outcomes

1. Varies

SPED 6996. Selected Topics in Special Education**1-6 Credits (1-6)**

Offered under various subtitles which indicate the subject matter to be covered. Maximum of 6 credits, 3 credits per semester. May be repeated up to 6 credits.

Learning Outcomes

1. Varies

SPED 6997. Independent Study Topics in Special Education

1-6 Credits (1-6)

A problem and seminar course for those pursuing an advanced graduate degree. Each course to bear an appropriate subtitle. May be repeated up to 99 credits.

Learning Outcomes

1. Varies

SPED 6998. Internship in Special Education

1-6 Credits (1-6)

Each course bears a qualifying subtitle. Maximum of 6 credits per semester. May be repeated up to 99 credits.

SPED 7000. Dissertation

1-9 Credits (1-9)

Credit may be earned by students who have successfully completed their doctoral comprehensive exams and presented their dissertation proposals to their committees. At least 18 credits are required during the course of dissertation study. May be repeated up to 24 credits.

Learning Outcomes

1. Varies

Name: School of Teacher Preparation, Administration and Leadership (TPAL)

Office Location: O'Donnell Hall, Suite 302

Applied Studies (Zero-to-Four (Early Childhood)) - Bachelor of Applied Studies

There is an identified need for prepared educators to serve young children birth to four years of age in settings outside of the public school in childcare centers, Head Start, and other agencies. The School of Teacher Preparation, Administration, and Leadership offers a non-licensure concentration, with the Bachelor of Applied Studies degree for the Zero to Four years old early childhood track. This non-licensure concentration serves private and public childcare, early intervention programs, and Head Start.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. All ECED courses must be successfully completed with a grade of C- or better. Developmental coursework will not count towards the degree requirements and/or

elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

or GNDR 2120G	Representing Women Across Cultures	

Second Language: (required) 0-8*Spanish or Sign-Language preferred³***Electives, to bring the total credits to 120⁴** 5-13

Electives: Minimum of 6 upper division (300-400) elective credits

Total Credits 120¹ See the General Education (p. 227) section of the catalog for a full list of courses² See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.³ All ECED (Non-Licensure) majors must complete two semesters of language courses, preferably American Sign Language or Spanish. (However, if students have fluency in an Indigenous language or wish to take something different than Spanish or Sign Language, please see Director of ECED for permission and/or process).⁴ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1134 Fundamentals of Elementary Mathematics I and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Early Childhood Education - Bachelor of Science in Education

All students wishing to complete a degree in Early Childhood Education (licensure track) must apply to the Teacher Education Program. Additional information on the application process can be obtained from the College of Education Educational Support and Resource Center or on the departmental website (<https://tpal.nmsu.edu/degree-programs/undergraduate-programs/ug-ece.html>). A 2.75 minimum GPA is required for admission to the Teacher Education Program and graduation. Students must pass ENGL 1110G Composition I, ENGL 2221G Writing in the Humanities and Social Science, Area II, Prerequisite courses, and Early Childhood Core courses with a grade of C- or better.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 122 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

CEPY 4150	Psychology, Multiculturalism and Counseling	3

Second Language: (not required)

¹ These courses may have prerequisites and/or co-requisites, and it is the students responsibility for checking and fulfilling all those requirements.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ Additional Social/Behavioral Science Courses to fulfill licensure requirements, choose from the following courses:

- ANTH 1115G Introduction to Anthropology
- ECON 1110G Survey of Economics
- ECON 2110G Macroeconomic Principles

Electives, to bring the total credits to 120⁵	40-43
Total Credits	120

- ¹ See the General Education (p. 227) section of the catalog for a full list of courses
- ² A Mathematics course is required for the degree but students may need to take any prerequisites needed to enter the course selected.
- ³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
- ⁴ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

A Suggested Plan of Study For Students

This roadmap assumes student placement into a Mathematics course and ENGL 1110G. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Elementary Education (Language Arts K-8) - Bachelor of Science in Education

General education and professional education are similar for all degree programs in the College of Health, Education, and Social Transformation. The B.S. Elementary Education degree embeds the Language Arts Teaching Field/Concentration and the Bilingual/TESL endorsements.

Note: For certification in the State of New Mexico the Bilingual/TESL endorsements require 6 credits of a language other than English. Additional teaching fields/concentrations are available in Social Studies, Science and Math but will require credits beyond 120. Students should meet

with the College's Educational Support and Resource Center to discuss additional teaching fields/concentrations requirements.

All students wishing to complete a degree in Elementary Education must apply to the Teacher Education Program. Additional information on the application process can be obtained from the College of Education Educational Support and Resource Center or on the departmental website (<https://tpal.nmsu.edu/degree-programs/undergraduate-programs/ug-ece.html>). A 2.75 minimum GPA is required for admission to the Teacher Education Program, and a 2.75 minimum GPA must be maintained for graduation. *Students must earn a "C-" or better in all education, TEP prerequisite, endorsement, and teaching field courses.*

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

for certification in the State of New Mexico, the Bilingual endorsement requires six credits taught in a language other than English, and for the TESL endorsement, six credits of a language other than English is required

Electives, to bring the total credits to 136 0

Total Credits 136

¹ Courses are pre/corequisites for Teacher Education Program (TEP)

² Science Concentration/Teaching Field Course

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

⁴ EDUC 3120 Multicultural Education must be completed prior to TEP portfolio submission.

⁵ Bilingual/TESL Endorsement course

⁶ Courses require admission to the TEP

⁷ For certification in the State of New Mexico the Bilingual/TESL endorsements require 6 credits of a language other than English.

Elementary Education (Social Studies K-8) - Bachelor of Science in Education

General education and professional education are similar for all degree programs in the College of Health, Education, and Social Transformation. The B.S. Elementary Education degree embeds the Social Studies Teaching Field/Concentration and the Bilingual/TESL endorsements. **Note: For certification in the State of New Mexico, the Bilingual/TESL endorsements require 6 credits of a language other than English.** Additional teaching fields/concentrations are available in Language Arts, Science, and Math but will require credits beyond 120. Students should meet with the College's Educational Support and Resource Center to discuss additional teaching fields/concentrations requirements.

All students wishing to complete a degree in Elementary Education must apply to the Teacher Education Program. Additional information on the application process can be obtained from the College of Education Educational Support and Resource Center or on the departmental website (<https://tpal.nmsu.edu/degree-programs/undergraduate-programs/ug-ece.html>). A 2.75 minimum GPA is required for admission to the Teacher Education Program, and a 2.75 minimum GPA must be maintained for graduation. *Students must earn a "C-" or better in all education, TEP prerequisite, endorsement, and teaching field courses.*

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 132 credits with 48 credits in courses numbered 300/3000 or above. Developmental coursework will not count towards the degree requirements and/or elective credits but may be needed to take the necessary English and Mathematics coursework.

² Area III: Laboratory Sciences Courses:

- ASTR 1115G Introduction to Astronomy Lecture & Laboratory or ASTR 1120G The Planets Lecture & Laboratory
- BIOL 1120G Human Biology/BIOL 1120L
- BIOL 2610G Principles of Biology: Biodiversity, Ecology, and Evolution/BIOL 2610L Principles of Biology: Biodiversity, Ecology, and Evolution Laboratory

- BIOL 2110G Principles of Biology: Cellular and Molecular Biology/BIOL 2110L Principles of Biology: Cellular and Molecular Biology Laboratory
- CHEM 1120G Introduction to Chemistry Lecture and Laboratory (non majors)
- CHEM 1215G General Chemistry I Lecture and Laboratory for STEM Majors
- CHEM 1225G General Chemistry II Lecture and Laboratory for STEM Majors
- GEOL 1110G Physical Geology
- GEOG 1110G Physical Geography

³ ANTH/GEOG/POLS/SOCI Courses:

- ANTH 1115G Introduction to Anthropology
- ANTH 1140G Introduction to Cultural Anthropology
- ANTH 1160G World Archaeology
- GEOG 1120G World Regional Geography
- GEOG 1130G Human Geography
- POLS 1120G American National Government
- POLS 1110G Introduction to Political Science
- POLS 1130G Issues in American Politics
- POLS 2120G International Relations
- SOCI 1110G Introduction to Sociology
- SOCI 2310G Contemporary Social Problems

⁴ 400-level Literature Courses:

- ENGL 405 Chaucer
- ENGL 442 Modern and Contemporary American Poetry
- ENGL 458 Latino/a Literature and Culture
- ENGL 469 Advanced Study in American Literature
- ENGL 481 Women's Literature

Secondary Education (Secondary Education Math) - Bachelor of Science in Education

General education and professional education requirements are similar for all degree programs in the College of Health, Education, and Social Transformation. Students should meet with an advisor to plan appropriate general education courses for a secondary education major. The below programs are labeled as Concentrations in the catalog and on student transcripts, but are also recognized as "Teaching Fields" for the Teacher Education Program. Students should meet with the College of Education Educational Support and Resource Center for degree progress.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

All students wishing to complete a degree in Secondary Education must apply to the Teacher Education Program. Additional information on the application process can be obtained from the College of HEST

Educational Support and Resource Center or on the **departmental website**. A 2.75 minimum GPA is required for admission to the Teacher Education Program and graduation. Students must pass all TEP prerequisites/co-requisites with a grade of C- or better.

Special Education (Elementary Education) - Bachelor of Science in Education

The undergraduate special education program is an CAEP accredited program designed to prepare teacher candidates for dual licensure in special education and elementary education. The B.S. Special Education (Elementary Education) degree embeds the Language Arts Teaching Field/Concentration and the Bilingual/TESL endorsements. **Note: For certification in the State of New Mexico the Bilingual/TESL endorsements require 6 credits of a language other than English.** Students graduate with the preparation to teach in environments across the continuum of special education services. In addition to special education coursework, students complete an academic teaching field within their major.

All students wishing to complete a degree in Special Education must apply to the Teacher Education Program. Additional information on the application process can be obtained from the College of Education Educational Support and Resource Center or on the departmental website (<https://tpal.nmsu.edu/degree-programs/undergraduate-programs/ug-ecce.html>). A 2.75 minimum GPA is required for admission to the Teacher Education Program, and a 2.75 minimum GPA must be maintained for graduation. *Students must earn a "C-" or better in all education, TEP prerequisite, endorsement, and teaching field courses.*

Students should meet with the College of Education Undergraduate Resource Center to plan appropriate general education courses for a special education major. See "General Requirements" in the "College of Health, Education, and Social Transformation (p. 1074)" section. Students must be admitted to the Teacher Education Program as a condition for enrolling in courses that lead to licensure. Students must pass ENGL, MATH, all education, and teaching field/concentration courses with a C- or better.

Teaching Field: Language Arts

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 129 credits with 48 credits in courses numbered 3000 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1215 Intermediate Algebra and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

¹ These courses may have prerequisites and/or co-requisites, and it is the students responsibility for checking and fulfilling all those requirements.

² See the General Education (p. 227) section of the catalog for a full list of courses.

³ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.

Special Education (Secondary Education) - Bachelor of Science in Education

The undergraduate special education program is an CAEP accredited program designed to prepare teacher candidates for dual licensure in special education and elementary education. The B.S. Special Education (Secondary Education) degree embeds the Language Arts Teaching Field/Concentration and the Bilingual/TESL endorsements. **Note: For certification in the State of New Mexico the Bilingual/TESL endorsements require 6 credits of a language other than English.** Students graduate with the preparation to teach in environments across the continuum of special education services. In addition to special education coursework, students complete an academic teaching field within their major.

All students wishing to complete a degree in Special Education must apply to the Teacher Education Program. Additional information on the application process can be obtained from the College of Education Educational Support and Resource Center or on the departmental website. A 2.75 minimum GPA is required for admission to the Teacher Education Program, and a 2.75 minimum GPA must be maintained for graduation. *Students must earn a "C-" or better in all education, TEP prerequisite, endorsement, and teaching field courses.*

Students should meet with the College of Education Undergraduate Resource Center to plan appropriate general education courses for a special education major. See "General Requirements" in the "College of Health, Education, and Social Transformation (p. 1074)" section. Students must be admitted to the Teacher Education Program as a condition for enrolling in courses that lead to licensure. Students must

pass ENGL, MATH, all education, and teaching field/concentration courses with a C- or better.

Teaching Field: Language Arts

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 132 credits with 48 credits in courses numbered 3000 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Second Language: (not required)		
Electives, to bring the total credits to 135		
		0
Total Credits		135-136

- ¹ Prerequisite for admission to Teacher Preparation Program (TEP)
- ² Course requires admission to Teacher Education Program (TEP)
- ³ MATH 1220G College Algebra or MATH 1250G Trigonometry & Pre-Calculus is required for the degree but students may need to take any prerequisites needed to enter MATH 1220G or MATH 1250G first.
- ⁴ See the General Education (p. 227) section of the catalog for a full list of courses
- ⁵ The 9 credits of Upper-Division HIST courses that are apart of the Concentration/Teaching Field coursework will meet the 2nd VWW requirement.
- ⁶ Course requires field experience
- ⁷ SPED 4811 requires minimum of 90 practicum hours; EDUC 4996 requires a minimum of 100 practicum hours
- ⁸ Students who complete HIST 2110 at another campus/university will need to take an additional 3 credit course at the 300+ level in ECON, GEOG, GOVT, or HIST to meet state licensure requirements.

A Suggested Plan of Study for Students

This roadmap assumes student placement in ENGL 1110G Composition I and the MATH course listed in Semester 1 of the First Year of each Teaching Field roadmap. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

Teaching Field: Language Arts

First Year

Semester 1		Credits
ENGL 1110G	Composition I ¹	4
CEPY 1120G	Human Growth and Behavior	3
MATH 1220G	College Algebra ¹	3
or MATH 1250G	or Trigonometry & Pre-Calculus	
JOUR 105G	Media and Society	3
THEA 1110G	Introduction to Theatre	3
Credits		16

Semester 2

COMM 1115G	Introduction to Communication	3
MATH 1130G	Survey of Mathematics ¹	3
or MATH 1430G	or Applications of Calculus I	
HIST 1160G	Western Civilization II	3
EDUC 1185	Introduction to Secondary Education and Youth	3
ENGL 2610	American Literature I	3
or ENGL 2620	or American Literature II	
Credits		15

Second Year

Semester 1

ENGL 2210G	Professional and Technical Communication Honors ¹	3
HIST 1110G	United States History I	3
or HIST 1120G	or United States History II

Early Childhood Education - Undergraduate Minor

The primary function of the undergraduate programs in the Department of Curriculum and Instruction is the preparation of licensed teachers for early-childhood settings and elementary and secondary schools. This process includes a broad general education, professional education and teaching specializations.

Prefix	Title	Credits
Early Childhood Education Minor		
<i>Select a minimum of 9 credits in lower division courses</i>		<i>9</i>
ECED 1110	Child Growth, Development, and Learning	
ECED 1115	Health, Safety, and Nutrition	
ECED 1130	Family and Community Collaboration	
ECED 2115	Introduction to Language, Literacy, and Reading	
ECED 2110	Professionalism	
ECED 1125	Assessment of Children and Evaluation of Programs	
ECED 1120	Guiding Young Children	
FCST 2110	Infancy Through Middle Childhood in the Family	
CEPY 2120	The Preschool Child	
<i>Select a minimum of 9 credits in upper division courses</i>		<i>9</i>
ECED 3210	Emergent Literacy	
ECED 4220	Advanced Caregiving for Infants and Toddlers	
SPED 3105	Introduction to Special Education in a Diverse Society	
ECED 4110	Young Children with Diverse Abilities	
ECED 4120	Assessment of Young Children, Birth-Eight	
EDUC 3120	Multicultural Education	
FCST 3230	Parenting and Child Guidance	
FCST 3110V	Introduction to Child Advocacy	
SOCI 3250	Sociology of Childhood	
Total Credits		18

Educational Leadership and Administration - Undergraduate Minor

A minor in educational leadership and administration is available to a student receiving a bachelor's degree from another department in the university. The minor in educational leadership and administration is designed to be useful to the undergraduate who is preparing to work as a teacher or staff member in educational organizations such as primary schools, community colleges and universities.

Prefix	Title	Credits
Required Courses		
ELAD 2340	Multicultural Leadership in Education	3
ELAD 2210	Leadership and Change in Education	3
ELAD 3210	Current Issues In Educational Leadership	3
ELAD 3996	Special Topics in Education	3
ELAD 4120	Principles of Education Law and Policy	3
ELAD 4130	Principles of Education Budgeting and Finance	3
Total Credits		18

How To Apply

If you wish to complete a minor in Educational Leadership and Administration (ELA), you should complete the ELA minor application/verification form and return it to the School of Teacher Preparation, Administration, and Leadership (TPAL) during the semester in which you will be completing your ELA minor coursework. This form notifies the registrar of your intention. It insures that if you complete the requirements for the minor, it will be officially recorded in your transcript.

Secondary Education - Undergraduate Minor

Students not earning a bachelor's degree in Secondary Education could be eligible for a minor in Secondary Education. Students must have a degree area related to one of the secondary licensure options of English Language Arts, Social Studies, Mathematics, or Science. Students must complete all 27 credits from the courses listed below with grades of C- or higher. All 27 credits are considered upper division. Students must complete a Teacher Education Program (TEP) online portfolio in order to be accepted into TEP. The TEP prerequisite courses include EDUC 3120 Multicultural Education, SPED 3105 Introduction to Special Education in a Diverse Society, and EDUC 3997 Secondary Field Experience. For completion of the minor, students must pass the approved state licensure exams and must complete a full semester of student teaching. Students interested in the Minor in Secondary Education must contact the program director to determine eligibility.

Prefix	Title	Credits
Pre-TEP Courses		
EDUC 3120	Multicultural Education ¹	3
SPED 3105	Introduction to Special Education in a Diverse Society ¹	3
EDUC 3997	Secondary Field Experience ^{1,2}	3

Total Credits		27

- ¹ Courses are prerequisites/co-requisites for the Teacher Education Program (TEP)
- ² Courses require Field Experience
- ³ Courses require admission to TEP
- ⁴ Must submit STEP Packet to be considered for student teaching
- ⁵ Must be last semester before graduation unless major degree program requires a Senior project to be completed in last semester.

Social Work Undergraduate Program Information

The BSW degree (CSWE accredited) allows you to join a profession dedicated to helping people in personal and social situations. As a unique and challenging field, social work addresses the complexity of human behavior and the ever-present needs and potential of people. From rural communities to inner cities, social workers work in social service agencies, mental health centers, hospitals, schools, neighborhood organizations, probation offices, and private agencies. Social work roles are varied and flexible. Social workers practice in areas such as child abuse, community organization, direct services with individuals and families, mental health, group work, and the administration, planning, and development of social programs. With each consumer group and in every agency setting, social workers help to correct the causes or alleviate the results of poverty, racism, poor health, mental illness, or any condition that prohibits people from reaching their potential. The School of Social Work offers the undergraduate program in Las Cruces and Online leading to the Bachelor of Social Work (BSW) degree.

Graduate Program Information

The School of Social Work offers full-time and part-time graduate study in Las Cruces and Online leading to the Master of Social Work (MSW) degree. The program is designed to provide academic and practicum education with an emphasis in Advanced Generalist Practice with

Populations of the Southwest based on the foundation first year of generalist practice. The program is fully accredited by the Council on Social Work Education (CSWE).

Admission to the program is in accordance with the general regulations of the Graduate School, which include a completed undergraduate degree from an accredited institution. In addition to applying to the Graduate School, the application must also be made to the School of Social Work. The application to the School of Social Work spells out admission requirements, including submitting an internal application, a written statement, a current resume, and personal references. Applicants are required to complete a Basic Statistics course and a course with Human Biology content before beginning their MSW program of study. The program does not grant academic credit for work or other life experience in lieu of social work courses or practicum education.

The School of Social Work is committed to ensuring a culturally diverse student population to enhance the social work profession at both state and national levels. To meet this goal of diversity, the school makes an effort to recruit from historically underrepresented groups.

Applicants who qualify for advanced standing may complete the program with 30 credits rather than 60 credits. Admission to the advanced-standing program is for highly qualified applicants who have a Bachelor of Social Work degree (BSW) from a social work program accredited by the CSWE and earned within five years of beginning the advanced standing program, a cumulative GPA of at least 3.0 and a minimum GPA of 3.5 in core Undergraduate Social Work courses.

Social Work Courses

SOWK 2110G. Introduction to Human Services & Social Work 3 Credits (3)

This course is for students who are interested in social welfare issues and/or are considering entering a social service profession. The course presents an overview of social problems, issues and trends, and the network of social agencies developed to address these concerns. The course examines the influence of personal and professional values and ethics on the helping relationship. The concept of social welfare will be discussed from a social work perspective (with an emphasis on social justice), and students will gain a basic understanding of social work in U.S. society, social work career opportunities, and contemporary issues facing social workers. Approaches relevant to work with individuals, families, groups and communities are presented, with special emphasis on Hispanic and Indigenous populations of New Mexico and the Southwest. May be repeated up to 3 credits.

Learning Outcomes

1. Explain the interactions of social institutions, cultural factors, dimensions of identity, and environment with the human development and behavior of individuals.
2. Demonstrate knowledge of the social work profession's focus on addressing contemporary social issues in the United States.
3. Describe the mission and services provided by social service agencies at the regional, national, and global levels.
4. Demonstrate a basic understanding of the social work profession, its history, career opportunities, and contemporary issues facing social workers in the United States today.
5. Recognize how students' knowledge, skills, and attitudes impact their competence as helping professionals.

SOWK 3110. Sociocultural Concepts 3 Credits (3)

Theoretical and sociohistorical perspectives on racism, sexism, ageism, heterosexism, classism, ableism, and other forms of discrimination and oppression. Cultural diversity, strengths, and Southwest and border issues are examined. May be repeated up to 3 credits.

Learning Outcomes

1. Examine the role culture, gender, sexual orientation, and socio-economic class play in the way people think, feel, and behave.
2. Examine how diverse populations have been oppressed and exploited by dominant groups throughout U.S. history.
3. Analyze the effects of stereotypes, fallacies, and misconceptions about groups that experience oppression such as the LGBTQIA2S + community, the Elderly, People with Disabilities, BIPOC and people from low socio economic backgrounds and other socially marginalized groups.

4. Recognize theoretical models that describe various forms of discrimination, oppression, privilege and power.
5. Be familiar with relevant knowledge regarding the Southwest, border issues, Native American and Latinx/Chicanx/Hispanic content.
6. Recognize and implement anti racist, anti oppressive, and practice decolonization/indigenization and cultural humility in social work practice and social justice.

SOWK 3120. Human Behavior and the Social Environment I
3 Credits (3)

Major theories of human behavior and the life span from conception to adolescence. May be repeated up to 3 credits.

Learning Outcomes

1. Apply knowledge of and be able to critique the major theories of human behavior and development processes in the social environment.
2. Introduce knowledge and understanding of the influence of environmental systems (groups and communities) and the complex interplay of biological, psychological, social, spiritual, and cultural dimensions for human development and functioning across the life span.
3. Explore and discuss knowledge and appreciation for human diversity (race/ethnicity, culture, gender, physical/mental disabilities, rural/urban differences, sexual orientation and socioeconomic status) and their impact on human development and functioning.
4. Identify and analyze factors and/events that affect ethnic minorities, women, and other vulnerable and/or oppressed populations.
5. Become familiar with current research of human behavior and the social environment as well as principal based ethics and social work values involved.
6. Examine and explore awareness of the ethical dilemmas, controversies and values inherent in work with diverse populations and various social systems and the implications for practice with emphasis on the Southwest.
7. Explore biases and stereotypes that can affect the understanding of human behavior and change in the social environment

SOWK 3130. Human Behavior and the Social Environment II
3 Credits (3)

Continuation of S WK 3120. Major theories of human behavior and the life span from young adulthood through old age. Restricted to: S WK majors. May be repeated up to 3 credits.

Prerequisite: SOWK 3120.

SOWK 3140V. Introduction to Social Policy: History
3 Credits (3)

Historical overview of the economic, political, and cultural impact on social welfare policy, institutions, and professions with international content. May be repeated up to 3 credits.

Learning Outcomes

1. Students will use reflection and self-regulation to manage personal values as they engage in discussion and written reflection around underlying values in social welfare.
2. Students will apply and communicate understanding of the importance of diversity and difference in shaping life experiences in practice at the macro level through written reflection.
3. Students will apply self-awareness and self-regulation to manage the influence of personal biases and values in working with diverse clients and constituencies through self-reflective discussions.

4. Students will apply their understanding of social, economic, and environmental justice to analyze social policy and advocate for just policies.
5. Through policy analysis and review of policy research, students will identify social policy at the local, state, and federal level that impacts well-being, service delivery, and access to social services; assess how social welfare and economic policies impact the delivery of and access to social services, and apply critical thinking to analyze, formulate, and advocate for policies that advance human rights and social, economic, and environmental justice.

SOWK 3150. Social Work Research
3 Credits (3)

This undergraduate course is designed to prepare students to be effective consumers of research and to evaluate their own practice. Students will learn to read, critically evaluate and use the research of others to select interventions that are based on evidence of effectiveness. Students will demonstrate the knowledge, values and skills to be critical consumers of research for effective and ethical practice as well as possess the basic skills necessary to evaluate their own social work professional practice. Restricted to Social Work majors. May be repeated up to 3 credits.

Prerequisite: MATH 1350G or STAT 2350G.

SOWK 3210. Social Work Practice Skills
3 Credits (3)

Introduction to generalist social work practice. Interpersonal skills, values, and ethics required in the helping relationship. Taught in a small-group format. Restricted to: S WK majors. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate and apply knowledge and skills of entry-level generalist social work practice which focus on the interaction between client-systems and the social environment.
2. Demonstrate and apply the integration of social work values and ethics with one's own personal values and apply ethical decision making in practice.
3. Demonstrate and apply worker-client relationship building and maintenance skills which can be applied across client-systems and populations.
4. Demonstrate and apply knowledge and skills of entry-level generalist social work practice with populations that are targeted and most vulnerable
5. Demonstrate and apply knowledge and skills of entry-level generalist social work practice with populations-at-risk including skills for engagement, assessment, intervention, and evaluation.
6. Demonstrate and apply both critical thinking and evidence-based practice skills in entry-level generalist social work practice.
7. Identify and apply methods of evaluating effectiveness in practice skills, assessment, and intervention across client systems.

SOWK 3220. Social Work Practice with Individuals
3 Credits (3)

Generalist social work practice theory and skills in engagement, information gathering, assessments, planning, interventions, evaluation, and termination with individual client systems. Restricted to: S WK majors. May be repeated up to 3 credits.

Prerequisite: SOWK 3210.

SOWK 3230. Social Work Practice with Families
3 Credits (3)

Generalist social work practice theory and skills in engagement, information gathering, assessments, planning, interventions, evaluation, and termination with multicultural family systems. May be repeated up to 3 credits.

Prerequisite: SOWK 3210.

Learning Outcomes

1. Students will apply ethical principles in social work and frameworks for ethical decision making to case scenarios involving families.
2. Students will assess their family of origin and its potential impact on their own work with families.
3. Students will model stages of the helping process with diverse families using cultural humility and a transcultural perspective.
4. Students will explain how family identity intersects with social factors to impact family functioning.
5. Students will plan and execute role plays modeling engagement with diverse families that reflect transcultural awareness and cultural humility.
6. Students will integrate discussion of their own experiences in their planning for family engagement.
7. Students will plan and execute role plays modeling assessment with diverse families that reflect transcultural awareness and cultural humility.
8. Students will conduct a family biopsychosocial assessment and treatment plan. Students will conduct a family biopsychosocial assessment and treatment plan. Students will plan and execute role plays modeling practice evaluation.

SOWK 4110. Social Welfare Policy: Legislation

3 Credits (3)

Policy practice related to the formation of current social welfare policies that promote social and economic justice. Emphasis is on the development and influences of social policy, policy analysis, and the policy change process. Restricted to: S WK majors. May be repeated up to 3 credits.

Learning Outcomes

1. Describe the social policy development and influence process.
2. Apply a framework for the analysis of current and proposed social policy.
3. Identify and discuss current legislation which addresses social and economic justice.
4. Articulate gaps and/or problems in existing social welfare policies and in social welfare programs.
5. Identify strategies which are appropriate to baccalaureate level practice that may influence policymakers on behalf of people in need.

SOWK 4210. Generalist Social Work Practice with Organizations and Communities

3 Credits (3)

This course focuses on generalist social work values, knowledge and skills regarding practice with larger systems. Course content will include theories of community and organizational assessment and intervention. Strategies for advocacy and change, leadership for community and organizational change. May be repeated up to 3 credits.

Learning Outcomes

1. Analyze various macro theories and apply two or more to a particular issue within a local community or organization.
2. Describe the historical context/foundation of macro practice in social work and identify its application in the community.
3. Identify ethical principles related to macro practice.

4. Describe the use of macro level practice in empowering diverse and oppressed populations
5. Describe an evidence-based practice framework for social work intervention with communities and organizations.

SOWK 4220. Generalist Social Work Practice with Groups

3 Credits (3)

Generalist social work practice skills with group client systems focusing on the planned change process and the empowerment of oppressed populations. Restricted to: S WK majors. May be repeated up to 3 credits.

SOWK 4230. Family and Child Welfare Practice

3 Credits (3)

Current issues and interventions in child protection, foster care, family preservation and support, family reunification, adoption and permanency planning. May be repeated up to 3 credits.

SOWK 4240. Professionalism in the Field of Social Work

3 Credits (3)

Students will use the field experience as the backdrop for assessing their own progress toward entry level generalist social work practice; to integrate coursework and field experience to develop their professional foundation. Restricted to: S WK majors. May be repeated up to 3 credits.

Corequisite: SOWK 4321.

SOWK 4310. Practicum I

3 Credits (3)

Supervised professional practice in a community social service agency, providing experiential learning and instruction. 240 clock hours required. Restricted to: S WK majors.

Corequisite: SOWK 4311.

SOWK 4311. Practicum Seminar I

3 Credits (3)

The practicum seminar course will provide students the opportunities to integrate coursework and field practice experience learning to develop social work competencies. Restricted to: S WK majors.

Corequisite: SOWK 4310.

SOWK 4320. Practicum II

3 Credits (3)

This course is a continuation of a supervised professional practice in a community social service agency, providing experiential learning and instruction. 240 clock hours required. Restricted to: S WK majors.

Corequisite: SOWK 4321.

SOWK 4321. Practicum Seminar II

3 Credits (3)

The practicum seminar course will provide students the opportunities to integrate coursework and field practice experience learning to demonstrate social work competencies. Restricted to: S WK majors. May be repeated up to 3 credits.

Corequisite: SOWK 4320.

SOWK 4510. Family and Child Welfare Policy

3 Credits (3)

This course is designed to provide students with an understanding of the history and evolution of child welfare policies, initiatives and factors that influence advocacy and practices within the child welfare system. Child welfare policies and services specific to the state of New Mexico are infused throughout the course. May be repeated up to 3 credits.

SOWK 4996. Special Topics

3 Credits (3)

Specific subjects to be announced in the Schedule of Classes. May be used as a mandatory practice elective. Junior or above standing, majors

or consent of instructor. Restricted to: S WK majors. May be repeated up to 3 credits.

Learning Outcomes

1. Varies

SOWK 4997. Independent Study

1-6 Credits (1-6)

Individual studies directed by consenting faculty with the prior approval of the department head. May be repeated up to 6 credits.

Learning Outcomes

1. Varies

**SOWK 5110. Sociocultural Concepts and Populations of the Southwest
3 Credits (3)**

Theoretical and sociohistorical perspectives on racism, sexism, ageism, heterosexism, classism, ableism, and other forms of discrimination and oppression. Cultural diversity, strengths, and Southwest and border issues are emphasized. May be repeated up to 3 credits.

Learning Outcomes

1. Explain and compare various theoretical and historical perspectives on discrimination, oppression and economic deprivation, as well as theories of human need and social justice as they relate to marginalized populations in the U.S., especially within the U.S. Southwest.
2. Describe the forms and mechanisms of oppression and discrimination, including the extent to which a culture's structures and values, including social, economic, political, and cultural exclusions, may oppress, marginalize, alienate, or create privilege and power.
3. Analyze the impact of discrimination, oppression and disenfranchisement as well as privilege, power, and acclaim on the human experience and formation of identity.
4. Evaluate dimensions of diversity as the intersectionality of multiple factors including but not limited to age, class, color, culture, disability and ability, ethnicity, gender, gender identity and expression, immigration status, marital status, political ideology, race, religion/spirituality, sex, sexual orientation, and tribal sovereign status.
5. Propose strategies designed to eliminate oppressive structural barriers to ensure that social goods, rights, and responsibilities are distributed equitably and that civil, political, environmental, economic, social, and cultural human rights are protected.

SOWK 5120. Social Work Research I

3 Credits (3)

Introduction to analytical skills used in social work research: problem formulation, research designs, measurement, instrumentation, data collection and analysis, use of human participants in research, and application of research knowledge and professional ethics to social work practice. Restricted to: MSW majors. May be repeated up to 3 credits.

Learning Outcomes

1. Students will demonstrate the application of research methodologies for conducting both qualitative and quantitative empirical studies.
2. Students will select relevant peer-reviewed journal articles representative of the generalist social work practice model that contribute to their understanding of social work as an evidenced-based practice.
3. Students will analyze the roles that the Belmont Report, Health and Human Services Office for Human Research Protections, and Institutional Review Boards have in the ethical treatment and protection of human subject participants in conducting research.

4. Students will integrate the professional standards of CSWE Competency 4 into the implications section of the article critiques and research proposal assignment.
5. Students will connect their field practicum experiences to identify the role of generalizable results from empirical research applying to their area of practice client population.
6. Students will propose an empirical research study that details the steps necessary to apply for Institutional Review Board approval.

**SOWK 5130. Human Behavior and the Social Environment I
3 Credits (3)**

The major theories of human behavior and the life span from conception to adolescence. Focuses both on the areas of concern and risk for client systems and on the opportunities and strengths in the social environment. Restricted to MSW majors. May be repeated up to 3 credits.

Learning Outcomes

1. Describe key theories of human behavior in the social environment.
2. Compare stage theories to recognize typical human development
3. Apply theoretical perspectives to explain a range of various human behaviors.
4. Identify key biological, psychological, and spiritual characteristics of a client (and) subsequently apply appropriate intervention strategies.
5. Identify ways one's physical environment may promote and/or deter optimal health/well-being.

**SOWK 5135. Human Behavior in the Social Environment
3 Credits (3)**

The major theories of human behavior and the life span from conception through adolescence, adulthood, and old age. Focuses both on the areas of concern and risk for client systems and on the opportunities and strengths in the social environment. May be repeated up to 3 credits.

Learning Outcomes

1. Describe the biological and psychological elements and impacts of adverse childhood experiences and trauma.
2. Identify typical physical, cognitive, and socio-emotional development of infants, children, adolescents, adults, and older adults, as well as atypical developmental issues for each age/stage.
3. Recognize the sociocultural context of childbearing, child rearing, adolescence, partnership, and aging.
4. Apply knowledge of human development to guide social work assessment and intervention.

**SOWK 5140. Human Behavior & the Social Environment II
3 Credits (3)**

The major theories of human behavior from young adulthood to old age. This course will focus on both areas of concern and risk for client systems and on the opportunities and strengths in the social environment. Restricted to: MSW majors.

Prerequisite: SOWK 5130.

Learning Outcomes

1. Describe the biological and psychological elements and impacts of adverse childhood experiences and trauma.
2. Identify typical physical, cognitive, and socioemotional development of infants, children, adolescents, adults and older adults (as well as atypical developmental issues for each age/stage).
3. Recognize the sociocultural context of childbearing, child rearing, adolescence, partnership, and aging.
4. Apply knowledge of human development to guide social work assessment and intervention.

SOWK 5150. Social Problems and Social Welfare Policy**3 Credits (3)**

An overview of social and economic problems in the United States and the historical and current social welfare policies aimed at alleviating these problems. Emphasis on developing an awareness and ability to change policies that impact vulnerable populations. May be repeated up to 3 credits.

Learning Outcomes

1. Summarize the history of the social work profession in social welfare policy and the major roles that social workers perform in policy practice.
2. Analyze the values, institutional, political and economic forces that drive social problems and social welfare policy in the U.S.
3. Analyze past, current and future social policies developed to respond to social problems from a lens that considers the historical, social, cultural, economic, organizational, environmental, and global influences on social problems, and the impact on diverse populations of the Southwest.
4. Evaluate how social work values, ethics, and research, impact the development, evaluation, and implementation of social policy.

SOWK 5155. Social Policy Issues, Analysis and Change**3 Credits (3)**

An overview of social and economic problems in the United States and the historical and current social welfare policies aimed at alleviating these problems. Emphasis on developing an awareness and ability to create, analyze, and change policies that impact vulnerable populations. May be repeated up to 3 credits.

Learning Outcomes

1. Comprehend the values, institutional, political, and economic forces that drive social problems and social welfare policy in the U.S.
2. Analyze past, current, and future social policies developed to respond to social problems from a lens that considers the historical, social, cultural, economic, organizational, environmental, and global influences on social problems and the impact on diverse populations of the Southwest.
3. Evaluate how social work values, ethics, and research impact social policy development, evaluation, and implementation.
4. Apply a multilevel policy advocacy framework to advocate for policies that promote human rights, social and economic justice and addresses culturally influenced barriers to services presented by practitioners, organizations, and larger systems for populations of the Southwest.

SOWK 5160. Generalist Social Work Practice I**3 Credits (3)**

This is the first course of a two-course sequence. An introduction to the generalist crosscultural, social work practice perspective with individuals and families, focusing on social work as a profession, social work knowledge base, professional development, relationship building and assessment with individuals and families within a framework of social work values and ethics. Restricted to: MSW majors. May be repeated up to 3 credits.

Learning Outcomes

1. Students will apply the NASW Code of Ethics and frameworks for ethical reasoning to ethical dilemmas encountered in social work practice
2. Students will analyze the strengths and limitations of social work at the micro, mezzo, and macro levels.
3. Students will demonstrate client engagement through the process of motivational interviewing

4. Students will apply skills for effective client assessment through interviews and written biopsychosocial-spiritual assessments
5. Students will create effective, measurable client-centered goals and objectives
6. Students will engage in interprofessional collaboration around a current topic
7. Students will apply knowledge of theory and their own positionality to assessment information to formulate a case

SOWK 5165. Generalist Social Work Practice**3 Credits (3)**

An introduction to generalist social work practice skills, focusing on the theoretical foundations of social work as a profession and implementing the planned change process with individual, family, group, community, and organizational client systems within a social work values and ethics framework. May be repeated up to 3 credits.

Prerequisite/Corequisite: SOWK 5141 and SOWK 5110.

Learning Outcomes

1. Students will apply the NASW Code of Ethics and frameworks for ethical reasoning to ethical dilemmas encountered in social work practice.
2. Students will demonstrate the application of assessment tools and approaches to various client systems.
3. Students will create effective, measurable client-centered goals and objectives.
4. Students will select relevant, evidence-based interventions to meet client goals.
5. Students will describe approaches to evaluating practice across a range of client systems.
6. Students will engage in interprofessional collaboration around a current topic.
7. Students will analyze strategies for integrating micro, mezzo, and macro approaches to meet client needs.

SOWK 5170. Generalist Social Work Practice II**3 Credits (3)**

This is the second course of a two-course sequence. A continuation of the generalist crosscultural, social work practice perspective with individuals and families, focusing on goal setting, contracting, implementation, and outcome assessment. The course also applies the generalist practice perspective and methods to larger systems: groups, organizations, and communities and includes relationship building, assessment, goal setting, contracting, implementation and outcome assessment within a framework of social work values and ethics. Restricted to: MSW majors. May be repeated up to 3 credits.

Prerequisite: SOWK 5160.

Learning Outcomes

1. Students will analyze strategies for integrating micro, mezzo, and macro approaches to meet client needs
2. Students will select relevant, evidence-based interventions to meet client goals
3. Students will monitor progress and evaluate treatment outcomes using effective measurement tools and strategies
4. Students will demonstrate foundational skills for engagement and intervention with groups and/or families
5. Students will describe the rationale and basic skills for intervention with communities and organizations.
6. Students will propose a project that applies the planned change process at the community level

- Students will integrate their learning across all nine social work competencies and apply this learning to a given case.

SOWK 5180. Generalist Practicum Experience I

3 Credits (3)

Supervised professional practice in a community social service agency, providing experiential instruction and learning. 225 clock hours required. Seminar required. Restricted to: MSW majors.

SOWK 5181. Generalist Practicum Seminar I

3 Credits (3)

This practicum seminar assists students in integrating knowledge, skills, values, and ethical principles gained in practice and theory courses into social work practice settings. This seminar also aids students in integrating social work practice processes in service planning and delivery. Students explore skills of collaboration and consultation by presenting practicum case examples. May be repeated up to 3 credits.

Corequisite: SOWK 5180.

Prerequisite/Corequisite: SOWK 5110 and SOWK 5161.

Learning Outcomes

- Increase awareness of personal strengths and challenges as a developing social work practitioner.
- Employ knowledge, skills, values, and ethical principles from practice and theory courses in social work practice.
- Demonstrate application of research findings to social work practice.
- Collaborate and consult effectively with peers and practicum liaison.
- Generalize the Council on Social Work Education's core competencies to social work practice.

SOWK 5190. Generalist Practicum Experience II

3 Credits (3)

Supervised professional practice in a community social service agency. 225 clock hours required. Seminar required. Restricted to: MSW majors.

Prerequisite: SOWK 5180.

SOWK 5191. Generalist Practicum Seminar II

3 Credits (3)

This practicum seminar builds on learning from Generalist Practicum Seminar I and assists students in integrating knowledge, skills, values, and ethical principles gained in practice and theory courses into social work practice settings. This seminar also aids students in integrating social work practice processes in service planning and delivery. Students explore skills of collaboration and consultation by presenting practicum case examples. May be repeated up to 3 credits.

Prerequisite: SOWK 5180 and SOWK 5181 and SOWK 5161.

Corequisite: SOWK 5190.

Prerequisite/Corequisite: SOWK 5320.

Learning Outcomes

- Increase awareness of personal strengths and challenges as a developing social work practitioner.
- Employ knowledge, skills, values, and ethical principles from practice and theory courses in social work practice.
- Demonstrate application of research findings to social work practice.
- Collaborate and consult effectively with others.
- Generalize the Council on Social Work Education's core competencies to social work practice.

SOWK 5210. Core Components for Trauma Informed Practice

3 Credits (3)

This course facilitates students' acquisition of the knowledge, skills, and attitudes necessary to effectively use 12 common trauma-informed practice elements in interventions for and the treatment of traumatized

children and their families. The course conceptualizes a trajectory of intervention that considers the impact of trauma, intervention objectives, and the practice elements needed to facilitate the intervention objectives. This course is taught using an inquiry-based learning (IBL) pedagogy to enhance students' engagement and learning using full-length cases to exemplify a range of different clients a clinician might encounter.

Learning Outcomes

- Demonstrate cultural humility by applying critical reflection, self-awareness, and self-regulation to manage the influence of bias, power, privilege, and values in working with clients and constituencies, acknowledging them as experts regarding their own lived experiences.
- Apply knowledge of human behavior and person-in-environment, as well as interprofessional conceptual frameworks to engage with clients and constituencies.
- Demonstrate respect for client self-determination during the assessment process by collaborating with clients and constituencies in developing mutually agreed-on goals.
- Engage with clients and constituencies to critically choose and implement culturally responsive, evidenced-informed interventions to achieve mutually agreed-on plans and increase the capacities of clients and constituencies.

SOWK 5220. Social Work Research II

3 Credits (3)

Focused on advanced generalist practice research in multicultural settings. Advanced skills to evaluate practice with individuals, families, groups, organizations, and communities in multicultural settings. Needs assessment as well as program and practice evaluation are emphasized. Restricted to: MSW majors.

Prerequisite: SOWK 5120.

Learning Outcomes

- Demonstrate and understanding of qualitative and quantitative analysis methods used in advanced generalist social work practice.
- Apply qualitative and quantitative analytical methods to evaluate the effectiveness of advanced generalist social work practice, for: a. advanced generalist program evaluation, b advanced generalist needs assessment, and c. evaluation of one's own practice.
- Develop competencies in critical analysis of empirical literature related to advanced generalist social work practice.
- Demonstrate sensitivity to ethical, value, and cultural issues in the application of social work research methods.

SOWK 5230. Applied Social Work Research

3 Credits (3)

Introduction to skills for research-informed practice and practice-informed research, including problem formulation, research designs, measurement, instrumentation, data collection and analysis, use of human participants in research, and application of research knowledge and professional ethics to social work practice. Focus on the critical analysis, interpretation, and application of existing research and use of data to inform practice and advance the field across a range of client systems. May be repeated up to 3 credits.

Learning Outcomes

- Formulate a clear, concise, and specific social work research problem statement that describes the social issue of focus.
- Understand key components of qualitative, quantitative, and mixed methods research designs.
- Apply research knowledge and social work professional ethics to social work practice.

- Critically analyze, interpret, and apply existing research to inform social work practice.

SOWK 5240. Leadership in Public Health Social Work

3 Credits (3)

This course explores the integrated application of Public Health Social Work (PHSW) models and theories of practice, addressing community and organizational assessment and intervention, interpretation of contexts of power and influence, capacity for conflict and alliances, and strategies for advocacy to promote community and organizational transformation. This course will emphasize assessing and sustaining culturally-sustaining, critical trauma theory-informed rural, tribal, and border area systems response to critical PHSW issues. This course is also designed to prepare students graduating in May 2022 for their MSW Final Program Examination and MPH Competency Exams.

Learning Outcomes

- Apply Public Health Social Work competencies to social work and public health practice settings.
- Demonstrate culturally humble, trauma informed public health social work knowledge, skills and values in social work and public health practice settings.
- Examine culturally- and identity-relevant public health social work practice considerations when serving in border area, tribal and rural communities.
- Design and implement community and organizational assessment through an integrated public health social work framework.

SOWK 5250. Policy Analysis and Change

3 Credits (3)

This course will emphasize policy practice focusing on policy analysis and creating and implementing policy change. Restricted to MSW majors. May be repeated up to 3 credits.

Prerequisite: SOWK 5150.

Learning Outcomes

- Analyze the role of policy advocacy in addressing social problems in accordance with the NASW Code of Ethics.
- Use a multilevel policy advocacy framework to advocate for policies which promote human rights, social and economic justice, and addresses culturally influenced barriers to services presented by practitioners, organizations, and larger systems for populations of the Southwest.
- Identify interconnections between micro policy advocacy interventions, mezzo policy advocacy interventions, and macro policy advocacy interventions.
- Develop a plan for engagement in micro, mezzo and macro policy advocacy for local, state and federal policies that address social problems impacting diverse populations and constituencies of the Southwest.
- Apply policy advocacy skills across complex social problems across social sectors that includes collaboration with colleagues and clients.

SOWK 5260. Social Work Skills Application

1 Credit (1)

This skills-based course prepares MSW students for management in government and nonprofit organizational contexts, including how to prepare and analyze organizational budgets, develop grant proposals and reports and develop a leadership platform.

Learning Outcomes

- Understand key components of budget planning, development and analysis for social service agencies and organizations.

- Develop knowledge and skills for writing grant proposals for federal, state and foundation funding requests.
- Explore social work leadership styles and develop a personalized leadership platform.

SOWK 5280. Advanced Generalist Practicum Experience I

3 Credits (3)

Supervised professional practice in a community social service agency providing experiential learning in advanced generalist practice. 250 clock hours required. Seminar required. Restricted to: MSW majors.

Prerequisite: SOWK 5190.

SOWK 5281. Advanced Generalist Practicum Seminar I

2 Credits

This practicum seminar builds upon students' knowledge, skills, values, and cognitive and affective processes attained in their generalist year to apply, analyze and evaluate advanced generalist social work service planning and delivery with diverse populations. Students develop professional social work practice knowledge in micro, mezzo, macro, and multidisciplinary settings.

Prerequisite: SOWK 5190 and SOWK 5191.

Corequisite: SOWK 5280.

Prerequisite/Corequisite: SOWK 5310 and SOWK 5330.

Learning Outcomes

- Incorporate the Council on Social Work Education's core competencies with social work practice skills and behaviors.
- Analyze and evaluate the efficacy of social work interventions.
- Perform critical reflectivity and skills of cultural humility to serve diverse populations competently.
- Integrate complex critical thinking with various theories and interventions to address complex and diverse practice contexts.

SOWK 5290. Advanced Generalist Practicum Experience II

3 Credits (3)

Supervised professional practice in a community social service agency providing experiential learning in advanced generalist practice. 250 clock hours required. Seminar required. Restricted to: MSW majors.

Prerequisite: SOWK 5280.

SOWK 5291. Advanced Generalist Practicum Seminar II

2 Credits

This practicum seminar builds on learning from Advanced Practicum Seminar I and students' knowledge, skills, values, cognitive and affective processes attained in their generalist year to apply, analyze and evaluate advanced generalist social work service planning and delivery with diverse populations. Students develop knowledge of professional social work practice in micro, mezzo, macro, and multidisciplinary settings.

Prerequisite: SOWK 5280 and SOWK 5281.

Corequisite: SOWK 5290.

Prerequisite/Corequisite: SOWK 5340 and SOWK 5350.

Learning Outcomes

- Incorporate the Council on Social Work Education's core competencies with social work practice skills and behaviors.
- Analyze and evaluate the efficacy of social work interventions.
- Perform critical reflectivity and skills of cultural humility to serve diverse populations competently.
- Integrate complex critical thinking with various theories and interventions to address complex and diverse practice contexts.

SOWK 5310. Social Work Mental Health Practice

3 Credits (3)

This course is designed to add to the practice sequence for Masters Level students in Social Work. It addresses social work assessment of major mental health issues across the life span with an emphasis on resiliency and coping skills. Culturally responsive practices are applied to the major issues of mental health. Basic psychopharmacology, neurobiology and the ways in which Social Workers interact with clients to aid education and effective treatment of medical interventions will be a prominent part of this course. Evidence-based practices useful for work in various disorders will be incorporated.

Learning Outcomes

1. Critically analyze the concepts of mental health and psychopathology.
2. Assess social, political, and economic conditions which interfere with mental health, focusing on populations at risk for discrimination and oppression.
3. Conduct assessments of mental and emotional functioning using approved models and tools.
4. Apply DSM five criteria across a range of ages and cultures.
5. Differentiate culturally based behaviors from psychopathology.
6. Promote strengths-based approaches to avoid labeling.
7. Recognize connections between psychopharmacological interventions, symptom reduction, and side effects.
8. Identify evidence-based practices for work with clients exhibiting a range of mental disorders.

SOWK 5320. Practice with Individuals

3 Credits (3)

This class builds on Foundation Year Practice courses by integrating theory and practice, and advancing skills in selecting, applying and evaluating practice interventions in a culturally sensitive manner with individuals. May be repeated up to 3 credits.

Prerequisite: SOWK 5170.

Learning Outcomes

1. Students will integrate key social work theories for direct practice into work with individuals.
2. Students will select, apply and evaluate culturally-relevant interventions for practice with individuals.
3. Students will describe and demonstrate the application of key approaches for direct practice with individuals.
4. Students will apply skills for clinical case formulation.

SOWK 5330. Practice with Groups

3 Credits (3)

This course will address the knowledge, values and skills needed to work effectively with diverse populations in group settings. The course will build on Foundation Year courses by integrating theory and practice, and advancing skills in selecting, applying and evaluating practice interventions in a culturally sensitive manner with social work groups. May be repeated up to 3 credits.

Prerequisite: SOWK 5170.

Learning Outcomes

1. Demonstrate the ability to conduct a group.
2. Apply a theoretically informed knowledge base of group development as it is executed across systems.
3. Demonstrate knowledge of the variety of roles that group leaders and participants need to address in accomplishing the successful mission of the group.
4. Establish a process that encourages clients to embrace the mutual aid function of groups, embracing an attention to multiple helping relationships.

5. Advocate for a democratic process within all groups, encouraging a mutual emphasis on empowerment.
6. Apply skills for social work assessment to group assessments.

SOWK 5340. Practice with Families

3 Credits (3)

This class builds on Foundation Year Practice courses by integrating theory and practice, and advancing skills in selecting, applying, and evaluating practice interventions in a culturally sensitive manner with families. Restricted to: MSW majors. May be repeated up to 3 credits.

Prerequisite: SOWK 5170.

Learning Outcomes

1. Describe a range of approaches to and issues in social work practice with families.
2. Apply social work assessment and planning skills to work with family systems.
3. Critically analyze the role of personal experiences in our perceptions of and work with families.
4. Describe key features of core approaches to family therapy and critique their application in models.
5. Demonstrate the application of at least one core approach to family therapy.
6. Apply considerations for ethical decision making to work with families.

SOWK 5350. Practice with Organizations and Communities

3 Credits (3)

This class builds on Foundation Year Practice courses by integrating theory and practice, and advancing skills in selecting, applying, and evaluating practice interventions in a culturally sensitive manner with organizations and communities. . Restricted to: MSW majors. May be repeated up to 3 credits.

Prerequisite: SOWK 5170.

Learning Outcomes

1. Identify key theories, history, and ideological influences for macro social work practice.
2. Describe and apply methodology of Root Cause Analysis for a selected community/social issue of concern.
3. Use a range of approaches to assess a community/social issue of concern.
4. Create a community Power Map for the purposes of advocacy and social change.
5. Conduct an Organizational Capacity Assessment.
6. Present a strategic plan for implementing a data-informed initiative.
7. Describe formal methods/techniques for program assessment.

SOWK 5510. Family and Child Welfare Policy

3 Credits (3)

This course will enhance students' ability to offer child welfare services that respect cultural differences, reflect current policy knowledge concerning child maltreatment, build on the advocacy and protective capacities of individuals, families and communities and encourage permanency for children and preservation of families. Required basic knowledge of child welfare and assessment skills. Outside majors require instructor permission. May be repeated up to 3 credits.

SOWK 5994. Final Exit Project

1 Credit (1)

Final Exit Project. This 1-credit course is the School of Social Work's competency examination. The final exit project is non-thesis summative examination of students' ability to apply the Council on Social Work

Education's core competencies to a case study. Students may only enroll in this course during the final semester of their MSW Program. May be repeated up to 2 credits.

Prerequisite: 45 Credit Hours.

Learning Outcomes

1. Apply Council on Social Work Education's core competencies to a case study.

SOWK 5996. Special Topics

1-3 Credits (1-3)

Specific subjects to be announced in the Schedule of Classes. Open to graduate students in related disciplines and to community professionals in related disciplines and to community professionals in related fields.

May be repeated up to 99 credits.

Learning Outcomes

1. Varies

SOWK 5997. Independent Study

1-3 Credits (1-3)

Individual study to augment depth of knowledge in area related to course of study. May be repeated up to 6 credits.

Learning Outcomes

1. Varies

SOWK 5999. Graduate Thesis

1-6 Credits (1-6)

Required for thesis option. May be repeated up to 6 credits.

Learning Outcomes

1. Varies

Office Location: Health and Social Services Bldg. Suite 210

Social Work - Bachelor of Social Work

The BSW program prepares you for a beginning professional level of generalist social work practice with an understanding and appreciation of the cultural diversity of the Southwest.

To be admitted as a BSW candidate, you must formally apply for admission to the program. A 2.5 grade-point average is required for the application. Consult the pre-social work major advisor, located in the Center for Academic Advising and Student Support. The deadline for submitting applications is the last Friday in January. The program is fully accredited by the Council on Social Work Education (CSWE).

General Education Requirements

Students need to complete the New Mexico State University general education requirements before applying to the Bachelor of Social Work program. The School of Social Work requirements include SOWK 2110G Introduction to Human Services & Social Work .

Once accepted into the program, students also need to meet a Cultural Emphasis requirement (6 credits). If the Cultural Emphasis classes are also Viewing a Wider World classes, you still need to complete the total number of specified upper-division credits necessary for graduation. Highly recommended electives for social work students include courses in sociology, history, Spanish, psychology, family life, child development,

English, philosophy, anthropology, computer science, criminal justice, government and economics. Electives must be sufficient to bring total credits to 120, including 48 upper-division credits, for graduation.

Departmental Requirements

Preparation for entry-level professional social work requires a thorough knowledge of theory and skills; therefore, the high number (57) of core social work credits is required. A grade of C- or better is required for all social work courses.

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements (6 credits), and elective credits to total a minimum of 120 credits with 48 credits in courses numbered 300/3000 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

- ¹ See the General Education (p. 227) section of the catalog for a full list of courses
- ² Either MATH 1350G Introduction to Statistics, A ST 311 Statistical Applications, or MATH 2350G Statistical Methods is required for the degree.
- ³ The Area III: Laboratory Science General Education requirement (BIOL 1120G Human Biology BIOL 1120L Human Biology Laboratory or BIOL 1130G Introductory Anatomy & Physiology (non-majors)) must be completed before starting the SOWK program and requires a grade of C- or better.
- ⁴ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses
- ⁵ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However, students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

Second Language Requirement

For the Bachelor of Social Work, there is a one-year second language requirement. The number of credits a student needs to take may vary depending on their fluency in another language. Please speak with an advisor for more information regarding the second language requirement for this degree.

Option 1:

Prefix	Title	Credits
Complete one of the following sequences:		
FREN 1110 & FREN 1120	French I and French II	4-8
GRMN 1110 & GRMN 1120	German I and German II	4-8
JAPN 1110 & JAPN 1120	Japanese I and Japanese II	4-8
SPAN 1110 & SPAN 1120	Spanish I and Spanish II	4-8
PORT 1110 & PORT 1120	Portuguese I and Portuguese II	3-6
SIGN 1110	American Sign Language I	3
SIGN 1120	American Sign Language II	3

For Heritage Speakers:

SPAN 1210 & SPAN 1220 or SPAN 2210	Elementary Spanish for Heritage Learners I and Spanish for Heritage Learners II or Spanish for Heritage Learners III	3-6
------------------------------------	--	-----

Heritage speakers may take a 3-credit 3000-level or higher upper division course taught in a foreign language offered by the Department of Language and Linguistics to meet the requirement 3

A Suggested Plan of Study for Students

This roadmap assumes student placement in either A ST 311 Statistical Applications, MATH 1350G Introduction to Statistics or MATH 2350G

Statistical Methods and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and English. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

¹ BIOL 1120G Human Biology/ BIOL 1120L Human Biology Laboratory or BIOL 1130G Introductory Anatomy & Physiology (non-majors) must be completed before starting the S WK program and require a grade of C- or better.

² See the General Education (p. 227) section of the catalog for a full list of courses

³ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

⁴ Either A ST 251G Statistics for Business and the Behavioral Sciences/STAT 251G Statistics for Business and the Behavioral Sciences, STAT 271G Statistics for Psychological Sciences or A ST 311 Statistical Applications is required for the degree but students may need to take any prerequisites needed to enter the course first.

**students who choose to take A ST 311, will need to take an additional Mathematics General Education course in order to meet the requirement.*

⁵ CEPY 1120G Human Growth and Behavior and SOWK 2110G Introduction to Human Services & Social Work: must be completed before starting the S WK program and require a grade of C- or better.

⁶ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses

NOTE: Students need to submit a formal application packet to the School of Social Work in January and be accepted into the program before they may take junior or senior year courses.

A grade of C- or better is required for all social work courses.

Sociology

Undergraduate Program Information

The undergraduate major in sociology is broad in scope. It prepares students for various public and private sector employment opportunities, including market research, personnel management, data analytics, computational sociology, human relations, law enforcement, health services, etc. Successful students often use their major as pre-professional preparation for advanced degrees in law, business, education, counseling, and other social science-based careers. Courses are offered both online and on campus.

Graduate Program Information

The program is designed to prepare students for doctoral study in sociology as well as employment in research and applied areas of the field. In addition to the on-campus program, we also offer an online MA for students who cannot attend in person. Through small seminars, on-campus graduate students engage in discussions of subjects that often result in thesis and internship topics. In online seminars, small classes allow for in-depth discussions that can generate ideas for research as well as knowledge for applied work environments. In both online and on-campus settings, faculty members and students work toward the mutual goal of developing each student's full potential.

The Southwest and Border Region

Our unique location attracts faculty and students who are interested in peoples of the southwest, particularly Hispanics/Latinos and Native Americans. In addition, our proximity to the U.S.-Mexico border provides an ideal laboratory for examining such issues as globalization, transnational migration, and the consequences of border development.

Social Inequality

Our faculty members examine the intersection of race, class, and gender oppression in their teaching and research, with special attention to educational, rural/urban, ecological, and global disparities. This examination addresses social problems such as poverty and racial/ethnic inequality.

Program Options and Requirements

Students seeking a master's degree in sociology should have taken undergraduate courses in methods and statistics or their equivalent. Students who have not taken these courses are encouraged to complete them before beginning their graduate study or in consultation with the sociology graduate director as soon as possible.

Graduate students in sociology have two program options, thesis or non-thesis. Faculty consider the students special interests and career plans in advising regarding their choice of program options. The thesis option is typically selected by students who intend to pursue a Ph.D. degree, while the non-thesis option is commonly pursued by those desiring immediate employment in research and applied areas in business, government, education, social welfare, and health. The non-thesis, coursework only option is currently the only option available for online MA students. All students must pass a final master's examination.

Degrees for the Department

Bachelor Degree(s)

- Sociology - Bachelor of Arts (p. 1299)
- Sociology - Bachelor of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/sociology-ba-online/>)

Master Degree(s)

- Sociology - Master of Arts (p. 168)
- Sociology - Master of Arts (Online) (<https://catalogs.nmsu.edu/global/nmsu-global/sociology-ma-online/>)

Minors for the Department

- Sociology - Graduate Minor (p. 225)
- Sociology - Undergraduate Minor (p. 1301)

Academic Department Head - David G. Ortiz, Ph.D.

Professors - LoConto, Rice; **Associate Professors** - Ortiz, Pelak, Steinkopf, Way; **Assistant Professors** - Arnett, Bermúdez Tapia, Harper, Newby, Taylor; **Emeritus Professor** - Hoffman, Loustaunau

S. Arnett, Ph.D. (University of Notre Dame)– education, race and ethnicity, social inequalities; B. Bermúdez Tapia, Ph.D. (University of Colorado, Boulder)– international migration, race and ethnicity, qualitative methodology; H. Harper, Ph.D. (University of California, San Diego)– political sociology, policy design and development, computational analysis; D. LoConto, Ph.D. (Oklahoma State University)– classical American social thought, popular culture, social psychology; C. A. Newby, Ph.D. (University of Texas at Austin)– race/ethnicity/minority relations, immigration, demography; D. Ortiz, Ph.D. (University of Notre Dame)– social movements, political sociology, Latin America; C. Pelak, Ph.D. (Ohio State University)– social inequalities, race and ethnicity, sociology of sport; J. Steinkopf-Rice, Ph.D. (Washington State University)– gender, globalization, communities; J.C. Rice, Ph.D. (Washington State University)– environment, society and technology, political sociology; M. Taylor, Ph.D. (University of Notre Dame)– computational/quantitative methods, culture, cognitive sociology; S. Way, Ph.D. (University of Arizona)– education, gender, juvenile delinquency.

Sociology Courses

SOCI 1110G. Introduction to Sociology

3 Credits (3)

This course will introduce students to the basic concepts and theories of sociology, as well as to the methods utilized in sociological research. The course will address how sociological concepts and theories can be utilized to analyze and interpret our social world, and how profoundly our society and the groups to which students belong influence them. Students will be given the opportunity to challenge their “taken-for-granted” or “common sense” understandings about society, social institutions, and social issues. Special attention will also be paid to the intimate connections between their personal lives and the larger structural features of social life. In addition, the implications of social inequalities, such as race/ethnicity, gender, and social class will be central to the course’s examination of social life in the United States.

Learning Outcomes

1. Define sociological perspectives and the contributions that sociological knowledge can bring to the social sciences.
2. Understand the sociological imagination and explain the relationships between social structures, social forces and individuals.

3. Demonstrate the ability to apply the perspectives of symbolic interactionist theory, conflict theory, and structural-functionalist theory to qualitative and/or quantitative data.
4. Understand and explain intersectionality and the connections between race, class, gender, disability, sexual identity and other forms of structural inequality.

SOCI 2230. Sociology of Sexuality

3 Credits (3)

This course explores all aspects of human sexuality from a sociological perspective. Topics include, but are not limited to, sex work, intimate relationships, sexual response, political movements, power, and the social construction of sexuality. The course also considers how various social statuses such as ethnicity, gender, and social class intersect with sexuality.

Learning Outcomes

1. Identify the central research questions, theories, and methodologies used in the study of human sexuality.
2. Identify and describe biological, cultural, social, and psychological sexual behaviors and response across the lifespan.
3. Identify and describe trends and changes that influence sexual attitudes and values in the U.S. and globally.
4. Describe how sexuality is influenced by contextual factors, such as race/ethnicity, gender, socioeconomic status, disability, and nationality.

SOCI 2240. Sociology of Intimate Relationships and Family

3 Credits (3)

This course provides an overview of contemporary intimate relationships and families from sociological perspectives. We will examine intimate relationships and families as social constructions whose meanings have changed over time and from place to place. This course will aid students in developing a greater understanding of intimate relationships and families as institutions in contemporary U.S. society. Intersections of race, class, gender, sexual orientation, nationality, and other factors within these institutions will be addressed. Community Colleges only. May be repeated up to 3 credits.

Learning Outcomes

1. Explain the sociological approaches to researching intimate relationships and families.
2. Describe important sociological research findings concerning intimate relationships and families.
3. Explain how intimate and familial relationships are affected by multiple intersecting inequalities and ongoing events in other social institutions.

SOCI 2261. Issues in Death and Dying

3 Credits (3)

Major personal and social issues related to the process of dying in our culture. Community Colleges only.

Learning Outcomes

1. be able to understand the diversity of the death experience and the various options available in coping with death and bereavement as shown by the student’s participation in class discussions and field trips.
2. better understand death and dying as social phenomena as shown by the student’s reaction papers.
3. have taken an in-depth look at her or his own death with a researched paper. Comprehension will be shown by the student’s grade on the paper.

SOCI 2310G. Contemporary Social Problems**3 Credits (3)**

This course studies the nature, scope, and effects of social problems and their solutions. The course will concentrate on sociological perspectives, theories, and key concepts when investigating problems, such as inequality, poverty, racism, alienation, family life, sexuality, gender, urbanization, work, aging, crime, war and terrorism, environmental degradation, and mass media. This course is designed to build students' sociological understanding of how sociological approaches attempt to clarify various issues confronting contemporary life, as well as how sociologists view solutions to these problems.

Learning Outcomes

1. Identify and explain major social problems in the United States, and how social problems become constructed as problems.
2. Describe and analyze policy related solutions associated with social problems from various perspectives.
3. Critically examine social problems through the use of sociological theories, methods, and empirical techniques.
4. Identify connections, both national and global, between social problems and social inequalities (e.g., social class, race/ethnicity, and gender/sexuality).

SOCI 3110V. Sociology of Religion**3 Credits (3)**

Provides an overview of old and new methods and theories for the study of religion. Exposure to the ways groups of people in diverse cultural systems construct and change their religious traditions to serve practical and meaningful ends. May be repeated up to 3 credits.

SOCI 3120V. Introduction to Population Studies**3 Credits (3)**

Determinants and consequences of changes in fertility, mortality and migration patterns. Introduction to techniques of demographic analysis. Focus on U.S. and world population issues and their relation to social, cultural, and economic systems. May be repeated up to 3 credits.

SOCI 3150. Social Research: Methods**3 Credits (3)**

An introduction to research design and data collection strategies commonly employed in the social sciences. Topics include experiments, survey research and various other quantitative and qualitative methods. May be repeated up to 3 credits.

Prerequisite: SOCI 1110G.

SOCI 3160. Sociological Research: Analysis**3 Credits (3)**

Elementary data analysis class emphasizing descriptive and inferential statistical techniques commonly employed in the social sciences. Topics range from one variable analysis through regression and correlation analysis of two variables. May be repeated up to 3 credits.

Prerequisite: SOCI 1110G.

Learning Outcomes

1. Critically evaluate understand social statistics from various common sources such as TV, newspapers, research reports, and scholarly articles. --Assessed via discussion, assignments and exams.

SOCI 3165. Sociological Theory**3 Credits (3)**

Analysis of the main historical themes underlying contemporary sociological theory. May be repeated up to 3 credits.

Prerequisite: SOCI 1110G.

SOCI 3240. Sociology of the Family**3 Credits (3)**

Family patterns, dynamics, and processes in North American and other contemporary families. Emphasis on diversity. May be repeated up to 3 credits.

Learning Outcomes

1. Family patterns, dynamics, and processes in North American and other contemporary families. Emphasis on diversity.

SOCI 3245V. Comparative Family Systems**3 Credits (3)**

A comparative analysis of family forms and characteristics in various societies. An examination of the diversity of family practices among ethnic and class groups in the United States. May be repeated up to 3 credits.

SOCI 3250. Sociology of Childhood**3 Credits (3)**

This course examines theories, methods, and empirical research in several areas of the sociology of childhood. Major themes are: (1) how social structure constrains children's lives, (2) how children negotiate, share, and create culture, and (3) how children's experiences vary within and across societies. May be repeated up to 3 credits.

SOCI 3255. Youth and Society**3 Credits (3)**

Comparative historical analysis of social, economic and cultural forces affecting young people. Emphasis on organizational and institutional effects on the well being of children and young adults. May be repeated up to 3 credits.

SOCI 3270. Gender and Society**3 Credits (3)**

Overview of issues related to gender, including how gender is constructed and reproduced in our society. Gender is examined from social psychological and institutional perspectives. May be repeated up to 3 credits.

SOCI 3310V. Social Issues in the Rural Americas**3 Credits (3)**

Discussion of the major social issues facing the rural United States and borderland areas. Topics include the social history, governmental policies, water rights, land issues and labor. May be repeated up to 3 credits.

SOCI 3315. Urban Society in a Global World: Problems, Prospects, and Promises**3 Credits (3)**

Identification and analysis of the causes and consequences of social issues in urban environments including poverty, crime, terrorism, urban social policy, suburban flight, disinvestment, and deindustrialization. Special emphasis on global forces affecting global urban environments around the world. May be repeated up to 3 credits.

SOCI 3330. Environmental Sociology**3 Credits (3)**

This course provides a sociological examination of the interconnections of human social organization and the biophysical environment. The goal is to make sense of these complex interconnections between society and the environment—including examination of potential causes and solutions to environmental problems in real world settings. May be repeated up to 3 credits.

SOCI 3340V. Social Change**3 Credits (3)**

Explanations of autonomous and directed social change as occurring at the individual, organizational, societal, and international levels. Case studies from around the world. May be repeated up to 3 credits.

SOCI 3410. Race and Ethnic Relations**3 Credits (3)**

Dynamics of racial prejudice and patterns of racial and ethnic interaction in the United States. May be repeated up to 3 credits.

SOCI 3415. Social Inequality**3 Credits (3)**

Analysis of the social distinctions arising from sex, age, occupation, and ethnicity. Emphasis on indicators of social class and patterns of social mobility. May be repeated up to 3 credits.

SOCI 3510. Crime and Society**3 Credits (3)**

Analysis of crime at the interpersonal, organizational, and social structure levels in society. Exploration of contemporary images of crime in mass media. Examination of connections between race, class, gender, and crime in U.S. society. May be repeated up to 3 credits.

SOCI 3520. Juvenile Delinquency**3 Credits (3)**

Nature, extent, and causes of juvenile delinquency; juvenile justice; modern methods of treatment; programs of prevention. May be repeated up to 3 credits.

SOCI 3610V. Sociology of Pop Culture**3 Credits (3)**

This course will provide students with a sociological look at creation, distribution, and effects of popular culture that have shaped, preserved, and conveyed distorted images of social class, race, gender and history to unwary consumers. May be repeated up to 3 credits.

SOCI 3620V. Sports and Society: A Global Perspective**3 Credits (3)**

A critical examination of sports in a global context, emphasizing the social and cultural factors that shape the world of sports and the consequences of sports for societies. Course examines issues of social inequality, violence, media and corporate influence, religion and sports, and the student-athlete experience. May be repeated up to 3 credits.

SOCI 3630. Culture and Social Life**3 Credits (3)**

What exactly does culture look like, and how precisely does it shape—and is shaped by—social behavior? These are the core questions in the sociology of culture and will be the focus of this course. The course begins with an overview of the various ways that culture has been defined in sociological theory and research. The course will then focus on various topics within the contemporary sociology of culture, including, but not limited to, culture and cognition, the production of culture, culture and politics, and culture and inequality.

Learning Outcomes

1. Finish the course with an understanding of the different ways that culture is defined in sociological research.
2. Understand the various ways that culture affects social behavior and how social behavior shapes and changes culture.
3. Finish the course with a sociological imagination that is expanded to included cultural theory.
4. Finish the course with the ability to formulate research projects that involve cultural theories.

SOCI 3640. Sociology of Digital Media**3 Credits (3)**

This course explores how the social, political-economic, and cultural landscape is changing in relation to digital media and information technologies.

Learning Outcomes

1. Develop analytical tools for understanding the complex information society.
2. Examine how the cultural, political, and social environments are changing with the emergence of new media and digital technologies.
3. Place the relationship between society and new media in context – what is interesting about these “new” technologies?
4. Successfully develop, conduct, and present a final project.
5. Understand a central and contemporary issue within the study of social media from a sociological perspective.

SOCI 3645. Music in Society**3 Credits (3)**

This course reviews historical, contemporary, and emerging forms of music. We will analyze the fascinating interplay between music and society, delving into how music reflects and shapes cultural attitudes and beliefs. Our focus views music as a primary source of meaning in our lives, exploring individual experiences and collective behavior and analyzing the central role of music in social life and society.

Learning Outcomes

1. Discuss music and its social and individual impact using sociological terms, concepts, and theories.
2. Apply a sociological perspective (using sociological theories and methods) to ask/answer questions about music and music-related topics.
3. Analyze the tremendous influence music has on our understanding and expressions of race, class, gender, sexual orientation, socioeconomic status, and contemporary culture.
4. Examine diversity and culture as they intersect with music in both historical and contemporary contexts.
5. Illustrate the role of music in collective identity and social movements.
6. Identify themselves as competent social actors exploring ways they can make positive contributions to society and be catalysts for change.

SOCI 3650. Film in Society**3 Credits (3)**

Using historical, cultural, and social perspectives, this course analyzes the comprehensive scope of classic and contemporary films. It uses examples from a variety of films to discuss how meaning is socially constructed and presented and its overall function in society. We explore the topics of identity, race, social class, gender, sexuality, education, courtship and marriage, religion, and many other elements of society.

Learning Outcomes

1. Express a working knowledge of sociological inquiry and sociological terms, concepts, and the major theoretical approaches that sociologists use to understand the complexities of film in society.
2. Explain how the human experience, personal values, and ideas are shaped and expressed by films at both individual and structural levels.
3. Illustrate expressions of intersectionality and the presentation expressed in contemporary film.
4. Apply a broad, sociological perspective to understand the complex issues involved in the social construction and perpetuation of contemporary social problems.
5. Evaluate the power of classical and contemporary film and their influence on human experience, personal identity, social values and ethics, and American culture.

6. Identify ourselves as competent social actors exploring ways we can make positive contributions to society and be catalysts for change.
7. Develop and express interpretation and analysis of sociological principles through formal and informal writing.

SOCI 4150. Networked and Connected

3 Credits (3)

Introduction to social network analysis in sociology. First half of the course focuses on understanding the structure of social networks. Second half of the course involves examining real-world social networks ranging from romantic relationships to political parties.

Learning Outcomes

1. Finish the course with the ability to interpret, question, and discuss network science theories and methods.
2. Understand which type of network method is appropriate for different kinds of research questions.
3. Finish the course with basic programming and network analysis skills in the R statistical computing environment.

SOCI 4155. Textual Analysis of Digital and Social Media

3 Credits (3)

Introduction to some of the methods that social scientists use to analyze digital and social media. Focus is on developing the fundamentals for designing and conducting text analysis projects.

Learning Outcomes

1. Finish the course with the ability to interpret, question, and discuss text analysis methods accurately.
2. Understand which type of text analysis method is appropriate for different kinds of research questions.
3. Finish the course with basic programming and data analysis skills in the R statistical computing environment.

SOCI 4160. Visualizing Social Life

3 Credits (3)

Introduction to how to communicate sociological findings using graphics. Emphasis is on finding meaningful trends in real-world social science data and creating graphics that best communicate those associations or trends.

Learning Outcomes

1. Finish the course with the ability to create, interrogate, and interpret data visualization.
2. Understand which type of graphic is appropriate for different kinds of social science data.
3. Finish the course with basic programming and data visualization skills in the R statistical computing environment, especially with the ggplot2 package.

SOCI 4240V. Comparative Global Family Systems

3 Credits (3)

The study of families around the world. The comparison will include how capitalism and power differentials have affected the course of family history, gender relations, and family life today. May be repeated up to 3 credits.

SOCI 4310. Community Development

3 Credits (3)

This is a holistic view of community development with an emphasis upon how economic development efforts can become more inclusive and sustainable. Topics include examining what 'community' means, community development versus economic development, and alternative economic activities. May be repeated up to 3 credits.

Prerequisite: SOCI 1110G.

SOCI 4315. Public Sociology

3 Credits (3)

This course examines both the theory and practice of public sociology. The course begins by examining the theoretical aspects, challenges, and critiques informing public sociology. After setting these foundations the remainder of the course examines different ways of applying public sociology, whether in the K-12 classroom, through community engagement activities such as nonprofit work, or other endeavors that seek to make the world a better place.

Learning Outcomes

1. Understand the theoretical foundations and debates within public sociology
- 2) Understand various ways public sociology can be practiced outside academia

SOCI 4320. Social Movements and Activism

3 Credits (3)

An overview and exploration of the key concepts of collective behavior and social movements as they apply to both historical and contemporary trends and movements. We examine also social movement tactics and their effectiveness in shaping policy and social norms. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate understanding of social movement theory and how it applies to particular cases.
2. Identify and analyze how social movements emerge and the conditions that their success depends on.
3. Analyze the role that movements play in transitions to and consolidations of democracy.
4. Critically examine how: a) State repression incites or threatens the development of movements, and b) which strategies movements use for communicating with the larger society.
5. Demonstrate knowledge of a specific social movement and its relations to broader questions of social, economic, political, and cultural transformations.

SOCI 4325. Digital Media and Activism

3 Credits (3)

This course introduces the study of social movements and activism and their relationship with digital and social media.

Learning Outcomes

1. Understand the most relevant theories of social movements and how these have been affected by the new digital media ecology.
2. Critically examine how the qualities and attributes of digital media contribute to the operation, growth, and success of contemporary activism around the world.
3. Place the relationship between social movements and new media in context.
4. Understand a central and contemporary social movement and its use of social media to further its goals.

SOCI 4335V. Advanced Environmental Sociology

3 Credits (3)

Advanced examination of societal responses to environmental problems including social adjustments to natural and technological hazards, sociocultural aspects of technological risk and impact assessment, and emergence of environmental social movements. May be repeated up to 3 credits.

SOCI 4337. Human Society and the Environment

3 Credits (3)

This course explores the relationship between human societies and the natural environment, with an emphasis on both sustainable human and environmental relationships. May be repeated up to 3 credits.

Prerequisite: SOCI 1110G.

SOCI 4410. Diversity in Alternative Families

3 Credits (3)

Cross-cultural examination of diversity among and within families: analysis of family diversity includes consideration of the theoretical frameworks, ideological commitments, personal experiences, and methodological approaches to examine family life. May be repeated up to 3 credits.

SOCI 4420. Sociology of Latinos/as in the United States

3 Credits (3)

In-depth examination and comparative analysis of political and economic issues affecting Latino/a culture and behavior. Includes the Chicano/a and larger Latino/a movements, the border, immigration, language policies, education, religion, labor, and Latina women's issues. Recommended preparatory courses: SOCI 1110G, SOCI 3410, or HIST 367. May be repeated up to 3 credits.

SOCI 4430. International Migration

3 Credits (3)

This course examines international migration as a social process, focusing on the American experience. Students will examine historical and comparative literature on immigration that puts contemporary questions about policy and immigrant assimilation into a broader sociological perspective. May be repeated up to 3 credits.

Prerequisite: SOCI 1110G.

SOCI 4450. Power and Politics in America

3 Credits (3)

This course provides an introduction to the study of Political Sociology with a focus on the United States. Political Sociology studies the social bases of politics and political systems and facilitates the understanding of the processes and consequences of power distributions in the United States. May be repeated up to 3 credits.

Prerequisite: SOCI 1110G.

SOCI 4455. Inequality and Public Policy

3 Credits (3)

This course explores the reciprocal relationship between inequality and public policy, with a particular focus on poverty and anti-poverty policy in the contemporary United States.

Learning Outcomes

1. Understand and compare different ways in which poverty has been historically measured and understood
2. Understand and apply various types of social inequality
3. Critically read and evaluate empirical research measuring, and policy proposals addressing, poverty and inequality
4. Write your own policy evaluation including empirically grounded policy recommendations
5. More effectively participate in policy debates regarding inequality and poverty

SOCI 4460. Globalization

3 Credits (3)

Analysis of the globalization process. Covers theories of globalization, the global economy, political globalization, global culture, transnational social movements, transnational migration and world labor market, global cities, and local-global linkages. Same as POLS 469. May be repeated up to 3 credits.

SOCI 4510. Social Deviance

3 Credits (3)

Theoretical approaches to the study of social deviance with emphasis on critical theories. Exploration of forms of deviance in society. Examination of social construction of deviance within mass media and systems of social control. May be repeated up to 3 credits.

SOCI 4555. Sociology of Education

3 Credits (3)

Socio-political and economic factors that shape the structure and operation of educational institutions in modern complex societies. Socio-historical development of the school as a microcosm of society, with examples from American and other school systems. May be repeated up to 3 credits.

SOCI 4992. Directed Readings

1-3 Credits (1-3)

Individual readings or research for either majors or nonmajors. Consent of Instructor required. May be repeated up to 6 credits.

SOCI 4996. Special Topics

3 Credits (3)

Specific subjects to be announced in the Schedule of Classes. May be repeated up to 12 credits.

Learning Outcomes

1. Varies

SOCI 4998. Internship

1-6 Credits (1-6)

Supervised participation in an appropriate community setting. Taught with SOCI 5998. May be repeated up to 9 credits.

SOCI 4999. Sociology Senior Seminar

3 Credits (3)

The main goal of this course is to provide Sociology students the opportunity to integrate the knowledge acquired from the classroom with personal real-world experiences in order to explore how a sociological perspective can be applied to one's everyday life and work. Students must be in senior standing to enroll in this course. May be repeated up to 3 credits.

Prerequisite: SOCI 1110G.

Learning Outcomes

1. Refine and demonstrate students' sociological imaginations.
2. Engage in critical self-reflection by practicing sociological mindfulness on a regular basis.
3. Have the opportunity to apply sociological concepts to a real-world setting.
4. Have the opportunity to critically apply and evaluate the utility of select social theories to a real-world setting.
5. Refine critical writing and thinking skills through class discussions.

SOCI 5110. Perspectives on Sociology

3 Credits (3)

Overview of Sociology and development of students' sociological imaginations. Understanding the place of sociology in career development and the application of Sociology and sociological concepts to the real world. May be repeated up to 3 credits.

Learning Outcomes

1. Refine students' sociological imaginations.
2. Engage in critical self-reflection by practicing sociological mindfulness on a regular basis.
3. Have the opportunity to apply sociological concepts to the real world.

4. Explore how students can utilize sociology in achieving their career goals.
5. Refine students' critical writing and thinking skills through class discussions.

SOCI 5150. Seminar in Social Networks

3 Credits (3)

Advanced introduction to social network methods. First half of the course focuses on understanding the structure of social networks. Second half of the course involves examining real-world social networks ranging from romantic relationships to political parties. Includes hands-on experience with the R statistical computing environment

Learning Outcomes

1. Finish the course with the ability to interpret, question, and discuss network science theories and methods.
2. Understand which type of network method is appropriate for different kinds of research questions.
3. Finish the course with basic programming and network analysis skills in the R statistical computing environment.

SOCI 5153. Seminar in Sociological Research

3 Credits (3)

Exploration of research methods, issues, and practical application. Restricted to: Sociology Majors May be repeated up to 3 credits.

SOCI 5155. Seminar in Text Analysis for the Social Sciences

3 Credits (3)

Advanced exploration into some of the methods that social scientists use to analyze digital and social media. Focus is on developing the fundamentals for designing and conducting text analysis projects. Includes hands-on experience with the R statistical computing environment.

Learning Outcomes

1. Finish the course with the ability to interpret, question, and discuss text analysis methods accurately.
2. Understand which type of text analysis method is appropriate for different kinds of research questions.
3. Finish the course with basic programming and data analysis skills in the R statistical computing environment.

SOCI 5157. Seminar in Qualitative Research Methods

3 Credits (3)

This course provides an in-depth examination of qualitative research methods, including the logic, time, and purpose of using such methods. Students must be in Graduate standing.

SOCI 5158. Seminar in Visual Ethnographic Methodology

3 Credits (3)

This course focuses on the potential and the qualities of visual data collection in research and will start with a review of the diversity of research strategies and ethics that incorporate visual data. We will discuss different ways of using visual methods in research alongside epistemological theory of understanding what it means to look at the world. We will use our own experiences of looking and feeling to consider what visual methods can contribute to effective ethnographic research. Students must be graduate students to enroll.

Learning Outcomes

1. Learn the basic fundamentals of visual qualitative inquiry.
2. Learn the concept of ethics and reflexivity in qualitative research.
3. Learn how to design visual qualitative research.
4. Understand the different methods used in visual qualitative research.

5. Select and use appropriate visual qualitative methods to answer research questions.

SOCI 5160. Seminar in Data Visualization

3 Credits (3)

Advanced exploration into how to communicate sociological findings using graphics. Emphasis is on finding meaningful trends in real-world social science data and creating graphics that best communicate those associations or trends. Includes hands-on experience with the R statistical computing environment, especially the ggplot2 package.

Learning Outcomes

1. Finish the course with the ability to create, interrogate, and interpret data visualization.
2. Understand which type of graphic is appropriate for different kinds of social science data.
3. Finish the course with basic programming and data visualization skills in the R statistical computing environment, especially with the ggplot2 package.

SOCI 5163. Issues in Advanced Quantitative Analysis

3 Credits (3)

Advanced methods of sociological analysis are examined in detail. Restricted to: Sociology majors. May be repeated up to 3 credits.

SOCI 5165. Foundations of Social Theory

3 Credits (3)

Analysis of classical social thought within the discipline. Restricted to: Sociology majors. May be repeated up to 3 credits.

Learning Outcomes

1. Know and have an understanding of the history of social thought in Sociology.
2. Know and have an understanding of the fundamental underlying assumptions of many social theories.
3. Be able to effectively write showing an understanding of the theorists/theories as they apply to social phenomena.
4. Be able to openly discuss with confidence the various tenets of social theory.

SOCI 5166. Seminar in Contemporary Theory

3 Credits (3)

This course equips students with the ability to critically analyze contemporary social theory (post World War II) with a particular focus on how these texts apply theoretical frameworks to pressing issues of our time.

Learning Outcomes

1. Understand the main conceptual and theoretical frameworks that have influenced social research post World War II.
2. Improve critical thinking through cross-cultural and cross-disciplinary analyses of social forces.
3. Identify one's own work and interests within/and in relation to these perspectives.
4. Comprehend and evaluate sociology as a discipline that has been shaped by diverse sets of social phenomena.

SOCI 5170. Seminar in Individual and Society

3 Credits (3)

Examines reciprocal relationship between individual and society. Topics include socialization, social influence and persuasion, group structure and performance, altruism, aggression, interpersonal attraction, group cohesion and conformity, and intergroup conflict. May be repeated up to 3 credits.

Learning Outcomes

1. Know and understand the theoretical antecedents for Social Psychology.
2. Know and understand the fundamental underlying assumptions of Social Psychology approaches in Sociology.
3. Know and understand the history and development of Social Psychological Theories.
4. Be able to effectively write a literature review addressing specific topics utilizing Social Psychology as an underlying framework.
5. Understand the relationship between the individual and society, particularly addressing the relationship between structure and agency.

SOCI 5175. Seminar in Symbolic Interaction**3 Credits (3)**

This seminar will provide you a backdrop on Symbolic Interactionism, focusing on the direct and indirect antecedents of the theory, as well as current research and theoretical development up to the present. May be repeated up to 3 credits.

Learning Outcomes

1. Know and understand the theoretical antecedents for Symbolic Interaction.
2. Know and understand the fundamental underlying assumptions of Symbolic Interaction.
3. Know and understand the history and development of Symbolic Interaction.
4. Be able to effectively write a literature review addressing specific topics utilizing Symbolic Interaction as an underlying framework.
5. Be able to openly discuss the various tenets of Symbolic Interaction with confidence.

SOCI 5270. Seminar in Sex and Gender**3 Credits (3)**

Comprehensive examination of current gender identity and gender stratification issues. May be repeated up to 3 credits.

Learning Outcomes

1. Gain an understanding of gender from a sociological perspective.
2. Critically examine how gender shapes and is shaped by personal interaction and meaning and how it is embedded in the structure of our social institutions.
3. Understand the relationship between gender, the body, media and violence.
4. Gain competence in discussing the biological and psychological explanations of gender differences as well as in discussing cultural and gender socialization and identity formation.
5. Examine how gender is relevant within the institutions of family, work, and education with particular focus on how gender is linked to inequality.

SOCI 5310. Seminar in Community Development**3 Credits (3)**

This is in an advanced seminar addressing a holistic view of community development with an emphasis upon how economic development efforts can become more inclusive and sustainable. Students must be in a graduate student to enroll. May be repeated up to 3 credits.

Learning Outcomes

1. Define community development.
2. Apply the different theoretical approaches to community development to an issue.
3. Identify the major challenges confronting various communities today.

4. Understand emerging and radical community development initiatives in both theory and practice.

SOCI 5315. Seminar in Public Sociology**3 Credits (3)**

This course examines both the theory and practice of public sociology. The course begins by examining the theoretical aspects, challenges, and critiques informing public sociology. After setting these foundations the remainder of the course examines different ways of applying public sociology, whether in the K-12 classroom, through community engagement activities such as nonprofit work, or other endeavors that seek to make the world a better place.

Learning Outcomes

1. Understand the theoretical foundations and debates within public sociology
2. Understand various ways public sociology can be practiced outside academia

SOCI 5320. Seminar in Social Movements and Activism**3 Credits (3)**

An advanced exploration of the key concepts of collective behavior and social movements as they apply to both historical and contemporary trends and movements. We examine also social movement tactics and their effectiveness in shaping policy and social norms. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate comprehensive understanding of social movement theory and how it applies to particular cases.
2. Identify and analyze how social movements emerge and the conditions that their success depends on.
3. Analyze the role that movements play in transitions to and consolidations of democracy.
4. Critically examine how: a) State repression incites or threatens the development of movements, and b) which strategies movements use for communicating with the larger society.
5. Exhibit scholarly professionalization by successfully developing, conducting and presenting a research project.
6. Demonstrate in-depth knowledge of a specific social movement and its relations to broader questions of social, economic, political, and cultural transformations.

SOCI 5325. Seminar in Digital Media and Activism**3 Credits (3)**

This seminar will investigate the interaction between digital media, social movements, and social change.

Learning Outcomes

1. Demonstrate comprehensive understanding of the most relevant theories of social movements and how these have been affected by the new digital media ecology.
2. Critically examine how the specific qualities and attributes of digital media contribute to the operation, growth, and success of contemporary social movements and activism around the world.
3. Place the relationship between social movements and new media in context – what is interesting about these “new” technologies?
4. Exhibit scholarly professionalization by successfully developing, conducting and presenting a research project.
5. Demonstrate in-depth knowledge of a central and contemporary social movement and its use of social media to further its goals.

SOCI 5335. Seminar Environmental Sociology**3 Credits (3)**

Advanced examination of societal responses to environmental problems including social adjustments to natural and technological hazards, sociocultural aspects of technological risk and impact assessment, and emergence of environmental social movements. May be repeated up to 3 credits.

SOCI 5337. Seminar in Human Society and the Environment

3 Credits (3)

This is an advanced seminar exploring the relationship between human societies and the natural environment, with an emphasis on both sustainable human and environmental relationships. May be repeated up to 3 credits.

Prerequisite: Graduate Student Status.

SOCI 5410. Seminar in Race and Ethnic Relations

3 Credits (3)

In-depth analysis of the dynamics of prejudice/discrimination and patterns of intergroup interaction in the U.S. May be repeated up to 3 credits.

Learning Outcomes

1. Identify a diverse set of critical sociological approaches to studying race, ethnicity, and racism within the United States.
2. Understand the social construction of race, racialized modernity, and the unequal distribution of racialized power and privilege in local, regional, national, and transnational contexts.
3. Examine the racialized structures of US society and give special consideration to how processes, discourses, and structures of white supremacy and racialization intersect with other systems of inequality, particularly gender, class, sexuality, nation, and settler colonialism.

SOCI 5415. Seminar in Social Stratification

3 Credits (3)

Advanced examination of theories of stratification and current methods of stratification research. Focus on differences by ethnicity, race, class and gender. May be repeated up to 3 credits.

Learning Outcomes

1. Gain an appreciation of the role of stratification as a powerful determinant of the opportunities that individuals experience in modern societies.
2. Critically consider the functions and repercussions of stratification for the individual and society.

SOCI 5420. Seminar in Sociology of Latinos/as in the United States

3 Credits (3)

In-depth examination and comparative analysis of political and economic issues affecting Latino/a culture and behavior. Topics include the Chicano/a and larger Latina/o movements, the border, immigration, language policies, education, religion, labor and Latina women's issues. May be repeated up to 3 credits.

Learning Outcomes

1. Examine the challenges currently facing the Latino population in the U.S. with special attention to three Latino subgroups: Puerto Ricans, Mexican-Americans, and Cubans.
2. Identify that latina/o experiences and identities are far from homogenous.
3. Understand how then has a sense of "Latino community" been created if this is the case? What is a Latina/o? And, how are individual identities among the many Latina/o identities shaped by difference?

4. Know the major Latino peoples, their immigration, migration and settlement patterns, identity formation, socioeconomic and labor conditions, politics, gender relations, and bilingualism.

SOCI 5430. Seminar in International Migration

3 Credits (3)

This course examines international migration as a social process, focusing on the American experience. Students will examine historical and comparative literature on immigration that puts contemporary questions about policy and immigrant assimilation into a broader sociological perspective. Students must be Graduate students to enroll. May be repeated up to 3 credits.

Learning Outcomes

1. Acquire in-depth knowledge, and develop a broad understanding of the historical and theoretical development, of the sociological sub-field of immigration.
2. Develop an ability to examine the processes involved in international migration, and the socioeconomic trajectories of different immigrant groups in the United States, analytically, critically, and comparatively.
3. Develop an understanding of how various social constructs (such as national origin, nativity, generation, length of time spent in the United States, citizenship, legal status, class, race, ethnicity, gender, and religion) influence immigrants' social positions and organize their daily lives.

SOCI 5440. Seminar in Sociological Perspectives on the U.S.-Mexico Border

3 Credits (3)

Theoretical perspectives and current research on U.S.-Mexico border region, including migration, identity, health, gender, and environment. May be repeated up to 3 credits.

Learning Outcomes

1. Use history, sociology, geography, anthropology, and other disciplines as a framework for understanding the border and analyzing border lives and structural dynamics.
2. Understand border identities, including nationality, ethnicity, and class, and apply them to analyzing border lives.
3. Understand border orientations (nationalist/binationalist; unicultural/bicultural) and apply them to analyzing border lives.
4. Recognize and analyze multiple, often conflicting, perspectives on border issues.
5. Apply the "multiple perspective" approach to U.S.-Mexico migration and know objective facts, humanistic understandings, and policy options for that issue.
6. Use the tools of "culture" and "social structure" to understand border working people, especially those facing poverty, low wages, low or no benefits, and discrimination in public.
7. Use comparisons to other borders to understand two important topics: (a) Border symbols and politics; (b) Border consumption, commerce, smuggling, and other cross-border transactions.

SOCI 5450. Seminar in Power and Politics in the United States

3 Credits (3)

This is an advanced seminar addressing the study of Political Sociology with a focus on the United States. Political Sociology studies the social bases of politics and political systems. It facilitates an understanding of the processes and consequences of power distributions in the United States. Students must be Graduate students to enroll. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate comprehensive understanding of the most relevant theories of political sociology and how these apply to current political issues of the United States.
2. Critically examine the role that civil society plays in shaping contemporary political processes in the United States.
3. Critically examine the role that civil society plays in shaping contemporary political processes in the United States.
4. Exhibit scholarly professionalization by successfully developing, conducting and presenting a research project.
5. Demonstrate in-depth knowledge of a central and contemporary political issue and its relations to broader questions of social, economic and cultural transformations in America.

SOCI 5455. Seminar in Inequality and Public Policy**3 Credits (3)**

This course explores the reciprocal relationship between inequality and public policy, with a particular focus on poverty and anti-poverty policy in the contemporary United States.

Learning Outcomes

1. Understand and compare different ways in which poverty has been historically measured and understood.
2. Understand and apply various types of social inequality.
3. Critically read and evaluate empirical research measuring, and policy proposals addressing, poverty and inequality.
4. Write your own policy evaluation including empirically grounded policy recommendations.
5. More effectively participate in policy debates regarding inequality and poverty.

SOCI 5460. Advanced Issues in Globalization**3 Credits (3)**

Analysis of the globalization process. Covers theories of globalization; global economy; political globalization; global culture; transnational social movements; transnational migration and world labor market; global cities; local-global linkages. Same as POLS 569. May be repeated up to 3 credits.

SOCI 5510. Issues in Social Deviance**3 Credits (3)**

Selected forms of deviant behavior, social issues, and social problems. May be repeated up to 3 credits.

SOCI 5515. Sociology of Organizations**3 Credits (3)**

Sociological models of formal organizations relevant to business, education, government, healthcare, military, and religion. Focus on internal organizational structure and dynamics plus the reciprocal relationship between organizations and their operating environment. May be repeated up to 3 credits.

SOCI 5555. Advanced Sociology of Education**3 Credits (3)**

Socio-political and economic factors that shape the structure and operation of educational institutions in modern complex societies. Socio-historical development of the school as a microcosm of society, with examples from American and other school systems. May be repeated up to 3 credits.

SOCI 5610. Seminar in Popular Culture**3 Credits (3)**

This course delves into Popular Culture and how Sociologists define and evaluate Popular Culture in the world today. Students will learn about

diverse forms of Popular Culture, their meanings, and how social theory is applied to how Popular Culture is commodified and consumed. Students must be a graduate student to enroll.

Learning Outcomes

1. Explain and show an advanced understanding of the relationship of popular to culture.
2. Have an in-depth knowledge of Critical Theory as it applies to the culture industry.
3. Understand the relationship of the individual and social issues to both popular culture and technologically driven cultural changes.
4. Apply critical thinking about the popular culture experienced in your day-to-day existence and its meaning to everyday life.
5. Read empirical and theoretical writings, summarize and expand upon their core ideas.
6. Be able to discuss as well as compare and contrast various issues associated with popular culture.

SOCI 5630. Seminar in Culture and Social Life**3 Credits (3)**

What exactly does culture look like, and how precisely does it shape—and is shaped by—social behavior? These are the core questions in the sociology of culture and will be the focus of this course. The course begins with an overview of the various ways that culture has been defined in sociological theory and research. The course will then focus on various topics within the contemporary sociology of culture, including, but not limited to, culture and cognition, the production of culture, culture and politics, and culture and inequality.

Learning Outcomes

1. Finish the course with an understanding of the different ways that culture is defined in sociological research.
2. Understand the various ways that culture affects social behavior and how social behavior shapes and changes culture.
3. Finish the course with a sociological imagination that is expanded to include cultural theory.
4. Finish the course with the ability to formulate research projects that involve cultural theories.

SOCI 5640. Seminar in Sociology of Digital Media**3 Credits (3)**

This course explores how the social, political-economic, and cultural landscape is changing in relation to digital media and information technologies. Seminar participants work together to explore frameworks, methods, and tools for understanding networked society in the digital media ecology.

Learning Outcomes

1. Develop analytical tools for understanding the complex information society.
2. Examine how the cultural, political, and social environments are changing with the emergence of new media and digital technologies.
3. Place the relationship between society and new media in context – what is interesting about these “new” technologies?
4. Exhibit scholarly professionalization by successfully developing, conducting and presenting a final project.
5. Demonstrate in-depth knowledge of a central and contemporary issue within the study of social media from a sociological perspective.

SOCI 5991. Special Research Problems**1-3 Credits (1-3)**

Individual analytic or experimental investigations. May be repeated up to 6 credits.

Learning Outcomes

1. Varies

SOCI 5996. Graduate Special Topics

3 Credits (3)

Specific subjects to be announced in the Schedule of Classes. May be repeated up to 99 credits.

Learning Outcomes

1. Varies

SOCI 5998. Internship

1-6 Credits (1-6)

Supervised participation in appropriate occupational setting. Taught with SOCI 4998 with additional work required at the graduate level. May be repeated up to 12 credits.

Learning Outcomes

1. Various

SOCI 5999. Master's Thesis

1-6 Credits (1-6)

Thesis. Consent of instructor required. Restricted to Sociology majors. May be repeated up to 88 credits.

Learning Outcomes

1. Various

Sociology - Bachelor of Arts

Departmental Requirements

Students must complete all University degree requirements, which include: General Education requirements, Viewing a Wider World requirements, and elective credits to total at least 120 credits with 48 credits in courses numbered 300 or above. Developmental coursework will not count towards the degree requirements and/or elective credits, but may be needed in order to take the necessary English and Mathematics coursework.

Prefix	Title	Credits
General Education		
<i>Area I: Communications</i>		
<i>English Composition - Level 1</i>		
ENGL 1110G	Composition I	4
<i>English Composition - Level 2</i>		
Select one from the following:		3
ENGL 2210G	Professional and Technical Communication Honors	
ENGL 2221G	Writing in the Humanities and Social Science	
<i>Oral Communication</i>		
Select one from the following:		3
ACOM 1130G	Effective Leadership and Communication in Agriculture	
COMM 1115G	Introduction to Communication	
COMM 1130G	Public Speaking	
HNRS 2175G	Introduction to Communication Honors	
<i>Area II: Mathematics</i>		
MATH 1130G	Survey of Mathematics (Recommended) ¹	3
<i>Area III/IV: Laboratory Sciences and Social/Behavioral Sciences</i>		
		10

SOCI 1110G	Introduction to Sociology (Departmental Requirement)

Second Language: (not required)		
Electives, to bring the total credits to 120 ⁷		52
18 credits of the electives must be Upper-Division		
Total Credits		120-121

¹ MATH 1130G Survey of Mathematics is recommended for the degree but students may need to take any prerequisites needed to enter MATH 1130G first.

² See the General Education (p. 227) of the catalog to view the full list of courses that can be selected to complete this requirement.

³ See the Viewing a Wider World (p. 231) Section of the catalog to view the full list of courses that can be selected to complete this requirement.

⁴ Criminal Justice/Sociology double majors may be permitted to substitute CJUS 300 Introduction to Criminal Justice Research for SOCI 3150 Social Research: Methods and CJUS 301 Advanced Research Methods for SOCI 3160 Sociological Research: Analysis.

⁵ Government/Sociology double majors may be permitted to substitute POLS 300 Political Research Skills for SOCI 3150 Social Research: Methods upon approval of appropriate substitution/waiver forms.

⁶ The six credits of SOCI 4000 electives does not include SOCI 4999 Sociology Senior Seminar. SOCI 4992 Directed Readings can be applied to this requirement. A maximum of six credits of SOCI 4992 Directed Readings is allowed. In addition, for those in the Master's Accelerated Program, SOCI 5000 electives can be used to meet the six credit requirement.

⁷ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.

In addition, substitution/waivers for courses may be available upon consultation with the Department Head in the Department of Sociology. In all cases, the total number of sociology credits (courses with SOCI prefix) must be a minimum of 33.

Second Language

For the Bachelor of Arts in Sociology there is no second language requirement for the degree.

A Suggested Plan of Study for Students

This roadmap assumes student placement in MATH 1130G Survey of Mathematics and ENGL 1110G Composition I. The contents and order of this roadmap may vary depending on initial student placement in mathematics and english. It is only a suggested plan of study for students and is not intended as a contract. Course availability may vary from fall to spring semester and may be subject to modification or change.

- ¹ MATH 210G Mathematics Appreciation is required for the degree but students may need to take any prerequisites needed to enter MATH 210G first.
- ² SOCI 1110G counts as an Area IV General Education requirement and towards the major.
- ³ See the General Education (p. 227) section of the catalog for a full list of courses.
- ⁴ Elective credit may vary based on prerequisites, dual credit, AP credit, double majors, and/or minor coursework. The amount indicated in the requirements list is the amount needed to bring the total to 120 credits and may appear in variable form based on the degree. However students may end up needing to complete more or less on a case-by-case basis and students should discuss elective requirements with their advisor.
- ⁵ SOCI 2310G Contemporary Social Problems may count as an Area IV General Education requirement and towards the major.
- ⁶ See the Viewing a Wider World (p. 231) section of the catalog for a full list of courses.
- ⁷ **Criminal Justice/Sociology double majors:** may be permitted to substitute CJUS 300 Introduction to Criminal Justice Research for SOCI 3150 Social Research: Methods and CJUS 301 Advanced Research Methods for SOCI 3160 Sociological Research: Analysis. **Government/Sociology double majors:** may be permitted to substitute POLS 300 Political Research Skills for SOCI 3150 Social Research: Methods upon approval of appropriate substitution/waiver forms.
- ⁸ The six credits of SOC 400 electives does not include SOCI 4999 Sociology Senior Seminar. SOCI 4992 Directed Readings can be applied to this requirement. A maximum of six credits of SOCI 4992 Directed Readings is allowed. In addition, for those in the Master's Accelerated Program, SOC 500 electives can be used to meet the six credit requirement.

Sociology - Undergraduate Minor

Students who earn a Bachelor of Arts in Sociology may not also earn a minor in Sociology. Students earning the minor must pass 18 credits with grades of C- or higher. Students may count S grades only in courses in which all grades are S/U. Students may substitute an upper division social research methods course for the required SOCI 3150 Social Research: Methods from the Departments of Criminal Justice and Government. Additional research methods courses may be considered. Please contact the Department Head of the Department of Sociology for further consideration. Students making this substitution must still pass 18 total credits in Sociology in order to earn this minor.

Prefix	Title	Credits
Required Courses		
SOCI 1110G	Introduction to Sociology	3
SOCI 3150	Social Research: Methods	3
SOCI 3165	Sociological Theory	3
Additional Sociology credits, of which at least 6 are upper division		9
Total Credits		18

NMSU Global Campus

NMSU Global Campus (<http://global.nmsu.edu>)

NMSU Global Campus (<http://global.nmsu.edu> (<http://global.nmsu.edu/>)) includes 100% online undergraduate and graduate degrees, doctorates, certificates, and microlearning courses. NMSU Global Campus serves students who need the flexibility of anytime, anywhere learning to pursue their education and career goals. There are 70+ programs and 500+ courses available to prepare students for careers and graduate study.

Mission of the William Conroy Honors College

The mission of the New Mexico State University Honors College is to serve the citizens and state of New Mexico by providing an enriching environment for diverse, academically talented, and motivated students. The Honors College also seeks to create a community of scholars and mentors that fosters personal growth, critical thinking, leadership, independence, curiosity, and social responsibility. The college aspires to cultivate student potential to broadly understand and positively impact communities, organizations, and the larger world. The Honors College aims to focus campus attention on excellence in undergraduate education while strengthening the university's reputation as the university of choice in New Mexico.

In support of this mission, the Honors College integrates the following objectives:

- Provide students with an interdisciplinary, intellectually challenging curriculum that integrates active learning;
- Promote university-wide undergraduate research and experiential opportunities, linking students with faculty mentors;
- Encourage, mentor and guide students seeking postgraduate scholarships and fellowships;
- Offer students opportunities for developing leadership skills;
- Create a residential community that combines learning inside and outside the classroom.

In small classes taught by master teachers, students in the Honors College engage in lively discussion and collaborative investigation of interdisciplinary topics. By taking honors courses, students may also work toward completing general education requirements and disciplinary requirements in the major.

Students in the Honors College are 'dual citizens', meaning they enroll in both the college(s) of their major/minor and the Honors College. The Honors College does not offer a degree instead, it offers students the opportunity to graduate with various levels of honors distinction (described below).

Admission to the Honors College

Students admitted to the Honors College are designated as Crimson Scholars, the following eligibility criteria apply:

Automatic Eligibility. Entering freshmen are automatically eligible for admission to the Honors College and Crimson Scholars by meeting one of the following criteria:

- composite ACT score of 26 (or 1240 SAT score); or
- high school GPA of 3.75 or higher

Admission by Petition. Entering freshmen who have an ACT score of at least 24 (or 1200 SAT score) or a high school GPA of 3.50 may submit a written petition for provisional admission to the Honors College using a form provided by the Honors College office upon the request of the student.

Transfer and Continuing Students. Transfer and continuing students who have earned at least 3 college credit hours will be eligible for admission to the college on the basis of a cumulative college GPA that meets eligibility requirements for continuing students (see below).

Eligibility for Continuing Membership. The eligibility criteria for continuing membership in the Honors College is the same as for continuing Crimson Scholars status. The requirements are:

- Fewer than 28 hours earned: 3.3 GPA
- More than 28 hours earned: 3.5 GPA

Appeals. Students who fall below the designated GPAs and lose their eligibility for Honors College status due to extraordinary circumstances may petition the Honors College Dean.

Enrolling in Honors Courses

All Crimson Scholars may enroll in Honors courses. The eligibility requirements to enroll in lower-division honors courses are the same as those pertaining to admission to the college and continuance in the college. For upper-division courses, the requirement is a cumulative 3.2 GPA. Students lacking these requirements may petition the Honors College Dean for permission on a case-by-case basis.

Graduating with University Honors

The Honors College offers two program options:

1. Graduating with Distinction in University Honors and
2. The Honors Certificate

Each option has separate eligibility requirements, benefits and forms of recognition for the student. Almost all honors courses fulfill university general education and viewing a wider world requirements.

Any student who attains an overall GPA of 3.5-4.0 and who completes 6 credits of honors course work, with at least 3 credits at the 300 level or higher, is eligible to graduate with the Honors Certificate.

Any student who attains an overall GPA of 3.5-4.0 and who completes 15 credits of honors coursework, with at least 6 credits at the 300 level or higher, and the honors capstone, is eligible to graduate with Distinction in University Honors. To have these courses count toward one of these programs, a student must earn at least a B. Students should plan to take 12-15 credits in official Honors College classes but may take up to 6 credits in Contract or Master's Accelerated Classes. Contract classes must be at the 300 level or higher and in a student's major (VWW courses do not count). The final 3 credits to graduate with a Distinction in Honors is in the form of an Internship Capstone course or a Research/Creative Activity Capstone course. Both options involve the completion and dissemination of a capstone project.

University Honors Course Options

Honors credits may be earned through both HNRS and H designated courses. Regular Honors course options include Gen Ed, VWW, and Departmental Honors options. The Honors Program is designed to maximize student flexibility and also includes the opportunity to complete 6 credits of Honors Contracts in the student's field of study. Honors credit may also be earned from education abroad and structured service experiences. Honors internship, directed research, and independent study options also ensure students can tailor their training to personal needs while building a resume of experience.

To complete the Honors Program, all students must propose and complete an Honors Capstone Project which includes an Honors Thesis (Research or Creative Project), Internship Capstone, or Independent Studies option. Students may petition to substitute a capstone project

from their major field of study, in advance, with an additional Honors component of their work.

Detailed information on earning Honors credits and procedures for the Honors Capstone options can be found at the Honors College web pages: <https://honors.nmsu.edu/> (<http://honors.nmsu.edu>)

Senior Capstone

The University is an academic community where new knowledge is created, the boundaries of creative expression are expanded, and standards for best professional practice are enhanced. In recognition of these important processes, all students that wish to graduate with University Honors recognition are required to participate in a capstone experience that features one of these activities:

Thesis — The thesis is an independent scholarly or scientific research project that is undertaken with the advice and direction of a member of the university faculty. The thesis does not need to be on a topic in the student's major field, but must meet the guidelines and protocols of the discipline in which it is written. The student's faculty advisor will review the student's thesis and determine a final grade. (HNRS 400 or approved substitution)

Creative Arts or Performance Project — The Senior Creative Arts/Performance project may take the form of an exhibition, written piece, performance, recital or other event deemed appropriate by the faculty advisor and the Dean of the Honors College. In addition to the performance or exhibition, the student must complete a written report, artist statement, or description of the project that is approved by the faculty advisor, to be filed with the Honors College. (HNRS 400 or approved substitution)

Capstone Internship with Project — The Honors Capstone Internship shall be undertaken under the auspices and supervision of an agency approved by the Dean of the Honors College and earn Honors internship credits. A NMSU advisor must approve the project and monitor its progress. To qualify as an Honors Capstone, this work must be more than simply a certain number of hours in service to an agency. It must also involve an original project that meets a need for the agency or promotes the student's professional development beyond the hours of work documented. The results of this project should include some form of written report along with a presentation to the appropriate audience. A log and journal, including a reflective component, shall be kept and submitted by the student. (HNRS 410 or approved substitution)

The Capstone is normally completed during the senior year and may be undertaken only if the student meets the eligibility requirements for graduation from the College (3.5 minimum GPA and the required courses). The Capstone carries 3 graded credit hours.

- Before beginning the final project, the student must choose a faculty advisor and file with the College a proposal that is approved by the faculty advisor and the Dean of the Honors College. The final project is graded by the faculty advisor, who submits a final grade to the Dean of the Honors College.
- Candidates for graduation with University Honors and Distinction in University Honors are expected to make presentations of their final projects at one or more of the following:
 - The Undergraduate Research and Creative Arts Symposium held every Spring Semester,
 - Research and Creative Week presentation in the Fall term,
 - A department seminar,

- A seminar sponsored by the Honors College,
 - A public reading or exhibition,
 - A meeting of the agency board of directors,
 - Or any other method of presentation deemed appropriate for the discipline and format of the project.
- The written component of the final project shall be filed with the Honors College.

Although most students will earn Honors Capstone Credit through HNRS (400, 410, 420), students may petition, in advance, to substitute capstone equivalent work from another department but are expected to meet the same standards for proposal, work submitted, and presentation as the Honors Capstone requirements.

The capstone options are designed to be flexible, however, they are not all inclusive. Students that wish to propose an alternate capstone strategy that meets the principles and goals of this work, are encouraged to meet with the Dean of the Honors College.

Updated proposal and application materials for Honors Capstone work is available on the Honors College website <https://honors.nmsu.edu/> (<http://honors.nmsu.edu>).

Community Service Options

The Honors College encourages its students to perform volunteer public service. Under certain circumstances, public service may be used as an alternative to completing some of the requirements for graduation from the Honors College. The following guidelines apply:

During the sophomore, junior or senior year, a student with at least a 3.5 GPA may undertake community service with an agency or organization in Doña Ana County (or an agency outside the area approved by the Honors College Dean) to earn a waiver of up to 3 of the hours required for University Honors (not including the Final Project). A minimum of 15 hours of community service per week, per semester is required for each honors credit hour to be waived. Community service hours must be verified by a supervisor of the agency or organization on a form approved by the Honors College. On-campus activities are not included under this option. The student must also certify that the community service hours are not being used for any course or degree requirement. Approval of the Dean of the Honors College must be obtained prior to beginning volunteer service to be eligible for this option.

International Study Option

Students in the Honors College are strongly encouraged to participate in an international experience. An NMSU honors student with at least a 3.5 GPA may earn a waiver of up to 3 credit hours required for University Honors for such international study (not including the Capstone). This waiver will be awarded for college credit earned while participating in any international study program approved by the Honors College. One honors hour will be waived for each 3 semester credit hours earned with a grade of 'A', 'B', or 'S'. Permission to use this option must be approved in advance by the Honors College.

Note: Waiver of university honors credit for service learning or international study does not reduce or affect in any way the total number of hours required for graduation. Waiver of honors credit for service learning or international study cannot be applied toward the capstone requirement.

Honors Certificate Program

Sophomores, juniors and seniors with a cumulative grade-point average of 3.2 are eligible for the Honors Certificate Program. A student who completes at least two 300- or 400-level honors seminars will be given a Certificate of Distinction at graduation and special recognition in the commencement program. See the honors Dean for details on available seminars, Honors College, Conroy Honors Center.

Crimson Scholars Program

The Crimson Scholars Program is a benefits and recognition program for academically superior students who have a cumulative 3.5 GPA and are taking three or more credits per semester. Crimson Scholars receive a number of benefits, including:

- Automatic eligibility for all Honors courses
- Early registration
- Extended library check-out privileges
- Special advising
- The option to live in the Honors Living Learning Community in our residence hall.
- Students who earned at least 75% of their credits from New Mexico State University with Crimson Scholar status¹ at the time of graduation receive a "Crimson Scholar Graduate" notation on their transcript.
- Students who complete 75% of their credits as Crimson hours¹ from New Mexico State University at the time of applying for their degree, receive recognition in the commencement program and are eligible to purchase a Crimson Scholar cord for graduation.
- Students who have maintained Crimson Scholars status for 24 Crimson hours¹ from New Mexico State University earn a Crimson scholar pin.

To be eligible for the Crimson Scholars Program, applicants must be degree seeking.

- Entering freshmen must have either:
 - a minimum ACT standard composite score of 26;
 - a 3.75 or better high school GPA; *or*
 - a minimum SAT score of 1240; *or*
 - a 3.75 or better high school GPA
- Currently enrolled students must have a minimum cumulative GPA of 3.5 for 75% of the credits¹ at NMSU
- Transfer students must have a 3.5 cumulative GPA from their previous institution(s) or complete 3 or more credits¹ at NMSU for eligibility.

To maintain Crimson Scholar status:

- Freshmen entering on an ACT score must maintain a cumulative GPA of 3.5 and complete three or more credits per semester to continue in the program.
- Sophomores, juniors and seniors must maintain a minimum cumulative GPA of 3.5 and be currently enrolled in a total of 3 or more credits¹ per semester at NMSU or any NMSU community college to retain their Crimson Scholars status.
- Crimson Scholars whose GPA drops below the required cumulative 3.5 or drop below the three credit minimum will be dropped from the program. If in the following semester, the student's cumulative GPA

and credits again meet the minimum requirement, the student will *automatically* be reinstated.

In recognition of the student's academic achievement, a statement designating "Crimson Scholar Graduate" is placed on the student's transcript after completion of 75% of credits earned at NMSU as Crimson hours¹ at the time of graduation and a minimum cumulative GPA of 3.5. To be designated in the commencement program as a Crimson Scholar graduate, a student must complete a minimum 75% of credits earned at NMSU as Crimson hours¹ at the time of applying for their degree. Crimson Scholars receive recognition in the commencement program and are eligible to purchase a Crimson Scholar cord for graduation. Students who complete 24 Crimson hours¹ from New Mexico State University earn a Crimson Scholar pin. Crimson Scholars are entitled to early registration and library privileges. Additional information is available from the Crimson Scholars Office, located in the Conroy Honors Center.

NOTE: Crimson Scholars interested in work-study positions must submit a yearly Free Application for Federal Student Aid (FAFSA) and complete a financial aid file with the NMSU Office of Financial Aid.

¹ does not include I or audit course designations at NMSU

The Honors Living and Learning Community (HLLC)

The New Mexico State University Honors Living and Learning Community (HLLC) is an educational initiative that links in-class and out-of-class learning experiences for honors students. The goals of the Honors Living and Learning Community are to:

1. supplement classroom learning experiences with co-curricular programming;
2. foster the development of an honors community that includes honors students, faculty, and staff; and
3. create a supportive environment for honors students.

Above all, the Honors Living and Learning Community aims to develop a small-college environment within the context of a large research university, thus giving students the benefits of both. Honors students, especially first-year students, are encouraged to take advantage of this special opportunity. The Honors Living and Learning Community is comprised of three components:

The Conroy Honors Center — is the academic home of the Honors College. This historic building was designed by the renowned southwestern architect Henry C. Trost and built in 1907 to house the campus chapter of the YMCA. The Conroy Center houses the administrative offices of the program along with three seminar rooms, a student commons area, a kitchen and a computer lab.

The Honors Residence Hall — is the focus of NMSU's vibrant honors community. It is a place where honors students live among a community of excellent students with outstanding academic records and who are interested in getting the most out of the academic opportunities offered to them at a large research institution. It also hosts many social and extracurricular academic activities.

The Honors Residence Hall is equipped with an electronic classroom, where some introductory honors courses may be taught. The honors faculty participate in residence hall programming and frequently attend

residence hall floor meetings with students. The Honors Residence Hall is open to all First Year Crimson Scholars.

Student Resources

Aggie Health & Wellness Center

The university maintains a well-equipped integrated health center on campus, providing comprehensive medical and acute care, laboratory, pharmacy, and counseling services, EAP, limited workers compensation care and health education services. Hospitalization and emergency services are available in the community. Undergraduate and graduate students are eligible for services at the Center. Main Campus undergraduate students enrolled in 12 or more credits (6 in a summer session) and graduate students enrolled in 9 or more credits may access the Center without an office visit fee as fees have been paid through full-time enrollment. Students enrolled for less than 12 credits (5 in summer session) may choose to pay the semester health fee of \$105 or a \$35 office visit fee for medical care. The Center accepts payment for medical, laboratory and pharmacy services through cash, credit card, and student account. Filing for insurance reimbursement can be done as well.

Counseling services at Aggie Health & Wellness provide students and the campus with individual, group counseling, crisis intervention, outreach programs, and consultation. We assist students who are dealing with issues such as relationship concerns, depression, anxiety, stress management, trauma and self-esteem and more. In addition, the Aggie Health & Wellness also has services and resources that support harm reduction. These services include: information concerning the decisions that surround alcohol use, sexual assault, and violence prevention.

The Aggie Health & Wellness Center is open Monday- Friday from 8:00 am - 11:30 am & 1:00pm - 5:00 pm. The Center is closed during the lunch hour from 11:30 am. The Center is located on the corner of Breland and Stewart St (3080 Breland Drive) and offers both in-person and telehealth appointments. For more information, please call (575) 646-1512 or visit the website at wellness.nmsu.edu (<http://wellness.nmsu.edu>).

Campus Dining

Food Services Options

We offer a variety of dining options across our beautiful campus to include a residential dining hall, national and local retail locations, convenience stores, a mobile food cart and the latest addition to campus dining — Robot Food Delivery! We also offer customizable catering for

events large and small. Please feel free to contact us in person at our office in Corbett Center Student Union in room 130 next to Taos Dining Hall or give us a call at 575-646-4801. Food can be purchased by utilizing Dining Dollars, Aggie Cash, the NMSU Enhanced Aggie ID Card, a credit/debit card or cash. Food service locations and hours are available at nmsudining.com (<http://nmsudining.com/>). For additional information, please contact the Parking & ID Card Office at (575) 646-4835, via email: idsvs@nmsu.edu, by visiting idcard.nmsu.edu (<https://idcard.nmsu.edu/>) or by visiting the office located in the Follett Bookstore between 8:00am - 4:30pm, Monday thru Friday. Here (<https://map.nmsu.edu/?ct/>) is a link to our campus dining map.

Meal Plan Information

First-year, on campus freshmen are defined as resident students who have been required to attend Aggie Welcome Orientation and include recent high school graduates with any college credits. These students have the choice between the Premium Platinum, Classic Crimson or *Hometown Aggies Plans. The Meal Plan is mandatory for one academic year (unless applying for the Spring Semester only) and will be billed to the student's university account which allows for you to purchase now and pay the balance later or over time!

Any registered student is welcome to participate in the Meal Plan program whether living on or off campus to include continuing, commuter, as well as Graduate students. A variety of Meal Plan choices are available to suit anyone's needs.

To purchase a meal plan or to review policies and procedures, please visit <https://dining.nmsu.edu>. You may also contact the Parking & ID Card Services Offices at (575)646-4835 or connect via e-mail at idsvs@nmsu.edu.

To enhance your meal plan, you can visit nmsudining.com to add brand new "+plus Packages" that will provide you with deals on beverages, amenities, and concessions! You can also add Dining Dollars with a 10% discount through nmsudining.com

**Hometown Aggies plan is only available for students that live in Dona Ana County.*

Campus Tutoring Services

Campus Tutoring Services offers NMSU students unlimited, accessible and convenient tutoring options to supplement their academic experience for our most in-demand courses on campus. Campus Tutoring offers individual and small group tutoring in-person and online via NMSU Zoom.

Campus Tutoring Services, led through a peer tutor model, enhances student's self-belief, giving students control over learning processes and developing confidence and commitment to learning. Campus Tutoring offers a strong and integrated academic support service to students led by experienced and nationally accredited peer tutors. CTS Peer Tutors are the only College Reading and Learning Association (CRLA) certified tutors that serve the entire NMSU campus.

For more information on Campus Tutoring Services, please visit us in Corbett Center Student Union, Room 206, call (575) 646-6050, or review our services at campustutoring.nmsu.edu (<https://campustutoring.nmsu.edu/>)

Career Exploration and Job Search

NMSU provides students with resources for career planning through career advising as well as opportunities for work experience.

Students launch their career plans through Handshake, a career management system that offers a comprehensive array of career programs and services which can be accessed at <https://nmsu.joinhandshake.com/login> (<https://nmsu.joinhandshake.com/login/>).

The following programs develop students' career goals and experience:

On-Campus Employment: Information is available for part-time employment through work-study, regular student employment, and graduate level programs. Available opportunities are advertised on Handshake at <https://nmsu.joinhandshake.com/login> (<https://nmsu.joinhandshake.com/login/>).

Off-Campus Employment: Part- and full-time jobs in Las Cruces, requiring general or very specific qualifications, are listed on Handshake and candidates may contact the employers for referrals.

Cooperative Education and Internship Program: Information is available in Handshake on Cooperative Education and Internship opportunities offered by government, nonprofit organizations and business/industry. Students seeking this experiential education must register with the Cooperative Education & Internship Program Coordinator any time after their first semester on campus.

Career Fairs: Students have the opportunity to meet employers and discuss job opportunities several times a year by attending a Career Fair. Information on upcoming fairs can be found at <https://oel.nmsu.edu/career-events/career-fairs-future-dates.html>

Career Exploration and Advising: Students can meet with their advisor to explore career and major options as well as develop job search materials such as resumes and cover letters. More information about career development can be found at <https://ssc.nmsu.edu/services/career-development.html>. (<https://ssc.nmsu.edu/services/career-development.html>)

Center for Academic Advising and Student Support

The Center for Academic Advising and Student Support (CAASS) is the central hub for academic and career advising on campus. Located in Educational Services, Suite 200, CAASS advisors teach undergraduate students how to define and achieve their academic, personal, and career goals for college. Although academic advisors help students plan for registration each semester, the primary focus of advising is supporting students as they navigate the university by explaining degree requirements, clarifying policies and procedures, and informing students of resources that will support their success. All undergraduate degree-seeking students will be assigned a CAASS academic advisor. Students can find contact information for their advisor at <https://advising.nmsu.edu/> or by visiting Educational Services, Suite 200 or by calling 575-646-2941. Current NMSU students can use Navigate (<https://nmsu.navigate.eab.com>) (<https://nam10.safelinks.protection.outlook.com/?url=https%3A%2F%2Fnmsu.navigate.eab.com%2F&data=04%7C01%7Cmarimaci%40nmsu.edu%7C00d86c6b68104a30db5a08d8e7f47f4f%7Ca3ec87a89fb84158ba8ff11bace1ebaa%7C1%7C0%7C637514384572234721%7CUnknown>)

to schedule academic advising appointments with their advisor. Both advising and walk-in services are available in-person or virtually via Microsoft Teams.

Cooperative Education and Internship Program

NMSU enjoys a national reputation for its Cooperative Education (Co-op) and Internship Program which contributes to students' total educational experience. Today's competitive employment market demands that students participate in an experiential learning experience related to their major before they complete their college degree. By participating in the Co-op / Internship Program, students integrate academic theory and practical application in an actual job. Co-op / Internship assignments provide an array of work experiences with employers in business, industry, government and nonprofit organizations.

All Co-op / Internship work assignments are for continuing full-time students and must be completed prior to graduation. For each semester (spring, summer, & fall) that a student completes an approved Co-op / Internship, a notation is placed on his/her official academic transcript. Note: In order to earn the permanent official notation on the academic transcript, required documentation must be completed and turned in on time to the Cooperative Education & Internship Program Coordinator before and after each Co-op / Internship assignment.

Students may register full-time for one or more Co-op / Internship positions throughout the U.S.; and each Co-op / Internship position will last the duration of an academic semester. While on a full-time Co-op / Internship, students are afforded full-time academic status with the university, which protects enrollment status, financial aid status, scholarship status, and other student eligibilities.

Students may also register part-time for a Co-op / Internship position, also known as a parallel Co-op / Internship. Employers are generally located within commuting distance of the university. While on a part-time Co-op/Internship, students work approximately 20 hours per week concurrently with full-time academic enrollment.

All students interested in cooperative education / internships must first register with the Cooperative Education and Internship Program, and complete all registration requirements. Required activities include accessing the student's NMSU Handshake Account and completing an online orientation session. Students are responsible for submitting required enrollment forms, a mid-semester follow-up, and a program evaluation by both the student and employer. International students participating in a Co-op / Internship must follow the application and approval process for Curricular Practical Training (CPT) through the International Student and Scholar Services office along with the Cooperative Education and Internship Program process.

For additional information regarding the Cooperative Education and Internship Program contact or visit us at:

Garcia Center, Room 224
Phone: (575) 646-4115

E-mail: coop@nmsu.edu
Website: <https://nmsu.joinhandshake.com/login> (<https://nmsu.joinhandshake.com/login/>)

Corbett Center Student Union

Corbett Center Student Union (CCSU) serves as the center for campus life, providing programs and services for students and other members of the university community. CCSU is a place to study, relax, meet with student groups, eat, work or play. CCSU offers students, faculty, staff and visitors a variety of services and activities. The student union is home to several student focused administrative offices including Student Involvement & Leadership Programs, Conference Services, Associated Students of NMSU (ASNMSU), Housing & Residential Life, Campus Dining Services, Dean of Students, LGBT + programs, the Tutoring Center, Black programs, the student operated radio station, KRUX-FM, Military and Veterans Programs, Disability Access services, and the Round Up newspaper. Services offered at CCSU include an auditorium, meeting rooms, multiple dining facilities, ATMs, a computer lab, E-Sports lab, study areas, post office, and game room.

For more information contact:

Corbett Center Information Desk
MSC CC, PO Box 30001
Las Cruces, NM 88003
Phone: (575) 646-4411
Email: ccsu@nmsu.edu or <http://ccsu.nmsu.edu>

NMSU Global Campus

NMSU Global Campus (<http://global.nmsu.edu>) includes 100% online undergraduate and graduate degrees, doctorates, certificates, and microlearning courses. NMSU Global Campus serves students who need the flexibility of anytime, anywhere learning to pursue their education and career goals. There are 70+ programs and 500+ courses available to prepare students for careers and graduate study.

Edgar R. Garrett Speech and Hearing Center

Combining instruction, evidence-based practice, state of the art technology, and service, the Edgar R. Garrett Speech and Hearing Center provides training for students in Communication Disorders and renders service to the community. Students have opportunities to participate in diagnostic evaluations and to provide therapy in the areas of speech, language, hearing, cognition, and swallowing for clients across the lifespan.

Referrals are accepted from all sources (self, medical, school, nonprofessionals). The Edgar R. Garrett Speech and Hearing Center is a fee-for-service clinic where university students, staff, faculty, and their immediate family receive a reduced rate. All services are supervised by speech-language pathologists who are licensed in New Mexico and hold the Certificate of Clinical Competence in Speech-Language Pathology or Audiology from the American Speech-Language-Hearing Association. Services are available in English and Spanish.

For further information, contact:

Edgar R. Garrett Speech and Hearing Center
MSC 3SPE, PO Box 30001
Las Cruces, New Mexico 88003-8001
Phone: (575) 646-3906
TTY: (575) 646-6191
web: <http://spedcd.education.nmsu.edu/cd/shc/> (<https://cd.nmsu.edu/about-erg/new-erg-clinic.html>)

Education Abroad

Education Abroad, a unit within the Office of Experiential Learning, assists colleges and departments with integrating education abroad into the undergraduate and graduate curriculum. Education Abroad manages support services for outbound study abroad students and inbound international exchange students. Education Abroad coordinates all international partner exchange agreements, intensive language immersion, faculty-led international programs, international student teaching programs (ISTP), as well as all credit-bearing international research, service and internships. The unit also sponsors the Education Abroad Ambassadors Club, a chartered student organization that provides support to international exchange students at NMSU.

All NMSU students, including community college students, may apply to study abroad while maintaining NMSU student status to receive regular course credit through faculty-led international programs, distance education intensive language (DEIL) credit and teacher education credit (graded A+ through F), and/or receive transfer credit (graded CR) per regular NMSU transfer credit guidelines for all other programs. Students must have completed two full semesters of university study, maintained a 2.5+ grade-point-average, be in good academic and disciplinary standing at NMSU, and obtained the permission of their college to enroll in the program. International Business majors must receive approval from their department for study abroad to count as required in their degree plan. An Education Abroad program consisting of at least four weeks of study or university coursework earning 3 credits in a foreign country may count for a waiver of 3 credits of Viewing the Wider World (<https://oel.nmsu.edu/educationabroad/>).

Housing and Residential Life

Living on campus is an investment in a student's academic and social success and overall experience as an Aggie. Residents are instantly part of the campus community – classes, the student union, activity center, library, bookstore, special events, golf course and many other campus resources are all located within walking distance. Studies show that compared to their off-campus peers, students who live on campus are more likely to: maintain higher grade point averages, use campus resources, interact more with peers and professors, and ultimately graduate within the typical four-year span.

Residency Requirement

All incoming first-time, first-year students must reside in university-operated housing or be approved for a first-year residency exemption as part of the campus enrollment process. First-year students will live in the residence halls and must reside for two consecutive semesters to satisfy this requirement (all summer/fall or fall/spring). However, there are a few reasons approved by the Board of Regents for students to be exempted from this requirement:

- The student is living in a structured environment provided by a parent, legal guardian, or immediate family member (defined as a grandparent or aunt/uncle). *Living with an adult sibling is not included in this exemption.*
- Students residing with a spouse, domestic partner, and/or dependent child(ren).
- A student is 21 years or older, enrolled exclusively in distance education, or is active military or a military veteran.
- Other extenuating circumstances include financial hardship or special medical accommodation.

Students are required to submit specific documentation to support each of the reasons presented above when applying for an exemption. Please visit housing.nmsu.edu/exemptions (<https://housing.nmsu.edu/future-residents/exemptions.html>) for more information.

Application Procedures and Acceptance

To qualify for housing, the student agrees to be enrolled continuously in at least half-time or more at either the undergraduate or graduate level during the fall or spring semesters as degree-seeking. Completed applications for housing should be submitted as early as possible, preferably one regular semester in advance. Submission of housing application indicates acceptance of the terms and conditions of the applicable agreement. Housing applications require a deposit and fee at the time of application. Certain qualifications must be met to apply for summer housing, single-student apartment and family housing.

To view the various housing options visit <http://housing.nmsu.edu/options> (<https://housing.nmsu.edu/options/>) or contact the housing office at (575) 646-3202, housing@nmsu.edu or Housing and Residential Life MSC 3BB, PO Box 30001, Las Cruces NM 88003-8001.

Housing has a May 1 priority deadline for both residence hall and campus apartment contracts. Student family housing applications are accepted on a rolling basis.

The university will assign accommodations subject to available space. Assignments to a particular building, type of accommodation, specific room or apartment, single room or roommate(s) are not guaranteed.

- The university reserves the right to change or cancel assignments in the interest of order, health, safety or discipline with appropriate written notice.
- The university reserves the right to deny housing to any student.

Examples of reasons for denial include, but are not limited to:

- Individuals who have felony criminal convictions that present a concern to the university community
- Individuals who have behavioral problems which may, in the opinion of the university, negatively impact the group-living environment
- Individuals who have been previously terminated from campus housing, or individuals who have poor rental histories

Student behavior expectations, rights, and responsibilities related to living in university-operated housing can be found at housing.nmsu.edu/guide (<https://housing.nmsu.edu/current-residents/guide.html>).

Availability of Units for Students with Disabilities

There are a limited number of specially equipped residence hall rooms, single-student apartments and family housing units available to students with disabilities who wish to reside in campus housing. These are assigned on a first-come, first-served basis. Specific needs or requirements (i.e., roll-in showers, special door openers, etc.) should be discussed with the Disability Access Services on an individual basis **prior to submitting an application**. Disability Access Services can be reached at (575)646-6840 or by email at das@nmsu.edu.

Residence Halls

Residence halls offer furnished, mostly suite-style rooms, large lobbies and plenty of outdoor space. Each residence hall has its a unique character and environment, offering students a variety of choices while providing amenities, social interaction and academic support. **Living Learning Communities (LLCs)** are a benefit for members who live in the same hall and on the same floor with other students who share common

interests. Some LLCs require enrollment in one or more academic course and/or may have additional requirements for eligibility.

More information on the extensive offerings of LLCs can be found at housing.nmsu.edu/llc (<http://housing.nmsu.edu/llc/>). Inclusive Housing is offered in the residence halls for students who wish to participate in a living environment where a student can room with any other student regardless of sex, gender, gender identity/expression or sexual orientation. Alcohol is not permitted in the residence halls.

Single Student Apartments and Houses

Campus apartments and houses offer students more than just affordable housing; they offer a unique college atmosphere where neighbors share similar goals and together form an academic community unlike any found off campus. Available for second-year to graduate students, on-campus apartments and houses have the benefits of on-site staff, prompt maintenance and amenities such as a computer lab and laundromat. **Living Communities** (LCs) similar to 1st year LLCs are available for upperclassmen based on thematic interests. Efficiencies, one-, two- and four-bedroom options are available and include living rooms and kitchens. Apartments and houses are fully furnished and the semester rate includes utilities, streaming TV and internet connectivity. Campus apartments feature a select number of co-ed housing options, where students may share other student(s) of any gender identity. A limited number of campus houses are available for single students without a roommate and include one bedroom, a study room, kitchen, living room and bathroom.

Student Family Housing

Completed applications for Student Family Housing should be submitted at least six weeks in advance. Family Housing occupants are assigned once the application process is completed. Applications are considered incomplete and cannot be processed if requested information and supporting documents are not provided and payment of the associated fees is not received. Family Housing applicants may select six-, nine- or twelve-month agreement, with thirty (30) day notice to vacate or request for renewal, prior to an expiration of the agreement.

Family units include married couples, married couples with children, single parents with dependent children and domestic partners (as defined by NMSU Policy found at <https://benefits.nmsu.edu/hr-benefits/other1/domestic-partner.html>).

Consideration is also given to veterans and non-traditional dependent family units. As part of the application process, a criminal history check will be conducted for all adult occupants over the age of 18. Current residents and adult occupants over the age of 18 will undergo a criminal history check no less than once a year. In addition, a rental payment history will also be conducted. By signing the application, the applicant authorizes New Mexico State University to conduct these processes.

Results of the criminal history checks and rental payment history may be shared with the applicant. Single-family homes include two bedrooms, a bath, kitchen and living room. Four-bedroom units include two bathrooms, a kitchen and living room. All units offer a stove and refrigerator and are unfurnished. The monthly rent includes utilities, streaming TV service, and internet connectivity. Some pets are allowed in parts of Student Family Housing, reference the pet policy at <https://housing.nmsu.edu/current-residents/guide.html>.

Community Development

Housing and Residential Life develops safe and engaged communities which support students' efforts to achieve academic success and strong social connections at New Mexico State University.

Our live-in student (Resident Assistants) and professional staff members (Resident Directors) work to meet students' needs, and create a fun, positive experience for our residents. Residents can expect to have meaningful conversations with student staff members; enjoy myriad social, educational, and recreational events; and engage in community meetings and health and safety inspections.

Residents are encouraged to join organizations such as Hall/Community Councils, Residence Hall Association (RHA) and the National Residence Hall Honorary, or other student organizations to help shape the community experience and learn more about leadership skills. Additionally, as part of our commitment to developing a safe and engaged community in campus housing, we hold students accountable in accordance with the Student Social Code of Conduct and the NMSU Resident Handbook.

Books, Supplies, Parking and Transportation

The New Mexico State University bookstore and parking office are both conveniently located at the corner of Jordan Street and University Avenue. The bookstore provides an avenue for students to obtain assistance with purchasing required books and supplies, along with spirit wear and numerous tech and specialty items. The Parking & Transportation office assists with parking permits and transportation services questions.

ID Card Services

The NMSU Aggie ID Card/Mobile ID is the official identification that provides access to services offered at NMSU. The Aggie ID Card/Mobile ID is utilized to access meals, Aggie Dining Dollars, Aggie Cash, Aggie Print, as a key to the residential halls, access to various buildings, proof of eligibility for access to athletic events and allows for other student services. This information is added to Aggie ID Card/Mobile ID after registration for classes. Please visit idcard.nmsu.edu (<https://idcard.nmsu.edu/>) for more information.

Aggie Cash is a pre-paid account that allows you to use your Aggie ID Card to make purchases at locations all over campus. The Parking & ID Card Services Office is located on the second floor of the NMSU Bookstore. For more information please contact us at (575) 646-2306.

Information and Communication Technologies

Information and Communication Technologies (ICT) provides the university community with the computing and communication resources and services that support the educational, research, and public service missions of the university. These resources include NMSU's central computing systems, the network that supports the systems and the wired and wireless functionality through which the Internet is accessed. ICT operates the student computer labs found throughout the Las Cruces campus; maintains and manages laptop, camera, and projector checkout and rental for students; provides network registration of internet connected devices which is required for access to the NMSU network; and provides student printing known as Aggie print. Information about specific resources are available at <https://studenttech.nmsu.edu/>. ICT also provides support for all NMSU technology users through the ICT Help Desk.

For further information, contact:

Information and Communication Technologies (ICT)
MSC 3AT, PO Box 30001
Las Cruces, NM 88003-8001
Phone: (575) 646-1840
email: help@nmsu.edu

ICT's web homepage can be found at <http://ict.nmsu.edu>. ICT's Helpdesk webpage can be found at <http://help.nmsu.edu/>. The helpdesk is located in room 105 of the Hardman and Jacobs Undergraduate Center. ICT's Student Technology and Planning Department's webpage can be found at <https://studenttech.nmsu.edu/>.

National Student Exchange Program

National Student Exchange (NSE), a unit within Education Abroad in the Office of Experiential Learning, offers programs at over 180 colleges or universities across the United States, Puerto Rico, Guam, U.S. Virgin Islands, and Canada. Students pay NMSU tuition and study for a semester or academic year at an NSE campus. NSE allows students to broaden their academic, social, and cultural awareness through study in different geographical settings. To qualify for the program, an applicant must be a full-time student with a 2.5 grade-point average and must be a sophomore, junior, or senior at the time of exchange. There is a priority deadline of February 15th for the following academic year, however, many NSE colleges and universities accept students on a rolling admission basis.

Grades and credit hours earned at the host institution become part of the official NMSU transcript upon approval of the academic department and records officer. Grades are recorded according to the NMSU grading system.

New Mexico State University Library

The New Mexico State University Library offers access to research and general collections in two library facilities located in the heart of the campus. Zuhl and Branson libraries house over millions of items and provide electronic access to scholarly journals, databases, and digital collections for general academic and discipline-specific research. The Archives and Special Collections Department at Branson Library holds unique research archives and rare books related to the history and cultural heritage of New Mexico, the U.S./Mexico border region and the Southwest, as well as the original records of the university. A professional team of faculty and staff dedicated to student success provides reference assistance and research support. A variety of quiet work areas, collaborative group spaces, and private study rooms offer a safe environment conducive to study and research. The Emerging Technology Lab in Branson Library offers amazing computers, a Podcast Studio, and Video Wall. Also, desktop computers, scanners, printers, laptops, and other resources are available for students to use. The Zuhl Fuel café is a place to recharge your batteries for those marathon study sessions. More information may be found at <http://lib.nmsu.edu>.

Office of Experiential Learning

The Office of Experiential Learning (OEL) provides comprehensive and quality hands-on learning opportunities that assists students with their experiential educational and career goals. OEL encompasses a variety of programs including Corporate Relations and Career Events, Cooperative Education and Internship Program, Education Abroad and National Student Exchange, Community Engagement and Outreach, and the Passport Acceptance Facility. Corporate Relations and Career Events and

the Cooperative Education and Internship Program seek to foster self-direction and personal responsibility as well as assisting students with their career and employment goals by increasing knowledge through real life experiences in order to obtain gainful employment upon graduation.

Community Engagement and Outreach focuses on assisting students with opportunities to apply what they have learned in the classroom into real life settings, which lends to develop soft skills in areas such as demonstrated complexity of understanding, problem analysis, problem-solving, and critical thinking, which leads to greater academic learning, leadership skills, and personal efficacy. When used as a way to give back through service learning and volunteering, community engagement and outreach aims at improving social responsibility and citizenship skills with hopes of Aggies continuing to have greater involvement in community engagement after graduation.

Education Abroad and National Student Exchange provides Aggies an exciting opportunity to continue their education inside and outside of the continental U.S. Studying abroad is great way to learn in an immersive environment as is studying in other areas in the U.S. through National Student Exchange. It is so much more than what students learn in a classroom. Education abroad gives students the opportunity to take classes in a new context as well as provides the opportunity for students to learn and understand different cultures and nationalities. Students who take advantage of education abroad experience academic and personal growth. The Office of Experiential Learning also provides students with an on campus Passport Acceptance Facility Office which provides ease of access to obtain a U. S. Passport to experience the world abroad.

Our goal is to continue to research and introduce innovative initiatives that will offer increased opportunities for Aggies to attain well-rounded experience. For more information about services offered by the Office of Experiential Learning, please call (575) 646-1631.

Office of Student Involvement and Leadership Programs (SILP)

The Office of Student Involvement and Leadership Programs (SILP) supports student success and offers involvement outside the classroom. SILP collaborates with campus and community partners to create opportunities for student engagement, individual and group leadership development, and a wide variety of campus traditions including Aggie Camp, First Year Walk, Crimson Kickoff, Homecoming Parade, Halloween Howl, Noche de Luminarias, and Aggie Remembrance Day. SILP staff train and support recognized student organizations on topics ranging from event planning to personal and professional development to funding and fiscal responsibility, manages the recognition and event registration processes, and helps all students determine where and how they can get involved at NMSU through Crimson Connection.

Areas contained within SILP include ASNMSU, Fraternity and Sorority Life, Leadership, Engagement, & Traditions, Campus Programs, and Student Media (KRUX 91.5FM and The Round Up), as well as administrative support for all other 200+ student organizations.

Parking Office

NMSU requires a parking permit to park in campus parking lots or curbside on streets. Parking meters require payment. Free parking is available near the Pan American Center. Parking regulations are enforced 24 hours a day with the exception of a required permit between the hours of 7:30am - 4:30pm. Disabled parking spaces, emergency/fire zones,

service zones, yellow curbs and permitted housing areas are enforced 24 hours a day. The campus parking map and Parking Regulations are available at park.nmsu.edu (<http://park.nmsu.edu>).

Information on purchasing a parking permit is also available by phone at 575-646-2306, by emailing parking@nmsu.edu, online at park.nmsu.edu (<http://park.nmsu.edu>) or at the Parking & ID Card Services Department located on the second floor of the NMSU Bookstore Monday through Friday from 8am- 4:00pm. All parking permits must be purchased online at <https://park.nmsu.edu/permits-placards/online.html>.

When visiting the Parking & ID Services office, you may park for free in designated spots just south of the building. Aggie Transit is a free campus shuttle service available to all students. Bus route maps are available at park.nmsu.edu (<http://park.nmsu.edu>).

Transportation and Parking & ID Card Services is responsible for issuing parking permits and developing parking lots.

NMSU Police Department is responsible for enforcing NMSU parking regulations.

Disability Access Services

In compliance with the federal regulations outlined in Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 2008, NMSU is committed to providing accommodations and academic adjustments to ensure equal access for students with disabilities. Students who wish to request an accommodation or academic adjustment for face-to-face and online classes, practicums and internships must follow the established procedures for self-identification by completing the application and interactive process with Disability Access Services (DAS). Our office also receives and processes housing accommodation requests for students residing in campus housing. Our office provides test proctoring services through our testing center and offers a student resource area for studying and networking with other students on campus.

To submit an application for accommodations or for more information, please visit our website or come by the DAS office in Corbett Center Student Union:

Room. 204
MSC 4149, PO Box 30001
Las Cruces, NM 88003-0001
(575) 646-6840
Email: das@nmsu.edu
<http://das.nmsu.edu>

Student Success Centers

The Student Success Center provides services to assist NMSU students in reaching their academic potential. The Student Success Center provides study skills assistance in such areas as: time management; memory; concentration; note taking; reading; test preparation; test taking; speed reading; critical thinking; financial wellness, as well as graduate school preparation. In addition, the Student Success Center provides career-focused services such as resume/cover letter reviews, mock interviews, and assistance with completing Handshake profiles. The services are available to students in the following formats:

1. Individualized consultations are provided to any student who walks in at the Student Success Center

2. Learning strategies, study-skills and career-focused workshops provide quick assistance in one-hour presentations offered throughout the semester.
3. Professional and graduate school workshops provide development in such areas as speed reading and preparing for graduate school.
4. Student Success Center staff provide outreach presentations on learning, study-skills and career-focused topics to classes, programs and organizations on campus.
5. Individual and group financial wellness services are provided through the Nusenda Center for Financial Capability which is housed in the Student Success Center.

For comprehensive information on all programs and services offered by the Student Success Center please visit us at the Hardman and Jacobs Undergraduate Learning Center Room 128, call (575) 646-3136, or review our services online at <http://ssc.nmsu.edu>.

Testing Services

The Dona Ana Community College Testing Center is a comprehensive and certified test facility that caters to DACC students, as well as those from other higher education institutions and community members year-round. Our Proctor Request Form allows instructors to easily schedule exam appointments for students through our dedicated DACC Testing Center webpage. The Testing Center also serves as a PearsonVue Authorized Center.

Our testing center offers the Math Placement Exam (MPE) year-round for all DACC students, with scores available immediately after testing. For students applying to DACC's radiology program, the ATI TEAS entrance exam is available every year within the months of March and April. Accuplacer is available strictly for Dual Credit and Early College Highschool students. Additionally, the DACC Testing Center provides two options for High School Equivalency Exams – the GED and the HiSET exams. We also offer CLEP exams, which allow students to earn college credit for their prior learning experiences.

The TOEFL ITP (Test of English as a Foreign Language) is available for prospective international students to evaluate their English-language proficiency when applying to NMSU.

For any additional questions, the DACC Testing Center can be reached at Testing@dacc.nmsu.edu or at (575) 528-7294.

TRIO Student Support Services Program

The TRIO Student Support Services program offers academic and social support to ensure that program participants succeed at New Mexico State University. TRIO SSS uses a holistic approach in providing essential services to participants. Services include tutoring, mentoring, and strategies to assist participants in reaching their academic potential. Tutors and Mentors are certified by the College Reading and Learning Association and assist participants with tutoring, developing study strategies, adjusting to college, learning and using campus resources, developing effective study skills, accessing financial aid, using academic peer pre-advising, staying motivated and dealing with personal issues associated with college.

To qualify for the program, students must be a first generation college student (neither parent received a four-year baccalaureate degree), meet income guidelines set by the US Department of Education, demonstrate an academic need or have a learning or physical disability. Admission to

the TRIO Student Support Services is highly competitive with only 350 slots available for eligible students.

For comprehensive information regarding services offered by the TRIO Student Support Services Program please visit at the Student Success Center located in the Hardman and Jacobs Undergraduate Learning Center Room 128, call (575) 646-1336, or visit our website at <http://triosss.nmsu.edu>

Undergraduate Research Programs

New Mexico State University has a variety of faculty-mentored undergraduate research opportunities through which students demonstrate knowledge gained within the classroom and apply it to scholarly research projects. As a part of the curriculum, students may work individually with a faculty member on an independent study project or Honors capstone project; in some majors, course-based undergraduate research experience courses, or CURE courses, prepare students for advanced research projects. Undergraduate students seeking guidance on how to engage with the research, scholarship, and creative work of the university are encouraged to contact the Center for Undergraduate Research and Creativity at <https://honors.nmsu.edu/curca.html>.

The following NMSU programs engage undergraduates in faculty-mentored research:

- ACES Undergraduate Research Program
- Avian Migration Research Program
- Discovery Scholars Program
- Enhancement Research Program in Ecological Sciences
- Fred Hutchinson Partnership for the Advancement of Cancer Research Project (PACR)
- iCREDITS Center for Smartgrid Technologies
- McNair Post-Baccalaureate Achievement Program
- New Mexico Alliance for Minority Participation (AMP)
- New Mexico Space Grant Consortium
- NM IDeA Network for Biomedical Research Excellence (INBRE)
- NSF-REU: BIG Data Analytics for Cyber-Physical Systems
- NSF-REU: Immigration Policy and US-Mexico Border Communities
- NSF-REU: Jornada Basin Long-Term Ecological Research

The Aggie Innovation Space & Workshop, a makerspace in Engineering Complex 2, provides access to state-of-the-art resources and technology for students to work on innovative projects.

The NMSU Community Colleges

Chancellor • *TBD*

Branch Executive Director • *Kenneth Van Winkle*

President NMSU-Doña Ana • *Monica Torres*

NMSU's Community College campuses make two years of college education available to students in their home environment. The community colleges provide a high quality program of education for all full-time and part-time students; provide occupational education; and provide noncredit community education courses.

A student attending any NMSU Community College campus is enrolled as a New Mexico State University student and may change campuses without completing additional admission procedures.

Associate Degree Graduation Requirements

Associate degree programs are offered at the NMSU Community College campuses for those desiring specialized training for employment. Community, junior, and technical college transfer students may be admitted and classified on the basis of acceptable credits at two-year institutions. The Associate in prebusiness degree, administered by the College of Business, is available to NMSU Community College campus students completing the requirements as outlined in the "College of Business" section of this catalog. Most courses required for the Associate in Applied Science degree with options in electronics technology offered at the Grants and Alamogordo campuses meet lower division requirements for the baccalaureate degree program in Electronics Engineering Technology, which is offered on the Las Cruces campus through the College of Engineering.

Math requirements in associate degree and certificate programs vary. ENGL 1110G Composition I and all developmental studies courses in English, math and reading must be completed with a grade of C- or better. Please refer to your NMSU Community College campus catalog for details. The last 15 semester credits for an associate degree must be taken in residence at NMSU or one of the NMSU Community Colleges. Degree requirements remain in effect for six years. The designation, Meritorious Graduate, is awarded to the top 15 percent of the students receiving associate degrees within each college in any one academic year, provided 45 or more credits have been completed at NMSU and/or a NMSU Community College with computable grades.

Certificate Programs

In addition to the regular degree programs offered by the NMSU Community College campuses, certificate programs are available. Students should contact the NMSU Community College campus for information on available certificate programs.

NMSU Community College Campus Information

Information concerning NMSU Community College campus programs, class schedules, catalogs, registration and other data may be obtained from the NMSU Community College campus administration.

Recognition of Academic Achievement

NMSU has a number of university-wide programs that recognize academic achievement. These include

- The Honors College and graduating with Honors
- The Crimson Scholars Program
- The Dean's Report of Academic Achievement

In addition, many colleges and departments have their own programs and awards that recognize the academic achievement of their students.

The Honors College

The Honors College provides motivated undergraduate students with opportunities to broaden and enrich their academic programs. In small classes taught by master teachers, honors students engage in lively discussion and collaborative investigation of interdisciplinary topics. By taking honors courses, students may also work toward completing general education requirements and disciplinary requirements in their major. There are two program options available to students: University or Distinction in Honors (both are 18 credits) or the Honors Certificate (6 credits). Each option has separate eligibility requirements, benefits, and forms of recognition for the student. For details concerning eligibility and requirements, see the Honors College (p. 1301) section of the catalog.

Crimson Scholars Program

Crimson Scholars is a recognition program for academically superior students who achieve and maintain a Grade Point Average (GPA) of 3.5 or better. Crimson Scholars receive a number of benefits, including:

- Automatic eligibility for all Honors courses
- Early registration
- Recognition in the commencement program
- Regalia for Commencement that acknowledges the Crimson Scholar designation
- Permission to live in the Honors Residential Community

For eligibility criteria, see the Honors College (p. 1301) section of the catalog.

Dean's Report of Academic Achievement

Following the close of the semester, each college dean publishes a list of students who have achieved honor standing in grades for the previous semester. To be eligible, a student must have been enrolled in 12 or more semester credits with a computable grade in each. The top 15 percent of eligible students by college for that semester will be named to the Dean's Honor List.

Graduation with Honors

To be eligible for a four-year degree with honors, a student must have earned at least 60 semester credits in computable grades while in residence at New Mexico State. Courses taken in the Honors College and graded S will be counted as a part of the minimum of 60 credits. The number of students at graduation, by college, receiving degrees with honors in any one year shall not exceed 15 percent. To receive high honors, a student must be in the top 1.5 percent of the graduating class by college. One person from each college will receive highest honors. In

case of a tie, the student with the greatest numbers of credits earned at NMSU with computable grades will be awarded highest honors for each college. Of the students receiving highest honors from the fall and spring commencements, the student with the highest grade-point average and the greatest number of credits earned at NMSU with computable grades will be awarded the Class of 1919 Scholarship Plaque.

Course Listings

New Mexico State University is currently undergoing a renumbering initiative to align with a State regulatory change. While this process is occurring courses will appear in two ways, a four-digit number or a three-digit number.

Course Numbering: Four-digit Course

ASTR 1120G The Planets Lecture & Laboratory (4 credits (3+3P))

- **Course Prefix-** the four letter code that represents the subject of the course and where the course can be located in the Courses A-Z list below.
- **Course number-** (1120) indicates the course is a freshman course.
- **Course Title-** will appear after the prefix and number
- **Suffix-** will appear at the end of the number
 - *Suffix (G)-* indicates a New Mexico statewide General Education course.
 - *Suffix (V)-* indicates a Viewing a Wider World course.
 - *Suffix (H)-* indicates a Honors courses outside of the Honors prefix.
 - *Suffix (L)-* indicates a Laboratory course.
 - *Suffix (M)-* indicates a Multicultural course.
- **Credits -** The unit of university credit is the semester hour. In the example the course can be taken and will be charged for 4 credits. The numbers that appear in the parenthesis indicate the number of credits for lecture hours (3) and the number of credits for practicum/ laboratory hours (3).

Three-digit Course

AERT 105 Aerospace Engineering PLTW (4 credits (2+4P))

- **Course Prefix-** the four letter code that represents the subject of the course and where the course can be located in the Courses A-Z list below.
- **Course number-** (105) indicates the course is a freshman course.
- **Course Title-** will appear after the prefix and number
- **Suffix-** will appear at the end of the number
 - *Suffix (G)-* indicates a New Mexico statewide General Education course.
 - *Suffix (V)-* indicates a Viewing a Wider World course.
 - *Suffix (H)-* indicates a Honors courses outside of the Honors prefix.
 - *Suffix (L)-* indicates a Laboratory course.
 - *Suffix (M)-* indicates a Multicultural course.
 - *Suffix (N) -* indicates when the course credits are not applicable to the baccalaureate and specified associate degrees and is only added to developmental coursework.
- **Credits -** The unit of university credit is the semester hour. In the example the course can be taken and will be charged for 4 credits.

The numbers that appear in the parenthesis indicate the number of credits for lecture hours (2) and the number of credits for practicum/laboratory hours (4).

Designation

- 100-299/1000-2999 – Lower Division (Las Cruces and Community College Campuses)
- 300-499/3000-4999 – Upper Division (Las Cruces Campus)
 - 450-499/4500-4999 – Senior and graduate courses (Las Cruces Campus)
- 500-799/5000-7999 – Graduate courses (Las Cruces Campus)

All undergraduate students must demonstrate Basic Academic Skills in both English and mathematics before enrolling in any upper-division course (numbered 300/3000 or higher). These requirements ensure that each student in the upper-division courses has the ability to succeed without compromising the learning experience of other students.

Course Descriptions:

The course description will follow the prefix, number and credit hours. The description will explain what the course entails and will display any restrictions that the course may have that will be enforced during the registration process.

ASTR 1115G. Introduction Astro (lec+lab)

4 Credits (3+2P)

This course surveys observations, theories, and methods of modern astronomy. The course is predominantly for non-science majors, aiming to provide a conceptual understanding of the universe and the basic physics that governs it. Due to the broad coverage of this course, the specific topics and concepts treated may vary. Commonly presented subjects include the general movements of the sky and history of astronomy, followed by an introduction to basic physics concepts like Newton's and Kepler's laws of motion. The course may also provide modern details and facts about celestial bodies in our solar system, as well as differentiation between them – Terrestrial and Jovian planets, exoplanets, the practical meaning of “dwarf planets”, asteroids, comets, and Kuiper Belt and Trans-Neptunian Objects. Beyond this we may study stars and galaxies, star clusters, nebulae, black holes, and clusters of galaxies. Finally, we may study cosmology—the structure and history of the universe. The lab component of this course includes hands-on exercises that work to reinforce concepts covered in the lecture, and may include additional components that introduce students to the night sky.

A E-AEROSPACE ENGINEERING**A E 339. Aerodynamics I****3 Credits (3)**

Fluid properties, conservation equations, incompressible 2-dimensional flow; Bernoulli's equation; similarity parameters; subsonic aerodynamics: lift and drag, analysis and design of airfoils. May be repeated up to 3 credits.

Prerequisite: C- or better grades in ENGR 234 and (M E 228 or MATH 392).

Learning Outcomes

1. Ability to apply knowledge of mathematics, science, and engineering;
2. Ability to design and conduct experiments, as well as to analyze and interpret data;
3. Ability to design a system, component or process to meet desired needs within realistic constraints;
4. Ability to identify, formulate, and solve engineering problems.

A E 362. Orbital Mechanics**3 Credits (3)**

Dynamics of exoatmospheric flight of orbiting and non-orbiting bodies; 2-body orbital dynamics and Kepler's laws; orbits in 3 dimensions; orbit determination; orbit design and orbital maneuvers; lunar and interplanetary trajectories. May be repeated up to 3 credits.

Prerequisite: C- or better grades in (M E 228 or MATH 392), ENGR 234, and M E 261.

Learning Outcomes

1. Ability to apply knowledge of mathematics, science, and engineering;
2. Ability to identify, formulate, and solve engineering problems;
3. Ability to use the techniques, skills and modern tools necessary for engineering practice.

A E 363. Aerospace Structures**3 Credits (3)**

Advanced concepts of stress and strain, introduction to the analysis of aero structures, complex bending and torsion, thin walled sections and shells, computational techniques. May be repeated up to 3 credits.

Prerequisite: C- or better grades in C E 301.

Learning Outcomes

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics

A E 364. Flight Dynamics and Controls**3 Credits (3)**

Fundamentals of airplane flight dynamics, static trim, and stability; spacecraft and missile six degree of freedom dynamics; attitude control of spacecraft. May be repeated up to 3 credits.

Prerequisite: C- or better grades in (M E 228 or MATH 392), ENGR 234, and M E 261.

Learning Outcomes

1. Ability to apply knowledge of mathematics, science, and engineering;
2. Ability to identify, formulate, and solve engineering problems;
3. Ability to use the techniques, skills and modern tools necessary for engineering practice.

A E 400. Undergraduate Research**1-3 Credits (1-3)**

Performed with the direction of a department faculty member. May be repeated for a maximum of 6 credits.

Prerequisite(s): Consent of faculty member.

A E 405. Special Topics**3 Credits (3)**

Topics of modern interest to be offered by the departmental staff.

Consent of instructor required.

A E 419. Propulsion**3 Credits (3)**

Propulsion systems, thermodynamic cycles, combustion, specific impulse; principles of gas turbines, jet engines, and rocket propulsion systems. May be repeated up to 3 credits.

Prerequisite: C- or better grades in A E 439.

Learning Outcomes

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics

A E 424. Aerospace Systems Engineering**3 Credits (3)**

Basic principles of top down systems engineering and current practice; preliminary and detailed design of aircraft and space vehicles, including

requirement, subsystem interaction, and integration, tradeoffs, constraints and non-technical aspects. May be repeated up to 3 credits.

Prerequisite: C- or better grades in A E 362.

Learning Outcomes

1. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
2. an ability to communicate effectively with a range of audiences
3. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
4. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives

A E 428. Aerospace Capstone Design

3 Credits (3+2P)

Team Project-analysis, design, hands-on build test, evaluate.

Prerequisite(s)/Corequisite(s): A E 447. Prerequisite(s): A E 363 and A E 424.

A E 439. Aerodynamics II

3 Credits (3)

Principles of compressible flow, momentum and energy conservation; thermal properties of fluids; supersonic flow and shock waves; basics of supersonic aerodynamics. May be repeated up to 3 credits.

Prerequisite: C- or better grades in (A E 339 or M E 338), M E 240, and (M E 328 or PHYS 395).

Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.

A E 447. Aerofluids Laboratory

3 Credits (2+3P)

Use of subsonic wind tunnels and other flow to study basic flow phenomena and methods of fluid measurement and visualization. May be repeated up to 3 credits.

Prerequisite: M E 345 or PHYS 325.

Prerequisite/Corequisite: A E 439.

Learning Outcomes

1. Students will be able to write technical reports about aerodynamic experiments and make oral presentations, being familiar with data acquisition, processing and visualization.

A E 451. Aircraft Design

3 Credits (3)

Conceptual design of aircraft based on existing designs, empirical relationships, and theory. Dimensioning, structural design, and performance analysis of major subcomponents such as fuselage, wing, and propulsion system. Static stability and control analysis.

Prerequisite(s): A E 339 and A E 363.

A E 452. Control System Design

3 Credits (3)

Introduction to the control of dynamical systems, with a focus on mechanical and aerospace systems, including basic systems theory, controllability / observability, feedback and stabilization, PID controls, root-locus plot, and Bode diagram. May be repeated up to 3 credits.

Prerequisite: M E 261, M E 328 and ENGR 234.

Learning Outcomes

1. Construct a block diagram to find a transfer function for a dynamical system;
2. Analyze control systems by utilizing various linear control theories such as root-locus design method, bode / Nyquist plots, and lead / lag compensation techniques;
3. Design and simulate automatic control systems for mechanical and aerospace engineering applications.

A E 464. Advanced Flight Dynamics and Controls

3 Credits (3)

Advanced airplane flight dynamics and stability control system design, longitudinal and lateral autopilots, missile/rocket control systems, and guidance systems.

Prerequisite(s): A E 364 or consent of instructor.

A E 509. Individualized Study

3 Credits (3)

Individualized study covering specialized topics in aerospace engineering. Consent of instructor required. Restricted to A E & M E majors.

A E 510. Special Topics

1-6 Credits (1-6)

Topics in aerospace engineering. May be repeated for a maximum of 6 credits. Consent of instructor required.

A E 527. Linear Systems Theory

3 Credits (3)

Introduction to control of linear multi-input-multi-output (MIMO) systems. Topics include representation of system dynamics using the state-space model, linearization, internal and input-to-output stability, controllability, observability, optimal control, linear quadratic regulator, and observer. May be repeated up to 3 credits.

Learning Outcomes

1. Students are able to design linear multi-input-multi-output (MIMO) control systems.

A E 533. Numerical Methods for Fluid Mechanics and Heat Transfer

3 Credits (3)

Numerical methods for solving differential equations (initial and boundary value problems, eigenvalue problems) with focus on fluid mechanics and heat transfer problems. Concepts such as stability, accuracy, consistency, and systematic errors (phase/amplitude error). Implement and test algorithms for the solution of ordinary and partial differential equations. May be repeated up to 3 credits.

Prerequisite: M E 341.

Learning Outcomes

1. An ability to apply computational approaches to fluid dynamic and heat transfer problems and to understand limitations with respect to stability, accuracy, and error.

A E 564. Advanced Flight Dynamics and Controls

3 Credits (3)

Advanced airplane flight dynamics and stability control system design, longitudinal and lateral autopilots, missile / rocket control systems, and guidance systems May be repeated up to 3 credits.

Prerequisite(s): A E 364 or consent of instructor.

A E 598. Special Research Programs

1-3 Credits (1-3)

Individual investigations, either analytical or experimental. May be repeated for a maximum of 6 credits. Restricted to A E & M E majors.

A E 599. Master's Thesis**1-15 Credits (1-15)**

Thesis. Graded: Thesis/Dissertation.

A E 600. Doctoral Research**1-15 Credits (1-15)**

This course number is used for assigning credit for research performed prior to successful completion of the doctoral qualifying examination.

Graded: Thesis/Dissertation.

A E 700. Doctoral Dissertation**15 Credits (15)**

Dissertation. Graded: Thesis/Dissertation.

A EN-AGRICULTURAL ENGINEERING

A EN 459. Groundwater, Wells & Pumps**3 Credits (3)**

Occurrence and movement of groundwater; design of water wells; selection and specification of pumps and power units. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 382 or consent of instructor.

Learning Outcomes

1. Understand the occurrence and movement of groundwater in aquifers, and extraction of it.
2. Ability to interpret pump specifications and data.
3. Select and detail power units for pumping systems.

A EN 478. Irrigation and Drainage Engineering**3 Credits (2+3P)**

Design and operation of surface and sprinkler irrigation systems; pumping and conveyances; introduction to principles and practices of drainage systems and wells. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 382 or consent of instructor.

Learning Outcomes

1. Students will be able analyze and design irrigation systems.

A EN 498. Special Topics**1-3 Credits**

May be repeated for a maximum of 6 credits.

Prerequisite: consent of instructor.

A ST- APPLIED STATISTICS

A ST 311. Statistical Applications**3 Credits (3)**

Techniques for describing and analyzing economic and biological data; estimation, hypothesis testing, regression and correlation; basic concepts of statistical inference. May be repeated up to 3 credits.

Prerequisite: MATH 1215 or higher.

Learning Outcomes

1. Describe a data set with graphical tools and computed measures.
2. Explain the relationship between two numerical variables using correlation and regression.
3. Understand how probability and sampling methods are used to make statistical inferences.
4. Draw inference from a sample to a population using confidence intervals and hypothesis tests.
5. Understand the relationship between population parameters and sample statistics.

6. Understand the basic procedure of data production with sampling and experimental design.

A ST 450. Special Topics**1-4 Credits**

Specific subjects and credits announced in the Schedule of Classes. Maximum of 4 credits per semester and a grand total of 9 credits.

A ST 465. Statistical Analysis I**3 Credits (3)**

An analytic introduction to the theory and methods of statistical inference. Sampling, frequency distributions (z, t, x², F), estimation, testing, and simulation. Crosslisted with: A ST 565.

Prerequisite(s): MATH 2530G or consent of instructor.

A ST 466. Statistical Analysis II**3 Credits (2+2P)**

Continuation of A ST 465. An analytic introduction to the theory and methods of statistical inference. Sampling, frequency distributions (z, t, x², F), estimation, testing, and simulation. Crosslisted with: A ST 566.

Prerequisite(s): A ST 465 or consent of instructor.

A ST 498. Independent Study**1-3 Credits**

Individual studies directed by consenting faculty with prior approval of the department head. Maximum of 3 credits per semester and a grand total of 3 credits.

A ST 503. SAS Basics**3 Credits (2+2P)**

An introduction to the statistical software package, SAS, and its utilization in an interactive computing environment, primarily PC/SAS. Provides a fundamental understanding of the structure of SAS, its data management capabilities, and how to invoke a variety of descriptive and simple statistical SAS procedures.

Corequisite(s): A ST 505.

A ST 504. Statistical Software Applications**1 Credit (1)**

Optional Computing course to accompany A ST 506. Computer analysis of topics covered in A ST 505 and A ST 506.

Prerequisite(s): A ST 503.

Corequisite(s): A ST 506.

A ST 505. Statistical Inference I**4 Credits (3+2P)**

A qualitative introduction to the concepts and methods of statistical inference. Sampling, frequency distributions (z, t, x², F), estimation, and testing. One-way analysis of variance. Simple linear regression.

Prerequisite: consent of the instructor.

A ST 506. Statistical Inference II**3 Credits (2+2P)**

Introduction to multiple regression; the analysis of variance for balanced studies; multiple comparisons, contrasts, factorials, experimental designs through split plots. May be repeated up to 3 credits.

Prerequisite: A ST 505 and the ability to use a standard computer package such as SAS (may be satisfied by A ST 503) or consent of instructor.

Learning Outcomes

1. Formulate models, construct ANOVA tables for balanced designs, and conduct complete analyses accounting for factorial treatment structures, and standard experimental design structures, including the completely randomized design, the randomized complete block design, completely randomized design with subsampling, the

completely randomized design with a covariate, and the split-plot design.

2. Assess model adequacy including assessing constancy of variance and normality assumptions.
3. Choose an appropriate multiple comparisons procedure to control the experiment wise or family wise Type I error rate.
4. Use contrasts to conduct pre-planned comparisons.
5. Identify the experimental unit(s) in an experiment; formulate a model and conduct an analysis appropriately accounting for the experimental unit(s).
6. Conduct a complete analysis of data from a designed experiment and interpret findings.

A ST 507. Advanced Regression

3 Credits (3)

Examination of multiple regression; residual analysis, collinearity, variable selection, weighted least squares, polynomial models, and nonlinear regression: linearizable and intrinsically nonlinear models. May be repeated up to 3 credits.

Prerequisite: A ST 503 and A ST 505 or consent of instructor.

Learning Outcomes

1. Understand the fundamental philosophy behind regression.
2. Conduct a proper regression analysis, including making inferences and predictions.
3. Address common pitfalls in regression, including model assumption and collinearity issues.
4. Use the R language to perform regression analysis.

A ST 509. Statistical Models for Complex Data Structures

3 Credits (3)

Statistical models for data that are not normally distributed or data with correlated observations. Covers generalized linear models for discrete and mixed models for correlated data structures. Analysis of data with unbalanced and missing cells.

Prerequisite: A ST 506 with a grade of B or higher, or A ST 507 with a grade of B or higher.

Learning Outcomes

1. Analyze data using classical regression and generalized linear models.
2. Derive quantities of interest from fitted models.
3. Formulate the appropriate hierarchical model for different analytical goals and data structures.
4. Use statistical software to fit hierarchical models and assess the adequacy of the model.
5. Interpret summaries of fitted hierarchical models.

A ST 511. Statistical Methods for Data Analytics

3 Credits (3)

Statistics fundamentals, with an emphasis on inferential methods, linear regression, and practical applications to data analytics. A ST majors should not take this course if they have already completed A ST 505.

Learning Outcomes

1. Understand descriptive and inferential methods commonly used in data analytics
2. Formulate linear regression models and fit models using statistical software
3. Properly interpret the results of statistical analyses
4. Effectively communicate statistical methods and results orally and in writing

A ST 512. Quantitative Analysis for Business Decisions

3 Credits (3)

Identification, collection, and analysis of an organization's data both internal and external, and use of the resultant information in managerial decision making. Crosslisted with: MGMT 512.

Learning Outcomes

1. Understand statistical methods commonly used in business.
2. Identify statistical considerations in the design of studies.
3. Properly interpret the results of statistical analyses and use results to make decisions regarding business problems.
4. Effectively communicate business decisions orally and in writing, using statistics to defend decisions, as appropriate.

A ST 515. Statistical Analysis with R

3 Credits (3)

Introduction to R data types, basic calculations and programming, data input and manipulation, one and two sample tests, ANOVA, regression, diagnostics, graphics, probability distributions, and basic simulations in the R software environment.

Prerequisite(s): A ST 505 or equivalent with consent of instructor.

A ST 540. Predictive Analytics

3 Credits (3)

This course covers data analytic techniques that can be used to predict and classify observations outside of the original data. Material includes linear and nonlinear regression models, linear and nonlinear classification models, and classification and regression trees. Students will gain hands-on experience using modern software packages to build predictive models and quantify the accuracy of these models.

Prerequisite(s): A ST 507 or consent of instructor.

A ST 550. Special Topics

1-4 Credits

Specific subjects to be announced in the Schedule of Classes. Maximum of 4 credits per semester. No more than 9 credits toward a degree.

A ST 554. Practicum in Statistics

3 Credits (3)

Practical experience in data analysis and the reporting of results; selecting and using statistical methods to analyze and interpret real-world problems; written and oral communication of findings

Prerequisite: A ST 503, A ST 506, A ST 507, and A ST 566.

Learning Outcomes

1. Work with real data to gain substantial experience in data analysis, writing, and presentation.
2. Research and apply a variety of statistical methods, some of which students may not have encountered in prior coursework.
3. Apply knowledge and skills gained throughout the program of study, integrating content from across the MS in A ST curriculum.

A ST 555. Applied Multivariate Analysis

3 Credits (3)

Multivariate analysis of linear statistical models, including MANOVA and repeated measures. Analysis of correlation and covariance structures, including principal components, factor analysis, and canonical correlation. Classification and discrimination techniques. May be repeated up to 3 credits.

Prerequisite: A ST 506 and A ST 504.

Learning Outcomes

1. Understand the details of various multivariate techniques, emphasizing connections to univariate techniques where applicable.
2. Select appropriate multivariate techniques for a given data set and problem.

- Use statistical software to perform multivariate analyses.
- Correctly interpret, write about, and present the results of multivariate analyses.

A ST 565. Statistical Analysis I

3 Credits (3)

An analytic introduction to the theory and methods of statistical inference. Sampling, frequency distributions (z , t , x^2 , F), estimation, testing, and simulation. Crosslisted with: A ST 465.

Prerequisite(s): MATH 2530G or consent of instructor.

A ST 566. Statistical Analysis II

3 Credits (2+2P)

Continuation of A ST 565. Crosslisted with: A ST 466.

Prerequisite(s): A ST 565 or consent of instructor.

A ST 568. Applied Linear Models II

3 Credits (3)

The relation of full to less-than-full rank linear models; complex data structures, including messy data, empty cells, and components of variance: extensions to categorical data analysis and nonparametric methods. Continues some emphasis on computational aspects.

Prerequisite: A ST 567.

A ST 596. Independent Study

1-3 Credits

Individual studies directed by consenting faculty with prior approval by department head. May be repeated for a maximum of 3 credits.

Prerequisite: consent of instructor.

A ST 598. Special Research Problems

1-6 Credits

Individual analytical or experimental projects. Restricted to majors. Graded S/U.

A ST 599. Master's Thesis

1-6 Credits

Thesis.

A ST 609. Linear Model Theory

3 Credits (3)

Theoretical treatment of linear models. Covers fixed effects and mixed effects models; models that are full rank, less than full rank, and over-parameterized. Some computational aspects are discussed in relation to statistical packages. Prior to enrollment students should have a basic understanding of undergraduate-level matrix algebra.

Prerequisite: A ST 565, A ST 566, and A ST 509.

Learning Outcomes

- Derive estimators of model parameters using design matrices, including models that are full rank, less than full rank, and over-parameterized
- Derive the expectation vector and variance matrix of a linear transformation of a random data vector
- Derive common test statistics and their distributions for fixed effects and mixed effects models with a balanced design
- Understand the mathematical properties of variance-covariance matrices and their implications for model estimation and inference
- Derive and interpret diagnostics for linear models

A ST 616. Computational Statistics

3 Credits (3)

An introduction to topics in computational statistics including: methods for generating random variables, large scale hypothesis testing, resampling, bootstrapping, permutation tests, the Expectation-Maximization algorithm, Markov chain Monte Carlo methods, and

computational approaches in Bayesian inference. Includes some applications of computational statistics in the sciences. Previous experience with programming, while helpful, is not required.

Prerequisite: A ST 505 and A ST 566.

Learning Outcomes

- Conduct large-scale hypothesis testing
- Generate random numbers and random variables
- Implement Markov chain Monte Carlo methods for conducting Bayesian inference
- Import and manipulate data using R
- Employ bootstrapping methods for making inferences and conduct statistical hypothesis testing using permutation tests

A ST 645. Time Series Methods

3 Credits (3)

Theory and methods for analyzing, modeling, and forecasting time series. Covers ARIMA models, spectral analysis, filtering, and state-space models. Previous experience using the R programming language is helpful but not required. Students should have a basic understanding of undergraduate-level matrix algebra and trigonometry.

Prerequisite: A ST 565 and A ST 507.

Learning Outcomes

- Explore time series datasets for autocorrelation, cross-correlation, and stationarity
- Select appropriate models for analyzing and forecasting time series data
- Identify regular patterns and frequencies in time series data
- Fit time series models using statistical software
- Understand mathematical theory underlying time series models

A ST 665. Bayesian Theory

3 Credits (3)

Provides an overview of theory underlying Bayesian inference. Topics include Likelihood and Sufficiency Principles, concepts from decision theory, construction of prior distributions, Bayesian point estimation, tests and confidence regions.

Prerequisite: A ST 565 and A ST 566.

Learning Outcomes

- Understand the theoretical justification for using Bayesian methods as a means of statistical inference
- Apply decision-theoretic principles to evaluate estimators under different loss functions
- Develop prior distributions using the concepts of entropy, conjugacy, and non-informativeness
- Derive basic point estimators using Bayesian principles
- Understand testing and confidence region methods used for Bayesian inference

A ST 700. Doctoral Dissertation

1-15 Credits (1-15)

Dissertation for the Applied Statistics doctoral program. Students must have advancement to candidacy in order to enroll in this course. May be repeated up to 36 credits.

Learning Outcomes

- Make substantive progress towards completing a dissertation that fulfills the requirements for the Applied Statistics doctoral degree.

ACCT-ACCOUNTING

ACCT 200. A Survey of Accounting

3 Credits (3)

Emphasis on financial statement interpretation and development of accounting information for management. For engineering, computer science, and other non business majors. Community Colleges only.

Prerequisite: one C S course or consent of instructor.

ACCT 2110. Principles of Accounting I

3 Credits (3)

An introduction to financial accounting concepts emphasizing the analysis of business transactions in accordance with generally accepted accounting principles (GAAP), the effect of these transactions on the financial statements, financial analysis, and the interrelationships of the financial statements.

Learning Outcomes

1. Analyze business transactions, their effects on the financial statements and the interrelationships of the financial statements involving the following: Cash transactions; Receivables and Net Realizable Value; Operational Assets and Depreciation; Inventory; Current Liabilities; Long-term Liabilities
2. Define, identify and demonstrate the impact of adjusting entries on financial statements.
3. Explain and demonstrate the differences between cash and accrual basis accounting.
4. Define and identify generally accepted accounting principles.

ACCT 2120. Principles of Accounting II

3 Credits (3)

An introduction to the use of accounting information in the management decision making processes of planning, implementing, and controlling business activities. In addition, the course will discuss the accumulation and classification of costs as well as demonstrate the difference between costing systems.

Prerequisite(s): ACCT 2110.

Learning Outcomes

1. Identify the differences between financial and managerial accounting.
2. Illustrate the accumulation of costs in cost accounting systems.
3. Describe the basic elements of the budgeting process, its objectives and budget preparation.
4. Define and classify cost behavior.
5. Perform cost-volume-profit analysis for decision-making.
6. Perform differential (incremental) analysis for business decision making.
7. Explain the cause of the variance and its effect on the income statement.
8. Explain and demonstrate the difference between traditional costing and activity-based costing.

ACCT 301. Financial Accounting I

3 Credits (3)

Concepts, principles, and practices of financial accounting, stressing the determination of income and financial position. A student who does not pass the class within three attempts will not be allowed to take class for a fourth.

Prerequisite(s): C or better in ACCT 2110 or (OATS 120 and OATS 121) and ACCT 2120.

ACCT 302. Financial Accounting II

3 Credits (3)

A continuation of ACCT 301.

Prerequisite(s): C- or better in ACCT 301.

ACCT 351. Accounting Systems

3 Credits (3)

Covers accounting information systems as processors of data for financial reporting and control of economic organizations.

Prerequisite(s): C or better in ACCT 2110 or (OATS 120 and OATS 121) and ACCT 2120.

ACCT 353. Cost Accounting

3 Credits (3)

The development and use of cost accounting information for inventory valuation, income determination, and cost control. A student who does not pass the class within three attempts will not be allowed to take class for a fourth.

Prerequisite(s): C or better in ACCT 2110 or (OATS 120 and OATS 121) and ACCT 2120.

ACCT 403. Federal Taxation I

3 Credits (3)

Basic federal income tax laws; emphasis on determination of taxable income of individuals. A student who does not pass the class within three attempts will not be allowed to take class for a fourth.

Prerequisite(s): C or better in ACCT 2110 or (OATS 120 and OATS 121) and ACCT 2120.

ACCT 451. Auditing Theory and Practices

3 Credits (3)

Auditing standards, audit evidence, auditors reports and opinions, and professional responsibilities.

Prerequisite(s): ACCT 351 and C- or better in ACCT 302.

ACCT 455. Federal Taxation II

3 Credits (3)

Federal income tax laws applicable to partnerships, corporations, fiduciaries, tax research, tax planning.

Prerequisite(s): C- or better in ACCT 403 or consent of instructor.

ACCT 456. Accounting for Nonprofit Organizations

3 Credits (3)

Control and reporting problems unique to governmental units and other nonprofit organizations. Fund accounting principles, procedures, and reports.

Prerequisite(s): C- or better in ACCT 302.

ACCT 458. Accounting Data Analytics

3 Credits (3)

Data Analytics in financial and managerial accounting and auditing. Restricted to: Accounting majors.

Prerequisite(s): C- or Better in ACCT 301, ACCT 302, and ACCT 351.

ACCT 490. Selected Topics

1-3 Credits

Current topics in accounting. Prerequisites vary according to the seminar offered. May be repeated for a maximum of 12 credits under different subtitles.

ACCT 498. Independent Study

1-3 Credits

Individual studies directed by consenting faculty with the prior approval of the department head. May be repeated up to 3 credits. Consent of Instructor required.

Prerequisite(s): Consent of instructor.

ACCT 500. Concepts in Accounting

1 Credit (1)

Development, interpretation, and use of accounting information for financing, investing, operating, and managerial decision making.

Prerequisite(s): Admitted to MBA program.

ACCT 503. Accounting for Managers

3 Credits (3)

Concepts and principles of financial and managerial accounting. Presents techniques used to measure business transactions, prepare financial statements, techniques for management decision-making, planning, and control. Not open to MAcc students.

Prerequisite(s): B or better in both ACCT 2110 or (OATS 120 and OATS 121) and ACCT 2120.

ACCT 510. Technical and Professional Communication for Accountants

3 Credits (3)

Effective writing strategies for professional communications. Students will learn to write with a professional style and proper English usage and to work with a variety of technical and lay audiences. Emphasis on initiation, planning, composition, and evaluation of business and accounting workplace scenarios to develop communication skills used in a business environment. Restricted to: Master of Accountancy majors.

ACCT 530. Advanced Accounting

3 Credits (3)

This course is designed to provide in-depth study of current financial accounting concepts related to business combinations, financial statement consolidations, and foreign currency transactions and translations. Restricted to: Master of Accountancy majors.

Prerequisite(s): ACCT 302 with a grade of C or better.

ACCT 544. Financial Statement Analysis and Valuation

3 Credits (3)

Valuation of firms using financial information, financial statement analysis, and the valuation of individual assets and liabilities. Restricted to: Master of Accountancy majors.

Prerequisite(s): Acct 302; Graduate students only.

ACCT 550. Special Topics

3 Credits (3)

Seminars in current topics in various areas of accounting including financial, managerial, auditing, taxation, systems, and fund accounting. Prerequisites vary according to topic being offered.

ACCT 551. Advanced Auditing Theory and Practice

3 Credits (3)

Understanding and evaluating internal control in an EDP environment. Statistical sampling applications and current issues in auditing. Restricted to: Master of Accountancy majors.

Prerequisite(s): ACCT 451.

ACCT 555. Federal Tax Research

3 Credits (3)

Tax research methodology including case materials, critical judicial decisions, journal articles, and research services. Emphasis on tax planning. Restricted to: Master of Accountancy majors.

Prerequisite(s): ACCT 403.

ACCT 559. Ethics and Professionalism in Accounting

3 Credits (3)

Introduction to ethical reasoning, integrity, objectivity, independence, and professional accounting issues. Students will apply the concepts and theories to accounting-specific cases. Restricted to: Master of Accountancy majors.

Prerequisite(s): C or better in ACCT 451.

ACCT 560. Taxation of Corporations and Shareholders Advanced

3 Credits (3)

Effects of taxation on the organization, operation, and reorganization of corporations and on their shareholders. Restricted to: Master of Accountancy majors.

Prerequisite(s): ACCT 403.

ACCT 564. Financial Accounting Research

3 Credits (3)

Interpretation and application of accounting principles to financial reporting issues of business and nonbusiness organizations. Consent of Instructor required. Restricted to: Master of Accountancy majors.

Prerequisite(s): ACCT 302.

ACCT 580. Professional Accountancy

3 Credits (3)

Prepares students for the accounting profession and professional certification through study of a wide range of topics similar to those a student might encounter in their first year of employment. Restricted to: Master of Accountancy majors.

ACCT 598. Independent Study

1-3 Credits

Individual studies directed by consenting faculty with prior approval of the department head. A maximum of 3 credits may be earned.

Prerequisite: consent of instructor.

ACCT 599. Master's Thesis

15 Credits

Thesis.

ACES-AGRI, CONSUMER & ENV SCIE

ACES 1120. Freshman Orientation

1 Credit (1)

Orientation to University life, including the understanding and utilization of resources that promote University success. Designed to promote success in achieving a career objective and perseverance for degree completion. Promotes a recognition of changes required in moving from high school to the University. Eight weeks in length, required for all freshmen in the College of Agricultural, Consumer and Environmental Science.

Learning Outcomes

1. Orient students to NMSU and to the College of Agricultural, Consumer and Environmental Sciences.
2. Develop an understanding of the personal skill set needed for academic success.
3. Develop awareness of the academic and personal resources available to NMSU students.
4. Help students create a peer network that will support their academic and personal success.
5. Strengthen skills in oral and written communications

ACES 1210. Financial Fitness for College Students

1 Credit (1)

An introduction to personal financial practices in post high school and/or college lives. Emphasis is placed on budgeting, savings, investment, college debt, student loans, credit cards, scams and consumer protection.

Learning Outcomes

1. Discuss the importance of personal financial management during college years.
2. Discuss the essentials of following: a. paying yourself first and budgeting, b. differentiating between needs and wants, c. the significance of building and having good credit, d. managing debt, e. understanding and minimizing student loan debt, f. investing, g. life

success principles, e.g., goal setting, time management, stress management.

3. Choose online financial tools to help them succeed financially.

ACES 1220. Academic Excellence

1-3 Credits (1-3)

Academic curriculum of excellence that includes the development of collaborative learning and student success environment, learning diverse learning styles and multiple intelligences, and developing multi-contextual academic communication styles. Restricted to: Open to all ACES majors. Restricted to Las Cruces campus only.

Learning Outcomes

1. Demonstrate an understanding of the relationship between time management and academic success.
2. Express a familiarity with college culture.
3. Communicate a comprehension of study skills and test taking strategies.
4. Apply material learned to other aspects to enhance academic excellence.
5. Develop an academic and career life plan that will highlight goals, taking into account life circumstance
6. Become competent in appropriate professional/academic communication

ACES 301. Agricultural Leadership Development

1-3 Credits (1-3)

This course will introduce the student to skill sets necessary to engage in the process of leadership through an applied project. A broad spectrum of principles and applications associated with the College of Agricultural, Consumer and Environmental Sciences will be employed. The development of a specific project through a collaborative process will be required. Students will be engaged in hands-on, real-time experiences applicable to agriculture. Student must have a 3.5 GPA and above. Consent of Instructor required. May be repeated up to 4 credits.

Learning Outcomes

1. Learn the key student support services available at NMSU.
2. Develop effective oral and written communication skills.
3. Learn elements of effective peer mentorship.

ACES 305. Advanced Leadership and Communication in Agricultural Sciences

1-3 Credits (1-3)

Theory and application of advanced communication techniques, focusing on public speaking and public relations, are emphasized in this course for current and potential college ambassadors.

Learning Outcomes

1. Learn the mission, vision and pillars of the NMSU College of Agricultural, Consumer and Environmental Sciences.
2. Learn the key student support services available in ACES and at NMSU.
3. Understand the importance of professionalism and improve individual leadership skillset.
4. Develop effective oral and written communication skills, and employ these skills in delivery of student recruitment presentations and programs.

ACOM-AG COMMUNICATIONS

ACOM 1110. Introduction to Agricultural Communication **3 Credits (3)**

Students will learn about the history and theories of agricultural communications, be introduced to the degree program, explore careers in the field, and examine the role of media in agricultural communications. May be repeated up to 3 credits.

Learning Outcomes

1. Identify classes needed in the degree program and relevant clubs.
2. Recall important times in history of agricultural communication and journalism.
3. Comprehend the communication process and identify its components.
4. Identify effective and efficient media for agricultural communication.
5. Analyze the various roles and uses of media in agriculture communication.
6. Apply theories of communication and journalism to class assignments.

ACOM 1120. Introduction to Graphic Design in Agriculture **3 Credits (3)**

This course focuses on introducing students to creating and critiquing visual communication materials in agricultural communications by developing understanding of visual communications, graphic design and branding principles as well as basic skills in using Adobe Illustrator and Photoshop software.

Learning Outcomes

1. Understand and demonstrate the correct use of formats, modes, and resolutions when creating or using graphics for various mediums and audiences.
2. Critique and evaluate graphic and photographic design elements in agricultural communications pieces.
3. Demonstrate a working knowledge of the Adobe Illustrator and Photoshop software and their uses for implementing principles of graphic design and branding.

ACOM 1130G. Effective Leadership and Communication in Agriculture **3 Credits (2+2P)**

Theory and practice in leadership and communication for professionals who must work effectively in leadership and supervisory roles with people in agricultural business, industry, government agencies, and education. Course focuses on contemporary leadership theories. Oral communication skills in informative and persuasive speaking, parliamentary procedure, and for small groups are developed. May be repeated up to 3 credits.

Learning Outcomes

1. Understanding Leadership: Definitions of Leadership; Agricultural Education, FFA , Leadership; Leadership Categories; Democratic, Authorization, and Situational Leadership; Personality and Leadership Relations; Developing Leaders; Personal Leadership Development; Ability, Experience, and the Opportunity to Lead; Leadership in the Workplace; Human Relations, Technical, and Conceptual Skills
2. Communication Skills: Communication and Leadership; The Purpose of Communication; Forms of Communication; Communication Barriers and Styles; Verbal and Nonverbal Communication; Feedback; Self Communication and Interpersonal Communication
3. Leading Individuals and Groups: Group Dynamics and Team Building; Democratic Group Leadership; Importance of Groups; Types of Groups; Organizing Groups; Group Dynamics, Development, and Discussion
4. Conducting Successful Meetings: Skills Developed by Bring an Officer; Basic Meeting Functions; Characteristics of a Good Meetings; Planning and Preparing for Meetings; The Meeting Room;

Committees; Informative and Motivational Meetings; Group Member Involvement; Officer and Member Responsibilities; Developing a Program of Activities

ACOM 2120. Photography in Agriculture

3 Credits (1+2P)

This is a field-based course focused on how to students use the camera as a tool to make the rules of photography and design work for the student's style, creativity, and goals pertaining to application of photography in agricultural communications. Students develop and disseminate a photography portfolio through a variety of communications channels.

Learning Outcomes

1. Utilize a DSLR or mirrorless camera to analyze scenarios to effectively curate a body of work that compliments agricultural communications practice
2. Demonstrate working knowledge of camera equipment and photography principles to create visual stories
3. Evaluate and critique imagery for use of photography skills and principles

ACOM 2998. Early Field- Based Experience in Agricultural Communications

1-4 Credits (1-4)

This course is designed to help you understand people and how to communicate with people. The key to all journalism or communications-related courses is to understand the audience well enough to know how to speak like them, to them, and to your stakeholders. The most successful communicators exhibit greatness in themselves and in their peers. Communicators cannot do their job if they do not show up with their best attitude and work ethic. Don't let your audience down, and we will make sure you are equipped to do so. May be repeated up to 6 credits.

Learning Outcomes

1. Explain the role of communications in the agricultural or science industries.
2. Develop a communication campaign for an agriculturally related client.
3. Identify key principles of communication channels including newswriting, radio production, and communication plans.
4. Create effective internship application materials to meet needs in the industry.
5. Design a job portfolio that includes examples of communications experience.

ACOM 3110. Agricultural Communications

3 Credits (3)

Principles and practical experience in news writing, radio production, newsletter design, public meeting presentations, video productions, graphics, and public relations activities, especially as related to the fields of agriculture and family and consumer sciences.

ACOM 3115. Global Issues in Agricultural Communications and Marketing

3 Credits (3)

Global perspectives related to international agricultural communications and marketing. The course will provide real-world settings for students to advance their awareness of international issues influencing marketing and trade in the United States and abroad. The course will expose students to high-impact learning, research skill development, communication skill development with a global mindset, and international travel. May be repeated up to 6 credits.

Learning Outcomes

1. Explain the role of communications and marketing in international agriculture.
2. Develop an awareness of global agricultural issues and how they impact domestic and international trade.
3. Increase awareness of global perspectives in agriculture.
4. Discover cultural similarities and differences within the U.S. and the selected country.
5. Investigate agricultural communications and marketing issues using an applied perspective.
6. Communicate course experiences through reflective analyses, photojournalism blog entries, social media campaigns, and presentations.

ACOM 3125. Website User Experience Design in Agriculture

3 Credits (3)

The purpose of this course is for students acquire user experience development, coding and web design skills in order to create a live personal portfolio website that demonstrates their professional skills and experiences in agriculture.

Learning Outcomes

1. Evaluate websites based on user experience principles
2. Use the fundamentals of HTML and CSS to edit code
3. Implement user experience principles in website design
4. Develop a website using WordPress
5. Explain and justify web design decisions

ACOM 3150. Communications Campaigns in Agriculture

3 Credits (3)

Client-based marketing and communication needs for stakeholders in agricultural and life sciences. Students will learn brand awareness for agricultural stakeholders by developing a campaign of communications and marketing materials using multiple modes (e.g., written, visual, social). Students in this course will gain an overall understanding of the agricultural communications industry by developing portfolio materials, prepare for the job and internship search process, and identify the skills necessary to grow in and contribute to a communications profession.

Learning Outcomes

1. Students will be able to identify communications-related needs with a client or stakeholder in the food, fiber, and natural resources industries.
2. Direct a communications plan with channels, tactics, steps, and timelines for a client.
3. Develop a campaign of communications materials (e.g., written, visual, social) around a client's needs.
4. Manage a client's brand with desired audiences through establishing, promoting, and reinforcing messages.

ACOM 3160V. Communicating Agriculture & Science to the Public

3 Credits (3)

Principles and practical experience in general communications channels (i.e., news writing, radio production, newsletter design, public meeting presentations, video productions, graphics, and public relations activities) related to the fields of agricultural, consumer, or environmental sciences. Students in this course will gain an overall understanding of the agricultural communications industry and identify the skills necessary to grow in and contribute to a communications profession.

Learning Outcomes

1. Explain the role of communications in the agricultural, consumer, or environmental science industries.

2. Develop a communication campaign for an agricultural, consumer, or environmental science related client.
3. Identify key principles of communication channels including news writing, radio production, and communication plans.
4. Design a social media campaign including Instagram, Facebook, Twitter, and/or other emerging platforms.
5. Develop skills in media communications including public relations, conducting radio and television interviews, developing interview skills and identifying the needs of an audience.
6. Create effective internship application materials to meet needs in the industry.
7. Design a job portfolio that includes examples of communications experience.
8. Examine social, ethical, and legal issues related to communicating components related to the agricultural, consumer, and environmental science industries.
9. Conduct an audience analysis of key issue related to the agricultural, consumer, and environmental science industries by analyzing demographics, psychographics, sociographics, and geographics of affiliated audience personas.

ACOM 4115. Agricultural and Scientific Publications

3 Credits (3)

Learn and gain experience with the principles and concepts of designing, writing, editing, producing and distributing a student insert to the ACES Magazine, including practical applications of writing feature articles, magazine design, layout and graphics.

Learning Outcomes

1. Execute the steps necessary to be a freelance writer.
2. Identify feature story ideas, contact sources and develop publishable stories.
3. Compare and contrast the varying types of publication materials (connection/spotlights, feature stories, social media sprints, etc.).
4. Comprehend publication design principles and current practices used in print communication industries.
5. Create, produce, publish and publicize a print magazine.
6. Connect with an audience through soft news.

ACOM 4120. Advanced Graphic Design and Layout in Agriculture

3 Credits (3)

This class provides an in-depth examination of visual communication principles and theories, design applications, and design topics relevant to the agricultural industry. Students will learn how to more deeply evaluate designs and layouts, create effective design pieces for targeted agricultural audiences, and further utilize the Adobe Creative Cloud software.

Learning Outcomes

1. Analyze and apply the principles underlying effective graphic design and layout
2. Recognize and discuss communication and visual theories for developing effective designs and layouts for intended purposes and audiences
3. Demonstrate an extensive working knowledge of Adobe Illustrator, Photoshop, and InDesign to create effective designs for both print and digital platforms

ACOM 4130. Strategic Brand Identity & Design in Agriculture

3 Credits (3)

The purpose of this course is for students to develop extensive understanding of strategic and visual theory and principles specific to

branding as a critical aspect of business development in all aspects of agriculture and natural resources. Students will utilize research and Adobe Creative Cloud to design targeted brand strategy, client brief, and design strategy to effectively build a client pitch.

Prerequisite: ACOM 1120.

Learning Outcomes

1. Articulate the significance of utilizing brand identity for differentiation
2. Apply extensive knowledge of visual and brand theory, principles, strategy and application to various contexts in agriculture and natural resources
3. Research, design and pitch a brand strategy, client brief and design strategy

ACOM 4998. Internship in Agricultural Communications

3-12 Credits (3-12)

The experiential learning experience selected by students and approved by their academic advisor will form the basis of this course. Students will apply problem-solving skills, communication skills, and disciplinary knowledge through an internship related to agricultural communications. During the internship, students will gain real-world experience in their specific field of interest within the discipline. May be repeated up to 12 credits.

Learning Outcomes

1. Synthesize discipline-specific knowledge and its application to real-world contexts
2. Design and implement solutions to meet project-related tasks
3. Produce professional-quality deliverables for the employer and for the course
4. Handle a high level of responsibility with professionalism and care in preparation and presentation

ACOM 5115. Global Issues in Agricultural Communications and Marketing

3 Credits (3)

Graduate-level course broadening global perspectives related to international agricultural communications and marketing. The course will provide real-world settings for students to advance their awareness of international issues influencing marketing and trade in the United States and abroad. The course will expose students to high-impact learning, research skill development, communication skill development with a global mindset, and international travel. May be repeated up to 6 credits.

Learning Outcomes

1. Explain the role of communications and marketing in international agriculture.
2. Develop an awareness of global agricultural issues and how they impact domestic and international trade.
3. Increase awareness of global perspectives in agriculture.
4. Discover cultural similarities and differences within the U.S. and the selected country.
5. Investigate communications and marketing issues using an applied perspective.
6. Communicate course experiences through reflective analyses, photojournalism blog entries, social media campaigns, and presentations.
7. Research and dissemination information regarding international issues in agriculture using critical thinking skills.

AEEC-AGRICULTURAL ECON/ECON

AEEC 1110. Introduction to Agricultural Economics and Business 3 Credits (3)

This course is an orientation to agricultural economics and business through the discovery process for the consumer in the food, fiber, and natural resource sectors of the global economy. The course discusses the application of micro-and macro-economic principles as they relate to agricultural economics and business. May be repeated up to 3 credits.

Learning Outcomes

1. Gain a broad understanding of the role of the consumer in the market-place for agricultural commodities, producers, agencies and the global market structure.
2. Apply introductory economic principles to applied global situations.
3. Employ economic concepts in the application of production level decision making.
4. Employ economic principles to the basic and global agricultural community.
5. Understand relationships that exist between producers and consumers.

AEEC 1120. Careers in Food and Agribusiness 1 Credit (1)

This course provides an orientation to careers in agricultural economics and agricultural business. Students will learn about the agricultural supply chain in New Mexico, the United States, and the world. Students will be introduced to faculty and staff within the department, learn about career opportunities available to AEAB graduates, and develop a greater appreciation of current agricultural issues. Freshman status or consent of instructor required. May be repeated up to 1 credit.

Learning Outcomes

1. Become familiar with career opportunities in agricultural economics and agricultural business
2. Understand knowledge and skills desired by employers
3. Become acquainted with faculty and staff in the Department of Agricultural Economics and Agricultural Economics and resources available to students within the Department
4. Refine written and verbal communication skills

AEEC 2110. Principles of Food and Agribusiness Management 3 Credits (3)

This course introduces business management theory and application of theory related to businesses within the food and fiber supply chain. Topics include management and financial principles, market planning, and organization theory. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate, refine and expand written and oral communication skills
2. Develop an understanding of basic financial statements, their use and analysis
3. Understand the roles management and management styles play in modern agribusiness
4. Learn about the history of agribusiness domestically and internationally
5. Integrate the role of technology into modern agribusiness management

AEEC 2120. Introduction to Food and Agribusiness Accounting 3 Credits (3)

This course outlines the purpose and methods of keeping and analyzing farm and ranch records. Course topics include financial statements, efficiency measures, analysis of the business, and tax computations.

Learning Outcomes

1. Understand the terminology and principles used in modern farm and ranch financial management statements.
2. Evaluate capital investments, analyze farm business performance, and develop tools for financial planning and analysis
3. Evaluate farm and ranch cash flows

AEEC 2130G. Survey of Food and Agricultural Issues 3 Credits (3)

Survey of food and agricultural issues, including: geography of food production and consumption; human-agricultural-natural resource relations; agriculture in the United States and abroad; modern agribusiness; food safety; food, agriculture, and natural resources policy; ethical questions; role and impact of technology. Crosslisted with: FSTE 2130G.

Learning Outcomes

1. Understand of global agriculture including production techniques used in various geographical regions, consumption trends, and political and social constraints.
2. Synthesis information about agricultural issues and make informed arguments
3. Articulate modern issues in agriculture
4. Write coherent arguments relative to personal beliefs regarding agricultural issues

AEEC 2140. Technology and Communication for Business Management 3 Credits (2+2P)

This course helps students improve their skills related to data analysis, information management, and communication. Drawing examples from a variety of management, business, technological and research situations, students discover the versatility and functionality of modern computer software. The course emphasizes a 'hands-on' approach. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate an understanding terms used to describe common techniques and concepts in business information systems.
2. Demonstrate mastery of spreadsheet design and use.

AEEC 2996. Special Topics 1-4 Credits

Specific subjects and credits to be announced in the Schedule of Classes. Maximum of 4 credits per semester. No more than 9 credits toward a degree. Consent of instructor required.

Learning Outcomes

1. Varies

AEEC 3110V. World Agriculture and Food Problems 3 Credits (3)

This course examines key concepts and issues relevant to the world's food production systems. Topical highlights include the causes and consequences of hunger, agriculture's economic and environmental significance, sustainable development, biotechnology, and globalization of agricultural markets. As students learn about these issues from both local and global perspectives they are engaged in the development of both their literacy of economic concepts and their core research and communication skills. We do this through a combination of relevant course readings, in-class discussion exercises, and focused writing

assignments on current issues of relevance. Same as GEOG 315V. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate conceptual and systems thinking and design
2. Assess the nutrition and healthfulness of food choices
3. Describe the structure and function of food and agricultural systems
4. Analyze roles of and relationships between food producers, consumers, and policymakers
5. Apply basic economic concepts to describe and interpret food and agricultural issues
6. Explain the environmental context and role of agriculture
7. Articulate key arguments that favor and oppose food biotechnology
8. Recognize several of the benefits and barriers in international trade of food and agricultural products

AEEC 3120V. Natural Resource Economics

3 Credits (3)

This course helps students gain insight into important natural resource problems of our time. Apply economic principles to problems in the preservation, use, and development of agricultural, range, mineral, water, forestry, fishery, and environmental resources. Understand the use of cost-benefit analysis for government natural-resource projects, policies, and programs. Same as ECON 337V. May be repeated up to 3 credits.

Prerequisite: ECON 1110G or ECON 2120G or ECON 2120H.

Learning Outcomes

1. Demonstrate knowledge of economic principles to better understand natural resource issues
2. Document understanding of current and emerging natural resource issues
3. Apply economic principles to guide selected natural resource policy debates
4. Demonstrate the application of economic principles to inform policy debates addressing current water resources issues

AEEC 3130V. Water Resource Economics

3 Credits (3)

This course uses economic principles to evaluate current and emerging issues in water resources. Applications focus on the use of economic methods of analysis to current policy decisions surrounding agricultural, municipal, industrial, and environmental uses of water. Same as ECON 384V. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate knowledge of economic principles to better understand water resource issues
2. Show understanding of current and emerging water issues
3. Apply economic principles to guide selected water resource policy debates
4. Demonstrate the application of economic principles to inform policy debates addressing current water resources issues

AEEC 3140V. Agricultural Policy

3 Credits (3)

This course provides a historical and cultural background of food and agricultural policy in the United States. Analysis of food and agricultural problems, policy-making, and implementation. Economic evaluation of specific U.S. food and agricultural policy instruments, their domestic and international impacts.

Learning Outcomes

1. Apply economic concepts to deepen understanding of agricultural policy, particularly with regard to macroeconomic importance to agriculture
2. Describe inherent tradeoffs and opportunity costs in policy
3. Identify the global impacts of U.S. agricultural policy
4. Explain and describe important agricultural policy issues for a lay audience

AEEC 3210. Marketing and Food Agricultural Products

3 Credits (3)

This course provides a review of marketing principles and techniques used throughout the food and fiber supply chain. The course introduces a broad variety of marketing topics including marketing strategy, consumer behavior, market segmentation, market research, competitive analysis, and the marketing mix. The course serves as a foundation for advanced courses in agricultural marketing. May be repeated up to 3 credits.

Prerequisite: ECON 1110G or ECON 2120G.

Learning Outcomes

1. Articulate how agricultural commodities move through the food and fiber supply chain.
2. Understand the importance of strategic marketing and how organizations within the food and fiber supply chain identify consumers and their preferences
3. Understand key marketing concepts used by agribusiness marketers, including SWOT analysis, the marketing mix, advertising and public relations
4. Know the basic outline and components of a marketing plan

AEEC 3220. Financial Derivative Markets

3 Credits (3)

This course explores the role of financial derivatives in modern business, including income generation, risk management, and price discovery. Derivatives markets covered in the course include futures, options, and swaps. Course content focuses on the fundamentals of trading and hedging in a wide variety of markets, e.g., agriculture, interest rates, exchange rates. Students participate in simulated futures and options trading. Same as AEEC 5220/BFIN 511 with additional coursework required at the graduate level. Cannot receive credit for both AEEC 3220/BFIN 311 and AEEC 5220/BFIN 511. Same as BFIN 311.

Learning Outcomes

1. Understand and explain the concept of risk, list various sources of risks observed in businesses, and identify common methods used to manage risk
2. Demonstrate an understanding of the vocabulary associated with derivatives and derivative markets
3. Articulate the role that derivative markets play in reducing risk and illustrate how they can be used in practice to reduce risk
4. Illustrate how derivative markets can be used to generate income and manage risk through hedging

AEEC 3230. Food and Agricultural Sales

3 Credits (3)

This course reviews the techniques of salesmanship. Course topics include identification and classification of buyer type and different approaches to sales based on client base. Improving oral communication skills through individual and/or group sales presentations. Students must be in Junior or above standing to enroll. May be repeated up to 3 credits.

Learning Outcomes

1. Analyze sales situations and effectively identify pathways to closing the sale.

2. Demonstrate execution of the sales process – prepare, learn, communicate, evaluate.
3. Conduct product and customer analysis to build a sales strategy.
4. Exhibit enhanced relationship management and communication skills.

AEEC 3240. Agricultural and Natural Resource Law

3 Credits (3)

This course discusses the relationship of common-law principles, statutory law and regulatory law to problems involving agriculture with an emphasis on New Mexico issues. Legal problems relevant to agribusiness, torts, fencing laws, liability for agricultural pollution, irrigation water rights, corporations and partnerships, land tenure, farm and ranch tenancy, agricultural labor, farm and ranch management, and taxation. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the complexity of law as it relates to agriculture and natural resources
2. Develop a basic understanding of the legal system in the U.S. including the role of federal and state agencies responsible for agricultural and natural resource regulation
3. Articulate at a layperson's level, the roles of the legislative, judicial, and executive branches of the government as they relate to agriculture and natural resources.

AEEC 3250. Economics of Food and Agricultural Markets

3 Credits (3)

This course focuses on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Pays special attention to empirical analysis. Includes institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions. May be repeated up to 3 credits.

Prerequisite: ECON 2120G, MATH 1430G, and A ST 311 or MATH 1350G.

Learning Outcomes

1. Become familiar with commonly used data analysis methods and tools.
2. Develop an understanding of the factors that influence agricultural prices.
3. Use data to analyze and solve real-world problems related to agricultural prices.

AEEC 3260. Economic Analysis of Food and Agribusiness

3 Credits (3)

This course uses economic and business theory to analyze business decision making. The course includes a discussion of economic, managerial, and financial considerations relevant to modern agribusinesses. May be repeated up to 3 credits.

Prerequisite: ECON 2110G, ECON 2120G.

Learning Outcomes

1. Understand the role of managers within the food and fiber supply chain.
2. Develop an understanding of the applications of managerial economics as they related to businesses within the food and fiber supply chain.
3. Analyze market conditions and assess the position of a business within the market.
4. Identify and articulate optimal business decisions by analyzing economic and business information.

AEEC 3270. Spreadsheet Applications in Food and Agriculture

3 Credits (2+2P)

This course is an advanced course in electronic spreadsheets. Concepts and tools of data analysis and database management within a spreadsheet, emphasizing agricultural applications, are presented. May be repeated up to 3 credits.

Prerequisite: AEEC 2140 or consent of instructor.

Learning Outcomes

1. Ability to effectively utilize some of the advanced features in Microsoft Excel by course end.
2. Transforming agricultural and agribusiness problems into spreadsheet models for analysis.
3. Increase critical thinking capacity with respect to solving problems/tasks.
4. Develop creativity in solving problems/tasks.

AEEC 3280. Applied Production Economics

3 Credits (3)

This course introduces students to fundamental economic theories and analytical tools required for managing an agricultural operation. In particular, the principles of microeconomics will be reviewed and applied to the problems faced by farms and ranches. The course focuses only on economic making at the farm or ranch level. May be repeated up to 3 credits.

Prerequisite: (ECON 2120G or ECON 2120H) and (MATH 1430G) and (A ST 311 or MATH 1350G).

Learning Outcomes

1. Analyze production function and calculate the total, average, and marginal products
2. Derive profit-maximizing input and output combinations
3. Evaluate the relationship between production, revenue, and profit functions
4. Analyze crop budgets and determine optimal acreage allocation
5. Measure the impact of risk and uncertainty on agricultural production

AEEC 3998. Internship

1-4 Credits (1-4)

Professional work experience under the supervision of a faculty member. May be repeated up to 6 credits.

Prerequisite: Consent of instructor.

AEEC 4110. Food and Agribusiness Financial Management

3 Credits (3)

This course provides a description and application of techniques and principles of financial management to problem situations faced by agricultural businesses, including financial statement development and analysis, capital budgeting, sources and costs of capital. May be repeated up to 3 credits.

Prerequisite: ECON 2120G or ECON 2120H and ACCT 2110.

Learning Outcomes

1. Understand the time value of money and perform capital investment analysis for agricultural firms
2. Interpret financial statements used by agricultural firms
3. Comprehend farm financial risks and returns
4. Discuss financing options for U.S. farm businesses

AEEC 4410. Senior Seminar

1 Credit (1)

This course focuses on current topics and cases in the agribusiness literature stressing rigorous qualitative analysis of current problems and policy issues. During the course, students provide feedback about their

experience within the Department and help identify ways in which the Department can improve. Restricted to: AEAB; NREP majors. Must be Senior standing to enroll. May be repeated up to 1 credit.

Learning Outcomes

1. Illustrate an understanding of economic and business concepts as illustrated and applied in case analyses.
2. Articulate ways in which the Department can improve academically.
3. Prepare future steps in careers, e.g., resumes, cover letters, mock interviews.
4. Develop interpersonal communication skills.

**AEEC 451. Food and Agribusiness Market Assessment
3 Credits (3)**

This course is an application course in which self-managed teams develop and present marketing plans for agribusiness firms. Emphasis on integrating the marketing mix, particularly promotional elements. May be repeated up to 3 credits. Crosslisted with: AEEC 4510.

Prerequisite(s): AEEC 3210 or MKTG 305 or consent of instructor.

Learning Outcomes

1. Identify, organize and conduct market research specific to the project
2. Develop an understanding of primary and secondary research collection and analysis
3. Exhibit enhanced relationship management, communication skills, and team building
4. Develop written communication with final deliverable for implementation into the business world

**AEEC 4510. Food and Agribusiness Market Assessment
3 Credits (3)**

This course is an application course in which self-managed teams develop and present marketing plans for agribusiness firms. Emphasis on integrating the marketing mix, particularly promotional elements. May be repeated up to 3 credits. Crosslisted with: MKTG 451.

Prerequisite(s): AEEC 3210 or MKTG 305 or consent of instructor.

Learning Outcomes

1. Identify, organize and conduct market research specific to the project.
2. Develop an understanding of primary and secondary research collection and analysis.
3. Exhibit enhanced relationship management, communication skills, and team building.
4. Develop written communication with final deliverable for implementation into the business world.

**AEEC 4520. Food and Agribusiness Marketing Plan Development
3 Credits (3)**

This course focuses on learning marketing research methods applicable to developing new food and agricultural products and repositioning existing products for new markets. Students will be required to prepare precise written and oral marketing plans to industry standards and will have opportunities to present written and oral plans at national competitions. May be repeated up to 3 credits.

Learning Outcomes

1. Illustrate abilities to make decisions based on market research and analysis, including financial analysis, analysis of consumer trends, and the business environment.
2. Create professional marketing and business presentation.
3. Build effective teams to analyze and present real-world marketing opportunities.

4. Practice business decision making founded on evidence from market research.

**AEEC 4530. Case Studies in Food and Agribusiness Management
3 Credits (3)**

This course integrates production, marketing, accounting, finance, agricultural policy, human behavior, and business environment concepts in the management of agricultural businesses using a decision case approach. May be repeated up to 3 credits.

Learning Outcomes

1. Exhibit an ability to understand complex and varying business and resource issues, including financial analysis, natural resource issues, and business operations.
2. Provide reasoning and rationale for decision making, identifying the best options from many potential decisions.
3. Practice business writing and communication skills.

**AEEC 4540. Economics of Making and Marketing Wine
3 Credits (3)**

This course is designed to provide a basic knowledge of the principles of winemaking with emphases on wine production and economics for small wineries and home winemaking. The course also focuses on the investment costs of starting small wineries and the costs of making wine and successful market strategies for small wineries. The class includes a hands-on lab that includes selecting, crushing, fermenting grapes, and all the steps required through bottling the wine. Students must be 21 to enroll in the class. Consent of instructor required. May be repeated up to 3 credits.

Learning Outcomes

1. Identify and evaluate production costs, economics, and marketing strategies for small wineries.
2. Identify current technologies used in the production of wine for home and in a small winery.
3. Identify the processes required to make high-quality wine using hands-on winemaking techniques, sensory analysis, and testing.
4. Learn the basics of Viticulture (wine grape growing) practices.

**AEEC 4550. Real Estate Appraisal
3 Credits (2+2P)**

This course addresses issues influencing the value of real estate with some emphasis upon rural properties. Topics include courthouse records, property taxes, appraisal methodology, expert courtroom testimony, condemnation, and legal issues. Students will take field trips and write appraisals. Course material is relevant to students in Finance, Accounting, and Pre-Law, as well as Agriculture. Accredited for hours to apply to both pre-licensing and continuing education requirements of the New Mexico Real Estate Commission for both Appraisers and Real Estate Brokers. May be repeated up to 3 credits.

Learning Outcomes

1. Distinguish between the Income Approach, Cost Approach, and Sales Comparison Approach.
2. Identify market abstracted influences on value.
3. Apply proper appraisal methodology.
4. Demonstrate appraisal knowledge by writing a residential appraisal and a farm appraisal.

**AEEC 4997. Special Problems
1-3 Credits**

Special problems in agricultural economics or agricultural business of particular interest to the individual student. Maximum of 3 credits per

semester. No more than 6 credits toward degree. Consent of instructor required. May be repeated up to 6 credits.

AEEC 4999. Senior Thesis

3 Credits (3)

Develop a thesis project with a faculty advisor. The senior thesis requires students to work creatively to apply business and economic principles to address a problem of concern. May be repeated up to 3 credits.

Restricted to AEAB majors.

Prerequisite: consent of department head and have senior standing.

AEEC 5110. Introduction to Quantitative Methods

3 Credits (3)

Introduce students to quantitative tools widely used in applied economic analysis such as regression analysis, statistical tests, and mathematical programming. Restricted to: Agricultural Economics and Business (Masters) majors.

Learning Outcomes

1. Course objectives for the statistics module include helping students master basic statistical tests/methods commonly used in research and business analysis. Specific methods / tests include: One-sample mean hypothesis tests, Two-sample mean hypothesis tests, Analysis of Variance (mean tests for three or more samples), and Nonparametric methods to test proportions.
2. Course objectives for the econometrics/regression module include introducing students to the field of econometrics and helping them master a basic understanding of econometrics and its use in agricultural economics and business. Specific topics that will be covered include: Correlation analysis, Simple least squares regression; and Multiple regression analysis.
3. Course objectives for the math programming module including helping students formulate, specify, build and interpret linear programming models using Microsoft Excel's Solver feature and the specialized software package, GAMS.

AEEC 5120. Microeconomic Theory

3 Credits (3)

A rigorous re-examination of the pricing mechanism in the goods and factor markets. Development of theoretical tools of general applicability. May be repeated up to 3 credits.

Prerequisite: ECON 371 and ECON 457, or consent of instructor.

Learning Outcomes

1. A rigorous re-examination of the structure and function of the price mechanism to guide resource allocation and policy analysis in the goods and factor markets.
2. Introduce the models that economists use to explain the behavior of consumers, firms, and markets.
3. Development of theoretical tools used for economic analysis.

AEEC 5130. Macroeconomic Theory

3 Credits (3)

This course provides contemporary aggregative theory regarding the interrelationships among national income, employment, the price level, money supply and interest rates, and implications of this theory for public policy in a mixed economy. May be repeated up to 3 credits.

Learning Outcomes

1. Develop an in-depth understanding of the IS/LM model.
2. Understand how fiscal and monetary policy affect output, employment, interest rates and prices.
3. Develop and use mathematical models of the economy.

4. Derive the effect of a change in tax rates, government spending, or a change in the money supply, on the nation's output through expenditure multipliers.
5. Understand how fiscal and monetary policy work in an Open economy.
6. Understand the basics of Exogenous and Endogenous Growth Theory.

AEEC 5140. Agricultural Policy

3 Credits (3)

Historical and cultural background of food and agricultural policy in the United States. Analysis of food and agricultural problems, policy-making and implementation. Economic evaluation of specific U.S. food and agricultural policy instruments, their domestic and international impacts. Same as AEEC 3130V with additional work required at the graduate level. Cannot receive credit for both AEEC 3130V and AEEC 5140. May be repeated up to 3 credits.

Prerequisite: Consent of instructor.

Learning Outcomes

1. Apply economic concepts to deepen understanding of agricultural policy, particularly regarding the macroeconomic importance to agriculture.
2. Be able to describe inherent tradeoffs and opportunity costs in policy.
3. Acquire an international perspective with respect to food and agricultural policy.
4. Develop an appreciation for history and trajectory of agricultural policy.

AEEC 5150. Economic and Financial Analysis of Agribusiness

3 Credits (3)

This course focuses on common analytical tools used to evaluate the economic and financial performance of businesses operating in the food and fiber supply chain. The course uses a combination of course discussions, assignments, and case studies to present the material critical to the successful management of agribusinesses. Topics include financial statements and analysis, financial planning/modeling, financial risk and risk management, the time value of money, and capital budgeting methods used in agribusiness.

Learning Outcomes

1. Read, understand, and create financial statements used in agribusiness, including income statements, balance sheets, cash flow statements, and owner's equity statements.
2. Describe and conduct financial analysis including comparative analysis, change analysis, and common-size analysis, and ratio analysis.
3. Describe and understand credit in agricultural production and agribusiness.
4. Understand the importance of capital budgeting within agribusiness and be able to conduct capital budgeting.
5. Describe, calculate, and use standard measures of investment return including net present value, internal rate of return, discounted payback period, and simple payback period.

AEEC 5210. International Agricultural Trade Theory and Policy

3 Credits (3)

This course provides a review and analysis of international trade models. Analysis of the effects of trade instruments such as tariffs, quotas, and subsidies on welfare and income distribution. Analysis of bilateral, regional, and multilateral trade agreements and their effect on the agricultural sector from both country-specific and global perspectives. May be repeated up to 3 credits.

Learning Outcomes

1. Understand and be able to describe the importance of international trade to U.S. agriculture.
2. Familiar with commonly used trade models to describe impacts of trade barriers, for example tariffs, quotas, and subsidies.
3. Analyze trade agreements and their impact on economies of different trade partners.

AEEC 5220. Financial Derivative Markets**3 Credits (3)**

This course examines advanced futures and options strategies for income generation and risk management. Coverage includes a variety of markets, e.g., interest rates, stock indexes, metals, currencies, livestock, and grains. Both technical and fundamental trading strategies are identified and discussed. Same as AEEC 3220/BFIN 311 with additional coursework required at the graduate level. Cannot receive credit for both AEEC 3220/BFIN 311 and AEEC 3220/BFIN 311. Taught with BFIN 511.

May be repeated up to 3 credits.

Learning Outcomes

1. Define risk and identify methods of managing risk.
2. Demonstrate understanding of vocabulary associated with derivatives and derivative markets.
3. Identify the role that derivative markets play in reducing risk.
4. Demonstrate a basic understanding of derivative markets including their use in risk management and income generation.

AEEC 5230. Public Sector Economics**3 Credits (3)**

Introduction to the economic rationale for government intervention in the economy and the effects of that intervention on economic agents and the economy in general. Emphasis on the expenditure side of government policies. Same as POLS 522. May be repeated up to 3 credits.

Learning Outcomes

1. The focus of Public Sector Economics I, which draws on microeconomic theory, concentrates on the development of analytical tools and their application to key issues relating to the spending activities of government.
2. This course aims to provide students with a solid grounding in the analytical methods that are important for studying the role of government in society.
3. Moreover, it will provide students with an economics perspective of that role and when it is appropriate for governments to intervene in an economy.
4. Once established, students will have a practical way to examine a modern government's programs such as social Security and other welfare programs.

AEEC 5240. Econometrics**3 Credits (3)**

An integration of quantitative and statistical techniques for research and management in economics and business. May be repeated up to 3 credits.

Prerequisite: ECON 457 and ECON 405 or A ST 505.

Learning Outcomes

1. This course will cover simple linear regression on cross-sectional data; multiple-regression, data with limited dependent variables (including binary, truncated/censored, and count data); and if time permits, time series econometrics.

2. After this course, you will understand the theories behind these methods, know when to use them, and be able to carry them out in Stata®, a popular commercial software for applied econometricians.

AEEC 5320. Microcomputer Applications in Agriculture**3 Credits (2+2P)**

An advanced course in electronic spreadsheets and the concepts and tools of database management emphasizing agricultural applications. May be repeated up to 3 credits.

Prerequisite: AEEC 2140G or consent of instructor.

Learning Outcomes

1. Understand and apply descriptive, predictive, and prescriptive analysis to solve business problems.
2. Use Excel spreadsheet formula in modeling agribusiness problems/solutions.
3. Use basic spreadsheet skills to conduct simple business feasibility analyses.
4. Conceptualize and solve a research problem.

AEEC 5330. Agribusiness Marketing**3 Credits (3)**

Applications course in which self-managed teams apply marketing theory in the development and presentation of marketing plans for food and agribusiness firms. Course includes analysis of marketing problems with emphasis on strategic marketing issues changing trade policies, and global competitiveness. May be repeated up to 3 credits.

Learning Outcomes

1. Estimate consumer demand and supply functions using regression analysis.
2. Measure consumer willingness to pay for food products using conjoint analysis.
3. Evaluate the value of new product attributes using contingent valuation.
4. Conduct market research and present results.

AEEC 5340. Agribusiness Management**3 Credits (3)**

Integration of production, marketing, accounting, finance, agricultural policy, human behavior, and business environment concepts in management of agricultural businesses using a decision case approach.

May be repeated up to 3 credits.

Learning Outcomes

1. To provide an integrated approach to marketing, financial, and strategic management problems of agribusiness and commercial farm and ranch businesses.
2. To develop a deeper understanding of the agribusiness system through the investigation of selected U.S. agribusinesses.

AEEC 5350. Economics of Water Resource Management and Policy**3 Credits (3)**

Focuses on issues, approaches and methods used in the assessment of water resource management and policy problems. Extends and further develops student understanding and comprehension of specific economic concepts and methods that are useful in the assessment and management of water resources, including cost-benefit analysis, welfare economics, non-market valuation, watershed management, and consideration of equity and ethical concerns. Students will develop critical reasoning, communication and analytic skills through active class discussions and assignments that emphasize both quantitative and written products.

Learning Outcomes

1. Describe the major categories of water use and explain their role, function, and economic value of water within natural and human systems.
2. Apply basic economic concepts to the assessment of water quantity and quality issues.
3. Analyze impacts of water management and policy decisions on competing water resource users, public interests, and address their potential for conflict.
4. Demonstrate conceptual and systems thinking applied to water resource problems.
5. Apply quantitative and qualitative reasoning, modeling, and decision-support methods to water resource problems, including Integrated Water Resources Management (IWRM), Cost-Benefit Analysis (CBA), and Economic and Environmental Impact Assessment.
6. Compare analytic methods for watershed assessment, including statistical, optimization, and simulation methods applied to watershed assessment.

AEEC 5360. Production Economics**3 Credits (3)**

Application of microeconomic theory to problems and decisions of food and agricultural firms. The theoretical foundation of production economics and the theory of the firm are developed. May be repeated up to 3 credits.

Prerequisite: MATH 1430G, ECON 312, and ECON 457.

Learning Outcomes

1. Students should be able demonstrate an understanding of the microeconomic underpinnings of production economics, as well as how theoretical assumptions are made regarding physical production of agricultural products.
2. Students should be able to examine production decisions by agricultural firms, and determine economically optimal decisions, including under cases of risk and uncertainty.

AEEC 590. Special Topics**3 Credits (3)**

Seminars in selected current topics in the various areas of agricultural economics and economics. Offerings will carry a subtitle.

Prerequisite: consent of instructor.

AEEC 593. Internship**1-6 Credits**

Supervised professional on-the-job training experience in policy analysis.

AEEC 594. Internship**1-6 Credits**

One semester to six months internship with a regulated firm or public utility commission. A faculty member will direct and evaluate the internship. For AEEC regulatory option students only.

AEEC 595. Internship**3 Credits (3)**

Supervised professional on-the-job learning experience.

Prerequisite(s): Consent of instructor.

AEEC 596. Individual Study**1-3 Credits**

Individual study programs. Each offering will carry a subtitle. Maximum of 3 credits in a semester and 6 credits in a program.

Prerequisite: consent of instructor.

AEEC 599. Master's Thesis**1-15 Credits**

Thesis.

AEEC 5991. Non-Thesis Research Project**1-3 Credits (1-3)**

Individual investigations, either analytical or experimental. Maximum of 3 credits per semester. No more than 3 credits toward a degree. May be repeated up to 3 credits.

AEEC 5994. Creative Component Project**3-6 Credits (3-6)**

Individual investigations, either analytical or experimental. A minimum of 3 to 6 credits per semester. No more than 6 credits toward degree. Consent of instructor required. May be repeated up to 6 credits.

Prerequisite: Consent of Instructor.

AEEC 5996. Special Topics**3 Credits (3)**

Seminars in selected current topics in the various areas of agricultural economics and economics. Offerings will carry a subtitle.

Prerequisite: consent of instructor.

AEEC 5997. Individual Study**1-3 Credits**

Individual study programs. Each offering will carry a subtitle. Maximum of 3 credits in a semester and 6 credits in a program.

Prerequisite: consent of instructor.

AEEC 5998. Internship**1-6 Credits**

Supervised professional on-the-job training experience in policy analysis.

AEEC 5999. Master's Thesis**1-15 Credits**

Thesis.

AERO-AEROSPACE STUDIES

AERO 121. Heritage and Values**2 Credits (1.25+2P)**

"Heritage and Values of the United States Air Force," is a survey course designed to introduce students to the United States Air Force and provides an overview of the basic characteristics, missions, and organization of the Air Force. Includes Leadership Lab practicum. May be repeated up to 2 credits. Restricted to Las Cruces campus only.

AERO 122. Heritage and Values II**2 Credits (1.25+2P)**

"Heritage and Values of the United States Air Force," is a survey course designed to introduce students to the United States Air Force and provides an overview of the basic characteristics, and organization of the Air Force. Includes Leadership Lab practicum. May be repeated up to 2 credits. Restricted to Las Cruces campus only.

AERO 221. Team and Leadership Fundamentals**2 Credits (1.25+2P)**

"Teams and Leadership Fundamentals," focuses on laying the foundation for teams and leadership. The topics include skills that allow cadets to improve their leadership on a personal level and within a team. The courses will prepare cadets for their field training experience where they will be able to put the concepts learned into practice. The purpose is to instill a leadership mindset and to motivate sophomore students to transition from AFROTC cadet to AFROTC officer candidate. Includes Leadership Lab practicum. May be repeated up to 2 credits. Restricted to Las Cruces campus only.

AERO 222. Team and Leadership Fundamentals II**2 Credits (1.25+2P)**

"Team and Leadership Fundamentals," focuses on laying the foundation for teams and leadership. The topics include skills that will allow cadets to improve their leadership on a personal level and within a team. The courses will prepare cadets for their field training experience where they will be able to put the concepts learned into practice. The purpose is to instill a leadership mindset and to motivate sophomore students to transition from AFROTC cadet to AFROTC officer candidate. Includes Leadership Lab practicum. May be repeated up to 2 credits. Restricted to Las Cruces campus only.

AERO 223. Air Force Leadership Development
1 Credit (2P)

This course prepares cadets to excel in field training. Cadets are prepared in all facets of field training, including: leadership competency evaluations, the Cadet's Guide to Field Training, individual drill evaluations, attention to detail, dining hall procedures, maintenance of living areas, and the group problem solving process. Restricted to: Main campus only.

AERO 301. Leading People and Effective Communication
4 Credits (3+2P)

"Leading People and Effective Communication," teaches cadets advanced skills and knowledge in management and leadership. Special emphasis is placed on enhancing leadership skills and communication. Cadets have an opportunity to try out these leadership and management techniques in a supervised environment as juniors and seniors. Includes Leadership Lab practicum.

Prerequisite(s): Completion of AERO 121/AERO 122 and AERO 221/AERO 222, or permission of instructor.

AERO 302. Leading People and Effective Communication II
4 Credits (3+2P)

"Leading People and Effective Communication," teaches cadets advanced skills and knowledge in management and leadership. Special emphasis is placed on enhancing leadership skills and communication. Cadets have an opportunity to try out these leadership and management techniques in a supervised environment as juniors and seniors. Include Leadership Lab practicum.

Prerequisite(s): Completion of AERO 121/AERO 122 and AERO 221/AERO 222, or permission of instructor.

AERO 401. National Security, Leadership Responsibilities and Commissioning Preparation
4 Credits (3+2P)

"National Security Affairs/Preparation for Active Duty," is designed for college seniors and gives them the foundation to understand their role as military officers in American society. It is an overview of the complex social and political issues facing the military profession and requires a measure of sophistication commensurate with the senior college level. The final semester provides information that will prepare the cadets for Active Duty. Includes Leadership Lab practicum.

Prerequisite(s): Completion of AERO 121/AERO 122, AERO 221/AERO 222, and AERO 301/AERO 302, or permission of instructor.

AERO 402. National Security, Leadership Responsibilities and Commissioning Preparation II
4 Credits (3+2P)

"National Security Affairs/Preparation for Active Duty," is designed for college seniors and gives them the foundation to understand their role as military officers in American society. It is an overview of the complex social and political issues facing the military profession and requires a measure of sophistication commensurate with the senior college level. The final semester provides information that will prepare the cadets for Active Duty. Includes Leadership Lab practicum.

Prerequisite(s): Completion of AERO 121/AERO 122, AERO 221/AERO 222, AERO 301/AERO 302, and AERO 401 or permission of instructor.

AERO 411. Aerospace Studies Independent Study
1 Credit (1)

This course provides in-depth research on specified topics of the United States Air Force and NMSU's Detachment 505 history. Consent of instructor required.

Prerequisite(s): AERO 301, AERO 302, AERO 401, AERO 402.

AERT-AEROSPACE TECHNOLOGY

AERT 105. Aerospace Engineering PLTW
4 Credits (2+4P)

Introduce the student to Aerospace Engineering (AE) concepts and history. Studied topics include History of Flight, Aerodynamics, Rocket Science, Orbital Physics, Systems Engineering and Life Support/Environmental Systems. Restricted to: Community Colleges only.

AERT 111. Basic Electricity and Electronics
3 Credits (2+2P)

Fundamentals of electricity and electronics, basic circuit devices, meters, transistors, integrated fiber optics, and industrial application topics. Minimum math proficiency of CCDM 103 or CCDM 104 required or math placement into CCDM 114 or higher. Restricted to: Community Colleges only. Crosslisted with: ELT 105

AERT 121. Introduction to the Aerospace Workplace
4 Credits (2+4P)

The course covers space history, regulations, controls, aerospace industry terminology and acronyms as well as hands-on activities related to tools, procedures, and standard practices. Restricted to: Community Colleges only.

AERT 122. Aerospace Safety and Quality
3 Credits (2+2P)

Covers identification of hazards, personal protective equipment, safe practices, and protection of personnel, property, and equipment in the aerospace environment. Basic principles of quality assurance engineering and quality control relating to work processes will be discussed. Restricted to: Community Colleges only.

AERT 145. Introduction to Drone-UAS Technology
3 Credits (3)

Introduction to drone or Unmanned Aircraft System (UAS) technology and its applications in architecture, engineering, construction, film, media, and other related industries. Best practices, training, permissions, licensing, and documentation requirements will be explored. Obtaining, working with, and managing data obtained by drones will be emphasized. Emerging technologies and future applications will be introduced. Restricted to Dona Ana Campus only.

Learning Outcomes

1. Describe applications of drone technology by industry.
2. Recognize types of drone data.
3. Provide examples of how drone data can be used in project visualization.
4. Identify standard drone features.
5. Utilize related applications, software, and hardware successfully.
6. Demonstrate professional practices.
7. Describe training, permissions, licensing, and documentation requirements.
8. Identify best practices of UAV use.

9. Process and produce imagery and videos from drone data. 1
10. Perform basic data processing. 1
11. Manage point cloud data. 1
12. Create 3D meshes from drone data. 1
13. Explore emerging technologies and future applications.

AERT 195. Introduction to Drone - UAS Equipment Operation and Maintenance
4 Credits (4)

Introduction to drone or Unmanned Aircraft System (UAS) equipment operation and maintenance. Flying and maneuvering drones will be practiced. Pre-flight, in-flight, and post-flight procedures will be emphasized. Drone maintenance will be introduced. Restricted to Dona Ana campus only.

Prerequisite: AERT 145.

Learning Outcomes

1. Describe related safety practices and procedures.
2. Discuss related communications requirements.
3. Demonstrate launch preparation steps.
4. Create a basic flight plan.
5. Demonstrate proper preflight, inflight, and post-flight procedures.
6. Describe standard flight operations.
7. Perform basic drone flight and maneuvers.
8. Identify elements of maintenance and inspection programs.
9. Describe related FAA requirements. 1
10. Demonstrate proper equipment and battery maintenance. 1
11. Describe proper parts and material control.

AERT 211. Electromechanical Devices
4 Credits (2+4P)

Theory and application of electromechanical devices and digital control circuits. Includes AD and DA converters, pneumatics, hydraulics, programmable logic controllers, DC, AC and stepper motors, and servomechanisms. Crosslisted with: MAT 240.

Prerequisite(s): ELT 160.

AERT 212. Materials and Processes (Basic Metallurgy)
3 Credits (2+2P)

Basic Metallurgy: Aluminum and its alloys (Alclad), hardening, tempering, annealing, anodizing, magnetism, titanium, copper, stainless steel, surgical steel, safety wire, iron rust. Metallurgical Processes: Welding and soldering. Inspection Fundamentals: Eddy currents, magnetic particles (ferrous and non-ferrous metals), ultrasonic, x-ray, visual, corrosion and corrosion control, and vacuum bagging. Restricted to: Community Colleges only.

AERT 213. Aerospace Fluid Systems
3 Credits (2+2P)

This course includes a familiarization of fluid system components, characteristics, and applications. Cryogenic and hypersonic materials and high pressure systems are also covered. Restricted to: Community Colleges only.

AERT 214. Aerospace Systems
3 Credits (2+2P)

This course provides an introduction to expendable and reusable spacecraft systems including hydraulic, pneumatic, electrical, propulsion, mechanical, HVAC, and ECLSS (Environmental Control and Life Support System). How systems interact with computer and data acquisition systems is also covered. Restricted to: Community Colleges only.

AERT 221. Inspection Requirements and Planning Metrology
3 Credits (2+2P)

Course teaches the benefits of inspection, quality control, material conditions. Also covers measurements, including temperature, ultrasonic, vibration and more. Restricted to: Community Colleges only.

AERT 222. Electromechanical Systems
3 Credits (2+2P)

Principles and applications of preventive and corrective maintenance procedures on industrial production machines using systems technical and maintenance manuals to develop troubleshooting procedures using systems block and schematic diagrams. Crosslisted with: MAT 245.

Prerequisite(s)/Corequisite(s): AERT 221 or MAT 240. Prerequisite(s): ELT 160.

AERT 224. Aerospace Tests and Measurements
3 Credits (2+2P)

This course covers electrical and mechanical testing procedures (primarily non-destructive testing), equipment, measurements, and instrumentation involved in aerospace systems. Verification of tool and equipment calibration is also covered.

Prerequisite(s)/Corequisite(s): AERT 221. Restricted to: Community Colleges only.

AERT 225. Cooperative Experience
1-3 Credits (1-3)

Supervised cooperative work program. Student is employed in an approved occupation and supervised and rated by the employer and instructor. Consent of instructor required. Graded: S/U. Restricted to: Community Colleges only.

AERT 245. Remote Pilot Certificate Test Preparation
3 Credits (3)

Preparation course for the FAA Unmanned Aircraft General – Small (UAG) aeronautical knowledge exam. Overview of applicable regulations, restrictions, procedures, and operations will be provided. Process for obtaining an FAA Tracking Number (FTN), registering for the FAA Unmanned Aircraft General – Small (UAG) aeronautical knowledge exam, and certificate registration requirements will be explored. Restricted to Dona Ana campus only.

Prerequisite: AERT 195.

Learning Outcomes

1. Demonstrate increased knowledge related to topics covered in the FAA UAG exam.
2. Demonstrate increased skills related to topics covered in the FAA UAG exam.
3. Demonstrate increased abilities related to topics covered in the FAA UAG exam.
4. Describe processes related to obtaining a FAA Unmanned Aircraft General – Small (UAG) aeronautical certificate.
5. Practice certification test-taking skills.

AERT 255. Special Topics
1-4 Credits (1-4)

Specific topics to be announced in the Schedule of Classes. Restricted to: Community Colleges only.

AERT 290. Independent Study
1-3 Credits (1-3)

Individual studies in areas directly related to aerospace. Consent of instructor required. Restricted to: Community Colleges only.

AFST-AFRICANA STUDIES

AFST 1110G. Introduction to Africana Studies

3 Credits (3)

An interdisciplinary course that introduce students to the histories, cultures, and experiences of global people of African descent. NMSU Specific Description This course presents a survey of the experiences of Blacks across the African Diaspora with particular attention given to the experience of Blacks in the United States. This course will examine the experiences of Black people across various disciplines and fields of academic inquiry. African people, and their descendants across the diaspora, have contributed to the political, cultural, economic, and social landscape of the world. This course will assist you in understanding the Black/Africana experience in the U.S. and around the world.

Learning Outcomes

1. Students will carry out critical analysis and engagement with complex, interdependent global systems and legacies (natural, physical, social, cultural, economic, and political) and their implications for people's lives and the earth's sustainability.
2. Students will explore issues/objects/works through collection and analysis of evidence that result in informed conclusions/judgments, understanding and analysis of critical literacy and ethics pertaining to the dynamics of diversity, equity, inclusion and social change.
3. Students will examine habits of mind characterized by the comprehensive exploration of issues, ideas, artifacts and events related to diversity, equity and inclusion before accepting or formulating an opinion or conclusion.
4. Students will demonstrate the capacity to combine or synthesize existing ideas, images, or expertise in original ways.
5. Students will prepare, purposeful presentations designed to increase knowledge, foster understanding, or promote change in listener's values, beliefs, or behaviors pertaining to the dynamics of diversity, equity, inclusion and social change.
6. Students will develop and express ideas in writing and learning in many genres and styles using different writing technologies, mixing texts, data and images that relate to the dynamics of diversity, equity, inclusion and social change.
7. Students will show the ability to reason and solve quantitative problems from a wide array of authentic contexts and everyday life situation.
8. Students will demonstrate the ability to know a need for information or visual literacy and understanding of the dynamics of historic and contemporary inequality and how they shape individual and community power, biases, structural arrangements and social justice bias.
9. Students will enact behaviors and efforts and interact with others on the team to enhance the quality and quantity of contributions made to team discussions. 1
10. Students will design, evaluate and implement strategies to answer open-ended questions in multiple ways. 1
11. Students will work to make a difference in the civic life of communities and develop the combination of knowledge, skills and values and motivation to make a difference. 1
12. Students will develop their cognitive, affective and behavioral skills and characteristics to support effective and appropriate interaction in a variety of cultures. 1
13. Students will develop their ethical self-identity as they practice ethical decision making skills while learning how to describe and analyze positions on ethical issues. 1

14. Students will engage in self-reflection regarding one's own history and position in contemporary U.S. society as well as in a global context. 1
15. Student learners will connect perspectives and integrate relevant experience and academic knowledge from multiple disciplines.

AFST 2110G. African American History

3 Credits (3)

This course surveys the long and turbulent journey of African-Americans, the rich culture they have cultivated, and their persistent struggle for freedom from the perspective, interests, aspirations, possibilities and envisioned destinies of African descended peoples. From African antiquity to the 21st century, students will study: 1) The African background; 2) The Holocaust of Enslavement; 3) Black Resistance and Abolition; 4) Reconstruction; 5) The Jim Crow Era; 6) Civil Rights and Black Power, and; 7) The Post-Industrial/Post Civil Rights Era. (unique)

Learning Outcomes

1. Demonstrate a full ability to analyze and interpret how enslavement and oppression shape the racial, gendered, social, economic, and political realities of African descended people in the U.S.
2. Recognize and respond to ethical challenges/social justice issues that affect African American people.
3. Acquire a critical understanding of the human condition.

AFST 2140G. Black Women in the African Diaspora

3 Credits (3)

This survey course reviews the contributions of Black women to the Black Diasporic Story. NMSU Specific Description This course critically surveys Black women's history and experiences across the African Diaspora. Particular attention is given to Black women's experiences in North America. Some of the topics covered include: Black women and the building of nation-states; Black women in the U.S. slave system; Black women in race and gender movements in the U.S. and Latin America; systemic and institutionalized violence against Black women; Black motherhood; Black Latinas and the politics of identity; representations of Black women in popular culture; radical activism and Black lesbian identity, as well as the emergence and growth of Black feminist theory and selected other topics. In addition, students will engage in an autobiographical project on a Black woman they select to study.

Learning Outcomes

1. Students will gain theoretical knowledge of the field of Black feminist thought.
2. Students will explore the relationship between Black feminist theory and the larger more general body of work on feminism.
3. Students will study the historical, political and social experiences of Black women in the Americas.
4. Students will understand the intersecting relationship between race, gender, class and sexuality.
5. Students will critically analyze the representations of Black women in popular culture.

AFST 4110. Race, Culture, and Education

3 Credits (3)

This course deconstructs the history of education through the lens of culture and race. Using an intersectionality framework, the creation of public education, and the impact of historical shifts within the law concerning education will be examined. Special emphasis is placed on the role of ethnicity in the development of the United States and its education system. Includes an overview of multicultural/multilingual curricula with a special focus on culturally / linguistically responsive instruction and assessment practices. This course provides

a critical examination of race and culture using multicultural theoretical frameworks to analyze the conditions of education today.

Learning Outcomes

1. Analyze and interpret the historical, philosophical, economic, and sociocultural elements of education as it relates to race and culture.
2. Evaluate and interpret the ways in which education policies influence and are influenced by equity issues.
3. Describe multicultural education initiatives and assumptions about teaching, learning, and knowing.
4. Understand how cultural groups and students' cultural identities affect language learning and education overall.
5. Explain and provide examples of anti-bias teaching strategies and education practices.

AGRO-AGRONOMY

AGRO 1110G. Introduction to Plant Science (Lecture & Lab)

4 Credits (3+2P)

This is an introductory course for understanding plant science. Basic biological, chemical, and physical principles of various plants are covered. The focus of this course is on plants/crops used in agriculture production of food and fiber as well as pasture and range plants. Plant taxonomy and soil properties will also be discussed. Same as HORT 1115G.

Learning Outcomes

1. Describe the basic structure of plants including growth and function.
2. Define photosynthesis, respiration, and translocation
3. Utilize plant taxonomy techniques to identify various plants.
4. Classify soils based on their chemical and physical properties.
5. Explain how different soil properties affect plant growth and sustainability.

AGRO 2160. Plant Propagation

3 Credits (2+2P)

Practical methods of propagating horticultural plants by seed, cuttings, layering, grafting, division and tissue culture. Examination of relevant physiological processes involved with successful plant propagation techniques. Crosslisted with HORT 2160.

Learning Outcomes

1. Practical methods of propagating plants by seed, cuttings, layering, grafting, division, and tissue culture through experiential, "hands-on" laboratories.
2. Relevant physiological principles involved in propagating horticultural plants through lecture discussions and readings.

AGRO 2996. Special Topics

1-4 Credits (1-4)

Specific subjects and credits to be announced in the Schedule of Classes. Maximum of 4 credits per semester. No more than 9 credits toward a degree. May be repeated up to 9 credits. Consent of Instructor required.

Learning Outcomes

1. Varies

AGRO 300. Special Topics

1-4 Credits (1-4)

Specific subjects and credits to be announced in the Schedule of Classes. Maximum of 4 credits per semester. No more than 9 credits toward a degree. May be repeated up to 9 credits. Consent of Instructor required. Restricted to Las Cruces campus only.

AGRO 303V. Genetics and Society

3 Credits (3)

Relates the science of genetics with social ramifications. Ways in which genetics and evolution interact with social, political, and economic issues. Includes genetic engineering, gene therapy, DNA finger-printing, ancient DNA, plant and animal improvement, and future prospects. Students required to formulate value judgments on contemporary biological issues that will impact society. Crosslisted with: GENE 303V.

AGRO 305. Principles of Genetics

3 Credits (3)

Covers fundamental principles of reproduction, variation, and heredity in plants and animals. May be repeated up to 3 credits.

Prerequisite: (BIOL 2610G and BIOL 2110G, or BIOL 2110G and BCHE 140, and either CHEM 1215G or CHEM 1216).

Learning Outcomes

1. To provide an introduction to the basic concepts, methods, and terminology of genetics. Introduction to genomics and bioinformatics.
2. To develop a working understanding of genetics and heredity
3. To understand in some depth, the mechanism of DNA replication, transcription and protein synthesis. To understand the regulation of gene expression.
4. To examine the impact of genetics on both basic and applied aspects of the biological sciences, as well as its effects on our everyday lives.

AGRO 311. Introduction to Weed Science

4 Credits (4)

Principles of weed science with emphasis on characteristics of invasive plants, methods of integrated weed management, and current issues impacting weed management. Identification of local weeds. Same EPWS 311.

Prerequisite: CHEM 1215G and BIOL 2110G.

AGRO 365. Principles of Crop Production

4 Credits (3+3P)

Basic principles of crop production including environmental and physiological factors limiting production, plant nutrition and soil science, soil-water management, cropping systems and management, pest management, and economic factors influencing crop production. Crosslisted with: HORT 365

Prerequisite(s): AGRO 1110G/HORT 1115G, CHEM 1215G or equivalent and MATH 1215 or equivalent.

AGRO 377. Introduction to Turfgrass Management

4 Credits (3+3P)

Establishment and maintenance of turfgrass with emphasis on seeding methods, soil and water management, mowing, disease, insects and turfgrass varieties. Consent of instructor required. Crosslisted with: HORT 377

AGRO 391. Internship

1-6 Credits

Professional work experience under the joint supervision of the employer and a faculty member. A written report is required. No more than 6 credits toward a degree. Consent of Instructor required. Graded: S/U Grading (S/ U, Audit).

Prerequisite(s): Consent of instructor.

AGRO 447. Seminar

1 Credit (1)

Organization, preparation, and presentation of current topics in agronomy, environmental sciences, horticulture, and soil science. Crosslisted with: HORT 447, ENVS 447 and SOIL 447.

AGRO 449. Special Problems**1-3 Credits (1-3)**

Research problem, experience training, or other special study approved by a faculty adviser. Maximum of 3 credits per semester and a grand total of 6 credits. May be repeated up to 6 credits. Consent of Instructor required.

AGRO 450. Special Topics**1-4 Credits (1-4)**

Specific subjects to be announced in the Schedule of Classes. Maximum of 4 credits per semester and a total of 9 credits toward a degree. May be repeated up to 9 credits. Consent of Instructor required.

AGRO 462. Plant Breeding**3 Credits (3)**

Principles and practices involved with the genetic improvement of plants. May be repeated up to 3 credits.

Prerequisite(s): ANSC/AGRO/BIOL/HORT/GENE 305 or GENE 315 and GENE 320.

AGRO 471. Plant Mineral Nutrition**3 Credits (3)**

Basic and applied aspects of plant requirements for soil-derived minerals and the processes whereby minerals are acquired, absorbed, translocated, and utilized throughout the plant. Same as HORT 471 and EPWS 471. May be repeated up to 3 credits.

Prerequisite/Corequisite: EPWS 314/BIOL 314, or concurrent enrollment, or consent of instructor.

AGRO 483. Advanced Sustainable Crop Production**4 Credits (3+3P)**

Characteristics and objectives of sustainable agricultural systems with application to the production, utilization, and improvement of agronomic and vegetable crops.

Prerequisite: AGRO 365 or HORT 365.

Learning Outcomes

1. Identify and analyze issues in agriculture and their possible causes.
2. Identify principles of sustainable agriculture and contrast with conventional agriculture.
3. Evaluate application of principles of sustainable agriculture.
4. Define clearly what sustainable agriculture is and its importance for conserving natural resources.
5. Evaluate role of different crop management practices such as GMO's or organic agriculture and make unbiased inferences based on scientific evidence.
6. Gain experience in sustainable crop production through experiential learning.
7. Observe, analyze, and critique real-world examples of sustainable agriculture and conventional agriculture models.
8. Collaborate with peers and engage in team-based learning.
9. Present and write well on topics in sustainable crops. 1
10. Learn about advances in agricultural technology and its role in sustainable crop production.

AGRO 492. Diagnosing Plant Disorders**3 Credits (2+3P)**

Systematic diagnosis of the physiological, pathological, and entomological causes of plant disorders. Same as EPWS 492 and HORT 492.

Prerequisites: EPWS 303 and EPWS 310.

AGRO 500. Special Topics**1-4 Credits**

Specific subjects and credits to be announced in the Schedule of Classes. Maximum of 4 credits per semester. No more than 9 credits toward a degree.

AGRO 505. Research Orientation**4 Credits (3+2P)**

Training in writing research proposals, presentation of research results, and interpretation of research results. Crosslisted with: HORT 505, SOIL 505 and ENVS 505.

AGRO 511. Introduction to Weed Science (f)**4 Credits (4)**

Covers the principles of weed science with emphasis on characteristics of invasive plants, methods of integrated weed management, and current issues impacting weed management. Includes identification of local weeds. Research paper required for graduate credit. Same as EPWS 511.

Prerequisites: CHEM 1215G or BIOL 2110G, or consent of instructor.

AGRO 516. Molecular Analysis of Complex Traits**3 Credits (3)**

Provide a comprehensive overview of molecular genetic analysis of complex phenotypes, including case histories/experiments in plants, animals and humans. Emphasize technological developments in DNA marker technologies and their application to molecular quantitative genetics. Explore the efficient application of these technologies in the future to complex genetic systems, breeding, and other areas of life sciences. Same as HORT 516.

Prerequisite: AGRO 305 or consent of instructor.

AGRO 525. Scientific Writing- How to be a Productive and Effective Writer**1-3 Credits (1-3)**

Students will learn to improve their writing skills so that their manuscript preparation process is more efficient and productive. Students will also gain experience in peer-review. Crosslisted with: HORT 525, EPWS 525, SOIL 525, AGRO 625, HORT 625 and SOIL 625.

AGRO 590. Graduate Seminar**1 Credit (1)**

Current research discussions presented by masters level graduate students. Not more than one credit toward the degree. Same as HORT/SOIL 590. Crosslisted with: HORT 590 and SOIL 590.

AGRO 595. Internship**1-6 Credits**

Supervised professional on-the-job learning experience. Limited to Master of Agriculture candidates. Not more than 6 credits toward the degree.

AGRO 596. Masters Proposal**1 Credit (1)**

Current research proposal written by masters level graduate students. Consent of Instructor required. Crosslisted with: ENVS 596, GENE 596, HORT 596 and SOIL 596. Restricted to: Masters HORT; Masters PLEN majors.

Prerequisite(s): Master level graduate students.

AGRO 597. University Teaching Experience**1-3 Credits (1-3)**

Certain graduate students will be permitted to teach up to one-third of one AGRO/HORT/SOIL/ENVS course. The student will prepare and deliver lectures and will prepare, administer, and grade at least one examination. The professor in charge of the course will attend and evaluate the student's lectures.

AGRO 598. Special Research Programs**1-6 Credits**

Individual investigations, either analytical or experimental. Maximum of 6 credits per semester. No more than 9 credits towards degree. Same as SOIL 598.

AGRO 599. Master's Thesis

15 Credits

Thesis.

AHS-ALLIED HEALTH SCIENCE

AHS 115. Dietary Guidelines & Meal Planning

4 Credits (4)

A combination of the science of nutrition and the current Dietary Guidelines for Americans with practical application to meal planning and preparation. Strategies and techniques used to plan and prepare healthful and appetizing meals are explored. Evidenced-based dietary guidelines are provided to meet the needs of individuals and groups with chronic diseases. Menu development, modification and analysis are reviewed. Restricted to Community Colleges campuses only.

AHS 120. Medical Terminology

3 Credits (3)

The study and understanding of medical terminology as it relates to diseases, their causes and effects, and the terminology used in various medical specialties. Emphasis will be placed on learning the basic construction of medical words, appropriate spelling, use of medical terms, and use of medical abbreviations. Same as HIT 150.

Learning Outcomes

1. By the conclusion of this course, the student should be able to identify and translate common medical prefixes.
2. By the conclusion of this course, the student should be able to identify and translate common medical and surgical suffixes.
3. By the conclusion of this course, the student should be able to identify and translate common medical root words.
4. By the conclusion of this course, the student should be able to construct and deconstruct medical terms.

AHS 140. Essentials of Anatomy and Physiology

4 Credits (3+3P)

Essentials of anatomy and physiology for those considering a career in health as well as those interested in understanding their own body and the basics of health.

AHS 153. Introduction to Anatomy and Physiology I

4 Credits (3+3P)

Survey of human anatomy and physiology.

Prerequisite: high school biology or high school chemistry, or CHEM 1120G, or consent of instructor.

AHS 155. Special Topics

1-6 Credits

Topics to be announced in the Schedule of Classes. May be repeated for a maximum of 6 credits.

AHS 190. Clinical Skills & Concepts for Medical Assisting I

6 Credits (3+6P)

A core course designed to provide an introduction to the theory, concepts, and skills needed for entry-level medical assisting positions. Content includes basic theory and concepts designed to support safe and effective practice as a medical assistant in ambulatory care settings. Includes a skills laboratory for hands-on practice and 96 hours of supervised clinical in the work environment. Restricted to Community Colleges campuses

Learning Outcomes

1. Apply theoretical knowledge associated with medical assisting in providing basic healthcare services.
2. Perform essential clinical skills within the medical assistant scope of practice in ambulatory clinic settings.
3. Recognize factors that affect procedures and results, and take appropriate actions with predetermined limits when indicated, including patient compromise or complications.
4. Demonstrate professional conduct and interpersonal communication skills with patients, other health care professionals, and with the public.
5. Recognize the responsibilities of other health care personnel and interact with them with respect for their jobs and patient care.
6. Apply basic scientific principles in learning new techniques and procedures.
7. Relate vital sign and laboratory findings to common disease processes.

AHS 202. Legal and Ethical Issues in Health Care

3 Credits (3)

Consideration of legal and ethical issues in modern health care delivery.

AHS 250. Spanish for Health Professionals

3 Credits (3)

Spanish for Health Professionals is a 3 credit course geared toward individuals working or majoring in health related areas. The course focus is on conversation and vocabulary needed for the workplace and task based practical skills. Restricted to: Community Colleges only.

AHS 280. Medical Office Administration & Management

4 Credits (2+4P)

A core course designed to provide the theory, concepts, and skills needed in preparation for entry-level medical assisting positions. Content includes theory and concepts related to medical office administration. The course includes skills, hands-on practice, and 40 hours of supervised clinical in the work environment in ambulatory care settings. Restricted to Community Colleges campuses only.

AHS 290. Clinical Skills & Concepts for Medical Assisting II

6 Credits (3+6P)

A core course designed to provide the theory, concepts, and skills needed in preparation for entry-level medical assisting positions. Content includes theory and concepts related to specialty areas of healthcare practice, as well as consideration for conditions affecting persons throughout the life span. The course includes a skills laboratory for hands-on practice and 96 hours of supervised clinical in the work environment with specialized populations and procedures in both ambulatory and acute care settings. Restricted to Community Colleges campuses

Learning Outcomes

1. Apply theoretical knowledge associated with medical assisting in providing basic healthcare services.
2. Perform essential clinical skills within the medical assistant scope of practice in ambulatory clinic settings where specialized care is given, as well as, acute care settings.
3. Recognize factors that affect procedures and results, and take appropriate actions within predetermined limits when indicated, including patient compromise or complications.
4. Demonstrate professional conduct and interpersonal communication skills with patients, other health care professionals, and with the public.

5. Recognize the responsibilities of other health care personnel and interact with them with respect for their jobs and patient care.
6. Apply basic scientific principles in learning new techniques and procedures.
7. Relate vital sign and laboratory findings to common disease processes.

ANSC-ANIMAL SCIENCE

ANSC 1110. Animal Science Careers

1 Credit (1)

Introduction to scientific disciplines and career options in animal-agriculture career skill development, including resume preparation, networking, importance of internships, and leadership experiences in animal agriculture.

Learning Outcomes

1. Increasing the understanding of career opportunities in animal agriculture.
2. Gain a broad experience in the development of creative thinking about the career choices available in animal agriculture.
3. Apply the increased knowledge of career development in the career path and internship directions for each student.
4. Gain leadership experience that will be impactful for the student in their pursuit of a career in animal agriculture.

ANSC 1120. Introduction to Animal Science

3 Credits (3)

Survey of the livestock industry throughout the world. Basic management practices will be covered, including livestock selection, nutrition, reproduction, anatomy and marketing to the consumer. This course will also discuss animal behavior and welfare.

Learning Outcomes

1. Understand the role of farm animals in a global setting.
2. Describe the role of nutrition, breeding, behavior, welfare, and physiology of livestock in the world.
3. Explain the structure and organization of livestock industries.
4. Discuss concepts and terminology of the livestock industries as they relate to the global perspective.
5. Classify the overall management, care, marketing of animals, represented in the various livestock industries.

ANSC 1120H. Introduction to Animal Science Honors

3 Credits (3)

This course is designed to provide an introduction to nutrients and their function in livestock animals. Basic feed identification, evaluation, and diet formulation will be discussed. The anatomy of the digestive tract of animals and their ability to utilize feedstuffs is presented. Classification, digestion, absorption, transport and metabolism of major nutrients required by animals are studied. Additional course work will be required. Restricted to Las Cruces campus only.

Prerequisite(s): Eligibility for membership in honors college.

Learning Outcomes

1. Identify conventional and non-conventional feedstuffs that are fed to livestock animals.
2. Describe various methods for feed processing and storage.
3. Assess the nutritional value of a ration or feed ingredients.
4. Interpret the NRC (Nutrient Requirement Council) guidelines for feeding livestock.
5. List the basic digestive anatomy for all classes of livestock.

6. Describe nutritional deficiencies and digestive disorders common to livestock animals

ANSC 1120L. Introduction to Animal Science Lab

1 Credit (2P)

Students will observe and participate in activities related to farm animal management and will include areas of livestock selection, nutrition, reproductive physiology, animal ID and animal health. This lab is required for animal science majors.

Prerequisite(s)/Corequisite(s): ANSC 1120.

Learning Outcomes

1. To provide the students with an understanding of the principles, concepts and terminology of today's livestock industry

ANSC 1125. Equestrian Team Competition

1 Credit (1)

Basic principles of equestrian team competition, including care and management of the riding horse, equitation equipment, and development of riding skills. Emphasis will be placed competition within the Intercollegiate Horse Show Association. Consent of Instructor required. May be repeated up to 8 credits.

Learning Outcomes

1. Have a general knowledge of horses and basic horsemanship/equitation position.
2. Explain and demonstrate basic techniques of balance, control, and safety skills while being in contact and mounted on a horse.
3. Explain and demonstrate proper handling and safety around horses and the proper care of the stable and tack.
4. Be able to ride unassisted at the walk, jog, and lope in either English or Western tack.
5. Apply general knowledge of horsemanship and equitation to competitive equine events in a safe manner including equitation on the flat, equitation over fences, horsemanship, ranch riding and reining.

ANSC 1130. Western Equitation I

2 Credits (4P)

Basic principles of Western riding, including care and management of the riding horse, equitation equipment, and development of riding skills.

ANSC 1140. Introduction to Dairy Science

3 Credits (3)

Introduction to the basic aspects of dairy science and how to apply key concepts to the practical feeding and management of dairy cattle and production of dairy products. Students should also obtain an appreciation for the size and diversity of the dairy industry.

Prerequisite(s)/Corequisite(s): ANSC 1120. Restricted to Las Cruces campus only.

Learning Outcomes

1. Learn key concepts in dairy production and management
2. Be familiar with terms used in production of milk and milk products

ANSC 1160. Introductory Horse Science

3 Credits (2+2P)

The light horse industry; breeds; introduction to feeding, breeding, marketing and management; handling and selecting horses for breeding and performance.

Learning Outcomes

1. Describe and identify breeds of horses, their characteristics and their uses.
2. Demonstrate knowledge of basic physiology of horses by recalling parts of the horse, including bones, muscle, tendons and ligaments.

Also, by ageing horses via teeth, body condition scoring and taking vital signs.

3. Demonstrate safe and proper handling of horses.
4. Demonstrate comprehension of basic nutrition and feedstuffs by formulating/correcting diets in clinical and non-clinical situations.
5. Recall aspects of basic reproduction by calculating a stallion book and recalling appropriate procedures for breeding.
6. Create informative articles that seek to educate the lay horse person about a topic covered in class.

ANSC 1170. Introduction to Animal Metabolism

3 Credits (3)

Principles underlying the mechanisms of animal metabolism as they relate to production, maintenance, and health of animals.

Prerequisite: CHEM 1215G.

Learning Outcomes

1. This course provides an introduction to the study of the physiology of life.
2. The first part of the course covers acids and bases and the chemical nature of organic compounds.
3. The second part of the course relates to the chemistry of biomolecules (nutrients) and summarizes the chemical reactions of life (metabolism).

ANSC 1180. Companion Animal in Society

3 Credits (3)

Examination of the historical, current, and potential future roles of companion animals in human society. Topics include animal domestication, breeds, exotic companion animals, the companion animal industry, and competitions and sports involving companion animals.

Emphasis is on canine and feline species. May be repeated up to 3 credits. Restricted to Las Cruces campus only.

Learning Outcomes

1. Discuss the theories regarding why, how, and when companion animals became domesticated.
2. Describe how selective breeding has optimized certain physiological and behavioral traits of companion animals in order to fulfill the needs of individual people and society.
3. Explain the concept of human-companion animal interaction (HAI) and the influence this bond has on human behavior, health, society, and government policy/laws.
4. Understand the breadth and economic impact of the rapidly expanding companion animal industry and the recent expenditure trends of pet owners.
5. Discuss the past and present uses of companion animals and theorize regarding the future uses of companion animals in society
6. Be effective in searching for, and critically evaluating, scientific based resources.

ANSC 2120. Equine Management

3 Credits (3)

Introduction and application of the business skills necessary to effectively manage the equine operation. Students will learn how to use strategic thinking and sound business management practices to succeed in the demanding equine industry.

Prerequisite: ANSC 1160.

Learning Outcomes

1. Develop a working knowledge of the business principles needed to operate a successful entrepreneurial enterprise.

2. Increase the awareness of the need for business principles in the aggregate function of an equine operation.

3. Gain a greater perspective of accounting, economic and financial principles in an equine business operation.

ANSC 2130. Western Equitation II

2 Credits (4P)

Intermediate principles of Western riding, including reading horse behavior, limbering-up exercises, and developing riding skills. Introduction to rollbacks, turnarounds and stops.

Prerequisite: consent of instructor.

Learning Outcomes

1. Increasing the understanding of the student relative to equitation practices
2. Increase the students' ability to apply principles of Western Equitation to applied settings across a broad spectrum of outlets
3. Prepare the student to engage equine in a professional manner

ANSC 2140. Introduction to Companion Animal Science

3 Credits (3)

Introduction to the care of common companion animal species. Species specific housing and nutrition are covered in the context of maximizing animal health and well-being and reducing disease. May be repeated up to 3 credits.

Learning Outcomes

1. Accurately use scientific terminology common to the companion animal discipline.
2. Compare and contrast the physiological similarities and differences between the various companion animal species studied in class.
3. Create dietary plans based on the nutritional needs of different companion animal species to optimize animal health and lifespan.
4. Identify symptoms of disease/injury at the early stages of illness in order to obtain Veterinary care and treatment as quickly as possible.
5. Design and construct species specific cages/vivariums to maximize animal well-being and health.
6. Educate others regarding providing the best possible care for a variety of companion animal species.

ANSC 2150. Management of Equine Operations

3 Credits (3)

Introduction and application of business skills necessary to effectively manage the equine operation. Students will learn how to use strategic thinking and sound business management practices to succeed in the demanding equine industry.

Prerequisite(s): ANSC 1160.

Learning Outcomes

1. Acquire a working knowledge of different sectors of the equine industry, including business practices, management and marketing skills.

ANSC 2310. Introduction to Meat Science

3 Credits (2+3P)

Fundamental aspects of the red meat industry. Lecture topics and laboratory exercises include the nutrient value of meat, meat preservation, meat safety, muscle structure and contraction, slaughter and processing of beef, lamb and pork, sausage manufacture, meat curing, meat cookery, and muscle and bone anatomy.

Learning Outcomes

1. Increasing the understanding of meat science applications across animal agriculture.

2. Increase the students' ability to apply principles of production to the industry perspective.
3. Apply the increased knowledge of meat science in a global situation.
4. Gain an understanding of the components involved in the development and processing of the red meat industry.

ANSC 2330. Animal Production**3 Credits (2+2P)**

Production and utilization of beef cattle, sheep, and swine; emphasis on feeding, breeding, management problems and marketing; selection of animals for breeding and market

Learning Outcomes

1. Increasing the understanding of meat animal production.
2. Increase the students' ability to apply principles of production to the industry perspective.
3. Apply the increased knowledge of meat animal production to global situations.
4. Gain a broader understanding of the importance of meat animals in the global food system.

ANSC 2340. Genetics in Animal Science**3 Credits (3)**

Introduction to genetics and inheritance relative to livestock production. Introduction to procedures for collection and use of performance information in livestock improvement programs.

Prerequisites: BIOL 2610G.

Learning Outcomes

1. Gain a broader understanding of the role genetic impacts in the livestock industry.
2. Employ an increased knowledge of impact of genetics in the food animal industry and the production and economic principles that apply.
3. Recognition of the global impacts of genetics in the food animal industry in a global setting.

ANSC 2996. Special Topics**1-4 Credits**

Specific subjects and credits to be announced in the Schedule of Classes. Maximum of 4 credits per semester. No more than 9 credits toward a degree.

Learning Outcomes

1. Varies

ANSC 301. Animal and Carcass Evaluation**3 Credits (2+2P)**

Determination of the market value of meat animals by relating live animal and carcass traits. Topics include the identification of economically important traits, grading, growth and development, wholesale and retail pricing, and futures and options markets.

ANSC 303. Livestock, Meat and Wool Evaluation**4 Credits (3+2P)**

Selection, classification, grading, and judging of livestock, meat, and wool.

ANSC 304. Feeds and Feeding**3 Credits (2+2P)**

Digestibility of feeds, their nutritive values, grades, and classes, principles of ration formulation and computer ration formulations, and practical feeding of farm animals. **Prerequisite(s):** CHEM 1215G

ANSC 305. Principles of Genetics**3 Credits (3)**

Covers fundamental principles of reproduction, variation, and heredity in plants and animals. May be repeated up to 3 credits.

Prerequisite: (BIOL 2610G and BIOL 2110G, or BIOL 2110G and BCHE 140, and either CHEM 1215G or CHEM 1216).

Learning Outcomes

1. To provide an introduction to the basic concepts, methods, and terminology of genetics. Introduction to genomics and bioinformatics.
2. To develop a working understanding of genetics and heredity
3. To understand in some depth, the mechanism of DNA replication, transcription and protein synthesis. To understand the regulation of gene expression.
4. To examine the impact of genetics on both basic and applied aspects of the biological sciences, as well as its effects on our everyday lives.

ANSC 308. Horse Evaluation**4 Credits (2+4P)**

Students will acquire a working knowledge of selection and classification of horses, learn criteria for evaluation and selection of breeding and show animals, gain a broad understanding of judging conformation and performance in the horse, and learn effective oral and written communication skills through defense of class placings. This course is considered an introduction to the NMSU Horse Judging Team.

ANSC 310. Exhibiting Livestock**3 Credits (1+4P)**

Fitting and showing beef cattle, dairy cattle, sheep and swine.

ANSC 312V. Companion Animals and the Human- Animal Interaction**3 Credits (3)**

The science behind human-animal interactions (HAI). An examination of the interactions between humans and companion animals and the effects on human and animal health and wellness. Cultural differences in HAI will be explored. Topics will include Animal Assisted Activity (AAA), Animal Assisted Therapy (AAT), and service animals. Emerging and future uses of companion animals in HAI will be discussed.

ANSC 320. Equine Behavior and Training**3 Credits (6P)**

Basic principles, methods and philosophies of handling, breaking and training the two-year-old Western horse. May be repeated up to 6 credits.

Prerequisite(s): ANSC 2130 or consent of instructor.

ANSC 321. Advanced Equine Behavior and Training**3 Credits (6P)**

Continuation of ANSC 320. Further development of skills required to advance the training of the two-year-old Western horse. Emphasis will be placed on lateral work, lead changes, turn-arounds, obstacles, and making the horse accustomed to ranch and trail riding situations.

Prerequisite(s): ANSC 320 or consent of instructor.

ANSC 350. Special Topics**1-4 Credits**

Specific subjects and credits to be announced in the Schedule of Classes. Maximum of 4 credits per semester. No more than 9 credits toward a degree.

ANSC 351V. Agricultural Animals of the World**3 Credits (3)**

Global study of the development and use of animals for production of food and nonfood products. Climatic, cultural, and economic influences on systems of livestock production and species and breeds of livestock utilized will be evaluated.

ANSC 370. Anatomy and Physiology of Farm Animals**4 Credits (3+2P)**

Structure and function of the animal body. Includes studies of the horse, cow, sheep, pig, and comparisons with the human body.

Prerequisite(s): CHEM 1215G and BIOL 2610G or BIOL 2110G.

ANSC 383. Equine Reproductive Management

3 Credits (1+4P)

Anatomy, physiology, and endocrinology of reproduction of the mare and stallion; training in modern reproductive techniques employed in the horse industry.

Prerequisites: ANSC 1160, ANSC 2150, and ANSC 370.

ANSC 390. Internship

1-3 Credits

Professional work experience under the joint supervision of the employer and a faculty member. A written report is required. No more than 3 credits toward a degree. Graded S/U.

Prerequisite: consent of instructor.

ANSC 391. Undergraduate Research Experience

1-3 Credits (1-3)

Formal laboratory, library, or field study of problems related to animal sciences, emphasizing hypothesis development, testing, and reporting results. Projects are preplanned, reviewed, and approved. Students submit periodic written reports and final written and oral reports. May be repeated for a maximum of three credits. Consent of Instructor required.

ANSC 392. Animal Sciences Teaching/Extension Experience

1-3 Credits (1-3)

: Formal teaching experience related to animal sciences supervised by a faculty member. May involve classroom instruction, educational material development, and/or student evaluation and assessment. Students may also be involved in development, implementation, or assessment of adult or youth educational programs related to animal sciences, supervised by a faculty member. Students submit periodic written reports and a final written and oral report. May be repeated for a maximum of three credits. Consent of Instructor required.

ANSC 402. Animal Science Seminar

1 Credit (1)

A seminar course designed to inform students of the career opportunities, develop their interviewing and other interpersonal skills may also include reading, discussions, written reports, and seminar presentations of current relevant literature.

ANSC 402 H. Animal Science Seminar

1 Credit (1)

Taught with ANSC 402 with additional work.

Prerequisite(s): Meets Honors eligibility and/or Crimson Scholar status.

ANSC 411. Canine and Feline Behavior and Training

3 Credits (3)

The influence of domestication, breeds, genetics, and physiology on the behavior of canine and feline species. Training methods and modification of problem behaviors are examined. The impact of the pet parent on their animal's behavior is addressed. May be repeated up to 3 credits.

Prerequisite(s): Junior or Senior status or consent of the instructor.

ANSC 412. Canine and Feline Health and Diseases

3 Credits (3)

A review of common infectious and non-infectious diseases and the basics of the immune response. Pathophysiology and treatment of these diseases and the role the pet parent plays in pre-disposing their animals to disease. May be repeated up to 3 credits.

Prerequisite(s): ANSC 2140 or consent of instructor.

ANSC 421. Physiology of Reproduction

4 Credits (3+2P)

Fertility and the role of hormones, nutrition, selection, management and environment in the maintenance of high reproductive rate.

Prerequisite(s): ANSC 370.

ANSC 422. Animal Nutrition

3 Credits (3)

Nutrient utilization and measurement and nutrient requirements for the various body functions. May be repeated up to 3 credits.

Prerequisite: CHEM 313 or ANSC 1170.

Learning Outcomes

1. Compare digestion, absorption and metabolism of nutrients between ruminants and non-ruminants.
2. Demonstrate how animal physiology drives nutrient usage in the body.
3. Integrate animal nutrition concepts to better understand efficient animal production and health.

ANSC 423. Animal Breeding

3 Credits (2+2P)

Mating systems, and selection procedures; calculation of inbreeding coefficients, genetic relationships, and gene frequency.

Prerequisite(s): ANSC 2340 or 305.

ANSC 424. Swine Production

3 Credits (2+2P)

Breeding, feeding, and care of swine.

Prerequisite(s): ANSC 304.

ANSC 425. Horse Science and Management

3 Credits (2+2P)

Senior level course requiring students to apply basic knowledge acquired in the previous courses to solve typical problems encountered in the horse industry. Specific topics include genetics and animal breeding, business and legal issues, reproduction, health, nutrition and exercise physiology.

Prerequisite(s): ANSC 304 and ANSC 370 or concurrent registration.

ANSC 426. Beef Production: Cow-Calf Management

3 Credits (2+2P)

Senior level course examining management practices for the cow-calf producers. Specifically focusing on nutrition, reproduction, genetics, marketing, and health. May be repeated up to 3 credits.

Prerequisite(s): ANSC 304 and (ANSC 2340 or ANSC 305) or concurrent registration.

ANSC 427. Dairy Production

3 Credits (2+2P)

Breeding, nutrition, physiology and management of dairy cattle.

Prerequisite(s): ANSC 304 and (ANSC 2340 or ANSC 305) or concurrent registration.

ANSC 428. Sheep and Wool Production

3 Credits (2+2P)

Genetics, nutrition, physiology and management of sheep. Wool grading, shearing, and disease control. May be repeated up to 3 credits.

Prerequisite: ANSC 304, ANSC 370.

Learning Outcomes

1. Enhance knowledge and understanding of the different systems utilized to produce a sheep and wool. Topics discussed will include breeding, nutrition, reproduction, management and marketing strategies

ANSC 429. Beef Production: Feedlot Management

3 Credits (2P)

Senior level course in feedlot management of beef cattle. Topics of interest include cattle handling and processing, health and nutrition,

intake management, and growth. Feed mill operation, marketing strategies, and regulatory concerns associated with finishing cattle production may also be discussed.

Prerequisite(s): ANSC 304 or Consent of Instructor.

ANSC 448. Problems

1-4 Credits

Individual investigation in a specific area of animal science. Maximum of 4 credits per semester. No more than 6 credits toward a degree. Consent of Instructor required.

ANSC 458. Livestock Behavior, Welfare and Handling

3 Credits (2+3P)

Principles of animal behavior and evaluation of management practices on animal welfare in confined and rangeland livestock operations. Low stress livestock handling techniques. Design of livestock handling facilities. Crosslisted with: RGSC 458

Prerequisite(s): RGSC 2110 or ANSC 1120.

ANSC 462. Parasitology

3 Credits (3)

Same as EPWS 462.

ANSC 468. Advanced Dairy Herd Management

3 Credits (3)

The course is offered through the Southern Great Plains Dairy Consortium in Clovis, NM, and will include breeding, nutrition, physiology, health and management of large herd dairies of the Southwest. Students must apply for the course through the Consortium, and can take it more than once, as topics vary. Consent of instructor required.

Prerequisite(s): ANSC 304.

ANSC 480. Environmental Physiology of Domestic Animals

3 Credits (3)

Influence of environmental factors on physiological processes of domestic animals.

Prerequisite: ANSC 370.

ANSC 484. Ruminant Nutrition

3 Credits (3)

Energy, nitrogen, and mineral nutrition of ruminants with special emphasis on digestive physiology and metabolism of nonprotein nitrogen compounds.

Prerequisite: ANSC 422.

ANSC 501. Advanced Animal Nutrition (so)

3 Credits (3)

Emphasis on digestive physiology and metabolism. Basic mechanisms involved in the intake, digestion, and absorption of nutrients studied. May be repeated up to 3 credits.

ANSC 507. Laboratory Techniques in Nutrition (f)

4 Credits (2+6P)

Methodology and experimental procedures in measuring nutrient requirements and value of diets.

Prerequisites: ANSC 422 or consent of instructor.

ANSC 509. Endocrinology of Domestic Animals (f)

3 Credits (3)

The role of hormones in growth, development, metabolism, temperature regulation, lactation, and reproduction of domestic animals, including commercial applications.

ANSC 510. Range Nutrition Techniques (se)

3 Credits (3)

Animal and plant methods of determining quantity and quality of range forage. Same as RGSC 510.

Prerequisite: ANSC 484 or consent of instructor.

ANSC 512. Research Methods in Animal Science (s)

4 Credits (3+2P)

Procedures used in animal science research, including planning and conduct of investigations and interpretation of results.

ANSC 515. Graduate Seminar

1 Credit (1)

Current topics.

ANSC 520. Advanced Nutritional Management I: Feedlot (se)

3 Credits (3)

Emphasis on feeding systems for beef cattle from weaning to slaughter. Primary focus on feedlot nutrition and management.

Prerequisite: ANSC 484 or consent of instructor.

ANSC 521. Advanced Nutritional Management II: Cow Calf/Stocker (so)

3 Credits (3)

Emphasis on nutritional management for cow-calf and stocker operations. Primary focus on applications to range animal nutrition and management.

Prerequisite: ANSC 484 or consent of instructor.

ANSC 522. Animal Nutrition (f)

3 Credits (3)

Nutrient utilization and measurement; nutrient requirements for the various body functions. Taught with ANSC 422 with additional requirements for graduate students. Recommended for nonmajors. May be repeated up to 3 credits.

Learning Outcomes

1. Compare digestion, absorption and metabolism of nutrients between ruminants and non-ruminants.
2. Demonstrate how animal physiology drives nutrient usage in the body.
3. Integrate animal nutrition concepts to better understand efficient animal production and health.

ANSC 560. Rumen Microbiology (so)

3 Credits (3)

Issues in ruminal and gastrointestinal microbiology. Includes physiological and genetic mechanisms in carbohydrate and nitrogen utilization. Same as FSTE 560.

Prerequisites: ANSC 501.

ANSC 580. Environmental Physiology of Domestic Animals

3 Credits (3)

Influence of environmental factors on physiological processes of domestic animals. Specific focus on fetal and developmental programming, heat and cold stress.

ANSC 598. Special Research Programs

1-4 Credits (1-4)

Individual investigations, either analytical or experimental. Maximum of 4 credits per semester. No more than 6 credits toward a degree. Consent of Instructor required.

ANSC 599. Master's Thesis

1-15 Credits (1-15)

Thesis. Consent of Instructor required. Thesis/Dissertation Grading. May be repeated up to 88 credits.

Learning Outcomes

1. Various

ANSC 600. Research

1-15 Credits

This course is for Ph.D. students before they have completed qualifiers. Consent of Instructor required. Thesis/Dissertation Grading.

Prerequisite(s): ANSC 421 or consent of instructor.

ANSC 602. Advanced Reproductive Physiology (fo)
3 Credits (3)

Mechanisms of reproductive function; research methodology.

Prerequisite(s): ANSC 421 or consent of instructor.

ANSC 604. Hypothalamo-Hypophyseal-Pineal Endocrinology (fe)
1 Credit (1)

Hormones and other neurochemicals synthesized and secreted by the hypothalamus, pituitary, and pineal glands. Neuroendocrinology of the hypothalamo-hypophyseal axis.

Prerequisite: ANSC 509.

ANSC 605. Gonadal and Uterine Endocrinology (fe)
1 Credit (1)

Endocrinology of mammalian ovaries, testes, and uteri including developing trophoblasts.

Prerequisite: ANSC 509.

ANSC 606. Endocrinology of Pregnancy, Parturition, and Lactation (fe)
1 Credit (1)

Hormones and other chemical messengers involved in maintenance of pregnancy, control of parturition, and initiation and maintenance of lactation in farm animals.

Prerequisite: ANSC 509.

ANSC 621. Metabolic Functions and Dysfunctions (fe)
3 Credits (3)

Physiological chemistry of ruminants and other domestic animals, with attention to metabolic dysfunctions and nutritional toxicology.

Prerequisites: CHEM 345 and ANSC 501.

ANSC 625. Nutrient Metabolism I: Mineral, Vitamin, and Nitrogen Metabolism (fo)
4 Credits (4)

Cellular metabolism, physiological function(s), toxicities, and deficiencies of minerals, vitamins and nitrogen in ruminants and nonruminants.

Prerequisite: ANSC 501.

ANSC 626. Nutrient Metabolism II: Carbohydrates, Lipids, and Energetics (se)
4 Credits (4)

Basic principles of carbohydrate, lipid, and energy metabolism; integration of metabolism with emphasis on nutritional and biochemical processes related to efficiency of nutrient use.

Prerequisite: ANSC 501.

ANSC 698. Special Research Programs
1-4 Credits

Advanced individual investigations, either analytical or experimental. Maximum of 4 credits per semester. No more than 6 credits toward a degree. Consent of Instructor required.

ANSC 700. Doctoral Dissertation
15 Credits

Dissertation. Consent of Instructor required. Thesis/Dissertation Grading.

ANTH-ANTHROPOLOGY

ANTH 1115G. Introduction to Anthropology
3 Credits (3)

Anthropology is the systematic study of the humanity both past and present. The course introduces students to the four subfields of anthropology, which include archaeology, biological, linguistic and cultural anthropology. Students will learn about the concepts and

methods that anthropologists use to study our species and gain a broader perspective on the human experience.

Learning Outcomes

1. Describe and summarize terms, approaches, and cultural and biological adaptations in the four subfields of anthropology.
2. Explain and analyze conceptual and ethical arguments in the four subfields of anthropology.
3. Effectively communicate content, perspectives, and ideas in four subfields of anthropology.
4. Critically evaluate sources, approaches, and arguments in the four subfields of anthropology.

ANTH 1135G. Introduction to Biological Anthropology
3 Credits (3)

This course provides a basic introduction to the broad field of biological anthropology. The research interests of biological anthropologists include the history and development of modern evolutionary biology, molecular and population genetics, modern primates, the primate and human fossil record, and modern human biological diversity.

Corequisite(s): ANTH 1135L.

Learning Outcomes

1. Summarize the basic principles of evolution and recognize how they apply to the human species.
2. Recognize the biological and behavioral continuity of humans with all life, and especially other modern primate species.
3. Identify ways in which the human species is biologically and behaviorally unique.
4. Summarize fossil evidence for human evolution.
5. Distinguish the major Paleolithic industries and outline the behavioral and cognitive changes indicated by the fossil and archeological evidence.
6. Critically evaluate popular accounts of human variation and human evolution.
7. Interpret modern human dilemmas (e.g., overpopulation, co-evolution of disease, and genetic engineering) from an evolutionary perspective.
8. Discuss in class and analyze in writing scholarly arguments concerning course concepts.

ANTH 1135L. Introduction to Biological Anthropology Lab
1 Credit (2P)

This laboratory course expand on the topics covered in lecture course and uses scientific methods and principles to examine evidence for the process of evolution, the nature of heredity, human evolutionary history and family tree relationships, primate ecology and behavior, and modern human diversity. Hands-on experience with fossil and skeletal material will be an important part of the learning process. **Corequisite(s):** ANTH 1135G

Learning Outcomes

1. Demonstrate an understanding of the scientific method.
2. Employ principles of Mendelian genetics to determine genotype and phenotype probabilities, and calculate gene, genotype, and phenotype frequencies using the Hardy-Weinberg Equilibrium formula.
3. Demonstrate an understanding of cell structure and functions.
4. Use common lab and anthropometric equipment such as a compound microscope and calipers.
5. Discuss primate evolution, and compare and contrast members of the Primate order in terms of structure, behavior, and phylogeny.

- Classify hominid species based upon selected traits such as anatomical changes associated with bipedalism, changes in the size and structure of the brain, and the development of culture.
- Locate and describe the major bones of the human skeleton, and identify characteristics of human skeletons or skulls such as gender, age, and ancestry.
- Discuss current research in genome analysis of various hominid populations.

ANTH 1136. Introduction to Historic Preservation
3 Credits (3)

Introduction to historic preservation, its history, goals, methods, legal basis, and economic importance. Explores public role in decision-making. Community Colleges only.

Learning Outcomes

- Understand why historic preservation is important;
- be familiar with what is important to preserve;
- know who among the general public, state, and federal governments is responsible for preserving the past;
- Have gained experience in how we all preserve.

ANTH 1140G. Introduction to Cultural Anthropology
3 Credits (3)

This is an introductory course that provides an overview of cultural anthropology as a subfield within the broader discipline of anthropology and as a research approach within the social sciences more generally. The course presents core concepts and methods of cultural anthropology that are used to understand the ways in which human beings organize and experience their lives through distinctive cultural practices. More specifically, this course explores social and cultural differences and similarities around the world through a variety of topics such as: language and communication, economics, ways of making a living, marriage and family, kinship and descent, race, ethnicity, political organization, supernatural beliefs, sex and gender, and globalization. This course ultimately aims to present a broad range of perspectives and practices of various cultural groups from across the globe. May be repeated up to 3 credits.

Learning Outcomes

- Introduce students to the basic concepts and research methods of cultural anthropology as one of the disciplines of social science, including fundamental concepts, such as culture and society, which form the pillars of the discipline (e.g., cultural relativism, cultural persistence and change, world-view and enculturation).
- Comprehend the importance of studying cultural anthropology.
- Demonstrate knowledge of the practice of anthropological research in the modern world that is increasingly multicultural, transnational and globally interconnected (e.g., globalization and modern world system).
- Demonstrate an awareness of how students' own cultures shape their experiences and the way they see the world, as well as help them understand and interact with other cultures.
- Understand how beliefs, values and assumptions are influenced by culture, biology, history, economic, and social structures.
- Gain a sense of relationship with people possessing different experiences from their own.
- Gain a deeper understanding and appreciation for cultural anthropology as a broad discipline through learning about its practices, and differentiating cultural anthropology from other disciplines that study people

- Become more sensitive and engaged global citizens from culturally relative perspectives.

ANTH 1160G. World Archaeology
3 Credits (3)

This course is an exploration of human evolution and cultural development throughout the world. Students will be introduced to basic anthropological methods and theories and will learn how anthropological research has contributed to our understanding of major themes in human prehistory, including human evolution, the origins of culture, migration and colonization, animal and plant domestication, and the rise and fall of civilizations.

Learning Outcomes

- Describe and explain the major developments in human prehistory.
- Identify and describe major archaeological cultures throughout the world.
- Employ critical thinking skills in the evaluation of competing theories about the past.
- Select and use relevant archaeological evidence to explain how prehistoric populations adapted to their natural and cultural environments.
- Demonstrate competency in written communication.

ANTH 2140G. Indigenous Peoples of North America
3 Credits (3)

This course is a general survey of the history and ethnology of indigenous groups in North America. The course is designed to give students a comprehensive view of major issues pertaining to the indigenous cultures of North America, such as family structure, social organization, subsistence and contemporary economies, environmental adaptation, Indian-White relations, religious practices, and contemporary issues.

Learning Outcomes

- Demonstrate familiarity with common elements pertaining to the languages and social organization of indigenous peoples in North America.
- Recognize fundamental differences and similarities among traditional indigenous cultures.
- Describe social relations of indigenous peoples in relationship to other ethnic groups.
- Identify and analyze important ways that European societies and cultures and indigenous societies and cultures interacted from the time of Columbus to the present.
- Evaluate the impacts of Euroamerican policies and programs on indigenous cultures.
- Distinguish major social issues facing contemporary indigenous communities in North America.
- Understand objectives and limitations of cross-cultural analysis in anthropology as they relate to the study of indigenous peoples in North America.
- Demonstrate research and communication skills as they relate to the study of indigenous peoples in North America.

ANTH 2996. Special Topics
1-4 Credits

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

Learning Outcomes

- Varies

ANTH 301. Cultural Anthropology**3 Credits (3)**

The course will introduce students to the basic concepts and methods in cultural anthropology, focusing on the critical role of culture in traditional society and in the modern world. We apply the anthropological perspective to study the components of cultural systems, including language and meaning, ways of making a living, kinship, worldview, power and political systems, and socio-cultural inequalities, among others, across different cultures. By “unpacking” culture, we focus on how local knowledge is put to work in grappling with practical problems of everyday life. May be repeated up to 3 credits.

Learning Outcomes

1. Students will explain the core concepts in cultural anthropology, including the complexities, contradictions, dynamics, and implications.
2. Students will identify the important methods of fieldwork, linking theory to application.
3. Students will explain the critical components of cultural systems and how they operate, comparing and contrasting their different manifestations across different cultures. This identification should also address the complexities, dynamics, and implications.
4. Students will develop anthropological field skills in carrying out field projects, analyzing observed practices, symbols, and activities.
5. Students will identify and explain factors that explain cultural persistence and the relevance of culture in the modern world.

ANTH 305V. Contemporary Native Americans**3 Credits (3)**

Introduction to contemporary native peoples and cultures of North America. Emphasis on sociocultural and socioeconomic history, sociocultural change and persistence, present day reservation life, and current social and economic goals.

Learning Outcomes

1. Identify the major challenges within American Indian communities.
2. Analyze the components and causes of contemporary issues in Indian country.
3. Understand and be able to define sovereignty and self-determination and the relationship of Native nations to the U.S. government.
4. Develop an awareness of the historical and continuing efforts of resistance, adaptation, and endurance of Native peoples.
5. Integrate learned concepts to address contemporary Native American issues.
6. Possess foundation knowledge as preparation for higher-level coursework in NATV.

ANTH 306V. Peoples of Latin America**3 Credits (3)**

The course presents an overview of different cultures in Latin America, covering a range of topics including history, environment, race and ethnicity, religion, health, music, food, popular culture, globalization, and violence. Within this context, the perspective of cultural anthropology looks at the commonality of patterns shared across Latin America, at the same time that we examine the construction of cultural diversity, a diversity that has persisted into the modern era. We also examine how different Latin American peoples use culture, i.e., through their food, music, religion, and politics among other elements, as a way of shaping and conserving their ethnic identity. The class includes a mixture of lecture, discussion, films, music, and good food...

Learning Outcomes

1. Students will explain the major prehistoric Latin American civilizations and their role in shaping distinctive modern cultures today.
2. Students will identify the major ecological zones in Latin America and corresponding cultural adaptations and subsistence strategies.
3. Students will explain the critical role of economic and political history throughout the Colonial Period and Independence in shaping the patterns of cultural diversity, racial boundaries, and ethnic identities.
4. Students will explain the role of cultural practices (such as religion, music, popular culture, and foodways) in supporting indigenous and minority populations' efforts to retain distinct cultural identities.
5. Students will explain the global and historical connections between Latin American and the United States, in particular the role that Latin American culture, migration, and traditions have played in shaping our society's development.

ANTH 307V. Japanese Culture and Society: Anthropological Perspectives**3 Credits (3)**

This course introduces students to Japanese culture from anthropological and philosophical perspective. Learning about Japanese culture (non-Western) enhances students' awareness of the diversity of human values, beliefs, and morals and provides an understanding of cultural differences outside of mainstream American culture.

Learning Outcomes

1. Take a position on an anthropological theory that accounts for how and why Japanese culture has changed through time.
2. Select and integrate relevant anthropological perspectives to argue for or against ethical and moral differences between American and Japanese cultures.
3. Analyze social, political, and religious aspects in Japanese society and compare them with those in America.
4. Investigate sociopolitical and economic status of minority groups in Japan using anthropological approaches and compare them with those of America.
5. Engage in face-to-face interactions with Japanese people in southern New Mexico and discuss similarities and differences between cultures, values, and worldview.

ANTH 312. The Ancient Maya**3 Credits (3)**

Archaeological evidence of culture change in the Maya civilizations of Mexico and Central America from 2000 BC to the Spanish Conquest.

ANTH 313V. Ancient Mexico**3 Credits (3)**

We will explore the archaeology the Aztecs, Zapotecs, and the Maya of Mexico and Central America from 3000BC up to and including the Spanish invasion of 1519-1521. We will examine how the legacies of these great civilizations were erased from written sources and how Mesoamerican heritage can be preserved and reclaimed for descendant communities and the public using archaeological remains. We will address: (1). the origins of agriculture and traditional food systems in Mesoamerica; (2). the rise of cities and urban centers; (3). writing, religion, social inequality, and the circulation of commodities; (4). Political disintegration, fragmentation, and collapse; (5). the formation and expansion of the Aztec and Tarascan empires; and (6). the consequences of the Spanish invasion and colonialism.

Learning Outcomes

1. Take a position on theories that explain how, when, and why human lifeways changed in ancient Mesoamerica.

2. Select and integrate relevant archaeological evidence to argue for and against a theoretical position.
3. Analyze the significance of sites, structures, artifacts, and ecofacts within their archaeological contexts and explain their relevance for people today.
4. Evaluate how practices in research, conservation, and tourism to archaeological sites promote stewardship of non-renewable archaeological resources and intangible heritage.
5. Critique and reflect on designs for virtual public tours of archaeological sites in Mexico or Central America and suggest improvements to best practices for the preservation and public presentation of archaeological resources.

ANTH 315. Introduction to Archaeology

3 Credits (3)

This course introduces you to the discipline of archaeology, situating this discipline within the wider field of anthropology. The first part of the course presents a brief history of the discipline, introduces some foundational concepts, and explains common field research methods. The second part of the class takes you through the process of identifying, classifying, and interpreting archaeological materials. The third and final part of the class introduces you to different research areas and types of professional work within archaeology. May be repeated up to 3 credits.

Learning Outcomes

1. Identify major figures, sites, and trends in the history of archaeology
2. Identify and describe common field and laboratory methods used in archaeology
3. Construct and critically evaluate material culture typologies
4. Explain and provide examples of different models of archaeological inference
5. Describe and apply different theoretical approaches to the study of the human past
6. Identify and describe significant areas of archaeological research and work

ANTH 318. Historical Archaeology

3 Credits (3)

This survey course explores the development of historical archaeology, its methods and theory, and popular research themes within the discipline. Students will be introduced to the ways that archaeologists identify and analyze historical-period documents, oral histories, features, and artifacts, and how they use these data to deepen our understanding of the recent past. Crosslisted with: ANTH 518.

Learning Outcomes

1. Critically evaluate historical sources.
2. Identify and analyze common historical-period artifacts and features.
3. Utilize historical and archaeological evidence in research.
4. Demonstrate how historical archaeology can be used to draw attention to and highlight the contributions of diverse populations in history.
5. Demonstrate improved oral and written communication skills.

ANTH 320. Anthropological Linguistics

3 Credits (3)

The study of language and culture with particular emphasis on the cultural factors in the communication process.

ANTH 330V. Magic Witchcraft and Religion

3 Credits (3)

Provides an introduction to method and theory for the study of religion, ritual, and spiritual practice. Review and discussion of case studies

drawn from around the globe to enhance understanding of the varied ways that people in diverse cultural systems construct and change their religious traditions to serve practical and meaningful ends.

Learning Outcomes

1. Define and identify examples of magic, science, witchcraft, and religion. Develop an understanding of the variation in cultural and behavioral practices associated with each.
2. Develop knowledge and critique early approaches and concepts in the anthropology of religion and its role in explanations of cultural change.
3. Develop knowledge of variation in religion as a cultural system and the experiences of liminality in rites of passage.
4. Identify the statuses and roles of various kinds of religious practitioners and their positionalities vis a vis dominant and resistant ideologies and structural inequality.
5. Develop critical thinking skills that speak to the relevance of different forms of religious thought and ritual practice in our daily lives.

ANTH 345. Introduction to Museology

3 Credits (3)

This course provides a broad introduction to the museum world. Through discussion of readings, examination of case-studies, and practical assignments, students will gain an understanding of the museum as an institution, as well as learn the challenges and responsibilities that museums and their staff encounter. Topics include the history of museums, contemporary debates surrounding the definition of museums, ethical and legal issues, and community connections. The course will cover various types of museums—including art, history, ethnographic, indigenous, and scientific—and discuss how these thematic orientations impact museum practice. Students will also explore common museum processes such as collecting, cataloguing, conservation, exhibition, research, and education through practical exercises using the collections of the University Museum in Kent Hall, as well as through case studies of museums around the world.

Learning Outcomes

1. Describe the major conceptual and practical influences on museums today—including issues of historical development, ethics, missions, and thematic orientations.
2. Critically engage with diverse types of museums as cultural institutions, their practices, and the communities with whom they engage.
3. Implement skills relevant to the museum profession, such as collections management, condition reporting, exhibition and programming planning, and research.

ANTH 349. Museum Anthropology

3 Credits (3)

This course provides an introduction to the methodological and theoretical approaches of museum anthropology. Students will gain experience with all these aspects of museum anthropology in the course by engaging with critical scholarship, analyzing case studies, and practicing collections-based research methods utilizing the collections of the University Museum. Through assignments students will analyze objects in the museum's collections using techniques of close looking, drawing, photography, sequences of making, and external research using scholarly sources. Students will gain skills in primary and secondary research, the analysis of material culture, and the practicalities of navigating research in museums.

Learning Outcomes

1. Describe major theoretical approaches to museum anthropology, and how these have changed over time.

- Critically engage with the intersections between museums as institutions and the practice of anthropology, including the politics of representation.
- Implement methodological research skills as a student-scholar by conducting independent research based on museum collections.
- Convert collections-based research into written and media works characteristic of scholar-facing and public-facing practice in museum anthropology, curatorship, and museum studies.

ANTH 350. Anthropological Theory

3 Credits (3)

This course introduces students to historical and contemporary theory in anthropology with a focus on understanding why theory matters in our discipline. Key questions the course explores include: How have anthropologists thought about the concept of culture in different ways throughout the history of anthropology? What is the relevance of anthropological theory, both inside and outside the discipline? What new and promising trajectories do we see in anthropological theory today?

May be repeated up to 3 credits.

Learning Outcomes

- Trace the history of anthropological theory. You will recognize major figures and schools of thought in anthropological theory and be able to articulate their contributions to the field.
- Critically analyze anthropological concepts of culture. Throughout the course, you will hone analysis skills through discussing and critiquing various anthropological perspectives on the culture concept.
- Apply anthropological theory to contemporary anthropological "problems". Throughout the course, you will reflect on the usefulness of anthropological theory to the field and beyond. You will be able to articulate the connections made through writing and class discussion.

ANTH 355. Biological Anthropology

3 Credits (3)

An introduction to the fundamentals of the scientific method and organic evolution specific to the study of human origins and contemporary biological variation. Non-human primate diversity and behavior are also considered.

Learning Outcomes

- Increase scientific literacy.
- Improve specific skill areas including: Critical thinking; Expository writing; Analytical reading; Oral presentation skills.
- Establish foundational knowledge as a basis for further study in: Evolutionary theory; Human variation and adaptation; Primatology; Human origins and evolution.

ANTH 356. Forensic Anthropology

3 Credits (3)

Overview of the field of forensic anthropology. Topics covered include basic human osteology; skeletal examination and documentation; skeletal trauma; personal identification; forensic taphonomy and the process of decomposition; archaeology and scene processing; sex, age, stature, and ancestry estimation; and contemporary issues and limitations in the field of forensic anthropology.

Learning Outcomes

- Learn about the scientific method and how to apply scientific findings to field work.
- Learn about the history and applications of forensic anthropology.
- Gain a practical understanding of the methods, applications, and limitations of forensic anthropology as relates to police and other investigations.

- Learn to identify human bones and the process of building a biological profile of human remains.
- Learn about decomposition and how forensic anthropologists process and interpret crime scenes.

ANTH 357V. Medical Anthropology

3 Credits (3)

This course introduces students to evolutionary, ecological, interpretive, political-economic, and applied anthropological perspectives on health, illness, and healing to address some of the major questions in the field. How do humans adapt to changing environments that bring with them new illnesses and diseases? How do anthropologists understand the multiple meanings of health and illness cross-culturally? How can anthropologists effectively study health inequalities? What can medical anthropological perspectives contribute to addressing the health issues that we face in our current global context?

Learning Outcomes

- Explain medical anthropology to someone unfamiliar with the field. Meeting this goal requires that you are able to: Define medical anthropology; Define health, illness, sickness, disease, and healing; Explain basic research methods in medical anthropology; Identify the different perspectives within medical anthropology.
- Evaluate health problems from medical anthropological perspectives. Meeting this goal requires that you are able to: Accomplish goal
- Identify different medical anthropological perspectives in research and reporting on health problems; Identify what is missing (based on your knowledge of medical anthropological perspectives) in addition to what is present in research and reporting on health problems.
- Apply medical anthropological perspectives to current health problems. Meeting this goal requires that you are able to: Accomplish goals 1 and 2; Develop deeper understanding of medical anthropological perspectives by formulating "in your own words" definitions of medical anthropological perspectives; Identify multiple facets of major health issues.

ANTH 360V. Food and Culture Around the World

3 Credits (3)

Study of the interaction between food and human culture from an anthropological perspective. Examines the traditional role of food in local economies, social relations, and identity around the world. Also examines the impact of globalization on traditional food systems and cultures.

ANTH 362V. Environmental Anthropology

3 Credits (3)

This course examines environmental studies from an anthropological perspective. The class focuses on how cultural values mediate environmental management. The class covers topics such as environmental anthropology, large scale development, biodiversity conservation, sustainable development, indigenous groups, consumption, and globalization.

Learning Outcomes

- Students will understand the impact of cultural values on how humans interact with the environment.
- Students will understand how different cultural perspectives can be used to address environmental problems.
- Students will critically reflect on their own environmental values and recognize how these values are shaped by our own culture.

ANTH 375. Pottery Analysis in Archaeology

3 Credits (3)

This course introduces the basic concepts, methods, and approaches used in the analysis of archaeological pottery. The purpose of the course

is first to provide hands-on experience with the full range of analytical techniques routinely applied to ceramic materials recovered from archaeological sites, but to also provide a contextual framework for the interpretation and evaluation of these data. Classes consist of brief introductory lectures, and seminar presentation and discussion of course readings. Lab meetings consist of exercises designed to provide you with practical experience working with the materials and measures covered in lectures and readings. Crosslisted with: ANTH 575.

Learning Outcomes

1. Students will learn the theory underlying pottery analysis as well as some of the methods used to identify and interpret pottery;
2. Students will learn to think about the organization of pottery technology from a behavioral rather than a purely typological framework;
3. Students will have the opportunity to develop and then evaluate a research question or problem statement within a chosen theoretical framework, as well as have the opportunity to evaluate that question or questions using both qualitative and quantitative analyses;
4. Students will gain the skills needed to assess pottery analysis reports and undertake pottery analyses for senior thesis, M.A. theses, and CRM contexts.

ANTH 376. Lithic Technology Organization

3 Credits (3)

Advanced seminars and laboratory exercises to learn and develop techniques and methods that will help us determine how to interpret behavioral and cultural information from lithic (stone tool) data.

Prerequisite(s): ANTH 315.

ANTH 378. Introduction to Lab Methods in Archaeology

3 Credits (3)

Introduction to laboratory techniques used in the analysis of archaeological materials.

Learning Outcomes

1. Identify different categories and types of archaeological materials.
2. Employ common methods for analyzing material culture.
3. Explain how research design determines analytical methods and shapes interpretations.
4. Discuss our ethical obligation to preserve collections for future researchers, while recognizing the challenges involved in this endeavor.

ANTH 385. Internship in Anthropology

3-12 Credits (3-12)

Applied or field experience to gain professional expertise. Placements with public agencies, NGOs, or research organizations. Topical focus tailored to student's individual needs through consultation with instructor.

Prerequisite(s): Junior status, consent of instructor and GPA 2.8 or better.

ANTH 388. Intermediate Archaeological Field School

2-6 Credits (2-6P)

Training in archaeological field methods, including excavation of archaeological sites, mapping, and data management and analysis.

Consent of Instructor required.

Learning Outcomes

1. Map sites/site features using a compass and tape, GPS unit, and total station/RTK GNSS receiver.
2. Identify artifacts, ecofacts, and features in archaeological contexts.
3. Document sites, features, and/or excavation units using appropriate forms.
4. Conduct excavations using arbitrary or natural levels.

5. Process/analyze archaeological materials in field/laboratory settings.
6. Work collaboratively and productively with a team in a challenging field setting.
7. Record your daily field activities, observations, and preliminary interpretations in a field journal.

ANTH 389. Archaeological Mapping

3 Credits (3)

Techniques for mapping archaeological sites and recording spatial distributions of archaeological data using a variety of surveying equipment and computer mapping software. This course will take you through the process of creating a detailed archaeological site plan map and record the information on the NM Cultural Resource Information System (NMCRIS). You will learn how to set up and operate a theodolite and GPS devices (both optical and total station, GNSS receivers). You will record data sufficient to make 1. a feature map; 2. a topographic map; and 3. an artifact density map on our chosen site. You will learn how to calculate horizontal distances and elevations. You will learn about the capabilities and common sources of error in the use of the equipment. You will transform your raw data and draw several kinds of maps using Surfer software.

Learning Outcomes

1. Learn different methods and use of survey instrumentation to create maps of archaeological sites.
2. Learn how to record and process field data needed to create a. a feature map; b. a topographic map; and c. an artifact density map on our chosen site.
3. Learn to calculate horizontal distance and elevation.
4. Use common mapping software – ARCGIS and Surfer to draw your maps.
5. Learn about the capabilities and common sources of error in survey instrumentation.
6. Produce accurate information and site maps needed to complete NMCRIS LA forms.

ANTH 399. Professionalism & Practice in Anthropology

3 Credits (3)

This course serves as a capstone for Anthropology majors. It offers students a writing focused opportunity to hone professional anthropological skills including critical thinking and communication strategies. All communication takes a position; it makes an argument. Students will learn and practice these skills through writing, rewriting and then rewriting again a research paper, a curriculum vitae/resume, employment letters of inquiry, and graduate school letters of inquiry. Restricted to Anthropology Majors. May be repeated up to 3 credits.

Learning Outcomes

1. Learn and practice written communication these skills through writing, rewriting and then rewriting again a research paper,
2. Learn and practice professional verbal and visual communications through research presentations, job interviews and elevator speeches
3. Identify and use anthropologically informed ethical responsibilities that pervade written, verbal and visual communication skills (e.g., goals for use of information, use of accurate information, protection of sources of information, honest attribution of credit to sources of scholarly work, sensitivity to others cultural traditions);

ANTH 402. Contemporary Medical Anthropology

3 Credits (3)

Contemporary Medical Anthropology This advanced seminar in medical anthropology addresses contemporary issues in the field of medical anthropology through theoretical and ethnographic texts. Topics span

a wide range of studies in medical anthropology and may include such issues as the social production of health and illness, medical pluralism, discourses of mental health, the practice of complementary and alternative medicine, health disparities, the political economy of infectious disease, race and biological variation in biomedicine, and implementing biocultural perspectives. Crosslisted with: ANTH 546.

Prerequisite(s): ANTH 301 or ANTH 355 or ANTH 357V or consent of instructor.

Learning Outcomes

1. Discuss current issues relevant to the study of medical anthropology.
2. Apply medical anthropological concepts and ideas to theoretical and practical health issues.
3. Acquire skills in the critical appraisal of ethnographic literature.

ANTH 414. The Archaeology of Religion

3 Credits (3)

The class offers an in-depth introduction to the Archaeology of Religion focusing on the theoretical framework of artifact agency. The course begins with a discussion of the role of material culture in society and religion (artifact agency theory) and then moves through a series of case studies that highlight important themes in the archaeology of religion. These themes include the Religion among the Earliest Paleolithic Cultures, Relationships between Houses and Temples, Sacrifice (Artifact, Animal and Human), New Religious Movements, and Witchcraft Persecution.

Learning Outcomes

1. Students will develop a stronger understanding of the role of religious material culture in anthropology and archaeology.
2. Students will develop strong research skills by applying that knowledge of material culture theory in a term paper that explores artifact agency in an ancient religion.
3. Students will develop strong communication skills through the preparation of a written term paper and class power point presentation of that research.

ANTH 415. Applied Anthropology

3 Credits (3)

Examines the intellectual roots of applied anthropology and early case studies of anthropologists working as administrators. Examines the ethical and methodological approaches that applied anthropologists employ. Examination of case studies that show role of applied anthropologists in improving human service delivery, cultural preservation, planning and implementing programs of participatory change, advocacy, and economic development. Taught with ANTH 515.

ANTH 419. Topics in Prehistoric Archaeology

3 Credits (3)

Specific subjects in prehistoric archaeology as announced in the Schedule of Classes. May be repeated up to 6 credits.

ANTH 431V. Nutritional Anthropology

3 Credits (3)

This course provides biological, ecological, and cross-cultural perspectives on human nutrition. Topics covered include human nutritional evolution, dietary adaptation, variation in human foodways and habits, relationships between diet and health, nutrition transitions, and methods for studying human diet and nutrition in field settings.

Learning Outcomes

1. Understand the ways in which biology, culture, and ecology shape human nutritional outcomes and dietary patterns.

2. Be able to identify methods best suited to answering questions about human diet and nutrition in field settings.
3. Be able to develop a research question and basic research strategy.

ANTH 433V. Sex, Gender and Culture

3 Credits (3)

This seminar course introduces students to the anthropological study of gender. We take an integrated approach to the subject, considering the ways that different kinds of anthropological research, including archaeology, biological anthropology, ethnography, etc., expand our understanding of the various ways gender is defined across space and time, how it is lived, and what it means to us and others. Students will review the historical context and development of this subject within the field, and will explore such topics as sex versus gender, embodiment and gendered performance, gender hierarchies, the politics of reproduction, and globalization. May be repeated up to 3 credits.

Learning Outcomes

1. Identify and evaluate different anthropological approaches to the study of gender
2. Develop and employ analytical and critical thinking skills
3. Demonstrate proficiency in oral and written communication
4. Integrate and synthesize knowledge of gender-related topics in a research paper

ANTH 435. Human Health and Biological Variation

3 Credits (3)

Overview of contemporary human biological variation and adaptability within a scientific evolutionary and biocultural framework. Special emphasis is placed on human adaptation to the environment and the sociocultural, epidemiological, and evolutionary factors that underlay contemporary issues in human health and disease. Crosslisted with: ANTH 535.

Learning Outcomes

1. Develop critical thinking skills and scientific literacy through discussion, reading, and writing exercises and evaluating scientific theories, data, and research methods.
2. Develop an understanding of evolutionary theory, and how human organic evolution shapes variation, adaptation, and health in contemporary human populations.
3. Learn how human evolutionary history has shaped the global distribution of contemporary human biological diversity.
4. Understand the scientific critique of the biological race concept, and how social inequality, particularly racism, can become embodied.
5. Understand the various ways that humans adapt to the environment on different timescales.
6. Study life course theory and how experiences during development impact health across the life course.
7. Develop specific transferable skills, including written communication, public speaking, and information gathering (research), and for graduate students, research questions development, hypothesis testing, basic data analysis/visualization in Excel.

ANTH 436. Evolutionary Medicine

3 Credits (3)

This course provides an overview of evolutionary medicine, a field that applies evolutionary theory to understanding variation in human biology and health and treating and preventing disease. Topics covered in the course include evolutionary perspectives on diet and nutrition, chronic disease, infectious disease, cancer, stress, mental health, reproductive health, women's health, and child growth and development.

Learning Outcomes

1. Understand the basic principles of evolutionary theory.
2. Understand how anthropologists and medical and public health professionals can apply evolutionary theory to understand human health and disease.
3. Understand both the promise and limits of evolution as an explanatory paradigm for variation in human health and disease.
4. Be able to apply principles of evolutionary medicine to development of a research proposal.
5. Develop collaborative and oral presentation skills through a group presentation.

ANTH 449. Directed Reading**1-6 Credits**

Comprehensive reading on selected topics. May be repeated for a maximum of 6 credits.

Prerequisite(s): Upper division anthropology majors with consent of instructor.

ANTH 449 H. Directed Reading Honors**1-3 Credits**

Same as ANTH 449. Additional work to be arranged. May be repeated for a maximum of 6 credits.

ANTH 456. Native American Intersections in Museums**3 Credits (3)**

This course explores the changing relationships and complex intersections between Native people and museums. We will examine how museum practices of collection and exhibition influence ways in which knowledge is formed and presented, and interrogate the role of museums as crucial sites for discourse around issues of ownership, indigenous knowledge and representation. Case studies revealing shifting meanings of objects, curatorial challenges, the development of tribal museums and repatriation complexities will be used to critically engage with Native responses via art, criticism and legal action. Crosslisted with: ANTH 556.

ANTH 458. Gender and Reproduction**3 Credits (3)**

This course examines biocultural variation in reproductive health and birth practices. Human reproductive events like childbirth, contraception, abortion, surrogacy, fertility treatment, and conception, are not only biological in nature, but are also shaped by cultural beliefs and social, medical, and political institutions. Through cross-cultural case studies, we will examine how reproductive experiences are impacted by health-related ideas and medical technologies, and by national and international population policies. We will explore how pregnancy, menstruation, birth, menopause, and fertility control provide sites for gender formation, the reproduction of social inequalities, and state regulation of national populations.

Prerequisite: ANTH 301 or ANTH 355 or ANTH 357V or consent of instructor.

Learning Outcomes

1. Identify the fundamental concepts, modes of analysis, and central questions of the anthropology of reproduction.
2. Gain proficiency in the use of critical thinking skills in their assessment of ethnographic writing.
3. Apply knowledge of peoples' reproductive practices, and gendered identities and sexual lifeways in a range of social contexts.
4. Articulate, in oral and written forms, the central issues in reproduction and culture.

ANTH 463. Cultural Resource Management I**3 Credits (3)**

This course introduces you to the field of cultural resource management (CRM) and to the federal and state laws and regulations that govern most archaeology and historic preservation projects conducted today. Class lectures, readings, and written assignments will cover the major relevant US federal laws (NHPA, NEPA, ARPA, NAGPRA); New Mexico state cultural resource laws, regulations, and permitting practices; and major international heritage laws. Particular emphasis will be placed on understanding how to evaluate and nominate cultural resources for listing on the National Register of Historic Places (NRHP). Good oral and written communication skills are essential for success in CRM, so students will be provided with numerous opportunities to develop these skills in class.

Learning Outcomes

1. Explain the goals of cultural resource management (CRM)
2. Describe the major laws and regulations that govern CRM in the United States, in the state of New Mexico, and abroad
3. Identify some common challenges with implementing these laws and regulations
4. Determine the eligibility of cultural resources for listing on the NRHP, and justify this determination

ANTH 464. Curation Crisis in Archaeology**3 Credits (3)**

This collection management course will introduce students to collections curation, collections care, and collections-based research. Archaeological collections stewardship begins before an archaeologist steps foot into the field and continues well after the recovered collections reach the repository. This course provides students with an understanding of the curation#“crisis”#using archaeological collections curated at the University Museum as a case study and the responsibilities that archaeologists have to the collections they generate.

Learning Outcomes

1. Learn about the maintenance of archaeological collections
2. Learn about the management of, access to, and use of archaeological collections
3. Learn about the curation crisis at a small museum (e.g., Kent Hall University Museum)
4. Learn about collections-based research
5. Learn about various ways of disseminating archaeological collections to the public
6. Change the perception of the “just digging and we will deal with the collections later” approach.

ANTH 467. Archaeology of the American Southwest**3 Credits (3)**

Description and analysis of the archaeology of the American Southwest including paleo-environmental reconstruction, culture change, and relations with contemporary cultures.

Prerequisite: ANTH 315.

Learning Outcomes

1. Learn the culture history of the American Southwest from the Ice-Age through the Spanish Colonial Period.
2. Students will learn the advances in archaeological method and theory developed in the American Southwest such as Tree-ring dating, Pottery Seriation, Paleoindian Archaeology.
3. Students will develop a research interest in the region through a paper specializing in a theme and subregion e.g. Architectural change in the four corners during the 13th century, the adoption of corn in the Late archaic borderlands of southern New Mexico.

ANTH 468. Applied Medical Anthropology**3 Credits (3)**

This course introduces students to applications of medical anthropological perspectives to health care, international development, public health, and health policy.

Learning Outcomes

1. Discuss the usefulness of anthropological perspectives in addressing health issues in a variety of interdisciplinary and professional settings.
2. Assess the health impact of public policy from anthropological perspective.

ANTH 474. Human Osteology**3 Credits (3)**

A survey of the functional, developmental, and evolutionary biology of the human skeleton. Identifying bones and teeth from hands-on experience with skeletal and dental material. Provides a foundation for human evolutionary studies, bioarchaeology and forensic anthropology. May be repeated up to 3 credits. Crosslisted with: BIOL 424.

ANTH 477. Zooarchaeology**3 Credits (3)**

Detailed study and analysis of taphonomic processes affecting animal bone recovered from archaeological and paleontological contexts. May be repeated up to 3 credits.

ANTH 485. Special Research Project**1-3 Credits**

Anthropological, archaeological, or museum field work or laboratory experience in academic, private, state, or federal agencies. Must spend 30 hours in a field, museum, or laboratory setting per credit hour earned. May be repeated up to 6 credits.

Prerequisite(s): Complete 12 ANTH credits and consent of instructor.

ANTH 486. Community Engagement and Service Learning**3 Credits (3)**

Course combines classroom instruction with a local community service project. Formal instruction component will examine social science research findings and perspectives on a locally relevant social issue or problem. In the service learning component, students will be trained and work on a local community service project. Students will develop field experience and methodological skills in community engagement. Projects and social issues may vary for different semesters.

ANTH 488. Archaeological Field School Advanced**2-6 Credits (2-6P)**

Additional training in archaeological field methods for students with previous fieldwork experience. Consent of Instructor required.

Learning Outcomes

1. Map sites/site features using a compass and tape, GPS unit, and total station/RTK GNSS receiver.
2. Identify artifacts, ecofacts, and features in archaeological contexts.
3. Document sites, features, and/or excavation units using appropriate forms.
4. Conduct excavations using arbitrary or natural levels.
5. Process/analyze archaeological materials in field/laboratory settings.
6. Work collaboratively and productively with a team in a challenging field setting.
7. Record your daily field activities, observations, and preliminary interpretations in a field journal.

ANTH 497. Special Topics**1-6 Credits (1-6)**

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

Prerequisite(s): Junior or above standing.

ANTH 500. Seminar in Anthropological Theory**3 Credits (3)**

Detailed focus on specific areas of anthropological theory. Course subtitled in the Schedule of Classes. Course may be repeated.

Prerequisite(s): graduate standing in Anthropology or consent of instructor.

ANTH 502. Fundamentals of Anthropology**1-4 Credits (1-4)**

Review of fundamental knowledge and theories in biological, cultural, or linguistic anthropology or archaeology. Graded S/U.

ANTH 503. Anthropological Theory**3 Credits (3)**

This seminar is designed to introduce graduate students to the major concepts and developments in anthropological theory. Students will develop an understanding of the major principles, contributions, and limitations of anthropological theory from the 1890s to the present. The course will address theoretical developments in biological anthropology, sociocultural anthropology, archaeology, and public and applied anthropology.

Learning Outcomes

1. Articulate the history of theoretical developments in multiple anthropological subfields and explain the holistic connections among them.
2. Explain and critique the major theoretical formulations of the field, including: human biological evolution and variation; cultural relativism; practice theory; life history and formation processes of archaeological, paleontological, and contemporary sites and specimens; historical contingency in culture change and globalization; human ecology and environmental anthropology, past and present; indigenous perspectives, participatory action research, and collaborative research designs; identity and the intersections of gender, sex, race, class, and other categories, past and present; origins and contemporary variation of inequality and socioeconomic disparities; political economy, domination and resistance, past and present; the development and critique of diverse narratives of the past drawn from archaeological/material, visual and performative, documentary, and oral historical media; stewardship of tangible and intangible cultural heritage,
3. Read and practice in the norms of written and verbal expression across multiple theoretical domains in anthropology.

ANTH 505. Issues in Anthropological Practice**3 Credits (3)**

This is a course in professional development in which students design their thesis/non-thesis research projects and write a first draft of their capstone research proposal. The purpose is to connect the MA thesis or non-thesis research project to your future career. Professionals in anthropology should demonstrate competency in research and writing by completing an M.A. thesis or qualification equivalent (e.g. internship report, research report, which increasingly include public scholarship and the development of creative digital media). Successful completion of an original research project demonstrates that a student can conduct applied and collaborative research, complete a scope of work according to standards and guidelines of the agency, institution, or organization, and evaluate the research and contributions of colleagues and peers. Anthropologists are all called to participate in the investigation, management, and evaluation of cultural resources (tangible

and intangible), address the intersectionalities within organizations and institutions that differentially impact social groups, and work with individuals and communities to achieve shared objectives that enhance engagement.

Learning Outcomes

1. Students will develop and implement a research project in anthropology. We will focus on research design—from defining the research problem, funding, lit review, logistics of fieldwork, analysis, and write-up. Students will move from exploring a topic of interest to developing a proposal for investigation.
2. Students will develop professional skills, ethics, values, and attitudes necessary for developing and implementing a research project and for employment in the field. They will map out a pathway to a career in anthropology. We will examine anthropological practice in academic and applied contexts. We will consider expectations and qualifications needed for different work environments and degree programs. Students will work towards matching NMSU's MA curriculum to their professional goals. You should make the curriculum and university resources work for you.

ANTH 506. Advanced Studies in Physical Anthropology

1-3 Credits

Lectures, seminars, or laboratory research in selected topics. May be repeated for a maximum of 12 credits.

Prerequisite(s): graduate standing in Anthropology or consent of instructor.

ANTH 507. Advanced Studies in Archaeology

1-3 Credits

Lectures, seminars, field or laboratory research in selected topics. May be repeated for a maximum of 12 credits.

Prerequisite(s): graduate standing in Anthropology or consent of instructor.

ANTH 508. Advanced Studies in Cultural Anthropology

1-3 Credits

Lectures, seminars, or field research in selected topics. May be repeated for a maximum of 12 credits.

Prerequisite(s): graduate standing in Anthropology or consent of instructor.

ANTH 512. Quantitative Analytical Methods in Anthropology

3 Credits (3)

This class is an introduction to statistical analysis of anthropological and social science data. Students will learn how quantitative and statistical techniques are used in the analysis of anthropological problems and how to evaluate statistical arguments in the literature. No previous background in statistics is required. We will consider data collection, sampling and statistical populations, exploratory summaries of data, and the importance of choosing appropriate statistical techniques. All course work will emphasize anthropological interpretation through applied statistical methods. The course has a four-field focus (archaeology, biological anthropology, cultural anthropology, and linguistics), and students will work with readings, examples, and problem assignments from each subfield.

Learning Outcomes

1. Articulate the difference between descriptive and inferential statistics.
2. Explain the difference between a population and a sample and learn how to draw random samples (various methods – simple random, stratified, systematic, etc.) in the field and using numerical data and statistical procedures within SAS or other STATPACKS (SPSS, R).

3. Use appropriate graphs, tables, and measures of central tendency and dispersion to display and summarize distributions of nominal, ordinal, interval and ratio level data.
4. Understand the Normal Distribution and the assumptions required for hypothesis testing.
5. Perform hypothesis testing and interpret the results for univariate, bivariate, and multivariate statistical procedures, including Chi Square, T-tests, Non-parametric Comparison tests, ANOVA, Correlation, Simple Linear Regression, Multiple Regression, Cluster and Discriminant Analysis (as time permits).
6. Develop an exploratory statistical analysis for original anthropological data and write a final paper interpreting the results.

ANTH 514. Advanced Issues in the Archaeology of Religion

3 Credits (3)

The class offers an in-depth introduction to the Archaeology of Religion focusing on the theoretical framework of artifact agency. The course begins with a discussion of the role of material culture in society and religion (artifact agency theory) and then moves through a series of case studies that highlight important themes in the archaeology of religion. These themes include the Religion among the Earliest Paleolithic Cultures, Relationships between Houses and Temples, Sacrifice (Artifact, Animal and Human), New Religious Movements, and Witchcraft Persecution.

Learning Outcomes

1. Students will develop a stronger understanding of the role of religious material culture in anthropology and archaeology and be required to lead class discussions.
2. Students will develop strong research skills by applying that knowledge of material culture theory in a term paper that explores artifact agency in an ancient religion.
3. Students will develop strong communication skills through the preparation of a written term paper and class power point presentation of that research.

ANTH 515. Applied Anthropology

3 Credits (3)

Examines the intellectual roots of applied anthropology and early case studies of anthropologists working as administrators. Examines the ethical and methodological approaches that applied anthropologists employ. Examination of case studies that show the role of applied anthropologists in improving human service delivery, cultural preservation, planning and implementing programs of participatory change, advocacy, and economic development. Taught with ANTH 415.

ANTH 516. Advanced Archaeology of the American Southwest

3 Credits (3)

Advanced topics in Southwestern archaeology including ritual architecture, environmental reconstruction, violence, site formation processes, and experiment and research.

Learning Outcomes

1. Students will have an advanced understanding of the changes in subsistence, social organization, and material culture in the American Southwest from the Ice Age through the Spanish Entrada.
2. Students will understand the history of archaeological method and theory as it played out in the archaeology of the American Southwest. They will recognize that theory determines they questions ask about the ancient peoples of the region.
3. Graduate students will write a term paper (professional technical and scientific writing) that contributes to their MA projects either directly as part of a specific thesis or as extension of their interest in a topic

(e.g., identity, domestication, ritual violence) or method (e.g., pottery sourcing, faunal analysis).

ANTH 517. Advanced Topics in Mesoamerican Archaeology

3 Credits (3)

Specific subjects in Mesoamerican archaeology to be announced in the Schedule of Classes. May be repeated for a maximum of 6 credits.

Prerequisite: graduate standing.

ANTH 518. Advanced Historical Archaeology

3 Credits (3)

This survey course explores the development of historical archaeology, its methods and theory, and popular research themes within the discipline.

Students will be introduced to the ways that archaeologists identify and analyze historical-period documents, oral histories, features, and artifacts, and how they use these data to deepen our understanding of the recent past. Crosslisted with: ANTH 318.

Learning Outcomes

1. Critically evaluate historical sources.
2. Identify and analyze common historical-period artifacts and features.
3. Utilize historical and archaeological evidence in research.
4. Demonstrate how historical archaeology can be used to draw attention to and highlight the contributions of diverse populations in history.
5. Demonstrate improved oral and written communication skills.

ANTH 519. Advanced Topics in Prehistoric Archaeology

3 Credits (3)

Seminar on specialized research archaeology.

Prerequisite: graduate standing.

ANTH 520. Ethnographic Field Methods

3 Credits (3)

Basic methodologies used in conducting qualitative ethnographic research. Projects in participant observation, ethnographic interviews, life history interviews, folk taxonomy construction, and coding of field notes.

ANTH 522. Archaeological Field School-Graduates

2-6 Credits (2-6P)

Graduate-level training in archaeological field methods, including excavation, survey, mapping, documentation, and processing/analysis of data. Consent of Instructor required.

Learning Outcomes

1. Map sites/site features using a compass and tape, GPS unit, and total station/RTK GNSS receiver.
2. Identify artifacts, ecofacts, and features in archaeological contexts.
3. Document sites, features, and/or excavation units using appropriate forms.
4. Conduct excavations using arbitrary or natural levels.
5. Process/analyze archaeological materials in field/laboratory settings.
6. Process archaeological materials safely so that they can be analyzed in a laboratory environment.
7. Record your daily field activities, observations, and preliminary interpretations in a field journal.

ANTH 523. Archaeological Mapping

3 Credits (3)

Techniques for mapping archaeological sites and recording spatial distributions of archaeological data using a variety of surveying equipment and computer mapping software. This course will take you through the process of creating a detailed archaeological site plan map and record the information on the NM Cultural Resource Information

System (NMCRIIS). You will learn how to set up and operate a theodolite and GPS devices (both optical and total station, GNSS receivers). You will record data sufficient to make 1. a feature map; 2. a topographic map; and 3. an artifact density map on our chosen site. You will learn how to calculate horizontal distances and elevations. You will learn about the capabilities and common sources of error in the use of the equipment. You will transform your raw data and draw several kinds of maps using Surfer software.

Learning Outcomes

1. Learn different methods and use of survey instrumentation to create maps of archaeological sites.
2. Learn how to record and process field data needed to create a. a feature map; b. a topographic map; and c. an artifact density map on our chosen site.
3. Learn to calculate horizontal distance and elevation.
4. Use common mapping software – ARCGIS and Surfer to draw your maps.
5. Learn about the capabilities and common sources of error in survey instrumentation.
6. Produce accurate information and site maps needed to complete NMCRIIS LA forms.

ANTH 529. Advanced Evolutionary Medicine

3 Credits (3)

This course provides an overview of evolutionary medicine, a field that applies evolutionary theory to understanding variation in human biology and health and treating and preventing disease. Topics covered in the course include evolutionary perspectives on diet and nutrition, chronic disease, infectious disease, cancer, stress, mental health, reproductive health, women's health, and child growth and development.

Learning Outcomes

1. Understand the basic principles of evolutionary theory.
2. Understand how anthropologists and medical and public health professionals can apply evolutionary theory to understand human health and disease.
3. Understand both the promise and limits of evolution as an explanatory paradigm for variation in human health and disease.
4. Be able to apply principles of evolutionary medicine to development of a research proposal.
5. Develop collaborative and oral presentation skills through a group presentation.

ANTH 531. Issues in Nutritional Anthropology

3 Credits (3)

This course provides biological, ecological, and cross-cultural perspectives on human nutrition. Topics covered include human nutritional evolution, dietary adaptation, variation in human foodways and habits, relationships between diet and health, nutrition transitions, and methods for studying human diet and nutrition in field settings.

Learning Outcomes

1. Understand the ways in which biology, culture, and ecology shape human nutritional outcomes and dietary patterns.
2. Be able to identify methods best suited to answering questions about human diet and nutrition in field settings.
3. Be able to develop a research question and basic research strategy.

ANTH 533. Advanced Issues in Sex, Gender, and Culture

3 Credits (3)

Survey of the history of anthropological ideas about gender and women, and a comparison of gender roles, relations, and ideologies across a range of cultures. May be repeated up to 3 credits.

Learning Outcomes

1. Explain to others how you understand the concepts of sex, women, gender, and culture.
2. Critically analyze the uses of these concepts across a range of different contexts including media, politics, cultural performance, and everyday interactions.
3. Apply theoretical concepts introduced in this class to a current anthropological research problem/topic.

ANTH 535. Adv. Human Health and Biological Variation

3 Credits (3)

Overview of contemporary human biological variation and adaptability within a scientific evolutionary and biocultural framework. Special emphasis is placed on human adaptation to the environment and the sociocultural, epidemiological, and evolutionary factors that underlay contemporary issues in human health and disease. Crosslisted with: ANTH 435.

Learning Outcomes

1. Develop critical thinking skills and scientific literacy through discussion, reading, and writing exercises and evaluating scientific theories, data, and research methods.
2. Develop an understanding of evolutionary theory, and how human organic evolution shapes variation, adaptation, and health in contemporary human populations.
3. Learn how human evolutionary history has shaped the global distribution of contemporary human biological diversity.
4. Understand the scientific critique of the biological race concept, and how social inequality, particularly racism, can become embodied.
5. Understand the various ways that humans adapt to the environment on different timescales.
6. Study life course theory and how experiences during development impact health across the life course.
7. Develop specific transferable skills, including written communication, public speaking, and information gathering (research), and for graduate students, research questions development, hypothesis testing, basic data analysis/visualization in Excel.

ANTH 538. Plants, Culture, and Sustainable Development

3 Credits (3)

Study of role of indigenous cultures and indigenous knowledge systems in plant domestication, ethnoecology, and preservation of traditional crop diversity. Examination of issues related to conserving cultural diversity, food systems, food security and biodiversity.

ANTH 539. Culture and Foodways

3 Credits (3)

Study of interaction between food and culture from anthropological perspective. Study of role of food in cultural history, social relations, ritual, and identity. Examination of impact of globalization of food systems on traditional cultures, local food systems, and food security.

ANTH 540. Cultural Resource Management

3 Credits (3)

Study of federal and state of New Mexico historic preservation laws and regulations and their application in current Cultural Resource Management and a review of relevant case studies.

ANTH 542. Cultural Resource Management II

3 Credits (3)

Continuation of ANTH 540. This course introduces students to the business and practice of doing contractual cultural resource management in the United States.

Learning Outcomes

1. Map an archaeological site (meeting New Mexico state standards for archaeological survey)
2. Document an archaeological site (using a Laboratory of Anthropology site form)
3. Prepare a written site description suitable for inclusion in a survey report
4. Analyze and present data using relevant software (e.g., Excel, Access)
5. Prepare a research proposal or report (meeting New Mexico state standards)

ANTH 543. Indigenous Ways of Knowing

3 Credits (3)

This course examines Indigenous knowledge and ways of knowing as a means to gain an appreciation of an epistemology and ontology that may be outside the boundaries of Eurocentric theory, concepts, and principles. Knowledge development through mythology and story telling is viewed from the nature of difference rather than comparative analysis.

Learning Outcomes

ANTH 545. Advanced Museology

3 Credits (3)

This course provides a broad introduction to the museum world. Through discussion of readings, examination of case-studies, and practical assignments, students will gain an understanding of the museum as an institution, as well as learn the challenges and responsibilities that museums and their staff encounter. Topics include the history of museums, contemporary debates surrounding the definition of museums, ethical and legal issues, and community connections. The course will cover various types of museums—including art, history, ethnographic, indigenous, and scientific—and discuss how these thematic orientations impact museum practice. Students will also explore common museum processes such as collecting, cataloguing, conservation, exhibition, research, and education through practical exercises using the collections of the University Museum in Kent Hall, as well as through case studies of museums around the world.

Learning Outcomes

1. Describe the major conceptual and practical influences on museums today—including issues of historical development, ethics, missions, and thematic orientations.
2. Critically engage with diverse types of museums as cultural institutions, their practices, and the communities with whom they engage.
3. Implement skills relevant to the museum profession, such as collections management, condition reporting, exhibition and programming planning, and research.

ANTH 546. Advanced Contemporary Medical Anthropology

3 Credits (3)

This advanced seminar in medical anthropology addresses contemporary issues in the field of medical anthropology through theoretical and ethnographic texts. Topics span a wide range of studies in medical anthropology and may include such issues as the social production of health and illness, medical pluralism, discourses of mental health, the practice of complementary and alternative medicine, health disparities, the political economy of infectious disease, race and biological variation in biomedicine, and implementing biocultural perspectives. Crosslisted with: ANTH 402.

Learning Outcomes

1. Discuss current issues relevant to the study of medical anthropology.
2. Apply medical anthropological concepts and ideas to theoretical and practical health issues.
3. Acquire skills in the critical appraisal of ethnographic literature.

ANTH 549. Advanced Museum Anthropology**3 Credits (3)**

This course provides an introduction to the methodological and theoretical approaches of museum anthropology. Students will gain experience with all these aspects of museum anthropology in the course by engaging with critical scholarship, analyzing case studies, and practicing collections-based research methods utilizing the collections of the University Museum. Through assignments students will analyze objects in the museum's collections using techniques of close looking, drawing, photography, sequences of making, and external research using scholarly sources. Students will gain skills in primary and secondary research, the analysis of material culture, and the practicalities of navigating research in museums.

Learning Outcomes

1. Describe major theoretical approaches to museum anthropology, and how these have changed over time.
2. Critically engage with the intersections between museums as institutions and the practice of anthropology, including the politics of representation.
3. Implement methodological research skills as a student-scholar by conducting independent research based on museum collections.
4. Convert collections-based research into written and media works characteristic of scholar-facing and public-facing practice in museum anthropology, curatorship, and museum studies.

ANTH 556. Advanced Native American Intersections in Museums**3 Credits (3)**

This course explores the changing relationships and complex intersections between Native people and museums. We will examine how museum practices of collection and exhibition influence ways in which knowledge is formed and presented, and interrogate the role of museums as crucial sites for discourse around issues of ownership, indigenous knowledge and representation. Case studies revealing shifting meanings of objects, curatorial challenges, the development of tribal museums and repatriation complexities will be used to critically engage with Native responses via art, criticism and legal action. Crosslisted with: ANTH 456.

ANTH 558. Advanced Gender and Reproduction**3 Credits (3)**

This course examines biocultural variation in reproductive health and birth practices. Human reproductive events like childbirth, contraception, abortion, surrogacy, fertility treatment, and conception, are not only biological in nature, but are also shaped by cultural beliefs and social, medical, and political institutions. Through cross-cultural case studies, we will examine how reproductive experiences are impacted by health-related ideas and medical technologies, and by national and international population policies. We will explore how pregnancy, menstruation, birth, menopause, and fertility control provide sites for gender formation, the reproduction of social inequalities, and state regulation of national populations.

Learning Outcomes

1. Identify the fundamental concepts, modes of analysis, and central questions of the anthropology of reproduction.
2. Learn how to use a cross-cultural approach to understand reproductive health.

3. Gain proficiency in the use of critical thinking skills in their assessment of ethnographic writing.
4. Summarize key historical and contemporary debates in the field of reproductive health.
5. Apply knowledge of peoples' reproductive practices, and gendered identities and sexual lifeways in a range of social contexts.
6. Articulate, in oral and written forms, the central issues in reproduction and culture.

ANTH 560. Advanced Forensic Anthropology**3 Credits (3)**

Overview of the field of forensic anthropology. Topics covered include basic human osteology; skeletal examination and documentation; skeletal trauma; personal identification; forensic taphonomy and the process of decomposition; archaeology and scene processing; sex, age, stature, and ancestry estimation; and contemporary issues and limitations in the field of forensic anthropology.

Learning Outcomes

1. Understand how scientific findings from fields like biological anthropology are applied in forensic anthropology.
2. Understand the history and range of applications of forensic anthropology.
3. Gain a practical understanding of the methods, applications, and limitations of forensic anthropology as relates to police and other investigations.
4. Gain a practical understanding of how forensic anthropologists identify human bones and the process of building a biological profile of human remains.
5. Understand processes like decomposition and recovery of remains at crime scenes.

ANTH 564. Advanced Curation Crisis in Archaeology**3 Credits (3)**

This collection management course will introduce students to collections curation, collections care, and collections-based research. Archaeological collections stewardship begins before an archaeologist steps foot into the field and continues well after the recovered collections reach the repository. This course provides students with an understanding of the curation#“crisis”#using archaeological collections curated at the University Museum as a case study and the responsibilities that archaeologists have to the collections they generate.

Learning Outcomes

1. Learn about the maintenance of archaeological and repository collections over time
2. Learn about the management of, access to, and use of archaeological collections
3. Learn about the curation crisis at a small museum (e.g., Kent Hall University Museum)
4. Learn about collections-based research
5. Learn about the development of a small as well as large archaeological database
6. Learn about various ways of disseminating archaeological collections to the public
7. Change the perception of the “just digging and we will deal with the collections later” approach.

ANTH 574. Advanced Human Osteology**3 Credits (3)**

Advanced Human Osteology surveying the functional, developmental and evolutionary biology of the human skeleton. Identifying bones and teeth

from hands-on experience with skeletal and dental material. Provides a foundation for human evolutionary studies, bioarchaeology and forensic anthropology. May be repeated up to 3 credits. Crosslisted with: BIOL 574.

ANTH 575. Advanced Pottery Analysis in Archaeology
3 Credits (3)

This course introduces the basic concepts, methods, and approaches used in the analysis of archaeological pottery. The purpose of the course is first to provide hands-on experience with the full range of analytical techniques routinely applied to ceramic materials recovered from archaeological sites, but to also provide a contextual framework for the interpretation and evaluation of these data. Classes consist of brief introductory lectures, and seminar presentation and discussion of course readings. Lab meetings consist of exercises designed to provide you with practical experience working with the materials and measures covered in lectures and readings. Crosslisted with: ANTH 375.

Learning Outcomes

1. Students will learn the theory underlying pottery analysis as well as some of the methods used to identify and interpret pottery;
2. Students will learn to think about the organization of pottery technology from a behavioral rather than a purely typological framework;
3. Students will have the opportunity to develop and then evaluate a research question or problem statement within a chosen theoretical framework, as well as have the opportunity to evaluate that question or questions using both qualitative and quantitative analyses;
4. Students will gain the skills needed to assess pottery analysis reports and undertake pottery analyses for senior thesis, M.A. theses, and CRM contexts.

ANTH 576. Lithic Technology Organization
3 Credits (3)

Advanced seminars and laboratory exercises to learn and develop techniques and methods that will help us determine how to interpret behavioral and cultural information from lithic (stone tool) data. Consent of Instructor required.

ANTH 577. Advanced Zooarchaeology
3 Credits (3)

Detailed study and analysis of taphonomic processes affecting animal bone recovered from archaeological and paleontological contexts.

ANTH 578. Advanced Lab Methods in Archaeology
3 Credits (3)

Examination of advanced laboratory techniques used in the analysis of archaeological materials.

ANTH 579. Qualitative Data Analysis and Interpretation
3 Credits (3)

This course focuses on methods for qualitative data analysis, both computer-assisted and non-computer-assisted, and interpretation. It includes writing up data for academic articles or theses.

ANTH 585. Method and Theory in Archaeology
3 Credits (3)

Focus on major methodological and theoretical aspects of contemporary archeology.

ANTH 587. Field Work in Latin America
3-12 Credits

Covers anthropological field methods in Latin America that also incorporate in-field lab analysis. No S/U grading.

Prerequisite: consent of instructor.

ANTH 596. Readings

1-6 Credits

Individual study of selected readings and topics. May be repeated for a maximum of 6 credits. Consent of instructor required.

ANTH 597. Internship

1-9 Credits

Anthropological or archaeological internship in private, state, or federal agency. May be repeated for a maximum of 18 credits. Consent of instructor required. Restricted to ANTH majors.

Prerequisite(s): graduate standing.

ANTH 598. Special Research Problems

1-6 Credits (6)

Individual analytic or experimental investigations. May be repeated under different subtitles for a maximum of 6 credits. Consent of instructor required. Restricted to ANTH majors.

Prerequisite(s): graduate standing.

ANTH 599. Master's Thesis

1-15 Credits

Thesis. Consent of instructor required. Restricted to ANTH majors.

Prerequisite(s): graduate standing.

ARCH-ARCHITECTURE

ARCH 1110. Architectural Drawing

4 Credits (2+4P)

This course is designed as an introduction to architectural drawing and design for students without prior experience in the fine arts. Students are guided through a series of spatial and analytical exercises that focus attention on not only how architects draw, but also the reasoning and processes embedded within the technique. Students are provided exposure to a wide range of interconnected architectural concepts and to manual and digital drawing, as well as modeling techniques for architectural and interior design. Students will learn how to represent composition, form, and space by orthographic drawing, paraline and perspective views, and freehand sketching. Three-dimensional model building techniques will also be introduced.

Learning Outcomes

1. Gain understanding of basic methods of architectural drawing
2. Explore and gain understanding of concepts of spatial design and its representation through exercises
3. That stress analytical ability and an awareness of rational design process
4. Gain an understanding of the design process with practice and various exercises
5. Gain exposure to architectural delineation
6. Demonstrate an understanding of specific skills and concepts related to architectural drawing
7. Create and modify architectural models through various phases of a project
8. Demonstrate a knowledge of graphic standards according to industry conventions
9. Identify the various phases of work with regard to the architectural and interior design professions 1
10. Develop analytical and critical thinking skills

ARCH 1114. Introduction to Architectural Design

3 Credits (2+2P)

This course provides students who possess a basic background in architecture and architectural drawing with an introduction to

architectural design. Students are guided through a series of spatial and analytical exercises that focus attention on two dimensional, three dimensional, and four dimensional design. This course will build on direct linkages to ARCH 1120 and ARCH 1110 to further students' exposure to interconnected architectural concepts of process, organizational strategies, and analysis of material methodology while utilizing abstract and practiced graphical architectural conventions. Consent of Instructor required. Restricted to Community Colleges campuses only.

Prerequisite(s): ARCH 1120 and ARCH 1110.

Learning Outcomes

1. Develop critical thinking strategies through a series of connected exercises in order to explain, demonstrate, categorize, compare, contrast and assess information/evidence.
2. Explore concepts of design through spatial design and apply these concepts through a series of progressive representational exercises that stress analytical ability and an awareness of rational design process.
3. Gain skills in the application of graphical communication in a range of media.
4. Enhance abilities in selecting specific information and applying that information to problem solve issues/concerns required to complete a task, while considering other implications.
5. Develop skill sin writing and speaking effectively and use representational media appropriate for both within the profession and with the public.
6. Gather, assess, record, and comparatively evaluate relevant information and performance in order to support conclusions related to a specific project or assignment.
7. Utilize basic formal, organizational and environmental principles and the capacity of each to inform two- and three-dimensional design.
8. Apply fundamentals of both natural and formal ordering systems and the capacity of each to inform two- and three-dimensional design.
9. Demonstrate basic principles of structural systems and their ability to withstand gravitational, seismic, and lateral forces, as well as the selection and application of the appropriate structural system

ARCH 1120. Introduction to Architecture

3 Credits (2+2P)

This course provides students the tools and vocabulary to analyze, interpret and discuss the built environment from the social, historical, perceptual and technical determinants. Students are introduced to elements, principles, and theories of architecture through their social, historical, and technical determinants. The course seeks to lay a foundation in architectural studies, including introducing students to fundamental vocabulary and concepts.

Learning Outcomes

1. Identify and describe significant architects and iconic buildings
2. Discuss social, cultural, and aesthetic contributions of specific architects and projects
3. Explain architectural concepts via written and graphic communication
4. Recall basic processes and vocabulary of architectural professional practice
5. Understand our built environment and the language of design and architecture
6. Understand how buildings are constructed and explain the process of development
7. Describe and discuss design elements, principles, and theories

8. Understand the relationships among owner, surveyors, designers, architects, engineers, and contractors
9. Research design texts and analyze buildings, landscapes, interiors, sustainability, and products to increase knowledge of important elements of architecture and design 1
10. Identify the various styles, periods, and movements and their social, historical, and technical impacts on architecture

ARCH 1121. Computers in Architecture

3 Credits (2+2P)

Explore various software and photography techniques widely used in the architectural field. In addition to using industry standard CAD program as primary 2-d drafting tool, focus is to produce digital architectural models and renderings, presentation boards, and animations. Digital images will be produced and enhanced through basic techniques in photography and integration of various software. Both individual and group work will be required.

Learning Outcomes

1. Demonstrate the use of the computer and plotters/printers
2. Define and understand different terminologies
3. Demonstrate the understanding of different files using windows operating system
4. Understanding the appropriate use of the software in order to produce necessary drafting outcomes
5. Use proper plotting and printing procedures in order to increase efficiency and minimize paper waste
6. Demonstrating the use of different line types as the relate to drafting

ARCH 1122. Architectural Design Studio I

5 Credits (1+8P)

Enhancement of general graphic communication skills and introduction to fundamental design including exploration, development and defense of design concepts; structural order; 2D and 3D processes in manual and digital architectural graphic expression; model building; general communication and presentation techniques; and development of course portfolio. Course is Studio/critique-based with considerable amount of work/hours required. This course is designed to be taken during student's last year in the Pre-Architecture program at DACC. Consent of Instructor required. Restricted to Community Colleges only.

Prerequisite(s): Grade of B- or better in both ARCH 1120 and ARCH 1110.

Learning Outcomes

1. Write and speak effectively and use representational media appropriate for both within the profession and with the general public.
2. Raise clear and precise questions, use abstract ideas to interpret information, consider diverse points of view, reach well-reasoned conclusions, and test alternative outcomes against relevant criteria and standards
3. Gather, assess, record, and comparatively evaluate relevant information and performance in order to support conclusions related to a specific project or assignment.
4. Effectively use basic formal, organizational and environmental principles and the capacity of each to inform two-and three-dimensional design.
5. Apply the fundamentals of both natural and formal ordering systems and the capacity of each to inform two-and three-dimensional design.
6. Examine and comprehend the fundamental principles present in relevant precedents and to make informed choices about the incorporation of such principles into architecture and urban design projects.

7. Prepare a comprehensive program for an architectural project that includes an assessment of client and user needs; an inventory of spaces and their requirements; an analysis of site conditions (including existing buildings); a review of the relevant building codes and standards, including relevant sustainability requirements, and an assessment of their implications for the project; and a definition of site selection and design assessment criteria.
8. Respond to site characteristics, including its context and developmental patterning, the fabric, soil, topography, ecology, climate, and building orientation, in the development of a project design.
9. Design sites, facilities, and systems that are responsive to relevant codes and regulations, and include the principles of life-safety and accessibility standards. 1
10. Demonstrate the basic principles of structural systems and their ability to withstand gravitational, seismic, and lateral forces, as well as the selection and application of the appropriate structural system. 1
11. Understand the basic principles involved in the appropriate selection and application of building envelope systems relative to fundamental performance, aesthetics, moisture transfer, durability, and energy and material resources.

ARCH 1220. Architecture World History I

3 Credits (2+2P)

A survey of the development of world architecture from the ancient era to the advent of the enlightenment in Europe. Major emphasis is on the visual, intellectual, cultural and technological aspects of the ancient and indigenous cultures of the classical and pre-modern world. Community Colleges only. Restricted to Alamogordo, Dona Ana and Grants campuses.

Learning Outcomes

1. Identify major architectural monuments from prehistory to the Renaissance (1400's) in the Western world
2. Demonstrate an understanding of major monuments, styles of architecture and building traditions of non-Western cultures
3. Recognize the relationship of movements and styles in Western architecture to their counterparts in painting and sculpture from the various historical periods
4. Describe the basic principles of urban design
5. Express an appreciation of architectural achievements and the ways in which the elements of art {line, form, color, texture, light, etc.} combine to produce objects of beauty in the built environment
6. Describe basic engineering concerns and achievements in architecture

ARCH 2111. Architectural Delineation I

3 Credits (2+2P)

Introduction to visual literacy, architectural graphic communication, & basic analytical skills. Architectural concepts primarily explored through the application of technical drawing, descriptive geometry, & material manipulation; primarily black & white media. Use of digital tools and media as applicable. May be repeated up to 3 credits. Restricted to Community Colleges campuses only.

Learning Outcomes

1. Develop and utilize visual observation skills
2. Translate visual observations into graphical information
3. Develop and utilize critical thinking in the development of projects
4. Develop effective line drawing techniques

5. Produce graphical representations using various shading techniques
6. Communicate design concepts and ideas clearly

ARCH 2114. Construction Documents

3 Credits (2+2P)

Basic use of CAD to produce residential, commercial, and industrial architectural working drawings, including floor plans, sections, foundation plans and details, exterior and interior elevations, framing plans, and site plans. Use and application of building and zoning codes, typical construction methods and materials, and accessibility requirements. Basic 3-D modeling, AIA layering standards, sheet layout, and construction document coordination. Restricted to: Community Colleges only.

Prerequisite(s)/Corequisite(s): DRFT 109.

Learning Outcomes

1. Create full 3D architectural project models, both via tutorials, and independently
2. Set models up as working drawings.
3. Have a working knowledge of the tools that the majority of users will use to work with Revit Architecture.
4. Project File management skills

ARCH 2115. Architecture Design Studio II

5 Credits (1+8P)

Advanced graphic communication, design, and 3D physical model representation. Focus on site analysis, programming and fundamental design issues of context, environment, program development and space planning, 2D and 3D design and presentation techniques. Course is 'Studio/critique-based' with considerable amount of outside work/hours required. This course is designed to be taken during student's last year in the Pre-Architecture program at DACC. Restricted to Alamogordo, Dona Ana and Grants campuses.

Prerequisite(s): Grade of C- or better in ARCH 1122.

Learning Outcomes

1. Write and speak effectively and use representational media appropriate for both within the profession and with the general public.
2. Raise clear and precise questions, use abstract ideas to interpret information, consider diverse points of view, reach well-reasoned conclusions, and test alternative outcomes against relevant criteria and standards
3. Gather, assess, record, and comparatively evaluate relevant information and performance in order to support conclusions related to a specific project or assignment.
4. Effectively use basic formal, organizational and environmental principles and the capacity of each to inform two-and three-dimensional design.
5. Apply the fundamentals of both natural and formal ordering systems and the capacity of each to inform two-and three-dimensional design.
6. Examine and comprehend the fundamental principles present in relevant precedents and to make informed choices about the incorporation of such principles into architecture and urban design projects.
7. Prepare a comprehensive program for an architectural project that includes an assessment of client and user needs; an inventory of spaces and their requirements; an analysis of site conditions (including existing buildings); a review of the relevant building codes and standards, including relevant sustainability requirements, and an assessment of their implications for the project; and a definition of site selection and design assessment criteria.

8. Respond to site characteristics, including its context and developmental patterning, the fabric, soil, topography, ecology, climate, and building orientation, in the development of a project design.
9. Design sites, facilities, and systems that are responsive to relevant codes and regulations, and include the principles of life-safety and accessibility standards. 1
10. Demonstrate the basic principles of structural systems and their ability to withstand gravitational, seismic, and lateral forces, as well as the selection and application of the appropriate structural system. 1
11. Understand the basic principles involved in the appropriate selection and application of building envelope systems relative to fundamental performance, aesthetics, moisture transfer, durability, and energy and material resources.

ARCH 2116. Architectural Delineation

3 Credits (2+2P)

Continuation of ARCH 2111 with an emphasis in color media.

Prerequisites: ARCH 2111.

Learning Outcomes

1. Develop and utilize visual observation skills
2. Translate visual observations into graphical information
3. Develop and utilize critical thinking in the development of projects
4. Develop effective line drawing techniques
5. Produce graphical representations using various shading techniques
6. Communicate design concepts and ideas clearly

ARCH 2124. Professional Development and Leadership

1-3 Credits (1-3)

As members and/or officers of student professional organizations, architecture students gain experience through undertaking leadership roles, participating in team building, and becoming involved in service to the community. Students can also gain actual work experience involving skills related to their field of study. May be repeated up to 6 credits.

Learning Outcomes

1. Leadership skills.
2. Presentation techniques and public speaking.
3. Organizational and teambuilding skills.
4. Architecture-related skills.
5. Community organizations and service.

ARCH 2220. Architectural World History II

3 Credits (2+2P)

A survey of the development of world architecture from the enlightenment in Europe to the present. Community Colleges only.

Restricted to Alamogordo, Dona Ana and Grants campuses.

Prerequisite(s): ARCH 1220 or consent of instructor.

Learning Outcomes

1. Identify major architectural monuments from 1400 to the present in the Western world
2. Identify major architectural monuments from 1400 to the present in the Western world
3. Recognize the relationship of movements and styles in Western architecture to their counterparts in design, painting, and sculpture from the various historical periods
4. Describe the basic principles of urban design

5. Express an appreciation of architectural achievements and the ways in which the elements of art (line, form, color, texture, light, etc.) combine to produce objects of beauty in the built environment
6. Analyze basic engineering concerns and achievements in architecture

ARCH 2994. Portfolio Design in Architecture

3 Credits (3)

This course is intended for Pre-Architecture students in their last semester of the program. Students develop a comprehensive portfolio that compiles, organizes, and showcases their most accomplished coursework produced in Architecture courses at DACC, in preparation for application to a 4 yr. Architecture program. Skills and techniques in architectural photography, scanning, and design layout using graphic software. Restricted to Community Colleges only.

Corequisite(s): ARCT 2115.

Learning Outcomes

1. Edit and enhance previous drawings, digital files, and models.
2. Research and learn about portfolio and layout styles.
3. Development/Presentation of Final Portfolio for application/transfer purposes, as well as presenting it to the class and other reviewers.
4. Document drawings, models, digital work and other productions accurately and effectively.
5. Organize their coursework and select the images that best showcase learned skills
6. Develop organizational habits to record and document their work and back up digital copies
7. Develop analytical skills to produce an effective layout to then produce a portfolio
8. Organize, layout and design their own portfolio.

ARCH 2995. Cooperative Experience

1-6 Credits

Supervised cooperative work program. Student employed in approved occupation; supervised and evaluated by employer and instructor. Student meets weekly with instructor. Graded S/U.

Prerequisite: consent of instructor.

Learning Outcomes

1. Varies

ARCH 2996. Special Topics

1-6 Credits

Topics subtitled in the Schedule of Classes. May be repeated for a maximum of 12 credits.

Prerequisite: consent of instructor.

Learning Outcomes

1. Varies

ARSC-ARTS & SCIENCES

ARSC 1110. Insights: University Experience for Future Careers

1 Credit (1)

Research and investigation of college majors and career opportunities.

ARSC 1115. Success Seminar

1 Credit (1)

Academic and personal strategies and campus resources to enhance scholastic achievement. May be repeated up to 1 credit.

ARSC 1120. Quantitative Foundations

3 Credits (3)

Course is designed to prepare students for College level mathematics. Initial assessments generate individualized paths to mastery of

fundamental skills. Course also covers strategies and campus resources to enhance scholastic achievement. Traditional Grading with RR. May be repeated up to 6 credits.

ARSC 2511. Leadership and Mentorship Training for Arts and Sciences Student Leaders

1 Credit (1)

Leadership training for student volunteers serving in the Arts and Sciences Student Ambassador program or other student leadership roles. May be repeated up to 3 credits.

Learning Outcomes

1. Students will be able to identify leadership strengths and techniques to enhance leadership capabilities
2. Students will be able to formulate strategies for goal setting and persistence
3. Students will be able to identify different student support services available on NMSU main campus and their roles.
4. Students will be able to identify the different disciplines in the Arts and Sciences and their missions, and articulate their broader roles in training students.

ARSC 2996. Interdisciplinary Topics

1-4 Credits (1-4)

An interdisciplinary approach to subject matter cutting across departmental fields. Specific subjects to be announced in the Schedule of Classes. May be repeated up to 99 credits.

ARSC 3110. Prehealth Internship

1-3 Credits (30P)

Placement with an office of a health professional. May be repeated up to 3 credits.

Prerequisite: Minimum junior standing, 2.5 GPA.

ARSC 3130. Faculty Led International Travel

1-3 Credits (1-3)

This is an intensive Faculty Led International Program and earns an additional credit(s) for participation the FLIP. May be repeated up to 3 credits.

ARSC 3996. Interdisciplinary Topics

1-3 Credits (1-3)

An interdisciplinary approach to subject matter cutting across departmental fields. Specific subjects to be announced in the Schedule of Classes. May be repeated up to 99 credits.

ARSC 4110. Career Readiness for Majors in Arts and Sciences

1 Credit (1)

Career preparation for graduating students with majors in the College of Arts and Sciences. Students will evaluate their academic experiences as they relate to their career goals and formulate strategies to begin and build their careers.

Learning Outcomes

1. Students will evaluate their academic experiences as they relate to their career goals.
2. Students will demonstrate an understanding of how their educational experiences relate to post-graduation opportunities.
3. Students will learn to build and present a professional portfolio.

ARSC 4550. Topics in Pharmacy

12-18 Credits (12-18)

This course accepts the transfer of credits from the University of New Mexico College of Pharmacy to New Mexico State University for students who are participants in the UNM/NMSU Cooperative Pharmacy Program. May be repeated up to 18 credits.

ARSC 4555. Advanced Topics in Pharmacy

12-18 Credits (12-18)

This course accepts the transfer of credits from the University of New Mexico College of Pharmacy to New Mexico State University for students who are participants in the UNM/NMSU Cooperative Pharmacy Program. May be repeated up to 18 credits.

ARTH-ART HISTORY

ARTH 1115G. Orientation in Art

3 Credits (2+3P)

A multicultural examination of the principles and philosophies of the visual arts and the ideas expressed through them.

Learning Outcomes

1. Identify elements of art principles of design.
2. Articulate the relationship of art to the human experience.
3. Write and discuss critically using the vocabulary of art.
4. Interpret art within cultural, social, personal, and historical contexts.
5. Critically analyze an original work of art.

ARTH 2110G. History of Art I

3 Credits (3)

This survey course explores the art and architecture of ancient pre-historic cultures through the end of the fourteenth century. While focused primarily on the art of the Western civilizations, this course will also provide insights into the works of other major cultures in order to provide alternate views of art and history. Emphasis will be placed on the relationship of artworks to political, social, spiritual, intellectual, and cultural movements that affect and are affected by their creation and development.

Learning Outcomes

1. Identify major artworks from a variety of regions and time periods.
2. Investigate the methods of producing various works of art.
3. Articulate an understanding and appreciation for the political, social, spiritual, intellectual, and cultural contexts of art forms.
4. Comprehend and apply terms, methodologies and concepts common to studies of art history, developing a language to further understanding of art.
5. Compare works across a range of historical styles and periods.

ARTH 2120G. History of Art II

3 Credits (3)

This survey course will explore the architecture, sculpture, ceramics, paintings, drawings, and glass objects from the 14th century to the modern era. While focused primarily on the art of the Western civilizations, this course will also provide insights into the works of other major cultures in order to provide alternate views of art and history. Emphasis will be placed on the relationship of artworks to political, social, spiritual, intellectual, and cultural movements that affect and are affected by their creation and development. May be repeated up to 3 credits.

Learning Outcomes

1. Identify major artworks from a variety of regions and time periods.
2. Investigate the methods of producing various works of art.
3. Articulate an understanding and appreciation for the political, social, spiritual, intellectual, and cultural contexts of art forms.
4. Comprehend and apply terms, methodologies and concepts common to studies of art history, developing a language to further understanding of art.
5. Compare works across a range of historical styles and periods.

ARTH 2136. Writing in Art**3 Credits (3)**

This class looks at the variety of writings associated with art history and studio art practice. It explores the discipline of art history itself, and introduces students to the specific ways in which art historians study art. Within a workshop setting, students will practice approaches to research, understanding art and writing about art. Students will also be introduced to professional writing practices, including digital formats, relating to studio art.

Learning Outcomes

1. Develop visual literacy in looking at art 2 .Analyze a complex art historical argument
2. Apply art specific vocabulary to critically-based writings and discussions of art
3. Develop writing skills to articulate the relationship of art to the human experience

ARTH 300. Special Topics in Art History**3 Credits (3)**

Specific subjects to be announced in the Schedule of Classes, individual topics may not be repeated . Restricted to Las Cruces campus only. May be repeated up to 12 credits.

Prerequisite: ARTH 2110G, ARTH 2120G, and ARTH 2136 or consent of instructor.

Learning Outcomes

1. Analysis of specific problems in art history
2. Evaluate approaches to specific problems in art history

ARTH 311. Art of China I: Neolithic to Song Dynasty**3 Credits (3)**

Survey of the art of China from the neolithic period to the end of the Song dynasty. Non-majors welcome.

Prerequisite: ARTH 2110G, ARTH 2120G, and ARTH 2670 or HIST 2250G and HIST 2251G or consent of instructor.

Learning Outcomes

1. identify the principal periods and dynasties up to the Song dynasty and the major political, philosophical and religious ideas that emerged during those periods.
2. describe the principal stylistic characteristics of two-dimensional and three-dimensional artworks and architecture for each period
3. Analyze how the form, function and style of art corresponds to religious beliefs and funerary practices
4. identify some of the major monuments of Chinese painting and be able to discuss their specific historical contexts and meaning
5. Identify basic elements of Buddhist and Taoist iconography

ARTH 312. Art of China II: Song Dynasty to Today**3 Credits (3)**

Survey of art, architecture and landscape design of China from the Song Dynasty to the present day Crosslisted with: ARTH 512.

Prerequisite(s): ARTS 2671 or ARTH 2110G or HIST 2250G and HIST 2251G or consent of instructor.

ARTH 336. Race and Art**3 Credits (3)**

Traces race, representation and appropriation through a historical and cultural lens. Issues of identity up to and including contemporary visual expression are examined. Non-majors welcomed. Each topic may be taken one time.

Prerequisite: ARTH 2110G, ARTH 2120G, and ARTH 2136 or consent of instructor.

Learning Outcomes

1. Recognize how identity is perceived and constructed and the contemporary challenges to the creation of the "Other"
2. identify and place art objects within political, social, artistic and philosophical contexts.
3. Acquire the tools to determine how issues of race and identity are being explored and understood today.
4. Interpret and evaluate the relationship of art to the human experience

ARTH 342. Global Modernisms**3 Credits (3)**

Examines themes and monuments from the late 19th century to 1968, emphasizing modern and avant-garde cultural practices.

Prerequisite: ARTH 2110G, ARTH 2120G, ARTH 2136, or consent of instructor.

Learning Outcomes

1. Identify and place art objects within political, social, artistic and philosophical contexts.
2. Summarize the major styles and practices that emerged in the Twentieth Century
3. Analyze the importance of context for these major styles
4. Explain different methodologies of Art History and their relevance for understanding Twentieth Century Art
5. Apply art specific vocabulary to critically based writings and discussions of the art objects studied
6. Develop analytical processes, writing skills and research methodology to interpret and articulate the relationship of art to the human experience.

ARTH 343. Contemporary Global Art Practices**3 Credits (3)**

Examines the myriad of contemporary art practices, media, and forms from 1968 to the present.

Prerequisite: ARTH 2120G, ARTH 2136; or consent of instructor.

Learning Outcomes

1. Identify and place art objects within political, social, artistic and philosophical contexts.
2. Summarize the major styles and practices that emerge in the Contemporary period
3. Analyze the importance of context for these major styles and practices
4. Explain different methodologies of Art History and their relevance for understanding Contemporary Art
5. Apply art specific vocabulary to critically based writings and discussions of the art objects studied
6. Develop analytical processes, writing skills and research methodology to interpret and articulate the relationship of art to the contemporary human experience.

ARTH 344. Gender, Sexuality, and Art in the Americas**3 Credits (3)**

This course examines woman power/trans/ queer discourses of both the global south and those of people of color in the United States in relation to art from Latin, Central, and North America.

Prerequisite: ARTH 2110G, ARTH 2120G, and ARTS 2136, or consent of instructor.

Learning Outcomes

1. Identify and analyze arguments and problems within gender and sexualities of the global south

2. Locate works of art in relation to the cultures from which they originate, historicizing and contextualizing them in socio-political histories
3. Identify and employ methodology(ies) and theoretical approaches salient to the specific forms of art practice which they are studying
4. Evaluate, comment upon, and formulate approaches to the artistic practices of people of the Americas based in feminist, decolonial methodologies

ARTH 345. Latin American Film**3 Credits (3)**

Surveys films and their histories from Latin American and the LatinX diaspora.

Prerequisite: ARTH 2110G, ARTH 2120G, and ARTS 2136, or consent of instructor.

Learning Outcomes

1. Discuss, distinguish among, and analyze film techniques, genres, distribution systems, and movements, particularly as they relate to Latin America
2. Demonstrate an historical understanding of the political histories, movements, and changes in Latin America
3. Locate films in relation to the cultures from which they originate, historicizing and contextualizing them in socio-political histories
4. Identify and employ methodology(ies) and theoretical approaches salient to filmic

ARTH 346. Museum and Curatorial Studies**3 Credits (3)**

This museum and curatorial studies course surveys practices, objects, and histories.

Prerequisite: ARTH 2110G, ARTH 2120G, and ARTS 2136, or consent of instructor.

Learning Outcomes

1. Historicize the development of museums, patronage, collecting, looting, and restitution; noting distinctions between cultures, geographic regions, and nation-state systems
2. Identify and analyze arguments and problems within museum studies
3. Distinguish between the professional positions, institutional functions, and governing missions within and among of distinct types of art institutions
4. Evaluate, comment upon, and formulate approaches to exhibition design in both their practical and ideological functions

ARTH 444. Art and Life in Renaissance Italy**3 Credits (3)**

Examines how Italian Renaissance textual and visual culture offered Europe new ways of seeing and portraying itself. 1350-1550. Topics include: Florence, Venice, Rome, Leonardo, Michelangelo, titian, humanism, the Medici, and republican and courtly culture.

Prerequisite(s): ARTH 2110G, ARTH 2120G, ARTS 2671, or consent of instructor.

ARTH 477. Independent Research in Art History**1-9 Credits (1-9)**

Advanced research on special problems to be conducted under supervision of art history faculty. May be taken up to 12 credits. Consent of instructor required.

Learning Outcomes

1. Student will analyze approaches to a problem in art history
2. Student will evaluate approaches to a problem in art history
3. Student will formulate approaches to address a problem in art history

ARTH 478. Seminar in Art History**3 Credits (3)**

Reading, research, and discussion of advanced problems. Topics will be announced in the course schedule. Each topic may be only taken once. Non-art/art history majors, contact instructor for consent.

Prerequisite: ARTH 2110G, ARTH 2120G and ARTH 2136, and one 300 level ARTH course or consent of instructor.

Learning Outcomes

1. Analyze problems in art history
2. Propose a hypothesis relating to a problem in art history and support conclusions through research
3. Evaluate various approaches to problems in art history

ARTH 479. Methodologies and Theories of Art and Art History**3 Credits (3)**

Theories and methodologies in art, art history and art criticism; taught with ARTH 579

Prerequisite: ARTH 2110G, ARTH 2120G, ARTH 2136 and one 300 level art history course or consent of instructor.

Learning Outcomes

1. understand the history of the discipline of art history, its origins, and its institutional developments
2. Assess the strengths and limitations of various approaches and methods to interpreting works of art
3. identify the methodology employed in an art historical argument
4. apply a variety of methodological and critical approaches to interpreting a work of art and assess the strengths and limitations of those applications
5. recognize strategies of art practice that correspond to different methodological and critical approaches

ARTH 500. Special Topics in Art History**3 Credits (3)**

Specific subjects to be announced in the Schedule of Classes. Individual topics may only be taken one time. Students must be Graduate students to enroll.

Learning Outcomes

1. Analyze specific problems in Art History
2. Evaluate approaches to specific problems in Art History

ARTH 511. Art of China I: Neolithic to Song Dynasty**3 Credits (3)**

Survey of the art of China from the neolithic period to the Song dynasty. Student must be a Graduate student to enroll.

Learning Outcomes

1. Identify the principal periods and dynasties up to the Song dynasty and the major political, philosophical and religious ideas that emerged during those periods.
2. Describe the principal stylistic characteristics of two-dimensional and three-dimensional artworks and architecture for each period
3. Analyze how the form, function and style of art corresponds to religious beliefs and funerary practices.

4. Identify some of the major monuments of Chinese painting and be able to discuss their specific historical contexts and meaning
5. Identify basic elements of Buddhist and Daoist iconography

ARTH 536. Race and Art**3 Credits (3)**

This course explores the visual expression of race and identity in art and visual culture from a diverse geographical and historical range. Each topic may only be taken one time. Crosslisted with: ARTH 336. Students must be Graduate students to enroll.

Learning Outcomes

1. Recognize how identity is perceived and constructed and the contemporary challenges to the creation of the "Other"
2. Identify and place art objects within political, social, artistic and philosophical contexts.
3. Acquire the tools to determine how issues of race and identity are being explored and understood today.
4. Interpret and evaluate the relationship of art to the human experience.
5. Formulate a question concerning race and art and using analysis, evaluate the research on that question and create an original argument.

ARTH 542. Global Modernisms**3 Credits (3)**

Examines themes and monuments of created from the end of the 19th century to 1968 emphasizing modern and avant-garde cultural practices. Crosslisted with: ARTH 342. Students must be Graduate students to enroll.

Learning Outcomes

1. Identify and place art objects within political, social, artistic and philosophical contexts.
2. Summarize the major styles that emerged in the early Twentieth Century to 1968
3. Analyze the importance of context for these major styles
4. Explain different methodologies of Art History and their relevance for understanding the art of this period
5. Apply art specific vocabulary to critically based writings and discussions of the art objects studied
6. Formulate a question in art history relating to the topic of the course, evaluate and assess research, and create an original argument concerning that problem

ARTH 543. Contemporary Global Art Practices**3 Credits (3)**

Examines the myriad of contemporary art practices, media, and forms from 1968 to the present. Crosslisted with: ARTH 343. Students must be in Graduate standing to enroll.

Learning Outcomes

1. Identify and place art objects within political, social, artistic and philosophical contexts.
2. Summarize the major styles and practices that emerge in the Contemporary period
3. Analyze the importance of context for these major styles and practices
4. Explain different methodologies of Art History and their relevance for understanding Contemporary Art
5. Apply art specific vocabulary to critically based writings and discussions of the art objects studied

6. Formulate a question in contemporary art, evaluate and assess research, and create an original argument concerning that problem

ARTH 544. Gender, Sexuality, and Art in the Americas**3 Credits (3)**

This course examines woman power/trans/ queer discourses of both the global south and people of color in the United States in relation to art from Latin, Central, and North America. Cross-listed with ARTH 344. Students must be in graduate standing to enroll.

Learning Outcomes

1. Identify and analyze arguments and problems within gender and sexualities of the global south
2. Locate works of art in relation to the cultures from which they originate, historicizing and contextualizing them in socio-political histories
3. Identify and employ methodology(ies) and theoretical approaches salient to the specific forms of art practice which they are studying
4. Evaluate, comment upon, and formulate approaches to the artistic practices of people of the Americas based in feminist, decolonial methodologies

ARTH 545. Latin American Film**3 Credits (3)**

Surveys films and their histories from Latin American and the LatinX diaspora. Taught with ARTH 345. Students must be in graduate standing to enroll.

Learning Outcomes

1. Discuss, distinguish among, and analyze film techniques, genres, distribution systems, and movements, particularly as they relate to Latin America
2. Demonstrate an historical understanding of the political histories, movements, and changes in Latin America
3. Locate films in relation to the cultures from which they originate, historicizing and contextualizing them in socio-political histories
4. Identify and employ methodology(ies) and theoretical approaches salient to filmic works

ARTH 546. Museum and Curatorial Studies**3 Credits (3)**

This museum and curatorial studies course surveys practices, objects, and histories. Taught with ARTH 346. Students must be in graduate standing to enroll.

Learning Outcomes

1. Historicize the development of museums, patronage, collecting, looting, and restitution; noting distinctions between cultures, geographic regions, and nation-state systems
2. Identify and analyze arguments and problems within museum studies
3. Distinguish between the professional positions, institutional functions, and governing missions within and among of distinct types of art institutions
4. Evaluate, comment upon, and formulate approaches to exhibition design in both their practical and ideological functions

ARTH 578. Seminar in Art History**3 Credits (3)**

Reading, research, and discussion of advanced problems in art history; rotating topics will be announced in the course schedule. Individual topics may only be taken once. Student must be Graduate students to enroll.

Learning Outcomes

1. Analyze advanced problems in art history
2. Evaluate approaches to advanced problems in art history

ARTH 579. Graduate Seminar: Art Theory, Criticism, Historiography
3 Credits (3)

Theories and methodologies in art history and art criticism.

Prerequisite: graduate standing.

ARTH 597. Independent Study in Art History
3 Credits (3)

Supervised independent study in topics in art history. Students must be in graduate standing to enroll.

Learning Outcomes

1. Student will formulate a question in art history, evaluate and assess research, and create an original argument concerning that problem

ARTH 599. Art History Thesis**1-15 Credits (1-15)**

Art history master's thesis research. Students must be in Graduate standing to enroll.

Learning Outcomes

1. Student will formulate a question in art history, evaluate and assess research, and create an original argument concerning that problem

ARTS-ART STUDIO

ARTS 1121. Foundations in Art**3 Credits (2+4P)**

The Foundations course will focus on a deceptively simple question. "What is Contemporary Art, and how can we make it?" Through the exploration of basic visual design concepts, collaborative learning, and interdisciplinary studio production, this course will help us to discover what it means to be an artist in the 21st century.

Learning Outcomes

1. Create original works of art through the investigation of ideas and concepts resulting in the communication of meaning. Develop forms that convey meaning.
2. Evaluate works of art through critiques that appraise how the form communicates meaning. Justify the decisions that were made in the use and application of the chosen medium and form to communicate meaning in a work of art.
3. Analyze the differences in clarity of communication between works of art based subject matter, medium and form.
4. Apply knowledge provided in lectures to produce works of art that communicate meaning. Demonstrate an ability to express concepts in visual form.
5. Understand how the choice of subject matter, medium and form translate in the expression of concepts through discussion and description.
6. Remember the fundamental tenets of art, elements and principles of design, through the duplication of them in works of art as well their use in discussions.

ARTS 1145G. Visual Concepts**3 Credits (2+4P)**

Visual Concepts is an introduction to the philosophies of art, visual thinking, and principles of visual organization. Designed to give students a broad view of aesthetic traditions, ideologies, and techniques basic to the creation and evaluation of art. Principles and concepts are taught in a common lecture and applied in parallel small studio sections. For non-art majors only.

Learning Outcomes

1. Develop understanding of history, major styles and contemporary issues in art.
2. Introduce students to the language of visual perception and aesthetic evaluation.
3. Introduce students to the fundamental processes of visual perception and artistic expression.
4. Develop students' confidence in using various art materials for artistic expression.
5. Develop students' ability to verbalize ideas and processes in art making.
6. Develop student's ability to communicate through writing about art and art experiences.

ARTS 1240. Design I**3 Credits (3)**

This course introduces the fundamentals of two-dimensional design as it applies to fine art and commercial contexts. Emphasis will be on basic color theory, elements of dynamic composition, vocabulary of visual arts and design, and development of visual conceptual skills. Students will use a variety of materials and techniques. Restricted to Community Colleges campuses only.

Learning Outcomes

1. Produce art works that apply and organize the elements of two-dimensional form (line, shape, value, texture, color and space).
2. Produce artworks that apply the principles of two-dimensional design (harmony, variety, repetition, balance, rhythm, proportion, dominance, movement, and economy).
3. Demonstrate effective use of materials and techniques with consideration for craftsmanship and presentation.
4. Use visual art vocabulary in the development and critique of work
5. Explore concepts and ideas: from conceptual, realistic/referential to non-representational

ARTS 1250. Design II**3 Credits (3)**

This course introduces the basic formal (aesthetic), spatial, and physical aspects of 3-D form as they can be applied to sculptural and functional design. Techniques that explore structure, mass, volume, scale, surface, form, and function are covered, along with various media, which may include paper, wood, clay, and/or metal. Restricted to Community Colleges campuses only.

Learning Outcomes

1. Apply the artistic qualities of the elements of art and principles of design to three-dimensional form.
2. Create 3 dimensional form using varied sculptural methods, construction techniques and media.
3. Produce 3 D design projects safely with proper use of equipment and materials.
4. Apply realistic, referential, and abstract concepts and ideas to projects.
5. Demonstrate knowledge of 3-D related art vocabulary, origin and trends in sculpture, and 3-D design fundamentals.

ARTS 1310. Introduction to Ceramics**3 Credits (2+4P)**

This course introduces the technical processes and conceptual concerns of working with ceramic material. Various methods of forming functional and expressive works out of clay are explored. Methods used include

handbuilding and throwing, basic clay bodies, slip and glaze, and atmospheric firing.

Learning Outcomes

1. Explain the transformation of the ceramic material from raw clay form to glazed ceramic object
2. Demonstrate proficiency of technical ceramic skills
3. Explain larger concepts and design principles
4. Apply basic 3-D design principles in the formation of a work of art, as they apply to the ceramic media
5. Create ceramic works of art based on conceptual prompts
6. Critically evaluate a variety of artwork
7. Gain an understanding of the history of ceramic art from a multicultural perspective

ARTS 1320. Ceramics I

3 Credits (2+4P)

An introduction to the medium of clay incorporating hand building and wheel throwing to introduce the student to both the sculptural and utilitarian uses of clay. The student will also be introduced to a variety of glazing and firing techniques

Learning Outcomes

1. Demonstrate through critical discourse or writing an introductory knowledge of the history of ceramics, and ceramic language and terminology.
2. Demonstrate through mechanical application an introductory knowledge of the properties of clays, glazes, and a variety firing techniques.
3. Produce a body of work that exemplifies good ceramic design through the effective use of form, surface, and color.
4. Through the production a body of work demonstrate competency in hand building and throwing on the wheel.

ARTS 1410. Introduction to Photography

3 Credits (2+4P)

This course introduces the making of photographic images from a broad viewpoint to consider both as an art practice and as a cultural practice. The course covers technical information on camera use and functionality, composition and visual design, digital workflow and editing, professional functions of manipulating and enhancing images, and printing correctly and effectively. The historical aspects of photography are also covered.

Learning Outcomes

1. Gain fluency with basic camera function as well as a working knowledge of other photographic equipment and software to produce technically competent photographs.
2. Have a familiarity with current image-editing software to enhance images as well as developing a digital workflow for the management of digital images.
3. Be able to develop creative solutions to visual photographic problems.
4. Gain awareness of contemporary issues in contemporary art photographic practice that can be applied to the one's own individual practice.
5. Develop the ability to critically analyze and discuss photographic images.
6. Print and produce a final project that demonstrates synthesis of ideas presented in the course readings, critiques, and individual research.
7. Demonstrate photographic terminology, and the many ways photographs function in society, both currently and historically.

ARTS 1520. Digital Media I

3 Credits (2+4P)

This course provides an introduction to two of Adobe's major software applications, Illustrator and Photoshop, which are essential in creating artwork, designing promotional materials, websites and more. Part of the course deals with creating a variety of documents using the major tools of each program, and gaining an understanding of the contemporary graphic design industry and basic elements and principles of design. Community Colleges only.

Learning Outcomes

1. Demonstrate appropriate skills in configuring and navigating computer systems software applications as appropriate to digital image making needs including organization of files using keywords and running batch processes.
2. Exhibit an understanding of a layer based bitmap editing program, through photo retouching, precise use of selection tools, and color adjustment techniques.
3. Create imagery using a vector based illustration program which demonstrates an understanding of vector based drawing tools.
4. Integrate the use of bitmap and vector images using bitmap and vector based image making applications to demonstrate a basic understanding of composition, color, and appropriate image size and resolution.

ARTS 1610. Drawing I

3 Credits (2+4P)

This course introduces the basic principles, materials, and skills of observational drawing. Emphasis is placed on rendering a 3-D subject on a 2-D surface with visual accuracy. Other topics include historical and contemporary references as well as an investigation of linear perspective, line, value, shape, space & composition.

Learning Outcomes

1. Produce drawings that demonstrate techniques and mechanics of observational drawing.
2. Demonstrate competency in the following practices: measuring and sighting, gesture, contour line, negative space, shape, value, space, volume, plane and texture.
3. Create drawings primarily from observation with black and white traditional drawing media.
4. Demonstrate effective verbal or written response to one's own art and the art of others.

ARTS 1630. Painting I

3 Credits (2+4P)

This course introduces the tradition of painting as a medium for artistic expression. Students will investigate materials, tools, techniques, history and concepts of painting. Emphasis is placed on developing descriptive and perceptual skills, color theory, and composition.

Prerequisite: ARTS 1610.

Learning Outcomes

1. Produce paintings that demonstrate the tradition of methods, techniques, materials, and tools of oil painting.
2. Construct a variety of support structures and grounds on which paintings are created
3. Examine the historical origins and practices of painting from the personal, social and cultural perspective.
4. Identify and apply environmentally safe painting practices, care of tools, equipment, and facilities, as well as disposal of mediums, solvents and paints.

5. Apply basic color theory to representational and non-representational painting.

ARTS 1710. Introduction to Printmaking

3 Credits (2+4P)

This course provides direct experience of exploring basic printmaking processes, including relief, intaglio, and monoprint processes, as well as the investigation of materials/media, tools, techniques, history, and concepts of printmaking. Emphasis is given to solving problems through thematic development while producing a portfolio of prints.

Learning Outcomes

1. Properly operate a printing press and safely handle materials and equipment.
2. Demonstrate an adequate ability to utilize basic historical printmaking techniques that are widely relevant to contemporary, artistic expressions.
3. Utilize formal elements of art and design (line, shape, value, texture, space, and color), to create prints that are formally sophisticated.
4. Create imagery that contains conceptual depth, which can be interpreted by viewers with regard to social, cultural, political, geographical, and/or psychological experiences and relevance.

ARTS 1711. Computer-Based Illustration

3 Credits (2+4P)

Introduction to the principles of computerized drawing and design. Using the basic concepts, drawing tools, and vocabulary of Adobe Illustrator.

Prerequisite: ARTS 1610, ARTS 1240, or consent of instructor.

Learning Outcomes

1. Demonstrate drawing with the pen tool.
2. Demonstrate the use of blending color and creating shapes.
3. Create spot colors and effectively use them in a page layout.
4. Demonstrate formatting and creating typography.
5. Demonstrate the use of layers, effects, graphic styles, symbols, and brushes
6. Demonstrate competency in creating digital graphics using of Adobe Illustrator software

ARTS 1712. Digital Graphics

3 Credits (2+4P)

Importing and exporting images and text into various desktop publishing formats. Exploring imaging, drawing, and page layout applications.

Introduction to typography.

Prerequisite: ARTS 1520.

Learning Outcomes

1. Demonstrate competency in the use of InDesign software.
2. Create appropriate visual solutions based on target marketing information.
3. Demonstrate competency in the design and production of advertising and promotional materials.
4. Present ideas and concepts effectively and competently.
5. Visually demonstrate design solutions to be used in a portfolio

ARTS 1713. Web Page Design

3 Credits (2+4P)

Introduction to the creation of well-designed and organized Web sites. Emphasis on building creative but functional user-friendly sites.

Introduction to HTML, Flash, Java Script, and Web-authoring software.

Community Colleges only.

Prerequisite: ARTS 1520.

Learning Outcomes

1. Outline the structure and functionality of a typical website.
2. Demonstrate design and layout skills.
3. Demonstrate competency in the use of Dreamweaver software.
4. Demonstrate competency in the use of photo editing software.
5. Demonstrate skills learned for website functionality.
6. Create an Internet compatible website.

ARTS 1810. Jewelry and Small Metal Construction I

3 Credits (2+4P)

This course introduces the basic techniques, materials, and tools traditionally used in the creation of jewelry and/or small-scale sculptural objects.

Learning Outcomes

1. Apply basic jewelry fabrication techniques (such as: piercing, cold connections, soldering, metal forming, casting and stone setting) to complete projects.
2. Create design sketches of the objects prior to fabrication.
3. Demonstrate knowledge of materials and safe practices for making jewelry, as well as small functional and non-traditional objects.
4. Analyze projects through critiques, oral presentations, and discussions.

ARTS 2010. Portfolio Development

3 Credits (2+4P)

This course presents the practicalities of building an art career with emphasis on developing a professional portfolio through visual aids, resumes, statements, and presentations. It covers professional practices of the studio artist including self-promotion, contracts, research tools for exhibition venues and other art related opportunities.

Prerequisites: ARTS 1712, ARTS 2611, and ARTS 1520, or consent of instructor.

Learning Outcomes

1. Develop a portfolio package with visual aids, photographic documentation, resumes, bios and artist statements.
2. Analyze the qualifications, procedures and portfolio requirements necessary for professional art related opportunities.
3. Complete an oral presentation on a series of personal works.
4. Distinguish pathways for navigating the business side of being a professional artist.

ARTS 2430. Photographic Portraiture

3 Credits (2+2P)

This course covers the study of professional photography that involves people, including studio and environmental portraits. Topics include studio and exterior lighting techniques, and selecting lighting equipment and supplies. Restricted to: Community Colleges only.

Prerequisite(s): ARTS 1410 or FDMA 1545.

Learning Outcomes

1. Demonstrate successful operation of studio lighting equipment and accurately define lighting equipment terminology
2. Illustrate the principles of photographic lighting
3. Demonstrate and apply how to use and modify natural light effectively
4. Demonstrate understanding of different approaches such as formal, informal, candid, vernacular and their cultural implications
5. Distinguish historic and contemporary cultural notions informing different types of portraits

ARTS 2431. Introduction to Graphic Design**3 Credits (2+4P)**

Introduction to the principles of visual communication and digital media, letterforms, typography and identity marks. Projects produced using conventional and digital tools.

Learning Outcomes

1. Demonstrate working knowledge of the graphic design software.
2. Identify and apply basic design concepts for the purpose of visual communication.
3. Conduct visual research and create presentations on design topics.
4. Solve graphic design problems through solving fundamental communication challenges by sketching, drawing, typographic composition, use of image and color.

ARTS 2440. Photo Finishing & Presentation**2 Credits (1+2P)**

Use of visual language for personal expression. Freelance photography; care of original photos; preparation of portfolios, photographic markets, exhibitions and judging, galleries and copyrights. Students will prepare a photographic portfolio. Restricted to: Community Colleges only.

Prerequisite(s): FDMA 1545.

Learning Outcomes

1. Define your target market and create a complete "Personal Promotional Package"
2. Produce a professional Resume Cover Letter.
3. Produce a professional looking Business Card, Letterhead Mailing Labels
4. Produce a single page Promotional Piece, (and possible follow-up material)
5. Produce a PDF Formatted Portfolio (Create in Photoshop Export as PDF)
6. Produce a clean, professional looking traditional hard portfolio with 20-30 pieces
7. Present the Entire Promotional Portfolio and promo materials in a "Job Interview"

ARTS 2610. Drawing II**3 Credits (2+4P)**

This course introduces color and colored media as an element of composition while emphasizing descriptive and perceptual drawing skills and conceptual approaches to contemporary drawing. Restricted to ART and ANVE/DFM majors.

Prerequisite(s): ARTS 1610.

Learning Outcomes

1. Create drawings in wet and dry color media.
2. Practice analyzing and visually translating observed subjects from realistic, referential, and/or objective form, to non-representational or abstract imagery in drawings.
3. Compose fully developed drawings that include a conceptual or historical basis.
4. Engage in effective written and oral critique in response to one's own art and the art of others.

ARTS 2611. Advanced Computer-Base Illustration**3 Credits (2+4P)**

Design custom graphics and create special effects with filtering, special effects on type, graphing, technical illustrations, and three-dimensional drawing using Adobe Illustrator.

Prerequisites: ARTS 1212, ARTS 1711, and ARTS 1520, or consent of instructor.

Learning Outcomes

1. Demonstrate competency in the use of Adobe Illustrator software.
2. Create appropriate visual solutions based on target marketing information.
3. Demonstrate competency in the design and production of advertising and promotional materials.
4. Present ideas and concepts effectively and competently.
5. Visually demonstrate design solutions to be used in a portfolio

ARTS 2616. Aspects of Drawing**2-3 Credits**

Continued work in drawing with emphasis on personal creative endeavor. Community Colleges only.

Prerequisites: ARTS 1610 and ARTS 2610.

Learning Outcomes

1. Advanced skill level in the visual dynamics of line involved in the creation of drawing.
2. Advanced skill level in the visual dynamics of shape involved in the creation of drawing.
3. Advanced skill level in the visual dynamics of value involved in the creation of drawing.
4. Advanced skill level in the visual dynamics of color involved in the creation of drawing.
5. Advanced skill level in the visual dynamics in the combination of line, shape, value and color involved in the creation of drawing.

ARTS 2630. Painting II**3 Credits (2+4P)**

This course focuses on the expressive and conceptual aspects of painting, building on the observational, compositional, technical, and critical skills gained previously. Students will investigate a variety of approaches to subject matter, materials, and creative processes through in-class projects, related out-of-class assignments, library research or museum/gallery attendance, written responses, and critiques.

Prerequisite(s): ARTS 1610 and ARTS 1630

Learning Outcomes

1. Produce paintings building on the skills and techniques learned in Painting I
2. Solve unique format, support, ground, over and under texturing surface challenges
3. Practice analyzing and translating observed subjects from realistic, referential, and/or objective form, to non-representational imagery
4. Create paintings that explore personal content, stylization, symbolism, narrative, and/or iconography

ARTS 2635. Painting III**2-3 Credits**

Continuation of ARTS 2630.

Prerequisites: ARTS 1610, ART 1240 (for art majors), ART 1630, or consent of instructor.

Learning Outcomes

1. Color mixing and color relationships
2. Create illusions of space and volume
3. The student will strengthen his or her own personal artistic style.
4. Knowledge of the proper use and maintenance of painting tools
5. Explore and learn the technique of a master painter of the past.
6. Awareness of nature, "eye hand response," and an imaginative or personal use of the medium.
7. Awareness of the creative process, exploring unforeseen possibilities

8. An ability to work independently.
9. Understanding of painting styles and arts vocabulary

ARTS 2839. Introduction to Sculpture**3 Credits (2+4P)**

Beginning sculpture students “explore space” while learning new processes and skills, including mold making, welding and woodworking.

Learning Outcomes

1. Be able to utilize a variety of traditional materials and sculpture processes, including: mold making, metal fabrication/wood fabrication, and the creative integration of mixed media.
2. You will learn to differentiate between objects and installations, and be prepared to explore sculpture in upper division, topics based courses.

ARTS 2993. Art Workshop**0.5 Credits (.5)**

Required for all freshman and sophomore Art majors for four semesters, this workshop is designed to build professional student cohorts within the Department of Art; incorporate visiting artist and scholar lectures into the curriculum; and actively involve students in exhibitions and gallery and departmental events. May be repeated up to 4 credits. Crosslisted with: ARTS 308. Restricted to: BA Studio Art, BA Art History BFA Studio Art, BFA Museum Conservation majors. Restricted to Las Cruces campus only.

Learning Outcomes

1. Varies

ARTS 2996. Special Topics in Studio**1-3 Credits**

Specific subjects and credits to be announced in the Schedule of Classes. No more than 9 credits toward a degree.

Prerequisite: consent of instructor.

Learning Outcomes

1. Varies

ARTS 308. Art Workshop**0.5 Credits (.5)**

Required for all junior and senior Art majors for four semesters, this workshop is designed to build professional student cohorts within the Department of Art; incorporate visiting artist and scholar lectures into the curriculum; and actively involve students in exhibitions and gallery and departmental events. May be repeated up to 4 credits. Crosslisted with: ARTS 208. Restricted to: BA studio art, BA Art History BFA studio art, BFA Museum Conservation majors.

ARTS 340. Internship in Art**1-9 Credits (3P)**

This course provides students with the opportunity for workplace learning as an important component in their program of study. Students can identify an internship in graphic design, photography, conservation or other studio areas; or within broader arts institutions such as museums, galleries and visual arts centers which will provide them with professional experience that will support the successful achievement of their career goals in art. May be repeated up to 9 credits.

Prerequisite: ARTH 2110G, ARTH 2120G, ARTS 2136 and eighteen credits of ARTS/ARTH 2000 or ARTS/ARTH 300 studio courses.

ARTS 350. Special Topics in Intermediate Drawing and Painting**3 Credits (2+4P)**

Intermediate drawing and painting course focusing on the following topics: Realism, Color, Narrative, and Abstraction. Other topics may be

offered as well. Topics will be announced in the course schedule. Each topic may only be taken once. May be repeated up to 12 credits.

Prerequisite: ARTS 1610 and ARTS 1630, or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an intermediate level drawing and painting course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering intermediate level tools and processes in drawing and painting.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary drawing and painting.
4. Create original works of art through the application of medium, tools, techniques and concepts specific to drawing and painting.

ARTS 355. Special Topics in Intermediate Graphic Design**3 Credits (2+4P)**

Intermediate graphic design course focusing on the following topics: web design, typography, motion graphics, publication design. Other topics may be offered as well. Topics will be announced in the course schedule. Each topic may only be taken once. May be repeated up to 12 credits.

Prerequisite: ARTS 2431 or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an intermediate level graphic design course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering intermediate level tools and processes in graphic design.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary graphic design.
4. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary graphic design.

ARTS 360. The Figure**3 Credits (2+4P)**

Introduction to working from live models, anatomical skeletons, source images and the imagination in a variety of two-dimensional media, including painting and drawing. An emphasis is placed on anatomical accuracy and with a focus on the figure as an expressive subject. May be repeated up to 6 credits.

Prerequisite(s): ARTS 1610 or consent of instructor.

ARTS 365. Intermediate Sculpture Special Topics**3 Credits (2+4P)**

Intermediate sculpture students will expand their fabrication skills in metal, wood and mixed media. Topics will be announced in the course schedule. Each topic may only be taken once. May be repeated up to 12 credits. May be repeated up to 12 credits.

Prerequisite: ARTS 2839 or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an intermediate level sculpture course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering intermediate level tools and processes in sculpture.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary sculpture.

4. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary sculpture.

ARTS 370. Special Topics in Intermediate Digital Photography

3 Credits (2+4P)

Intermediate digital photography course addressing techniques and production of photo media within the context of contemporary art. Rotating topics include: Networks, Photo-book and Video art, among others. Each topic may only be taken one time. May be repeated up to 12 credits.

Prerequisite: ARTS 1410, or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an intermediate level photography course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering intermediate level tools and processes in photography.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary photography.
4. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary photography.

ARTS 373. Intermediate Analog Photography

3 Credits (2+4P)

Introduction to skills and techniques of black and white film photography within the context of contemporary art. Emphasis on analog camera work and darkroom procedures. 35 mm SLR or rangefinder film camera required for course. May be repeated up to 6 credits.

Prerequisite(s): ARTS 1410, or consent of instructor.

ARTS 374. Intermediate Ceramics Multiples (Design and Production)

3 Credits (2+4P)

Intermediate ceramics course focusing on an introduction to the technical processes of throwing, prototyping, mold making, glaze calculation, and alternative firing.

Prerequisite: ARTS 1310 or consent of instructor.

Learning Outcomes

1. Develop the basic visual and tactile problem solving skills necessary to making one part and two part molds.
2. Demonstrate competency is using these techniques to translate basic cylindrical, spherical, and rectangular forms.
3. Develop ability to make successful clay casts from properly made molds.
4. Apply the principles of design to creating multiples: Balance, Emphasis, Rhythm, Contrast, Proportions, and Scale, Movement.
5. Develop basic skills in glazing and a variety of other surface design techniques.
6. Apply the visual element to glazing and surface design of ceramic forms: Line, Shape, Mass, Value, Color, Texture, Pattern, Space.
7. Through research, writing, and class critiques develop the ability to think, speak and write about the conceptual relevance to creating multiples in contemporary art.

ARTS 375. Intermediate Ceramics Sculptural Concerns

3 Credits (2+4P)

Intermediate ceramics course focusing on the refinement of technical skills with an emphasis on conceptual development related to materiality.

Prerequisite(s): ARTS 1310 or consent of instructor.

Learning Outcomes

1. Refine and master the basic skills in all the standard ceramic building techniques. This includes wheel throwing, coil building, and slab building.
2. Demonstrate competency is using these techniques to replicate complex geometric, organic, and figurative forms
3. Through the guidance of course assignments begin to develop original conceptual themes and natives to translate into sculptural forms.
4. Through the guidance of course assignments begin to develop original conceptual themes and natives to translate into sculptural form.
5. Refine and master glazing and surface design techniques. Begin to develop ability to mix glazes and slips.
6. Demonstrate clear understanding of the visual element to glazing and surface design: Line, Shape, Mass, Value, Color, Texture, Pattern, Space
7. Through research, writing, and class critique refine the ability to think, speak and write about contemporary ceramic sculpture in a competent and nuanced way.

ARTS 376. Museum/Gallery Research Internship

1-9 Credits

Research internship in museum or gallery. Requirements determined by instructor in cooperation with supervising museum/gallery professional. May be repeated up to 9 credits. Consent of Instructor required.

Prerequisite(s): ARTH 2110G, ARTH 2120G, ARTS 2671, or consent of instructor.

ARTS 385. Special Topics in Intermediate Metals/Jewelry

3 Credits (2+4P)

Intermediate Metals/Jewelry course focusing on the following topics: design and production, materiality and sculptural concern. Techniques may include casting, complex construction, forming, and mix media. Topics will be announced in the course schedule. Each topic may only be taken once. May be repeated up to 12 credits.

Prerequisite(s): ARTS 1810 or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an intermediate level metals/jewelry course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering intermediate level tools and processes in metals/jewelry.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary metals/jewelry.
4. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary metals/jewelry.

ARTS 394. Special Topics in Studio

3 Credits (3)

Specific subjects and credits to be announced in the Schedule of Classes online. Topics cannot be repeated. May be repeated up to 9 credits.

ARTS 401. Museum Conservation Techniques I

3 Credits (2+3P)

Introduces the student to conservation theory and the basic principles of conservation for cultural objects. The course integrates the history, philosophy and technologies of art conservation with knowledge of the properties of materials used in conservation. The student will learn and develop conservation skills including learning about the most frequent kinds of deterioration that can occur in various types of art

objects, symptoms and causes as well as preventative and restoration techniques. Although this course provides practical experience, it also seeks to provide a broad understanding of the field of conservation. This course also includes how to document the condition of an object during the conservation process.

Learning Outcomes

1. Identify and explain strengths and weaknesses of the theory of conservation
2. Analyze a ceramic object through testing and observation; evaluate the results of an object to be conserved.
3. Create and defend a conservation treatment plan based on the conservation theory and the principles of conservation for cultural objects, tests results, observations, and personal experience in the lab.
4. Apply conservation and restoration techniques to the ceramic object in the lab, after analyzing, evaluating and creating a treatment plan for the object.
5. Create a Condition Report of the ceramic object by describing the condition and its treatment during the conservation process.

ARTS 402. Museum Conservation Techniques II

3 Credits (2+3P)

Continues conservation theory and the basic principles of conservation for cultural objects. The course integrates the history, philosophy and technologies of art conservation with knowledge of the properties of materials used in conservation. The student will learn and develop conservation skills including learning about the most frequent kinds of deterioration that can occur in various types of art objects, symptoms and causes as well as preventative and restoration techniques. Although this course provides practical experience, it also seeks to provide a broad understanding of the field of conservation.

Prerequisite(s): ARTS 401.

Learning Outcomes

1. Analyze different types of materials by examining two objects, a painted canvas and a painted wood panel, through testing and observation and evaluate the results of the objects to be conserved
2. Create and defend a conservation treatment plan based on the conservation theory and the principles of conservation for cultural objects, tests results, observations, and personal experience in the lab.
3. Apply conservation and restoration techniques to both objects in the lab, a painted canvas and a painted wood panel, after analyzing, evaluating and creating a treatment plan for the object.
4. Create a Condition Report for each object, describing the condition of the object, history, the problems the object presents, its treatment during the conservation process, and any remaining issues after treatment.

ARTS 403. Preventative Conservation/Collections Care

3 Credits (3)

Introduces the student on how to mitigate the deterioration and damage of cultural property in a museum setting through the formulation and implementation of policies and procedures. The course addresses most aspects of collections management and care for objects in storage, exhibitions and during transportation.

Learning Outcomes

1. Understand the principles of Preventive Conservation and Collections Care and develop conservation skills through recognizing, describing, explaining, locating, and reporting symptoms and causes of the agents of deterioration that affect all types of art objects

2. Apply methods of Preventive Conservation and collections care for causes of deterioration in museum collections
3. Analyze and Evaluate several museums and create a Museum Assessment that could serve a plan of action to remediate any problems encountered.
4. Create a plan for re-organizing a museum based on the Museum Assessment
5. Create a binder based on the readings from class that includes all the causes of deterioration of materials, how to prevent deterioration, and environmental control of collections.

ARTS 404. Applied Projects in Museum Conservation

3 Credits (3)

This course provides student with the practical application of techniques and policies learned in previous museum conservation coursework with the underpinnings of basic museum and conservation practices, particularly in collection care, preventive conservation, conservation, ethics, teamwork and security. Rotating special projects. May be repeated up to 6 credits.

Prerequisite(s): ARTS 401, ARTS 402, ARTS 403 or ARTS 501, ARTS 502, ARTS 503.

Learning Outcomes

1. Analyze and examine the different types of materials that compose one or various objects through testing and observation and evaluate the results of the object/s to be conserved
2. Create and defend the conservation treatment plan based on conservation theory and the principles of conservation for cultural objects, the tests results, and the observations.
3. Apply conservation and restoration techniques to the object/s in the lab after analyzing, evaluating and creating a treatment plan for the object/s.
4. Create Condition Reports, one for each object, by describing the condition of the object and its treatment during the conservation process.

ARTS 440. Internship in Art

1-9 Credits (3P)

This course provides students with the opportunity for workplace learning as an important component in their program of study. Students can identify an internship in graphic design, photography, conservation or other studio areas; or within broader arts institutions such as museums, galleries and visual arts centers which will provide them with professional experience that will support the successful achievement of their career goals in art. May be repeated up to 9 credits.

Prerequisite: ARTH 2110G, ARTH 2120G, ARTS 2136 and eighteen credits of ARTS/ARTH 2000 or ARTS/ARTH 300 studio courses.

ARTS 450. Special Topics In Advanced Drawing and Painting

3-6 Credits (2-4+4P)

Advanced drawing and painting course focusing on the following topics: Identity, Place, Spirituality, Body, and among others. Topics will be announced in the course schedule. May be repeated up to 12 credits.

Prerequisite: 3 credits of ARTS 350, or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an advanced level drawing and painting course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering advanced level tools and processes in drawing and painting.

- Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary drawing and painting.
- Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary drawing and painting

ARTS 455. Special Topics in Advanced Graphic Design

3-6 Credits (2-4+4P)

Advanced graphic design course focusing on the following special topics: special projects, identity design, storytelling, portfolio. Other topics may be offered as well. Topics will be announced in the course schedule. Each topic may only be taken once. May be repeated up to 15 credits.

Prerequisite: 6 credits of ARTS 355, or consent of instructor.

Learning Outcomes

- Apply fundamental elements and principles of design to art production specific to an advanced level graphic design course.
- Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering advanced level tools and processes in graphic design.
- Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary graphic design.
- Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary graphic design.

ARTS 465. Advanced Sculpture Special Topics

3-6 Credits (2-4+4P)

Thematic classes deepen students' knowledge of contemporary sculpture and extended media through a series of interpretive assignments that culminates in a unified body of work. Special topics will be announced in the course schedule. May be repeated up to 12 credits.

Prerequisite: ARTS 365 or permission of the instructor.

Learning Outcomes

- Apply fundamental elements and principles of design to art production specific to an intermediate level sculpture course.
- Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering intermediate level tools and processes in sculpture.
- Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary sculpture.
- Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary sculpture.

ARTS 470. Advanced Digital Photography

3-6 Credits (2-4+4P)

Advanced digital photography course addressing technique and production of photo media within the context of contemporary art. Rotating topics may include: Temporality, Photo-installation and Video Art, among others. Each topic may only be taken once. May be repeated up to 12 credits.

Prerequisite: ARTS 370 or consent of instructor.

Learning Outcomes

- Apply fundamental elements and principles of design to art production specific to an advanced digital photography course.
- Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering advanced level tools and processes in digital photography.

- Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary photography.
- Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary photography.

ARTS 474. Advanced Ceramics Design and Production

3-6 Credits (3-6)

Advanced ceramics course focusing on the technical processes of throwing, prototyping, mold making, glaze calculation, and alternative firing. Discussions may also include issues of professional practice, marketing, and branding. May be repeated up to 6 credits.

Prerequisite(s): ARTS 374 and ARTS 375, or consent of instructor.

Learning Outcomes

- Refine the basic visual and tactile problem solving skills necessary to making two part molds, and develop the ability to make complex multipart molds.
- Demonstrate competency is using these techniques to translate complex geometric and organic forms
- Develop pertinent conceptual reasoning for creating multiples of a form in ceramic material.
- Demonstrate clear understanding of the principles of design in designing ceramic multiples: Balance, Emphasis, Rhythm, Contrast, Proportions, and Scale, Movement.
- Develop basic skills in glazing and a variety of other surface design techniques.
- Demonstrate clear understanding of the visual element of art to the glaze and surface design of ceramic multiples: Line, Shape, Mass, Value, Color, Texture, Pattern, Space,
- Through research, writing, and class critiques refine the ability to think, speak and write about the conceptual relevance to creating multiples in contemporary art and articulate.

ARTS 475. Advanced Ceramics Sculptural Concerns

3-6 Credits (2-4+4P)

Advanced ceramics course focusing on conceptual development as it relates the creation of a unified body of work. Topics may include discussions of advanced techniques, professional practices, and contemporary issues in ceramics. May be repeated up to 15 credits.

Prerequisite(s): ARTS 374 and ARTS 375, or consent of instructor.

Learning Outcomes

- Strive to innovate the standard ceramic building techniques in a way that contributes to, and is informed by, the field of ceramic sculpture.
- Develop a cohesive body of work, which explores completely original concepts and themes.
- Demonstrate clear understand of the principles of design by challenging them in an informed way.
- Refine and master glazing and surface design techniques. Begin to develop ability to mix glazes and slips.
- Demonstrate clear understanding of the visual element of art by challenging them in an informed way.
- Through research, writing, and class critique refine the ability to think, speak and write about contemporary ceramic sculpture in a competent, nuanced, and critical way. Begin to measure one's work against the larger context of contemporary art.

ARTS 485. Special Topics in Advanced Metals/Jewelry

3-6 Credits (2-4+4P)

Advanced Metals/Jewelry course focusing on the following topics: conceptual development and personal aesthetic and style, professional

practices, contemporary issues in Metals/Jewelry, and senior exhibition. Techniques may include enameling, coloring, historical processes, and digital technology. Topics will be announced in the course schedule. Each topic may only be taken once. May be repeated up to 12 credits.

Prerequisite: 6 credits of ARTS 385, or consent of instructor.

Learning Outcomes

1. Apply fundamental elements and principles of design to art production specific to an intermediate level metal/jewelry course.
2. Demonstrate the ability to express concepts in visual form through art making and process specific to a course covering intermediate level tools and processes in metal/jewelry.
3. Evaluate/appraise original works of art through the application of medium, tools, techniques and concepts specific to contemporary metal/jewelry.
4. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary metal/jewelry.

ARTS 490. Museum Conservation Internship

1-6 Credits (1-6)

The goal of this internship is to provide a student with a practical learning experience in preventative conservation techniques and policies so that they can relate what they have learned in the classroom from ART 403 Preventative Conservation/Collections Care to applied situations. It will provide the student an opportunity to learn skills and knowledge needing in working with museum collections. Tasks and projects will be assigned by the instructor. 3 credits required for BFA in Museum Conservation.

May be repeated up to 6 credits.

Prerequisite(s): ARTS 403.

ARTS 494. Special Topics in Studio

3 Credits (3)

Specific subjects and credits to be announced in the Schedule of Classes online. May be repeated up to 9 credits.

ARTS 495. Undergraduate Studio Thesis

3-6 Credits (3-6)

Special research and independent study leading to undergraduate thesis exhibition. May be repeated up to 6 credits. Consent of Instructor required.

Prerequisite(s): Consent of instructor.

ARTS 496. Fundamentals of Studio Management

1 Credit (1)

Advanced studio course designed to introduce students to the fundamentals of studio management. Includes training in proper tools use and maintenance; safety procedures; and practical experience with studio oversight. Concurrent registration in advanced level studio course of the same media area required. May be repeated for a maximum of 3 credits. Restricted to majors. Graded S/U.

Prerequisite: consent of instructor.

ARTS 499. Problems in Studio Art

1-6 Credits (1-6)

Individualized study in specialized studio areas not covered by other advanced courses. May be repeated up to 9 credits. Consent of Instructor required.

ARTS 501. Museum Conservation Techniques I

3 Credits (2+3P)

Introduces the student to conservation theory and the basic principles of conservation for cultural objects. The course integrates the history, philosophy and technologies of art conservation with knowledge of the properties of materials used in conservation. The student will learn and develop conservation skills including learning about the most frequent kinds of deterioration that can occur in various types of art

objects, symptoms and causes as well as preventative and restoration techniques. Although this course provides practical experience, it also seeks to provide a broad understanding of the field of conservation. This course also includes how to document the condition of an object during the conservation process. May be repeated up to 3 credits. Crosslisted with: ARTS 401.

ARTS 502. Museum Conservation Techniques II

3 Credits (2+3P)

Continues conservation theory and the basic principles of conservation for cultural objects. The course integrates the history, philosophy and technologies of art conservation with knowledge of the properties of materials used in conservation. The student will learn and develop conservation skills including learning about the most frequent kinds of deterioration that can occur in various types of art objects, symptoms and causes as well as preventative and restoration techniques. Although this course provides practical experience, it also seeks to provide a broad understanding of the field of conservation. Crosslisted with: ARTS 402.

Prerequisite(s): ARTS 501.

ARTS 503. Preventive Conservation/Collections Care

3 Credits (3)

Introduces the student on how to mitigate the deterioration and damage of cultural property in a museum setting through the formulation and implementation of policies and procedures. The course addresses most aspects of collections management and care for objects in storage, exhibitions and during transportation. Crosslisted with: ARTS 403.

ARTS 504. Applied Projects in Museum Conservation

3 Credits (3)

This course provides students with the practical application of techniques and policies learned in previous conservation coursework with the underpinnings of basic museum and conservations practices, particularly in collection care, preventative conservation, conservation, ethics, teamwork and security. May be repeated up to 6 credits. Crosslisted with: ARTS 404.

Prerequisite(s): ARTS 401, ARTS 402, ARTS 403 OR ARTS 501, ARTS 502, ARTS 503.

ARTS 540. Internship in Art

1-9 Credits (3P)

This course provides students with the opportunity for workplace learning as an important component in their program of study. Students can identify an internship in graphic design, photography, conservation or other studio areas; or within broader arts institutions such as museums, galleries and visual arts centers which will provide them with professional experience that will support the successful achievement of their career goals in art. May be repeated up to 9 credits. Crosslisted with: ARTS 440 and ARTS 340.

ARTS 550. Drawing and Painting Workshop

3-6 Credits (2-4+4P)

Graduate level drawing and painting course focusing on the development of concepts, expression and visual form. May be repeated up to 27 credits.

Prerequisite(s): Graduate standing.

ARTS 555. Graphic Design

3 Credits (3)

May be repeated up to 27 credits.

ARTS 565. Sculpture Media

3-9 Credits

May be repeated up to 27 credits.

ARTS 570. Photography Seminar

3-9 Credits (3-9)

Graduate students develop and implement a research program using photographic media and processes. Outcomes and program developed in consultation with photography faculty.

Prerequisite: .

Learning Outcomes

1. Create original works of art through the application of medium, tools, techniques and concepts specific to contemporary photography at the graduate level.

ARTS 575. Ceramic Arts

3-9 Credits

May be repeated up to 27 credits.

ARTS 576. Museum/Gallery Research Internship

1-9 Credits

Research internship in museum or gallery. Requirements determined by instructor in cooperation with supervising museum/gallery professional. For art history credit. May be repeated for a maximum of 9 credits.

Prerequisite: graduate standing.

ARTS 585. Metals and Jewelry Design

3-9 Credits

May be repeated up to 27 credits.

ARTS 595. Problems in Studio

1-6 Credits

Individualized study in specialized studio areas not covered by other advanced courses. May be repeated up to 12 credits. Consent of Instructor required.

ARTS 596. Graduate Studio Seminar

3 Credits (3)

Explores issues in contemporary art making and their relationship to personal work. Presentation of research in oral, visual, and written form. May be repeated for a maximum of 18 credits. Restricted to majors.

Prerequisite(s): Graduate standing.

ARTS 598. Studio Thesis

1-15 Credits

Special research in studio, leading to an exhibition and written thesis statement.

ASTR-ASTRONOMY

ASTR 1115G. Introduction to Astronomy Lecture & Laboratory

4 Credits (3+2P)

This course surveys observations, theories, and methods of modern astronomy. The course is predominantly for non-science majors, aiming to provide a conceptual understanding of the universe and the basic physics that governs it. Due to the broad coverage of this course, the specific topics and concepts treated may vary. Commonly presented subjects include the general movements of the sky and history of astronomy, followed by an introduction to basic physics concepts like Newton's and Kepler's laws of motion. The course may also provide modern details and facts about celestial bodies in our solar system, as well as differentiation between them – Terrestrial and Jovian planets, exoplanets, the practical meaning of “dwarf planets”, asteroids, comets, and Kuiper Belt and Trans-Neptunian Objects. Beyond this we may study stars and galaxies, star clusters, nebulae, black holes, and clusters of galaxies. Finally, we may study cosmology—the structure and history of the universe. The lab component of this course includes hands-on exercises that work to reinforce concepts covered in the lecture, and may include additional components that introduce students to the night sky. May be repeated up to 4 credits.

Learning Outcomes

1. Students will discuss the night sky as seen from Earth, including coordinate systems, the apparent daily and yearly motions of the sun, Moon, and stars, and their resulting astronomical phenomena.
2. Students will list and apply the steps of the scientific method.
3. Students will describe the scale of the Solar System, Galaxy, and the Universe.
4. Students will explain telescope design and how telescopes and spectra are used to extract information about Astronomical objects.
5. Students will describe the formation scenarios and properties of solar system objects.
6. Students will describe gravity, electromagnetism, and other physical processes that determine the appearance of the universe and its constituents.
7. Students will describe methods by which planets are discovered around other stars and current results.
8. Students will describe the structure, energy generation, and activity of the sun.
9. Students will compare our sun to other stars and outline the evolution of stars of different masses and its end products, including black holes. 1
10. Students will describe the structure of the Milky Way and other galaxies and galaxy clusters. 1
11. Students will describe the origin, evolution, and expansion of the universe based on the Big Bang Theory and recent Astronomical observations. 1
12. Students will describe conditions for life, its origins, and possible locations in the universe.

ASTR 1116. Introduction to Astronomy Lab, Special

1 Credit (1)

This lab-only listing exists only for students who may have transferred to NMSU having taken a lecture-only introductory astronomy class, to allow them to complete the lab requirement to fulfill the general education requirement. Consent of Instructor required. , at some other institution). Restricted to Las Cruces campus only.

Prerequisite(s): Must have passed Introduction to Astronomy lecture-only.

Learning Outcomes

1. Course is used to complete lab portion only of ASTR 1115G or ASTR 112
2. Learning outcomes are the same as those for the lab portion of the respective course.

ASTR 1120G. The Planets Lecture & Laboratory

4 Credits (3+2P)

Comparative study of the planets, moons, comets, and asteroids which comprise the solar system. Emphasis on geological and physical processes which shape the surfaces and atmospheres of the planets. Laboratory exercises include analysis of images returned by spacecraft. Intended for non-science majors, but some basic math required. May be repeated up to 4 credits.

Learning Outcomes

1. Students will describe the sky as seen from Earth, the apparent daily and yearly motions of the Sun, Moon, planets and stars, and resulting astronomical phenomena.
2. Students will apply the process of the scientific method in an astrophysical setting.

- Students will describe the structure of the solar system and explain the development of the currently accepted model of solar system formation.
- Students will explain how telescopes and spectra are used to extract information about astronomical objects.
- Students will describe properties of minor solar system objects, such as dwarf planets, moons, asteroids, meteoroids, and comets.
- Students will compare and contrast bulk and unique properties of the Terrestrial and Jovian worlds.
- Students will describe how gravity and other physical processes determine the appearance of the solar system and its constituents.

ASTR 301V. Revolutionary Ideas in Astronomy**3 Credits (3)**

Examines recent fundamental scientific revolutions that have shaped our view of Earth and the universe. Topics in astronomy range from exoplanets to black holes to dark energy and raise questions about the very nature of how we use the scientific method to see the unseen, and how this shapes science research today.

Prerequisite(s): Any general education science course.

ASTR 305V. The Search for Life in the Universe**3 Credits (3)**

Use of information from several of the sciences to explore the likelihood that life exists elsewhere in the universe. Subjects include an overview of historical ideas about the possibility of life elsewhere in the universe, the chemistry and biology of life on Earth, recent explorations for life within our solar system, and current search strategies for life in the universe and their scientific basis.

ASTR 308V. Into the Final Frontier**3 Credits (3)**

Exploration of space: a brief review of the history of space flight, the Apollo program, joint U.S.-Soviet space missions, and unstaffed exploration of the planets. Emphasis on knowledge gained through these efforts. Includes new space initiatives. Same as HNRS 308V.

ASTR 330V. Planetary Exploration**3 Credits (3)**

A current planetary exploration mission is studied within the context of the solar system. The data acquired and principles involved in executing the mission, as well as social, political, ethical and economic implications of planetary exploration, are examined. May be repeated up to 3 credits.

Learning Outcomes

- Students will describe the various types of interplanetary missions used to explore solar system objects.
- Students will explain the roles and responsibilities of the groups of scientists and engineers that comprise a mission team.
- Students will describe the social, political, ethical, and financial challenges associated with planetary exploration.

ASTR 400. Undergraduate Research**1-3 Credits**

Supervised individual study or research. May be repeated for a maximum of 6 credits.

Prerequisite: consent of instructor.

ASTR 401. Topics in Modern Astrophysics**3 Credits (3)**

This course is designed for students interested in astrophysics who have some background in math and physics and want to learn about basic astrophysics and interesting current topics. The course will cover basic astrophysical concepts such as orbital mechanics, light, and radiative

processes and transfer. These concepts will be applied to the discussion of exciting modern topics involving planets, exoplanets, stars, galaxies, and/or cosmology, with topical emphasis determined by the instructor.

Prerequisite(s): MATH 1521G and (PHYS 2110 or PHYS 1310G).

ASTR 402. Astronomical Observations and Techniques**3 Credits (3)**

Designed for students interested in astrophysics who have some background in math and astronomy and want to learn about techniques for obtaining and analyzing astronomical data. This course will review the properties of light and discuss the process of experimental design. The course will describe basic observational tools such as telescopes and detectors. It will discuss how data is obtained, and how features of the detector and the Earth's atmosphere can be corrected for. Some topics in basic astronomical data analysis will be discussed, with topical emphasis determined by the instructor. Some simple data analysis projects will be assigned. May be repeated up to 3 credits.

Prerequisite: MATH 1511G and (PHYS 2140 or PHYS 1320G) and (ASTR 1120G, ASTR 1115G, or ASTR 401).

Learning Outcomes

- Review the properties of light and discuss the process of experimental design.
- Describe basic observational tools such as telescopes and detectors.
- Discuss how data is obtained, and how features of the detector and the Earth's atmosphere can be corrected for.
- Discuss topics in basic astronomical data analysis.

ASTR 403. Fundamentals of Astronomy**3 Credits (3)**

This course is designed to ensure a basic, quantitative knowledge of fundamental topics in astronomy and astrophysics. These topics include orbital mechanics, properties of radiation, principles of stellar radiation and spectra, structure and dynamics of the Milky Way, properties of galaxies, and basic cosmology. While this course is designed for first year graduate students, it is also cross-listed as an undergraduate course for students who have already had some exposure to astronomy and are prepared for a fast-paced review of fundamental topics and concepts in astronomy. Undergraduates will have a reduced homework load. Consent of Instructor required. Crosslisted with: ASTR 505.

Prerequisite(s): ASTR 401 or demonstrated background in astronomy and problem solving.

ASTR 500. Seminar**1 Credit (1)**

Organized group study treating selected topics.

ASTR 503. Fundamentals of Astrophysics**3 Credits (3)**

This course is designed to ensure a basic, quantitative knowledge of fundamental topics in astronomy and astrophysics. These topics include orbital mechanics, properties of radiation, principles of stellar radiation and spectra, structure and dynamics of the Milky Way, properties of galaxies, and basic cosmology.

Learning Outcomes

- Ensure a basic, quantitative knowledge of fundamental topics in astronomy and astrophysics.
- Discuss orbital mechanics, properties of radiation, principles of stellar radiation and spectra, structure and dynamics of the Milky Way, properties of galaxies, and basic cosmology.

ASTR 506. Dynamics and Hydrodynamics**3 Credits (3)**

Graduate level course on basic stellar dynamics and fundamentals of hydrodynamics. May be repeated up to 3 credits.

Learning Outcomes

1. Learn and be able to apply basics of stellar dynamics and hydrodynamics.

ASTR 535. Observational Techniques

3 Credits (3)

Up-to-date introduction to modern observational astronomy in a two-semester sequence. Topics include: introduction to computers, error analysis in data, the different types of optical telescopes, and optical and infrared photometry, image processing, and detectors. May be repeated up to 3 credits.

Learning Outcomes

1. Discuss an introduction to computers, error analysis in data, the different types of optical telescopes, and optical and infrared photometry, image processing, and detectors.

ASTR 545. Stellar Spectroscopy

3 Credits (3)

This course covers the physics of stellar atmospheres with emphasis on using spectra as a diagnostic tool for understanding the properties of stars. Topics include spectral classification, radiative transfer, gas equilibrium physics, line and continuum opacities, adiabatic and superadiabatic convection, and extraction of observed quantities from spectra for deducing physical conditions of the source.

ASTR 555. Galaxies I

3 Credits (3)

Fundamentals of the properties of galaxies and galaxy components, including stars and stellar populations, gas and dust, central black holes, and dark matter. Includes a detailed description of the properties of the Milky Way Galaxy.

ASTR 565. Stellar Interiors

3 Credits (3)

Internal constitutions of stars, computation of stellar models, and stellar evolution.

ASTR 598. Special Research Programs

1-6 Credits

Individual investigations, either analytical or experimental.

ASTR 599. Master's Thesis

1-15 Credits (1-15)

Master's level research in astrophysics or observational astronomy. May be repeated up to 88 credits.

Learning Outcomes

1. Varies

ASTR 600. Pre-dissertation Research

1-15 Credits

Research.

ASTR 601. Thesis Proposal Preparation

1 Credit (1)

This is a one-credit course that introduces students to Departmental expectations regarding the Thesis Proposal and provides rigorous training in proposal-writing. Drawing heavily from the presentation in the course textbook, *Writing Science* by Joshua Schimel, students will practice devising, developing, and proposing three new ideas for astronomical research over the course of the academic term. Classroom activity will consist of a mixture of short lecture-discussions and focused peer-editing sessions; homework will consist of readings and writing assignments. While the course will assist students in developing

their thesis proposals, its topics are general enough to be useful for any proposal. Students taking Pre-Dissertation Research in their fifth semester are required to register for this course, while students in their fourth and fifth years who have not yet defended their thesis proposals are strongly encouraged to join them. This course should not change the total number of credits for which students are expected to register in a semester

Corequisite: ASTR 600.

Learning Outcomes

1. Provide continuing programmatic/structural support to students as they transition from structured coursework/cumes to unstructured thesis work.
2. Suppress the temptation for students to distance physically starting in the third year.
3. Optimize balance between programmatic progress and ongoing research/outreach commitments.
4. Clarify thesis proposal expectations and improve consistency between experiences of different students.
5. Suppress thesis proposal inflation.
6. Train students in ideation and proposal writing.

ASTR 605. Interstellar Medium

3 Credits (3)

Basics of radiative transfer and processes in the interstellar medium. Properties of dust and infrared emission from grains. Applications to neutral atomic and molecular gas and ionized plasmas in galaxies. May be repeated up to 3 credits.

ASTR 616. Galaxies II

3 Credits (3)

Galaxy formation within a cosmological context. Topics include an introduction to cosmology, the growth of linear and nonlinear structures, the formation of dark matter halos, galaxy growth and feedback processes, and their observational signatures in the intergalactic and circumgalactic media.

ASTR 620. Planetary Processes

3 Credits (3)

Evaluation and analysis of observational data on solar system objects to determine their nature and physical conditions, with emphasis upon atmospheres (composition, structure, thermodynamics, evolution, etc.). Restricted to Astronomy Majors. May be repeated up to 3 credits.

Learning Outcomes

1. Evaluation and analysis of observational data on solar system objects to determine their nature and physical conditions, with emphasis upon atmospheres (composition, structure, thermodynamics, evolution, etc.)

ASTR 621. Planetary System Formation

3 Credits (3)

The physical processes involved in planetary system formation are addressed. Specific foci include molecular cloud collapse, disk processes, and competing theories of planet formation within disks. Additional topics to be discussed may include: the solar wind, planetary magnetic fields, planetary ring processes, and mineralogy. May be repeated up to 3 credits. Restricted to: ASTR majors.

ASTR 630. Advanced Methods in Astrophysics

3 Credits (3)

Provides basic background in numerical and statistical methods relevant to astrophysical research. Topics include a review of probability and probability distribution functions, Bayesian and frequentist approaches, data simulation, parameter estimation, Markov Chain Monte Carlo, image

processing, feature detection, inversions or other topics. May be repeated up to 3 credits.

Learning Outcomes

1. Perform basic background in numerical and statistical methods relevant to astrophysical research.
2. Review of probability and probability distribution functions, Bayesian and frequentist approaches, data simulation, parameter estimation, Markov Chain Monte Carlo, image processing, feature detection, inversions or other topics.

**ASTR 670. Heliophysics, Space Plasmas, and Space Weather
3 Credits (3)**

Explore the Sun and its processes, the heliosphere, and its interactions with the planets. Topics include: A introductory description of space weather and its physics; energy interaction with the space environment; the quiet Sun and its interactions with planetary atmospheres (with an emphasis on Earth); Magnetohydrodynamics; frozen-in flux; the solar wind; magnetized fluid dynamics; the active Sun (flares and coronal mass ejections); the effects of Space Weather. May be repeated up to 3 credits.

Learning Outcomes

1. Manipulate the equations of electromagnetism for any astrophysical plasma, and thereby predict the behavior of any plasma under specific conditions.
2. Use the equations of electromagnetism to explain temporal and spatial size scales throughout the heliosphere.
3. Interpret the role magnetism plays in both the storage and release of energy in plasmas.
4. Analyze the effect and impact of solar particles and radiation on Earth, and at other planets.

**ASTR 671. Solar Astrophysics
3 Credits (3)**

Solar astrophysics, including observational and theoretical aspects of the Sun's atmosphere. Although focused on the Sun, the course will be conducted so be of general interest to all astronomy graduate students

Learning Outcomes

1. Develop critical thinking skills in study the solar atmosphere.
2. Asses the validity of solar MHD and other approximations in uncovering the physics of the Sun.
3. Investigate the evolution of solar features at multiple size scales.
4. Determine the connections of the solar plasma oscillations and particle acceleration to energy release processes.

**ASTR 698. Special Topics.
1-9 Credits**

Special topics.

**ASTR 700. Doctoral Dissertation
1-15 Credits (1-15)**

Dissertation. May be repeated up to 88 credits.

Learning Outcomes

1. Varies

AUTO-AUTOMOTIVE TECHNOLOGY

**AUTO 111. Automotive Mechanics Basics
4 Credits (4)**

Basic maintenance procedures of the major components of the automobile using service repair manuals, hand and power tools, precision measurement equipment, fasteners and chemicals. Restricted to: Community Colleges only.

**AUTO 112. Basic Gasoline Engines
5 Credits (2+6P)**

Principles of gasoline engine operation. Identification, design, function of engine components; engine disassembly and reassembly; trouble shooting, and rebuilding heads.

**AUTO 113. Automotive Electricity and Electronics PT I
4 Credits (2+4P)**

Topics include mastery of DC electricity, use of digital multimeters, troubleshooting electrical problems in starting, charging and accessory systems. Restricted to Community Colleges only.

**AUTO 114. Automotive Electricity and Electronics PT II
4 Credits (2+4P)**

Advanced AC and DC automotive electronic circuits. Troubleshooting electronically controlled components including supplemental restraint systems and convenience accessories. Restricted to Community Colleges campuses only.

Prerequisite: AUTO 113.

Learning Outcomes

1. Understand and demonstrate safety rules related to electronically controlled automotive systems.
2. Diagnosis and demonstrate knowledge of series, parallel, and combination circuits, and their applications as applied to automotive repair.
3. Demonstrate use of wiring diagrams as a diagnostic aide.
4. Demonstrate use of meters, handheld labsopes, scan tools, and other diagnostic equipment.
5. Demonstrate use of repair manuals, both hard copy and electronic.
6. Demonstrate knowledge, diagnose and repair Air Bag Supplemental Inflatable Restraint systems
7. Demonstrate knowledge, diagnose and repair various convenience electronic systems.
8. Interpret customer concerns, create and complete a diagnostic routine and successfully repair an electrical problem.
9. Diagnose and repair starting and charging systems.

**AUTO 115. Automotive Engine Repair
4 Credits (2+4P)**

Principles of gasoline engine operation. Identification of engine parts, operation, and function. Disassembly and reassembly. Engine problem diagnoses (cooling system, lubrication system, engine noises). Restricted to Community Colleges only.

Learning Outcomes

1. Understand internal combustion engine theory.
2. Identify all components of an engine and their function.
3. Identify worn engine components and determine necessary repairs.
4. Effectively present engine issues and corrections using verbal and written communication.
5. Diagnose cooling system issues and the effect on various components.
6. Rebuild/ reassemble an engine to specifications.
7. Understand the operation and rationale of forced induction.
8. Identify methods of increasing engine efficiency.

**AUTO 117. Electronic Analysis and Tune-Up of Gasoline Engines
5 Credits (2+6P)**

Theory and operation of ignition and emission control systems and fuel system. Use of troubleshooting equipment and diagnostic equipment.

Prerequisite: AUTO 120 or consent of instructor.

AUTO 119. Manual Transmission/Clutch**5 Credits (2+6P)**

Manual transmission, transfer cases, and clutch operating principles. Students will diagnose problems, remove and replace, disassemble, repair, and assemble units.

AUTO 120. Electrical Systems**4 Credits (2+4P)**

Troubleshooting and repair of starters, alternators, and associated circuits. Reading electrical diagrams, diagnosis and repair of electrical accessories.

Prerequisite: consent of instructor.

AUTO 122. Automotive Brakes**4 Credits (2+4P)**

Focus is on theory, diagnosis, and service of drum, disc, and anti-lock braking systems, brake component machining, hydraulic component reconditioning, friction and hardware replacement. Restricted to Community Colleges only.

AUTO 123. Job Shadowing**1 Credit (1)**

Observing a professional in a real-world work setting, while gaining on-the-job training. Student will meet in a weekly class or online.

Learning Outcomes

1. Work with colleagues in the diagnosing and repair of automobiles.
2. Understand basic tool needs to meet industry requirements.
3. Prepare for various pay scales (straight time, flat-rate, hourly).
4. Understand daily operations in a live shop setting.
5. Understand the roles in the automotive field to include Technician, Service Writer, Shop Foreman, and Service Manager.

AUTO 124. Automotive Heating and Air Conditioning**4 Credits (2+4P)**

R12 and R134A air conditioning systems maintenance diagnosis and repair. R12 to R134A conversion procedures. Troubleshooting automatic temperature controls and leak detection. Restricted to Community Colleges only.

AUTO 125. Brakes**5 Credits (2+6P)**

Theory of operation, diagnosis, repair, and maintenance of disc and drum brakes; safety and use of special tools.

AUTO 126. Suspension, Steering, and Alignment**5 Credits (2+6P)**

Types of steering systems, suspension maintenance and repair, four-wheel alignment procedures.

AUTO 127. Basic Automatic Transmission**4 Credits (2+4P)**

Theory and operation of the automatic transmission; maintenance, troubleshooting, diagnosis, and repair of components.

AUTO 129. Automotive Steering and Suspension**4 Credits (2+4P)**

Diagnosis/service of suspension components including shocks, springs, ball joints, manual and power steering systems and four wheel alignment are some areas covered. Restricted to Community Colleges only.

AUTO 130. Introduction to Transportation Industry**3 Credits (3)**

State and national traffic statutes that relate to the trucking industry. A Commercial Driver's License Learner's Permit will be obtained through successful completion of the course.

Prerequisites: Must be 18 years of age, have a current driver's license and consent of instructor.

AUTO 131. Class A CDL**3 Credits (1+4P)**

Instruction in how to perform proper pre-trip inspection; hands-on training with a tractor-trailer unit on the backing range and street driving to develop skills necessary to pass Class A DCL exam. Restricted to Community Colleges campuses only.

Prerequisite(s): Class A CDL restricted license (permit) and either restriction of D.O.T.

AUTO 132. Automotive Air-Conditioning and Heating Systems**4 Credits (2+4P)**

Theory and operation, reading schematic diagrams, troubleshooting, repair, and replacement operations performed.

AUTO 137. Fuel Systems and Emission Controls**4 Credits (2+4P)**

Covers theory and operation of fuel system and emission control. Troubleshooting, vacuum diagrams, overhaul, repair and adjustment of carburetion and fuel injection.

Prerequisites: AUTO 117 or consent of instructor.

AUTO 160. Hybrid/Electric Vehicles**4 Credits (2+4P)**

Theory and operation of Hybrid and Electric vehicles with emphasis on electrical motor subsystems and battery management systems.

Prerequisite: AUTO 113, AUTO 115.

Prerequisite/Corequisite: AUTO 205.

Learning Outcomes

1. Use automotive scanners and test equipment effectively.
2. Explain the difference between hybrid and electrical vehicles.
3. Identify faulty electrical components and determine necessary repairs.
4. Effectively present issues and corrections using verbal and written communication.
5. Demonstrate proper safety when working with hybrid/EV batteries.
6. Demonstrate knowledge of differences between hybrid and fully electric vehicles and their benefits.
7. Perform routine service on hybrid and electric vehicles.

AUTO 162. Advanced Non-Structural Repair I**4 Credits (2+4P)**

This course will involve the students in all phases of minor non-structural collision damage repairs. It will encompass sheet metal repair, advanced panel replacement and alignment.

Prerequisite(s): AUTO 161.

AUTO 164. Automotive Industry Collision Repair I**4 Credits (2+4P)**

This advanced course is a continuation of AUTO 161, 162, and 163. This course will incorporate all areas of major non-structural collision damage repair. Through practical application the student will learn how to effectively repair all heavy collision damage using current I-CAR repair standards and procedures.

Prerequisite(s): AUTO 163.

AUTO 165. Automotive Industry Collision Repair II**4 Credits (2+4P)**

This advanced course is a continuation of AUTO 164 with emphasis on time efficiency. This course will involve the student in all areas of major collision damage repair. The student will be exposed to all applicable I-CAR industry procedures and standards involved in sheet metal and composite panel repair.

Prerequisite(s): AUTO 164.

AUTO 172. Introduction to Automotive Refinishing
4 Credits (2+4P)

This course is designed to incorporate all aspects of surface preparation, paint safety, refinishing materials, and refinishing fundamentals. Students will receive instructions for the application of acrylic enamel and base coat/clear coat refinishing systems.

AUTO 174. Intermediate Automotive Refinishing
4 Credits (2+4P)

This course encompasses all areas of surface preparation, damage repair and refinishing procedures that are necessary for achieving a proper spot repair. Students will also be exposed to safe work habits in the refinishing area and correct automotive detailing procedures.

Prerequisite(s): AUTO 172.

AUTO 176. Automotive Color Adjustment & Blending
4 Credits (2+4P)

This course will help develop the skills needed to match any type of paint. It will expose the student to color theory, color evaluation, color matching, and other color adjustment factors. The student will be instructed in multiple panel paint blending techniques as well.

Prerequisite(s): AUTO 174.

AUTO 178. Automotive Overall Refinishing
4 Credits (2+4P)

This course encompasses all areas of automotive refinishing. This advanced course is a continuation of AUTO 176 with emphasis in achieving industry refinishing times and standards consistent with that of I-CAR. The student will be exposed to surface preparation and refinishing techniques involved with overall coat/clear coat refinishing system.

Prerequisite(s): AUTO 176.

AUTO 181. Frame and Structural Repair
4 Credits (2+4P)

This course will involve the student in all areas of frame and structural damage repairs. Through theory and practical application, the student will learn how to diagnose and repair various types of damage include: mash, twist, sag, and side sway. This course will expose the students to safe work habits while using measuring and straightening equipment.

Prerequisite(s): AUTO 165.

AUTO 182. Structural Panel Replacement
4 Credits (2+4P)

This course is a continuation of AUTO 181 with infancies in structural panel replacement. The student will be exposed to frame and unibody measuring equipment and their proper use in sectioning procedures. Through theory and practical application the student will learn how to ID structural components, properly separate spot welds, position and weld new body panels in place.

Prerequisite(s): AUTO 181.

AUTO 200. Engine Performance
4 Credits (2+4P)

Theory and operation of ignition, emission control systems, fuel systems, and exhaust systems. Use of troubleshooting and diagnostic equipment. May be repeated up to 4 credits.

Prerequisite/Corequisite: AUTO 113, AUTO 115.

Learning Outcomes

1. Use automotive scanners and test equipment effectively
2. Identify all emission control components of an engine and their function
3. Identify faulty ignition components and determine necessary repairs
4. Effectively present engine issues and corrections using verbal and written communication

5. Diagnose fuel system issues and the effect on various components
6. Demonstrate knowledge of differences between different fuel delivery methods and their benefits
7. Understand the operation and rationale of forced induction
8. Identify methods of increasing engine efficiency

AUTO 201. Engine Performance I
4 Credits (2+4P)

Theory, function, service and analysis of engine related subsystems including ignition, fuel, starting, and charging systems. Emphasis is placed on diagnosis and operation of electronic engine control management systems. Restricted to Community Colleges only.

AUTO 203. Engine Performance II
4 Credits (2+4P)

Study of engine management systems and emission control systems, their function and relationship to vehicle performance and air pollution. Emphasis is placed on the analysis and repair of non-compliant vehicles. Restricted to Community Colleges only.

Prerequisite: AUTO 201.

Learning Outcomes

1. Be able to explain basic electrical theories.
2. Be able to explain basic and advanced engine designs and engine operating theory.
3. Be able to explain engine cooling and lubricating systems.
4. Be able to explain intake and exhaust systems
5. Test battery, starting and charging systems
6. Test ignition systems including point type, electronic trigger type, and distributor-less systems.
7. Test automotive fuel system including fuel tanks, lines, filters and pumps.
8. Test basic electronic fuel injection systems.
9. Test automotive computer input devices and controlled devices 1
10. Demonstrate ability to work with PC based automotive software including Alldata,

AUTO 205. Manual Drive Train and Axles
4 Credits (2+4P)

Operation, diagnosis, maintenance, repair or replacement of manual transmissions, clutch assemblies, differentials, drivelines, axles, and manual transaxles. Restricted to Community Colleges only.

AUTO 206. Automatic Transmissions
5 Credits (2+6P)

Operation, diagnosis, maintenance, and repair of automatic transmissions including rear wheel drive, front wheel drive, and electronically controlled transmissions and transaxles. Restricted to Community Colleges only.

AUTO 208. Introduction to Alternative Fueled Vehicles
3 Credits (3)

Course will familiarize student with conditions that are resulting in the alternative fueled vehicle movement as well as the design and safety precautions unique to each alternative fuel. Propulsion systems covered include electric vehicles, bio-fueled vehicles, hybrid-electric vehicles and hydrogen powered vehicles, along with other emerging technologies as appropriate. Restricted to: Community Colleges only.

Prerequisite(s): AUTO 113 and AUTO 114.

AUTO 209. Hybrid Vehicle Service Techniques
3 Credits (3)

Designed for experienced automotive technicians, this course will cover safety procedures, design, operational overview and service techniques as well as minor diagnosis and repair of all classifications of hybrid-electric vehicles. Each student must possess legal Class '0' high voltage gloves and liners to attend this class. Restricted to: Community Colleges only.

Prerequisite(s): AUTO 113 and AUTO 114.

AUTO 210. Light Diesel

4 Credits (2+4P)

Theory and operation of light duty diesel engines with emphasis on highway diesel usage including major engine subsystems and fuel management systems.

Prerequisite/Corequisite: AUTO 113, AUTO 115.

Learning Outcomes

1. Use automotive scanners and test equipment effectively.
2. Identify all emission control components included on diesel engines and their function.
3. Identify faulty emission components and determine necessary repairs.
4. Effectively present engine issues and corrections using verbal and written communication
5. Diagnose fuel system issues and the effect on various components.
6. Demonstrate knowledge of differences between different fuel delivery methods and their benefits.
7. Understand the operation and rationale of forced induction.
8. Identify methods of increasing engine efficiency.

AUTO 221. Cooperative Experience I

1-6 Credits

Supervised cooperative work program. Student is employed in an approved occupation and supervised and rated by the employer and instructor. Student will meet in a weekly class. Graded S/U.

Prerequisite: consent of instructor.

AUTO 255. Special Problems in Automotive Technology

1-5 Credits

Individual studies in areas directly related to automotive technologies. May be repeated for a maximum of 12 credits.

Prerequisite: consent of instructor.

AUTO 290. ASE Certification Preparation

1 Credit (1)

This is the capstone course for the Automotive Technology Program and is a requirement for graduation. Consent of Instructor required. Restricted to: AUTO majors. Restricted to Community Colleges campuses

Learning Outcomes

1. write technical reports explaining customers complaint(s), specific component malfunction(s) and related problems to include repair procedures, specifications, parts and costs associated with each specific repair
2. determine, categorize and document component or systems malfunctions which will be discussed in class
3. adequately identify safety hazards associated with electrical, electronic, hydraulic, pneumatic and mechanical systems before participating in any lab project
4. use a systematic approach to identify, diagnose and repair new hydro, electrical and mechanical systems
5. identify all related parts and components before attempting to repair each system

6. clearly identify and understand the specific function of each component before these systems and subsystems are dismantled for repairs
7. demonstrate proficiency in locating, identifying and following procedures for repairs as outlined on the Mitchell and All-DATA computer information systems
8. retrieve all phases of automotive information needed to repair the following: Electrical and Electronics, Engine Repair, Engine Performance, Automatic transmissions, Heating And Air Conditioning Systems
9. demonstrate proficiency in the proper usage of on-board computer scanners used to identify and properly diagnose possible malfunction within a specific on-board computer system 1
10. demonstrate proficiency in the proper use of scanners, information and vehicle specifications to determine needed repairs 1
11. identify, evaluate, diagnosis and repair electrical, electronic and mechanical systems and subsystems

AUTO 295. Special Topics

1-6 Credits

Topics to be announced in the Schedule of Classes.

AXED-AGRICULTURAL EXTN EDUC

AXED 1110. Introduction to Agricultural, Extension, and Technology Education

3 Credits (3)

Orientation to programs, philosophies, competencies and leadership skills needed by professionals in agricultural and technology education, extension education, agricultural communications, and related career opportunities in industry, governmental agencies, and international organizations.

Learning Outcomes

1. Orient student to the AXED Department and their role as students.
2. Explore career opportunities (and the related skill sets needed for success) in public schools, career and technical institutions, the cooperative extension service, community, and international development, agricultural communications, agricultural industry associations and public service (e.g., NMDA and USDA).
3. Develop an understanding of the self-leadership skills needed to be effective in a variety of professional and personal environments.
4. Familiarize students with the aspects included within a total program in agricultural or technology education.
5. Strengthen skills in oral and written communications.

AXED 1130. Techniques in Agricultural Mechanization

3 Credits (2+2P)

Development of competencies in agricultural mechanics including safety, tool identification, operation and maintenance of hand and power tools, cold metal, drafting, and plumbing procedures. Designed for any major wishing to improve mechanical skills needed in agriculturally related occupations in education and industry.

Learning Outcomes

1. To understand basic drafting language used in orthographic and isometric drawings.
2. To develop an understanding of the proper use and safety of basic hand and power tools.
3. To develop skills needed to operate basic hand and power tools correctly.

4. To develop an understanding of surveying methods and building layout for construction.
5. To develop an adequate level of competence in workshop techniques.
6. To prepare students to properly teach and demonstrate these techniques to others who may use them as a means of earning a living.

AXED 2110. Metal Fabrication**3 Credits (2+4P)**

Instruction and skill development in process and procedures of metal fusion, including gas and electric welding techniques, safety, and oxy-acetylene cutting and welding. Designed to improve mechanical skills needed in agriculturally related occupations in education and industry.

Learning Outcomes

1. To develop students understanding and appreciation for metal fabrication, design and teaching.
2. To develop in the student an adequate level of competence in shop work techniques, so that the student may be able to properly teach and demonstrate multiple metal fabrication techniques to others who may use them as a mean of earning a living.
3. To develop the student's fundamental techniques in shielded metal arc welding, oxy-acetylene welding and cutting operations, metal inert gas welding (MIG), and gas tungsten-arc welding as needed in repair and construction of agricultural equipment.
4. Student will understand appropriate shop management techniques and have an appreciation for mechanized agriculture.
5. To assist the student in developing an understanding and comprehension of the fundamental principles that apply to the area of basic shop work included in this course; such as proper selection of electrodes, oxy-acetylene filler rods, welding processes best suited for given welding conditions, the proper tool for the job, etc.
6. To develop in the student comprehension of safety practices that apply to the areas of basic shop work, tools, and equipment required in the course.

AXED 2130. Early Field-Based Experience**2 Credits (2)**

First Hand view of the roles of professional educators through field experiences with Cooperative Extension or other government agencies. Includes 4 weeks of classroom instruction and 30 hours of observation in a work setting. Consent of Instructor required. Restricted to Las Cruces campus only.

Learning Outcomes

1. Identify successful characteristics, tips and strategies that an agricultural education professional may use as part of their program.
2. Identify key components of an agricultural education program
3. Actively observe a local agricultural education program.
4. Identify ways that your agency program networks and interacts with clientele and community

AXED 2996. Special Topics**1-4 Credits (1-4)**

Specific subjects and credits to be announced in the Schedule of Classes. Student can only take up to 6 credits per semester, and will not be able to have more than 12 credits count towards their degree. May be repeated up to 12 credits.

Learning Outcomes

1. Varies

AXED 3115. Small Engine Technology**3 Credits (2+2P)**

Development of competencies in small gasoline engines; theory, operation, design, maintenance and safety. Designed for any major wishing to improve mechanical skills needed in agriculturally related occupations in education and industry. May be repeated up to 3 credits.

AXED 3120. Agricultural Structures**3 Credits (2+3P)**

Selection and use of agricultural building materials. Design, construction, and maintenance of agricultural structures. Development of competencies in carpentry, concrete, electricity, masonry, and safety. Designed for any major wishing to improve mechanical skills needed in agriculturally related occupations in education and industry. May be repeated up to 3 credits.

AXED 3130. Advanced Technology in the Agricultural Mechanization**3 Credits (2+3P)**

Students will construct a project in the area of agricultural mechanization under the direction of instructor. Project must be completed within a semester and of sufficient complexity for 3 credits.

Prerequisite: AXED 1130 and AXED 2110 or consent of instructor.

AXED 3150. Philosophy and Methods of Contests**3 Credits (3)**

Covers the roles that career development events (contests) play in agricultural and technology education and in extension programs. Topics include competition and cooperation, winning and losing, ethics, use of community resources, and academic and employability skills taught through contests. Coaching as a teaching method is introduced and expanded. Students will assist with the coordination of various career development events. May be repeated up to 3 credits.

AXED 3210V. John Muir: Lessons in Sustainability**3 Credits (3)**

This course examines the life of John Muir in the context of sustainability. Muir was a farmer, inventor, explorer, botanist, glaciologist, conservationist, and noted nature author. He was influential in the National Parks movement and in starting the Sierra Club. Living in the natural world influenced his faith and philosophy. By examining his life and the themes that shaped it, students will develop an understanding of what it means to live sustainably and to contribute beyond their personal lives to a sustainable future. May be repeated up to 3 credits.

AXED 3996. Special Topics**1-4 Credits (1-4)**

Course addresses specific subjects and issues as identified by department. Topics and credits to be announced in the Schedule of Classes. Students can only take up to 4 credits per semester and no more than 6 credits of the course may be applied to a degree. May be repeated up to 12 credits.

Learning Outcomes

1. Various

AXED 4110. Management of Change, Diffusion, and Adoption of Innovations**3 Credits (3)**

Factors that influence the rates of diffusion and adoption of innovations. Consequences of adopting or rejecting innovations. Processes by which change agents influence introduction and adoption of innovations. Taught with AXED 5110. May be repeated up to 3 credits.

Learning Outcomes

1. Critically examine the adoption-diffusion model. Included are issues such as social class differentials in the dissemination of ideas and technology, non-adoption as a form of behavior, social and economic constraints on adoption behavior, and the consequences of adoption at both the individual and social levels.

2. Demonstrate understanding of how the rapid pace of change in technology and applied science may have good and bad outcomes.
3. Discuss the dissemination of new ideas and technology within various social units.
4. Discuss the applications of the adoption-diffusion model from the perspective of the change agent.
5. Enhance the development of leadership skills required to work with people in times of change.

AXED 4210. Curriculum Development and Assessment in Agricultural Education

3 Credits (3)

This course prepares students to develop curriculum, design lessons, and prepare appropriate assessments in an agricultural education setting. An emphasis will be placed on the developing curriculum using the currently established resources that are available to agriculture teachers.

Prerequisite: 2.5 GPA.

AXED 4215. Developing Excellent Programs in Career and Technical Education

3 Credits (3)

Students learn to develop excellence in the three components of a successful secondary school program in career and technical education: classroom and laboratory instruction, career and technical student organizations, and career development activities. Community-based program planning, utilizing partners, program marketing, and professional development are addressed as strategies for achieving excellence. Methods of obtaining financing and maintaining accountability for the program are discussed. May be repeated up to 3 credits.

AXED 4220. Methods for Teaching Agricultural and Technology Education

3 Credits (3)

Methods of instruction and presentation, selection of teaching aids and support materials, classroom management, development of a complete educational program, and microteaching experiences. May be repeated up to 3 credits.

Prerequisite: GPA of 2.5 or above.

AXED 4230. Directed Teaching in Agricultural or Technology Education

15 Credits (15)

Semester-long off-campus professional experience in directed teaching and observation provided in selected centers under secondary agricultural or technology education supervising teachers. Consent of Instructor required.

Prerequisite: AXED 4215, AXED 4220 and consent of instructor.

AXED 4235. Directed Teaching in Extension Education

3-12 Credits (3-12)

Four-to-fourteen-week, professional experiences in directed teaching and observation provided in cooperative extension at the county, regional, or state level. Consent of instructor required. May be repeated up to 12 credits.

AXED 4510. Introduction to Research Methods

3 Credits (3)

Introduction to research design and methodology in education and behavioral sciences. Overview of common research designs and data collection strategies. Prepares students to critique published research and understand basic skills including hypothesis development and conducting a literature search. Students must be in junior standing to enroll. May be repeated up to 3 credits.

AXED 4520. Methods in Career and Technical Laboratory Instruction

2 Credits (2)

For students planning to teach agricultural or technology education at a secondary or postsecondary level. Focus on planning, delivering, and evaluating instruction in laboratories; and on CPR, first aid, and NCCER certifications. Laboratory safety and tool, equipment, and laboratory management systems are also emphasized. Restricted to AXED Majors. May be repeated up to 2 credits.

AXED 4610. Leadership On Agricultural and Natural Resource Issues

3 Credits (3)

Investigates leadership concepts and group dynamics as they relate to a changing world and complex agricultural and natural resource issues. Topics include emotional intelligence, leading change, political leadership, facilitating agreement, team building, and managing conflict in agricultural and natural resource settings. May be repeated up to 3 credits.

AXED 4620. Methods of Teaching Biological, Earth and Physical Sciences in Agriculture

3 Credits (3)

Students learn to set up and teach in a modular agriscience laboratory, utilizing a variety of technologies. Modules covered focus on incorporating biological, earth and physical sciences into agricultural instruction and may include: Tissue culture, animal anatomy, hydroponics microscopy, electrophoresis, microbiology, soils and plant nutrients, water quality, water systems, entomology, integrated pest management, and renewable energy applications. Students develop their own modules and/or experiments.

AXED 4710. 4-H Youth Development

1 Credit (1)

On-line course explores 4-H Youth Development as an integral part of the Cooperative Extension Service. Topics to be addressed include mission, philosophy, delivery modes, audiences and partnerships. Course is relevant for anyone interested in pursuing a career in Cooperative Extension. May be repeated up to 1 credit.

AXED 4715. The FFA Organization: An Overview

1 Credit (1)

Online course addressing the history, mission, philosophy and structure of the New Mexico and National FFA Organizations and their relationship to supervised agriculture experiences and the agricultural education curriculum. Course is relevant for anyone interested in pursuing a career in agricultural education. May be repeated up to 1 credit.

AXED 4991. Undergraduate Research

1-4 Credits (1-4)

Research experience in agricultural, extension, and technology education with applications to selected issues and problems. May be repeated up to 4 credits.

AXED 4997. Independent Study in Agricultural, Extension, or Technology Education

1-3 Credits (1-3)

Specific subjects are agreed upon by the student and instructor. Students must be juniors or seniors to enroll. May be repeated up to 6 credits.

AXED 5110. Management of Change, Diffusion, and Adoption of Innovations

3 Credits (3)

Factors that influence rates of diffusion and adoption of innovations. Consequences of adopting or rejecting innovations. Processes by which change agents influence introduction and adoption of innovations. Taught with AXED 4110 with differential assignments for graduate students. May be repeated up to 3 credits.

Learning Outcomes

1. Critically examine the adoption-diffusion model. Included are issues such as social class differentials in the dissemination of ideas and technology, non-adoption as a form of behavior, social and economic constraints on adoption behavior, and the consequences of adoption at both the individual and social levels.
2. Demonstrate understanding of how the rapid pace of change in technology and applied science may have good and bad outcomes.
3. Discuss the dissemination of new ideas and technology within various social units.
4. Discuss the applications of the adoption-diffusion model from the perspective of the change agent.
5. Enhance the development of leadership skills required to work with people in times of change.

**AXED 5130. Advanced Agricultural Mechanization
3 Credits (3)**

This course provides an overview of advanced agriculture mechanization techniques and concepts. Precision farming tools and applications will be introduced, and hands-on activities will be utilized. A discussion about applications and benefits will frame the course lectures.

Learning Outcomes

1. Describe and classify various precision agriculture software/hardware technologies
2. Demonstrate usage of various precision agriculture technologies
3. Understand decision making processes associated with implementation of precision agriculture technologies
4. Analyze the costs, time, and application of precision agriculture technologies

**AXED 5150. Strategic Communications Campaigns and Evaluation
3 Credits (3)**

Client-based marketing and communication needs for stakeholders in agricultural and life sciences. Students will learn brand awareness for agricultural stakeholders by developing a campaign of communications and marketing materials using multiple channels (e.g., written, visual, social). Students will also evaluate the materials for their audience reach, visibility, and effectiveness. Strategic communications involve planning, prioritizing, and evaluating. Students will gain experience implementing these needs with a real-world client to keep materials relevant to industry demands. May be repeated up to 3 credits.

Learning Outcomes

1. Identify communications-related needs with a client or stakeholder in the food, agricultural, natural resources, and human (FANH) sciences.
2. Define priority communications areas to address client or stakeholder needs.
3. Direct a communications plan with channels, tactics, steps, and timelines.
4. Develop a campaign of communications materials (e.g., written, visual, social) around a client's needs.
5. Evaluate the reach, visibility, and effectiveness of the communications materials.
6. Manage a client's brand with desired audiences through establishing, promoting, and reinforcing messages.
7. Publish portfolio materials showcasing the client's brand.

**AXED 5155. Youth Program Development and Management
3 Credits (3)**

Designed for professionals involved in youth group activities. Basic concepts in planning, conducting, and managing educational youth

programs in a variety of organizations. Taught with AXED 415 with differentiated assignments for graduate students. May be repeated up to 3 credits.

**AXED 5160. Teaching Adults in Nonformal Settings
3 Credits (3)**

The adult and postsecondary learner; adult learning styles and principles; use of community resources and problem-solving techniques; and learning strategies for adults in formal and nonformal education. Taught with AXED 430 with differentiated assignments for graduate students. May be repeated up to 3 credits.

**AXED 5165. History and Philosophy of Agricultural and Extension Education
3 Credits (3)**

History and Philosophy of Agricultural and Extension Education serves as a foundational core of graduate studies in Agricultural and Extension Education. The design of the course is to acquaint the student with a broad perspective of cultural and historical conditions that have shaped both education and agricultural education as we know it today. The primary purpose of this course is to explore the nature of selected philosophical concepts and philosophers and to evaluate their influence upon education and agricultural/extension education in the United States. In addition to philosophical influences, students will examine the historical events and governmental laws and policies that have evolved and developed our educational system of today.

Learning Outcomes

1. Understand the principles of philosophy in education and agricultural and extension education.
2. Recognize the influence of philosophers and philosophical documents upon education and agricultural and extension education.
3. Analyze the historical foundations that have established our modern educational system.
4. Develop a personal philosophy regarding education and agricultural education.

**AXED 5170. Keys for Agricultural and Rural Development
3 Credits (3)**

Introduction to concepts of development, the process of change, key factors that contribute to agricultural and rural development in a community, and strategies employed to effect change with implications for international students or domestic students planning to work internationally. May be repeated up to 3 credits.

**AXED 5210. Curriculum Development and Assessment in Agricultural Education
3 Credits (3)**

This course prepares students to develop curriculum, design lessons, and prepare appropriate assessments in an agricultural education setting. An emphasis will be placed on the developing curriculum using the currently established resources that are available to agriculture teachers.

Prerequisite: 2.5 GPA.

**AXED 5215. Developing Excellent Programs in Career and Technical Education
3 Credits (3)**

Students learn to develop excellence in the three components of a successful secondary school program in career and technical education: classroom and laboratory instruction, career and technical student organizations, and career development activities. Community-based program planning, utilizing partners, program marketing, and professional development are addressed as strategies for achieving excellence. Methods of obtaining financing and maintaining accountability of

the program are discussed. Taught with AXED 445 with differentiated assignments for graduate students. May be repeated up to 3 credits.

AXED 5220. Methods for Teaching Agricultural and Technology Education
3 Credits (3)

Methods of instruction and presentation, selection of teaching aids and support materials, classroom management, development of a complete educational program, and microteaching experiences. Taught with AXED 446. May be repeated up to 3 credits.

Prerequisite: GPA of 3.0 or above.

AXED 5230. Directed Teaching in Agricultural or Technology Education
4-9 Credits (4-9)

Semester-long off-campus professional experience in directed teaching and observation provided in selected centers under secondary agricultural and technology supervising teachers. Students need to have completed a teaching methods class prior to enrolling in this course. Consent of Instructor required.

AXED 5235. Directed Teaching in Extension Education
4-9 Credits (4-9)

Four- to fourteen-week professional experiences in directed teaching and observation provided in cooperative extension at the county, regional, or state level. Taught with AXED 448 with reduced credit hours for graduate students. Restricted to AXED majors. May be repeated up to 9 credits.

AXED 5310. New Mexico Water Issues
3 Credits (3)

Designed for agricultural and natural resource professionals who must educate others or provide leadership on complex water issues in New Mexico. Students will travel to four distinct geographic and cultural regions of the state and study water policies, issues, and delivery technologies in each region. Specific areas covered will be determined by resource professionals who will present past, current and future issues involved in the distribution of water. Urban impacts on water use will also be investigated. May be repeated up to 3 credits.

AXED 5320. Risk and Crisis Communications in Agricultural, Consumer, and Environmental Sciences
3 Credits (3)

The purpose of this course is to introduce risk and crisis as interdisciplinary concepts, reviewing theoretical frameworks from a variety of fields and perspectives, such as communication, social psychology and public relations. Students will develop a theoretical understanding of all aspects of strategic communication pertaining risks. Using readings and reflective writings, you will understand how individuals cognitively process risks and how to leverage trust and knowledge to facilitate public understanding. In addition, you will learn crisis communication and management from an organizational perspective. Using case studies and discussions, students will be able to recommend strategies for managing crises occurred to agricultural and natural resource industries.

Learning Outcomes

1. Develop a critical understanding of theoretical and conceptual frameworks related to risk and crisis communications
2. Use an integrated framework to analyze the communication strategies used by the agricultural and natural resource industries
3. Recommend effective and ethical strategies for managing actual and potential crises

AXED 5510. Research Methods
3 Credits (3)

Students learn the research process as it is applied to solving problems in the behavioral sciences. Prepares students to conduct and critique research and to diffuse research findings. Implications, applications, and

ethics of research also stressed. Students develop a research proposal for a problem of their choice. May be repeated up to 3 credits.

AXED 5515. Data Collection and Analysis
3 Credits (3)

Introduction to basic concepts of data collection and analysis. Interpretations from observational studies and controlled experiments. Roles of descriptive and inferential statistics in a complete data analysis. Mean, median, standard deviation, and graphical summaries of data. Correlation and simple regression. One- and two-sample tests and confidence intervals. Chi-square tests and basic analysis of variance. Competency in arithmetic and algebra required. An undergraduate statistics course recommended. May be repeated up to 3 credits.

AXED 5610. Leadership on Agricultural and Natural Resource Issues
3 Credits (3)

Investigates leadership concepts and group dynamics as they relate to a changing world and complex agricultural and natural resource issues. Topics include emotional intelligence, leading change, political leadership, facilitating agreement, team building, and managing conflict in agricultural and natural resource settings. Taught with AXED 475 with differential assignments for graduate students. May be repeated up to 3 credits.

AXED 5615. Effective Management of Volunteer Programs
3 Credits (3)

For individuals currently involved in, or interested in being involved in, the management and supervision of volunteer programs. Emphasis on practical application, utilizing a research and academic base. Explores the roles, functions, and tasks of volunteers and managers of volunteers including recruitment, orientation and training, supervision, evaluation, recognition and retention. May be repeated up to 3 credits.

AXED 5993. Workshops in Agricultural, Extension, and Technology Education
1-3 Credits (1-3)

Workshop procedures applied to current trends in agricultural, extension, and technology education. A maximum of seven credits will count towards a degree. May be repeated up to 7 credits.

AXED 5994. Creative Component
1-4 Credits (1-4)

For nonthesis program. Individual investigations or projects, either qualitative or quantitative studies. A maximum of six credits will count towards a degree. May be repeated up to 88 credits.

AXED 5996. Special Topics
1-4 Credits (1-4)

Specific subjects and credits to be announced in the Schedule of Classes. Students can take only a maximum of four credits per semester and no more than six credits will count towards a degree. May be repeated up to 6 credits.

AXED 5998. Internship/Cooperative Experience
1-6 Credits (1-6)

Supervised professional on-the-job learning experience. May be repeated up to 6 credits.

AXED 5999. Master's Thesis
1-6 Credits (1-6)

Thesis. May be repeated up to 88 credits.

AXED 7000. Doctoral Dissertation
1-9 Credits (1-9)

Independent research planned, conducted and reported in consultation with and the direction of a major professor. Open only to students pursuing graduate study beyond the master's degree level. Offered for

variable credit, 1-18 credit hours, maximum of 18 credit hours. May be repeated up to 18 credits.

Prerequisite: Graduate Advisor Approval.

Learning Outcomes

1. Identify/define problems pertinent to the discipline.
2. Generate questions and/or a hypothesis to provide a solution to the problem.
3. Review and summarize the literature relative to the problem.
4. Apply appropriate research methods and collect data systematically.
5. Conduct research responsibly and ethically.
6. Evaluate, interpret, and analyze a body of empirical data and evidence.
7. Discuss findings in the broader context of the field.
8. Develop and sustain an evidence-based argument.
9. Write and speak critically and coherently.
10. Produce publishable results.

B A-BUSINESS ADMINISTRATION

B A 105. Special Topics

1-3 Credits

Current topics in business and economics.

B A 291. Business Administration and Economics Internship and Cooperative Education I

1-3 Credits

Introduction and applications of the principles of business administration and economics. Registration in one course allowed per co-op work phase; a minimum of 12 work weeks is required. Open only to students in the College of Business. Option of S/U or a grade. The amount of academic credit (1-3 cr.) will be determined by the academic experience, and not by the work experience.

B A 305. Leadership Training for COB Ambassadors

1 Credit (1)

Leadership development for volunteers serving as COB student ambassadors, focusing on COB undergraduate business degree programs, NMSU student services, public speaking and public relations.

B A 391. Business Administration and Economics Internship and Cooperative Education II

1-3 Credits

Applications of the principles of business administration and economics. Registration in one course allowed per co-op work phase; a minimum of 12 work weeks is required. Open only to students in the College of Business. Option of S/U or a grade. The amount of academic credit (1-3 cr.) will be determined by the academic experience and not by the work experience.

B A 490. Selected Topics

3 Credits (3)

Prerequisites vary according to the seminar being offered.

B A 498. Independent Study

1-3 Credits

Individual studies directed by consenting faculty with the prior approval of the department head. A maximum of 3 credits may be earned.

Prerequisite: junior or above standing and consent of instructor.

B A 500. Macroeconomic Essentials

1 Credit (1)

Macroeconomic theory and public policy, national income concepts, unemployment, inflation, economic growth and international payment problems. Restricted to: MBA Major majors majors.

B A 501. Quantitative Tools for the MBA

1 Credit (1)

An overview of critical topics in math and statistics that will provide a quantitative foundation for students entering the Master of Business Administration program. Admission to the MBA program.

B A 545. Business Ethics

3 Credits (3)

Understanding of business ethics, social responsibilities of business organizations, and personal codes of conduct. Complexities of moral reasoning and principles of ethical behavior.

B A 550. Special Topics

3 Credits (3)

Interdisciplinary seminar in selected current business topics.

Prerequisite(s): Prerequisites vary according to the seminar being offered.

B A 590. Professional Paper/Presentation

3 Credits (3)

Paper written in close coordination with sponsoring professor and presented near the end of the student's final semester in the M.B.A. program. The paper will consist of a professional business report, a case study of a business or organization or a research report. Restricted to: MBA majors.

Prerequisite(s): Minimum of 3.0 average in: ACCT 503, BLAW 502, BFIN 503, and MKTG 503 or AEEC 551.

B A 598. Special Research Programs

1-3 Credits

Individual investigations either analytical or experimental. A maximum of 3 credits may be earned.

Prerequisite: consent of instructor.

B A 599. Master's Thesis

15 Credits

Thesis.

BCHE-BIOCHEMISTRY

BCHE 140. Introduction to Biochemistry

1 Credit (1)

A description of the nature of inquiry in biochemistry, especially with respect to the interaction of chemistry and biology. Both historical development and topics of current interest will be discussed. Graded S/U.

BCHE 241. Introduction to Research in Biochemistry

1-3 Credits

Techniques and procedures of biochemical research. May be repeated for a maximum of 3 credits.

Prerequisites: 8 credits of chemistry and 3.0 GPA in chemistry.

BCHE 341. Survey of Biochemistry

4 Credits (3+3P)

Basic principles of biochemical processes and the structure/function of the major classes of biomolecules, with introductions to metabolism and the central dogma of biochemistry. The chemical and biological properties of major biomolecules (DNA, proteins, May be repeated up to 4 credits.

Prerequisite(s): C- or better in CHEM 2115 or CHEM 314.

BCHE 395. Biochemistry I

3 Credits (3)

Principles governing chemistry and physics of life processes with emphasis on the relationships between molecular structure and cell function. Basic principles of biochemical processes, enzymology, and the structure/function of the major classes of biomolecules with introductions to metabolism. Introduction to catabolic metabolism. May be repeated up to 3 credits.

Prerequisite: C- or better in CHEM 314.

Learning Outcomes

1. Understand the structure, reactivity, and metabolic function of the presented biological molecules and apply that knowledge to biomolecules encountered in future experiences. Examples include the 20 common amino acids, carbohydrate molecules of glycolysis, carboxylic acids of the citric acid cycle, lipid components of biological membranes, and many catalytic enzymes.
2. Understand the theory and application of many of the experimental techniques of Biochemistry.
3. Understand biochemical regulation and the interconnectedness of metabolic processes. A large fraction of contemporary biochemical research is devoted to delineating biochemical regulation. Details of biochemical regulation will be interwoven with material presented throughout the semester, stressing the principles of regulation that are common in many organisms.
4. Understand enzyme kinetics and enzyme mechanism.

BCHE 396. Biochemistry II, Lecture and Laboratory 4 Credits (2.5+3P)

Introduction to anabolic metabolism and hormonal regulation. Biochemical principles of the mechanism and regulation of replication, transcription, recombination and translation in prokaryotes and eukaryotes. Introduction to DNA-based information technology. Taught with BCHE 396 H. May be repeated up to 4 credits.

Prerequisite: C- or better in BCHE 395.

Learning Outcomes

1. Recognize the essential biochemical reactions and enzymatic mechanisms required for nucleic acid, amino acid, and fatty acid synthesis.
2. Learn the biochemical reaction mechanisms associated with key elements of the central dogma of molecular biology.
3. Identify the reactions and enzymes required for DNA maintenance and replication, transcription and RNA polymerization, and the translation of mRNA to primary amino acid sequence and protein synthesis.
4. Conduct experiments safely.
5. Select and manipulate plasmids to achieve desired recombinant DNA for experimentation.
6. Obtain relevant DNA sequence information from public databases.
7. Transform and isolate plasmid DNA to be used for cloning procedures.
8. Design DNA specific primers for PCR reactions.
9. Perform restriction digest and ligation reactions. 1
10. Analyze DNA sequence to validate the outcome of recombinant DNA experimentation. 1
11. Demonstrate scientific dissemination skills by attending scientific seminars or review primary literature and provide summary via written or oral presentation.

BCHE 396 H. Biochemistry II Honors, Lecture and Laboratory 4 Credits (2.5+3P)

Introduction to anabolic metabolism and hormonal regulation. Biochemical principles of the mechanism and regulation of replication,

transcription, recombination and translation in prokaryotes and eukaryotes. Introduction to DNA-based information technology. Taught with BCHE 396 with additional work required. May be repeated up to 3 credits.

Prerequisite: C- or better in BCHE 395.

Learning Outcomes

1. Recognize the essential biochemical reactions and enzymatic mechanisms required for nucleic acid, amino acid, and fatty acid synthesis.
2. Learn the biochemical reaction mechanisms associated with key elements of the central dogma of molecular biology.
3. Identify the reactions and enzymes required for DNA maintenance and replication, transcription and RNA polymerization, and the translation of mRNA to primary amino acid sequence and protein synthesis.
4. Conduct experiments safely.
5. Select and manipulate plasmids to achieve desired recombinant DNA for experimentation.
6. Obtain relevant DNA sequence information from public databases.
7. Transform and isolate plasmid DNA to be used for cloning procedures.
8. Design DNA specific primers for PCR reactions.
9. Perform restriction digest and ligation reactions. 1
10. Analyze DNA sequence to validate the outcome of recombinant DNA experimentation. 1
11. Demonstrate scientific dissemination skills by attending scientific seminars or review primary literature and provide summary via written or oral presentation.

BCHE 424. Experimental Biochemistry I 3 Credits (1.25+6P)

Laboratory techniques required for experimentation with recombinant DNA such as nucleic acid isolation and purification, polymerase chain reaction (PCR), sequence analysis, and directed mutagenesis using genetic material from both prokaryotic and eukaryotic organisms.

Prerequisite(s): C- or better in BCHE 395, and BCHE 396 or GENE 315.

Learning Outcomes

1. Conduct experiments safely
2. Select and manipulate plasmids to achieve desired recombinant DNA for experimentation
3. Obtain relevant DNA sequence information for gene of interest from public databases
4. Make buffers and reagents necessary for transforming and isolating plasmid DNA from E. coli
5. Transform and isolate plasmid DNA to be used for cloning of gene of interest
6. Design primers for PCR to enrich gene of interest from genomic DNA
7. Analyze DNA sequence and choose appropriate restriction enzymes for cloning gene of interest
8. Design primers for PCR to incorporate restriction sites at the ends of gene of interest
9. Perform restriction digest on plasmid DNA and PCR products 1
10. Perform ligation reaction to combine gene of interest with plasmid DNA 1
11. Analyze sequence of plasmid containing gene of interest to validate the outcome of experimentation

BCHE 425. Experimental Biochemistry**3 Credits (1.25+6P)**

Introduction to fundamental techniques used to explore structure and function of biological macromolecules such as proteins, carbohydrates, lipids, and nucleic acid. Course covers analyzing and reporting experimental data; enzymology; quantitative methods to determine biological molecules; basic principles of electrophoresis, chromatography, and spectroscopic immunochemistry. May be repeated up to 3 credits.

Prerequisite: C- or better in BCHE 395.

Learning Outcomes

1. Understand and implement various methods of protein purification as well as qualitative and quantitative analysis of protein preparations
2. Become proficient in absorbance and fluorescence spectroscopy.
3. Determine ligand binding parameters.
4. Understand and measure enzyme kinetics and inhibition.
5. Perform basic protein crystallization and structure determination.
6. Develop skills in scientific writing and presentation.

BCHE 432. Physical Biochemistry**3 Credits (3)**

This course focuses on the theoretical principles of biophysical techniques and how they are applied to biological problems. Primary literature is used heavily to explain concepts and applications along with periodic demonstrations of biophysical techniques using department instruments. Students taking this course will be expected to present primary literature highlighting the applications of various techniques. May be repeated up to 3 credits. CHEM 431, or CHEM 433.

Prerequisite: One semester of undergraduate physical chemistry, e.g.

Learning Outcomes

1. Understand the theoretical principles of spectroscopic and biophysical techniques.
2. Understand the appropriate applications for various instruments.
3. Be able to interpret spectroscopic and biophysical data.
4. Understand and describe biophysical literature.
5. Be able to describe biophysical studies to a diverse audience of scientists and non-scientists.

BCHE 440. Biochemistry Seminar**1 Credit (1)**

Introduction to current literature in biochemistry and molecular biology. Selected topics in the field will be presented by the faculty. Students will present written and oral reports from literature searches. Restricted to: BCHE majors.

Prerequisite(s): BCHE 395.

BCHE 441. Advanced Research in Biochemistry**1-3 Credits**

Investigation of biochemical problems and the development of special techniques. May be repeated for a maximum of 3 credits.

Prerequisites: consent of instructor, 16 credits of chemistry and 3.0 GPA in chemistry for nonmajors.

BCHE 451. Special Topics**1-3 Credits**

Same as CHEM 451. May be repeated for a maximum of 12 credits.

Prerequisite: consent of instructor.

BCHE 455. Independent Studies**1-3 Credits**

Independent studies directed by consulting faculty.

Prerequisite: consent of instructor.

BCHE 542. Biochemistry I**3 Credits (3)**

Relationship between macromolecular structure and function. Basic enzymology. Energy metabolism.

Prerequisite(s): CHEM 314 and CHEM 431 or CHEM 433; or BCHE 395 or equivalent.

BCHE 545. Molecular and Biochemical Genetics**3 Credits (3)**

An accelerated treatment of the molecular basis of gene expression. Discussion of chemical, enzymological, and genetic techniques of molecular biology. Same as BIOL 545.

Prerequisite: BCHE 542 or equivalent.

BCHE 546. Biochemistry II**3 Credits (3)**

Intermediary metabolism: catabolic and anabolic pathways of carbohydrates, lipids, amino acids, and nucleic acids, including their regulation.

Prerequisite: BCHE 542 or BCHE 395 with consent of instructor.

BCHE 598. Special Research Programs**1-3 Credits**

May be repeated for a maximum of 6 credits. Same as CHEM 598. Graded S/U.

BCHE 599. Master's Thesis**15 Credits**

May be repeated for a maximum of 6 credits. Same as CHEM 599.

BCHE 600. Research**1-15 Credits**

May be repeated for a maximum of 20 credits. PR/U grading. Same as CHEM 600.

BCHE 647. Physical Biochemistry**3 Credits (3)**

Fundamental applications of physical chemistry to the investigation of biological metabolites and biological macromolecules, including proteins, oligo-nucleotides, and molecular arrays with an emphasis on understanding biological functions based on chemical structures. Taught with BCHE 432. May be repeated up to 3 credits.

Prerequisite: C- or better in CHEM 430 or CHEM 433 or BCHE 542.

Learning Outcomes

1. Understand the theoretical principles of spectroscopic and biophysical techniques.
2. Understand the appropriate applications for various instruments.
3. Be able to interpret spectroscopic and biophysical data.
4. Understand and describe biophysical literature.
5. Be able to describe biophysical studies to a diverse audience of scientists and non-scientists.

BCHE 649. Topics in Biochemistry**1-3 Credits**

Selected topics of current interest designated by title and credit. May be repeated for a maximum of 3 credits.

BCHE 700. Doctoral Dissertation**20 Credits**

May be repeated for a maximum of 20 credits. Graded PR/U. Same as CHEM 700.

BCIS-BUSINESS COMPUTER SYSTEMS

BCIS 1110. Introduction to Information Systems

3 Credits (3)

Examination of information systems and their impact on commerce, education, and personal activities. Utilization of productivity tools for communications, data analysis, information management and decision-making.

Learning Outcomes

1. Describe the social impact of information literacy and systems in relation to commerce, education, and personal activities.
2. Explain how to use the information resources legally, safely, and responsibly in relation to ethical, security, and privacy issues.
3. Evaluate bias, accuracy and relevance of information and its sources.
4. Use productivity tools for communications, data analysis, information management and decision-making.
5. Describe and use current information systems and technologies

BCIS 321. Introduction to Software Development and Programming

3 Credits (3)

Computer algorithm development and programming logic in the context of business information systems using current programming environments. Includes program design, data types, data structures, control structures, arrays, and principles of object oriented programming.

Prerequisite(s): C- or better in BCIS 1110; and MATH 1215.

BCIS 338. Business Information Systems I

3 Credits (3)

Application, design and use of computerized information systems in business environment.

Prerequisite(s): BCIS 1110 or consent of instructor.

BCIS 350. Information Systems Analysis and Design

3 Credits (3)

An introduction to the analysis and design of secure information systems.

Prerequisite(s): Concurrently with BCIS 338 or consent of instructor.

BCIS 461. Business Analytics I

3 Credits (3)

This course provides an understanding of how organizations can utilize technology to successfully collect, organize, manipulate, use, and present data. The course blends the use of current technology with the managerial practices involving business analytics. The emphasis of the course will be on data management practices and the production of descriptive analytics. Crosslisted with: BCIS 561.

Prerequisite(s): BCIS 338 or consent of instructor.

BCIS 466. Business Analytics II

3 Credits (3)

This course provides an understanding of how organizations can build and test predictive models, utilizing business-related data to estimate model parameters. The emphasis of the course will be on utilizing data management systems to produce useful predictive analytics. Crosslisted with: BCIS 566.

Prerequisite(s): BCIS 461 or consent of the instructor.

BCIS 475. Database Management Systems

3 Credits (3)

Design, development, and use of database management systems in the business environment.

Prerequisite(s): BCIS 338 or consent of instructor.

BCIS 480. E-Commerce Security

3 Credits (3)

Introduction to securing network-based applications from internal and external threats. Fundamentals of network security, including TCP/IP, firewalls, intrusion detection, and vulnerability.

Prerequisite(s): BCIS 338 or consent of instructor.

BCIS 482. Management of Information Security

3 Credits (3)

Provides management overview of information security and thorough examination of administration of information security. Surveys field of information security including planning, policy and programs, protection and people relative to information security.

Prerequisite(s): BCIS 338 or consent of instructor.

BCIS 485. Enterprise Resource Planning

3 Credits (3)

This course covers concepts in enterprise resource planning (ERP). Topics include how ERP integrates business processes across functional areas--such as the procurement process and the sales order process--and how businesses use ERP information systems in day-to-day operations as well as for performance monitoring. SAP R/3 software will be used in several hands-on examples of ERP software as a real-world example of an ERP system.

Prerequisite(s): C- or better in BCIS 338 or BCIS 350 or ACCT 351.

BCIS 490. Selected Topics

1-3 Credits

Current topics in business systems analysis. Consent of Instructor required.

BCIS 498. Independent Study

1-3 Credits

Individual studies directed by consenting faculty with prior approval of the department head. May be repeated for a maximum of 3 credits.

Prerequisites: junior or above standing and consent of instructor.

BCIS 502. Business Information Systems

3 Credits (3)

Analysis of information systems as integral parts of business organizations, including the responsibility of management to understand their capabilities and uses in handling the organization's information flow and providing appropriate information for decision making.

Prerequisite: graduate students only.

BCIS 550. Information Systems Analysis and Design

3 Credits (3)

Information systems development methodologies and the system life cycle. Justifying and managing systems development projects. Not open to students who have taken BCIS 350. Students must be Graduate Students to enroll. May be repeated up to 3 credits.

Learning Outcomes

1. Describe foundations of systems development.
2. Explain systems development life cycle and key methodologies.
3. Depict how to conduct planning in systems development.
4. Determine and structure system requirements.
5. Apply principles and guidelines to design interfaces, forms and databases.
6. Understand the major issues in the systems implementation and maintenance.

BCIS 561. Business Analytics I

3 Credits (3)

This course provides an understanding of how organizations can utilize technology to successfully collect, organize, manipulate, use, and

present data. The course blends the use of current technology with the managerial practices involving business analytics. The emphasis of the course will be on data management practices and the production of descriptive analytics. Not open to students who have taken BCIS 461. No S/U or audit option.

Prerequisite: BCIS 338.

Learning Outcomes

1. Identify the reasons for and the evolution of computerized support in managerial decision making.
2. Describe the business intelligence (BI) methodology and concepts.
3. Identify and explain various types of analytics.
4. Explain the nature of data in the context of BI and Business Analytics.
5. Describe statistical modeling and its relationship to business analytics.
6. Apply descriptive and inferential statistics techniques.
7. Explain the importance of data/information visualization and apply different types of visualization techniques.
8. Explain the basic concepts of data warehousing.
9. Explain data integration and the extraction, transformation, and load (ETL) processes. 1
10. Describe the essence of business performance management (BPM). 1
11. Describe balanced scorecard and Six Sigma as performance measurement systems. 1
12. Explain the objectives and benefits of data mining. 1
13. Learn the standardized data mining process. 1
14. Enhance your communication (presentation and report writing), creative thinking, problem-solving, and analytical skills.

BCIS 566. Business Analytics II

3 Credits (3)

This course provides an understanding of how organizations can build and test predictive models, utilizing business-related data to estimate model parameters. The emphasis of the course will be on utilizing data management systems to produce useful predictive analytics. Not open to students who have taken BCIS 466. No S/U or audit option.

Prerequisite: BCIS 561.

Learning Outcomes

1. Identify and explain various types of analytics.
2. Define data mining as an enabling technology for business analytics.
3. Learn the standardized data mining processes and the different methods and algorithms of data mining.
4. Build working knowledge of the existing data mining software tools.
5. Describe text analytics and understand the need for text mining.
6. Learn the process of carrying out a text mining project and the common methods for sentiment analysis.

BCIS 575. Database Management Systems

3 Credits (3)

Design, development, and use of database management systems in the business environment. Not open to students who have taken BCIS 475. May be repeated up to 3 credits.

Prerequisite: BCIS 350.

Learning Outcomes

1. Describe fundamental database terminology and explain the primary features of database management systems. (Cognitive Level: Understand)

2. Explain relational database concepts, such as primary key and referential integrity, normalization, and triggers. (Cognitive Level: Understand)
3. Explain what a data model is. (Cognitive Level: Understand)
4. Write SQL—the standard language of relational databases—at an advanced level. (Cognitive Level: Apply)
5. Design a data model and code/implement it as a database solution using SQL. (Cognitive Level: Create)
6. Describe the fundamental concepts of Data Warehouses. (Cognitive Level: Understand)
7. Design and build data warehouses. (Cognitive Level: Create)
8. Describe emergent database topics such as graph databases, big data, data lakes, NoSQL. (Cognitive Level: Understand)
9. Demonstrate how a database can be used with Python programming language and MSEXcel. (Cognitive Level: Apply)

BCIS 580. E-Commerce Security

3 Credits (3)

Introduction to securing network-based applications from both internal and external threats. Fundamentals of network security including TCP/IP, firewalls, intrusion detection and vulnerability discussed. Not open to students who have taken BCIS 480. No S/U or audit option. May be repeated up to 3 credits.

Prerequisite: C- or better in BCIS 460 or consent of instructor.

Learning Outcomes

1. Communication (COMM): Students are effective communicators; a) Students can write effectively. (write); b) Students can make effective oral presentations. (oral)
2. Diversity (DIVERSITY): Students can demonstrate knowledge of diversity; a) Students can identify stereotypes; b) Students can discern between helpful and detrimental stereotypes. c) Students can identify individual characteristics that affect social perception and strategies that counter negative influence on social perception.
3. Information Technology (TECH): Students are effective users of information technology; a) Students can acquire information using relevant information technologies; b) Students can use information technology to manipulate information into a form usable in business decision making; c) Students can use information technology to disseminate information to others.
4. Critical Thinking: Students can solve problems and think critically; a) Students can solve problems. (PROB SOLV); b) Students can think critically. (THINK)
5. Legal and Ethical: Students can recognize legal and ethical issues; a) Students can recognize legal issues. (LEGAL); b) Students can recognize ethical issues. (ETHICS)

BCIS 582. Management of Information Security

3 Credits (3)

Provides management overview of information security and thorough examination of administration of information security. Surveys field of information security including planning, policy and programs, protection and people relative to information security. Not open to students who have taken BCIS 482. May be repeated up to 3 credits.

Prerequisite: BCIS 1110 or equivalent.

Learning Outcomes

1. Explain the fundamental concepts of the management of information security within the context of organizations.
2. Describe commonly used information systems (IS) security standards and guidelines.

3. Create IS security management and policy as well as risk management plans.
4. Explain the behavioral aspects of IS security and discuss the development of security culture within organizations.
5. Explain the technical aspects of IS security, including issues related to cryptography and network security.
6. Describe and evaluate the regulatory aspects of information system security (primarily within the United States and European Union context).

BCIS 590. Special Topics

1-3 Credits (1-3)

Seminars in selected current topics in business computer systems. May be repeated up to 3 credits.

Prerequisite(s): Vary according to topic being offered.

BCIS 598. Independent Study

1-3 Credits

Individual studies directed by consenting faculty with prior approval of department head. A maximum of 3 credits may be earned.

Prerequisite: consent of instructor.

BCT-BUILDING CONSTRUCTION TECH

BCT 100. Building Trades I

8 Credits (2+12P)

Equipment and general safety. Human relations, building construction surveying, footings, foundation form work, framing, sheathing, insulation. Basic electrical wiring and plumbing. Classroom instruction, on-the-job training, and problem solving.

BCT 101. Introduction to Construction I

2 Credits (2+1P)

Basic safety, including personal protective equipment, how to perform basic construction tasks safely, and what to do if an accident occurs. Includes basic construction methods. Restricted to Community Colleges campuses only.

Corequisite: BCT 102;BCT 103.

Learning Outcomes

1. Students will be able to operate hand and power tools safely.
2. Demonstrate the ability to read construction drawings.
3. Work effectively as a team.
4. Demonstrate how related industry theories apply to real world settings.
5. Investigate mechanical processes found in building trades.
6. Identify and resolve ethical workplace issues.
7. Describe the responsibilities of safety related to the construction industry.
8. Students will be able to selected the proper tools for the job.

BCT 102. Introduction to Construction II

2 Credits (2+1P)

Introduction to power and hand tools, blueprints, and basic rigging hardware and techniques. Restricted to Community Colleges campuses only.

Corequisite: BCT 101;BCT 103.

Learning Outcomes

1. Students will be able to operate hand and power tools safely.
2. Demonstrate the ability to read construction drawings.
3. Work effectively as a team.

4. Demonstrate how related industry theories apply to real world settings.
5. Investigate mechanical processes found in building trades.
6. Identify and resolve ethical workplace issues.
7. Describe the responsibilities of safety related to the construction industry.
8. Students will be able to selected the proper tools for the job.

BCT 103. Introduction to Construction Laboratory

3 Credits (3)

Provides students the opportunity to practice skills they have acquired in BCT 101 and BCT 102. It includes task-oriented projects in which students can apply many of the skills and knowledge that have been presented throughout the National Center for Construction and Education Research (NCCER) Carpentry Program. Restricted to Community Colleges campuses only.

Corequisite: BCT 101; BCT 102.

Learning Outcomes

1. Demonstrate effectively leadership skills through the use of Students will be able to operate hand and power tools safely.
2. Demonstrate the ability to read construction drawings.
3. Work effectively as a team.
4. Demonstrate how related industry theories apply to real world settings.
5. Investigate mechanical processes found in building trades.
6. Identify and resolve ethical workplace issues.
7. Describe the responsibilities of safety related to the construction industry.
8. Students will be able to selected the proper tools for the job.
9. Work effectively as a team. 1
10. Demonstrate an awareness of the environmental problems arising from conventional practices.

BCT 104. Woodworking Skills I

3 Credits (1+4P)

Use and care of hand tools and elementary power tools, safety procedures, and supervised project construction.

BCT 105. Woodworking Skills II

3 Credits (1+4P)

Advanced woodworking skills to include use of advanced power tools, power tool safety, and supervised construction.

Prerequisite: BCT 104 or consent of instructor.

BCT 106. Woodworking Theory and Practice

3 Credits (2+2P)

History of wood manufacturing, industrial techniques, wood characteristics, stains and finishes. Design and construction of minor wood projects.

BCT 109. Plumbing I

3 Credits (2+3P)

Covers orientation to the trade. Students will learn about materials used in the plumbing industry and the different types of plumbing fixtures. It includes task-oriented projects in which the students apply many of the skills and knowledge that are presented through the National Center for Construction and Education Research (NCCER) Plumbing Program.

Prerequisite/Corequisite: BCT 101, BCT 102. Restricted to Community Colleges campuses only.

Learning Outcomes

1. Describe the history of plumbing in construction.
2. Perform plumbing work safely.
3. Identify and utilize the correct tools.
4. Perform common math calculations related to plumbing.
5. Read plumbing-related prints and drawings.
6. Work with different piping materials.
7. Identify and install plumbing fixtures.
8. Install basic drain, waste and vent systems.
9. Identify major components of a water distribution system. 1
10. Explain water distribution system in a standard building.

BCT 110. Blueprint Reading for Building Trades**4 Credits (2+4P)**

Same as DRFT 151, OEET 101, OEPB 110.

BCT 111. Small Equipment Maintenance and Repair**4 Credits (2+4P)**

Covers small engine theory, troubleshooting and repair, auto maintenance, hydraulic theory and repair lubricants, batteries and scheduled tool maintenance. Restricted to: Community Colleges only.

BCT 114. Basic Carpentry**3 Credits (1+4P)**

Covers orientation to the trade; wood building materials, fasteners, and adhesives; detailed description and explanations of hand-operated and power tools, including safety; framing basics including laying out and constructing of wood floors, walls and ceilings and includes roughing in of door and window openings. Restricted to Community Colleges campuses only.

Corequisite: BCT 115; BCT 116.

Learning Outcomes

1. Students will be able to operate hand and power tools safely.
2. Demonstrate the ability to read construction drawings.
3. Work effectively as a team.
4. Identify various types of building materials and their uses.
5. Calculate the quantities of lumber and wood products using industry standard methods.
6. Describe the fasteners, anchors and adhesives used in construction.
7. Describe the responsibilities of safety related to the construction industry.
8. Select proper tools for the job.
9. Identify the different grades and markings of wood building materials. 1
10. List and recognize different types of flooring materials. 1
11. Knowledge of the materials and methods used to construct floor systems using the platform method of floor framing. 1
12. Describe the procedure for laying out a wood frame wall. 1
13. Describe the correct procedure for laying out floor joist. 1
14. Estimate the materials required to frame a floor system.

BCT 115. Carpentry Level I**3 Credits (1+4P)**

Describes the various kinds of roofs and provides instructions for lay out of the different roofing systems. Describes the various types of windows, skylights, and exterior doors and provides instruction for installation. Restricted to Community Colleges campuses only.

Corequisite: BCT 114; BCT 116.

Learning Outcomes

1. Students will be able to operate hand and power tools safely.
2. Demonstrate the ability to read construction drawings.
3. Work effectively as a team.
4. Identify various types of building materials and their uses.
5. Calculate the quantities of lumber and wood products using industry standard methods.
6. Describe the fasteners, anchors and adhesives used in construction.
7. Describe the responsibilities of safety related to the construction industry.
8. Select proper tools for the job.
9. Identify the different grades and markings of wood building materials. 1
10. List and recognize different types of flooring materials. 1
11. Knowledge of the materials and methods used to construct floor systems using the platform method of floor framing. 1
12. Describe the procedure for laying out a wood frame wall. 1
13. Describe the correct procedure for laying out floor joist. 1
14. Estimate the materials required to frame a Floor System.

BCT 116. Basic Carpentry Lab**2 Credits (2)**

Provides students the opportunity to practice skills they have acquired in BCT 114 and BCT 115. It includes task-oriented projects in which students can apply many of the skills and knowledge that have been presented throughout the National Center for Construction and Education Research (NCCER) Carpentry Program. Restricted to Community Colleges campuses only.

Corequisite: BCT 114; BCT 115.

Learning Outcomes

1. Demonstrate the correct selection, use, and care of various hand tools.
2. Demonstrate the correct selection, use, and care of various power tools.
3. Recognize and Read basic blueprint terms, components, and symbols.
4. Recognize and identify different classifications of drawings.
5. Lay out and frame a complete roof structure.
6. Be able to layout and set up concrete forms.
7. Build a Staircase.
8. Install windows and exterior doors properly.

BCT 118. Math for Building Trades**3 Credits (3)**

Geometry, algebra, arithmetic, and basic trigonometry pertaining to mathematical applications in the building trades field. Same as OEET 118, DRFT 118, OEPB 118.

Prerequisite: CCDM 103 N.

BCT 123. Residential Wiring I**3 Credits (2+3P)**

Introduction to residential electrical wiring trade, electrical safety practices, basic electrical circuits and theory, reading and interpreting applicable construction prints/drawings, introduction to basic National Electric Code (NEC), and preparation for entry-level employment in residential electrical wiring. Restricted to Community Colleges campuses only.

BCT 130. Professional Development and Leadership**1 Credit (1)**

As members and/or officers of various student professional organizations, students gain experience in leadership, team building, and community service. Students competing or participating in Skills USA are required to register for the course. May be repeated up to 6 credits. Consent of Instructor required. Restricted to: BCT majors. Graded: S/U Grading (S/U, Audit). Restricted to: Community Colleges only.

BCT 150. Forklift Operation

1 Credit (1)

Classroom instruction and hands-on practice to prepare students to operate a forklift safely in the workplace. Students will have the opportunity to earn a forklift operator's permit. Consent of Instructor required. Restricted to Community Colleges campuses only.

BCT 200. Building Trades II

8 Credits (2+12P)

Continuation of BCT 100: roofing; exterior and interior finish; masonry; door, window, and cabinet installation.

BCT 206. Advanced Cabinetmaking

3 Credits (1+3P)

Advanced cabinetmaking skills, to include expert use of hand and power tools, professional construction and finishing techniques.

Prerequisites: BCT 105, BCT 106, or consent of instructor.

BCT 209. Plumbing II

3 Credits (2+3P)

Continuation of BCT 109. Provides students the opportunity to gain more practice in the skills and knowledge learned in Plumbing I. Students will install fixtures and run the various plumbing supply lines from Plumbing Level I. The course included hands on projects in which the students apply many of the competencies that have been presented through the National Center for Construction and Education Research (NCCER) Plumbing Program.

Prerequisite/Corequisite: BCT 109.

Learning Outcomes

1. Work with copper tubing and fittings.
2. Practice safety related to the plumbing trade.
3. Work with cast iron pipe and fittings.
4. Work with steel pipe and fittings.
5. Perform calculations related to the plumbing trades.
6. Read plumbing blueprints and drawings.
7. Install plumbing fixtures.
8. Install and design drain, waste and vent systems.
9. Identify the major components of water distribution systems and describe their functions.

BCT 217. Building and the Environment

3 Credits (3)

Introduction to LEED's, and Green Building Fundamentals, sustainability, sustainable design and green building evaluating cost implication of green building. Describes site development; managing site water runoff, improving a project's water use efficiency. Discusses renewable energy sources, and introduces student to generating power on-site using renewable energy sources, improving a building's indoor environment quality, improving the building industries' environmental performance and environmental aspects of building maintenance, re-use and conservation. Restricted to: Community Colleges only.

BCT 219. Weatherization in Construction

3 Credits (2+2P)

Introduction to industry weatherization standards and practices utilized in the construction of buildings for the purpose of energy conservation.

Economic and environmental impacts of the use of energy in heating and cooling building will be examined.

Prerequisite(s): BCT 101, BCT 102 and BCT 103.

BCT 221. Cooperative Experience I

1-4 Credits

Supervised cooperative work program. Student is employed in an approved occupation and is supervised and rated by the employer and instructor. Student will meet in a weekly class. Graded S/U.

Prerequisite: consent of instructor.

BCT 223. Residential Wiring II

3 Credits (2+3P)

Introduction to electrical raceways and fittings; electrical conductors and cables; basic electrical construction drawings, residential electrical services, and electrical test equipment. Restricted to Community Colleges campuses only.

Prerequisite(s): BCT 123.

BCT 255. Special Topics

1-6 Credits (1-6)

Topics to be announced in the Schedule of Classes. May be repeated up to 12 credits. Consent of Instructor required. Restricted to Community Colleges campuses only.

BCT 290. Special Problems in Building Technology

1-4 Credits

Individual studies in areas directly related to building technologies.

Prerequisite: consent of instructor.

BEST-BORDERLAND & ETHNIC STUDIES

BEST 1110G. Introduction to Borderlands and Ethnic Studies

3 Credits (3)

The field of Ethnic Studies is about 1) critical knowing and 2) unapologetic imagining and creation of a better, more just world. This course explores the roots, logics, and administrations of racism within the U.S. context, locally along the border, and framed within a larger global and historical context. The past few decades have borne witness to increasing global diversity and cross-border migrations, which has led many in the U.S. to imagine the nation as "post-racial." Simultaneously, increasing clashes that can only be described as "racist" have led people to wonder about the dark racist underpinnings of a society that believes it has achieved the goals put forth by the distinct and intersecting Civil Rights Movements of the 1960s. Perhaps now, more than any other time in history, there is earnest desire to talk about race and racism and unpack these constructs/activities/outcomes. This course is designed to inform us about how colonization, racism, and hegemony function. Secondly, it is designed for self and collective exploration of these somewhat broad and abstract concepts in an applied manner. Finally, it is designed for us to arrive at a shared understanding of the decolonial turn, or a re-humanization imperative. How do we understand, apply, and heal as these activities each relate to coloniality of power

Learning Outcomes

1. Learn and understand broad histories of social struggles, social movements, and ensuing human relationships.
2. Meaningfully engage classical and new materials from the Borderlands and Ethnic Studies "canon."
3. Articulate observations using key terms, theories, and concepts in Borderlands and Ethnic Studies.
4. Apply key concepts in "everyday life" via course activities.

5. Gain a better understanding of your own worldviews and opinions towards issues of race, class, gender, nationalism, migration, borders, social movements, and resistance.
6. Learn mindful and constructive ways to engage peers about sometimes “difficult” topics like race, power, and privilege.

BEST 300. History and Theories in Borderlands and Ethnic Studies
3 Credits (3)

This course provides a basic understanding of the history and theoretical foundations of Borderlands and Ethnic Studies. It engages in an in-depth analysis of the concepts and history that resulted in reshaping the way we understand race, national borders, immigration, education, and the law. It examines borderlands theorizing to critically engage the border not simply as a physical barrier meant to regulate migration, but the economic, cultural, spatial, and metaphorical borderlands that informs us on larger processes of membership, belonging, identity, politics, and dehumanization linked to social structures and institutions. It explores the history of social movements in the U.S. that sought to illuminate social inequalities and social justice issues and investigates the underlying causes and sources of these social movements as they relate to reconceptualizing race and the borderlands and their overall impact on society at large. Throughout the course we will ask the following questions: How does the idea of race permeate our everyday lives? How does education reinforce our understandings of race? How do historical struggles over economic resources and political power illuminate the formation and development of the borderlands? How does law relate to power relations and mechanisms of social control?

Learning Outcomes

1. Explain how race and ethnicity has been historically socially constructed in the U.S.
2. Understand how the social construction of race and ethnicity is related to issues of social control.
3. Understand how the idea of race helps to reinforce existing power arrangement.
4. Connect historical struggles for justice and equality in the U.S. to current social and political issues dealing with the Borderlands.
5. Explain hegemony and its link to shifting borders and nationalism.
6. Identify how racial beliefs are tied to laws, policies, and practices of social institutions and organizations.
7. Understand how race relates to the development of the border.
8. Analyze the ways race, class, and gender serve as interlocking systems of oppression.
9. Gain a better understanding of your own worldviews and opinions towards issues of race, class, , gender, nationalism, migration, borders, social movements, and resistance. 1
10. Critically engage and “think outside the box” when discussing the conceptualization and history of the idea of race.

BEST 400. Capstone in Borderlands and Ethnic Studies
3 Credits (3)

This seminar is designed to culminate the undergraduate minor by summarizing knowledge and experience garnered in pre-courses: Intro to Borderlands & Ethnic Studies, History & Theories of Ethnic Studies, as well as the chosen gender course, the chosen race, history & education course, and the chosen elective course. Students will be asked to write a reflective essay at the start of the course that highlights 1) materials and ideas that have most impacted the student throughout the core courses, 2) discuss how the elective course complemented and expanded materials and ideas from BEST core classes, 3) what materials and ideas remain challenging to grasp, and 4) what kind of culminating project

the student would like to complete. This essay will be the foundational document to carry the student through the semester, along with close guidance provided by the instructor as well as peer feedback.

Prerequisite/Corequisite: BEST 1110G, BEST 300, and either (AFST 2140G, CCST 3120V, or NATV 4110) and either (AFST 4110, CCST 3110, or NATV 4210).

Learning Outcomes

1. Design and develop a semester-long project that draws upon all previous BEST in collaboration with instruction and peers.
2. Re-explain vis-a-vis previous courses how race and ethnicity has been historically socially constructed in the U.S.
3. Critically engage and “think outside the box” when discussing the conceptualization and history of the idea of race.
4. Work with a community organization, agency, or other group to collaborate on the final project.
5. Present project to class as a final product.

BEST 450. Special Topics in Borderlands and Ethnic Studies
3 Credits (3)

This course is a focused and intensive study of particular historical, aesthetic, cultural, political, or social issues and contexts within the discipline of Borderlands and Ethnic Studies. Repeatable under different subtitles. May be repeated up to 9 credits.

Learning Outcomes

1. Define and articulate the fundamental characteristics and issues related to the topic of focus.
2. Contextualize the topic of focus within the broader field of Ethnic Studies, Chicana Studies, Africana Studies, and/or Native American Studies.
3. Develop compelling and logical arguments for class discussion, individual and group presentations and writing assignments, based on course readings and discussions.
4. Interpret, understand, and engage texts within cultural, social and historical contexts.
5. Gather, analyze, and evaluate information from a variety of sources.
6. Compose texts in a variety of media formats.

BEST 455. Borderlands Representations
3 Credits (3)

In this course, we will explore contemporary portrayals of border spaces and peoples in literature, film, visual art, and theory. We will engage an interdisciplinary and cross-genre exploration to examine the flexibility, tensions, and range of border-focused textual/artistic production. The Mexico-U.S. border will be the foundation and we will extend from this most familiar border to borders globally, with particular attention to the Canada-U.S. border, the Haitian-Dominican border, the Palestine/Israel nation states. Questions that will guide the course: How do representations of the Mexico-U.S. border reflect/converse with historical and contemporary political tensions? How do the perspectives and vantage points of Mexican, Chicano, and U.S. Anglo producers of cultural artifacts, including literature, diverge, collide, and coalesce? And, finally, how do perceptions and portrayals of geopolitical borders converse with understandings of the Mexico-U.S. border, what can we bring from our border-knowing to global borders, and what are specificities of particular border spaces?

Learning Outcomes

1. Express knowledge of major economic, political, social and cultural realities of multiple global borderlands.
2. Explain the multidisciplinary diversity and intellectual rigor that compose cultural productions of these borderlands.

3. Develop compelling and logical arguments for class discussion, individual and group presentations and writing assignments, based on course readings and discussions.
4. Interpret, understand, and engage texts within cultural, social and historical contexts.
5. Gather, analyze, and evaluate information from a variety of sources.
6. Compose texts in a variety of media formats.

BEST 470. Literary Explorations of Race & Justice **3 Credits (3)**

While this course is, as the title suggests, a survey of literary texts emphasizing race and justice, an exploration like this one posits an argument about which works of a literary tradition are most important, most fundamental, and, especially, how works that are deemed "political" feature in literary traditions. How have some authors and their texts become popularized, for whom, and what are some of the consequences (both positive and negative) of how the processes (both organic and inorganic) of popularization (canonicity, if you will) establish the parameters of ethnic literary traditions? We will work with these questions as you read and respond in discussion and in writing to some of what I, and others, consider a handful of the most prominent U.S. writers of color, their works, and their representations of race and justice. Other questions that will help us explore the multiplicity and richness of these literary texts: How do these texts converse with broader traditions of literatures? What are the conversations between and tensions within these texts and among its writers? How do aesthetics, politics, and community intersect? How do issues, including race and justice, ethnicity, gender, sexuality, and self-representation manifest within texts? What histories impact literary production and publication of these texts? How are these literary explorations of race and justice evolving and what does the future hold? The course will be writing-intensive, reading-intensive, and genre-inclusive, as we connect the "creative" realm of textual representation in fiction, poetry, and nonfiction to the "theoretical" realm of criticism and scholarship that provides ways for us to see and read textual representation critically, imaginatively, differently. The course promises to incite provocative discussions, as it engages the relevance of a rapidly changing U.S. population.

Learning Outcomes

1. Summarize the major economic, political, social and cultural forces influencing the composition, publication, and reception of literary texts focusing upon race and justice.
2. Explain the multidisciplinary diversity and intellectual rigor that compose these texts.
3. Develop compelling and logical arguments for class discussion, individual and group presentations and writing assignments, based on course readings and discussions.
4. Interpret, understand, and engage texts within cultural, social and historical contexts.
5. Gather, analyze, and evaluate information from a variety of sources.
6. Compose texts in a variety of media formats.

BEST 480V. Narratives and Representations of Palestinians: Media, Music, Film, and Art **3 Credits (3)**

This course is an undergraduate (that fulfills requirements for VWW) and graduate Palestine Studies course that draws on Palestine, settler-colonial studies, and decolonial Arab feminisms as an intersectional set of knowledges, methodologies, and practices. It also draws on various examples of contemporary Palestinian arts—paintings, fashion, land-based ceremonies/rituals, music, and film. The course is structured to connect the themes addressed throughout the semester with their

iterations in world media, Palestinian art creation, and representation. The course aims to help the learners address 1) how Palestinian art creation is a resistance tool to the erasures imposed by the Zionist settler-colonial state of Israel on Palestinians and 2) how art creation in all its forms act to counter the Zionist's narratives and propaganda about Palestinian history, heritage, identity and right to their land. It also introduces and engages liberatory and decolonial visions of art/knowledge creation, as well as, global resistance and solidarity with Palestinian artists.

Learning Outcomes

1. How Palestinian art creation is a resistance tool to the erasures imposed by the Zionist settler-colonial state of Israel on Palestinians.
2. How art creation in all its forms act to counter the Zionist's narratives and propaganda about Palestinian history, heritage, identity and right to their land. It also introduces and engages liberatory and decolonial visions of art/knowledge creation, as well as, global resistance and solidarity with Palestinian artists.

BEST 510. Foundations in Borderlands & Ethnic Studies **3 Credits (3)**

This seminar explores the roots, logics, and administrations of racism within the U.S. context, locally along the border, and framed within a larger global and historical context. In addition to race, other social locations such as gender, class, and sexual orientation are explored as intersectional. The course uses traditional lecture format, multi-media, guest lecturers, and engaging activities inside and outside the classroom to apply materials in tangible and impactful ways. May be repeated up to 6 credits.

Learning Outcomes

1. Identify, compare and contrast broad histories of social struggles, social movements, and ensuing human relationships.
2. Meaningfully engage classical and new materials from the Borderlands and Ethnic Studies "canon."
3. Articulate observations using key terms, theories, and concepts in Borderlands and Ethnic Studies.
4. Apply key concepts in "everyday life" via course activities.
5. Demonstrate mindful and constructive ways to engage peers about sometimes "difficult" topics like race, power, and privilege.

BEST 511. Methodologies in Borderlands and Ethnic Studies **3 Credits (3)**

This seminar introduces the practice of indigenizing research methods by looking beyond the canon of Eurocentric methodologies that have often trapped marginalized communities outside of normative time frames. Through the deconstruction of colonial apparatuses and their influence on research methods, the class explores key concepts in decolonizing research to move us to new understandings of communities according to indigenous traditions that privilege ancestral ways of knowing. May be repeated up to 6 credits.

Learning Outcomes

1. Explain how producing research is connected to producing knowledge.
2. Identify and describe the impact of colonialism and imperialism on disrupting ways of knowing.
3. Recognize political and cultural implications of the world seen as a colonial, constructed narrative
4. Describe how a social reality can have set political and ideological conditions.
5. Distinguish how indigenous methodologies relate to decolonizing methods.

- Describe how decolonizing methods are a different approach to research.
- Identify decolonizing methods that have been used in research.
- Critically engage with research lenses stemming from a decolonizing standpoint.

BEST 512. Theories in Borderlands and Ethnic Studies

3 Credits (3)

This seminar provides a basic understanding of theoretical foundations of Borderlands and Ethnic Studies. It also examines borderlands theorizing to critically engage the border not simply as a physical barrier meant to regulate migration, but the economic, cultural, spatial, and metaphorical borderlands that informs us on larger processes of membership, belonging, identity, politics, and dehumanization linked to social structures and institutions. Social movements in the U.S. that sought to illuminate social inequalities and social justice issues are explored. The course investigates the underlying causes and sources of these social movements as they relate to reconceptualizing race and the borderlands and their overall impact on society at large. May be repeated up to 6 credits.

Learning Outcomes

- Explain how race and ethnicity has been socially constructed in the U.S.
- Recognize how the social construction of race and ethnicity is related to issues of social control
- Describe how the idea of race helps to reinforce existing power arrangements
- Connect historical struggles for justice and equality in the U.S. to current social and political issues dealing with the borderlands
- Explain hegemony and its link to shifting borders and nationalism
- Identify how racial beliefs are tied to laws, policies, and practices of social institutions and organizations
- Distinguish how biopolitics relates to the development of the border.
- Analyze the ways race, class, and gender serve as interlocking systems of oppression.
- Gain an understanding of and be able to evaluate your own worldviews and opinions towards issues of race, class, gender, nationalism, migration, borders, social movements, and resistance.
- Critically engage and “think outside the box” when discussing the conceptualization and development of the idea of race.

BEST 513. Capstone in Borderlands and Ethnic Studies

3 Credits (3)

This seminar is designed to culminate the graduate certificate by summarizing knowledge and experience garnered in pre-courses: BEST 510, 511, 512. Students will be asked to write a reflective essay at the start of the course that highlights 1) materials and ideas that have most impacted the student throughout the core courses, 2) discuss how the elective course complemented and expanded materials and ideas from BEST core classes, 3) what materials and ideas remain challenging to grasp, and 4) what kind of culminating project the student would like to complete. This essay will be the foundational document to carry the student through the semester, along with close guidance provided by the instructor as well as peer feedback. May be repeated up to 6 credits.

Prerequisite: BEST 510; BEST 511; BEST 512.

Learning Outcomes

- Summarize, concisely, key concepts and frameworks learned in BEST seminars.
- Express, reflectively, what these concepts and frameworks mean in the context of historical and contemporary social issues related to

power dynamics created and exacerbated by hierarchies associated with racial, gender, class, sexual orientation and other positionalities.

- Design a culminating project that encapsulates a nuanced understanding of Borderlands and Ethnic Studies, ensuring its impact on a broader audience.
- Generously evaluate cohort mates' projects as they progress during semester.
- Receive feedback about one's own project and apply those comments and critiques in useful ways and in collaboration with instructor.
- Create/generate a culminating project that aligns with rubrics in the most effective manner possible.
- Present work to cohort and instructor in an effective way.

BEST 550. Advanced Special Topics in Borderlands and Ethnic Studies

3 Credits (3)

This course is a focused and intensive study of particular historical, aesthetic, cultural, political, or social issues and contexts within the discipline of Borderlands and Ethnic Studies. Repeatable under different subtitles. May be repeated up to 9 credits.

Learning Outcomes

- Define and articulate the fundamental characteristics and issues related to the topic of focus.
- Contextualize the topic of focus within the broader field of Ethnic Studies, Chicana Studies, Africana Studies, and/or Native American Studies.
- Develop compelling and logical arguments for class discussion, individual and group presentations and writing assignments, based on course readings and discussions.
- Interpret, understand, and engage texts within cultural, social and historical contexts.
- Gather, analyze, and evaluate information from a variety of sources.
- Compose texts in a variety of media formats.

BFIN-BUSINESS FINANCE

BFIN 2110. Introduction to Finance

3 Credits (3)

Introduces tools and techniques of financial management. Includes time value of money; financial planning, diversification and risk; debt and equity investment decisions; and financial statement analysis.

Prerequisite(s): OATS 106 or higher; OATS 120 or ACCT 2110; ECON 1110G or ECON 2110G.

Learning Outcomes

- Explain the time value of money and its application in decision-making, including calculating present and future values of single payment and series of payments.
- Identify the major sources of external long-term financing for corporations.
- Explain risk-return tradeoff as it relates to diversification.
- Differentiate the role of finance from other related disciplines such as accounting and economics.
- Demonstrate knowledge of capital markets and securities (debt and equity).
- Describe basic types of financial ratios and their uses.
- Demonstrate the ability to prepare cash flows and make qualitative judgments on the relevance of the changes from one time frame to another.

BFIN 303V. Personal Financial Planning and Investing in a Global Economy

3 Credits (3)

Provides a framework for successful personal financial planning within an individual's career and income. Covers personal money management, federal and state taxation, the mathematics of finance and credit, housing, inflation, insurance, savings, and investments. Majors and minors may not use this course to satisfy their finance requirements.

BFIN 311. Financial Futures Markets

3 Credits (3)

Same as AEEC 311.

BFIN 322. Principles of Insurance

3 Credits (3)

Theory and practice of insurance and its economics and social significance; review of the major lines of insurance including life, health, and property liability insurance.

BFIN 323. Life/Health/Employee Benefits

3 Credits (3)

Approaches to problems of employee security from the perspective of businesses. Topics including pensions, profit-sharing plans, 401(k) plans, group life and health plans, and flexible benefit programs. The course also addresses individual life, health, and annuity contracts within a financial planning context. May be repeated up to 3 credits.

Prerequisite/Corequisite: BFIN 322.

Learning Outcomes

1. Understand the various types of life insurance and annuity contracts and their uses.
2. Know how life and health insurers are regulated.
3. Analyze the insurance marketplace and health care reform.
4. Review contractual provisions of life insurance policies.
5. Understand how human life value is determined.
6. Calculate life contingencies and pricing of life and health insurance.

BFIN 324. Property and Liability Insurance

3 Credits (3)

Analysis of property and liability insurance with emphasis on handling of commercial exposures. Review of property and liability company operations including rate making and insurance accounting. May be repeated up to 3 credits.

Prerequisite/Corequisite: BFIN 322.

Learning Outcomes

1. Determine if an insurance policy covers an insurance claim.
2. Calculate the amount payable for an insurance claim.
3. Choose the insurance needed for a given situation.
4. Define frequently used insurance terms and acronyms.
5. Explain the responsibility of the various insurance functions.

BFIN 325. Real Estate Principles and Law I

3 Credits (3)

Real estate law and the fundamental aspects of the real estate purchase transaction and the real estate lease agreement. Topics include real estate brokerage, marketing of real estate, fundamental legal aspects of real estate, present and future interests, air and water rights, methods of transfer, basics of financing and liens, and real estate leases. Same as BLAW 325.

BFIN 326. Business Risk Management

3 Credits (3)

The operational risks faced by firms and the study of various methods of handling these risks, including loss prevention, risk retention, self-

insurance, corporate insurance programs, and capital markets. May be repeated up to 3 credits.

Prerequisite/Corequisite: BFIN 322.

Learning Outcomes

1. Develop an understanding of risk management and its basic concepts.
2. Discuss alternative approaches to risk management and develop the knowledge to analyze the features and benefits of enterprise risk management.
3. Gain knowledge regarding risk assessments and the fundamental requirements for a successful risk management program through risk classification and risk analysis tools and techniques.
4. Apply risk control techniques to the identified risks and learn the importance of insurance and risk transfer.
5. Explore the importance of risk management strategy and risk management policy while understanding the techniques to implement a successful risk management program.
6. Develop knowledge about creating a risk-aware culture and understanding an organization's risk appetite.
7. Understand risk governance and how corporate governance requirements impact an organization's risks.
8. Learn risk assurance and risk reporting within an organization to expand their knowledge regarding internal control and corporate social responsibility.

BFIN 341. Financial Analysis and Markets

3 Credits (3)

Financial analysis for business financing and investing decisions. Prerequisites ACCT 2110, ECON 2110G, ECON 2120G, MATH 1220G, A ST 311 or MATH 1350G.

BFIN 355. Investments

3 Credits (3)

Analysis of investment risks and rewards and of the problems of portfolio selection and management. Operation of the securities market.

Prerequisite(s): BFIN 341 with a grade of C- or better.

BFIN 360. Financial Information Technology

3 Credits (3)

Integrated use of electronic financial information resources with spreadsheet and word processing applications in investigating financial issues and solving financial problems.

Prerequisite(s): a grade of C- or better in BFIN 341 or consent of instructor.

BFIN 385. Analysis of Financial Markets and Institutions

3 Credits (3)

Analysis of the financial system, emphasizing its institutions and instruments.

Prerequisite(s): BFIN 341 with a grade of C- or better.

BFIN 391. Finance Internship and Cooperative Education I

1-3 Credits

Introduction and application of finance principles in a work environment. Open only to students in the finance major or minor who will be working with an approved employer in a finance related position, over a period of 12 weeks or at least 300 work hours. Consent of instructor required.

BFIN 392. Insurance Internship and Cooperative Education I

1-3 Credits (1-3)

Introduction and application of insurance principles in a work environment. Open only to students in the finance major or insurance minor who will be working with an approved employer in an insurance

related position, over a period of 12 weeks or at least 300 work hours. Consent of instructor required. Restricted to Finance majors.

BFIN 393. Banking Internship and Cooperative Education
1-3 Credits (1-3)

Professional banking experience with opportunities to engage in business analysis and to observe application of business principles in the management of a banking entity or a regulatory agency with banking oversight. Open only to students in the finance major or banking minor who will be working with an approved employer in a banking related position, over a period of 12 weeks or at least 300 work hours. May be repeated up to 3 credits. Consent of Instructor required.

BFIN 406. Theory of Financial Decisions
3 Credits (3)

Contemporary financial theory. Firm valuation, investments and financing decisions, risk analysis.

Prerequisite(s): BFIN 341 with a grade of C- or better.

BFIN 421. Personal Financial Planning for Professionals
3 Credits (3)

Introduction to personal financial planning, including goal setting and fact finding, cash management, credit, housing, retirement planning, taxation and estate planning. This course is intended for those planning careers in personal financial advising in one of the various financial services environments.

Prerequisite(s): BFIN 341, or consent of Instructor.

BFIN 435. Investment Analysis
3 Credits (3)

Efficiency of capital markets, modern portfolio management, special topics of current interest to investment analysts.

Prerequisite: BFIN 355.

BFIN 445. Fixed Income Markets, Instruments and Derivatives
3 Credits (3)

Course provides a broad introduction to treasury, corporate, municipal, mortgage backed and asset backed bond markets. The analytical techniques for valuing bonds, quantifying their exposure to changes in interest rate and credit risk exposures and investment decision-making are explored.

Prerequisite(s): BFIN 341.

BFIN 455. Derivative Markets and Securities
3 Credits (3)

Institutional aspects of derivative markets and the arbitrage based pricing of derivative instruments such as stock options, interest rate options, future contracts and swaps. The applied component of the course demonstrates use of these instruments as hedge and/or investment vehicles.

Prerequisite(s): BFIN 355.

BFIN 470. Real Estate Appraisal
3 Credits (2+2P)

This course addresses issues influencing the value of real estate with some emphasis upon rural properties. Topics include courthouse records, property taxes, appraisal methodology, expert courtroom testimony, condemnation, and legal issues. Students will take field trips and write appraisals. Course material is relevant to student in Finance, Accounting, and Pre-Law, as well as Agriculture. Accredited for hours to apply to both pre-licensing and continuing education requirements of the New Mexico Real Estate Commission for both Appraisers and Real Estate Brokers.

May be repeated up to 3 credits.

Learning Outcomes

1. Distinguish between the Income Approach, Cost Approach, and Sales Comparison Approach.

2. Identify market abstracted influences on value.
3. Apply proper appraisal methodology.
4. Demonstrate appraisal knowledge by writing a residential appraisal and a farm appraisal.

BFIN 475. International Managerial Finance
3 Credits (3)

International aspects of financial transactions, decision-making, banking and financial markets. Crosslisted with: I B 475 and BFIN 575.

BFIN 480. Management of Financial Institutions
3 Credits (3)

Asset and liability management of financial institutions; emphasis on commercial bank management.

Prerequisite: BFIN 385 or consent of instructor.

BFIN 490. Selected Topics
1-3 Credits

Current topics in finance.

Prerequisites: vary according to the seminar being offered.

BFIN 498. Independent Study
1-3 Credits

Individual studies directed by consenting faculty with the prior approval of the department head. A maximum of 3 credits may be earned.

Prerequisites: junior or above standing and consent of instructor.

BFIN 500. Concepts in Finance
1 Credit (1)

An overview of fundamental principles of finance necessary for prospective MBA students who do not have an undergraduate background in finance. Includes: Time value of money concepts and calculations; risk and calculation of return given appropriate risk measures; bond risk characteristics and calculation of the value of a bond; calculation of the value of common stock (determination as to whether a stock is over-valued or under-valued); and calculation of the costs of capital and capital budgeting problems using the cost of capital.

Prerequisite(s): admitted to MBA Program or consent of course department.

BFIN 503. Financial Management
3 Credits (3)

Theory and application of financial analysis to asset management, project evaluation, capital structure, and dividend policy. Interrelationships among financial and other organizational decisions.

Prerequisite(s): BFIN 341 with a grade of B or better.

BFIN 511. Financial Derivative Markets
3 Credits (3)

This course examines advanced futures and options strategies for income generation and risk management. Coverage includes a variety of markets, e.g., interest rates, stock indexes, metals, currencies, livestock, and grains. Both technical and fundamental trading strategies are identified and discussed. Same as AEEC 3220/BFIN 311 with additional coursework required at the graduate level. Cannot receive credit for both AEEC 3220/BFIN 311 and AEEC 3220/BFIN 311. Taught with AEEC 5220.

Learning Outcomes

1. Define risk and identify methods of managing risk.
2. Demonstrate understanding of vocabulary associated with derivatives and derivative markets.
3. Identify the role that derivative markets play in reducing risk.
4. Demonstrate a basic understanding of derivative markets including their use in risk management and income generation.

BFIN 521. Personal Financial Planning for Professionals**3 Credits (3)**

Introduction to personal financial planning, including goal setting and fact finding, cash management, credit, housing, retirement planning, taxation and estate planning. This course is intended for those planning careers in personal financial advising in one of the various financial services environments. For Graduate students only

Learning Outcomes

1. Describe the financial planning process, assess the external environment, use goals to establish financial direction, and analyze a client's present financial position.
2. Estimate the impacts of income tax planning strategies, apply the basic process for retirement planning, and define the considerations for estate planning.
3. Evaluate the roles of various insurances products in managing risks, and recognize the professional and ethical aspects of financial planning

BFIN 535. Investment Concepts**3 Credits (3)**

Investments in common stocks and other securities. Risk and return, securities markets, portfolio theory and management. For Graduate students only

Learning Outcomes

1. Model forecasted financial statements using Microsoft Excel.
2. Build financial models in Excel to estimate risk and return for individual stock.
3. Build financial models in Excel to construct an efficiently diversified portfolio.
4. Make decisions regarding investments for the Wetherbe Student-Managed Investment Fund.

BFIN 545. Fixed Income Markets, Instruments and Derivatives**3 Credits (3)**

Course provides a broad introduction to treasury, corporate, municipal, mortgage backed and asset backed bond markets. The analytical techniques for valuing bonds, quantifying their exposure to changes in interest rate and credit risk exposures and investment decision-making are explored. Assignments and exams will be differentiated from the undergraduate cross-listed course. In addition, graduate students are expected to complete a project. For Graduate students only.

Learning Outcomes

1. Describe basic features of a fixed-income security.
2. Describe mechanisms available for issuing bonds in primary markets.
3. Analyze repurchase agreements (repos) and the risks associated with them.
4. Compute invoice prices, yields, spot rates, and forward rates.
5. Compute PVBP, duration and convexity of a bond, duration of a portfolio of bonds.
6. Construct the term-structure of interest rates, Yield curve strategies.
7. Describe the process of calibrating a binomial interest rate tree to match a specific term structure.
8. Explain the principles underlying, and factors that influence, the market's pricing of CDS.
9. Explain and execute interest rate swaps.

BFIN 555. Derivative Markets and Securities**3 Credits (3)**

Institutional aspects of derivative markets and the arbitrage based pricing of derivative instruments such as stock options, interest rate

options, future contracts and swaps. The applied component of the course demonstrates use of these instruments as hedge and/or investment vehicles. Same as BFIN 455 with differentiated assignments for graduated students. For Graduate students only.

Learning Outcomes

1. Define forward contracts, futures contracts, options (call and puts), swaps, and credit derivatives and compare their basic characteristics.
2. Determine the value at expiration and profit from a long or a short position in a call or put option, or combinations such as straddles, covered calls, spreads, put-call parity etc.
3. Explain how the concepts of arbitrage, replication, and risk neutrality are used in pricing derivatives.
4. Explain how the value of an option is determined using a multiperiod-period binomial model.
5. Describe how the Black-Scholes-Merton model is used to value European options on equities.
6. Interpret each of the option Greeks.
7. Describe how a delta hedge is executed.
8. Define implied volatility and explain how it is used in options trading.
9. Describe a futures contract: long and short positions, hedging, basis risk, and hedge ratios

BFIN 575. International Managerial Finance**3 Credits (3)**

International aspects of financial transactions, decision-making, banking and financial markets. For Graduate students only.

Learning Outcomes

1. Explain and evaluate how the globalization process moves a business from a purely domestic focus in its financial relationships and composition to one truly global in scope.
2. Describe what three major corporate currency exposure arises from multinational business.
3. Define and explain the terms that are used in reference to exchange rates and currency regimes in addition to analyzing the characteristics of an ideal currency.
4. Explain how nations measure their own level of international economic activity and how that is measured by the balance of payments.
5. Show how interest rates and inflation affect each country and currency.
6. Identify the forms of currency quotations used by currency dealers, financial institutions, and agents of all kinds when conducting foreign exchange transactions.
7. Distinguish between spot, forward, swaps, and other types of foreign exchange financial instruments as well as foreign currency futures and options contracts.
8. Demonstrate how both the diversifiable and non-diversifiable risks of an investor's portfolio may be reduced through international diversification.
9. Evaluate the various internal and external sources of funds available for the financing of foreign subsidiaries.

BFIN 581. Management of Financial Institutions**3 Credits (3)**

Asset and liability management of financial institutions; emphasis on commercial bank management. For Graduate students only.

Learning Outcomes

1. Describe the Financial System and Competing Financial Service Institutions.

- Describe the impact of government policy and regulation on the banking industry.
- Explain the array of organizational structures in Banking: Unit, Branch, Holding, Company and Electronic Services.
- Analyze the Balance Sheets and Income Statements of Banks.
- Measure and evaluate the performance of Banks and their principal competitors.
- Apply different liquidity management strategies.

BFIN 590. Selected Topics**1-3 Credits (1-3)**

Current topics in finance. Taught with BFIN 490 with differentiated assignments for graduate students. Consent of instructor required.

BFIN 598. Special Research Programs**1-3 Credits**

Directed individual reading or research.

Prerequisite: consent of instructor.

BIOL-BIOLOGY

BIOL 1120G. Human Biology**3 Credits (3)**

This course is an introduction to modern biological concepts with an emphasis on the relevance to humans and their relationships with the environment.

Learning Outcomes

- Explain that biology is a scientific discipline based on observations and experimentations.
- Explain the process of scientific inquiry and explain how scientific knowledge is discovered and validated.
- Describe the chemical basis of living organisms and how biomolecules contribute to the structure and function of cells.
- Develop a basic familiarity with cells and cell organelles.
- Describe the structure and function of DNA as well as how DNA is used in the production of proteins
- Describe the basic principles of genetics and heredity leading to human diversity.
- Identify the major features of the systems in the human body, and understand the anatomy and physiology of them
- Describe the roles of the organ systems in maintaining homeostasis
- Explain the principles of evolution by means of natural selection explaining the diversity of life. 1
- Describe how science and technology have impacted life in particular to society and the environment (e.g. medicine, forensic science, agriculture, ecology, sustainability).

BIOL 1120L. Human Biology Laboratory**1 Credit (3P)**

This course introduces exercises, experiences, and activities exploring biological concepts and theories relevant to humans and their relationship to the environment in a laboratory setting.

Prerequisite(s)/Corequisite(s): BIOL 1120G.

Learning Outcomes

- Understand general principles of cell structure and function.
- Understand general principles of genetics.
- Understand basic human anatomy and physiology.
- Communicate scientific information effectively.
- Demonstrate an understanding of the scientific method.

- Knowledge of appropriate laboratory skills
- Apply quantitative reasoning and scientific thinking to real world problems.

BIOL 1130G. Introductory Anatomy & Physiology (non-majors)**4 Credits (3+3P)**

This course introduces the anatomy (structure) and physiology (function) of the human body, which includes the study of basic chemistry, molecules, cells, tissues, organs, organ systems, and terminology related to these concepts. May be repeated up to 4 credits. Restricted to Community Colleges campuses

Learning Outcomes

- (Lecture) Define and explain anatomy and physiology.
- (Lecture) Use anatomic directional, regional, and sectional terminology related to the human body.
- (Lecture) Explain and describe the basic chemical principles of the human body including the structure and function of carbohydrates, lipids, proteins and nucleic acids.
- (Lecture) Develop a basic familiarity with cells and cell organelles that include cell division, DNA replication, and protein synthesis.
- (Lecture) Describe the structure and function of the major tissues in the human body.
- (Lecture) Identify and describe the basic anatomical features of the integumentary, skeletal, muscle, nervous, endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems.
- (Lecture) Describe the basic physiological roles of the integumentary, skeletal, muscle, nervous, endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems.
- (Lecture) Apply and describe the principles of homeostasis in the human body.
- (Laboratory) Use and apply proper anatomic terms 1
- (Laboratory) Develop skills using the microscope correctly. 1
- (Laboratory) Identify basic tissue types. 1
- (Laboratory) Discuss and describe the basic anatomical features of the integumentary, skeletal, muscle, nervous, endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems. 1
- (Laboratory) Demonstrate and describe physiological roles of the integumentary, skeletal, muscle, nervous, endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems.

BIOL 1190G. Contemporary Problems in Biology**4 Credits (3+3P)**

Fundamental concepts of biology will be presented using examples from relevant problems in ecology, medicine and genetics. For nonscience majors only. Community Colleges only.

Learning Outcomes

- Identify the unity and diversity of living things
- Identify the structure and function of cells and biological molecules
- Recognize and demonstrate patterns of inheritance
- Describe mechanisms of evolution
- Describe the human body systems including immune response
- Discuss population dynamics and ecological systems
- Describe the process of scientific inquiry, solve problems scientifically, and communicate on a scientific level
- Apply quantitative analysis and scientific thinking to scientific and real world problems

BIOL 1996. Topics in Biology**1-3 Credits (1-3)**

Introductory level coverage of biological topics. May be repeated up to 9 credits.

Learning Outcomes

1. Varies

BIOL 2110G. Principles of Biology: Cellular and Molecular Biology**3 Credits (3)**

This course introduces students to major topics in general biology. This course focuses on the principles of structure and function of living things at the molecular, cellular and organismic levels of organization. Major topics included are introduction to the scientific process, chemistry of cells, organization of cells, cellular respiration, photosynthesis, cell division, DNA replication, transcription, and translation. Must be taken with BIOL 2110L to meet general education requirements. May be repeated up to 3 credits.

Prerequisite/Corequisite: a C- or better in MATH 1215 or higher and a C- or better in (CHEM 1120G or CHEM 1215G or CHEM 1216).

Learning Outcomes

1. Apply the scientific method to develop and evaluate hypotheses and propose an experiment to test a scientific hypothesis related to cell biology and molecular biology.
2. Describe the distinguishing characteristics of various biological molecules (water, carbohydrates, lipids, proteins, and nucleic acids).
3. Compare and contrast the basic features of cells and how prokaryotic cells differ from eukaryotic cells.
4. Understand how organisms maintain homeostasis in a dynamic environment.
5. Describe how biological molecules are acquired and how they are subsequently used to meet the metabolic needs of organisms.
6. Describe membrane structure and function.
7. Describe and analyze the nature of bioenergetic transformations and metabolism within the cell.
8. Describe the processes of cellular respiration and photosynthesis.
9. Analyze with specific detail the processes of DNA replication, transcription, and translation. 1
10. Analyze with specific detail the types, mechanisms, and regulation of cellular division. 1
11. Assess important applications of cell and molecular biology to energy use, medicine, and other day-to-day processes.

BIOL 2110L. Principles of Biology: Cellular and Molecular Biology**Laboratory****1 Credit (3P)**

This course introduces students to major topics in general biology. This course focuses on the principles of structure and function of living things at the molecular, cellular and organismic levels of organization. Major topics included are introduction to the scientific process, chemistry of cells, organization of cells, cellular respiration, photosynthesis, cell division, genetics, DNA replication, transcription, and translation. May be repeated up to 1 credit.

Prerequisite: MATH 1215 or higher, and a C- or better in (CHEM 1120G or CHEM 1215G or CHEM 1216).

Prerequisite/Corequisite: BIOL 2110G.

Learning Outcomes

1. Describe and apply the scientific method to solve problems in biological context
2. Demonstrate knowledge of laboratory safety skills and procedures.

3. Practice principles of scientific method while conducting laboratory activities and experiments.
4. Perform laboratory activities using relevant laboratory equipment, chemical reagents, and supplies to observe biological specimens, to measure variables, and to design and conduct experiments.
5. Operate light microscopes, prepare wet mount slides, and use stains.
6. Exhibit ability to use pipettes and other volumetric measuring devices, chemical glassware, balances, pH meters or test papers, spectrophotometers, and separation techniques, such as chromatography and/or electrophoresis to perform activities relevant to other course competencies.
7. Analyze and report data generated during laboratory activities and experiments.

BIOL 2210. Human Anatomy and Physiology I for the Health Sciences**4 Credits (3+3P)**

This course is the first of two that serve as an introduction to human anatomy and physiology for biology majors and allied health students. The course entails describing, explaining, and analyzing structure and function from the submicroscopic to the organismal level with emphasis on anatomic, directional, and sectional terminology, basic cellular structure and metabolism, tissue differentiation and characteristics, and organ system structure and function; Specifically the integumentary, skeletal, muscular, and nervous systems.

Prerequisite(s)/Corequisite(s): CHEM 1120G or CHEM 1215G. Restricted to: Community Colleges only.

Learning Outcomes

1. Describe and apply anatomical terminology.
2. Describe multi cellular organization.
3. Distinguish and describe major tissue types.
4. Describe the structure and function of the integumentary system.
5. Describe the structure and function of the skeletal system.
6. Describe the structure and function of the muscular system.
7. Describe the structure and function of the nervous system.
8. Describe the structure and function of the special senses.
9. Define homeostasis and describe specific examples for the integumentary, skeletal, muscular, and nervous systems.

BIOL 2225. Human Anatomy and Physiology II**4 Credits (3+3P)**

This course is the second of two that serve as an introduction to human anatomy and physiology for biology majors and allied health students. The course entails describing, explaining, and analyzing structure and function from the submicroscopic to the organismal level with emphasis on specific cellular, tissue, and organ structure and physiology, and organ system structure and function; specifically the endocrine, cardiovascular, respiratory, urinary, and reproductive systems. Additionally, an analysis of these concepts is included: fluid and electrolyte balance, pregnancy, growth and development from zygote to newborn, and heredity. Restricted to: Community Colleges only.

Prerequisite(s): BIOL 2210, CHEM 1120G or CHEM 1215G.

Learning Outcomes

1. Identify and describe the major anatomical features of the endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems.
2. Analyze the physiological roles of the endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems in maintaining homeostasis in the human body.

3. Explain how fluid and electrolyte balance is maintained in the human body.
4. Compare and contrast the anatomy and physiology of male and female reproductive systems.
5. Describe pregnancy from conception to parturition including human growth and development from zygote to newborn.
6. Explain heredity and genetic control.

BIOL 2310. Microbiology**3 Credits (3P)**

Introduction to the basic principles of microbiology, microbial pathogenesis, host defenses and infectious diseases. The course will emphasize concepts related to the structure and function of microorganisms, including their mechanisms of metabolism and growth. Host parasite interactions will also be emphasized, including mechanisms of microbial pathogenesis and mechanisms of host defenses against infectious diseases. Restricted to Community Colleges campuses only.

Prerequisite(s): CHEM 1120G or CHEM 1215G or CHEM 1225G.

Corequisite(s): BIOL 2310L.

Learning Outcomes

1. Describe and compare the structure and function of prokaryotic and eukaryotic cells.
2. Describe and compare the techniques used for staining of and microscopic observation of bacteria including morphology.
3. Describe the nutritional requirements for bacterial growth and the impact of environmental factors on bacterial growth (temperature, pH, oxygen, etc.).
4. Describe and compare the mechanisms of aerobic respiration, anaerobic respiration, and fermentative metabolism.
5. Describe the mechanism of bacterial growth by binary fission, and laboratory methods used for observing and measuring bacterial growth.
6. Describe the mechanisms of bacterial DNA replication, RNA transcription, and translation, and compare and contrast with eukaryotic cells.
7. Describe the structure and replication strategies of viruses.
8. Describe and contrast mechanisms of innate nonspecific immunity and adaptive specific immunity.
9. Describe immune hypersensitivity reactions, autoimmune diseases, and immunodeficiency diseases. 1
10. Differentiate between host microberelationships, mechanisms of microbial pathogenesis, differentiate between communicable and noncommunicable diseases and describe mechanisms of direct and indirect transmission of communicable diseases.

BIOL 2310L. Microbiology Lab**1 Credit (3P)**

This course will emphasize both the theory and hands-on application of techniques used in a microbiology laboratory for the growth and identification of bacterial species. Students will learn microscopy skills and staining techniques for the observation of bacteria. Students will also learn aseptic techniques used for isolation of bacteria, inoculation of cultures, and interpretation of selective and differential growth media for the identification of bacterial species.

Prerequisite: BIOL 2310 or BIOL 2320 or concurrent enrollment.

Learning Outcomes

1. Demonstrate skills of microscopy.
2. Demonstrate skills of bacterial staining.

3. Demonstrate aseptic technique for inoculation of bacterial growth media.
4. Interpret results from selective and differential media.
5. Demonstrate appropriate use of diagnostic reagents.
6. Interpret results of diagnostic assays.
7. Identify unknown bacterial species through the use of a dichotomous key, inoculation and interpretation of laboratory assays, and application of the scientific method.

BIOL 2320. Public Health Microbiology**3 Credits (3)**

This course introduces microbiology on the health profession level. It incorporates cell structure, metabolism, growth, controls of growth, infectious epidemiology, etiology, pathogenicity, and relative virulence of pathogens. It will lead to students assessing a clinical infection scenario from the microbiological perspective that includes making diagnoses based on data from appropriate diagnostic tests, investigating appropriate treatment options, and making recommendations for prevention.

Prerequisite: BIOL 2110G and BIOL 2110L.

Learning Outcomes

1. Identify key physical features of various infectious agents and describe their structure and function in the pathogen
2. Describe the microbiological, serological, biochemical and genetic tests that are used to identify infectious agents in a laboratory setting and be able to interpret test results in order to identify the pathogen
3. Explain how structural and metabolic differences between infectious agents and human host can be exploited for chemotherapy
4. Explain the observed effect of a particular environmental change on the growth of a given microorganism, and the relationship between bacterial growth patterns and selected foodborne illnesses
5. Describe several mechanisms by which pathogens generate genetic diversity and the role genetic diversity plays in resistance to therapy and treatment failure
6. Explain the role of innate, and adaptive immunity in host defense
7. Describe general virulence strategies used by variety of pathogens, and different types of vaccines along with recommendations for vaccinations of specific populations
8. Demonstrate understanding of signs and symptoms of selected diseases, and be able to relate disease agents with environmental reservoirs and transmission

BIOL 2505. Pathophysiology**3 Credits (3)**

This course is designed to provide the conscientious student with a solid foundation for understanding the pathophysiological processes of the human organism. Successful completion of this course will promote the general student learning outcomes listed below. **Corequisite/ Prerequisite(s):** AHS 154 or BIOL 2225. **Restricted to:** Community Colleges only.

Prerequisite(s): AHS 153 or BIOL 2210.

Learning Outcomes

1. To describe the general concepts of disease processes and factors associated with disease causation.
2. To identify the function of basic cellular structures, determining the process of cellular malfunctions.
3. To describe the response of the body to injury and immunologic challenge.

- To discuss the etiology, pathogenesis, and treatment modalities of frequently occurring diseases.

BIOL 2511. Human Pathophysiology

3 Credits (3)

The first in a two-course sequence that covers changes in body physiology that result from disease or injury. Includes a general introduction to pathophysiology as well as an overview of altered cellular and tissue biology, injury, inflammation, and neoplasia. Students will also explore deviation from fluid, hemodynamic, and endocrinologic balance. Topics related to the science of pathophysiology, including pathology, pathogenesis, etiology, epidemiology, and clinical manifestations, are also discussed throughout the course where relevant. Grade of C- or higher in microbiology is recommended. Restricted to Community Colleges campuses only.

Prerequisite(s): Grade of C- or higher in BIOL 2210 and BIOL 2225.

Learning Outcomes

- The cellular adaptations occurring in atrophy, hypertrophy, hyperplasia, dysplasia, and metaplasia; the types and causes of cellular injury; and the types of necrosis.
- The different compartments for body fluids; the factors that affect water movement; the processes that drive and affect capillary exchange; the mechanisms causing edema; the electrolytes in body compartments; the various electrolyte imbalances; the body mechanisms that maintain acid-base balance; and the various acid-base imbalances and how they are compensated for .
- The interrelationships of DNA, RNA, and proteins; the various types of mutations; the various types of mutagens, the various types of numerical and structural chromosomal aberrations; the various genetic terms; the single-gene disorders discussed in class; the multifactorial disorders discussed in class.
- The relationships between genes, environment, and multifactorial diseases; the criteria used to define multifactorial disease; the characteristics of multifactorial traits; and the various features of the threshold model.
- The terms related to tumor/cancer biology, classification, and nomenclature; the various features of cancer biology, including the characteristics of cancer and the genetic basis of cancer; features related to cancer invasion and metastasis; and the clinical manifestations and treatments of cancer.
- Features related to Innate and adaptive immunity; features related to the first, second, and third lines of defense; the mechanisms and manifestations of inflammation; components/mechanisms related to the complement, clotting, and kinin systems; mechanisms of wound healing; and features of dysfunctional wound healing.
- Aspects/mechanisms of specific (adaptive) immunity, features related to the structure, function, and classification of immunoglobulins; features related to haptens, antigens, immunogens, and epitopes; the different types of antigens; features related to immunological memory; and features related to the different types of active and passive immunity.
- Aspects related to allergy, autoimmunity, and alloimmunity; aspects/mechanisms/examples related to the four basic types of hypersensitivity reactions; mechanisms and examples related to autoimmunity; and aspects/mechanisms related to immunodeficiency.
- The risk factors for infection; the six components of the chain of infection; general concepts, terms, and processes/mechanisms related to basic microbiology; and the mechanisms of microbial pathogenicity. 1

- General concepts, terms, and processes/mechanisms related to normal hormonal action; mechanisms of hormonal alterations; processes/mechanisms related to the pathophysiology of the various disorders discussed in class; and the clinical manifestations and treatment of the hormonal alterations discussed in class.

BIOL 2512. Human Pathophysiology II

3 Credits (3)

The second in a two-course sequence that covers changes in body physiology that result from disease or injury. This course focuses on the pathophysiology of the nervous, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems. Topics related to the science of pathophysiology, including pathology, pathogenesis, etiology, epidemiology, and clinical manifestations, are also discussed throughout the course where relevant. Grade of C- or higher in microbiology is recommended. Restricted to Community Colleges campuses only. May be repeated up to 3 credits.

Prerequisite: Grade of C- or higher in BIOL 2210, BIOL 2225, and BIOL 2511.

Learning Outcomes

- The different types of sensory modalities; the different dysfunctions of the general and special senses; the different pain theories discussed in class; the various aspects of the neuroanatomy and neuromodulation of pain; the various clinical descriptions of pain; the various aspects of temperature regulation; components of the pathogenesis of fever; the various disorders of temperature regulation; the various aspects of sleep disorders; the various components of visual dysfunction; and the various aspects of auditory, gustatory, and olfactory dysfunction.
- The various alterations in cognitive systems; the various alterations in arousal; the outcomes of alterations in arousal; the various alterations in awareness; the various seizure disorders; the various data processing deficits; various alterations in cerebral hemodynamics; and alterations in neuromotor function.
- The various disorders of the central and peripheral nervous systems; and the various disorders of the neuromuscular junction.
- The components of normal blood; the process/stages of hematopoiesis; the various normal RBC laboratory values; the components and functions of the lymphatic system; the various types of imbalances of erythropoiesis; the various types of anemias and their causes; the various types of polycythemia and their causes; the processes related to hemostasis; the various alterations of white blood cells and their causes; and the various alterations of lymphoid and hemostatic function.
- The various diseases of the veins; the various diseases of the arteries; the various aspects of atherosclerosis; features related to the pathogenesis and consequences of coronary artery disease; the disorders of the heart wall and their consequences; the various aspects of valvular dysfunction; aspects of the pathogenesis and manifestations of rheumatic disease; the causes, pathogenesis, and manifestations of infective endocarditis; the causes, manifestations, and pathophysiology of heart failure; and the various types of shock.
- The various signs and symptoms of pulmonary disease; the various conditions caused by pulmonary disease/injury; the various disorders of the chest wall and pleura; and the causes, manifestations, and pathophysiology of selected pulmonary disorders.
- The features and consequences of upper and lower urinary tract obstruction; the various types of urinary tract infection; the causes, pathogenesis, and clinical manifestations of glomerulonephritis; the various features of nephrotic and nephritic syndrome; and the various

features (etiology, pathophysiology, and clinical manifestations) of both acute kidney injury and chronic kidney disease.

8. The various clinical manifestations of gastrointestinal dysfunction; the various aspects (etiology, pathophysiology, and clinical manifestations) of disorders of motility; the causes, manifestations, and pathophysiology of gastritis; features related to the causes, manifestations, and pathophysiology of peptic ulcer disease; features related to the etiology, pathogenesis and pathophysiology of selected malabsorption syndromes, inflammatory bowel diseases, diverticular disease of the colon, appendicitis, and irritable bowel syndrome; the various types of vascular insufficiency; the various disorders of nutrition and their causes and clinical manifestations; and the various disorders of the accessory organs of digestion.
9. The various features associated with alterations of sexual maturity (delayed puberty and precocious puberty); features related to the etiology, pathogenesis, and pathophysiology of the various disorders of the male reproductive system, including disorders of the urethra, disorders of the penis, disorders of the scrotum, disorders of the testes, disorders of the epididymis, disorders of the prostate gland, and disorders of the male breast; features related to the etiology, pathogenesis, and pathophysiology of male sexual dysfunction; features associated with abnormalities of reproductive tract development; the various hormonal and menstrual alterations and their causes and clinical manifestations; the various conditions related to infection, inflammation, and pelvic organ prolapse (uterine prolapse, cystocele, rectocele, and enterocele); conditions involving benign growths and cancer (endometriosis, cervical cancer, vaginal cancer, vulvar cancer, endometrial cancer, uterine sarcoma, and ovarian cancer); features related to the etiology, pathogenesis, and pathophysiology of female sexual dysfunction (disorders of desire, vaginismus, anorgasmia, and dyspareunia); features related to infertility; and features related to the etiology, pathogenesis, and pathophysiology of breast cancer.

BIOL 2610G. Principles of Biology: Biodiversity, Ecology, and Evolution
3 Credits (3)

This course is an introduction to the dynamic processes of living things. Major topics include the mechanisms of evolution, biological diversity, Mendelian genetics, and ecology.

Prerequisite/Corequisite: grade of C- or better in MATH 1215 or higher, or a Math Placement Exam score adequate to enroll in mathematics courses beyond MATH 1215.

Learning Outcomes

1. Understand the scientific method and apply it to biological topics of genetics, evolution, ecology, and biodiversity.
2. Apply quantitative reasoning and scientific thinking to real world problems.
3. Identify and describe the basic principles of evolution.
4. Analyze the relationships between the genetics of populations and evolution.
5. Analyze the processes of speciation.
6. Describe how the hierarchical classification scheme is used to categorize organisms.
7. Describe how DNA research has modernized bio systematics.
8. Compare and contrast the general characteristics of each of the living domains and kingdoms.
9. Relate the structure of organisms to the way they function. 1
10. Explain how the life histories of organisms are adapted for different environments. 1

11. Relate the complexity of behavior to the overall complexity of an organism. 1
12. Describe the ecological roles played by organisms in each kingdom. 1
13. Compare basic ecological principles at the population and community levels of organization. 1
14. Describe and compare energy relationships and the cycling of materials in ecosystems. 1
15. Identify and describe the basic principles of Mendelian genetics.

BIOL 2610L. Principles of Biology: Biodiversity, Ecology, and Evolution
Laboratory

1 Credit (3P)

This laboratory course is an introduction to the dynamic processes of living things. This course introduces students to the methods used in the study of Mendelian genetics, evolution, ecology, and biological diversity. Designed for students continuing in life sciences.

Prerequisite/Corequisite: BIOL 2610G; grade of C- or better in MATH 1215 or higher, or a Math Placement Exam score adequate to enroll in mathematics courses beyond MATH 1215.

Learning Outcomes

1. Describe and apply the scientific method to generate testable hypotheses in evolution and ecology.
2. Design and conduct laboratory experiments using relevant laboratory equipment and methods.
3. Analyze and report data generated during laboratory activities and experiments.
4. Communicate scientific results from experiments in Mendelian genetics, evolution, ecology, and biodiversity.

BIOL 2996. Special Topics

1-3 Credits

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 6 credits. Community Colleges only.

Learning Outcomes

1. Varies

BIOL 301. Principles of Ecology

3 Credits (3)

A survey of ecology including general theory, the adaptations of organisms, population dynamics, species interactions, and the structure and function of natural communities and ecosystems. MATH 1511G and A ST 311 recommended. Same as ENVS 301. Crosslisted with: ENVS 301.

Prerequisite(s): BIOL 2610G, MATH 1220G.

BIOL 302. Molecular Biology Techniques Laboratory

3 Credits (6P)

This combined lecture and laboratory course emphasizes molecular biology laboratory practices through the hands-on application of commonly applied techniques, protocols, and equipment. The topics covered include both the fundamental development of empirical data as well as data analysis using stand-alone and web-based resources. Consent of instructor required.

Prerequisite(s): BIOL 2110G or equivalent, and MATH 1220G.

BIOL 305. Principles of Genetics

3 Credits (3)

Covers fundamental principles of reproduction, variation, and heredity in plants and animals. May be repeated up to 3 credits.

Prerequisite: (BIOL 2610G and BIOL 2110G, or BIOL 2110G and BCHE 140, and either CHEM 1215G or CHEM 1216).

Learning Outcomes

1. To provide an introduction to the basic concepts, methods, and terminology of genetics. Introduction to genomics and bioinformatics.
2. To develop a working understanding of genetics and heredity
3. To understand in some depth, the mechanism of DNA replication, transcription and protein synthesis. To understand the regulation of gene expression.
4. To examine the impact of genetics on both basic and applied aspects of the biological sciences, as well as its effects on our everyday lives.

BIOL 309. Guided Biological Research Lab**3 Credits (3)**

This laboratory course provides a guided experience to hands-on research in biology. It is intended for early-career undergraduates who have finished the introductory sequence of Biology courses. Topics will vary with instructor.

Prerequisite(s): BIOL 2610G, BIOL 2110G, and MATH 1220G.

BIOL 311. General Microbiology**3 Credits (3)**

Principles of physiology, molecular biology, ecology, and taxonomy of microorganisms.

Prerequisite(s): BIOL 2110G and MATH 1220G.

BIOL 311 L. General Microbiology Laboratory**2 Credits (4P)**

Microbiology techniques and procedures, including isolation and identification of microorganisms and biotechnology procedures that employ microorganisms.

Prerequisite(s)/Corequisite(s): BIOL 2320 or BIOL 311. **Prerequisite(s):** BIOL 2110G and MATH 1220G.

BIOL 312. Plant Taxonomy**3 Credits (2+3P)**

Classification and identification of representative plant families and local plants. Emphasis on ability to use technical sources. Saturday field trips may be recommended.

Prerequisite(s): BIOL 2610G and MATH 1220G.

BIOL 313. Structure and Function of Plants**3 Credits (2+3P)**

Structure, function, and survey of plants. BIOL 2110G recommended.

Prerequisite(s): BIOL 2610G, MATH 1220G, and sophomore-level standing.

BIOL 314. Plant Physiology**3 Credits (3)**

Photosynthesis, respiration, water relation of plants, minerals and organic nutrition, growth and development.

Prerequisite(s): BIOL 2110G and CHEM 1225G.

BIOL 322. Zoology**3 Credits (2+3P)**

Structure, function, and survey of animals. BIOL 2110G recommended.

Prerequisite(s): BIOL 2610G, MATH 1220G, and at least sophomore-level standing.

BIOL 350. Special Topics**1-4 Credits**

Specific subjects announced in Schedule of Classes and offered as scheduled courses. May be repeated for unlimited credit.

BIOL 351. Biology Internship**1-6 Credits**

Substantial off-campus experience in biology selected by student in consultation with regular biology faculty member. Internship must be approved by faculty member. Student will supply mutually agreed upon documentation of internship activities after the internship is completed. May be repeated up to 6 credits. Restricted to: BIOL, MBIO, CEC, GEBT majors. Graded: S/U Grading (S/U, Audit).

Prerequisite(s): 45 college credits, 2.5 or better GPA, consent of instructor.

BIOL 353. Pre-Professional Human Anatomy**4 Credits (4)**

Pre-professional clinically-oriented survey of human anatomy. Designed primarily for pre-nursing majors. Provides comprehensive anatomical training for students planning careers in health and allied health sciences, such as medicine, dentistry, nursing, physical therapy, physicians aid, human nutrition, and food science. Suitable as a biology elective.

Concurrent enrollment in BIOL 353 L is recommended but not required.

May be repeated up to 4 credits.

Prerequisite(s): BIOL 2110G and either CHEM 1120G, CHEM 1215G, or CHEM 1216.

BIOL 353 L. Pre-Professional Human Anatomy Laboratory**1 Credit (3P)**

Laboratory experience in human anatomy using anatomical models and cat dissections. Designed as a learning aid to support and augment BIOL 353 pre-professional Human Anatomy. For students planning careers in health and allied health sciences such as medicine, dentistry, nursing, physical therapy, physicians aid, human nutrition, and food science. May be repeated up to 1 credits.

Prerequisite(s)/Corequisite(s): BIOL 353. **Prerequisite(s):** BIOL 2110G and either CHEM 1120G, CHEM 1215G, or CHEM 1216.

BIOL 354. Physiology of Humans**3 Credits (3)**

Principles of integrative functions in humans. A systems approach emphasizing tissues, organs, and their regulation.

Prerequisite(s): BIOL 2110G and MATH 1220G.

BIOL 354 L. Laboratory of Human Physiology**1 Credit (3P)**

Laboratory to accompany BIOL 354.

Prerequisite(s): MATH 1220G and either BIOL 2221, BIOL 381, BIOL 354, or concurrent enrollment in BIOL 354.

BIOL 377. Cell Biology**3 Credits (3)**

Fundamentals of eukaryotic cell structure, organization, and function. Emphasis on membranes, subcellular organelle systems, cytoskeleton, and cell cycle. Includes basic aspects of molecular biology. May be repeated up to 3 credits. BIOL 2610G recommended.

Prerequisite(s): (BIOL 2110G, BIOL 305 or GENE 315) and MATH 1220G.

BIOL 381. Animal Physiology**3 Credits (3)**

Principles of integrative function in animals, emphasizing tissues, organs, organ systems, and regulation. Includes adaptations of animals to their environments. BIOL 2610G and BIOL 377 recommended.

Prerequisite(s): BIOL 2110G and junior-level standing, MATH 1220G.

BIOL 382. Plant Signalling and Development**3 Credits (3)**

This is a course that introduces plant signalling pathways and their role in development to students. The lectures are structured to facilitate in-class discussions on the current state and future directions in this field. Topics will cover a wide range of biological questions and the methods used to study them. May be repeated up to 3 credits.

Prerequisite(s): BIOL 305 or GENE 315, and MATH 1220G.

BIOL 385. An Introduction to Cancer

3 Credits (3)

This course will cover 3 areas of cancer research and their interdisciplinary connections: clinical cancer research, epidemiology and public health, and basic cancer research. May be repeated up to 3 credits.

Prerequisite(s): BIOL 305 or GENE 315 or equivalent and MATH 1220G.

BIOL 398. Biology Research Programs

1-3 Credits

Directed studies and research experiences, by arrangement with instructor. May be repeated for a maximum of 6 credits.

BIOL 402. Biology Honors Thesis

1-3 Credits (1-3)

Provides guidance in how to write a scientific paper in the sciences. Students will produce an honors thesis based on previous independent research. Consent of instructor required.

Prerequisite(s): MATH 1220G and consent of instructor.

BIOL 412. Seminar in Microbiology

1 Credit (1)

Seminar to aid students in assessment and presentation of current topics in microbiology.

Prerequisite(s): BIOL 311, BIOL 311 L, and MATH 1220G.

BIOL 417. Topics in Environmental Microbiology

3 Credits (3)

This is an advanced undergraduate course based on current literature in Environmental Microbiology, and is a seminar-style, discussion-based class. Topics typically include marine microbiology, ancient DNA, and the human microbiome. Crosslisted with: BIOL 577.

Prerequisite(s): MATH 1220G, BIOL 477 or consent of instructor.

BIOL 424. Human Osteology

3 Credits (3)

A survey of the functional, developmental, and evolutionary biology of the human skeleton. Identifying bones and teeth from hands-on experience with skeletal and dental material. Provides a foundation for human evolutionary studies, bioarchaeology and forensic anthropology. Students are recommended to take ANTH 355 or an equivalent before enrolling in this course. BIOL 424L should be taken concurrently when it is offered. Crosslisted with: ANTH 474.

BIOL 427. Symbiosis

3 Credits (3)

In-depth treatment of the ecology, evolution, and mechanisms that are found in symbiotic systems. May be repeated up to 3 credits. Crosslisted with: BIOL 527.

Prerequisite(s): BIOL 2610G, BIOL 2110G, and MATH 1220G.

BIOL 436. Disease Vector Biology

3 Credits (3)

Fundamentals of disease vector biology with emphasis on molecular biology. Explores an overview of vector borne diseases, insect endocrinology, insect immunity, olfaction, vector genome projects and transgenic insect techniques. Includes student presentations and literature discussions. Crosslisted with: BIOL 536

Prerequisite(s): BIOL 2110G, BIOL 305, and MATH 1220G.

BIOL 442. Genomics Technology

3 Credits (3)

The course introduces current genomic techniques in genome sequencing, transcriptome analysis, detection of genetic variation, and metagenomics. May be repeated up to 3 credits. Crosslisted with: BIOL 562.

Prerequisite(s): BIOL 2110G, BIOL 305 or BIOL 478 or GENE 315, and MATH 1220G.

BIOL 446. Bioinformatics and NCBI Database

3 Credits (3)

The course discusses how to use NCBI database and bioinformatic tools for research with genomics approaches. The topics include nucleotide and protein sequence analysis, similarity search with blast algorithms, gene/genome annotation, protein structure analysis, gene expression analysis, and metagenomic study.

Prerequisite(s): BIOL 2110G, BIOL 305 or BIOL 478 or GENE 315, and MATH 1220G.

BIOL 450. Special Topics

1-3 Credits

Specific subjects announced in the Schedule of Classes and offered as scheduled courses. May be repeated for unlimited credit.

BIOL 451. Physiology of Microorganisms

3 Credits (3)

Aspects of cellular physiology unique to prokaryotes. BCHE 395 recommended.

Prerequisite(s): C- or better in BIOL 311, MATH 1220G.

BIOL 455. Biometry

3 Credits (3)

Biometry is the analysis of biological data using mathematical and statistical models. The course will cover basic theories of probability and statistics and will introduce principles of sampling, estimation, experimental design, and hypothesis testing. Students will analyze biological data using computer programs and will perform tests for goodness-of-fit, independence, analysis of variance, correlation, and regression. May be repeated up to 3 credits.

Prerequisite: BIOL 2610G or BIOL 2110G, and MATH 1220G.

Learning Outcomes

1. Cover basic theories of probability and statistics
2. Understand principles of sampling, estimation, experimental design, and hypothesis testing.
3. Analyze biological data.
4. Perform tests for goodness-of-fit, independence, analysis of variance, correlation, and regression.

BIOL 459. Darwinism Versus Creationism

3 Credits (3)

This course examines the debate regarding Creationism versus Darwinism as explanations for the origin and diversification of life on Earth. Topics covered include the nature and philosophy of science, new-world creationism, old-world creationism, intelligent design, history of evolutionary thought, modern evolutionary theory, and the Creationism-Darwinism debate at the societal, political, and educational interfaces. The course structure will include formal lectures and in-class discussion of assigned readings.

Prerequisite(s): BIOL 2610G or BIOL 2110G, and MATH 1220G.

BIOL 459 H. Darwinism versus Creationism Honors

3 Credits (3)

This course will examine the history and philosophy surrounding the debate between Darwinism and Creationism. The course will also examine the consequences of the debate at the interface of sociology, economics, politics, and education. The Honors version of the course (BIOL 459H) will require a term paper in addition to the requirements of BIOL 459. Crosslisted with: BIOL 459.

Prerequisite(s): BIOL 2610G or BIOL 2110G, and MATH 1220G.

BIOL 462. Conservation Biology**3 Credits (3)**

Examination of the value of biological diversity, the natural processes that control biological diversity, and the ways in which human activities have resulted in the loss of biological diversity, both regionally and globally.

Prerequisite(s): BIOL 301 and either MATH 1430G or MATH 1511G.

BIOL 467. Evolution**3 Credits (3)**

Covers theory, historical background, population variation, natural selection, adaptation, speciation.

Prerequisite(s): BIOL 2610G, BIOL 305 or GENE 320, and MATH 1220G.

BIOL 469. Biology of Emerging Infectious Diseases**3 Credits (3)**

This class will investigate the evolutionary and ecological drivers of disease emergence. The effect of emerging diseases on human health will be addressed throughout the class, but the class will also consider the consequences of disease emergence for the health of wildlife and plant populations. Additionally, the class will consider the mechanisms used to control disease emergence and why they succeed or fail.

Prerequisite(s): MATH 1220G, Introductory Genetics (BIOL 305 or equivalent) or consent of the instructor.

BIOL 470. Developmental Biology**3 Credits (3)**

The purpose of this course is to introduce students to the principles that govern the development of a single fertilized egg cell into a complex multicellular organism. These principles, and often the molecular mechanisms by which they are accomplished, appear to be universal for all multicellular organisms including both plants and animals. We will explore issues such as: how cells become committed to particular cell fates and how this commitment is maintained; how organs acquire particular shapes, sizes and positions; the developmental causes of some human diseases; how the environment affects development; and, how changes in development provide the material basis for evolutionary change.

Prerequisite(s): BIOL 2110G, BIOL 305, and MATH 1220G.

BIOL 473. Ecology of Microorganisms**3 Credits (2+3P)**

The metabolic interactions of microorganisms in the environment, with emphasis on their roles in ecological processes.

Prerequisite(s): MATH 1220G, BIOL 311 or consent of instructor.

BIOL 474. Immunology**3 Credits (3)**

Basic concepts of the immune response.

Prerequisite(s): MATH 1220G, BIOL 305, and CHEM 2115 or CHEM 313.

BIOL 475. Virology**3 Credits (3)**

Mechanisms of viral infections of animals and man. BCHE 395 or BIOL 305 are recommended.

Prerequisite(s): BIOL 311 and MATH 1220G.

BIOL 476. Soil Microbiology**3 Credits (3)**

Nature and physiology of soil microorganisms, how they affect plant growth and recycle nutrients. Land farming, bioremediation, and other environmental problems as influenced by soil microorganisms. SOIL 2110 and BIOL 311 recommended. Same as SOIL 476.

BIOL 476 L. Soil Microbiology Laboratory**1 Credit (3P)**

Enumeration of soil microorganisms, their activities, and transformations they mediate. Same as SOIL 476L.

Prerequisite(s)/Corequisite(s): BIOL 476.

BIOL 477. Applied and Environmental Microbiology**4 Credits (4)**

A lecture-laboratory course on the microorganisms and the reactions they mediate which either impact the environment or have industrial applications. Reading of current literature will be emphasized. Topics include bioremediation, water quality, and aspects of industrial and food microbiology.

Prerequisite(s): MATH 1220G, BIOL 311, and 311 L, or consent of instructor.

BIOL 478. Molecular Biology of Microorganisms**3 Credits (3)**

The biochemical basis for gene mutation, recombination, and expression with emphasis on prokaryotes. Includes fundamentals of recombinant DNA technology. BIOL 305 and BCHE 395 recommended.

Prerequisite(s): BIOL 311 and MATH 1220G.

BIOL 479. Medical Microbiology**3 Credits (3)**

An in-depth overview of microbial pathogens associated with human infectious disease. Etiological agents, pathogenesis, and processes leading to the disease state and the therapies of infectious disease.

Prerequisite(s): MATH 1220G and BIOL 311 required, BIOL 474 recommended.

BIOL 479 L. Medical Microbiology Laboratory**1 Credit (1)**

Overview of common procedures used by medical microbiologists to identify agents of disease or microbial pathogen traits. May be repeated up to 1 credits.

Prerequisite(s)/Corequisite(s): BIOL 479. **Prerequisite(s):** MATH 1220G, BIOL 311, BIOL 311 L.

BIOL 480. Animal Behavior**3 Credits (3)**

A survey of the field of animal behavior. BIOL 322 recommended. May be repeated up to 3 credits.

Prerequisite: MATH 1220G or higher, BIOL 2610G, and junior-level standing.

Learning Outcomes

1. Distinguish between proximate mechanisms and ultimate causation.
2. Engage in the scientific process as applied to animal behavior.
3. Interpret and produce graphical representations of data.
4. Describe general patterns of animal behavior across a wide range of contexts.

BIOL 484. Animal Communication**3 Credits (3+3P)**

An examination of how animals produce and perceive signals, what factors influence the form of signals in different sensory modalities, and how conflicts between senders and receivers affect signaling strategies. Weekly discussion from the primary literature and group research products. May be repeated up to 3 credits.

Prerequisite: BIOL 2610G or consent of instructor, and MATH 1220G or higher.

Learning Outcomes

1. Describe how animal signals are produced, transmitted, and received in various taxa,
2. Understand how evolutionary, ecological and economic principles help predict how animals will communicate,

- Describe general patterns of animal communication across a range of social contexts.

BIOL 488. Principles of Conservation Genetics**3 Credits (3)**

Fundamentals of the genetics of small populations. Genetic technologies used in studying small populations. Application of genetics and evolution to the conservation of biological populations.

Prerequisite(s): MATH 1220G and BIOL 305.

BIOL 490. Neurobiology**3 Credits (3)**

Fundamentals of neurobiology with an emphasis on properties of neurons and glia, principles of synaptic transmission, development of nervous system and organization of motor and sensory systems.

Prerequisite(s): BIOL 2110G, MATH 1430G or equivalent.

BIOL 498. Biology Research Programs**1-3 Credits**

Directed studies and research experiences, by arrangement with instructor. May be repeated for a maximum of 6 credits.

BIOL 509. Guided Biological Research Lab**3 Credits (3P)**

This laboratory course provides a guided experience to hands-on research in biology. It is intended for early-career graduate students wishing an introduction to research practices. Topics will vary with instructor. Crosslisted with: BIOL 309.

BIOL 510. Current Topics in Biology**3 Credits (3)**

Introduction to diverse topics in modern biology, including dynamic areas of current research.

BIOL 514. Plant Physiology**3 Credits (3)**

Overview of photosynthesis, respiration, water relations of plants, minerals and organic nutrition, growth and development. May be repeated up to 2 credits.

Prerequisite: BIOL 2110G and CHEM 1225G.

Learning Outcomes

- Describe how individual plants survive in variable environments.
This means that students will be able to: a. Summarize the chemical and physical bases for major plant processes. b. Explain how major plant processes interact to support plant growth and development. c. Describe the adaptive forms of physiological processes and their underlying anatomical modifications.
- Predict consequences of environmental change on physiological processes within individual plants.
- Apply course concepts to real-world scenarios that involve plant function and plant development.
- Describe experimental approaches used to understand physiological processes within individual plants.

BIOL 520. Molecular Cell Biology**3 Credits (3)**

An in-depth look at cellular processes and structures at the molecular level. Emphasis is placed on formal student presentations and discussions of current literature.

Prerequisite: BIOL 377 or equivalent.

BIOL 527. Symbiosis**3 Credits (3)**

In-depth treatment of the ecology, evolution, and mechanisms that are found in symbiotic systems. May be repeated up to 3 credits. Crosslisted with: BIOL 427.

Prerequisite(s): Graduate status.

BIOL 536. Advanced Disease Vector Biology**3 Credits (3)**

Fundamentals of disease vector biology with emphasis on molecular biology. Explores an overview of vector borne diseases, insect endocrinology, insect immunity, olfaction, vector genome projects and transgenic insect techniques. Includes student presentations and literature discussions. Taught with: BIOL 436.

Prerequisite(s): BIOL 2110G and BIOL 305.

BIOL 540. Science and Ethics**1-3 Credits (1-3)**

Ethical concerns facing researchers in the basic and applied biological sciences. Coverage of responsible conduct in research including scientific integrity and research misconduct, mentor/trainee responsibilities, data management, authorship, publication practices, human subjects, animal welfare, intellectual property, conflicts of interest and effort and collaborative science. Emphasis on ethical reasoning skills. Discussion of ethical and societal implications of issues selected from a broad range of contemporary research areas (genetics, reproductive biology, environmental sciences, nanoscience, drug discovery, bioengineering, neuroscience). Subtitled. May be repeated up to 4 credits. Crosslisted with: PHIL 540.

BIOL 541. Professional Development Seminar**1-3 Credits**

Practical aspects of career enhancement including job seeking, professional presentations, grant proposals, etc.

Prerequisite: consent of instructor.

BIOL 550. Special Topics**1-3 Credits**

Readings, discussions, and/or field and laboratory investigation of selected problems. Possible topics: human genetics, systematic entomology, or parasitism in animals. May be repeated for unlimited credit.

Prerequisite: consent of instructor, and designation of a specific topic before registration.

BIOL 562. Advanced Genomics Technology**3 Credits (3)**

This course covers current genomics techniques in genome sequencing, transcriptome analysis, detection of genetic variation, and metagenomics. May be repeated up to 3 credits. Consent of Instructor required. Crosslisted with: BIOL 442.

BIOL 565. Biology In The K-6 Curriculum**3 Credits (3)**

Linking important biological concepts to the K-6 curriculum and standards. Addressing known content area challenges with effective pedagogical approaches. Aligning content, standards, classroom activities and assessment. Does not fulfill requirements for degrees in biology. Consent of Instructor required. Restricted to: Master of Arts in Education: Elementary Mathematics and Science majors.

Learning Outcomes

- Explain that biology is a scientific discipline based on observations and experimentations.
- Explain the process of scientific inquiry and explain how scientific knowledge is discovered and validated.
- Describe the chemical basis of living organisms and how biomolecules contribute to the structure and function of cells.

4. Develop a basic familiarity with cells and cell organelles.
5. Describe the structure and function of DNA as well as how DNA is used in the production of proteins
6. Describe the basic principles of genetics and heredity leading to human diversity.
7. Identify the major features of the systems in the human body, and understand the anatomy and physiology of them
8. Describe the roles of the organ systems in maintaining homeostasis
9. Explain the principles of evolution by means of natural selection explaining the diversity of life. 1
10. Describe how science and technology have impacted life in particular to society and the environment (e.g. medicine, forensic science, agriculture, ecology, sustainability) 1
11. Describe the benefits of a case study approach to teaching 1
12. Align biology content with specific K-6 (e.g. NGSS) science standards 1
13. Design an instructional case study (complete with teaching notes and assessment) to address specific K-6 science standards

BIOL 566. Advanced Bioinformatics and NCBI Database

3 Credits (3)

The course discusses how to use NCBI database and bioinformatic tools for research with genomics approaches. The topics include nucleotide and protein sequence analysis, similarity search with blast algorithms, gene/genome annotation, protein structure analysis, gene expression analysis, and metagenomic study. Consent of Instructor required.

BIOL 568. Communities and Ecosystems

3 Credits (3)

Community ecology is an interdisciplinary field that integrates numerous theories, concepts, and methods to study the patterns and dynamics of biotic assemblages. Because biotic groups affect the biogeophysical and biogeochemical processes that govern Earth system functioning, community ecology also plays an increasingly large role in the study of ecosystem ecology, a discipline which seeks to understand the processes governing nutrient and energy flow across the Earth system. This course will explore the theories and methods for study of biodiversity, biogeography, and community assembly, as well as the pathways through which communities exert influence on ecosystem functioning. Topics will also include evolutionary influences on communities, the integration of community ecology into conservation and land management, and community ecology in an era of rapid environmental change.

BIOL 577. Advanced Topics in Environmental Microbiology

3 Credits (3)

This course is based on current literature in Environmental Microbiology, and is a seminar-style, discussion-based class. Topics typically include marine microbiology, ancient DNA and the human microbiome.

Prerequisite(s): Consent of instructor.

BIOL 581. Physiology of Animals

3 Credits (3)

Comprehensive treatment of integrative physiology of animals, emphasizing tissues, organ systems, and regulatory control, including neuroendocrine function, circulation, respiration, and excretion. Term paper required. BIOL 2610G, BIOL 377 recommended.

Prerequisite: BIOL 2110G.

BIOL 582. Advanced Plant Signalling and Development

3 Credits (3)

This is a course that introduces plant signalling pathways and their role in development to students. The lectures are structured to facilitate in-class discussions on the current state and future directions in this field. Topics

will cover a wide range of biological questions and the methods used to study them. May be repeated up to 3 credits.

Prerequisite(s): BIOL 305 or GENE 315, and MATH 1220G.

BIOL 587. Behavioral and Evolutionary Ecology

3 Credits (3)

This course will investigate the causes and consequences of phenotypic variation and the adaptive value of phenotypic traits.

BIOL 589. Speciation and Adaptation

1-3 Credits (1-3)

Examination of the two great themes of evolutionary biology. Begins with an historical overview of perspectives on these evolutionary processes, and then moves through the foundations of modern research to focus on recent advances driven by improvements in theory and technology. Emphasis on synthesis of the primary literature through lectures, discussion, and written assignments.

Learning Outcomes

1. Students will actively participate in discussions focused on both classic foundational texts as well as recent research in this field.
2. Students are expected to lead class discussions on relevant evolution topics.
3. Students will learn to write a literature review paper on a specific topic in the field of evolutionary biology.

BIOL 590. Neuroscience

1-3 Credits

Detailed examination of the principles underlying nervous system organization and function. Emphasis on recent advances in multidisciplinary, integrated approaches to study the nervous system. May be repeated up to 9 credits.

BIOL 598. Special Research Programs

1-9 Credits

Individual investigations either analytical or experimental.

BIOL 599. Master's Thesis

15 Credits

Thesis.

BIOL 600. Doctoral Research

1-15 Credits

Research.

BIOL 610. Seminar

1-3 Credits (1-3)

Oral presentation and discussion of journal articles and ongoing research projects. May be repeated up to 6 credits. Graded: S/U Grading (S/U, Audit).

BIOL 612. Microbiology Seminar

1 Credit (1)

Seminar to aid graduate students in assessment and presentation of classical and current topics in microbiology.

BIOL 698. Selected Topics

1-3 Credits

Selected topics for doctoral students.

BIOL 700. Doctoral Dissertation

15 Credits

Dissertation.

BLAW-BUSINESS LAW

BLAW 2110. Business Law I

3 Credits (3)

Survey of the legal environment of business and common legal principles including: the sources of law, dispute resolution and the U.S. court systems, administrative law, tort law, contract law, agency and employment law, business structure and governance, ethics and corporate social responsibility. Explores sources of liability and presents strategies to minimize legal risk. Offered at all NMSU Community Colleges except Dona Ana Community College. Credit may not be earned in both BLAW 2110 and BLAW 317.

Learning Outcomes

1. Describe the sources of law.
2. Describe and explain dispute resolution and the court systems in the United States.
3. Describe the concepts of negligence, intentional torts and strict liability.
4. Describe and apply the essential aspects of contracts from creation, performance, breach and remedies, including basic contract law from Article 2 of the Uniform Commercial Code.
5. Explain the concept of ethics.

BLAW 313. Sports and the Law

3 Credits (3)

Introduction to legal concepts related to sports and business including an introduction to U. S. law and the civil practice, agency, sports contracts, sport torts, sport crimes, pertinent federal legislation such as Title IX, drugs and sports, international sports issues, pertinent antitrust issues, intellectual property, ethics and alternative dispute resolution.

Prerequisite(s)/Corequisite(s): BLAW 316.

BLAW 316. Legal Environment of Business

3 Credits (3)

Survey of business law including: the legal system (court systems, sources and types of law, litigation and dispute resolution), ethics and corporate social responsibility, administrative law, tort law, contract law, agency and employment law, business structure and governance, securities regulations, and international law. Students may not receive credit for both BLAW 316 and BLAW 317.

BLAW 325. Real Estate Principles and Law I

3 Credits (3)

Real estate law and the fundamental aspects of the real estate purchase transaction and the real estate lease agreement. Topics include real estate brokerage, marketing of real estate, fundamental legal aspects of real estate, present and future interests, air and water rights, methods of transfer, basics of financing and liens, and real estate leases. Same as BFIN 325.

BLAW 330. Entrepreneurial Law

3 Credits (3)

This course will explore the legal issues faced in the process of launching, financing, and growing a new venture. We will pay special attention to ventures making use of innovative technologies and business models. Intellectual property (trade secrets and confidential information, patents, copyrights, and trademarks) are of special importance to innovation-driven ventures, so we will consider in-depth how intellectual property is developed, protected, and put to use.

BLAW 385V. Employment and Consumer Law

3 Credits (3)

Study of the interrelationships between business, legal, and ethical aspects of employment and consumer issues and their attendant civil liability and remedies in domestic and international markets.

Learning Outcomes

1. Almost every aspect of today's businesses is subject to a myriad of legal requirements imposed by law (whether that law be civil

or criminal, common or statutory, or regulatory). Legal issues lurk everywhere! To succeed in business, one must be aware of the major aspects of the substantive law and the nature of the legal system, and be able to communicate with the lawyers that he or she will likely come in contact with.

2. Successful completion of this course will not qualify you to be a lawyer or to solve your own legal problems (or those of your business). Rather, this course will provide you with a broad overview of certain aspects of the law that you may encounter in your day-to-day business (or personal) affairs (some of the subjects covered in a chapter in this course are semester-long courses in law school, so this course necessarily is somewhat of a "survey" of the topics covered).
3. Successful completion of the course should provide you with sufficient knowledge to recognize when "legal" issues in consumer protection are looming, and provide you some tools to assist you in seeking the right help to address the issues. Students taking this course will better understand the American legal system, with an emphasis on administrative law, since most consumer protection regulations are a creature of administrative law.
4. Secondly, students will master the scope of several consumer protection agencies, their respective roles and responsibilities, and the associated obligations of businesses and consumers to comply with the various agency rules and regulations.
5. Third and finally, interspersed throughout the semester student will learn about select topics they choose that have some relationship to consumer protection. This is student guided, and can be anything of interest to you. In the past, I have covered landlord-tenant law, intellectual property, state lemon laws, election law, and employment law.

BLAW 490. Selected Topics

1-3 Credits

Prerequisites vary according to the seminar being offered.

BLAW 498. Independent Study

1-3 Credits

Individual studies directed by consenting faculty with the prior approval of the department head.

Prerequisites: junior or above standing and consent of instructor and department head.

BLAW 502. Legal Environment of Business

3 Credits (3)

Legal procedures and the judicial system as applied to business situations and a general coverage of the bodies of substantive law most commonly associated with business.

Prerequisite: graduate students only.

BLAW 518. Uniform Commercial Code and Advanced Business Law Topics

3 Credits (3)

Property, advanced contract law, debtor-creditor relations, bankruptcy and Uniform Commercial Code topics, including sales, negotiable instruments, secured transactions. Students who have taken either BLAW 318 or BLAW 418 may not receive credit for BLAW 518. Same as BLAW 418 with differentiated assignments for graduate students.

Prerequisite(s): BLAW 316 or BLAW 502.

BLAW 550. Selected Topics

3 Credits (3)

Seminars in selected topics related to business law or the legal environment of business.

Prerequisite(s): Varies according to seminar being offered.

BLAW 598. Special Research Programs

1-3 Credits

Individual investigations either analytical or experimental with the prior consent of the instructor and department head.

Prerequisite: consent of instructor and department head.

BLED-BILINGUAL EDUCATION

BLED 1110. Introduction n Bilingual Education/ESL

3 Credits

An overview of the American Education system with emphasis on organization, governance, law, demographics, and professional practice. Will include supervised experience in bilingual education/ESL elementary settings for prospective bilingual education/ESL teachers.

Learning Outcomes

1. Complete 24 hours field observations in a classroom.
2. Articulate the attributes of an education professional entering the field.
3. Construct an individualized map to teacher licensure in the State of New Mexico.
4. Differentiate and summarize the major educational philosophies and historical events that have influenced the progression of educational practice.

BLED 2110. Bilingual Methods

3 Credits (3)

This course provides a historical overview of bilingual and ESL education including an emphasis on present trends and practices. Discussions of the aspects of bilingualism at both an individual and a societal level are included. May be repeated up to 3 credits.

Learning Outcomes

1. (Culture) Develops awareness in the learner of the value of cultural diversity.
2. (Culture) Prepares and assists students to interact successfully in cross cultural settings.
3. (Culture) Recognizes and accepts different patterns of child development within and between cultures in order to formulate realistic instructional strategies.
4. (Culture) Recognizes the similarities and differences between mainstream American and other cultures and the potential conflicts and opportunities they may create for students.
5. (Culture) Demonstrates knowledge of the effects of culture and socio-economic variables in learning styles.
6. (English Language Development) Demonstrates knowledge of the basic nature of language, language acquisition, language variation, language change, and the relation of language to society and culture.
7. (English Language Development) Demonstrates knowledge of the nature of bilingualism and the process of becoming bilingual.
8. (Instructional Methodology) Demonstrates knowledge of the historical, legal, theoretical, and sociological foundations of programs of instruction for second language learners.
9. (Instructional Methodology) Demonstrates knowledge of theories of first and second language acquisition. 1
10. (Instructional Methodology) Utilizes teaching methods appropriate to various age and language groups.

BLED 3110. Secondary Bilingual/ESL Field Experience

3 Credits (2+2P)

Develop professional skills, dispositions, and understanding of secondary bilingual youth, content, and pedagogy through discussion seminar and interactions with public education mentor teachers. Focused observations, study of classroom language and culture, introduction to lesson planning and student assessment. Requires 32 hours of practicum field experience. Taught with EDUC 3997. May be repeated up to 3 credits.

Learning Outcomes

1. Complete thirty-two hours of secondary classroom and professional development practicum with a satisfactory rating from middle/high school cooperating teacher.
2. Apply Costa's Level of Thinking, WICOR strategies, Cornell Notes, and other high-yield strategies of the AVID College Readiness System.
3. Interact with youth through a tutoring model.
4. Demonstrate ability to effectively utilize specific observation techniques in secondary classrooms following specific guidelines.
5. Describe classroom language and culture of middle/high school.
6. Develop an understanding of resources available at the secondary level.
7. Identify authentic assessment and instructional methods that can be used to deliver engaging lessons in specific content areas.
8. Participate in a weekly discussion seminar.
9. Assemble a culminating reflective portfolio that demonstrates the ability to self-assess strength and need areas based on NM Teach InTASC standards and experiences in the classroom/professional development.

BLED 3120. Sheltered English Instruction for the ESL Classroom

3 Credits (3)

Addresses the acquisition of English proficiency by speakers of other languages. May be repeated up to 3 credits.

Learning Outcomes

1. Discuss sheltered instruction for teaching English learners (ELs).
2. Compare and contrast SIOP model lesson components and features.
3. Co-Design a grade-level and subject-specific SIOP lesson with a peer.
4. Correlate components of your prepared lesson plan to ensure alignment.
5. Co-Implement your SIOP lesson in class.
6. Evaluate two lessons (yours and another lesson developed by two other peers).

BLED 3130. Language, Literacy, and Culture in the ESL Classrooms

3 Credits (3)

Framework and strategies for developing the written abilities of second language learners. May be repeated up to 3 credits.

Learning Outcomes

1. Build an online learning community.
2. Demonstrate an understanding of various perspective and theories on language, culture, and literacy.
3. Demonstrate an understanding of the impact that federal and state language/literacy policies have had on schools.
4. Evaluate the major arguments articulated and varying positions taken about language, literacy, and culture by scholars from different disciplines, such as Sociolinguistic, Linguistics, Sociology, Cultural studies.
5. Analyze social, political, and ideological aspects/components of these concepts, perspectives, and theories.
6. Explain the interaction between literacy, language, culture, and its implication for student learning.

7. Apply the theories of language, culture, and literacy they are learning in classroom practices.
8. Demonstrate critical thinking skill

BLED 3140. Issues in Schooling for Bilingual Learners

3 Credits (3)

Current thought and direction regarding bilingual education in the United States and New Mexico. May be repeated up to 3 credits.

Learning Outcomes

1. To create a framework for understanding issues facing bilingual learners with scrutiny toward social justice.
2. To review and study the various theories that informs bilingual education.
3. To explore the classroom practice of these theories with bilingual learners.
4. To co-construct practical teaching strategies to use with bilingual learners.
5. To reflect on the socio/politico-cultural constructs and contexts of bilingual learners

BLED 4110. Second Language Acquisition

3 Credits (3)

Exploring affective, cultural, linguistic, cognitive factors that influence the second language acquisition process with application to classroom practice. Restricted to: TEP, EED, ECED, SED and SPED majors. May be repeated up to 3 credits.

Learning Outcomes

1. Explore different language perspectives as they relate to first and second language acquisition
2. Explore the role of language across different social contexts and academic contexts
3. Explore the cognitive factors influencing language development in second language learning and acquisition
4. Examine culturally linguistically diverse styles of second language learners and how these factors influence the second language acquisition process
5. Explore, select and implement second language teaching methods

BLED 4996. Special Topics

3 Credits (3)

Course subtitled in the Schedule of Classes. May be repeated up to 9 credits.

Learning Outcomes

1. Examine specific topics selected by the instructor in the field of bilingual education.

BLED 5110. Adult and Family Literacy in TESOL

3 Credits (3)

An exploration of the theoretical, programmatic, and curricular frameworks for English language learners and their families. Focus on the development of culturally responsive and pedagogically sound literacy programs. May be repeated up to 3 credits.

Learning Outcomes

1. Examine the assumptions underlying the common practices of family and adult education that predominate in schools and in public discourse.
2. Plan and conduct an adult and family literacy project by expanding the range of family literacies to include those practiced in non-mainstream cultural groups, as well as to include those literacies

that are necessary in order to be able to participate fully in building a democratic society.

3. Develop research questions, collect data from the adult and family literacy sessions, and write a Family Literacy Research Project.
4. Develop an advocacy plan for policy makers and administrators based on your work with adults and families.

BLED 5120. The Bilingual Preschool Child

3 Credits (3)

Principles of multicultural education applied to preschool and primary levels. Focus on issues, methods, and materials. May be repeated up to 3 credits.

Learning Outcomes

1. Compare and contrast bilingual -bicultural early childhood curriculum models.
2. Address early literacy and language development in children's first and second languages.
3. Demonstrate strategies for cross-cultural competence when working with families and communities.
4. Respond to the linguistic and cultural backgrounds of children.
5. Use the cultural arts in curriculum planning and language development.
6. Apply theory and research in bilingual studies.

BLED 5130. Issues in Schooling for Bilingual Learners

3 Credits (3)

Identification and consideration of current thought and directions in bilingual education, nationally and internationally. May be repeated up to 3 credits.

Learning Outcomes

1. To create a framework for understanding issues facing bilingual learners with scrutiny toward social justice.
2. To review and study the various theories that informs bilingual education
3. To explore the classroom practice of these theories with bilingual learners
4. To co-construct practical teaching strategies to use with bilingual learners
5. To reflect on the socio/politico-cultural constructs and contexts of bilingual learners

BLED 5210. Literacy-Language Instruction for Bilingual Students

3 Credits (3)

Framework and strategies for developing the written language abilities of bilingual learners, with attention to the interrelationships among reading, writing, and oral language. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate knowledge about diverse theories on literacy, language, and culture and fully grasp the intersection between language, culture, and literacy and its implication for student learning.
2. Articulate an understanding of children's literacy and biliteracy development by examining the relationship between oral and written language.
3. Apply pedagogical knowledge about teaching and learning of reading/writing across different social contexts.
4. Develop an understanding of theoretical frameworks governing proficient reading and writing of all children, particularly bilingual learners.

5. Refine understanding of how children "come to know" literacy, biliteracy, and critical literacy.
6. Implement best practices that organize, facilitate, mediate, and develop children's language, literacy, and content knowledge across the curriculum.
7. Demonstrate an understanding of how to organize teaching/learning for success in literacy and biliteracy across curricular content.

BLED 5220. Sheltered English Instruction for the ESL Classroom
3 Credits (3)

Addresses the acquisition of English proficiency via the SIOP (Sheltered Instruction Observational Protocol) a research validated model for lesson planning and implementation that provides English learners with access to grade-level standards.

Learning Outcomes

1. Discuss sheltered instruction for teaching English learners (ELs).
2. Compare and contrast SIOP model lesson components and features.
3. Co-Design a grade-level and subject-specific SIOP lesson with a peer.
4. Correlate components of your prepared lesson plan to ensure alignment.
5. Co-Implement your SIOP lesson in class.
6. Evaluate two lessons (yours and another lesson developed by two other peers).

BLED 5230. Language, Literacy and Culture in the ESL Classrooms
3 Credits (3)

Framework and strategies for developing the written abilities of second language learners. Explore different theories of language, culture and literacy by analyzing the interconnections between language, culture and literacy.

BLED 5310. Bilingual/Multicultural Schooling and Community Relations
3 Credits (3)

Rationale, information pertinent to the school and the community in a setting involving economic, cultural, and linguistics diversity. May be repeated up to 3 credits.

Learning Outcomes

1. This course is designed as a space to enhance educators' understanding of bilingual/multicultural schooling and community relations in the borderland region as it relates to the rest of the US, with a view to rethinking their own role in order to become agents of change.
2. The main objective of this course is the development of a framework to understand, critique and contribute to the strengthening and critical transformation of school and community relations in the borderlands

BLED 5320. Second Language Acquisition
3 Credits (3)

Exploring affective, cultural, linguistic, cognitive factors that influence the second-language-acquisition process with application to classroom practice. May be repeated up to 3 credits.

Learning Outcomes

1. Explore different language perspectives as they relate to first second language acquisition
2. Explore the role of language across different social contexts and academic contexts
3. Explore the cognitive factors influencing language development in second language learning and acquisition

4. Examine culturally linguistically diverse styles of second language learners and how these factors influence the second language acquisition process
5. Explore, select and implement second language teaching methods.

BLED 5330. Assessment in Culturally & Linguistically Responsive Teaching

1-3 Credits (1-3)

An overview of approaches to assessment with a special focus on cultural and linguistic responsiveness needed for teaching learners of English as an additional language.

Learning Outcomes

1. Explore different approaches to assessment in cultural and linguistically diverse (CLD) settings
2. Explore authentic assessment by content areas for assessing CLD students
3. Explore assessment of English language development in CLD students
4. Examine culturally linguistically diverse styles of CLD students
5. Select Culturally and Linguistically responsive assessments for assessing content and language in CLD students

BLED 5410. Sociolinguistics in Education

3 Credits (3)

Course provides an overview of sociolinguistics, with emphasis on the study of the relationship between language and society. Explores both foundational and current issues as they relate to educational practice.

Learning Outcomes

1. The nature of reading and writing as socio-psycholinguistic processes including: Language, culture and politics and their relationships; The structure, forms and purposes of written language; What makes a text a text; Readers and writers as users of language. What that means; Written language in education and curriculum; Oral and written language development and their relationships; Alphabetic and non-alphabetic writing systems; Defining oneself as a literate person

BLED 5420. Pedagogy of TESOL

3 Credits (3)

Overview of approaches that provide for interactive, culturally responsive pedagogy for students acquiring English. Emphasis on content and language integration through sheltered instruction. May be repeated up to 3 credits.

Learning Outcomes

1. Understand and explore the foundations of TESOL instruction.
2. Analyze the sociocultural theory of teaching English as a second/foreign language.
3. Demonstrate an understanding of culturally responsive pedagogy in language teaching and academic achievement.
4. Evaluate principles of best practices instruction and applications of TESOL methods.
5. Explore assessment issues and concepts related to English Language Learners.
6. Examine the impact of policies, national laws, school and community partnerships, and personal professional development on TESOL instruction.
7. Develop, select, and implement second language teaching methods.

BLED 5990. TESOL Practicum

3 Credits (3)

Classroom applications of ESL literacy development through supervised teaching experiences accompanied by a seminar. May be repeated up to 3 credits.

Learning Outcomes

1. Apply philosophies of education related to curriculum issues in content and language ESL classroom settings
2. Apply knowledge of second language acquisition theory and methods in teaching ESL
3. Collaborate with peers in the design of age appropriate culturally and linguistically responsive lessons for English language learners
4. Reflect on teaching experiences making connections to theories, methods, assigned readings, and prior knowledge and experience
5. Authenticate a culturally and linguistically responsive pedagogy in practice

BLED 5992. Directed Study in Bilingual Education

1-6 Credits (1-6)

Independent research topics in bilingual education based on particular individual interest or needs. May be repeated up to 88 credits.

Learning Outcomes

1. Analyze selected topics of interest in bilingual education selected by the student.

BLED 5996. Selected Topics in Bilingual Education

1-6 Credits (1-6)

Various topics on current requests and needs in bilingual education. May be repeated up to 6 credits.

Learning Outcomes

1. Examine specific topics selected by the instructor in the field of bilingual education.

BLED 5998. Internship in Bilingual Education

1-6 Credits (1-6)

Advanced experience in educational bilingual settings for prospective bilingual education teachers. May be repeated up to 6 credits.

Learning Outcomes

1. The Internship has traditionally meant that you will be involved in practicing what you have learned in a series of studies you have taken or are taking. In this course, we will cover topics and themes related to bilingual education

BLED 6110. Acquiring Emancipatory Discourses: TESOL/BIL

3 Credits (3)

An elaboration of understandings of bi- and multilingualism and related models of education based on current research and practice. May be repeated up to 3 credits.

Learning Outcomes

1. This course is designed for participants to -deepen their critical understanding of the relationship between language and power and its relevance to educational studies -analyze critical discourses from different contexts, institutional settings, and social agents: major discourse theorists, educational researchers, teachers, and students -become familiar with Critical Discourse Analysis as a framework and a methodology to study the role of discourse in the construction of the social world and its relevance to teachers, students, and researchers in education

BLED 6120. Multiple Critical Literacies

3 Credits (3)

An exploration of the multiple literacies that operate on the individual, classroom, community, cultural and societal levels. Taught with READ 6120. May be repeated up to 3 credits.

Learning Outcomes

1. This doctoral level course explores in depth various theories about literacy.
2. Placed in the bilingual and multicultural context, this course critically reviews and brings to the forefront key linguistic, educational, socio-economic, political, cultural, and racial issues related to literacy.
3. It goes on to unveil and carefully analyze various ideological forces informing multiple forms of literacy and the effects of these forces on student learning, teachers' teaching practices, and people's lives in general.

BLED 6130. Literacy / Biliteracy Assessment and Evaluation

3 Credits (3)

Developing students ability to understand and critique both traditional and alternative forms of assessment.

Learning Outcomes

1. Literacy assessment and evaluation
2. Documenting student language and literacy development
3. Interpreting and analyzing your documentation/data
4. Generating and implementing appropriate, engaging and effective literacy instructions in order to meet children's interests and needs
5. Linguistics, psycholinguistics, sociolinguistics and their relationships
6. Readers and writers as users of language.
7. Relationships between reading, writing and text
8. Reading strategies and instructional implications
9. Kidwatching: documenting and analyzing literacy processes and events 1
10. Miscue Analysis: Understanding and analyzing children's oral reading 1
11. Defining oneself as a literate person

BLED 6210. Curriculum and Instructional Leadership

3 Credits (3)

The purpose of this course is to examine the concepts of leadership and curriculum. This examination will focus on the dynamic relationships of these concepts in our society and their differentiated effects on diverse community groups. Our examination will lead us on a development and contributions. Taught with: EDUC 6210.

Learning Outcomes

1. To become well versed in those issues surrounding leadership and curriculum and their impact on various groups in society.
2. To develop an understanding of how the interactions of leadership, curriculum, and multiculturalism impacts distribution of knowledge in our society.
3. To develop an appreciation for the diverse representations of the concepts curriculum and leadership.
4. To evolve an understanding of the interconnectedness of leadership, curriculum, multiculturalism, and people.
5. For you to determine: A good leader-

BLED 6220. Praxis and Reflexivity

3 Credits (3)

The cyclical research processes of continuous self and systemic (re)evaluation vis-a-vis classroom, community, and society with an eye toward reflection, growth, change, and larger forms of social agency. May be repeated up to 3 credits.

Learning Outcomes

1. Thematic and theoretical explorations aimed at setting the path for your dissertation research

2. Theorization and the actualization of your own educational praxis and reflexivity as educators within this 'new world order', Therefore we will read, discuss and enact some theoretical and practical ideas by well-known and not so well-known thinkers and researchers who have been working on these issues for several years.

BLED 6310. Critical Theory and Pedagogy

3 Credits (3)

The course will explore critical theory and pedagogy and its applications to everyday life, teaching and learning. Taught with: EDUC 6310.

Learning Outcomes

1. Review, study and write about the history of critical theory and pedagogy.
2. Become familiar with current research regarding critical theory and pedagogy and to gain knowledge and understanding of its application to teaching and learning.
3. Create the opportunity to interact with peers and instructor regarding course topics.
4. Begin to understand the why and not only the how and what of critical theory and its pedagogies.

BLED 6320. Social Justice Issues in Education

3 Credits (3)

Students are introduced to social justice issues as they relate to education. In particular, we will seek to understand the interconnectedness and relationship between the social construction of inequity within education and the ways in which teachers, students, researchers and administrators grapple with such inequities. There will be an examination of historical and social injustices, social movements that seek to overcome these injustices, and contemporary work done by activists around the globe to cause transformation with such issues. Crosslisted with: EDUC 637.

Learning Outcomes

1. Define and describe key social justice concepts and principles in education,
2. Compose documents and reports while correctly utilizing American Psychological Association (APA) format,
3. Develop online resources for use in their work,
4. Critique and reflect upon diverse theoretical frameworks,
5. Utilize conceptual frameworks to analyze divergent theories in education, and
6. Apply information provided in this course to real-life situations.

BLED 6992. Directed Study in Bilingual Education

1-6 Credits (1-6)

Independent research topics in bilingual education based on particular individual interest or needs. May be repeated up to 6 credits.

Learning Outcomes

1. Analyze selected topics of interest in bilingual education selected by the student.

BLED 6998. Internship in Bilingual Education

3 Credits (3)

In this course you will apply your knowledge developed in prior coursework about the research, history, theories, policies, pedagogies, and practices in bilingual education. You will apply this knowledge in a bilingual internship setting where you will conduct your own research.

Learning Outcomes

1. The Internship has traditionally meant that you will be involved in practicing what you have learned in a series of studies you have taken or are taking.

2. In this course, we will cover research topics and themes related to bilingual education.

BMGT-BUSINESS MANAGEMENT

BMGT 112. Banks and Your Money

3 Credits (3)

Banking in today's economy: language and documents of banking, check processing, teller functions, deposit function, trust services, bank bookkeeping, loans, and investments.

Learning Outcomes

1. Define and explain the importance of full-service commercial banking.
2. Explain the impacts of the banking industry on the economy, the community, and individuals.
3. Describe the major functions of commercial banks and their interrelationships.
4. List and describe the major products and services provided by commercial banks.
5. Contrast the differences and similarities between time and demand deposits.
6. Describe the process and rationale behind issuing credit and loans.
7. Discuss the importance, necessity and process of bank investments.
8. Explain the concept of liquidity and its importance to the banking industry.
9. Identify and describe the duties of the various bank regulating agencies and the major regulations they enforce. 1
10. Describe the history and growth of the banking industry in the United States. 1
11. Explain the functions and importance of the Federal Reserve System.

BMGT 126. Retail Management

3 Credits (3)

Phases of retailing, including types of retail outlets and basic problems of organizing and operating a retail store. Restricted to: Community Colleges only.

BMGT 132. Principles of Selling

3 Credits (3)

Analysis of customer behavior, persuasive communication, process of the sales interview. Restricted to: Community Colleges only.

BMGT 136. Forecasting Business Activity

3 Credits (3)

Course covers the important elements of forecasting all types of business activities including inventory control, revenue forecasts, staffing, and other industry specific activities using metrics and data analysis processes. Restricted to Community Colleges campuses only.

Prerequisite: BUSA 1110.

Learning Outcomes

1. Define integrity and understand its importance to small business and explain how it applies to various stakeholders.
2. Distinguish among the different types and sources of startup ideas.
3. Understand the pros and cons of franchising.
4. Describe the purpose and content of an income statement and balance sheet.
5. Designate the purpose of financial forecasting.
6. Diagnose a pro forma income statement to forecast a new ventures profitability.
7. Realize the concepts of forecasting a firm's cash flows.
8. Identify various scenarios for effective financial forecasting.

9. Evaluate the choice between debt and equity financing. 1
10. Comprehend how technology can be used to improve customer relationships. 1
11. Explain how the internet and social media are changing promotional and communication practices. 1
12. Discuss the key financial issues in managing a firm's inventory.

BMGT 138. Advertising**3 Credits (3)**

Psychological approach to non-personal consumer persuasion; applied techniques in media selection, layout mechanics, production methods, and campaign structures. Restricted to: Community Colleges only.

BMGT 140. Principles of Supervision I**3 Credits (3)**

Principles of supervision emphasizing planning, organization, rating of employees and procedures to develop good morale. Introduction to interpretation of case studies. Restricted to: Community Colleges only.

BMGT 150. Income Taxation**3 Credits (3)**

Federal income taxation of individuals, sole proprietorships, partnerships, corporations, trusts, and estates with particular reference to CLU, life insurance and annuities. Restricted to: Community Colleges only.

BMGT 155. Special Topics I**1-3 Credits (1-3)**

Introductory special topics of lower division level work that provides a variety of timely subjects and content material. May be repeated up to 9 credits. Restricted to Community Colleges campuses only.

BMGT 160. Self-Presentation and Etiquette**3 Credits (3)**

Introduction to business etiquette based on tradition, social expectations, and professional behavior standards. Restricted to: Community Colleges only.

BMGT 201. Work Readiness and Preparation**3 Credits (3)**

Instruction in methods of selection, seeking, acquiring and retaining employment. Addresses work success skills, business etiquette, employer expectation and workplace norms. Restricted to Community Colleges campuses only.

BMGT 205. Customer Service in Business**3 Credits (3)**

Establishes concepts of service quality in relationship to business success and maximization of returns to the organization. Explores techniques for delivering quality and service in a variety of business settings. Restricted to: Community Colleges only.

BMGT 208. Business Ethics**3 Credits (3)**

The course examines the underlying dimensions of ethics in business, investigating ethics in relationship to the organization, the stakeholders, and society. Exploration of ethical issues from a historical context, analyzing actual events through the lens of business decision making, including legal/political, sociocultural, economic, and environmental considerations will be undertaken. Restricted to Community Colleges campuses only.

BMGT 216. Business Math**3 Credits (3)**

Application of basic mathematical procedures to business situations, including percentage formula applications, markup, statement analysis,

simple and compound interest, and annuities. Restricted to: Community Colleges only.

Prerequisite(s): CCDM 103 N or satisfactory math score on ACT.

BMGT 221. Internship I**1-3 Credits (1-3)**

Work experience that directly relates to a student's major field of study that provides the student an opportunity to explore career paths and apply knowledge and theory learned in the classroom. Internships may be paid or unpaid. Students are supervised/evaluated by both the employer and instructor. May be repeated up to 3 credits. Consent of Instructor required. Restricted to: BMGT majors. Graded: S/U Grading (S/U, Audit). Restricted to Community Colleges campuses only.

BMGT 232. Personal Finance**3 Credits (3)**

Budgeting, saving, credit, installment buying, insurance, buying vs. renting a home, income tax statement preparation, investment, and estate disposal through will and trust. Restricted to: Community Colleges only.

BMGT 236. Small Business Start-Up**3 Credits (3)**

Starting a small business is a complex endeavor that requires specialized knowledge. This course prepares students to take the first step in business ownership and operations. Restricted to Community Colleges campuses

Learning Outcomes

1. Identify the unique challenges of starting a small business.
2. Identify opportunities to start up a business and conduct a needs analysis.
3. Develop value proposition/market fit for proposed products and services.
4. Develop an appropriate business model.
5. Identify the availability of necessary resources.

BMGT 237. Managing Small Businesses**3 Credits (3)**

Managing a small business requires the owner/operator to be proficient in a number of skills and technical areas. This course provides small business owners/operators with the training and essential knowledge to manage a small business. Restricted to Community Colleges campuses

Learning Outcomes

1. Identify the strengths and weaknesses of small businesses
2. Define entrepreneurship and identifying its traits
3. Demonstrate a capability to explore and research business opportunities
4. Explain how to plan to start a new business, identifying legal structures, financing options, and organizing a management team
5. Identify and analyze financial statements
6. Review the importance of management information systems
7. Identify their own managerial leadership style
8. Review purchasing and inventories, taxation and insurance
9. Describe the process of writing a business plan

BMGT 250. Diversity in the Workplace**3 Credits (3)**

Concepts of culture, diversity, prejudice, and discrimination within the domestic workforce/society. Restricted to Community Colleges campuses only.

Prerequisite(s): BUSA 1110.

BMGT 272. E-Commerce Operations**3 Credits (3)**

Includes the many forms of e-commerce and emerging technologies that will impact the business of tomorrow. Restricted to Community Colleges campuses only.

Prerequisite(s): OECS 105 or BCIS 1110.

BMGT 280. Introduction to Human Resources**3 Credits (3)**

Personnel functions encompassing job analysis, recruitment, selection, training, appraisals, discipline, and terminations. Prerequisite(S): BUSA 1110 or B A 104. Restricted to Community Colleges campuses only.

BMGT 282. Introduction to International Business Management**3 Credits (3)**

Overview of the social, economic and cultural environment of international business transactions. Restricted to Community Colleges only.

Prerequisite(s): BUSA 1110.

BMGT 286. Introduction to Logistics**3 Credits (3)**

Overview on the planning, organizing, and controlling of transportation, inventory maintenance, order processing, purchasing, warehousing, materials, handling, packaging, customer service standards, and product scheduling. Restricted to: Community Colleges only.

BMGT 287. Introduction to Export/Import**3 Credits (3)**

Procedures and documentation for exporting and importing products. Emphasis on NAFTA regulations and other U.S. border operations crossings. Restricted to Community Colleges only.

Prerequisite(s): BUSA 1110.

BMGT 290. Applied Business Capstone**3 Credits (3)**

Refines skills and validates courses taken in BMGT program. Business simulations, case studies and projects used to test and improve business practices. Student must be within 25 credits of graduation. Restricted to: BMGT majors. Restricted to Community Colleges campuses only.

Prerequisite: BUSA 1110, and (BMGT 140 or MGMT 2110), and (BMGT 240 or SOCI 1110G or PSYC 1110G), and MKTG 2110.

Learning Outcomes

1. Plan, design, and create a real world project related to their field of study.
2. Participate in job shadowing in positions related to their field of study.
3. Create a portfolio in preparation for career applications.
4. Collaborate as a member of a team in their field of study.
5. Identify and use ethical decision-making in working on individual projects, job shadowing, and a team.

BMGT 298. Independent Study**3 Credits (3)**

Individual studies directed by consenting faculty with prior approval of department chair. May be repeated up to 6 credits. Restricted to Community Colleges campuses only.

Prerequisite(s): Sophomore standing with 3.0 GPA.

BUSA-BUSINESS ADMINISTRATION

BUSA 1110. Intro to Business**3 Credits (3)**

Fundamental concepts and terminology of business including areas such as management, marketing, accounting, economics, personnel, and finance; and the global environment in which they operate.

Learning Outcomes

1. Explain how business and entrepreneurship affect the quality of life and the world around us.
2. Explain the characteristics of the different forms of business ownership.
3. Perform basic stakeholder analysis concerning accountability, ethics and social responsibility of business.
4. Demonstrate knowledge of the various dimensions of the business environment including political and legal, socio-cultural, environmental, diversity, economic, technological, and global.
5. Describe the purpose and functions of finance, operations, marketing, management, accounting, and information systems.
6. Demonstrate basic skills such as use of common business terminology, information search skills, presentation and writing skills, and team skills.
7. Describe the purpose and content of a business plan.

BUSA 2230G. Human Relations in Business**3 Credits (3)**

This course is an examination and application of personal and interpersonal competencies and skills needed in a business setting to understand oneself, one's co-workers, employers, and customers. Students will investigate and examine attitudes, behavior, ethical behavior and cultural influences that affect the business environment. It offers structured situations in which interpersonal relationships and communication skills are explored. May be repeated up to 3 credits.

Learning Outcomes

1. Identify and describe the relevance and development of human relations theories as they apply to management, interpersonal interactions, leadership, conflict resolution, and other behaviors in the workplace.
2. Critically examine how individual beliefs, values, attitudes, and perceptions of the world are formed and discuss how they affect self-esteem and human interactions in the workplace individually and in formal and informal groups.
3. Recognize differing communication styles and apply effective communication skills to various workplace situations.
4. Examine the interrelationships between self, culture, ethnicity, gender, and personal environment and analyze their effects on the development of individual work behaviors.
5. Articulate the factors that influence the development of communication, self-esteem, motivation, trust, leadership, and conflict resolution skills.
6. Apply knowledge of human behavior and its origins to the analysis of workplace case studies and the development of solutions to workplace dilemmas.
7. Apply ethical decision-making in business situations.

C E-CIVIL ENGINEERING

C E 109. Computer Drafting Fundamentals**3 Credits (2+2P)**

Introduction to principles and fundamentals of drafting using both manual drawing techniques and computer-aided drafting (CAD) applications. Crosslisted with: DRFT 109 and E T 109. May be repeated up to 3 credits.

Learning Outcomes

1. Describe related career options/pathways.
2. Explain and apply common drafting terms, concepts, and conventions.
3. Utilize various AutoCAD commands and Coordinate Entry methods to produce accurate and precise Two-Dimensional drawings.
4. Setup AutoCAD working environment, drawings, styles, and applicable settings.
5. Navigate the AutoCAD user interface efficiently.
6. Apply different drafting methods, strategies, and processes.
7. Utilize AutoCAD to produce basic 2D CAD working drawings.
8. Measure utilizing scales accurately.
9. Create drawings with different scales and units. 1
10. Plot drawings produced in AutoCAD at various scales and on various sheet sizes. 1
11. Utilize the two Drawing Environments: Paper Space and Model Space. 1
12. Manage AutoCAD drawing files.

C E 151. Introduction to Civil Engineering**3 Credits (3)**

Problem solving and use of computer software for civil engineering applications. May be repeated up to 3 credits.

Prerequisite(s)/Corequisite(s): MATH 1220G.

C E 198. Special Topics**1-3 Credits**

May be repeated for a maximum of 6 credits.

Prerequisite: consent of department head.

C E 233. Mechanics-Statics**3 Credits (3)**

Engineering mechanics using vector methods. May be repeated up to 3 credits.

Prerequisite: C- or better grade in MATH 1521G or MATH 1521H, C- or better grade in PHYS 1310G and cumulative GPA of 2.0.

Learning Outcomes

1. Student will be able to apply concepts of equilibrium.

C E 234. Mechanics-Dynamics**3 Credits (3)**

Kinematics and dynamic behavior of solid bodies utilizing vector methods. May be repeated up to 3 credits.

Prerequisite: A grade of C- or better grade in the following: C E 233 and PHYS 1310G and MATH 1521G or MATH 1521H.

Learning Outcomes

1. Student will be able to apply concepts of kinematics and accelerated motion.

C E 256. Environmental Engineering and Science**3 Credits (3)**

Principles in environmental engineering and science: physical chemical systems and biological processes as applied to pollution control.

Crosslisted with: ENVS 2111

Prerequisite: CHEM 1215G and MATH 1511G or ENGR 190.

Learning Outcomes

1. To understand the nature of water quality parameters in the context of Civil Engineering and Environmental Science (Water Treatment/Wastewater Treatment/Environmental Science)
2. To learn to apply engineering and scientific solutions to water quality problems

3. To understand environmental regulations and their consequences on the design of pollution control systems

C E 256 L. Environmental Science Laboratory**1 Credit (1P)**

Laboratory experiments associated with the material presented in C E 256. Same as ENVS 2111L.

Corequisite(s): C E 256.

C E 298. Special Topics**1-3 Credits**

May be repeated for a maximum of 6 credits.

Prerequisite: consent of department head.

C E 301. Mechanics of Materials**3 Credits (3)**

Stress, strain, and elasticity of materials. May be repeated up to 3 credits.

Prerequisite: C- or better grade in ENGR 233.

Learning Outcomes

1. Calculate deformations, stresses, and strains of various types of members under loading.
2. Calculate principal stresses and strains.
3. Perform two-dimensional stress and strain transformation.
4. Analyze statically indeterminate structures using the method of consistent deformations.
5. Construct shear and moment diagrams for beam type structures.
6. Calculate beam deflections and rotations using various methods.
7. Determine buckling loads for elastic columns.

C E 311. Civil Engineering Materials**3 Credits (2+3P)**

Introduction to the structure, physical properties, testing and mechanical behavior of civil engineering materials and components made from these materials. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 301.

Learning Outcomes

1. Students will understand the structure, properties, and roles of materials in civil engineering.

C E 315. Structural Analysis**4 Credits (3+3P)**

Classical analysis of determinate and indeterminate structures; introduction to modern methods of structural analysis using computer programs. May be repeated up to 4 credits.

Prerequisite: C- or better grade in C E 301.

Learning Outcomes

1. Students will be able to compute deflections for trusses, beams, and frames.

C E 331. Fluid Mechanics and Hydraulics**3 Credits (3)**

Fluid Mechanics and Hydraulics. Fundamentals and theory of fluid mechanics, compressible fluids, flow of incompressible fluids in open and closed conduits.

Prerequisite: C- or better grade in PHYS 1310G, C- or better grade in ENGR 233 or C E 233.

Learning Outcomes

1. Students learn how to read and interpret problem statements related to fluid mechanics and hydraulics, how to work in teams as well as apply critical thinking skills to solve problems.

- Students develop an understanding of the theories and principles of hydraulics to understand hydraulic engineering components and subsystems.

C E 331 L. Fluid Mechanics and Hydraulics Laboratory

1 Credit (1P)

Fundamentals and Theory of Fluid Mechanics, compressible and incompressible flow of fluids in open and closed conduits.

Prerequisite(s)/Corequisite(s): C E 331. Restricted to: C E majors.

C E 355V. Technology and the Global Environment

3 Credits (3)

A scientific basis for understanding changes in the global environment that result through the complex interactions of natural phenomena and the impacts of the activities of man.

Prerequisites: junior or senior standing, and the general education requirements for math and natural sciences.

C E 356. Fundamentals of Environmental Engineering

3 Credits (3)

Introduction to water treatment and water pollution and the analysis and design of selected treatment processes. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 256.

Learning Outcomes

- Students will understand water treatment processes.
- Students will understand wastewater treatment processes.

C E 357. Soil Mechanics

3 Credits (2+3P)

Engineering properties of soils, consolidation settlement, compaction, water flow through soils, geostatic stresses, soil shear strength, lateral earth pressure, and soil laboratory testing.

Prerequisite: GEOL 1110G and C E 301.

Learning Outcomes

- The course covers the basic principles governing the mechanical behavior of soils.
- Students will develop an understanding of soil mechanics, flow through porous media, and mass-volume relationships, as well as the laboratory methods for measuring the mechanical and index properties of soils.
- Students will be able to interpret and use the laboratory test results for soil classification and for solving simple geotechnical engineering problems.

C E 382. Hydraulic and Hydrologic Engineering

3 Credits (3)

Analysis and design of hydraulic systems, including pipe networks, open channels, regulating structures, and pumping systems. Surface water and groundwater hydrology, analysis and design. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 331, C E 331 L.

Learning Outcomes

- Student will be analyze hydraulic systems.

C E 398. Special Topics

1-3 Credits

May be repeated for a maximum of 6 credits.

Prerequisite: consent of department head.

C E 435. Technical Communication for Engineers

3 Credits (3)

The course addresses the fundamentals of communicating technical information that is clear, concise, and concrete to a wide variety of stakeholder types.

Learning Outcomes

- Ability to write in a way that is clear.
- Ability to write in a way that is concise.
- Ability to write in a way that is concrete.

C E 444. Elements of Steel Design

3 Credits (3)

Analysis and design of tension members, beams, columns, and bolted and welded connections. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 315.

Prerequisite/Corequisite: C E 311.

Learning Outcomes

- Students will be able to design structural steel elements and connections.

C E 445. Reinforced Concrete Design

3 Credits (3)

Design and mechanics of structural reinforced concrete members. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 315.

Prerequisite/Corequisite: C E 311.

Learning Outcomes

- Students will be able to analyze and design reinforced concrete structural elements subjected to loads.

C E 452. Geohydrology

3-4 Credits (3+1P)

Origin, occurrence, and movement of fluids in porous media and assessment of aquifer characteristics. Development and conservation of ground water resources, design of well fields. Crosslisted with: ENVS 452 and GEOL 452.

Prerequisite(s): Junior or Senior.

C E 454. Wood Design

3 Credits (3)

Theory and design of wood structural members and systems subjected to gravity and lateral loads. Taught every other year, alternates with C E 455, Masonry Design. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 315.

Prerequisite/Corequisite: C E 311.

Learning Outcomes

- Students will be able to design wood structural members and components.

C E 455. Masonry Design

3 Credits (3)

Theory and design of masonry structural members and systems subjected to gravity and lateral loads. Taught every other year, alternates with C E 454.

Prerequisite: C- or better grade in C E 315.

Prerequisite/Corequisite: C E 311.

Learning Outcomes

- Introduce students to topics in masonry design that are commonly encountered in structural engineering.
- Provide the background needed to understand the code requirements applicable to problems in masonry design.

C E 457. Foundation Design

3 Credits (2+3P)

Application of principles of classical soil mechanics to the design of shallow and deep foundations, and the fundamentals of geotechnical site investigation. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 357.

Learning Outcomes

1. Students will be able to analyze and design shallow and deep foundations.

C E 460. Site Investigation**3 Credits (2+2P)**

Investigation and characterization of surficial and subsurface geologic materials and ground water for civil engineering projects. Includes exploration program, drilling and sampling, rock and soil classification and logging, groundwater monitoring, profiles, and preparation of geotechnical reports.

Prerequisite: C- or better grade in C E 357.

Prerequisite/Corequisite: C E 457.

Learning Outcomes

1. Develop approach to scoping and conducting a subsurface investigation.
2. Develop an understanding of geotechnical complexity and how to use the graded approach.
3. Use soil mechanics and foundation design skills to perform geotechnical analyses and develop recommendations needed by the project team to provide client(s) with needed facilities.
4. Understand field and laboratory tools and techniques used to develop suitable data for subsurface analyses and geotechnical report recommendations.
5. Understand the observational approach, how to use it, and how to avoid its misuse.
6. Develop skills needed to prepare geotechnical letter reports and complete geotechnical investigation reports.

C E 469. Structural Systems**3 Credits (3)**

Design of structural systems for buildings and bridges. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 444 or C E 445.

Learning Outcomes

1. Students will understand the scope of structural design projects.

C E 470. Design of Municipal and Hazardous Waste Landfills**3 Credits (3)**

Solid waste and application of geotechnical engineering principles and methods to the site selection and design of municipal and hazardous waste landfills. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 357 and C E 452, or consent of instructor.

Learning Outcomes

1. Students will understand the elements of design for municipal and hazardous waste landfills.

C E 471. Transportation Engineering**3 Credits (3)**

Highway and traffic design and systems. Students must be in junior or senior standing to enroll. May be repeated up to 3 credits.

Prerequisite: C- or better in MATH 1521G.

Learning Outcomes

1. Provide understanding of the principles of transportation engineering with a focus on highway engineering and traffic analysis.
2. Provide basic skill set that will allow a student to address most of the transportation problems that are likely to appear in professional practice and on the Fundamentals of Engineering exam (FE) and the Principles and Practice of Engineering exam (PE).

3. Provide foundation for future coursework in transportation should a student wish to pursue further coursework in the fields.

C E 477. Engineering Economics and Construction Management**3 Credits (3)**

Engineering economics, construction and project management. May be repeated up to 3 credits.

Prerequisite/Corequisite: C- or better grade in C E 357.

Learning Outcomes

1. Understand time value of money and be able to perform economic analyses on engineering problems to determine whether a given project is worthwhile or to prioritize multiple alternatives based on present worth.
2. Understand the mathematical and ethical implications of benefit/cost and internal rate of return analyses
3. Estimate durations and requirements of individual construction tasks.
4. Develop construction schedules using Critical Path Method (CPM) Analysis.
5. Understand the legal and ethical concerns involved in economic analysis and construction engineering.

C E 479. Pavement Analysis and Design**3 Credits (3)**

Covers stresses and deflections in pavement layers, material characterization, flexible and rigid pavement design by AASHTO, and rehabilitation concepts. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 357.

Learning Outcomes

1. Students will be able to analyze and design flexible and rigid pavements.

C E 481. Civil Engineering Capstone Design**3 Credits (3)**

Culminating multidisciplinary project-oriented capstone design. Ethics, professional development, global issues. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 356, C- or better grade in C E 382, and a C- or better grade in either C E 444 or C E 445.

Prerequisite/Corequisite: C E 457, C E 471, C E 477.

Learning Outcomes

1. Students will understand the scope of civil engineering design projects.

C E 482. Hydraulic Structures**3 Credits (3)**

Engineering design of water-regulating structures. Capstone design course. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 382.

Prerequisite/Corequisite: C E 477.

Learning Outcomes

1. Students will understand the scope of interdisciplinary civil engineering design projects.

C E 483. Surface Water Hydrology**3 Credits (3)**

Hydrologic cycle and relationships between rainfall and surface water runoff. May be repeated up to 3 credits.

Prerequisite: C- or better grade in C E 331 or consent of instructor.

Learning Outcomes

1. Students will understand the hydrologic cycle and basic principles of hydrology.

C E 485. Design of Earth Dams**3 Credits (3)**

Engineering design applied to site selection, foundation inspection and treatment, hydrology and hydraulics, stability, and seepage analysis.

Economic and environmental factors.

Prerequisite: C E 357, C E 382.

Learning Outcomes

1. Course introduces the students to small earthen dam siting, design and construction based on the knowledge and skills acquired in earlier coursework.
2. Course incorporates engineering standards and realistic constraints and prepares students for entry-level work.
3. Students work in teams to design a small earthen dam.

C E 490. Introduction to Artificial Intelligence for Civil Engineers**3 Credits (3)**

Introduces various machine learning methods for solving various civil engineering problems. Topics include: supervised & unsupervised machine learning; classification and linear regressions; K-nearest neighbor; decision tree, bagging, & boosting; random forest; and support-vector machines.

Prerequisite: C- or better grade in STAT 371.

Learning Outcomes

1. Identify appropriate data analysis methods for various civil engineering problems.
2. Perform various Machine Learning (ML) analyses to solve civil engineering problems.
3. Evaluate various forms of Machine Learning (ML) analysis results.

C E 497. Senior Seminar**1 Credit (1)**

Selected topics on the civil engineering profession and orientation for professional practice. Preparation for the FE exam. Students must be able to submit their application for degree while enrolled in this course.

Learning Outcomes

1. Prepare students for professional and ethical aspects of employment or graduate studies.

C E 498. Special Topics**1-3 Credits**

May be repeated for a maximum of 9 credits.

Prerequisite: consent of department head.

C E 501. Advanced Mechanics of Materials**3 Credits (3)**

Study of stress and strain in two and three dimensions, theories of failure, stress concentrations, unsymmetrical bending, curved beams, beams on elastic foundations, column theories, torsion, thick-wall cylinders. Same as M E 501.

Prerequisites: C E 301, MATH 392.

C E 502. Advanced Mechanics of Steel Structures**3 Credits (3)**

Advanced structural mechanics applicable to steel structures. Includes inelastic behavior, plastic analysis, column and frame stability and torsion.

Prerequisite: C E 444.

Learning Outcomes

1. Introduce students to advanced topics in structural mechanics of steel structures that are commonly encountered in structural engineering

2. Provide the background needed to understand the code requirements applicable to problems in plastic design of steel structures

C E 503. Special Design and Analysis Program**3-6 Credits**

Design and analysis covering subject matter of an approved 450 undergraduate departmental course plus an additional report or project. Course may be subtitled in the Schedule of Classes. May be repeated once for a total of 6 credits.

Prerequisite: consent of instructor/committee.

C E 504. Advanced Engineering Design**3 Credits (3)**

Advanced engineering design covering subject matter of a selected capstone undergraduate design course plus an additional report or project. May be subtitled.

Prerequisite: consent of instructor/committee.

C E 507. Design of Earth Retaining Structures**3 Credits (3)**

Lateral earth pressure theory, soil-reinforcement interaction, and analysis and design of rigid and flexible earth retaining structures for support of fills and excavations, including retaining walls, mechanically stabilized earth (MSE) walls, sheet pile walls, anchored walls, tiebacks and soil nailing.

Prerequisite(s): C E 357.

Prerequisite(s)/Corequisite(s): C E 457.

C E 508. Advanced Soil Behavior**3 Credits (3)**

The course covers particle-scale phenomena that govern the macro-scale behavior of soils. Topics covered in the class include classical concepts as well as contemporary advances in soil mechanics. The students will develop a fundamental understanding of soil-water interaction, theories of contact level deformation, and mass and energy transport through granular media. Consent of Instructor required.

Prerequisite(s): C E 357 or Instructor Consent.

C E 509. Deep Foundations**3 Credits (3)**

Behavior, analysis and design of pile and pier foundations subjected to axial and lateral loads.

Prerequisite: C E 457 or consent of instructor.

C E 510. Introduction to Nondestructive Testing**3 Credits (3)**

This course explores the application of different Nondestructive Testing (NDT) methods in material characterization and product qualification.

Prerequisite(s): C E 311 or CHME 361 or Consent of Instructor.

C E 514. Numerical Methods in Civil Engineering**3 Credits (3)**

Mathematical, numerical, and programming foundations of applied numerical methods with a focus on Civil and Environmental Engineering applications using MATLAB.

Learning Outcomes

1. To provide necessary background and skills to use MATLAB as a programming language for engineering problem solving.
2. To introduce classical and some modern methods for civil engineering numerical problem solving.
3. Develop numerical algorithms and programs for solving civil engineering problems involving: (1) multi-dimensional integration, (2) multivariate differentiation, (3) ordinary differential equations, (4) partial differential equations, (5) optimization (6) parameter

estimation methods such as linear and nonlinear least square methods.

C E 515. Finite Element Methods

3 Credits (3)

Introduces the finite element method. Topics may include beam, frame, plane stress, plane strain, axisymmetric, and 3-D stress elements. Includes static and dynamic analysis. Uses readily available finite-element software.

Prerequisite: graduate standing or consent of instructor.

C E 531. Open Channel Hydraulics

3 Credits (3)

Theoretical and applied hydraulics of open channels, with emphasis on nonuniform flow, rapidly varied flow, and wave formation.

Prerequisite: C E 382 or consent of instructor.

C E 535. Technical Communication for Engineers

3 Credits (3)

The course addresses the fundamentals of communicating technical information that is clear, concise, and concrete to a wide variety of stakeholder types. Same as C E 435 with differentiated assignments for graduate students.

Learning Outcomes

1. Ability to write in a way that is clear
2. Ability to write in a way that is concise
3. Ability to write in a way that is concrete

C E 544. Advanced Design of Steel Structures

3 Credits (3)

Connection design; beam-column analysis and design; composite construction; and plate girder design.

Prerequisite: C E 444.

Learning Outcomes

1. Introduce students to advanced topics in steel design that are commonly encountered in structural engineering
2. Provide the background needed to practice structural steel design
3. Provide the background needed to understand the code requirements applicable to difficult problems in structural steel design

C E 545. Advanced Concrete Design

3 Credits (3)

Advanced topics in ultimate strength design of reinforced concrete that include: concrete footings, retaining structures, short and long columns, torsion members, deep beams and shear walls, two-way slabs, and shear and moment transfer at slab-column connections.

Prerequisites: C E 445.

Learning Outcomes

1. Introduce students to advanced topics in reinforced concrete design that are commonly encountered in structural engineering
2. Provide the background needed to practice structural concrete design
3. Provide the background needed to understand the code requirements applicable to difficult problems in structural concrete design

C E 547. Bridge Engineering

3 Credits (3)

Topics related to prestressed concrete, reinforced concrete and steel bridge design according to the AASHTO specifications; bridge analysis and evaluation.

Prerequisite: C E 444 or C E 445.

Learning Outcomes

1. Introduce students to topics in bridge design that are commonly encountered in structural engineering
2. Provide the background needed to understand the code requirements applicable to problems in bridge design

C E 554. Wood Design

3 Credits (3)

Theory and design of wood structural members and systems subjected to gravity and lateral loads. Design project required. Taught every other year, alternates with C E 555 - Masonry Design.

C E 555. Masonry Design

3 Credits (3)

Theory and design of masonry structural members and systems subject to gravity and lateral loads. Design project required. Taught every other year, alternates with C E 554.

Learning Outcomes

1. Introduce students to advanced topics in masonry design that are commonly encountered in structural engineering.
2. Provide the background needed to practice masonry design.
3. Provide the background needed to understand the code requirements applicable to difficult problems in masonry design.

C E 557. Water Resources Development

3 Credits (3)

Students function as members of a consulting panel and prepare reports on major water resources development problems. Political, financial, and social aspects of water resources development are considered as well as scientific and technical details.

C E 571. Structural Dynamics

3 Credits (3)

Response of elastic structure to dynamic loading. Moving load, earthquake and blast loading.

Prerequisite: ENGR 234 and C E 315.

Learning Outcomes

1. Introduce students to topics in structural dynamics that are commonly encountered in structural engineering
2. Provide the background needed to understand the code requirements applicable to problems in seismic and blast-resistant design

C E 579. Ground Improvement

3 Credits (3)

The objective of this course is to introduce common ground improvement techniques, including mechanical (compaction, soil reinforcement, preloading and accelerated consolidation) and chemical (cementing, ion-replacement, polymer bonding) stabilization methods, as well as seepage and dewatering. Emphasis will be placed on developing an understanding of the underlying physical and chemical processes involved in each case.

Prerequisite(s): C E 357.

C E 581. Ground Water Hydrology

3 Credits (3)

Mathematical treatment of water flow in porous media. Emphasis on hydraulics of water movement, including pumping and recharge wells, drainage, and water quality.

Prerequisites: MATH 392, G EN 452, and C E 382, or consent of instructor.

C E 582. Statistical Hydrology

3 Credits (3)

Application of statistical techniques to hydrologic data, including distributions, hypothesis testing, linear models, non-parametrics, and time-series and stochastic models. May be repeated up to 3 credits.

C E 585. Slope Stability Analysis and Design**3 Credits (3)**

Design of earth slopes, causes of instability, limit equilibrium methods, slope reinforcement (geosynthetics soil nailing, tiebacks), seismic analysis, rock slope stability. Consent of instructor required.

Learning Outcomes

1. Be familiar with the implications of drainage conditions and pore water pressure in the soil as they relate to soil shear strength and slope stability.
2. Be able to recognize the differences between short-term and long-term analyses (total versus effective stress analyses) applied to slope stability.
3. Be able to perform hand calculations of slope stability for very simple cases.
4. Be familiar with the set of input data usually required to perform stability analyses using software.
5. Be able to design soil slopes with various soil profiles and geometry and reinforcement using slope stability software.
6. Recognize and understand the effects of geologic and groundwater conditions on the stability of soil slopes.
7. Understand the mechanisms by which the most common methods of slope stabilization work (tie-backs, soil nailing, geosynthetics).

C E 590. Advanced Artificial Intelligence for Civil Engineers**3 Credits (3)**

Deep learning methods for solving civil engineering problems. Topics include: introduction, backpropagation, training, regulations, and techniques of Neural Networks (NN); image processing using Convolutional Neural Networks (CNN); time-series data analysis using Recurrent Neural Networks (RNN); Gated Recurrent Units; and introduction to Transfer Learning.

Prerequisite: STAT 371 and MATH 392.

Learning Outcomes

1. Identify appropriate data analysis methods and utilize mathematical formulations of Deep Learning (DL) for various civil engineering problems.
2. Perform various Deep Learning (DL) analyses to solve civil engineering problems.
3. Evaluate various forms of Deep Learning (DL) analysis results.

C E 596. Special Topics**1-3 Credits**

May be repeated for a maximum of 6 credits.

Prerequisite: consent of department head.

C E 598. Special Research Programs**1-3 Credits**

Individual investigations either analytical or experimental. May be subtitled. Maximum of 3 credits per semester.

C E 599. Master's Thesis**1-15 Credits**

Thesis.

C E 600. Doctoral Research**1-15 Credits**

Research.

C E 604. Advanced Engineering Topics**3 Credits (3)**

In depth study of a topic at the forefront of environmental engineering & science. Journal papers will be critically reviewed and students will be asked to write an analysis of the topic and present their thoughts orally.

C E 614. Advanced Numerical Methods in Civil Engineering**3 Credits (3)**

Advanced mathematical, numerical, and programming for applied numerical methods with a focus on Civil and Environmental Engineering applications using MATLAB. Same as C E 514 with differentiated material and assignments for C E 614 students.

Learning Outcomes

1. To provide necessary background and skills to use MATLAB as a programming language for engineering problem solving.
2. To introduce classical and some modern methods for civil engineering numerical problem solving.
3. Develop numerical algorithms and programs for solving civil engineering problems involving: (1) multi-dimensional integration, (2) multivariate differentiation, (3) ordinary differential equations, (4) partial differential equations, (5) optimization (6) parameter estimation methods such as linear and nonlinear least square methods, and (7) time series analysis such as Fourier transform, wavelet, and basic filtering.

C E 682. Topics in Hydrodynamics II**3 Credits (3)**

Selected topics in hydrometeorology, including the transfer of water and energy between the land surface and the lower atmosphere.

Learning Outcomes

1. This course helps lay the foundation for theoretical concepts useful in measurement, analysis and estimation of evaporation/evapotranspiration. Students learn some of the theoretical concepts and relationships useful in the phenomenon of evaporation as well as gain some field experience on measurement of evapotranspiration and open water evaporation.

C E 698. Special Research Programs**1-3 Credits**

May be subtitled. May be repeated for a maximum of 9 credits.

C E 700. Doctoral Dissertation**1-15 Credits**

Dissertation.

C S-COMPUTER SCIENCE

C S 111. Computer Science Principles**4 Credits (3+2P)**

This course provides a broad and exciting introduction to the field of computer science and the impact that computation has today on every aspect of life. It focuses on exploring computing as a creative activity and investigates the key foundations of computing: abstraction, data, algorithms, and programming. It looks into how connectivity and the Internet have revolutionized computing and demonstrates the global impact that computing has achieved, and it reveals how a new student in computer science might become part of the computing future. May be repeated up to 4 credits.

Prerequisite: MATH 1215 or higher.

Learning Outcomes

1. Identify and differentiate programming constructs like IF, FOR, and WHILE
2. Convert numbers between Hexadecimal, Binary and Decimal
3. Write pseudo code to manipulate a robot
4. Use an ASCII table to translate HEX strings into characters
5. Encrypt and Decrypt simple messages with a Caesar Cypher

C S 117. Introduction to Computer Animation**3 Credits (3)**

Introductory course for learning to program with computer animation as well as learning basic concepts in computer science. Students create interactive animation projects such as computer games and learn to use software packages for creating animations in small virtual worlds using 3D models. Recommended for students considering a minor/major in computer science or simply interested in beginning computer animation or programming.

C S 151. C++ Programming**3 Credits (2+2P)**

Introduction to object-oriented programming in the C++ language. The focus will be on preparing students to use C++ in their own areas. No prior programming experience is required. Taught with C S 451.

Prerequisite: MATH 1215 or higher.

Learning Outcomes

1. Use various data types and the corresponding operations.
2. Write C++ programs that contain expressions, program control, functions, arrays, and input/output
3. Explain basic object-oriented programming concepts.
4. Demonstrate proficiency in using classes, inheritance, pointers, streams, and recursion

C S 152. Java Programming**3 Credits (2+2P)**

Programming in the Java language. May be repeated up to 3 credits.

Prerequisite(s): MATH 1215 or higher.

C S 153. Python Programming I**3 Credits (3)**

This course is an introduction to programming in the Python language, covering fundamental scripts, data types and variables, functions, and simple object creation and usage. The focus will be on preparing students to use Python in their own areas. No prior programming experience is required. Taught with C S 453.

Prerequisite: MATH 1215 or higher.

Learning Outcomes

1. Develop an algorithm to solve a problem
2. Demonstrate the ability to use Python data types: int, float, strings, and lists; and the built-in functions associated with those data types
3. Edit and debug programs using the Spyder IDE for Python
4. Implement algorithms using the Python features of assignment, input, output, branches, loops, and functions
5. Explain the fundamental concepts of object-oriented programming with Python
6. Design and implement Python classes based on given attributes and behaviors
7. Work with existing Python modules such as math, random, and os
8. Write Python programs that input data from files and store results in files

C S 154. Python Programming II**3 Credits (3)**

This course covers advanced Python programming, including classes, objects, and inheritance, embedded programming in domain applications, database interaction, and advanced data and text processing. The focus will be on preparing students to use Python in their own areas.

Prerequisite(s): C S 153 or C S 453.

C S 158. R Programming I**3 Credits (3)**

This course is an introduction to data processing in the R language, covering fundamental script configuration, data types and data collections, R control structures, and basic creation of graphs and data visualizations. This course will not focus on the statistical capabilities of R, though some basic statistical computations will be used.

Prerequisite(s): MATH 1220G.

C S 171G. Modern Computing in Practice**4 Credits (3+2P)**

This course provides a survey of practical and theoretical foundations for how computers work and how they support fundamental organizational needs. The course covers broad aspects of the hardware, software, and mathematical basis of computers. Lab assignments provide hands-on applications to use simple basic software tools to write simple programs, build and edit websites, analyze data with spreadsheets, choose an office productivity suite, and demonstrate computer literacy to potential employers. May be repeated up to 4 credits.

Prerequisite: MATH 1130G or MATH 1215 or higher.

Learning Outcomes

1. Students will create simple python programs using conditional statements and loops
2. Students will analyze data with spreadsheet formulas, charts, and tools
3. Students will create and publish a personal website using website building tools
4. Students will edit HTML and CSS to format a website manually
5. Students will practice the skill of performing software QA and providing actionable feedback to developers
6. Students will become aware of common cybersecurity risks
7. Students will learn basic vocabulary and context for broad aspects of hardware, software, and computer science theory such as Security, Privacy, Cloud Computing, the Internet, the Web, Operating Systems, Discrete Math, and Information Systems
8. Students will be exposed to various sub-fields of CS including artificial intelligence, security, data analytics, UX, web development, and QA testing
9. Students will reason about the societal impacts of technology 1
10. Students will incorporate their new knowledge and skills into their resume

C S 172. Computer Science I**4 Credits (3+2P)**

Computational problem solving; problem analysis; implementation of algorithms using Java. Object-oriented concepts, arrays, searching, sorting, and recursion. Taught with C S 460. May be repeated up to 4 credits.

Prerequisite: (A C- or better in either MATH 1250G or (MATH 1430G or higher)) OR (A C- or better in MATH 1220G and a 1 or better in the CS Placement Test) OR (A C- or better in MATH 1220G and a C- or better in C S 111).

Learning Outcomes

1. Develop algorithms to solve problems
2. Implement algorithms using the fundamental programming features of sequence, selection, iteration, and recursion
3. Apply an understanding of primitive and object data types
4. Design and implement classes based on given attributes and behaviors
5. Explain the fundamental concepts of object-oriented programming,

C S 209. Special Topics.**1-3 Credits**

May be repeated for a maximum of 12 credits.

C S 271. Object Oriented Programming**4 Credits (3+2P)**

Introduction to problem analysis and problem solving in the object-oriented paradigm. Practical introduction to implementing solutions in the C++ language. Pointers and dynamic memory allocation. Hands-on experience with useful development tools. Taught with C S 462. May be repeated up to 4 credits.

Prerequisite: At least a C- in C S 172 or ENGR 140.

Learning Outcomes

1. Develop an algorithm to solve a problem.
2. Implement algorithms using the C and C++ languages including imperative and object-oriented language features.
3. Beyond what was learned in C S 172, E E 112, or E E 161 demonstrate a noticeable increase in understanding of problem analysis and program design.
4. Demonstrate proficiency in using control structures including if statements (single selection), switch (multiple selection), and loops (repetition).
5. Demonstrate proficiency in using arrays and functions
6. Create UML class and relationship diagrams.
7. Design a class to model a real-world person, place, thing, or event.
8. Use editing and debugging software to create, debug, and test C and C++ programs.
9. Understand the basic terminology used in object-oriented programming. 1
10. Create a make file to build an executable from a set of C or C++ source files.

C S 272. Introduction to Data Structures**4 Credits (3+2P)**

Design, implementation, use of fundamental abstract data types and their algorithms: lists, stacks, queues, deques, trees; imperative and declarative programming. Internal sorting; time and space efficiency of algorithms. Taught with C S 463.

Prerequisite: At least a C- in C S 172, or placement.

Learning Outcomes

1. Be able to implement and use lists
2. Be able to implement and use stacks
3. Be able to implement and use queues
4. Be able to implement and use trees
5. Be able to perform the run time analysis of basic algorithms using Big O notation
6. Be able to implement, use, and analyze searching algorithms
7. Be able to solve a problem recursively
8. Take a problem statement from a user and convert it into a Java program that fulfills the user's needs
9. Create object oriented Java classes that effectively separate and hide implementation details from client applications

C S 273. Machine Programming and Organization**4 Credits (3+2P)**

Computer structure, instruction execution, addressing techniques; programming in machine and assembly languages. Taught with C S 464. May be repeated up to 4 credits.

Prerequisite: At least a C- in C S 172 or ENGR 140.

Learning Outcomes

1. Describe the architecture of a microcontroller, the interconnections between the components, and the basic units inside the CPU
2. Use signed and unsigned numbers, the associated branching instructions, and the corresponding flags in the status register
3. Explain immediate, direct, indirect addressing modes, their opcode and operands, and their utilities
4. Map high-level programming language features to assembly instructions, including loops, conditionals, procedure calls, value and reference parameter passing, return values, and recursion
5. Interface with I/O devices including LED and sensors via digital input and output, and analog-to-digital conversion
6. Program timers/counters and interrupts to control real-time applications
7. Design an assembly program

C S 278. Discrete Mathematics for Computer Science**4 Credits (3+2P)**

Discrete mathematics required for Computer Science, including the basics of logic, number theory, methods of proof, sequences, mathematical induction, set theory, counting, and functions. Taught with C S 465.

Prerequisite: At least C- in C S 172.

Learning Outcomes

1. Use logic to specify precise meaning of statements, demonstrate the equivalence of statements, and test the validity of arguments
2. Construct and recognize valid proofs using different techniques including the principle of mathematical induction
3. Use summations, formulas for the sum of arithmetic and geometric sequences
4. Explain and apply the concepts of sets and functions
5. Apply counting principles to determine the number of various combinatorial configurations

C S 343. Algorithm Design & Implementation**3 Credits (3)**

Introduction to efficient data structure and algorithm design. Basic graph algorithms. Balanced search trees. Classic algorithm design paradigms: divide-and-conquer, greedy scheme, and dynamic programming. Taught with C S 493.

Prerequisite: At least a C- in C S 272, or consent of instructor.

Learning Outcomes

1. Be able to use and implement sorting algorithms
2. Be able to design and implement graph algorithms
3. Be able to design and implement algorithms using the divide-and-conquer technique
4. Be able to design and implement algorithms using the greedy technique
5. Be able to design and implement algorithms using the dynamic programming technique
6. Be able to use and implement balanced search trees
7. Be able to use and implement hashing techniques
8. Be able to perform the run time analysis of basic algorithms using Big O notation

C S 370. Compilers and Automata Theory**4 Credits (3+2P)**

Methods, principles, and tools for programming language processor design; basics of formal language theory (finite automata, regular

expressions, context-free grammars); development of compiler components. Taught with C S 466.

Prerequisite: At least a C- in C S 271, C S 272, and C S 273.

Learning Outcomes

1. Understand the language theory concepts of regular languages, context free languages, regular expressions, context free grammars, and formal language hierarchy
2. Use Thompson's construction to convert from regular expression to NFA, and subset construction to convert from NFA to DFA
3. Apply recursive descent parsing in programming a parser of a small grammar
4. Understand the ideas in LL and LR parsing of context-free language classes
5. Understand and use table-driven top-down (LL(1)) and bottom up (SLR) parsing to parse a sentence

C S 371. Software Development

4 Credits (3+2P)

Software specification, design, testing, maintenance, documentation; informal proof methods; team implementation of a large project. Taught with C S 468.

Prerequisite: At least a C- in C S 271 and C S 272.

Learning Outcomes

1. Understand and explain the activities and structure of different styles of software development processes, including waterfall, (spiral,) iterative, and agile methodologies
2. Apply requirements knowledge and techniques to create functional and non-functional requirements for a software system
3. Apply high and low level design ideas to create an object-oriented design of a software system
4. Use good design and programming ideas to implement individual and team software systems in compiled OOP languages
5. Apply white and black box testing techniques and tools to individual and team software development
6. Use UML class diagrams (and sequence diagrams) to capture aspects of system design and/or requirements (domain)
7. Use practical software development tools, including version control systems, automated build tools, and testing tools

C S 372. Data Structures and Algorithms

4 Credits (3+2P)

Introduction to efficient data structure and algorithm design. Order notation and asymptotic run-time of algorithms. Recurrence relations and solutions. Abstract data type dynamic set and data structures based on trees. Classic algorithm design paradigms: divide-and-conquer, dynamic programming, greedy algorithms. Taught with C S 469. May be repeated up to 4 credits.

Prerequisite: At least a C- in C S 272 and C S 278.

Learning Outcomes

1. Analyze the growth of functions via asymptotic notation
2. Evaluate the asymptotic running time of a given algorithm
3. Solve recurrence relations of the kinds encountered in algorithm analysis
4. Design algorithms using the divide-and-conquer technique
5. Design algorithms using the greedy technique
6. Design algorithms using the dynamic-programming technique
7. Use and analyze data structures based on trees

8. Analyze the design, correctness, and time complexity of basic graph algorithms

C S 380. Introduction to Cryptography

3 Credits (3)

The course covers basic cryptographic primitives, such as symmetric, public-key ciphers, digital signature schemes, and hash functions, and their mathematical underpinnings. Course helps students understand basic notions of security in a cryptographic sense: chosen plaintext and chosen ciphertext attacks, games, and reductions. Course also covers computational number theory relevant to cryptography. Consent of Instructor required. Taught with: C S 525.

Prerequisite: C S 278 (or equivalent) with a C or better.

Learning Outcomes

1. Describe basic cryptographic primitives, including symmetric ciphers, asymmetric ciphers, digital signatures, message authentication codes, and hash functions.
2. Understand the mathematical, fundamental underpinnings of cryptography, and how to reason about the security of crypto primitives: indistinguishability (IND) properties of ciphertexts, CPA/CCA games, and reductions to fundamental math assumptions;
3. Be able to discuss number theory/algebra underpinning the design of cryptographic primitives, in some depth.

C S 381. Principles of Virtual Reality

3 Credits (3)

This course is an introduction to building systems and doing research in / on virtual reality. We cover system design, development, and evaluation, with an emphasis on recent research in the space. We cover a range of methods, qualitative and quantitative, in order to develop insights into effective VR designs. Students in this class will develop a foundation in VR development; learn about current topics in VR; and design, develop, evaluate, and report on a VR system. Consent of Instructor required.

Prerequisite: C S 485.

Learning Outcomes

1. Design and develop systems in virtual reality.
2. Understand the variety of development techniques in VR.
3. Understand the state-of-the-art in VR systems.
4. Communicate understanding of people, designs, and evaluations through presentations, demos, and/or reports.

C S 382. Modern Web Technologies

3 Credits (3)

In this course, we will take a full-stack approach to modern web application design. We will start with the fundamentals including HTML5, CSS3, Javascript, JSON, and the underlying networking concepts and protocols driving the modern web. We will then move on to more advanced topics including javascript backend development with Node.js, NoSQL database design with MongoDB, cloud computing, and responsive web design. Finally, we cover advanced topics including the design and implementation of browser extensions and real-time web technologies like WebRTC and WebSockets. Consent of Instructor required. Taught with: C S 532.

Learning Outcomes

1. Understand the fundamental technologies and operation of the web.
2. Design and develop responsive interactive web sites.
3. Deploy web applications on Cloud Computing Platforms.
4. Leverage modern tools and packages to develop full stack web applications.

5. Be fluent in the application of emerging web technologies like browser extensions, WebSockets, and WebRTC.
6. Use existing materials and references on the web to learn new skills.

C S 383. Introduction to Deep Learning

3 Credits (3)

The course covers basic concepts of neural networks which include transition of classical machine learning to hierarchical feature learning, feedforward networks, regularization, optimization, hyperparameter tuning, deep convolutional networks and their applications in computer vision, deep sequence models, and deep generative models. Taught together with C S 533. May be repeated up to 3 credits.

Prerequisite: At least a C- in C S 272 or C S 153, and C S 278, or consent of instructor.

Learning Outcomes

1. Have significant familiarity with different state-of-the-art theories and practices of deep learning.
2. Be able to apply deep learning to a variety of tasks suitable for data science-based projects of academia and industry.
3. Understand much of the current literature on the topic, review papers, and extend their knowledge through further study.
4. Design and evaluate novel deep learning models.
5. Train and test deep learning models on real-life and benchmark datasets using Python libraries such as TensorFlow and PyTorch.

C S 384. Graph Data Mining

3 Credits (3)

The course covers graph terminology, representation, and techniques to extract patterns from large graph data. The topics include random and scale-free graph generation, link analysis (PageRank), graph representation learning, graph neural networks, deep graph generation, community detection, frequent subgraph mining, graph classification, influence maximization, and knowledge graph mining. May be repeated up to 3 credits.

Prerequisite: At least a C- in C S 272 or C S 153, and C S 278, or consent of instructor.

Learning Outcomes

1. Have significant familiarity with different state-of-the-art theories and practices of graph data mining
2. Graph representation and graph querying using graph manipulating toolbox/library
3. Use random and scale-free graph models to generate graphs and visualize complex network properties
4. Apply algorithms such as PageRank, spectral clustering, and non-negative matrix factorization
5. Implement graph representation learning algorithms and graph neural networks
6. Understand much of the current literature on the topic, review papers, extend their knowledge through further study, and present findings of the papers.

C S 409. Independent Study

1-6 Credits (1-6)

Faculty supervised investigation, to culminate in a written report. May be repeated up to 6 credits.

Prerequisite(s): Written agreement with faculty supervisor.

C S 419. Computing Ethics and Social Implications of Computing

1 Credit (1)

An overview of ethics for computing majors includes: history of computing, intellectual property, privacy, ethical frameworks, professional ethical responsibilities, and risks of computer-based systems.

Prerequisite: At least a C- in C S 371.

Learning Outcomes

1. Understand the fundamental technologies and operation of the web.
2. Design and develop responsive interactive web sites.
3. Deploy web applications on Cloud Computing Platforms.
4. Leverage modern tools and packages to develop full stack web applications.
5. Be fluent in the application of emerging web technologies like browser extensions, WebSockets, and WebRTC.
6. Use existing materials and references on the web to learn new skills.

C S 448. Senior Project

4 Credits (4)

Capstone course in which C S majors work in teams and apply computer science skills to complete a large project. Restricted to: C S majors.

Prerequisite: At least a C- in C S 370 and C S 371.

Learning Outcomes

1. Apply design and development principles in the construction of software systems of varying complexity
2. Apply mathematical foundations, algorithmic principles, and computer science theory in the modeling and design of computer-based systems in a way that demonstrates comprehension of the tradeoffs involved in design choices
3. Design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs
4. Use current techniques, skills, and tools necessary for computing practice
5. Analyze a problem, and identify and define the computing requirements appropriate to its solution
6. Function effectively as teams to accomplish a common goal
7. Communicate effectively with a range of audiences

C S 449. Senior Thesis

4 Credits (4)

Capstone course in which C S majors apply computer science skills to complete a research project, culminating in a written thesis report. Restricted to: C S majors.

Prerequisite: At least a C- in C S 370 and C S 371.

Learning Outcomes

1. Apply design and development principles in the construction of software systems of varying complexity
2. Apply mathematical foundations, algorithmic principles, and computer science theory in the modeling and design of computer-based systems in a way that demonstrates comprehension of the tradeoffs involved in design choices
3. Design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs
4. Use current techniques, skills, and tools necessary for computing practice
5. Analyze a problem, identify, and define the computing requirements appropriate to its solution
6. Communicate effectively with a range of audiences via presentations and technical reports

C S 451. C++ Programming

3 Credits (3)

Programming in the C++ language. Taught with C S 151. More advanced than C S 151. Recommended for nonmajors only. Not for CS undergraduate students. May be repeated up to 3 credits.

Learning Outcomes

1. Use various data types and the corresponding operations.
2. Write C++ programs that contain expressions, program control, functions, arrays, and input/output.
3. Explain basic object-oriented programming concepts.
4. Demonstrate proficiency in using classes, inheritance, pointers, streams, and recursion.

C S 452. Java Programming

3 Credits (2+2P)

Programming in the Java language. More advanced than C S 152. Recommended for nonmajors only. Not for CS undergraduate standing. May be repeated up to 3 credits.

C S 453. Python Programming I

3 Credits (3)

This course is an introduction to programming in the Python language, covering fundamental scripts, data types and variables, functions, and simple object creation and usage. The focus will be on preparing students to use Python in their own areas. No prior programming experience is required. Taught with C S 153. More advanced than C S 153.

Learning Outcomes

1. Develop an algorithm to solve a problem
2. Demonstrate the ability to use Python data types: int, float, strings, and lists; and the built-in functions associated with those data types
3. Edit and debug programs using the Spyder IDE for Python
4. Implement algorithms using the Python features of assignment, input, output, branches, loops, and functions
5. Explain the fundamental concepts of object-oriented programming with Python
6. Design and implement Python classes based on given attributes and behaviors
7. Work with existing Python modules such as math, random, and os
8. Write Python programs that input data from files and store results in files

C S 454. Python Programming II

3 Credits (3)

This course covers advanced Python programming, including classes, objects, and inheritance, embedded programming in domain applications, database interaction, and advanced data and text processing. The focus will be on preparing students to use Python in their own areas. For graduate students only. Has more advanced work than C S 154, and does not count towards CS major requirements. Not for CS undergraduate students. May be repeated up to 3 credits. Restricted to: exclude C S majors.

Prerequisite(s): C S 153 or C S 453.

C S 458. R Programming I

3 Credits (3)

This course is an introduction to data processing in the R language, covering fundamental script configuration, data types and data collections, R control structures, and basic creation of graphs and data visualizations. This course will not focus on the statistical capabilities of R, though some basic statistical computations will be used. For graduate students only. Has more advanced work than C S 158. Does not count towards CS major requirements. May be repeated up to 3 credits.

Prerequisite(s): Good understanding of college algebra or higher.

C S 460. Computer Science I Transition

3 Credits (3)

Computational problem solving; problem analysis; implementation of algorithms. Recursive structures and algorithms. For C S graduate students only; cannot be used to meet a C S student's program of study. Taught with C S 172.

Learning Outcomes

1. Develop algorithms to solve problems
2. Implement algorithms using the fundamental programming features of sequence, selection, iteration, and recursion
3. Apply an understanding of primitive and object data types
4. Design and implement classes based on given attributes and behaviors
5. Explain the fundamental concepts of object-oriented programming

C S 462. Object Oriented Programming Transition

3 Credits (3)

Introduction to problem analysis and problem solving in the object-oriented paradigm. Practical introduction to implementing solutions in the C++ language. Hands-on experience with useful development tools. Cannot be used in a C S student's program of study. Consent of Instructor required. Taught with C S 271.

Prerequisite: At least a C- in C S 172 or C S 460 or consent of instructor.

Learning Outcomes

1. Develop an algorithm to solve a problem.
2. Implement algorithms using the C and C++ languages including imperative and object-oriented language features.
3. Demonstrate a noticeable increase in understanding of problem analysis and program design beyond what was learned in C S 172, E E 112, or E E 161
4. Demonstrate proficiency in using control structures including if statements (single selection), switch (multiple selection), and loops (repetition).
5. Demonstrate proficiency in using arrays and functions.
6. Create UML class and relationship diagrams.
7. Design a class to model a real-world person, place, thing, or event.
8. Use editing and debugging software to create, debug, and test C and C++ programs.
9. Understand the basic terminology used in object-oriented programming. 1
10. Create a make file to build an executable from a set of C or C++ source files.

C S 463. Introduction to Data Structures Transition

3 Credits (3)

Design, implementation, use of fundamental abstract data types and their algorithms: lists, stacks, queues, deques, trees; imperative and declarative programming. Internal sorting; time and space efficiency of algorithms. Cannot be used in a C S student's program of study. Consent of Instructor required. Taught with C S 272.

Prerequisite: At least a C- in C S 172 or C S 460 or consent of instructor.

Learning Outcomes

1. Be able to implement and use lists
2. Be able to implement and use stacks
3. Be able to implement and use queues
4. Be able to implement and use trees
5. Be able to perform the run time analysis of basic algorithms using Big O notation
6. Be able to implement, use, and analyze searching algorithms

7. Be able to solve a problem recursively
8. Take a problem statement from a user and convert it into a Java program that fulfills the user's needs
9. Create object oriented Java classes that effectively separate and hide implementation details from client applications

C S 464. Machine Programming and Organization Transition

3 Credits (3)

Computer structure, instruction execution, addressing techniques; programming in machine and assembly languages. Cannot be used in a C S student's program of study. Consent of Instructor required. Taught with C S 273.

Prerequisite: At least a C- in C S 172 or C S 460 or consent of instructor.

Learning Outcomes

1. Describe the architecture of a microcontroller, the interconnections between the components, and the basic units inside the CPU
2. Use signed and unsigned numbers, the associated branching instructions, and the corresponding flags in the status register
3. Explain immediate, direct, indirect addressing modes, their opcode and operands, and their utilities
4. Map high-level programming language features to assembly instructions, including loops, conditionals, procedure calls, value and reference parameter passing, return values, and recursion
5. Interface with I/O devices including LED and sensors via digital input and output, and analog-to-digital conversion
6. Program timers/counters and interrupts to control real-time applications
7. Design an assembly program

C S 465. Discrete Math for Computer Science Transition

3 Credits (3)

Logical connectives, sets, functions, relations, graphics, trees, proofs, induction, and application to computer science. For C S graduate students only. Cannot be used in a C S student's program of study.

Consent of Instructor required. Taught with C S 278.

Prerequisite: At least a C- in C S 172 or C S 460 or consent of instructor.

Learning Outcomes

1. Use logic to specify precise meaning of statements, demonstrate the equivalence of statements, and test the validity of arguments
2. Construct and recognize valid proofs using different techniques including the principle of mathematical induction
3. Use summations, formulas for the sum of arithmetic and geometric sequences
4. Explain and apply the concepts of sets and functions
5. Apply counting principles to determine the number of various combinatorial configurations

C S 466. Compilers and Automata Transition

3 Credits (3)

Methods, principles, and tools for programming language processor design; basics of formal language theory (finite automata, regular expressions, context-free grammars); development of compiler components. For C S graduate students only; cannot be used in a student's program of study. Taught with C S 370.

Prerequisite: At least a C in (C S 271 or C S 462), in (C S 272 or C S 463), in (C S 273 or C S 464), or consent of instructor.

Learning Outcomes

1. Understand the language theory concepts of regular languages, context free languages, regular expressions, context free grammars, and formal language hierarchy

2. Use Thompson's construction to convert from regular expression to NFA, and subset construction to convert from NFA to DFA
3. Apply recursive descent parsing in programming a parser of a small grammar
4. Understand the ideas in LL and LR parsing of context-free language classes
5. Understand and use table-driven top-down (LL(1)) and bottom up (SLR) parsing to parse a sentence

C S 468. Software Development Transition

3 Credits (3)

Software specification, design, testing, maintenance, documentation; informal proof methods; team implementation of a large project. For C S graduate students only. Cannot be used in a C S student's program of study. Consent of Instructor required. Taught with C S 371.

Prerequisite: At least a C- in C S 271 or C S 462, in C S 272 or C S 463, or consent of instructor.

Learning Outcomes

1. Understand and explain the activities and structure of different styles of software development processes, including waterfall, (spiral), iterative, and agile methodologies
2. Apply requirements knowledge and techniques to create functional and non-functional requirements for a software system
3. Apply high and low level design ideas to create an object-oriented design of a software system
4. Use good design and programming ideas to implement individual and team software systems in compiled OOP languages
5. Apply white and black box testing techniques and tools to individual and team software development
6. Use UML class diagrams (and sequence diagrams) to capture aspects of system design and/or requirements (domain)
7. Use practical software development tools, including version control systems, automated build tools, and testing tools

C S 469. Data Structure and Algorithms Transition

3 Credits (3)

Introduction to efficient data structure and algorithm design. Order notation and asymptotic run-time of algorithms. Recurrence relations and solutions. Abstract data type dynamic set and data structures based on trees. Classic algorithm design paradigms: divide-and-conquer, dynamic programming, greedy algorithms. For CS graduate students only. Taught with CS 372. May be repeated up to 24 credits.

Prerequisite: At least a C- in (C S 272 or C S 463) and a C- in (C S 278 or C S 465), or consent of instructor.

Learning Outcomes

1. Analyze the growth of functions via asymptotic notation
2. Evaluate the asymptotic running time of a given algorithm
3. Solve recurrence relations of the kinds encountered in algorithm analysis
4. Design algorithms using the divide-and-conquer technique
5. Design algorithms using the greedy technique
6. Design algorithms using the dynamic-programming technique
7. Use and analyze data structures based on trees
8. Analyze the design, correctness, and time complexity of basic graph algorithms

C S 471. Programming Language Structure I

3 Credits (3)

Syntax, semantics, implementation, and application of programming languages; abstract data types; concurrency. Not for C S graduate students.

Prerequisite: At least a C- in C S 370 and C S 371.

Learning Outcomes

1. Improve the background for choosing appropriate programming languages for certain classes of programming problems
2. Increase the ability to learn new programming languages
3. Critically evaluate what paradigm and language are best suited for a new problem
4. Demonstrate the use of the primary segments for a running program
5. Apply the principles of functional programming
6. Apply the principles of logic programming
7. Program a simple parallel program with threads
8. Program in at least five different programming languages
9. Program in C to demonstrate architecture details

C S 473. Architectural Concepts I

3 Credits (3)

Comparison of architectures to illustrate concepts of computer organization; relationships between architectural and software features. Not for C S graduate students.

Prerequisite: At least a C- in C S 273 and C S 370.

Learning Outcomes

1. Explain the concepts in instruction set architecture
2. Analyze the behavior of pipelined CPU data path and control
3. Analyze behavior and performance of memory hierarchies with different cache designs
4. Describe the implementation of binary integer and floating point representation and arithmetic
5. Identify and analyze performance of instruction level parallelism and multi-core parallelism
6. Describe virtual memory and architectural support for operating systems
7. Understand the organization of various kinds of secondary storage devices, and their performance and tradeoffs
8. Create software that demonstrates performance of architectural features and evaluate the effects of software change

C S 474. Operating Systems I

3 Credits (3)

Operating system principles and structures, and interactions with architectures. Not for C S graduate students.

Prerequisite: At least a C- in C S 273, C S 371, and C S 372.

Learning Outcomes

1. Explain OS control and management of hardware resources
2. Explain OS management and execution of processes
3. Explain OS control and management of real and virtual memory
4. Explain classical concurrency issues and their solutions
5. Analyze and implement threads
6. Analyze OS interaction with networks and architecture

C S 475. Artificial Intelligence I

3 Credits (3)

Fundamental principles and techniques in artificial intelligence systems. Intelligent Agents; solving problems by searching; local search techniques; game-playing agents; constraint satisfaction problems; knowledge representation and reasoning. Further selected topics may also be covered. Not for C S graduate students. Taught with C S 505.

Prerequisite: At least a C- in C S 272 and C S 278.

Learning Outcomes

1. Use various search algorithms commonly used in problem-solving
2. Use methods for solving constraint satisfaction problems
3. Use propositional and first-order logic to represent knowledge
4. Use logical inference methods to derive conclusions from a knowledge base
5. Use adversarial search for game-playing agents
6. Analyze the different search strategies
7. Design and Implement heuristic search for problem-solving

C S 476. Computer Graphics I

3 Credits (3)

Languages, programming, devices, and data structures for representation and interactive display of complex objects. Not for C S graduate students. Taught with C S 506.

Prerequisite: At least C- in C S 370 or C S 371.

Learning Outcomes

1. Techniques used in three-dimensional graphics
2. Computer Graphics lightning and shading
3. Client-server graphics using WebGL
4. Geometric and Solid modeling
5. Computer Graphics implementation algorithms

C S 477. Digital Game Design

3 Credits (3)

An introduction to digital game design. Topics include design, development, and playtesting of games. The course is structured to use team-based learning. Not for C S graduate students. Taught with C S 517.

Prerequisite/Corequisite: C S 371.

Learning Outcomes

1. Describe, analyze, and/or critique games with a consistent vocabulary
2. Design, develop, and playtest games
3. Understand the formal systems of games
4. Communicate game designs through demonstrations and presentations

C S 478. Computer Security

3 Credits (3)

Introduction to the art and science of computer security. Fundamentals of computer security including elementary cryptography, authentication and access control, security threats, attacks, detection and prevention in application software, operating systems, networks and databases. Not for C S graduate students. Taught with C S 513.

Prerequisite: At least a C- in C S 272, C S 273 or consent of instructor.

Learning Outcomes

1. Describe fundamental concepts in security and privacy
2. Understand requirements of security in different contexts
3. Describe practical implementation challenges in security/privacy system design
4. Explain at a high-level symmetric and public key cryptography
5. Explain various access control mechanisms such as authentication, authorization
6. Understand aspects of secure system design that a computer programmer/engineer needs to account for

C S 479. Special Topics

1-12 Credits

Topics announced in the Schedule of Classes. May be repeated under different subtitles. Not for C S graduate students. May be repeated up to 12 credits.

C S 480. Linux System Administration

3 Credits (3)

Basic system administration for Linux environments. Topics include user managements, file systems, security, backups, system monitoring, kernel configuration and other relevant aspects of system administration. Not for Computer Science graduate students.

Learning Outcomes

1. Be able to properly set up, configure, and maintain a Linux-based set of networked computers with shared resources
2. Understand the significance of proper administration of systems and its impact on users, their data and computational resources, and the security of the overall installation

C S 481. Visual Programming

3 Credits (3)

Design and implementation of programs using visual (i.e. dataflow or diagrammatic) programming techniques, with an emphasis on real-time data processing. Students will learn how to design visual programs, including how to handle cycles and state maintenance, and will learn to process audio, video, and other data using visual programs. Not for C S graduate students. Taught with C S 518.

Prerequisite: At least a C- in C S 272 and C S 278.

Learning Outcomes

1. Develop software in graph-based visual environments
2. Understand flows of control in visual programming environments
3. Use signals, digital and analog, to drive software
4. Communicate software design and evaluation with presentations, demos, and reports

C S 482. Database Management Systems I

3 Credits (3)

Database design and implementation; models of database management systems; privacy, security, protection, recovery. Not for C S graduate students. Taught with C S 502.

Prerequisite: At least a C- in C S 272 and C S 278.

Learning Outcomes

1. Utilize the basic concepts of relational database model
2. Utilize database query languages (e.g. SQL)
3. Identify data integrity and security requirements
4. Analyze, capture, and model user requirements for building database systems using conceptual models
5. Design and normalize relational schemas
6. Apply application development methods to implement a database system

C S 484. Computer Networks I

3 Credits (3)

Fundamental concepts of computer communication networks: layered network architecture, network components, protocol stack and service. Example of application, transport, network and data link layers, protocols primarily drawn from the Internet (TCP, UDP, and IP) protocol multimedia networks; network management and security. Not for C S graduate students. Taught with C S 504.

Prerequisite: At least a C- in C S 272 and CS 273.

Learning Outcomes

1. Explain the layered model of networking using the OSI and TCP/IP models

2. Describe the purpose and concepts of each layer in the OSI and TCP/IP models
3. Describe IP as a particular network layer protocol
4. Describe TCP and UDP as particular transport layer protocols
5. Describe Ethernet (11) and WiFi (15) as particular data link layer protocols
6. Describe and analyze routing and routing issues
7. Describe and analyze data link layer switching
8. Describe the need for application protocols such as HTTP
9. Explain other network issues such as multicasting and audio/video data streaming 1
10. Implement socket-based network programs

C S 485. Human-Centered Computing

3 Credits (3)

Covers iterative, human-centered interface design, including prototyping and evaluation. Basics of graphic design and visualization. Not for C S graduate students. Taught with C S 515.

Prerequisite: At least C- in C S 371.

Learning Outcomes

1. Describe, analyze, and/or critique a device interface using a design vocabulary
2. Enact a human-centered process of interaction design: gather data; develop a data-driven design; iterate design through testing; and evaluate results
3. Conduct human-computer interaction research by proposing, developing, and conducting experiments; analyzing data; and developing synthesized results
4. Communicate design and evaluation with presentations, demos, and reports
5. Implement a variety of interaction techniques

C S 486. Bioinformatics

3 Credits (3)

Introduction to bioinformatics and computational biology. Computational approaches to sequences analysis, protein structure prediction and analysis, and selected topics from current advances in bioinformatics. Not for C S graduate students. Taught with C S 516.

Prerequisite: At least a C- in C S 272 and C S 278.

Learning Outcomes

1. Explain the biology motivation of a bioinformatics question
2. Formulate a computational problem and its solution to address a molecular biology question
3. Implement basic bioinformatics algorithms such as sequence alignment, pattern matching, and genome assembly
4. Evaluate the performance of a bioinformatics algorithm on real data sets
5. Argue the correctness of a bioinformatics algorithm
6. Analyze the complexity of a bioinformatics algorithm

C S 487. Applied Machine Learning I

3 Credits (3)

An introductory course on practical machine learning. An overview of concepts for both unsupervised and supervised learning. Topics include classification, regression, clustering, and dimension reduction. Classical methods and algorithms such as linear regression, neural networks, support vector machines, and ensemble approaches. Recent techniques such as deep learning. Focused on applying of machine

learning techniques in application domains. Not for Graduate Majors.
Taught with: C S 519.

Prerequisite: At least a C- in C S 272, MATH 1511G; or consent of instructor.

Learning Outcomes

1. Implement and utilize different data processing techniques
2. Differentiate and assess several dimension reduction techniques
3. Utilize several classifiers (SVM, Decision tree, k-Nearest Neighbor, and logistic regression) and differentiate their advantages and disadvantages
4. Explain and demonstrate regression analysis
5. Describe and illustrate clustering approaches
6. Apply ensemble learning approaches
7. Implement several neural network classifiers, including deep learning models

C S 488. Introduction to Data Mining

3 Credits (3)

Techniques for exploring large data sets and discovering patterns in them. Data mining concepts, metrics to measure its effectiveness. Methods in classification, clustering, frequent pattern analysis. Selected topics from current advances in data mining. Taught with C S 508.

Prerequisite: At least a C- in C S 272 and C S 278.

Learning Outcomes

1. Explain and recognize different data mining tasks such as data pre-processing, visualization, classification, regression, clustering, association rules, and anomaly detection
2. Apply classical data mining / machine learning algorithms for classification, clustering, association rules, and anomaly detection
3. Evaluate and compare the performance of different data mining / machine learning algorithms
4. Utilize data mining algorithms to analyze data in real applications using a data mining tool

C S 489. Bioinformatics Programming

3 Credits (3)

Computer programming to analyze high-throughput molecular biology data including genomic sequences, bulk and single-cell transcriptome, epigenome, and other omics data. Quality control, library size normalization, confounding effect removal, clustering, statistical modeling, trajectory inference, and visualization. Taught with C S 509.

May be repeated up to 3 credits.

Learning Outcomes

1. Write R scripts and functions to manipulate biological sequences, genome annotation, and gene expression data
2. Perform high-throughput data analysis with established R packages
3. Detect differential gene expression on RNA sequencing data
4. Perform single-cell RNA sequencing data analysis (quality control, library size normalization, confounding effect removal, modeling)
5. Assess statistical significance of analytical results
6. Create automatic data analysis pipeline to link multiple software packages

C S 491. Parallel Programming

3 Credits (3)

Programming of shared memory and distributed memory machines; tools and languages for parallel programming; techniques for parallel programming; parallel programming environments. Not for C S graduate students. Taught with C S 521.

Prerequisite: At least a C- in C S 370 or consent of instructor.

Learning Outcomes

1. Describe existing parallel architectures including shared memory versus distributed memory platforms
2. Apply basic techniques for organizing parallel computations
3. Apply basic techniques for performance measurement and theoretical limitations of parallelism
4. Explain alternative parallel techniques and hardware
5. Perform performance Analysis of different parallel programming techniques
6. Program shared memory machines using threads, processes, and the OpenMP library
7. Program using a message passing paradigm and obtain working knowledge of the Message Passing Interface (MPI)

C S 493. Algorithm Design and Implementation

3 Credits (3)

This course introduces the basic knowledge of designing classical algorithms and implementing these algorithms using a programming language. In particular, the course teaches various data structures, including graphs and balanced binary search trees, and efficient schemes to implement these data structures. This course also teaches basic algorithm design techniques including divide-and-conquer, greedy scheme, and dynamic programming. This course covers graph algorithms, including graph traversals (depth-first search and breadth-first search), connectivity, shortest paths, and minimum spanning trees. Graduate standing. Not for CS students. Taught with C S 343.

Prerequisite: At least a C- in C S 272, or Consent of Instructor.

Learning Outcomes

1. Be able to use and implement sorting algorithms
2. Be able to design and implement graph algorithms
3. Be able to design and implement algorithms using the divide-and-conquer technique
4. Be able to design and implement algorithms using the greedy technique
5. Be able to design and implement algorithms using the dynamic programming technique
6. Be able to use and implement balanced search trees
7. Be able to use and implement hashing techniques
8. Be able to perform the run time analysis of basic algorithms using Big O notation

C S 494. Introduction to Smart Grids

3 Credits (3)

This course is an introduction to the technologies and design strategies associated with the Smart Grid. The emphasis will be on the development of communications, energy delivery, coordination mechanisms, and management tools to monitor transmission and distribution networks. Topics include: Smart grid introduction and evolution; Power systems; Networking and transport control; Artificial intelligence & agent coordination; Data mining for smart grids. Taught with C S 514. May be repeated up to 3 credits.

Prerequisite: At least a C- in C S 272 and a C- in ENGR 230; or Consent of instructor.

Learning Outcomes

1. Get basic understanding of how conventional power system is operated and protected
2. Understand and use basic knowledge of communication techniques in smart grids

3. Understand and use basic knowledge for the coordination of the different units in smart grids
4. Understand and apply data mining techniques for protecting smart grids

C S 496. Cloud and Edge Computing

3 Credits (3)

The course presents a top-down view of cloud computing, from applications and administration to programming and infrastructure. Its main focus is on the concepts of networking and parallel programming for cloud computing and large scale distributed systems which form the cloud infrastructure. The topics include: overview of cloud computing, cloud systems, parallel processing in the cloud, distributed storage systems, virtualization, security in the cloud, and multicore operating systems. Students will study state-of-the-art approaches to cloud computing followed by large cloud corporations, namely Google, Amazon, Microsoft, and Yahoo. Students will also apply what they learn through project developments using Amazon Web Services. Not for graduate CS majors. Taught with: C S 522.

Prerequisite: At least a C- in C S 372; background in C S 484/C S 504 is preferred or consent of instructor.

Learning Outcomes

1. The emphasis of the course will be on the understanding the concepts and the engineering trade-offs involved in the design of cloud computing systems
2. Cloud deployment models, cloud service models (software-as-a-service, infrastructure- as-a-service, protocol-as-a-service), cloud architecture, cloud-edge security, service level agreements, and load balancing in cloud and datacenters
3. Learn about cloud computing, especially what are their fundamental components, how these components interact, and how the technology is evolving for the future (edge computing, cloudlets, mobile edge computing, etc.).

C S 502. Database Management Systems I

3 Credits (3)

Database design and implementation; models of database management systems; privacy, security, protection, recovery; taught with C S 482; requires more advanced graduate work than C S 482. Students are expected to have solid knowledge of data structures and discrete mathematics.

Learning Outcomes

1. Utilize the basic concepts of relational database model
2. Utilize database query languages (e.g. SQL)
3. Identify data integrity and security requirements
4. Analyze, capture, and model user requirements for building database systems using conceptual models
5. Design and normalize relational schemas
6. Apply application development methods to implement a database system

C S 504. Computer Networks I

3 Credits (3)

Fundamental concepts of computer communication networks: layered network architecture, network components, protocol stack and service. Example of application, transport, network and data link layers, protocols primarily drawn from the Internet (TCP, UDP, and IP) protocol suite; local and wide area networks, wireless and mobile networks, multimedia networks; network management and security; taught with C S 484; requires more advanced graduate work than C S 484. Students are expected to have solid knowledge of data structures, machine-level

programming. Knowledge of statistics (at the level of MATH 371 or MATH 470) is recommended.

Learning Outcomes

1. Explain the layered model of networking using the OSI and TCP/IP models
2. Describe the purpose and concepts of each layer in the OSI and TCP/IP models
3. Describe IP as a particular network layer protocol
4. Describe TCP and UDP as particular transport layer protocols
5. Describe Ethernet (802-11) and WiFi (802-15) as particular data link layer protocols
6. Describe and analyze routing and routing issues
7. Describe and analyze data link layer switching
8. Describe the need for application protocols such as HTTP
9. Explain other network issues such as multicasting and audio/video data streaming
10. Implement socket-based network programs

C S 505. Artificial Intelligence I

3 Credits (3)

Fundamental principles and techniques in artificial intelligence systems. Knowledge representation formalisms; heuristic problem solving techniques; automated logical deduction; robot planning methods; algorithmic techniques for natural language understanding, vision and learning; taught with C S 475; requires more advanced graduate work than C S 475. Students are expected to have strong knowledge of algorithms and data structures (at the level of C S 372).

Learning Outcomes

1. Use various search algorithms commonly used in problem-solving
2. Use methods for solving constraint satisfaction problems
3. Use propositional and first-order logic to represent knowledge
4. Use logical inference methods to derive conclusions from a knowledge base
5. Use adversarial search for game-playing agents
6. Analyze the different search strategies
7. Design and Implement heuristic search for problem-solving

C S 506. Computer Graphics I

3 Credits (3)

Languages, programming, devices, and data structures for representation and interactive display of complex objects. Taught with C S 476. Requires more advanced graduate work than C S 476. Students are expected to have knowledge of compilers design and software engineering equivalent to C S 370 and C S 371.

Learning Outcomes

1. Techniques used in three-dimensional graphics
2. Computer Graphics lightning and shading
3. Client-server graphics using WebGL
4. Geometric and Solid modeling
5. Computer Graphics implementation algorithms

C S 508. Introduction to Data Mining

3 Credits (3)

Techniques for exploring large data sets and discovering patterns in them. Data mining concepts, metrics to measure its effectiveness. Methods in classification, clustering, frequent pattern analysis. Selected topics from current advances in data mining. Students are expected to have a preparation in Discrete Mathematics and Data Structures

equivalent to C S 272 and C S 278. Requires more advanced graduate work than C S 488. Taught with: C S 488.

Learning Outcomes

1. Explain and recognize different data mining tasks such as data pre-processing, visualization, classification, regression, clustering, association rules, and anomaly detection
2. Apply classical data mining / machine learning algorithms for classification, clustering, association rules, and anomaly detection
3. Evaluate and compare the performance of different data mining / machine learning algorithms
4. Utilize data mining algorithms to analyze data in real applications using a data mining tool

C S 509. Bioinformatics Programming

3 Credits (3)

Computer programming to analyze high-throughput molecular biology data including genomic sequences, bulk and single-cell transcriptome, epigenome, and other omics data. Quality control, library size normalization, confounding effect removal, clustering, statistical modeling, trajectory inference, and visualization. Taught with C S 489. Requires more advanced graduate work than C S 489.

Learning Outcomes

1. Write R scripts and functions to manipulate biological sequences, genome annotation, and gene expression data
2. Perform high-throughput data analysis with established R packages
3. Detect differential gene expression on RNA sequencing data
4. Perform single-cell RNA sequencing data analysis (quality control, library size normalization, confounding effect removal, modeling)
5. Assess statistical significance of analytical results
6. Create automatic data analysis pipeline to link multiple software packages

C S 510. Automata, Languages, Computability

3 Credits (3)

Regular and context-free languages, pushdown and finite-state automata, Turing machines, models of computation, halting problems. Students are expected to have knowledge of algorithms equivalent to C S 372. May be repeated up to 3 credits.

Learning Outcomes

1. Describe the language accepted by an automaton or generated by a regular expression or a context-free grammar
2. Design automata, regular expressions and context-free grammars accepting or generating a certain language
3. Prove properties of languages, grammars, and automata with formal mathematical methods
4. Convert between equivalent deterministic and non-deterministic finite automata, and regular expressions
5. Convert between equivalent context-free grammars and pushdown automata
6. Define Turing machines performing simple tasks

C S 513. Computer Security

3 Credits (3)

Introduction to the art and science of computer security. Fundamentals of computer security including elementary cryptography, authentication and access control, security threats, attacks, detection and prevention in application software, operating systems, networks and databases. Taught with C S 478. Requires more advanced graduate work than C S 478. Recommended knowledge of materials in C S 272. May be repeated up to 3 credits.

Prerequisite: At least a C- in C S 273 or consent of instructor.

Learning Outcomes

1. Describe fundamental concepts in security and privacy
2. Understand requirements of security in different contexts
3. Describe practical implementation challenges in security/privacy system design
4. Explain at a high-level symmetric and public key cryptography
5. Explain various access control mechanisms such as authentication, authorization
6. Understand aspects of secure system design that a computer programmer/engineer needs to account for

C S 514. Introduction to Smart Grids

3 Credits (3)

This course is an introduction to the technologies and design strategies associated with the Smart Grid. The emphasis will be on the development of communications, energy delivery, coordination mechanisms, and management tools to monitor transmission and distribution networks. Topics include: Smart grid introduction and evolution; Power systems; Networking and transport control; Artificial intelligence & agent coordination; Data mining for smart grids. Taught with C S 494. Requires more advanced work than C S 494. May be repeated up to 3 credits.

Prerequisite: At least a C- in C S 272 and a C- in ENGR 230; or Consent of instructor.

Learning Outcomes

1. Get basic understanding of how conventional power system is operated and protected
2. Understand and use basic knowledge of communication techniques in smart grids
3. Understand and use basic knowledge for the coordination of the different units in smart grids
4. Understand and apply data mining techniques for protecting smart grids

C S 515. Human-Centered Computing

3 Credits (3)

Covers iterative, human-centered interface design, including prototyping and evaluation. Basics of graphic design and visualization. Taught with C S 485. Requires more advanced graduate work than C S 485 with an emphasis on studying recent research in human-computer interaction. Students are expected to have knowledge of software engineering equivalent to C S 371.

Learning Outcomes

1. Describe, analyze, and/or critique a device interface using a design vocabulary
2. Enact a human-centered process of interaction design: gather data; develop a data-driven design; iterate design through testing; and evaluate results
3. Conduct human-computer interaction research by proposing, developing, and conducting experiments; analyzing data; and developing synthesized results
4. Communicate design and evaluation with presentations, demos, and reports
5. Implement a variety of interaction techniques

C S 516. Bioinformatics

3 Credits (3)

Introduction to bioinformatics and computational biology. Computational approaches to sequences analysis, protein structure prediction and analysis, and selected topics from current advances in bioinformatics;

taught with C S 486; requires more advanced graduate work than C S 486. Students are expected to have a knowledge of algorithms and data structures equivalent to C S 372 or exposure to Biology (equivalent to BIOL 2310 or BIOL 311).

Learning Outcomes

1. Explain the biology motivation of a bioinformatics question
2. Formulate a computational problem and its solution to address a molecular biology question
3. Implement basic bioinformatics algorithms such as sequence alignment, pattern matching, and genome assembly
4. Evaluate the performance of a bioinformatics algorithm on real data sets
5. Argue the correctness of a bioinformatics algorithm
6. Analyze the complexity of a bioinformatics algorithm

C S 517. Digital Game Design

3 Credits (3)

An introduction to digital game design. Topics include design, development, and playtesting of games. The course is structured to use team-based learning. Taught with C S 477. Requires more advanced graduate work than C S 477 with deeper attention to a team game project.

Learning Outcomes

1. Describe, analyze, and/or critique games with a consistent vocabulary
2. Design, develop, and playtest games
3. Understand the formal systems of games
4. Communicate game designs through demonstrations and presentations

C S 518. Visual Programming

3 Credits (3)

Design and implementation of programs using visual (i.e. dataflow or diagrammatic) programming techniques, with an emphasis on real-time data processing. Students will learn how to design visual programs, including how to handle cycles and state maintenance, and will learn to process audio, video, and other data using visual programs. Students must be in graduate standing to enroll. Taught with C S 481. Requires more advanced graduate work than C S 481.

Learning Outcomes

1. Develop software in graph-based visual environments
2. Understand flows of control in visual programming environments
3. Use signals, digital and analog, to drive software
4. Communicate software design and evaluation with presentations, demos, and reports

C S 519. Applied Machine Learning I

3 Credits (3)

An introductory course on practical machine learning. An overview of concepts for both unsupervised and supervised learning. Topics include classification, regression, clustering, and dimension reduction. Classical methods and algorithms such as linear regression, neural networks, support vector machines, and ensemble approaches. Recent techniques such as deep learning. Focused on applying of machine learning techniques in application domains. Taught with: C S 487. Requires more advanced graduate work than C S 487.

Learning Outcomes

1. Implement and utilize different data processing techniques
2. Differentiate and assess several dimension reduction techniques

3. Utilize several classifiers (SVM, Decision tree, k-Nearest Neighbor, and logistic regression) and differentiate their advantages and disadvantages

4. Explain and demonstrate regression analysis
5. Describe and illustrate clustering approaches
6. Apply ensemble learning approaches
7. Implement several neural network classifiers, including deep learning models

C S 521. Parallel Programming

3 Credits (3)

Programming of shared memory and distributed memory machines; tools and languages for parallel programming; parallelizing compilers; parallel programming environments; taught with C S 491; requires more advanced graduate work than C S 491. Students are expected to have knowledge of programming and machine organization equivalent to C S 271 and C S 273.

Learning Outcomes

1. Describe existing parallel architectures including shared memory versus distributed memory platforms
2. Apply basic techniques for organizing parallel computations
3. Apply basic techniques for performance measurement and theoretical limitations of parallelism
4. Explain alternative parallel techniques and hardware
5. Perform performance Analysis of different parallel programming techniques
6. Program shared memory machines using threads, processes, and the OpenMP library
7. Program using a message passing paradigm and obtain working knowledge of the Message Passing Interface (MPI)

C S 522. Cloud and Edge Computing

3 Credits (3)

The course presents a top-down view of cloud computing, from applications and administration to programming and infrastructure. Its main focus is on the concepts of networking and parallel programming for cloud computing and large scale distributed systems which form the cloud infrastructure. The topics include: overview of cloud computing, cloud systems, parallel processing in the cloud, distributed storage systems, virtualization, security in the cloud, and multicore operating systems. Students will study state-of-the-art approaches to cloud computing followed by large cloud corporations, namely Google, Amazon, Microsoft, and Yahoo. Students will also apply what they learn through project developments using Amazon Web Services. Might have additional requirements for graduate students. To enroll in this course a background in C S 484/C S 504 is preferred or have consent from the instructor. Taught with: C S 496. Requires more advanced graduate work than C S 496.

Learning Outcomes

1. The emphasis of the course will be on the understanding the concepts and the engineering trade-offs involved in the design of cloud computing systems
2. Cloud deployment models, cloud service models (software-as-a-service, infrastructure- as-a-service, protocol-as-a-service), cloud architecture, cloud-edge security, service level agreements, and load balancing in cloud and datacenters
3. Learn about cloud computing, especially what are their fundamental components, how these components interact, and how the

technology is evolving for the future (edge computing, cloudlets, mobile edge computing, etc.).

C S 525. Introduction to Cryptography

3 Credits (3)

The course covers basic cryptographic primitives, such as symmetric, public-key ciphers, digital signature schemes, and hash functions, and their mathematical underpinnings. Course helps students understand basic notions of security in a cryptographic sense: chosen plaintext and chosen ciphertext attacks, games, and reductions. Course also covers computational number theory relevant to cryptography. Consent of Instructor required. Taught with: C S 380. Requires more advanced graduate work than C S 380.

Prerequisite: C S 278 (or equivalent) with a C or better.

Learning Outcomes

1. Describe basic cryptographic primitives, including symmetric ciphers, asymmetric ciphers, digital signatures, message authentication codes, and hash functions.
2. Understand the mathematical, fundamental underpinnings of cryptography, and how to reason about the security of crypto primitives: indistinguishability (IND) properties of ciphertexts, CPA/CCA games, and reductions to fundamental math assumptions;
3. Be able to discuss number theory/algebra underpinning the design of cryptographic primitives, in some depth.

C S 532. Modern Web Technologies

3 Credits (3)

In this course, we will take a full-stack approach to modern web application design. We will start with the fundamentals including HTML5, CSS3, Javascript, JSON, and the underlying networking concepts and protocols driving the modern web. We will then move on to more advanced topics including javascript backend development with Node.js, NoSQL database design with MongoDB, cloud computing, and responsive web design. Finally, we cover advanced topics including the design and implementation of browser extensions and real-time web technologies like WebRTC and WebSockets. Consent of Instructor required. Taught with: C S 382. Requires more advanced graduate work than C S 382.

Learning Outcomes

1. Understand the fundamental technologies and operation of the web.
2. Design and develop responsive interactive web sites.
3. Deploy web applications on Cloud Computing Platforms.
4. Leverage modern tools and packages to develop full stack web applications.
5. Be fluent in the application of emerging web technologies like browser extensions, WebSockets, and WebRTC.
6. Use existing materials and references on the web to learn new skills.

C S 533. Introduction to Deep Learning

3 Credits (3)

The course covers basic concepts of neural networks which include transition of classical machine learning to hierarchical feature learning, feedforward networks, regularization, optimization, hyperparameter tuning, deep convolutional networks and their applications in computer vision, deep sequence models, and deep generative models. Taught with C S 383. Requires more advanced graduate work than C S 383. May be repeated up to 3 credits.

Prerequisite: At least a C- in C S 272 or C S 153, and C S 278, or consent of instructor.

Learning Outcomes

1. Have significant familiarity with different state-of-the-art theories and practices of deep learning.
2. Be able to apply deep learning to a variety of tasks suitable for data science-based projects of academia and industry.
3. Understand much of the current literature on the topic, review papers, and extend their knowledge through further study.
4. Design and evaluate novel deep learning models.
5. Train and test deep learning models on real-life and benchmark datasets using Python libraries such as TensorFlow and PyTorch.

C S 534. Graph Data Mining

3 Credits (3)

The course covers graph terminology, representation, and techniques to extract patterns from large graph data. The topics include random and scale-free graph generation, link analysis (PageRank), graph representation learning, graph neural networks, deep graph generation, community detection, frequent subgraph mining, graph classification, influence maximization, and knowledge graph mining. Taught with C S 384. Requires more advanced graduate work than C S 384. May be repeated up to 3 credits.

Prerequisite: At least a C- in C S 272 or C S 153, and C S 278, or consent of instructor.

Learning Outcomes

1. Have significant familiarity with different state-of-the-art theories and practices of graph data mining.
2. Graph representation and graph querying using graph manipulating toolbox/library.
3. Use random and scale-free graph models to generate graphs and visualize complex network properties.
4. Apply algorithms such as PageRank, spectral clustering, and non-negative matrix factorization.
5. Implement graph representation learning algorithms and graph neural network.
6. Understand much of the current literature on the topic, review papers, extend their knowledge through further study, and present findings of the papers.

C S 570. Analysis of Algorithms

3 Credits (3)

Techniques for design and analysis of algorithms; time and space complexity; proving correctness of programs. Particular algorithms such as sorting, searching, dynamic programming. NP complete problems. Students are expected to have knowledge of algorithms and data structures equivalent to C S 372.

Learning Outcomes

1. Prove algorithm correctness by loop-invariant
2. Prove an algorithm to be incorrect by counterexamples
3. Develop efficient divide-and-conquer algorithms
4. Design and analyze binary search tree algorithms
5. Construct dynamic programming solutions
6. Prove the correctness of dynamic programming solutions by contraposition
7. Traverse graphs efficiently
8. Find paths in graphs efficiently
9. Determine if a problem is NP-Complete or NP-Hard
10. Basic concepts of quantum computing

C S 573. Architectural Concepts II**3 Credits (3)**

Advanced topics related to computer architecture, guided by the current literature. Students are expected to have knowledge of computer architectures equivalent to C S 473 and of operating systems equivalent to C S 474. Crosslisted with: E E 564.

Learning Outcomes

1. Be able to explain the features in a modern multicore CPU architecture
2. Be able to utilize hardware counter features of a CPU in performance evaluation
3. Be able to explain the architecture of GPUs and their capabilities and drawbacks
4. Be able to evaluate novel cutting-edge architectural features and designs
5. Be able to present a research paper to an advanced audience

C S 574. Operating Systems II**3 Credits (3)**

Advanced topics related to operating system principles, guided by the current literature. Students are expected to have knowledge of computer architectures and operating systems equivalent to C S 473 and C S 474.

Learning Outcomes

1. Further an understanding of the principles of operating systems.
2. Develop insight into process management and scheduling issues.
3. Understand memory management operation.
4. Develop an understanding of file system implementation and of multiple levels of hardware support and management.
5. Develop a deep understanding of the concepts of cooperating processes, including communication, synchronization, and deadlock (detection and avoidance).
6. Be able to evaluate operating system features.
7. Develop an understanding of the distributed operating system environment.

C S 575. Artificial Intelligence II**3 Credits (3)**

Covers advanced theory and application of artificial intelligence. Concentration on several specific research areas, such as knowledge representation, problem solving, common-sense reasoning, natural language understanding, automated tutoring systems, learning systems. Students are expected to have knowledge of artificial intelligence equivalent to C S 475.

Learning Outcomes

1. Apply selected planning algorithms in solving problems
2. Identify problems where knowledge representation and reasoning techniques are applicable
3. Be able to apply answer set programming in problem solving
4. Be aware of various advanced research topics in Artificial Intelligence

C S 579. Special Topics**1-6 Credits**

Topic announced in the Schedule of Classes.

C S 581. Advanced Software Engineering**3 Credits (3)**

Advanced tools and methods for developing large software systems. Topics include object-oriented modeling and design, component architectures, templates and generic programming, software configuration and revision control, static and dynamic analysis tools, model, checking, advanced testing, and verification. Students are

expected to have knowledge of software engineering equivalent to C S 371.

Learning Outcomes

1. Be able to explain modern software development process ideas
2. Be able to apply agile software development techniques in a project
3. Be able to specify, design, and develop a complex software system in a team
4. Be able to properly utilize both black box and white box testing techniques
5. Be able to explain how unsound and incomplete formal methods can aid in system verification and validation
6. Be able to utilize sound and complete formal methods to prove properties of a system

C S 582. Database Management Systems II**3 Credits (3)**

Advanced data models and abstractions, dependencies, implementations, languages, database machines, and other advanced topics. Students are expected to have knowledge of data base management systems equivalent to C S 482.

Learning Outcomes

1. Analyze storage and file structures of an RDBMS
2. Analyze and apply indexing techniques of an RDBMS
3. Analyze query evaluation approaches of an RDBMS
4. Analyze the mechanisms of transaction management in an RDBMS

C S 584. Computer Networks II**3 Credits (3)**

Advanced topics in computer networks. Covers advanced topics in networking, with emphasis on wireless, and IP networks. Students are expected to have knowledge of computer networks equivalent to C S 484, and of statistics equivalent to MATH 371 or MATH 470.

Learning Outcomes

1. Understand design of link layer protocols.
2. Understand challenges and implementations for multimedia streaming.
3. Be able to use basic security constructs in the networking context.
4. Understand the concepts of edge and cloud computing
5. Understand the concepts and challenges of Internet of Things
6. Learn concepts of distributed networking
7. Learn and evaluate future internet architectures

C S 586. Algorithms in Systems Biology**3 Credits (3)**

The course will introduce important algorithms and computational models used in systems biology to study molecular mechanisms for cellular dynamics, processes, and systems. Cellular processes, such as metabolism and signal transduction, are studied as systems and networks quantitatively from high throughput molecular measurements. The topics include molecular biological systems, network alignment, model simulation, network inference, model optimization, and hybrid models. Students will be able to construct models and analyze their properties in the context of molecular biological systems. Students are expected to have knowledge of algorithms and data structures equivalent to C S 372.

Learning Outcomes

1. Create mathematical representation of biological systems
2. Infer biological network topology from observed omics data set

3. Simulate the behavior of a biological system using a mathematical model
4. Characterize behaviors of biological systems
5. Estimate parameters in a biological system model
6. Validate a model's statistical relevance given observed data

C S 589. Special Research Problems**1-6 Credits (1-6)**

Faculty-supervised investigation, to culminate in a written report. Maximally 6 credits can be applied to the student program of study. Written agreement with faculty supervisor is the required consent. May be repeated up to 18 credits.

Learning Outcomes

1. Research experience for graduate student.

C S 598. Master's Project**1-6 Credits**

Project-oriented capstone course to be completed by M.S. students under supervision of their advisor. Maximum of 6 credits may be applied toward M.S. degree. Restricted to C S majors.

Prerequisite: written agreement with instructor.

C S 599. Master's Thesis**1-6 Credits (1-6)**

Thesis to be developed by M.S. Students under supervision of their advisor. May be repeated for a maximum of 6 credits. Restricted to majors.

Prerequisite: consent of instructor.

C S 600. Pre-dissertation Research**1-15 Credits**

Pre-dissertation research.

C S 700. Doctoral Dissertation**1-15 Credits**

Dissertation.

CCDE-DEVELOPMENTAL ENGLISH

CCDE 105 N. Effective Communication Skills**4 Credits (3+2P)**

Instruction and practice in basic communication, to include written and oral presentations. Develops thinking, writing, speaking, reading, and listening skills necessary for successful entry to college and university classes. Provides laboratory. RR applicable.

CCDE 110 N. General Composition**4 Credits (3+2P)**

Instruction and practice in preparation for college-level writing. Students will develop and write short essays. Provides laboratory.

Learning Outcomes

1. Recognize and employ reading and writing processes.
2. Employ rhetorical awareness in reading and writing.
3. Compose a variety of texts that demonstrate reading comprehension, clear focus, and logical development of ideas that advance the writer's purpose.
4. Recognize and apply organizational strategies.
5. Locate, evaluate, and integrate appropriate sources including appropriate style guide.
6. Recognize and use conventions of standard American English including usage and mechanics of sentence structure.

CCDM-DEVELOPMENTAL MATHEMATICS

CCDM 100 N. Mathematics Preparation for College Success**1-4 Credits**

Mathematics skills course designed for college students with math skills insufficient for success in CCDM 103N. May be repeated for a maximum of 4 credits. RR applicable.

CCDM 103 N. Pre-Algebra**4 Credits (3+2P)**

Fundamental mathematics operations and arithmetic computations. Introduction to algebra and applied geometry. Provides laboratory and individualized instruction. RR applicable.

CCDM 105 N. Mathematics Preparation and Pre-Algebra**5 Credits (4+2P)**

A total immersion course that combines CCDM 100N and CCDM 103N using tutorials, manipulatives, and classroom instruction. Completion of this class is equivalent to the completion of CCDM 100N and CCDM 103N. Restricted to: Community Colleges only.

CCDM 114 N. Algebra Skills**4 Credits (3+2P)**

Fundamental algebra operations: algebraic expressions, solving linear and quadratic equations, factoring, radicals, exponents. Provides laboratory and individualized instruction. Completion of CCDM 114N meets basic skills requirement. Graded: Traditional with RR. Traditional Grading with RR. Restricted to Community Colleges campuses only.

Prerequisite(s): C or better in CCDM 103N or CCDM 105N or adequate placement score.

CCDR-DEVELOPMENTAL READING

CCDR 105 N. Fundamentals of Academic Reading.**3 Credits (2+2P)**

Fundamentals of academic reading skills. Emphasis on vocabulary development and text comprehension through literature based instruction. Course earns institutional credit but will not count towards degree requirements. Graded: Traditional with RR. May be repeated up to 3 credits. Traditional Grading with RR. Restricted to Community Colleges campuses only.

Prerequisite(s): Appropriate placement score.

CCDR 110 N. Effective College Reading**3 Credits (2+2P)**

Provides a variety of strategies for effective reading and studying at the college level. Emphasis on reading across disciplines. Course earns institutional credit but will not count towards degree requirements. Graded: Traditional with RR. May be repeated up to 3 credits. Traditional Grading with RR. Restricted to Community Colleges campuses only.

Prerequisite(s): Appropriate placement score.

CCDS-DEVELOPMENTAL SKILLS

CCDS 109 N. Study Skills for Reading**1-3 Credits**

Individualized reading skill strategies necessary for success in college classroom. May be repeated for a maximum of 3 credits. Graded traditional or S/U.

CCDS 111 N. Study Skills for Math**1-3 Credits**

Individualized study skill strategies necessary for success in the math classroom. May be repeated up to 3 credits. Restricted to Community Colleges campuses only.

CCDS 113 N. Study Skills for English

1-3 Credits

Individualized study skill strategies necessary for success in the composition classroom. May be repeated for a maximum of 3 credits.

CCDS 119 N. College Reading and Writing

4 Credits (4)

Instruction and practice in preparation for college-level reading and writing. Students will develop and write essays, work on the writing process, and learn to read and analyze college-level texts. Traditional Grading with RR.

Prerequisite(s): Appropriate placement test score.

Learning Outcomes

1. Practice the reading and writing process through activities such as pre-reading/writing, annotating, drafting, summarizing, peer reviewing, discussing, revising, proofreading, journaling, researching, and citing.
2. Infer and interpret meanings in various texts through activities such as summarizing, annotating, journaling, reflecting, and textual analysis.

CCST-CHICANA/O STUDIES

CCST 2110G. Introduction to Chicana and Chicano Studies

3 Credits (3)

An introductory survey of the Mexican American experience in the United States, with special reference to New Mexico. The course includes exploration of historical, political, social and cultural dimensions. NMSU Specific It seeks to review the historical causes and consequences of the formation of the Chicano identity and to understand its relation to the development of the Chicano experience as a distinct culture. The course explores the social and political impact that Chicana/o thought and theory has had on the United States over time, specifically developing concepts related to identity, community, social movements, and social justice. Ultimately, the course will facilitate understanding the historical ways in which Chicana/os have negotiated the pressures of their surroundings and in the process shaped or redefined American conceptions of identity, race, gender, sexuality, ethnicity, education, protest, and resistance.

Learning Outcomes

1. Apply various transdisciplinary perspectives and processes to understand humanist expressions through a variety of creative productions.
2. Assess and apply social, historical, economic and cultural perspectives as they impact diverse populations over a period of time.
3. Explain the ways in which narratives help people understand one another more clearly and profoundly across ethnic and cultural groups.
4. Design projects that foster and increase a full understanding of a subject in order to promote change in their own and listeners' attitudes, values, beliefs, or behaviors.
5. Apply qualitative and numerical data to explain diverse human actions in an everyday context of life.

CCST 3110. Chicana/o History

3 Credits (3)

This course is an exploration and discuss the history of Mexican Americans in the U.S., with emphasis on their contributions to society and the political, economic and cultural forces that exemplify their experiences as a population. Beginning in 1492, at the onset of European "contact" with indigenous people living in what is now called Mexico, students will study the early beginnings of Mexicans as a mestizo (mixed) race and follow this group on a rough timeline through the present. Films, music, images and poetry are included to supplement lecture material. With special attention to New Mexico and the borderlands specifically, students will endeavor to make relevant, contemporary connections to the material. Additionally, the course will contextualize this history of a population and experiences within the establishment of Chicana/o Studies as an evolving discipline.

Learning Outcomes

1. Summarize the major economic, political, social and cultural histories defining and effected by the Mexican American population.
2. Gain understanding of how these histories evolved in political solidarity with other minority populations in the United States.
3. Understand the multidisciplinary diversity and intellectual rigor that effected and currently compose Chicana/o Studies as an academic discipline.
4. Develop compelling and logical arguments for class discussion, individual and group presentations and writing assignments, based on course readings and discussions.
5. Interpret, understand, and engage texts within cultural, social and historical contexts.
6. Gather, analyze, and evaluate information from a variety of sources.
7. Compose texts in a variety of media formats.

CCST 3120V. Chicana/o Genders and Sexualities

3 Credits (3)

This survey course introduces students to Chicanx genders and sexual identities and representations as socially and culturally constructed in transnational Latinx communities and contexts. Through a lens of Chicana feminist and queer theories, students will gain familiarity with gender- and sexuality-related stereotypes and cultural expectations, as well as the histories of individual and group resistance to these norms. Course materials will highlight the revolutionary challenges to limitations and contributions to social, political, and cultural change made by queer Chicanx individuals and groups, women, and men resisting confining constructions of masculinity. This course will be both reading and writing intensive.

Learning Outcomes

1. Explain the multidisciplinary diversity and intellectual rigor that compose Chicanx feminist and queer theoretical traditions
2. Develop compelling and logical arguments for class discussion, individual and group presentations and writing assignments, based on course readings and discussions
3. Interpret, understand, and engage texts within cultural, social and historical contexts
4. Gather, analyze, and evaluate information from a variety of sources
5. Compose texts in a variety of media formats.

CCST 3130. Chicana/o Education

3 Credits (3)

This course deconstructs the history of education through the lens of culture and race. Using a framework of intersectionality, the creation of public education, and the impact of historical shifts within the law concerning education will be examined. Special emphasis is placed on the role of ethnicity in the development of the United States

and its education system. Includes an overview of multicultural/ multilingual curricula with a special focus on culturally / linguistically responsive instruction and assessment practices. This course provides a critical examination of race and culture using multicultural theoretical frameworks to analyze the conditions of education today. Additionally, this course will particularly foreground Latinx and Chicanx resistance and revolution in the realm of education and what this history and activism teaches us about our own identity, worldviews, environment, and ways of understanding in the contexts of both informal and formal processes and experiences of education.

Learning Outcomes

1. Analyze and interpret the historical, philosophical, economic, and sociocultural elements of education as it relates to race and culture.
2. Evaluate and interpret the ways in which education policies influence and are influenced by equity issues.
3. Describe multicultural education initiatives and assumptions about teaching, learning, and knowing.
4. Understand how cultural groups and students' cultural identities affect language learning and education overall, especially for Latinx and Chicanx students.
5. Explain and provide examples of anti-bias teaching strategies and education practices.

CEPY-COUNSELING & EDUCATIONAL PSYCHOLOGY

CEPY 1120G. Human Growth and Behavior

3 Credits (3)

Introduction to the principles of human growth and development throughout the life span. May be repeated up to 3 credits.

Learning Outcomes

1. Students will demonstrate an understanding of the scientific study of processes of change and stability throughout the human lifespan (i.e. Human Development).
2. Students will demonstrate a familiarity with the generally recognized stages of human development from conception to death.
3. Students will be able to demonstrate understanding of the normal and exceptional patterns of human development.
4. Students will be able to demonstrate understanding of recent research development regarding the identified stages of human development as they relate to gender and multicultural issues

CEPY 1150. Career Excellence

1 Credit (1)

Professional career curriculum to assist students in developing an understanding and ability to articulate who they are as emerging professionals through personal assessment activities. The focus will be on providing students with tools and strategies for reflection, planning, and goal-setting. Course does not count toward CEP minor. Spring only course offering. Restricted to College of HEST Majors only.

Learning Outcomes

1. Demonstrate an understanding of the relationship between academic and professional career success.
2. Express a familiarity with professionalism and career culture and communicate a comprehension of various professional career skills.
3. Apply material learned to other aspects to professional excellence.

4. Develop a career life plan that will highlight goals, taking into account life circumstances.
5. Become competent in appropriate professional communication.

CEPY 1160. Academic Excellence

1 Credit (1)

The course is designed to provide you students with a foundation in their personal academic process. The course will assist students in developing an understanding and ability to articulate who they are as beginning college students through personal assessment activities. The focus will be on providing students with tools and strategies for reflection, planning, and goal-setting. Topics discussed will include time management, study skills, test taking skills, stress management, motivational and academic discipline skills, interpersonal skills and college survival skills. We intend for this to be a supportive, respectful and collaborative environment where everyone can learn and grow. Fall only course offering. Restricted to College of HEST majors.

Learning Outcomes

1. Students will be able to demonstrate an understanding of the relationship between time management and academic success.
2. Students will be able to express a familiarity with college culture.
3. Students will be able to communicate a comprehension of study skills and test taking strategies.
4. Students will be able to apply material learned to other aspects to enhance academic excellence.
5. Students will be able to develop an academic life plan that will highlight goals, taking into account life circumstances.
6. Become competent in appropriate academic communication.

CEPY 2110. Learning in the Classroom

3 Credits (3)

This class introduces you to the basic principles of learning, including cognition, motivation, and assessment. You will examine the relationships between theory, research, and practice in learning, memory, child development, motivation, and educational assessment for the school setting. This course will provide the student with concepts and principles of educational psychology that will form a framework for thinking about learning and instruction and how theories of learning are connected to classroom situations May be repeated up to 3 credits.

Learning Outcomes

1. Define learning and compare and contrast the factors that cognitive, behavioral, and humanistic theories believed to influence the learning process, giving specific examples of how these principles could be used in the classroom.
2. Observe and reflect upon the teaching learning processes in economically, socially, culturally and educationally diverse classroom populations in order to develop a current understanding of students and families in public and private school.
3. Discuss how theories of information processing and cognitive theories of learning can impact memory, study strategies, and how certain teaching techniques can help students learn.
4. Compare teacher-centered and student-centered approaches to learning, and to identify a positive learning environment.
5. Identify various methods to motivate students and create effective learning environments.
6. Use major concepts of child and adolescent development, human learning, and social and cultural influences in planning and implementing classroom instruction, strategies, and management.
7. Evaluate the best means of accommodating instruction to meet individual needs and differences.

8. Students will examine how learning style, cultural and social issues and learning disabilities impact the learner's effectiveness in the classroom setting.
9. Explain different types of assessment used to assess learning and provide examples of effective assessment practices. 1
10. Discuss the relationship between motivation and classroom management

CEPY 2120. The Preschool Child

3 Credits (3)

Survey of psychological development from conception to age five. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate an understanding of major theories of early childhood development
2. Demonstrate an understanding of recognized stages of human development from prenatal to preschool years
3. Explore cultural influences that may create variability in human development
4. Apply major theories to themselves and reflect on their early childhood development.

CEPY 2130. Adolescence - School Setting

3 Credits (3)

This course is designed to present the student with an introduction to the area of adolescent development with an emphasis on the positive aspects of this life stage. Students will be encouraged to be reflective on the topics presented in class that will include issues on diversity, culture, health, and well-being, emerging adulthood and suggestions for improving the lives of adolescents. May be repeated up to 3 credits.

Learning Outcomes

1. Students will become knowledgeable about the historical background of adolescent development.
2. Students will become knowledgeable about the major theories related to adolescence.
3. Students will evaluate different developmental theories and their fit across cultures as you reflect on your personal experiences through discussions and videos you will watch.
4. Students will identify key developmental milestones, conflicts, and concepts of each chapter presented by utilizing critical thinking skills as you complete summary questions.
5. Students will define relevant terms, ideas, and concepts in the study of adolescent development through quizzes and homework assignments.

CEPY 2140. Explorations of Counseling & Community Psychology

3 Credits (3)

An introduction and exploration of various career options and functions within the mental health disciplines to aid in professional development. Emphasis will be placed on depth and scope of the choices available including research, teaching, community work, public policy, and clinical work and prevention (e.g. counseling, psychotherapy, assessment, consultation). May be repeated up to 6 credits.

Learning Outcomes

1. Acquire knowledge of historical and contemporary issues which affect the provision of mental health services by members of diverse mental health disciplines including clinical, counseling, school, and community psychologists, clinical mental health counselors, and others.

2. Acquire knowledge pertaining to education and training requirements for various disciplines.
3. Acquire survey-level knowledge of psychological assessment, measurement, and treatment.
4. Acquire survey-level knowledge of various inquiry approaches applicable to research pertaining to mental health and well-being—both at the individual and community level.
5. Understand the mental health recovery model and explore the lived experiences of individuals with mental health problems in contemporary society.
6. Understand the principles of sensitivity and respect for diverse populations as integral to professional practice in diverse mental health disciplines and settings, including practice in educational and community settings.

CEPY 2140H. Exploration of CCP

3 Credits (3)

An exploration of careers, activities, & techniques in counseling, school, and community psychology. Taught with CEPY 2140 with differentiated instruction and/or independent project to be determined. Restricted to Las Cruces campus only.

Learning Outcomes

1. Demonstrating knowledge of the basic functions of careers in counseling, community and school psychology.
2. Establishing a familiarity with the educational requirements necessary for a career in counseling, community, and school psychology.
3. Acknowledging and enhancing sensitivity and respect for diverse populations in various counseling areas; including educational and community settings.
4. Beginning to develop the interpersonal skills needed to succeed in the counseling, community and school psychology professions.

CEPY 3110. Sex Roles in Education

3 Credits (3)

Physiological, psychological, and political aspects of sex role socialization and the effects of these factors on personal development. May be repeated up to 3 credits.

Learning Outcomes

1. Increase awareness of gender issues in context with other identities.
2. Increase knowledge about feminism and masculinity from a multicultural and systems perspective.
3. Increase knowledge about gender issues among people of color, geographic regions, and differing socioeconomic status.
4. Gain an understanding of intentional and unintentional sexist behavior and the consequences of such behavior.
5. Prepare students to work with diverse populations by emphasizing differences in values based on gender roles.
6. Practice interpersonal and team-building skills.
7. Practice critical thinking skills in evaluating research evidence.
8. Increase knowledge of how gender influences education.
9. Understanding systemic influences on gender issues and learning how to take action for social justice.

CEPY 3210V. Human Relations Training

3 Credits (3)

Gain skills, knowledge, and sensitivity for living and working with others. May be repeated up to 3 credits.

Learning Outcomes

1. Critically evaluate academic literature regarding human relations.
2. Be familiar with theories of human relations.
3. Integrate and apply these theories toward understanding the dynamics of interpersonal and organizational relationships.
4. Demonstrate an increased understanding of human relations as they apply to one's family systems.
5. Demonstrate an increased understanding of the impact of culture on human relations.
6. Translate knowledge of human relations into attitudes, skills, and techniques that will result in favorable learning experiences for students.

CEPY 4110V. Introduction to Counseling**3 Credits (3)**

Principles of counseling for nonmajors. May be repeated up to 3 credits.

CEPY 4120. Introduction of Mindfulness Practice**3 Credits (3)**

Students will learn about contemplative practices through learning and participation in various mindfulness practices. Engages students in a practice or experience that leads to reflection and, thus, acquired knowledge about themselves, others, and group functioning. May be repeated up to 3 credits.

Learning Outcomes

1. To learn about mindfulness practices for self-care.
2. To incorporate mindfulness practices into daily life.
3. To learn how mindfulness practices may increase well-being.
4. To increase students' knowledge of mindfulness theory and research.
5. To learn about the philosophical underpinnings of mindfulness.

CEPY 4130. Addictions Prevention and Recovery**3 Credits (3)**

Understanding addictions process, prevention, and recovery, including biological, interpersonal and sociological influences, and intervention strategies. May be repeated up to 3 credits.

Learning Outcomes

1. To introduce students to the basic categories and processes of different addictions.
2. To introduce students to psychopharmacology and assist them to obtain an understanding of drug classification, specific drugs, and the etiology of drug addiction.
3. To foster students' awareness of the most prominent approaches to prevention in the development of addictions.
4. To foster students' awareness of the most prominent theories and approaches for conceptualizing clients presenting with addictions (i.e., transtheoretical, motivational interviewing, cognitive behavioral).
5. To assist students to better understand how different cultural groups (i.e., gender, race/ethnicity, sexual orientation, etc.) use and abuse drugs and recover from various addictions.
6. To assist students to gain awareness of ethical issues of particular importance to addictions treatment.

CEPY 4140. Family Guidance**3 Credits (3)**

Systems based guidance procedures for enhancing family strengths and development, and application of family guidance procedures for prevention and remediation of problems. May be repeated up to 3 credits.

Prerequisite: CEPY 1120G.

CEPY 4150. Psychology, Multiculturalism and Counseling**3 Credits (3)**

Understanding social identities such as race, ethnicity, sexual orientation, age, social class and spirituality as it relates to psychosocial development, academic achievement and counseling.

Learning Outcomes

1. Demonstrate a multicultural, global, and multiple perspectives approach to cultural differences.
2. Demonstrate increased cultural awareness, sensitivity, and empathy toward marginalized groups.
3. Identify subjective perceptions, biases, and the role culture plays in social interactions.
4. Examine societal institutions for privileges and barriers encountered by various groups.
5. Demonstrate increased flexibility, knowledge, and skills related to becoming multicultural.
6. Recognize that intersecting identities affect appropriate treatment and education.

CEPY 4150H. Psych., Multiculturalism & Counseling**3 Credits (3)**

Understanding social identities such as race, ethnicity, sexual orientation, age, social class and spirituality as it relates to psychosocial development, academic achievement and counseling. Taught with CEPY 4150. Differentiated instruction/independent project to be determined.

CEPY 4997. Independent Study**1-6 Credits (1-6)**

Individual study directed by consenting faculty. May be repeated up to 6 credits.

CEPY 4998. Internship in Counseling & Community Psychology**1-6 Credits (1-6)**

Students will explore in more depth the fields of counseling, community, and school psychology professions by completing an internship. Through the completion of the internship students will gain hands on work experience, enhance sensitivity for respect with working with diverse populations, and hone their interpersonal skills needed to succeed in the counseling, community, and school psychology professions. May be repeated up to 6 credits.

Learning Outcomes

1. Varies by internship placement.

CEPY 5110. Introduction to Counseling**3 Credits (3)**

Overview of counseling theory, techniques, ethics, and professional issues. Same as CEPY 4110V. This course is open to all majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. May be repeated up to 3 credits.

CEPY 5120. Human Development**3 Credits (3)**

Theory and research regarding cognitive, social, and emotional development across the lifespan with emphasis on enhancing human development. Non majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will understand and be able to apply the major theories and research that attempt to explain chronological constancy and

change in human beings, with emphasis on practical applications and implications.

2. Students will build a foundational knowledge of human development for adaptation to the professional fields of education, counseling, and psychology.
3. Students will explore the universality and cultural variations in human development from conception to death.
4. Students will learn about the factors which facilitate and impede healthy physical, cognitive, social, and affective/emotional development.

CEPY 5130. Multicultural Counseling

3 Credits (3)

Understanding age, gender, ethnicity, socioeconomic status and culture in relation to human development, education, and counseling. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Awareness will be accomplished by assisting students in the exploration and identification of students' individual cultural assumptions (i.e. WORLDVIEW) in relation to people diverse from themselves. This will be accomplished via modeling, observations, readings, group processing and other experiential exercises.
2. Knowledge will be accomplished by exploring the question, "What is Multiculturalism" in its many forms, roles, and relationships. It will begin with the examination of the psychology of multiculturalism and the requirements of cultural competency in intercultural communications. In addition, a review of various theories of diversity (i.e. identity development, acculturation, worldview, bilingualism, and disability, to name a few) will be embedded in readings, assignments, and class discussion. Exploration of various diverse populations will also be integrated into this course.
3. Skills will focus on "How to" of multicultural competency and its practical applications to everyday interactions. Students will learn about basic issues related to assumptions that are used in communication intra-cultural and intercultural interactions.

CEPY 5150. The Art & Science of Mindfulness for Helping Professionals

1-3 Credits (1-3)

In this course students will learn about contemplative practices by learning about and participating in various mindfulness practices for self-care and to increase well-being. Students will learn about psychological theories and research that support the use of mindfulness in helping others increase their well-being. Students will learn how to teach mindfulness to others. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. To learn about mindfulness practices for self-care.
2. To incorporate mindfulness practices into daily life.
3. To learn how mindfulness practices may increase well-being.
4. To increase students' knowledge of mindfulness theory and research.
5. To develop skills to teach mindfulness to others.

CEPY 5160. Organization and Administration of School Counseling Services

3 Credits (3)

Procedures for establishing and maintaining counseling programs in the schools. Professional and ethical issues in school counseling and

group laboratory experience to enhance self-awareness and interpersonal skills for effective professional relationships. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will learn about the history of school guidance/counseling and apply that knowledge to assess current trends and the quality of services provided in counseling programs with respect to the changing needs of today's diverse systems.
2. Students will learn to develop and administer a school guidance/counseling program according to professional and ethical standards developed by The American School Counseling Association's (ASCA) National Model of School Counseling.
3. Students will be introduced to a variety of technology-based career development applications, educational resources and research to promote academic advancement and social-emotional well-being. Additionally, students will explore the use of technology designed to implement, monitor, and evaluate a comprehensive school counseling program.
4. Students will gain an understanding of effective teamwork within a school setting including theories, models, and processes of consultation and change with teachers, administrators, and other school personnel. Students will explore strategies and methods of advocacy with families and communities designed to empower them to address issues of social justice within an educational system.
5. Students will build a framework for facilitating school-level individual and group counseling services. They will analyze and interpret trends in academic achievement by understanding the cultural context of the school environment as it relates to groups of students and to institutional functioning.

CEPY 5170. Professional Issues in Mental Health Counseling

3 Credits (3)

History, roles, organizational structures, settings, ethics, standards, laws, and credentialing related to mental health counseling. Group laboratory experience to enhance self-awareness and interpersonal skills for effective professional relationships. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students should understand and demonstrate ethical decision-making processes and resources.
2. Students should demonstrate understanding of the expectations and requirements of their new professional identity.
3. Students should demonstrate knowledge of history and philosophy of the counseling profession and its specialty areas.
4. Students should demonstrate understanding of the multiple professional roles and functions of counselors across specialty areas, and their relationships with human service and integrated behavioral health care systems, including inter-agency and inter-organizational collaboration and consultation.
5. Students should demonstrate knowledge and understanding of counselors' roles and responsibilities as members of interdisciplinary community outreach and emergency management response teams.
6. Students should demonstrate knowledge and understanding of the role and process of the professional counselor advocating on

behalf of the profession; advocacy processes needed to address institutional and social barriers that impede access, equity, and success for clients.

CEPY 5180. Addictions Counseling

3 Credits (3)

Emphasis on alcohol and other psychoactive substance abuse. Also includes eating disorders, gambling, and other addictive behaviors. Covers review of psychopharmacology, assessment, and diagnosis with the major focus on treatment and professional issues. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Recognize the potential for substance use disorders to mimic and coexist with a variety of medical and psychological disorders.
2. Know the disease concept and etiology of addiction and co-occurring disorders.
3. Identify standard screening and assessment instruments for substance use disorders and process addictions.

CEPY 5210. Research Methods

3 Credits (3)

Develop research and program evaluation including critical literature review, generating questions, quantitative and qualitative methodology, analysis, and writing proposals. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will understand how to critically evaluate research relevant to the practice of clinical mental health counseling.
2. Become knowledgeable of models of program evaluation for clinical mental health programs.
3. Demonstrate knowledge of evidence-based treatments and basic strategies for evaluating counseling outcomes in clinical mental health counseling.
4. Apply relevant research findings to inform the practice of clinical mental health counseling.
5. Develop measurable outcomes for clinical mental health counseling programs, interventions, and treatments.
6. Analyze and use data to increase the effectiveness of clinical mental health counseling interventions and programs.

CEPY 5220. Testing, Assessment, and Psychometric Theory

3 Credits (3)

Selection, administration, and interpretation of tests and other assessment methods. Topics include reliability, validity, norms, cultural factors, and ethics related to appraisal. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Basic concepts of standardized and non-standardized testing and other assessment techniques, including norm-referenced and criterion-referenced assessment, environmental assessment, performance assessment, individual and group test and inventory

methods, psychological testing, and behavioral observations (II-G-seven-b)

2. Statistical concepts, including scales of measurement, measures of central tendency, indices of variability, shapes and types of distributions, and correlations (II-G-seven-c). Reliability (i.e., theory of measurement error, models of reliability, and the use of reliability information) (II-G-seven-d)
3. Validity (i.e., evidence of validity, types of validity, and the relationship between reliability and validity) (II-G-seven-e)
4. Social and cultural factors related to the assessment and evaluation of individuals, groups, and specific populations (II-G-seven-f)
5. Ethical strategies for selecting, administering, and interpreting assessment and evaluation instruments and techniques in counseling (II-G-seven-g)

CEPY 5230. Counseling Theory and Technique

3 Credits (3)

Major theories of counseling with an emphasis on development of the ability to offer theory-based counseling and consultation. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will demonstrate the ability to foster counseling and helping relationships that are based on studies of the counseling process in a multicultural society and include an orientation to wellness and prevention as desired counseling goals.
2. Students will be able to apply theories and models of counseling, including a systems approach, to conceptualize clients, help select appropriate counseling interventions, and so the student begins to develop a personal model of counseling based on current professional research and practice with the aid of processes provided in this course.
3. Students will demonstrate the ability to foster counseling and helping relationships that include essential interviewing, counseling, and case conceptualization skills as well as developing the ability to provide professional feedback in consultation with other trainees.
4. Students will demonstrate the ability to foster counseling and helping relationships that include developmentally relevant counseling treatment or intervention plans, the development of measurable outcomes for clients, and evidence-based counseling strategies and techniques for prevention and intervention
5. Students will be able to demonstrate counselor characteristics and behaviors that influence helping processes.
6. Students will demonstrate knowledge and ability to provide suicide prevention, crisis intervention, trauma-informed, and community-based strategies, such as Psychological First Aid.

CEPY 5235. Counseling Theory and Techniques for School Psychologists

3 Credits (3)

Major theories of counseling with an emphasis on development of the ability to offer theory-based counseling and consultation. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. The student will demonstrate an understanding of their psychosocial and cultural context and how such phenomena influence their values, beliefs and, therefore, theoretical orientation.
2. The student will demonstrate the ability to examine and apply critical perspectives related to counseling theory and techniques.
3. The student will be able to compare and contrast various theoretical perspectives in the area of counseling children and adolescents in school settings.
4. The student will demonstrate the development of skills leading toward becoming a culturally responsive practitioner in the area of counseling with individuals from a variety of diverse backgrounds.
5. The student will be able to identify, describe, and apply legal and ethical issues relevant to practice in the area of counseling children and adolescents in the schools.
6. The student will be able to collaborate with others in the process of becoming a competent school psychologist in providing counseling services in the schools.

**CEPY 5240. Child and Adolescent Counseling Theory and Technique
3 Credits (3)**

Counseling theory and technique applied to children and adolescents from a developmental perspective in school and mental health settings. Restricted to CEP graduate students. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will demonstrate understanding of their psychosocial and cultural context and how such phenomena influence their values, beliefs and, therefore, theoretical orientation to counsel children and adolescents.
2. Students will examine and apply critical perspectives related to counseling children and adolescents.
3. Students will compare and contrast various theoretical perspectives in the area of counseling children and adolescents.
4. Students will develop a knowledge base leading toward becoming a culturally responsive practitioner in the area of counseling with individuals from a variety of diverse backgrounds.
5. Students will identify, describe, and apply legal and ethical issues relevant to practice in the area of counseling children and adolescents in various settings.
6. Students will collaborate with others in the process of developing relevant treatment plans and providing counseling services to children and adolescents in diverse settings.

**CEPY 5250. Family Therapy Theory and Technique
3 Credits (3)**

Major theories of family therapy and associated assessment, intervention and evaluation techniques. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will be able to explain a systems perspective and differentiate family and other systems theories and major models of family and related interventions.
2. Students will be able to demonstrate and apply an understanding of the family life cycle and impact on family and individual functioning.

3. Students will be able to prepare and utilize various forms of assessment for families and couples, including observation, collection of collateral information, and interviewing.
4. Students will be able to illustrate awareness of and skill in the use of formal and informal assessment measures used in family and couple counseling.
5. Students will be able to summarize evidence-based interventions and treatments for family and couple counseling.
6. Students will be able to analyze multicultural counseling theories and techniques for diverse family types and apply multicultural and family theories to one's own experience.
7. Students will be able to demonstrate an ability to communicate and relate effectively with families and couples.
8. Students will be able to describe ethical issues related to counseling families and couples and be able to identify a process to make sound judgments.

**CEPY 5260. Group Work Theory and Technique
3 Credits (3)**

Didactic and experiential learning in group theory and practice, which involves experiences in group participation and leadership. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Provide students with an intellectual understanding of group work theory and technique.
2. Provide students with an experiential understanding of group work.
3. To help students develop specific group facilitation competencies

**CEPY 5270. Diagnosis and Treatment Planning
3 Credits (3)**

Appraisal and conceptualization of mental disorders and other problems through diagnostic interviewing using the DSM. Treatment planning for counseling with children, adolescents, and adults. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will know the etiology, the diagnostic process and nomenclature, treatment, referral, and prevention of mental and emotional disorders.
2. Students will know the principles, models, and documentation formats of biopsychosocial case conceptualization and treatment planning.
3. Students will understand current literature that outlines theories, approaches, strategies, and techniques shown to be effective when working with specific populations of clients with mental and emotional disorders.
4. Students will understand the basic classifications, indications, and contraindications of commonly prescribed psychopharmacological medications so that appropriate referrals can be made for medication evaluations and so that the side effects of such medications can be identified.
5. Students will know the principles of the diagnostic process, including differential diagnosis, and the use of current diagnostic tools, such as the current edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM).

- Students will understand the established diagnostic criteria for mental and emotional disorders, and describes treatment modalities and placement criteria within the continuum of care.
- Students will know the impact of co-occurring substance use disorders on medical and psychological disorders.
- Students will understand the relevance and potential biases of commonly used diagnostic tools with multicultural populations.
- Students will understand appropriate use of diagnosis during a crisis, disaster, or other trauma-causing event. 1
- Students will be able to differentiate between diagnosis and developmentally appropriate reactions during crises, disasters, and other trauma-causing events.

CEPY 5280. Primary Care Psychology

3 Credits (3)

Didactic and experiential learning in primary care psychology issues. Through this course students will learn about the cultural necessity of the integration of mental and physical health issues and multidisciplinary collaboration. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

- Students will demonstrate the following primary care psychology competency within the context of addressing integrated behavioral health care: Biologic bases of behavior as related to health/illness and coping
- Students will demonstrate the following primary care psychology competency within the context of addressing integrated behavioral health care: Psychological bases of behavior as related to health/illness and coping
- Students will demonstrate the following primary care psychology competency within the context of addressing integrated behavioral health care: Sociocultural bases of behavior as related to health/illness and coping
- Students will demonstrate the following primary care psychology competency within the context of addressing integrated behavioral health care: Understanding and application of inter-professional collaboration
- Students will demonstrate the following primary care psychology competency within the context of addressing integrated behavioral health care: A knowledge of substance use disorders, particularly opioid use disorder and treatment in a primary care setting
- Students will demonstrate the following primary care psychology competency within the context of addressing integrated behavioral health care: How to utilize telemedicine effectively

CEPY 5310. Appraisal of Psychoeducational Achievement in a Diverse Society

3 Credits (3)

Advanced theory and use of norm and criterion referenced instruments in the classroom: planning of prescriptive and educational programs. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. Restricted to CEP graduate majors. May be repeated up to 3 credits.

Learning Outcomes

- Define assessment and describe the steps in the assessment process. Practitioner

- Describe a flowchart for the screening/referral/evaluation process according to New Mexico regulations. Research, Pedagogy
- Describe the uses of criterion and norm-referenced instruments as well as alternative forms of assessment (observation, curriculum based assessment and informal techniques). Practitioner, Effectiveness
- Identify and discuss instruments/assessment procedures appropriate for use in identifying academic achievement, learning aptitude, vocational aptitude, performance in specific areas, and social emotional functioning. Effectiveness
- Identify appropriate instruments/assessment procedures required for the exceptionality recognized under New Mexico regulations. Effectiveness
- Administer and score twenty-four instruments in reading, math, written language and processing and to utilize these results in completing test interpretations and psycho-educational reports. Effectiveness
- Interpret, report, and utilize assessment data in special education programming. Reflection, Pedagogy
- Determine the assessment needs of students who are speakers of languages other than English. Diversity
- Evaluate a test, write a review, and demonstrate and explain it in class. Practitioners 1
- Synthesize information gathered through comprehensive assessment procedures into a practical whole. Assessment, Evaluation

CEPY 5320. Career/Life Planning and Vocational Assessment

3 Credits (3)

Vocational choice theories, relationship between career choice and life style, sources of occupational and educational information, and approaches to decision making and values clarification. Laboratory involves supervised interpretation of vocational assessment. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean.

Learning Outcomes

- Career development theories and decision-making models.
- Career, vocational, educational, occupational and labor market information resources, and career information systems.
- Career development program planning, organization, implementation, administration, and evaluation.
- Interrelationships among and between work, family, and other life roles and factors, including the role of multicultural issues in career development.
- Career and educational planning, placement, follow-up, and evaluation.
- Assessment instruments and techniques relevant to career planning and decision making.
- Career counseling processes, techniques, and resources, including those applicable to specific populations in a global economy.

CEPY 5985. Counseling Practicum

1-6 Credits (1-6P)

Supervised experience of counseling and consultation. Weekly individual and group supervision involves review of audio, video, and/or live sessions and case presentations. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program

director, department head, and graduate school dean. May be repeated up to 6 credits.

Prerequisite: CEPY 5230.

Learning Outcomes

1. Understands ethical and legal considerations specifically related to the practice of clinical mental health counseling.
2. Understands a variety of models and theories related to clinical mental health counseling, including the methods, models, and principles of clinical supervision.
3. Understands the management of mental health services and programs, including areas such as administration, finance, and accountability.
4. Demonstrates the ability to apply and adhere to ethical and legal standards in clinical mental health counseling.
5. Recognizes the importance of family, social networks, and community systems in the treatment of mental and emotional disorders.
6. Uses the principles and practices of diagnosis, treatment, referral, and prevention of mental and emotional disorders to initiate, maintain, and terminate counseling.
7. Applies multicultural competencies to clinical mental health counseling involving case conceptualization, diagnosis, treatment, referral, and prevention of mental and emotional disorders.
8. Applies effective strategies to promote client understanding of and access to a variety of community resources.
9. Demonstrates appropriate use of culturally responsive individual, couple, family, group, and systems modalities for initiating, maintaining, and terminating counseling. 1
10. Demonstrates the ability to use procedures for assessing and managing suicide risk. 1
11. Applies current record-keeping standards related to clinical mental health counseling. 1
12. Provides appropriate counseling strategies when working with clients with addiction and co-occurring disorders. 1
13. Demonstrates the ability to recognize his or her own limitations as a clinical mental health counselor and to seek supervision or refer clients when appropriate. 1
14. Maintains information regarding community resources to make appropriate referrals. 1
15. Advocates for policies, programs, and services that are equitable and responsive to the unique needs of clients. 1
16. Demonstrates the ability to modify counseling systems, theories, techniques, and interventions to make them culturally appropriate for diverse populations. 1
17. Knows the principles and models of assessment, case conceptualization, theories of human development, and concepts of normalcy and psychopathology leading to diagnoses and appropriate counseling treatment plans. 1
18. Understands various models and approaches to clinical evaluation and their appropriate uses, including diagnostic interviews, mental status examinations, symptom inventories, and psychoeducational and personality assessments. 1
19. Demonstrates skill in conducting an intake interview, a mental status evaluation, a biopsychosocial history, a mental health history, and a psychological assessment for treatment planning and caseload management. 2

20. Demonstrates appropriate use of diagnostic tools, including the current edition of the DSM, to describe the symptoms and clinical presentation of clients with mental and emotional impairments. 2
21. Demonstrates the ability to conceptualize an accurate multi-axial diagnosis of disorders presented by a client and discuss the differential diagnosis with collaborating professionals.

CEPY 5990. Advanced Counseling Practicum

3-6 Credits (3-6P)

Supervised experience of appraisal and individual, family, and/or group counseling and consultation serving child, adolescent, and/or adult clients. Weekly individual and group supervision involves review of counseling sessions and case presentations. This course will carry a subtitle to reflect the practicum setting. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. Restricted to CEP graduate majors. May be repeated up to 6 credits.

Prerequisite: CEPY 5985 or consent of instructor.

Learning Outcomes

1. Obtain a minimum of one-hundred and fifty clinical hours including sixty hours of direct service (face-to-face) with clients appropriate to the program. For students enrolled in only six credits, this translates to three-hundred clinical hours, including one-hundred and twenty hours of direct service.
2. Obtain one hour a week of individual supervision with the on-site supervisor and a minimum of one and a half hours per week of group supervision with a program faculty member.
3. Students will have the opportunity to become familiar with a variety of professional activities in addition to direct service such as record keeping, information and referral, in-service, and staff meeting.
4. Students will have an opportunity to gain supervised experience in the use of a variety of professional resources such as assessment instruments, technologies, professional literature, and research.
5. Students receive a formal evaluation by site supervisor and program faculty member.
6. Students will have opportunity to work with clients who represent the ethnic and demographic diversity of their community.
7. Students will formally evaluate their supervisors and learning experience at the end of their internship experiences.
8. Students will be covered by professional liability insurance while enrolled in this course.
9. Students will adhere to ethical standards of ACA and related entities, and applications of ethical and legal considerations in professional counseling. 1
10. Students will have an opportunity to apply concepts of mental health education, consultation, collaboration, outreach and prevention strategies, and community mental health advocacy.

CEPY 5997. Special Research Programs

1-6 Credits (1-6)

Individual investigations either analytical or experimental. Maximum of 6 credits per semester and total of 9 credits overall. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. May be repeated up to 9 credits.

Learning Outcomes

1. Learning outcomes will vary depending on course content.

CEPY 5998. Counseling Internship**3-12 Credits (3-12)**

Supervised experience in a professional counselor role in a school or agency. Students perform all counselor functions including appraisal, individual/family/group counseling, consultation, administration, program development, research, and/or evaluation. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 12 credits.

Prerequisite: CEPY 5990.

Learning Outcomes

1. Obtain a minimum of six-hundred clinical hours including two-hundred and forty hours of direct service (face-to-face) with clients appropriate to the program. For students enrolled in only six credits, this translates to three-hundred clinical hours, including one-hundred and twenty hours of direct service.
2. Obtain one hour a week of individual supervision with the on-site supervisor and a minimum of one and a half hours per week of group supervision with a program faculty member.
3. The student has the opportunity to become familiar with a variety of professional activities in addition to direct service such as record keeping, information and referral, in-service, and staff meeting.
4. The student has an opportunity to gain supervised experience in the use of a variety of professional resources such as assessment instruments, technologies, professional literature, and research.
5. Students receive a formal evaluation by site supervisor and program faculty member.
6. Students will have opportunity to counsel clients who represent the ethnic and demographic diversity of their community.
7. Students will formally evaluate their supervisors and learning experience at the end of their internship experiences.
8. Students will be covered by professional liability insurance while enrolled in internship.
9. Students will adhere to ethical standards of ACA and related entities, and applications of ethical and legal considerations in professional counseling. 1
10. Students will have an opportunity to apply concepts of mental health education, consultation, collaboration, outreach and prevention strategies, and community mental health advocacy.

CEPY 5999. Master's Thesis**1-15 Credits (1-15)**

Thesis. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. May be repeated up to 88 credits.

Learning Outcomes

1. To develop and complete master's research thesis.

CEPY 6120. Human Development**3 Credits (3)**

Same as CEPY 5120 with differentiated assignments for Ed.S and Ph.D. students. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will understand and be able to apply the major theories and research that attempt to explain chronological constancy and

change in human beings, with emphasis on practical applications and implications.

2. Students will build a foundational knowledge of human development for adaptation to the professional fields of education, counseling, and psychology.
3. Students will explore the universality and cultural variations in human development from conception to death.
4. Students will learn about the factors which facilitate and impede healthy physical, cognitive, social, and affective/emotional development.

CEPY 6130. Psychology of Multiculturalism**3 Credits (3)**

In this advanced course for post-master's graduate students in applied fields of psychology, students will apply psychological concepts related to multiculturalism as well as critical race theories, feminist theories, queer theories, and liberation theories to understand intersecting social identities. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. Restricted to: SPSY, C EP, CEP majors.

Learning Outcomes

1. Students will understand and apply multicultural and pluralistic characteristics within and among diverse groups nationally and internationally.
2. Students will understand and apply theories and models of multicultural counseling, cultural identity development, and social justice and advocacy.
3. Students will understand and apply multicultural counseling competencies.
4. Students will understand and apply the impact of heritage, attitudes, beliefs, understandings, and acculturative experiences on an individual's views of others
5. Students will understand and apply the effects of power and privilege for counselors and clients.
6. Students will understand and apply help-seeking behaviors of diverse clients.
7. Students will understand the impact of spiritual beliefs on clients' and counselors' worldviews.
8. Students will understand and apply strategies for identifying and eliminating barriers, prejudices, and processes of intentional and unintentional oppression and discrimination.

CEPY 6140. Cognitive & Affective Basis of Behavior**3 Credits (3)**

This course provides an overview of cognitive and affective bases of behavior as well as the integration of cognition and affect in psychological processes. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, program director, department head, and graduate school dean. Restricted to CEP graduate majors. May be repeated up to 3 credits.

Learning Outcomes

1. Students will be able to identify key concepts of cognition such as memory, attention and learning.
2. Students will identify the functions and roles of affect and emotional expression.
3. Students will understand the connection between cognition and affect and how these two areas of human function influence each other.

- Students will be able to integrate and apply research findings and implications in the study of cognition and affect to practical experiences.
- Students will apply models and theories of cognition and affect to understanding and predicting behavior.

CEPY 6150. Social Psychology

3 Credits (3)

Theory, research and practice from feminist and multicultural perspectives will examine the integration of social identities such as gender, sexual orientation, race, ethnicity, age, social class, spirituality, and ability in relation to counseling psychology. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. Restricted to: CEP graduate majors. May be repeated up to 3 credits.

Learning Outcomes

- Heighten the student's awareness of multiple social identities, worldview beliefs, and other within-group variables.
- Aid the student in developing a knowledge base in the realms of social psychology and multicultural research, culturally-responsive interventions and professional practice.
- provide experiences for the application of this awareness and knowledge as a means of Develop the skills necessary for being a reflective decision-maker, creative problem solver, and responsive service provider for diverse individuals in a variety practice settings and intervention modalities.

CEPY 6160. History and Systems of Psychology

3 Credits (3)

History and systems of psychology related to contemporary applied psychology. This course will focus largely on the history of modern psychology and on the major systems (or schools) of psychology. Restricted to CEP graduate majors.

Learning Outcomes

- Effectively discuss historical and philosophical antecedents and contexts of psychology and compare and contrast multiple perspectives on important issues in this field.
- Apply global awareness to this topic (e.g., intersecting identities; how interlocking oppressions vary by epoch, continent, nation, cultural group, region, organizational system; etc.)
- Develop professional arguments; support opinions with reason and personal experience; and demonstrate higher order thinking and creative engagement (for definitions of terms like analyze, synthesize, evaluate, and create.
- Develop thoughtful inquiries that inspire scholarly discourse and further investigation; consider which types of evidence are needed to find answers; and effectively facilitate respectful, thought-provoking discussions of controversies and debatable topics.

CEPY 6170. Psychology of Poverty

3 Credits (3)

This course is designed to examine the nature, extent and impact of poverty on Southwestern populations and across the United States in relation to assessment and interventions and its impact on the education and psychological well-being of children and families. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. Restricted to: CEP graduate majors.

Learning Outcomes

- Students will learn how views of poverty have evolved in history.
- Students will be aware and demonstrate the skills of the different methods used to measure and understand poverty.
- Students will identify and apply relevant issues from education, health disparities, and criminal justice related to the psychology of poverty.
- Students will evaluate and present their own self-awareness and understanding of their worldview of poverty, along with its impact of how they view others in poverty.
- Students will conduct self-assessments regarding their range of liberalism/conservatism; implicit bias and how it impacts their interpretation of information of poverty.
- Students will understand and lead discussions as to why poverty remains so prevalent in U.S. society.
- Students will be able to articulate the within group differences and similarities of racial and ethnic backgrounds or family types that are susceptible to poverty.
- Students will learn successful interventions in working with children, adolescents and families impacted by the psychology of poverty.

CEPY 6180. Clinical Psychopharmacology

3 Credits (3)

Basic biological aspects of psychopharmacology with applications to clinical populations and treatment implications. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

- Students will be able to understand and apply concepts related basic neuroanatomy, neurochemistry, and neurophysiology.
- Students will be able to understand and apply basic knowledge related basic biological basis of the interdependence between behavior, cognition, and emotion.
- Students will understand the pharmacology and pharmacodynamics of major drug groups used in the treatment of CNS diagnoses; including, but no limited to, antidepressants, antipsychotics, anxiolytics, anticonvulsants, and natural remedies or herbal supplementation.
- Students will recognize the strengths and weaknesses of a wide range of research methodologies to screen compounds and test the mechanisms of action of drugs.
- Students will understand the drug development process from target identification to FDA approval and ongoing safety surveillance.
- Students will appreciate how pharmacological investigation informs the understanding of the underlying pathology of the illness.
- Students will access, critique, and assimilate evidence from scientific studies as it relates to translational neuroscience and the search for promising targets for psychotropic drugs.
- Students will become familiar with to the indication, contraindication, therapeutic drug monitoring, and effectiveness of medications across DSM-V classifications. As well as psychotropic drug tapering or switching. The implications of patient characteristic and medical co-morbidities are addressed.
- Students will share informed opinions about advances and challenges in experimental (off-label) psychopharmacology; and of their opinions of integrated psychotherapy or combined medicine. 1

10. Students will work effectively with peers and Instructor; as part of multidisciplinary learning environment.

CEPY 6185. Ethics, Law & Professional Issues in School Psychology
3 Credits (3)

This course provides an introduction and overview of the profession of school psychology with emphasis on the roles, functions, and competencies of the school psychologist within the context of legal and ethical practice. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean.

Learning Outcomes

1. Students will demonstrate an understanding of various professional issues, role functions, and historical contexts related to the field of school psychology.
2. Students will demonstrate the ability to examine and apply critical perspectives related to various professional issues, role functions, and the historical contexts associated with the field of school psychology.
3. Students will explore best practices issues associated with school psychology role functions and practices.
4. Students will demonstrate the development of skills leading her or him toward becoming a culturally responsive practitioner in the field of school psychology.
5. Students will obtain knowledge of the National Association of School Psychologists (NASP) Principles of Professional Ethics (2020) and the American Psychological Association's Ethical Principles of Psychologists and Code of Conduct (2010; 2016 amendments) and learn to apply these principles to specific areas of practice such as assessment, direct and indirect intervention, consultation, and research.
6. Students will understand complexities of ethical and legal issues occurring in school settings and will develop ethical decision-making skills.
7. Students will demonstrate knowledge of the provisions of state and federal statutes such as the Individuals with Disabilities Education Improvement Act (2004), Every Student Succeeds Act (2017) and Section 504 of the Rehabilitation Act of 1973 as well as other case laws related to the practice of school psychology and learn how to apply these mandates to the practice of school psychology.
8. Students will understand the importance of developing awareness of the legal and ethical issues affecting their professional identity and the need to remain current on these issues throughout their careers as school psychologists.
9. Students will continue to emerge as critical thinkers, reflective decision-makers, and creative problem-solvers, in general.

CEPY 6190. Ethical/Professional Issues in Counseling Psychology
3 Credits (3)

History of counseling psychology, scientist-practitioner model, American Psychological Association's Ethical Principles of Psychologists and Code of Conduct. Focus on current ethical, professional, and scientific issues. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. Restricted to: CEP majors. May be repeated up to 3 credits.

Learning Outcomes

1. Students will be knowledgeable of and act in accordance with the current version of the APA Ethical Principles of Psychologists and Code of Conduct, relevant laws, regulations, rules, and policies

governing health service psychology at the organizational, local, state, regional, and federal levels, and relevant professional standards and guidelines; Recognize ethical dilemmas as they arise, and apply ethical decision-making processes in order to resolve the dilemmas; Conduct self in an ethical manner in all professional activities.

2. Students will develop an understanding of how their own personal/cultural history, attitudes, and biases may affect how they understand and interact with people different from themselves; Apply knowledge of the current theoretical and empirical knowledge base as it relates to addressing diversity in all professional activities including research, training, supervision/consultation, and service.
3. Students will be expected to behave in ways that reflect the values and attitudes of psychology, including integrity, deportment, professional identity, accountability, lifelong learning, and concern for the welfare of others; Engage in self-reflection regarding one's personal and professional functioning and engage in activities to maintain and improve performance, well-being, and professional effectiveness
4. Students will be expected to produce and comprehend oral, nonverbal, and written communications that are informative and well-integrated; demonstrate a thorough grasp of professional language and concepts; Demonstrate effective interpersonal skills and the ability to manage difficult communication well.

CEPY 6210. School Psychology Research and Program Evaluation
3 Credits (3)

Survey and analysis of research and program evaluation procedures in school psychology. Critical review of literature, formulating questions, quantitative and qualitative methodology, and data analysis as foundations for reading research literature and generating research, program evaluation, and/or grant proposals. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will advance their foundational knowledge of research methodology and research design.
2. Students will develop skills and knowledge to conduct comprehensive literature reviews.
3. Students will critique scientific research studies by applying attained knowledge in research methodology and design.
4. Students will produce a research proposal they will conduct in their areas of interest within the field of school psychology.
5. Students will present a research proposal that will conduct within the field of school psychology.
6. Students will demonstrate skills and knowledge for program evaluation by developing a program evaluation plan.
7. Students will demonstrate knowledge and skills necessary to conduct single-subject design studies.

CEPY 6220. Spanish for Mental Health Professionals
3 Credits (3)

This course emphasizes the vocabulary for Mental Health Professionals to include academic, psychological and medical terminology. Students will incorporate Spanish terms in assessment and treatment plans through role plays. Further, the course will include an overview of the use of interpreters and translators in working with culturally and linguistically diverse clientele. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor,

department head, and graduate school dean. Restricted to: CEP graduate majors. May be repeated up to 3 credits.

Learning Outcomes

1. Students will be able to demonstrate brief, basic conversation in Spanish using mental health and health-care related expressions and terminology.
2. Students will be able to understand and respond to relevant cultural and linguistic client concerns related to presenting issues.
3. Students will be able to increase their Spanish speaking capabilities when engaged in their professional roles (e.g. conducting clinical interviews, gathering mental health histories, conducting assessments and delivering interventions using various theoretical frameworks).
4. Students will understand cultural and social factors that influence the practitioner-client relationship and communication with Latinx clients.
5. Students will be able to engage effectively in role play situations involving application of concepts learned.

CEPY 6240. Child and Adolescent Counseling Theory and Technique 3 Credits (3)

Taught with CEPY 5240 with differentiated assignments for Ed.S. and Ph.D. students. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will be able to demonstrate an understanding of their psychosocial and cultural context and how such phenomena influence their values, beliefs and, therefore, theoretical orientation to counsel children and adolescents.
2. Students will be able to demonstrate the ability to examine and apply critical perspectives related to counseling children and adolescents.
3. Students will be able to compare and contrast various theoretical perspectives in the area of counseling children and adolescents.
4. Students will be able to demonstrate the development of a knowledge base leading toward becoming a culturally responsive practitioner in the area of counseling with individuals from a variety of diverse backgrounds
5. Students will be able to identify, describe, and apply legal and ethical issues relevant to practice in the area of counseling children and adolescents in various settings.
6. Students will be able to collaborate with others in the process of developing relevant treatment plans and providing counseling services to children and adolescents in diverse settings.

CEPY 6250. Family Therapy Theory and Technique 3 Credits (3)

Taught with CEPY 5250 with differentiated assignments for Ed.S and Ph.D students. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will demonstrate their comprehension of a systems perspective that provides an understanding of family and other systems theories and major models of family and related interventions.
2. Students will demonstrate an understanding of the family life cycle and impact on family and individual functioning.

3. Students will demonstrate an awareness of and develop skills with various forms of assessment for families and couples, including observation, collection of collateral information, and interviewing.
4. Students will demonstrate an awareness of and develop skills in using formal and informal assessment measures used in family and couple counseling.
5. Students will develop conceptual skills that demonstrate an understanding of theory and implementation of interventions.
6. Students will demonstrate knowledge about evidenced-based interventions and treatments for family and couple counseling.
7. Students will demonstrate their understanding of multicultural counseling theories and techniques for family and marital counseling.
8. Students will be able to apply multicultural and family theories to their own experience in an effort to improve your counseling work.
9. Students will demonstrate will demonstrate an ability to communicate and relate effectively to families and couples. 1
10. Students will be able to design and implement outreach and psychoeducational interventions to families and couples. 1
11. Students will demonstrate their knowledge related to ethical issues surrounding counseling families and couples and be able to make sound judgments.

CEPY 6260. Consultation 3 Credits (3)

Didactic and experimental trainings in theory-based consultation. Supervision provided by faculty involves audio, video, and/or live observation consultation activities and case presentations. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. May be repeated up to 3 credits.

CEPY 6265. Diagnostic Class 3 Credits (3)

Emphasis on developing the knowledge, skills, and necessary application abilities related to diagnosis and associated interventions related to mental health and psychopathology issues that impact a student's ability to navigate the education setting. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will be expected to demonstrate the knowledge of the etiology, the diagnostic process and nomenclature, treatment, referral, and prevention of mental and emotional disorders.
2. Students will be expected to demonstrate knowledge of the principles, models, and documentation formats of biopsychosocial case conceptualization and treatment planning.
3. Students will be expected to demonstrate understanding of current literature that outlines theories, approaches, strategies, and techniques shown to be effective when working with specific populations of clients with mental and emotional disorders.
4. Students will be expected to demonstrate understanding of basic classifications, indications, and contraindications of commonly prescribed psychopharmacological medications so that appropriate referrals can be made for medication evaluations and so that the side effects of such medications can be identified
5. Students will be expected to demonstrate knowledge of the principles of the diagnostic process, including differential diagnosis, and the

use of current diagnostic tools, such as the current edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM)

6. Students will be expected to demonstrate understanding of the established diagnostic criteria for mental and emotional disorders, and describes treatment modalities and placement criteria within the continuum of care.
7. Students will be expected to demonstrate knowledge of the the impact of co-occurring substance use disorders on medical and psychological disorders.
8. Students will be expected to demonstrate understanding of the relevance and potential biases of commonly used diagnostic tools with multicultural populations.
9. Students will be expected to demonstrate understanding of the appropriate use of diagnosis during a crisis, disaster, or other trauma-causing events. 1
10. Students will be expected to differentiate between diagnosis and developmentally appropriate reactions during crises, disasters, and other trauma-causing events.

**CEPY 6270. Diagnosis and Treatment Planning
3 Credits (3)**

Taught with CEPY 5270 with differentiated assignments for Ph.D. students. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will be expected to demonstrate knowledge of the etiology, the diagnostic process and nomenclature, treatment, referral, and prevention of mental and emotional disorders.
2. Students will be expected to demonstrate knowledge of the principles, models, and documentation formats of biopsychosocial case conceptualization and treatment planning.
3. Students will be expected to demonstrate practice of using the DSM 5 to create differential diagnoses.
4. Students will be expected to construct an initial treatment plan based upon a systemic and differential diagnosis.
5. Students will be expected to formulate a culturally relevant diagnosis and treatment plan.
6. Students will be expected to discuss the barriers to assessment and treatment, as it relates to mental illness stigma.

**CEPY 6275. Professional Preparation Seminar
3 Credits (3)**

This seminar course provides academic support for students enrolled in the Specialist in Education (Ed.S.) School Psychology Program in preparation for capstone experiences (i.e., internship and culminating exams) in addition to continued development of students' professional identity as School Psychologists.

Learning Outcomes

1. Students will reflect on the growth of their knowledge, experiences, and skills gained in the School Psychology Program (SPP).
2. Students will reflect on how to expand their knowledge and skills during their internship.
3. Students will prepare for securing an internship position.
4. Students will develop and articulate a professional philosophy of counseling within school psychology.
5. Students will demonstrate skill in oral and written presentations.

6. Students will understand the role of mentoring and supervision in personal and professional.

**CEPY 6320. Career/Life Planning and Vocational Assessment
3 Credits (3)**

Taught with CEPY 5320 with differentiated assignments for Ed.S and Ph.D. students. Restricted to CEP graduate students. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Knowledge and understanding of career development theories and decision-making models.
2. Knowledge and understanding of career, vocational, educational, occupational and labor market information resources, and career information systems.
3. Knowledge and understanding of career development program planning, organization, implementation, administration, and evaluation.
4. Knowledge and understanding of interrelationships among and between work, family, and other life roles and factors, including the role of multicultural issues in career development.
5. Knowledge and understanding of career and educational planning, placement, follow-up, and evaluation.
6. Knowledge and understanding of assessment instruments and techniques relevant to career planning and decision making.
7. Knowledge and understanding of career counseling processes, techniques, and resources, including those applicable to specific populations in a global economy.

**CEPY 6330. Academic & Behavioral Assessment & Intervention
3 Credits (3)**

This course introduces basic concepts, methods, and applications of academic and behavior assessment and intervention. Students will learn how to conduct functional/informal assessments of academic and behavior and how to write behavior and academic plans. Methods appropriate for assessment and intervention of school-age children will be emphasized. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. Restricted to: CEP graduate majors.

Learning Outcomes

1. Students will gain and demonstrate knowledge on how behavior assessment fits within psychological/psycho-educational assessment.
2. Students will demonstrate the ability to examine and apply critical perspectives related to educational assessment.
3. Students will learn the rational, defining features and theoretical underpinnings of behavioral assessment.
4. Students will learn how to conduct and complete functional assessments of behavior.
5. Students will learn how to develop and evaluate a satisfactory positive behavior intervention plan.
6. Students will develop and/or learn techniques of behavioral observation.
7. Students will learn how to integrate behavioral observation findings with other assessment methods.

**CEPY 6340. Appraisal of Cognitive Functioning
3 Credits (3)**

Selection, administration, scoring, interpretation, and report writing using individual tests of intelligence. Moderator variables, such as acculturation, ethnic identity development, and world view are also incorporated. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will become knowledgeable about the historical background of intelligence testing.
2. Students will become knowledgeable about the major theories of intelligence.
3. Students will be able to discuss orally and in writing the pros and cons of intelligence testing and will be able to support the discussion with specific facts and research.
4. Students will be able to select "appropriate" intellectual assessment instruments for children, adolescents, and adults.
5. Students will be able to state pertinent information relative to these major intelligence tests such as age range, standardization, reliability, and validity.
6. Students will demonstrate mastery of administration, scoring, and interpretation of various norm-referenced cognitive assessment instruments while taking into consideration the cultural context of the individual.
7. The student will be able to demonstrate the ability to integrate information into meaningful written reports.

CEPY 6350. Appraisal of Personality

3 Credits (3)

Selection, administration, scoring, interpretation, and report writing using major objective and projective tests of personality. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Knowledge of the current theoretical and empirical knowledge base as it relates to addressing diversity in all professional activities including research, training, supervision/consultation, and service.
2. Produce and comprehend oral, nonverbal, and written communications that are informative and well-integrated; demonstrate a thorough grasp of professional language and concepts.
3. Demonstrate current knowledge of diagnostic classification systems, functional and dysfunctional behaviors, including consideration of client strengths and psychopathology.
4. Demonstrate understanding of human behavior within its context (e.g., family, social, societal and cultural).
5. Demonstrate the ability to apply the knowledge of functional and dysfunctional behaviors including context to the assessment and/or diagnostic process.
6. Select and apply assessment methods that draw from the best available empirical literature and that reflect the science of measurement and psychometrics; collect relevant data using multiple sources and methods appropriate to the identified goals and questions of the assessment as well as relevant diversity characteristics of the service recipient.
7. Interpret assessment results, following current research and professional standards and guidelines, to inform case conceptualization, classification, and recommendations, while

guarding against decision-making biases, distinguishing the aspects of assessment that are subjective from those that are objective.

8. Communicate orally and in written documents the findings and implications of the assessment in an accurate and effective manner sensitive to a range of audiences.

CEPY 6410. Introduction to Qualitative Research

3 Credits (3)

This course is intended to be an introduction to qualitative research methods for persons wishing to understand, apply, and conduct qualitative studies with human subjects in the fields of counseling and psychology. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students will understand the importance of applying and conducting culture-centered and ethical psychological research among persons from ethnic, linguistic, and racial minority backgrounds.
2. Students will understand the shift that has taken place in the past century from ignoring cultural variables to that of valuing the vast amounts of uncharted knowledge that is contained therein.
3. Students will gain a deeper understanding of the qualitative paradigm that informs research and the way we conduct and consume it.
4. Students will understand the components that make up good qualitative research considering carefully the variables that inform the proposed outcome of the study.
5. Students will assess the benefit of research to the entities, individuals and communities being studied.
6. Students will learn to be grounded in the empirical and conceptual literature on the ways that culture influences the variables under investigation, as well as psychological and social science research traditions and skills.
7. Students will be aware of their cultural assumptions on which their research questions are based (Egharevba, 2001).
8. Students will learn to be aware of, and if appropriate, to apply indigenous theories when conceptualizing research studies. They are encouraged to include members of cultural communities when conceptualizing research, with particular concern for the benefits of the research to the community (Fontes, 1998; LaFromboise, 1988).
9. Students will learn to consider the psychological (rather than demographic) contextual factors of race, ethnicity, language, gender, sexual orientation, socio-economic status, and other social dimensions of personal experience in conceptualizing their research design (Fouad Brown, 2000; Quintana et al., 2001).
10. Students will strive to recognize and incorporate research methods that most effectively complement the worldview and lifestyles of persons who come from a specific cultural and linguistic population; e.g., quantitative and qualitative research strategies (Hoshmand, 1989; Marin Marin, 1991; Ponterotto Casas, 1991).
11. Students will learn to consider culturally sensitive assessment techniques and data-generating procedures.
12. In analyzing and interpreting data from research studies and in proposed research, students will learn to consider cultural influences as possible explanations for their findings.
13. Students will learn the importance of considering the benefit to participants, and to include participants in the interpretation of results. They are encouraged to find ways for the results to be

of benefit to the community, and to represent the participants' perspectives accurately and authentically.

CEPY 6420. Psychometrics

3 Credits (3)

An introduction to psychometrics, including topics such as theory and techniques of psychological measurement, scale and inventory construction, reliability, validity, evaluation of measurement quality, classical and contemporary measurement theory, and standardization. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean.

Learning Outcomes

1. Students will acquire knowledge and skills in psychometrics.
2. Students will understand and apply psychometric theory through the completion of instrument evaluation, instrument development, and factor analysis projects.

CEPY 6425. Counseling Psychology Research

3 Credits (3)

Survey and analysis of research and program evaluation procedures in counseling psychology. Critical review of literature, formulating questions, quantitative and qualitative methodology, and data analysis are covered as a foundation for reading research literature and generating research, program evaluation, and/or grant proposals. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Students refine their foundational knowledge of research methods.
2. Students learn how to conduct comprehensive literature reviews in counseling psychology.
3. Students learn about sampling procedures and their limitations.
4. Students refine their knowledge about measurement applied to research (including the reliability, validity, norms and cultural relevance of measurement procedures).
5. Students refine their knowledge of statistics and the application of statistics to deriving conclusions from research data.
6. Students learn about ethical issues related to conducting research.
7. Students apply knowledge and skills in the areas described above to the critique of counseling psychology research.
8. Students apply knowledge and skills in the areas described above to the development of a draft proposal for research they can conduct in their area of interest within counseling psychology.
9. Students present and defend a proposal for research in counseling psychology.

CEPY 6430. Advanced Statistics

3 Credits (3)

An intermediate course focusing on more advanced theories and techniques of inferential statistics as applied to education and psychology. Includes ANOVA, planned contrasts, ANCOVA, simple regression, and non-parametrics. Both hand calculation and computer packages will be employed. Open to all College of HEST majors. May be repeated up to 3 credits.

Learning Outcomes

1. Students will understand how to describe procedural steps to submit proposals to the IRB at NMSU.

2. Students will be able to create data files and use SPSS to clean and examine datasets to assess data quality.
3. Students will be understand how to plan to address a research question, identify appropriate statistical tests and variables.
4. Students will be able to use SPSS to run statistical analyses to examine differences in means or relationships between two variables.
5. Students will understand how to assess assumptions and interpret findings of these analyses.
6. Students will understand key concepts, such as statistical significance, error, effect size, sample size, and statistical power.of analytic approaches, findings, and interpretations of the data
7. Students will be able to effectively communicate using scientific writing and accurate portrayal of the data in terms.

CEPY 6440. Multivariate Statistics

3 Credits (3)

Theories and techniques of multivariate statistics as applied to education and psychology. Includes multiple regression, logistic regression, MANOVA, factor analysis, and structural equation modeling. Computer packages will be the primary tool for data analysis. Open to all majors of the College of HEST. May be repeated up to 3 credits.

Learning Outcomes

1. To be able to construct statistical models, both non-multivariate (e.g., multiple regression) and multivariate (e.g., MANOVA, MANCOVA), and carry out the analysis using statistical software (e.g., SPSS, R).
2. To be able to interpret results of both non-multivariate and multivariate analyses, in the context of the data.
3. To be able to generate original research questions that can be answered with quantitative methods discussed in this course.
4. To be able to carry out a quantitative method discussed in this course to answer a research question(s), and to be able to appropriately interpret the results.
5. To be able to read published research in your field of study that makes use of multivariate methods, and critically interpret the results based on the claims and evidence provided.

CEPY 6450. Educational Experimentation

3 Credits (3)

Same as ELAD 6910. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 3 credits.

Learning Outcomes

1. Reflect on abilities to identify and effectively manage strengths and potential barriers that may impact progress on dissertation by thoroughly analyzing strengths and barriers and developing an action plan.
2. Conceptualize a dissertation topic that is germane to the field of Counseling Psychology and provide a convincing argument supporting the need for such research.
3. Conduct extensive and systematic literature searches for previous research and theory relevant to dissertation topic.
4. Write a comprehensive outline and annotated bibliography of the literature that incorporates the most relevant research and theoretical work associated with dissertation topic to inform literature review.
5. Clearly state research questions and hypotheses that will be examined in dissertation.

6. Create a detailed and comprehensive action plan that adheres to APA ethical guidelines for research that a reader can use to replicate dissertation study (i.e., method section).
7. Demonstrate understanding of the importance of having a diverse sample.
8. Present dissertation research to the class in a simulated proposal meeting.
9. Become more adept at providing support and challenge to student peers during weekly seminars and simulated proposal meetings. 1
10. Identify strategies for choosing and working with your dissertation committee effectively. 1
11. Demonstrate your knowledge of APA writing style.

**CEPY 6510. Practicum in School Psychology: Psychoeducational
1-6 Credits (1-6)**

Supervised practicum in psychological and educational evaluation. Skill development in ecological assessment, including interviewing, observations micro-counseling, acculturation, world view, and ethnic identity formation. Graded: S/U Grading (S/U, Audit). Restricted to CEP graduate majors. May be repeated up to 6 credits.

Prerequisite: CEPY 6340, CEPY 5310.

Learning Outcomes

1. Students will demonstrate sound diagnostic reasoning and data based decision-making through the formulation of possible preliminary hypotheses and testing of hypotheses via use of appropriate assessment methods.
2. Students will demonstrate skills in planning appropriate assessments, taking into consideration contextual factors, referral concerns, and background information; and will select appropriate evaluation methods.
3. Students will demonstrate skills related to devising and implementing evidence-based academic interventions for students in need.
4. Students will demonstrate sensitivity in regards to cultural diversity and diversity of values, as well as begin the process of being culturally responsive in their professional practices.
5. Students will become familiar with and practice in accordance with best practices and relevant standards of the profession.
6. Students will become familiar with the application of state special education rules and regulations.
7. Students will identify and apply relevant legal and ethical responsibilities and requirements.
8. Students will demonstrate effective interpersonal skills with clients and colleagues, appropriate to the functioning as a professional school psychologist.

**CEPY 6520. Field Experience in Educational Diagnostics
1-6 Credits (1-6)**

CEPY 6520 is designed to provide students with supervised school-based experiences and practices. The goal of the course is for students to master the competencies required for the delivery of academic services in the educational diagnostician role. The specific emphases in this course are placed on a data-based decision-making skills, psychoeducational assessment activities, and academic interventions. Under faculty and school-system staff supervisions, students will assume service delivery responsibilities and with increasing independence will respond to the diagnostic and intervention needs of students. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 6 credits.

Prerequisite: CEPY 6340 and CEPY 5310.

Learning Outcomes

1. Students will demonstrate sound diagnostic reasoning and data-based decision-making through the formulation of possible preliminary hypotheses and testing of hypotheses via use of appropriate assessment methods.
2. Students will demonstrate skills in planning appropriate assessments, taking into consideration contextual factors, referral concerns, and background information; and will select appropriate evaluation method.
3. Students will demonstrate skills related to devising and implementing evidence-based academic interventions and provide recommendations for students in need.
4. Students will demonstrate sensitivity in regards to cultural diversity and diversity of values, as well as begin the process of being culturally competent in their professional practices.
5. Students will become familiar with and practice in accordance with best practices and relevant standards of the profession.
6. Students will become familiar with the application of state special education rules and regulations.
7. Students will identify and apply relevant legal and ethical responsibilities and requirements.
8. Students will demonstrate effective interpersonal skills with clients and colleagues.

**CEPY 6530. Practicum in School Psychology: Psychological
1-6 Credits (1-6)**

School-based supervised experience for the advanced student. Provides experiences in various roles and models of service delivery (group, multifaceted, integrative, family assessments) expected of school psychologists. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. Restricted to: CEP graduate majors. May be repeated up to 6 credits.

Prerequisite: CEPY 6350 and CEPY 5235.

Learning Outcomes

1. Enhance the knowledge and skill students already possess and aid in the development of new knowledge and skills (related to psychological, behavioral needs of students).
2. Provide students with the opportunity to respond to supervision and use supervision in a constructive manner.
3. Provide students with the opportunity to share experiences as school psychologists in training in a supportive environment.
4. Provide the students with the opportunity to engage in learning activities that will assist them in functioning independently as school psychologists (i.e., data-based decision-making and accountability).
5. Provide the instructor with the opportunity to observe the student's ability to plan and execute successful interventions and demonstrate diagnostic skills.
6. Students will be able to establish a counseling relationship with students' clients through the provision of individual and/or group counseling as stated on their IEP's.
7. Students will be exposed to current issues, theories, and practices in the field of school psychology.
8. Students will be able to integrate theory/research and practice via case presentations.
9. Students will be able to demonstrate knowledge and integration of technology in their practice as school psychologist. 1

- Students will refine their skills in working with culturally and linguistically diverse students, families, educators, and other professionals.

**CEPY 6540. Advanced Multicultural School Psychology Field Experience
3 Credits (3)**

Supervised school psychology field experience including appraisal diagnosis, case conceptualization, treatment planning, theory-based counseling and evaluation from a multicultural perspective with diverse populations. Supervision provided by doctoral psychologist faculty involves audio, video, and/or live observation of sessions and case presentations. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. Restricted to CEP graduate majors.

Prerequisite: CEPY 6510, CEPY 6530.

Learning Outcomes

- Students will enhance the knowledge and skill they already possess and aid in the development of new knowledge and skills (related to psychological, behavioral needs of students).
- Students will respond to supervision and use supervision in a constructive manner.
- Students will share experiences as school psychologists in training in a supportive environment.
- Students will engage in learning activities that will assist them in functioning independently as doctoral-level school psychologists (i.e., data-based decision-making and accountability).

**CEPY 6550. Counseling Psychology Theory/Practicum
1-6 Credits (1-6)**

Theories of counseling and psychotherapy and their application during supervised counseling with clients. Supervision provided by doctoral psychologist faculty involves audio, video, and/or live observation of counseling sessions and case presentations. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 6 credits.

Learning Outcomes

- Students will refine their understanding of counseling theory and hone counseling skills through readings, lecture, demonstration, case presentation, and supervised counseling experiences.
- Students will learn about and employ a variety of evidence-based approaches to counseling and psychotherapy that have historically been used by counseling psychologists.
- Students will reflect on their development of an approach to counseling that is effective, theoretically sensible, and personally congruent.

**CEPY 6560. Group Work Theory/Practicum
1-6 Credits (1-6)**

Application of theory in group work with clients and in supervising group leaders in training. Supervision provided by doctoral psychologist faculty involves audio, video, and/or live observation of counseling sessions and case presentations. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. Restricted to CEP majors. May be repeated up to 6 credits.

Prerequisite: CEPY 6550.

Learning Outcomes

- Apply the basic elements of group theory to small groups, including principles of group dynamics, group process components, developmental stage theories, group member roles and behaviors, and therapeutic factors.
- Demonstrate effective leadership skills and intervention strategies in simulated class discussions to actual group sessions in the community.
- Possess knowledge of ethical and professional issues encountered by group leaders.
- Develop awareness of the relative advantages of group work for clients and counselors, as well as other practical advantages; discern when group may not be the preferred modality for clients.
- Distinguish characteristics of various group theories and approaches.
- Identify relevant socio-cultural factors and multicultural considerations in group work and its impact on theory, process, and group leadership skills.
- Communicate how they have improved their skill development relative to self-awareness and group leadership.
- Have knowledge of professional group organizations, certifications (Certified Group Psychotherapist), and be able to effectively market group skills in preparation for the pre-doctoral internship year.

**CEPY 6570. Advanced Counseling Psychology Practicum
1-6 Credits (1-6P)**

Supervised counseling psychology experience including appraisal, diagnosis, case conceptualization, treatment planning, theory-based counseling and evaluation. Supervision provided by doctoral psychologist faculty involves audio, video, and/or live observation of counseling sessions and case presentations. Restricted to CEP graduate majors. Graded: S/U Grading (S/U, Audit). May be repeated up to 12 credits.

Prerequisite: CEPY 6560.

Learning Outcomes

- To increase skill level in clinical work with individual/group/couple therapy and initial intakes through practice, formal supervision, and group case discussion.
- To integrate one's theoretical orientation into a brief practice therapy model and to improve treatment planning ability.
- To improve treatment planning ability by increasing knowledge and integration of empirically supported interventions.
- To increase exposure and use of assessment procedures and tools in clinical work.
- To be cognizant of cultural/diversity issues with clients and develop enough self-awareness to respond effectively to a wide range of clients.
- To examine professional identity concerns as they arise and increase one's knowledge base about specific areas of clinical interest.
- To adhere to APA's Ethical Principles of Psychologists and Code of Conduct and Specialty Guidelines for the Delivery of Service by Counseling Psychologists and Guidelines for Providers of Psychological Services to Ethnic, Linguistic, and Culturally Diverse Populations, and to develop a more applied understanding of them.
- To increase one's knowledge of relevant Mental Health Statutes and the Board of Psychologist Examiners Rules and Regulations for the state in which you are practicing (NM or TX).
- To demonstrate self-awareness and self-reflection through ongoing self-evaluation of counseling skills. 1
- To learn how to design and implement outreach presentations and to gain experience in consulting with interdisciplinary staff. 1

- To become familiar with and acquire practice with career counseling and the use of career inventories.

CEPY 6580. Supervision Theory and Practicum

1-6 Credits (1-6)

Didactic and experimental training in theory-based supervision. Supervision provided by doctoral psychologist faculty involves audio, video, and/or live observation of supervision sessions and case presentations. Restricted to CEP graduate majors. May be repeated up to 6 credits.

Prerequisite: CEPY 6530 or CEPY 6570.

Learning Outcomes

- Students will be able to conceptualize the counseling supervision process.
- Students will be able to understand the differences between various models of counseling supervision in order to develop a clearly conceptualized supervision theory/style.
- Students will be able to establish an effective supervisory relationship.
- Students will be able to demonstrate a variety of appropriately used supervision interventions.
- Students will be able to demonstrate self-awareness through ongoing self-assessment of supervisory skills and self-reflection of your experience.
- Students will be able to accurately assess your supervisee's abilities and developmental level.
- Students will be able to be cognizant of cultural/diversity issues with supervisees and develop enough self-awareness to respond effectively to such issues in both supervision and counseling.
- Students will be able to provide clear and timely feedback to your supervisee based on your on-going assessment.
- Students will be able to demonstrate the ability to write accurate and timely supervision process and progress notes. 1
- Students will be able to understand the differences between various models of consultation. 1
- Students will be able to understand the major issues in consulting and its place within the counseling profession, including orienting students to their professional identities.1
- Students will be able to understand how to orient students to their professional identities (school psychology, counseling psychology, or counseling). In addition, this course also provides supervisors an orientation to the counseling profession, including its history, counseling professional associations (e.g., the American Counseling Association), counseling licensure, roles counselors full fill in the community, and the difference between counseling and other related professions.

CEPY 6590. Behavioral Health Practicum

1-6 Credits (1-6)

An intensive supervised experience in providing behavioral health services at an on or off campus interdisciplinary health setting. Supervision provided by doctoral level psychologist faculty in collaboration with other team disciplines' supervising faculty involves audio, video, and/or live observation of counseling sessions and team interventions and case presentations. Restricted to CEP graduate majors. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean. May be repeated up to 6 credits.

Learning Outcomes

- Students will be able to apply a Biopsychosocial model of health and illness to case conceptualizations, treatment plans, and interventions at individual, group, and systemic levels.
- Students will learn and use motivational interviewing to support patient behavior change
- Students will learn strategies to employ telehealth services
- Students will learn behavioral strategies for Opiate Use Disorder
- Students will learn and perform a functional assessment of patient problems
- Students will learn and apply evidence-based brief behavior change interventions (e.g. goal setting, self-monitoring, stimulus control, positive reinforcement, guided imagery, progressive muscle relaxation, mindfulness social support)
- Students will describe and demonstrate behavioral health consultation skills
- Students will demonstrate understanding of health disparities and social justice issues relevant to health care setting, patient population, and service delivery models.
- Students will learn about ethical considerations for psychologists in health care settings

CEPY 6610. Internship in School Psychology

1-12 Credits (1-12)

Supervised experience in school psychology. Restricted to CEP graduate majors. May be repeated up to 12 credits.

Prerequisite: CEPY 6510 , CEPY 6530.

Learning Outcomes

- Student will complete 1200 clock hour internship experience an approved site.

CEPY 6620. Internship in Counseling Psychology I

1-18 Credits (1-18)

Full-time equivalent of one-half calendar year of internship preferably in an APA-approved or APA-equivalent site. Available to Ph.D. students who have successfully completed their comprehensive exams. Restricted to CEP graduate majors. May be repeated up to 18 credits.

Learning Outcomes

- Students will complete the full-time equivalent of one calendar year internship at a site accredited by the American Psychological Association (APA) that has been matched with the student through the APPIC process.

CEPY 6630. Internship in Counseling Psychology II

1-18 Credits (1-18)

Full-time equivalent of one-half calendar year of internship preferably in an APA-approved or APA-equivalent site. Available to Ph.D. students who have successfully complete their comprehensive exams. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, program director, department head, and graduate school dean May be repeated up to 18 credits.

Learning Outcomes

- Varies by site.

CEPY 6640. Doctoral Internship in School Psychology

6-12 Credits (6-12)

Supervised doctoral internship experience in school psychology. 1800 to 2000 clock hours are completed on a full-time basis. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate

school dean. Restricted to CEP graduate majors. May be repeated up to 12 credits.

Prerequisite: CEPY 6510, CEPY 6530, CEPY 6540.

Learning Outcomes

1. Varies by site.

CEPY 6996. Selected Topics

1-6 Credits (1-6)

Offered under various subtitles which indicate the subject matter covered. A maximum of 6 credits in any one semester and a total of 18 credits overall. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. May be repeated up to 18 credits.

Learning Outcomes

1. Varies

CEPY 6999. Ed.S. Thesis

1-15 Credits (1-15)

Study and research at the Specialist in Education level. Each problem to be designated by a qualifying subtitle. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. May be repeated up to 88 credits.

Learning Outcomes

1. Varies

CEPY 7000. Doctoral Dissertation

1-15 Credits (1-15)

Dissertation. Non-majors may be permitted to enroll in this course under limited circumstances with the permission of the course instructor, department head, and graduate school dean. May be repeated up to 88 credits.

Learning Outcomes

1. Varies

CHEF-CULINARY ARTS

CHEF 101. Culinary Arts Kitchen Orientation

3 Credits (3)

Provides students with basic information and skills necessary for success in the Culinary Arts program. Students learn basic kitchen routines, safety and sanitation, professional conduct and deportment, standard kitchen calculations, knife handling, and are introduced to the laboratories for initial cooking experiences. Restricted to Community Colleges campuses only.

CHEF 125. Introductory Cake Decorating

1 Credit (2P)

Introduction to the professional cake decorating techniques used by pastry chefs. Basic skills of piping a variety of icings into different patterns are taught. Restricted to Community Colleges campuses only.

Prerequisite(s): Consent of instructor.

CHEF 126. Intermediate Cake Decorating

1 Credit (2P)

Introduction to more advanced professional cake decorating techniques used by pastry chefs. Fondant work and more complex decorating schemes are taught. Restricted to Community Colleges campuses only.

Prerequisite(s): CHEF 125.

CHEF 127. Chocolate Work

1 Credit (2P)

Introduction to working with chocolate utilizing a variety of methods.

Tempering, forming, molding, and other professional techniques will be taught. Restricted to Community Colleges campuses only.

Prerequisite(s): Consent of Instructor.

CHEF 128. Advanced Chocolate Work

1 Credit (2P)

More advanced treatments of chocolate are explored and professional techniques for the chocolatier are developed. Restricted to Community Colleges campuses only.

Prerequisite(s): CHEF 127.

CHEF 129. Wedding Cake Design and Construction

1 Credit (2P)

Basic skills in designing wedding (or other specialty event) cakes. Includes shaping, icing selection, decorating scheme, presentation, transportation, and remote set up. Restricted to Community Colleges campuses only.

Prerequisite(s): CHEF 125 and CHEF 126.

CHEF 155. Special Topics

1-3 Credits (1-3)

Specific subjects to be announced in the Schedule of Classes. May be repeated up to 6 credits. Restricted to Community Colleges campuses only.

CHEF 165. Math for Kitchen Operations

3 Credits (3)

Fundamental mathematical concepts and computations, including measurement, recipe scaling and conversions, metric unit conversion, ingredient yield calculations, ratios and cost extensions are covered. Examples of basic mathematical calculations use kitchen and food service functions, as well as situations to demonstrate principles.

CHEF 211. Food Production Management I

3 Credits (2+2P)

Introduction to kitchen design, workflow, and commercial equipment. Techniques, methods, and application of basic food production principles. Practical experience in cooking processes from a managerial viewpoint. Crosslisted with: HOST 211. Restricted to Community Colleges only.

CHEF 212. Food Production Management II

3 Credits (2+2P)

Selection and use of ingredients. Demonstration and application of classical and modern cooking and preparation techniques. Management techniques for kitchen personnel. Recipe design and analysis. Crosslisted with: HOST 212. Restricted to Community Colleges only.

Prerequisite(s): CHEF 211 or consent of instructor.

CHEF 213. Bakery Management I

3 Credits (2+2P)

Fundamentals of baking from a supervisory/management perspective. Exposure to commercial equipment and processes. Introduction to commercial alternatives to scratch-preparation methods. Crosslisted with: HOST 213. Restricted to Community Colleges only.

CHEF 214. Bakery Management II

3 Credits (2+2P)

Advanced techniques and management of bakery operations are explored. Students learn classical forms and techniques. Modern methods of preparing traditional pastry and baked goods are introduced. Crosslisted with: HOST218. Restricted to Community Colleges only.

Prerequisite(s): CHEF 213 or consent of instructor.

CHEF 233. Culinary Arts Fundamentals I

4 Credits (1+9P)

Introduction to the basics of culinary arts, including ingredients recognition, cooking methods and techniques, knife usage, preparation of basic stocks, mother sauces, starches and vegetables. Students will participate in laboratory work designed to create an understanding of the professional role of the culinarian. Preparation and production of food products integral to service to guests is incorporated in the course. May be repeated up to 4 credits. Consent of Instructor required. Restricted to: CHEF, HOST, HSMG, HOCH majors. Restricted to Community Colleges campuses only.

CHEF 234. Culinary Arts Fundamentals II

4 Credits (1+9P)

Continuation of introductory course focusing on meat cookery, daughter sauces, cold food preparation, poultry and seafood. Safe use of equipment is emphasized while experiencing differing methods of preparation and cooking. Preparation and production of food products integral to service of guests is incorporated in this course. Restricted to: HOST, HSMG, CHEF majors. Restricted to Community Colleges campuses only.

Prerequisite: CHEF 233 with a grade of "C-" or better.

Learning Outcomes

1. Explain equipment safety concerns and how to operate safely.
2. Demonstrate the effective use of various types of kitchen equipment
3. Demonstrate a variety of techniques for cooking of beef, veal, lamb, pork, poultry, and fish/shellfish.
4. Demonstrate proper preparation of daughter sauces and small sauces.
5. Prepare salads and dressings following recipes using appropriate techniques.
6. Employing appropriate techniques, prepare fruits for guest consumption.
7. Prepare sandwiches according to recipes.
8. Demonstrate basic dessert preparation.
9. Prepare custards, creams and frozen desserts following assigned recipes. 1
10. Cooperatively comply with requirements for production of food items to be served to guests.

CHEF 235. Advanced Culinary Arts I

4 Credits (1+9P)

Exploration and experience in preparation techniques beyond the basic level. Nutritional components of food are discussed, as in the application of good nutrition practices in recipe design. Students are encouraged to use creative methods to expand the individual's culinary expressions. Prepares food products for service to guests in both bulk feeding and individual service settings. Plans, prepares, serves and critiques meals provided for students, faculty and staff. May be repeated up to 4 credits.

Prerequisite(s)/Corequisite(s): CHEF 234 with a grade of "C" or better if course has been previously taken. Restricted to: CHEF majors. Restricted to Community Colleges campuses only.

CHEF 236. Advanced Culinary Arts II

4 Credits (1+9P)

Advanced techniques and experimental use of food combinations to enhance the student's repertoire of skills and abilities. Utilizes knowledge to develop recipes for unique products. Plans, prepares, serves and critiques meals provided for students, faculty and staff. Restricted to: CHEF majors. Restricted to Community Colleges campuses only.

Prerequisite(s): CHEF 235 with a grade of "C" or better.

CHEF 237. Banquet/Catering Production

3 Credits (1+6P)

Planning and implementation of the culinary aspects of catered functions. Development of time schedules, work assignments and service plans for catered events and banquet functions. Production of food items in appropriate quantities for catered events. Costing and control functions are covered. May be repeated up to 6 credits. Restricted to: CHEF, HOST majors. Restricted to Community Colleges campuses only.

CHEF 240. Baking Fundamentals I

4 Credits (1+9P)

Introduction to baking techniques, measurement and use of ingredients; equipment use and chemical reactions inherent in the baking process. Production of simple desserts and baked goods. Introduction to working with bread doughs. Restricted to: HOST, CHEF majors. Restricted to Community Colleges campuses only.

Corequisite(s): CHEF 233.

CHEF 241. Baking Fundamentals II

4 Credits (1+9P)

More advanced baking and bread making techniques are covered in this course with emphasis on the more advanced elements of quantity production. Students work with a variety of products and ingredients. Restricted to: HOST, CHEF majors. Restricted to Community Colleges campuses only.

Prerequisite(s): grade of "C" or above in CHEF 240.

CHEF 242. Intermediate Baking I

4 Credits (1+9P)

More advanced baking and pastry techniques are covered in this course with emphasis on the basic elements of patisserie production. Focus is on preparing students to work in a pastry kitchen. Restricted to: HOST, CHEF majors. Restricted to Community Colleges campuses only.

Prerequisite(s): Grade of "C" or above in CHEF 241.

CHEF 243. Intermediate Baking II

4 Credits (1+9P)

Continuation of work with basic elements of patisserie products including laminated doughs and filled products. Students prepare creams, custards, fillings and are introduced to cake assembly procedures. Restricted to: CULI majors. Restricted to Community Colleges campuses only.

Prerequisite(s): Grade of "C" or above in CHEF 242.

CHEF 255. Special Topics

3 Credits (3)

Specific subjects to be announced in the Schedule of Classes. May be repeated up to 6 credits. Restricted to: CULI, HOST, HSMG majors. Restricted to Community Colleges campuses only.

CHEF 256. International Cuisine

3 Credits (1+6P)

Exploration into a variety of international cuisines is undertaken, including the cultural and historical backgrounds of the foods being prepared. Students work on developing themed menus and production plans for meals utilizing a single international cuisine. May be repeated up to 6 credits. Restricted to: CHEF, HOST majors. Restricted to Community Colleges campuses only.

Prerequisite(s): Grade of "C" or above in CHEF 233.

CHEF 257. Garde Manger

3 Credits (1+6P)

Traditional garde manger skills are taught, including plated salads, cold foods, entremets, pates, forcemeat, terrines, charcuterie and chaud froid work. The art and craft of food design, preparation and service are emphasized. May be repeated up to 3 credits. Restricted to: CHEF, HOST majors. Restricted to Community Colleges campuses only.

Prerequisite: Grade of "C" or above in CHEF 233.

Learning Outcomes

1. Demonstrates preparation and presentation of plated salads.
2. Prepares sandwiches and other cold items as assigned that meet standards.
3. Develops, designs and prepares entremets and palate refreshers.
4. Prepares classical and modern patés and forcemeats as assigned.
5. Designs and prepares terrines and galatines following recipes and directions.
6. Prepares charcuterie products as assigned following recipes and directions.
7. Designs, prepares, and decorates products with chaud froid as appropriate.

CHEF 260. Nutrition for Chefs

3 Credits (3)

Aspects of basic human nutritional requirements are covered as are the applications of the standards to the cooking and baking. Meeting the USDA nutrient guidelines while preparing good tasting food is discussed, calorie, fat and sodium reduction techniques are explored.

CHEM-CHEMISTRY

CHEM 1111. Basic Chemistry

3 Credits (3)

For students whose preparatory science or math training has been deficient. Does not meet the chemistry requirement in any curriculum.

Prerequisite: Enhanced ACT composite score of at least 18 or a grade of C- or better in CCDM 114 N.

Learning Outcomes

1. The goals and objectives for CHEM 1111 are to equip students with the necessary problem solving skills to be successful in CHEM 1215G/1225G

CHEM 1120G. Introduction to Chemistry Lecture and Laboratory (non majors)

4 Credits (3+3P)

This course covers qualitative and quantitative areas of non-organic general chemistry for non-science majors and some health professions. Students will learn and apply principles pertaining, but not limited to, atomic and molecular structure, the periodic table, acids and bases, mass relationships, and solutions. The laboratory component introduces students to techniques for obtaining and analyzing experimental observations pertaining to chemistry using diverse methods and equipment.

Prerequisite: CCDM 114N or A S 103 or MATH 1215 or higher.

Learning Outcomes

1. (Lecture) Use the different systems of measurements and perform conversions within the same system of measurement and between different systems of measurements
2. (Lecture) Identify elements from their name or symbol, use the periodic table to describe reactivity patterns of elements and to predict compound formation.
3. (Lecture) Describe the basic structure of an atom using subatomic particles, and apply these concepts to nuclear reactions.
4. (Lecture) Describe ion formation and the difference between covalent and ionic compounds. Name and write formulas for ionic and simple molecular compounds.
5. (Lecture) Write and balance chemical reactions. Use balanced reactions in stoichiometric calculations.

6. (Lecture) Describe the differences between the solid, liquid and gas phases. Use the gas laws in calculations, and apply these laws to everyday situations.
7. (Lecture) Explain different types of energy, and how energy is released or absorbed in a reaction
8. (Lecture) Describe acid and base behavior.
9. (Lecture) Explain the intermolecular attractive forces that determine physical properties; apply this knowledge to qualitatively evaluate these forces and predict the physical properties that result. 1
10. (Lecture) Explain the intermolecular attractive forces that determine physical properties; apply this knowledge to qualitatively evaluate these forces and predict the physical properties that result 1
11. (Laboratory) Practice concepts associated with laboratory safety, including the possible consequences of not adhering to appropriate safety guidelines. 1
12. (Laboratory) Demonstrate the computational skills needed to perform appropriate laboratory-related calculations to include, but not be limited to determining the number of significant figures in numerical value, solving problems using values represented in exponential notation, solving dimensional analysis problems, and manipulating mathematical formulas as needed to determine the value of a variable. 1
13. (Laboratory) Perform laboratory observations (both qualitative and quantitative) using sensory experience and appropriate measurement instrumentation (both analog and digital). 1
14. (Laboratory) Record quantitatively measured values to the correct number of significant figures and assign the correct units. 1
15. (Laboratory) Master basic laboratory techniques including, but not limited to weighing samples (liquid and solid), determining sample volumes, measuring the temperature of samples, heating and cooling a sample or reaction mixture, decantation, filtration, and titration. 1
16. (Laboratory) Draw appropriate conclusions based on data and analyses. 1
17. Present experimental results in laboratory reports of appropriate length, style and depth, or through other modes as required. 1
18. Determine chemical formulas and classify different types of reactions. 1
19. Relate laboratory experimental observations, operations, calculations, and findings to theoretical concepts presented in the complementary lecture course.

CHEM 1121. General Supplemental Instruction I

1 Credit (1)

Collaborative workshop for students in General Chemistry I. Course does not count toward departmental degree requirements. May be repeated for a maximum of 2 credits.

Corequisite(s): CHEM 1215G.

CHEM 1122. General Supplemental Instruction II

1 Credit (1)

Collaborative workshop for students in General Chemistry II. Course does not count toward departmental degree requirements. May be repeated for a maximum of 2 credits.

Corequisite(s): CHEM 1225G.

CHEM 1123. Principles of Supplemental Instruction III

1 Credit (1)

Collaborative workshop for students in CHEM 1120G, Principles and Applications of Chemistry. Course does not count toward departmental degree requirements. May be repeated for maximum of 2 credits.

Corequisite(s): CHEM 1120G.

CHEM 1215G. General Chemistry I Lecture and Laboratory for STEM Majors

4 Credits (3+3P)

This course covers descriptive and theoretical chemistry.

Prerequisite: (1) grade of C- or better in MATH 1215 or higher, or a Mathematics Placement Exam Score adequate to enroll in mathematics courses beyond MATH 1215.

Learning Outcomes

1. Use dimensional analysis, the SI system of units and appropriate significant figures to solve quantitative calculations in science. Understand the differences between physical and chemical changes to matter. Classify types of matter.
2. Understand the scientific method in the context of scientific discoveries.
3. Explain the structure of atoms, isotopes and ions in terms of subatomic particles.
4. Analyze how periodic properties (e.g. electronegativity, atomic and ionic radii, ionization energy, electron affinity, metallic character) and reactivity of elements results from electron configurations of atoms.
5. Understand the creation of different types of compounds (ionic and molecular), comparing and contrasting their structures, naming schemes and formulas. Apply knowledge of electronic structure to determine molecular spatial arrangement and polarity.
6. Understand bulk pure substances, their properties and their states of matter by understanding and identifying intermolecular forces. Apply kinetic molecular theory to relate atomic level behavior to macroscopic properties. Introduce the mole and apply the mole concept to amounts on a macroscopic and a microscopic level
7. Understand mixtures, solubility by considering intermolecular forces and expressing concentration in molarity.
8. Identify different reaction types. Apply the law of conservation of mass to reactions. Perform stoichiometry on balanced reactions. Laboratory Student Learning Outcomes
9. Demonstrate and apply concepts associated with laboratory safety, including the possible consequences of not adhering to appropriate safety guidelines.
10. Demonstrate the computational skills needed to perform appropriate laboratory related calculations to include, but not be limited to determining the number of significant figures in numerical value with the correct units, solving problems using values represented in exponential notation, solving dimensional analysis problems, and manipulating mathematical formulas as needed to determine the value of a variable.
11. Perform laboratory observations (both qualitative and quantitative) using sensory experience and appropriate measurement instrumentation (both analog and digital).
12. Prepare solutions with an acceptable accuracy to a known concentration using appropriate glassware.
13. Master basic laboratory techniques including, but not limited to weighing samples (liquid and solid), determining sample volumes, measuring the temperature of samples, heating and cooling a sample or reaction mixture, decantation, filtration, and titration.
14. Draw conclusions based on data and analyses from laboratory experiments.
15. Relate laboratory experimental observations, operations, calculations, and findings to theoretical concepts presented in the complementary lecture course.

CHEM 1216. General Chemistry I Lecture and Laboratory for CHEM Majors

4 Credits (3+3P)

As the first of a two-semester sequence, this course teaches fundamental concepts in chemistry, including the electronic structure of atoms, chemical periodicity, nature of chemical bonds, molecular structure, the three phases of matter, etc. Designed for majors in chemical and other physical sciences, including engineering. May be appropriate for the life science major. It is assumed that the students are familiar with college algebra, chemical nomenclature, stoichiometry, and scientific measurements. The laboratory component is designed to complement the theory and concepts presented in lecture, and will introduce students to techniques for obtaining and analyzing experimental observations pertaining to chemistry using diverse methods and equipment.

Prerequisite(s): Eligible to take MATH 1250G and an ACT composite score of 22 or higher.

Learning Outcomes

1. Apply the mole concept to amounts at a microscopic level and use this to perform stoichiometric calculations for reactions in solution, gases and thermochemistry.
2. Calculate solution concentrations in various units.
3. Apply the gas laws and kinetic molecular theory to relate atomic level behavior to macroscopic properties.
4. Explain the electronic structure of atoms, isotopes and ions in terms of its subatomic particles.
5. Analyze how periodic properties (e.g. electronegativity, atomic and ionic radii, ionization energy, electron affinity, metallic character) and reactivity of elements results from electronic configurations of atoms.
6. Understand the nature of chemical bonds (ionic and covalent). Apply knowledge of electronic structure to determine molecular structure and polarity.
7. Understand the formation of different phases of matter and the underlying fundamental intermolecular interactions.
8. Describe physical states and changes, and distinguish these from chemical changes.
9. Describe the energy conversions that occur in chemical reactions and state changes, relating heat of reaction to thermodynamic properties such as enthalpy and internal energy; apply these principles to measure and calculate energy changes in reaction. 1
10. Apply principles of general chemistry to specific real-world problems in environment, engineering and health-related fields.

CHEM 1225G. General Chemistry II Lecture and Laboratory for STEM Majors

4 Credits (3+3P)

This course is intended to serve as a continuation of general chemistry principles for students enrolled in science, engineering, and certain preprofessional programs. The course includes, but is not limited to a theoretical and quantitative coverage of solutions and their properties, kinetics, chemical equilibrium, acids and bases, entropy and free energy, electrochemistry, and nuclear chemistry. Additional topics may include (as time permits) organic, polymer, atmospheric, and biochemistry.

The laboratory component is designed to complement the theory and concepts presented in lecture, and will introduce students to techniques for obtaining and analyzing experimental observations pertaining to chemistry using diverse methods and equipment.

Prerequisite(s): C- or better in CHEM 1215G.

Learning Outcomes

1. Explain the intermolecular attractive forces that determine physical properties and phase transitions, and apply this knowledge to qualitatively evaluate these forces from structure and to predict the physical properties that result.
2. Calculate solution concentrations in various units, explain the effects of temperature, pressure and structure on solubility, and describe the colligative properties of solutions, and determine solution concentrations using colligative property values and vice versa.
3. Describe the dynamic nature of chemical equilibrium, and apply LeChatelier's Principle to predict the effect of concentration, pressure and temperature changes on equilibrium mixtures as well as describe the equilibrium constant and use it to determine whether equilibrium has been established, and calculate equilibrium constants from equilibrium concentrations and vice versa.
4. Describe the different models of acids and base behavior and the molecular basis for acid strength, as well as apply equilibrium principles to aqueous solutions, including acid/base and solubility reactions, and calculate pH and species concentrations in buffered and unbuffered solutions.
5. Explain titration curves as well as calculate concentrations of reactants.
6. Explain and calculate the thermodynamic functions, enthalpy, entropy and Gibbs free energy, for a chemical system, and relate these functions to equilibrium constants Student Learning Outcomes – Laboratory
7. Demonstrate and apply concepts associated with laboratory safety, including the possible consequences of not adhering to appropriate safety guidelines.
8. Demonstrate the computational skills needed to perform appropriate laboratory related calculations to include, but not be limited to determining the number of significant figures in numerical value with the correct units, solving problems using values represented in exponential notation, solving dimensional analysis problems, and manipulating mathematical formulas as needed to determine the value of a variable.
9. Perform laboratory observations (both qualitative and quantitative) using sensory experience and appropriate measurement instrumentation (both analog and digital).
10. Prepare solutions with an acceptable accuracy to a known concentration using appropriate glassware.
11. Perform basic laboratory operations related to, but not limited to, colligative properties of solutions, chemical equilibria, acid/base titrations, electrochemistry.
12. Draw conclusions based on data and analyses from laboratory experiments.
13. Relate laboratory experimental observations, operations, calculations, and findings to theoretical concepts presented in the complementary lecture course.

CHEM 1226. General Chemistry II Lecture and Laboratory for CHEM Majors**4 Credits (3+3P)**

As the second of a two-semester sequence, this course teaches fundamental concepts in chemistry, including solutions, equilibria, electrochemistry, thermodynamics and kinetics. Designed for majors in chemical and other physical sciences, including engineering. May be appropriate for the life science major. It is assumed that the students are familiar with college algebra, chemical nomenclature, stoichiometry, and scientific measurements. The laboratory component is designed

to complement the theory and concepts presented in lecture, and will introduce students to techniques for obtaining and analyzing experimental observations pertaining to chemistry using diverse methods and equipment.

Prerequisite(s): C- or better in CHEM 1216.

Learning Outcomes

1. Describe the colligative properties of solutions and explain them using intermolecular forces. Determine solution concentrations using colligative property values and vice versa.
2. Explain rates of reactions, rate laws, and half-life; determine the rate, rate law and rate constant of a reaction and calculate concentration as a function of time and vice versa. Understand the principle of catalysis.
3. Explain the collision model of reaction dynamics, including activation energy, catalysts and temperature; Derive a rate law from a reaction mechanism and evaluate the consistency of a mechanism with a given rate law.
4. Describe the dynamic nature of chemical equilibrium and its relation to reaction rates; apply Le Chatelier's Principle to predict the effect of concentration, pressure and temperature changes on equilibrium mixtures.
5. Describe the equilibrium constant and use it to determine whether equilibrium has been established; calculate equilibrium constants from equilibrium concentrations (including pressures) and vice versa.
6. Describe the different models of acids and base behavior, and the molecular basis for acid strength.

CHEM 2111. Explorations in Chemistry**1 Credit (1)**

The major intent of this course is to deepen your interest in chemistry and make you aware of research and career opportunities in the field. During this semester we hope to discuss both old and new developments in chemistry that impact our lives. We also want to build our communication skills that are so necessary in our profession. Graded S/U.

CHEM 2115. Survey of Organic Chemistry and Laboratory**4 Credits (3+3P)**

This course is a one-semester survey of organic and biological chemicals. Students will be introduced to nomenclature, molecular structure, properties, and reactions of hydrocarbons, alcohols, carbonyls, organic acids and bases, carbohydrates, lipids, and proteins. The handling of organic chemicals, simple organic reactions, tests for functional groups, and synthesis will be learned in the laboratory component of this course.

Prerequisite: C- or better in CHEM 1225G or CHEM 1226.

Learning Outcomes

1. Identify common organic functional groups.
2. Translate between the IUPAC names and structures of simple organic molecules.
3. Predict the products of certain organic chemical reactions from reagents and conditions presented.
4. Predict physical and chemical behavior of organic molecules based on structure.
5. Synthesize several classes of organic compounds in the laboratory that were previously studied in the lecture component of this course.
6. Recognize and name the four basic bioorganic units and certain of their derivatives and macromolecules.
7. Construct 3 dimensional models of organic compounds.

- Understand and apply safety principles associated with Organic Chemistry laboratory operations and activities.
- Present experimental results in laboratory reports of appropriate length, style and depth, or through other modes as required. 1
- Draw/recognize stereochemistry and explain its relevance to bioorganic molecules.

CHEM 2120. Integrated Organic Chemistry and Biochemistry **3 Credits (3)**

This course is a one- semester introduction to Organic Chemistry and Biochemistry designed for students in health and environmental occupations. The course surveys organic compounds in terms of structure, physical, and chemical properties, followed by coverage of the chemistry of specific classes of organic compounds in the biological environment. Students will apply course concepts to everyday organic and biological chemistry problems in preparation for careers in health and environmental fields.

Prerequisite: CHEM 1120G or CHEM 1215G.

Learning Outcomes

- Identify and name basic organic compounds.
- Construct/draw organic compounds from the names.
- Predict the products of certain organic chemical reactions from reagents and conditions presented.
- Recognize and name the four basic bioorganic units and certain of their derivatives and macromolecules.
- Compare and contrast the function and location of the four bioorganic units and their macromolecules and cofactors.
- Draw/recognize stereochemistry and explain its relevance to bioorganic molecules.
- Discuss the pathways and functions of some of the cellular metabolic processes.
- Recognize and describe metabolic cellular processes and macromolecular structure with respect to health and/or disease state

CHEM 2120L. Integrated Organic Chemistry and Biochemistry Lab **1 Credit (1,3P)**

This course provides experiences with the physical properties and laboratory synthesis of organic compounds.

Prerequisite/Corequisite: CHEM 2120.

Learning Outcomes

- Discuss the chemical, structural, and physical differences among the different functional groups.
- Prepare, label, and use solutions of appropriate and known concentrations.
- Recognize chiral organic molecules, and explain their biological significance.
- Understand and be able to identify the process of organic reactions: nucleophilic and electrophilic, redox reactions, and enzyme catalyzed reactions.
- Predict the products of substitution, elimination, condensation, and redox reactions.
- Explain why certain lipids and amino acids are essential while others are not.

CHEM 2130. Organic Chemistry I **3 Credits (3)**

This course is the first of a two semester sequence of Organic Chemistry, the chemistry of carbon containing compounds, as required for chemistry, medical science, and engineering majors. The course includes theoretical, qualitative, and quantitative discussion of Organic Chemistry concepts,

including but not limited to a review of electronic structure and bonding, acids and bases, stereochemistry, an introduction to organic compounds, isomers, substitution and elimination reactions of alkyl halides, reactions of alkenes, alkynes, alcohols, ethers, epoxides, amines, and thiols, mass and infrared spectrometry, ultraviolet/visible spectroscopy, and nuclear magnetic resonance.

Prerequisite: CHEM 1225G or CHEM 1226.

Learning Outcomes

- Review properties of elements and molecules discussed in general chemistry (electronegativity, bonding, formal charge, octet rule).
- Review chemical reactions discussed in general chemistry (products, reactants, balanced equations, byproducts).
- Classify organic compounds and their properties by functional group, including substitution and elimination reactions of alkyl halides, reactions of alkenes, alkynes, alcohols, ethers, epoxides, amines, and thiols.
- Use common and IUPAC rules of nomenclature to name organic compounds.
- Review the structure and stability of compounds.
- Comprehend the relationship between structure and reactivity.
- Comprehend configurations of organic compounds (resonance structures, stereochemistry, isomers).
- Interpret spectral properties and use in structure determination.
- Correctly describe the four-five step synthesis of a simple organic molecule using reactions learned in the class.

CHEM 2135. Organic Chemistry II **3 Credits (3)**

This course is the second of a two semester sequence of Organic Chemistry, the chemistry of carbon containing compounds, as required for chemistry, medical science, and engineering majors. The course will emphasize structure, main physical properties, chemical reactivity, and reaction mechanisms relating to alcohols, arenes and carbonyl compounds, as well as continued integration of mass and infrared spectrometry, ultraviolet/visible spectroscopy, and nuclear magnetic resonance technique and analysis.

Prerequisite: CHEM 2130 or CHEM 313.

Learning Outcomes

- Identify functional groups and other key features of different organic compounds.
- Correctly name organic compounds using the proper nomenclature (IUPAC and common names).
- Analyze relationships among molecular structure, chemical reactivity, physical and spectral properties.
- Understand chemical reactivity and reaction mechanisms relating, but not limited to dienes, arenes, alcohols, ethers, amines, phenols, and carbonyl compounds, i.e. aldehydes, ketones, carboxylic acids and derivatives.
- Write out correctly the mechanisms of electrophilic aromatic substitution, formation and hydrolysis of acetals and ketals, formation and hydrolysis of imines and enamines, conjugate addition of nucleophiles to α,β -unsaturated carbonyl compounds, Fischer esterification and hydrolysis of esters under both acidic and basic conditions, transesterification under acidic and basic conditions, amide hydrolysis under acidic and basic conditions, the aldol reaction and condensation, and the Claisen condensation/Dieckmann cyclization for examples that are different than those studied in class.
- Relate structures to spectral properties, interpreting IR, thirteenC and oneH NMR.

- Describe the six-seven step synthesis of a simple organic molecule using reactions learned in this class.
- Convert the Fischer projection of a carbohydrate to its corresponding Haworth projection, or convert the Haworth projection of a carbohydrate to its Fischer projection.
- Recognize derivatives of carbonic and phosphoric acids, alkaloids, carbohydrates, peptides, steroids, prostaglandins, aglycones, carbohydrate anomers, reducing sugars, waxes, fats, and oils.

CHEM 2991. Introduction to Research**1-3 Credits (3+9P)**

Techniques and procedures of chemical research. May be repeated for a maximum of 3 credits.

Prerequisites: 8 credits of chemistry and a 3.0 GPA in chemistry.

Learning Outcomes

- Varies

CHEM 2996. Special Topics in Chemistry**1-6 Credits (1-6)**

Specific subjects in Chemistry. These subjects will be announced in the 'Schedule of Classes'. It may be repeated under different topics for a maximum of 12 credits.

Learning Outcomes

- Varies

CHEM 303. Organic Supplemental Instruction I**1 Credit (1)**

Collaborative workshop for students in Organic Chemistry I. Course does not count toward departmental degree requirements. May be repeated for a maximum of 2 credits.

Corequisite(s): CHEM 313.

CHEM 304. Organic Supplemental Instruction II**1 Credit (1)**

Collaborative workshop for students in Organic Chemistry II. Course does not count toward departmental degree requirements. May be repeated for a maximum of 2 credits.

Corequisite(s): CHEM 314.

CHEM 313. Organic Chemistry I**3 Credits (3)**

Nomenclature, uses, basic reactions, and preparation methods of the most important classes of aliphatic and aromatic compounds.

Prerequisite(s): C- or better in CHEM 1225G or CHEM 1226.

CHEM 314. Organic Chemistry II**3 Credits (3)**

An in-depth focus on reactions and mechanisms as they relate to organometallic compounds, alcohols, ethers, ketones, aldehydes, carboxylic acid derivatives, and amines. May be repeated up to 3 credits.

Prerequisite(s): C- or better in CHEM 313.

Learning Outcomes

- Identify several new functional groups and other key features of organic compounds
- Interpret ^1H / ^{13}C NMR, IR, UV-Vis, and Mass spectrometry data and have the ability to correlate structural elements with spectral features
- Understand the chemical reactivity and reaction mechanisms relating, but not limited, to organometallic compounds, alcohols, ethers, ketones, aldehydes, carboxylic acids, and amines. Mechanistic highlights include: etherification, acetal formation / removal, alcohol oxidation, carbonyl addition reactions, enolate (and related) reactions, formation of carboxylic acid derivatives, and nucleophilic acyl substitution processes. Apply these mechanistic

and reactivity considerations to these same groups when they appear as substructures in larger biologically-important molecules (e.g. carbohydrates, amino acids, and lipids).

- Design concise, three to five step syntheses of simple organic molecules using reactions learned in both CHEM 313 and 314
- Qualitatively assess stability, solubility properties, chemical reactivity, spectral properties, and potential reactions that would lead to preparation, simply via visual inspection of structure.

CHEM 315. Organic Chemistry Laboratory**2 Credits (6P)**

Techniques, preparative and analytical methods in organic chemistry. May be repeated up to 2 credits.

Prerequisite(s)/Corequisite(s): CHEM 314. Prerequisite(s): C- or better in CHEM 313 or consent of instructor.

CHEM 351. Special Topics**1-3 Credits**

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

Prerequisite: consent of instructor.

CHEM 357. Synthetic Inorganic Laboratory**2 Credits (6P)**

Explores synthesis and analysis of main group and transition metal inorganic compounds. Inorganic laboratory and spectroscopic techniques will be used.

Prerequisites: CHEM 356.

CHEM 371. Analytical Chemistry**4 Credits (2+6P)**

The fundamentals of quantitative chemical analysis.

Prerequisite(s): C- or better in CHEM 1225G or CHEM 1226.

CHEM 422. Environmental Chemistry**3 Credits (3)**

Chemistry of organic and metal ion pollutants in the environment and principles important to their remediation including bioremediation.

Restricted to: Main campus only. Crosslisted with: ENVS 422

Prerequisite(s): CHEM 1225G and either CHEM 2120 or CHEM 313.

Learning Outcomes

- Describe and explain the solid, liquid, and gas phases of the environment and how they interact.
- Understand the chemical reactions and processes that occur between various phases of the environment.
- Learn how the chemical processes can be managed to promote environmental remediation, including the techniques and calculations used.

CHEM 424. Soil Chemistry**3 Credits (3)**

Same as SOIL/GEOL 424.

CHEM 430. Physical Chemistry: Thermodynamics, Kinetics, Quantum Chemistry, and Spectroscopy**3 Credits (3)**

Lecture course covering the basic four areas of Physical Chemistry at the advanced undergraduate level. Topics include: Statistical Mechanics, Thermodynamics, Kinetics, Quantum Chemistry, Group Theory, and Spectroscopy at the advanced undergraduate level.

Prerequisite: CHEM 1225G or 1226; MATH 1521G or higher; PHYS 1240G, 2140, 2240 or PHYS 1320G.

Learning Outcomes

- Students will master the theoretical basis and underlying laws governing Physical Chemistry (Thermodynamics, Kinetics, Quantum

Chemistry, and Spectroscopy) at the advanced undergraduate level of expertise. In particular, students will develop critical thinking and problem solving skills in the above four areas of Physical Chemistry.

CHEM 431. Physical Chemistry**3 Credits (3)**

Principles that govern the physical and chemical behavior of matter. May not be counted toward Bachelor of Science degree in Chemistry.

Prerequisite(s): CHEM 1226 or CHEM 2226; MATH 1521G; PHYS 1240G or PHYS 2240G or PHYS 2140 or PHYS 1320G.

CHEM 431 H. Physical Chemistry Honors**3 Credits (3)**

Same as CHEM 431. Additional work to be arranged.

Prerequisite(s): CHEM 1226 or CHEM 2226; MATH 1521G or MATH 1521H; PHYS 1240G or PHYS 2240G or PHYS 2140 or PHYS 1320G.

CHEM 433. Physical Chemistry I**3 Credits (3)**

This course will cover topics relevant to the quantum description of the Chemical world at the undergraduate level, with an emphasis on acquiring sufficient background knowledge necessary for subsequent graduate level courses. May be repeated up to 3 credits.

Prerequisite: CHEM 1225 or CHEM 1226; MATH 1521G; PHYS 2140 or PHYS 1320G, or consent of instructor.

Learning Outcomes

1. Students will develop critical thinking and problem-solving skills with direct application to basic Quantum Chemistry and Spectroscopy. Topics the students will master include (but are not limited to): The Schrodinger Equation, One-Electron Atoms, (i.e. the hydrogen atom), Many-Electron Atoms, Molecular Symmetry (Group Theory), Working with and generating Character Tables, Electric Dipole Spectroscopy, Vibrational Spectroscopy, Rotational Spectroscopy.

CHEM 433 H. Physical Chemistry I Honors**3 Credits (3)**

Same as CHEM 433. Additional work to be arranged. May be repeated up to 3 credits.

Prerequisite: CHEM 1225 or CHEM 1226; MATH 1521G or MATH 1521H; PHYS 2140 or PHYS 1320G, or consent of instructor.

Learning Outcomes

1. Students will develop critical thinking and problem-solving skills with direct application to basic Quantum Chemistry and Spectroscopy. Topics the students will master include (but are not limited to): The Schrodinger Equation, One-Electron Atoms, (i.e. the hydrogen atom), Many-Electron Atoms, Molecular Symmetry (Group Theory), Working with and generating Character Tables, Electric Dipole Spectroscopy, Vibrational Spectroscopy, Rotational Spectroscopy.

CHEM 434. Physical Chemistry II**3 Credits (3)**

Laws and theories underlying chemical phenomena.

Prerequisite: CHME 302 or CHEM 433.

CHEM 435. Physical Chemistry Laboratory**2 Credits (6P)**

Prerequisite: concurrent registration in CHEM 434.

CHEM 441. Advanced Research**1-3 Credits (3+9P)**

Investigation of chemical problems and the development of special techniques. May be repeated for a maximum of 3 credits.

Prerequisites: consent of instructor, 16 credits of chemistry and 3.0 GPA in chemistry for nonmajors.

CHEM 443. Senior Seminar**1 Credit (1)**

Discussions of current chemical research, impact of chemistry on society and/or ethics as applied to chemists. Each student will present a written and an oral report on an approved topic.

Prerequisite: CHEM 431 or CHEM 433.

CHEM 451. Special Topics**1-3 Credits**

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

Prerequisite: consent of instructor.

CHEM 455. Independent Studies**1-3 Credits**

Independent studies directed by consulting faculty.

Prerequisite: consent of instructor.

CHEM 456. Inorganic Structure and Bonding**3 Credits (3)**

Study of structure and bonding of inorganic elements with a focus on transition metals. An introduction to symmetry, group theory, and spectroscopy will be included. May be repeated up to 3 credits.

Prerequisite: (MATH 1521G or MATH 1521H) and C- or better in CHEM 314.

Learning Outcomes

1. Students will learn about inorganic coordination complexes with a focus on transition metals, and may include the main group and f-elements. Students will learn about inorganic nomenclature and to analyze complexes using Lewis acid-base concepts.
2. Students will learn bonding theories, including group theory and symmetry point groups. Students will learn introductory concepts in organometallic chemistry and electronic spectroscopy.

CHEM 471. Advanced Integrated Inorganic and Physical Chemistry**Laboratory****3 Credits (9P)**

Laboratory course covering Inorganic and Physical Chemistry techniques at the advanced undergraduate level. Topics may include: Transition metal/Main group synthesis in air and air free environments, Period f-element synthesis, UV-Vis spectroscopy, FT-IR spectroscopy, NMR spectroscopy, Isothermal Titration Calorimetry.

Prerequisite/Corequisite: CHEM 430 and CHEM 315.

Learning Outcomes

1. Students will engage in experiential learning to become proficient in the listed techniques at the advanced undergraduate level of expertise. Students will develop critical thinking and problem solving skills. Students will learn essential laboratory data documentation, record keeping, and communication skills.

CHEM 472. Advanced Integrated Instrumental Analysis and Protein Biochemistry Laboratory**3 Credits (9P)**

Laboratory course covering Protein Biochemistry and Instrumental Analysis techniques at the advanced undergraduate level. Topics may include: Affinity-based protein purification, basic protein quantification, protein activity assay, multi-variant analysis, diode array UV/VIS spectroscopy, ICP-MS, absorption and emission spectroscopy, raman spectroscopy, fluorescence, and separation science (HPLC, GCMS). Includes data analysis lab.

Prerequisite: CHEM 371.

Learning Outcomes

1. Students will engage in experiential learning to become proficient in the listed techniques at the advanced undergraduate level of expertise. Students will develop critical thinking and problem solving skills. Students will learn essential laboratory data documentation, record keeping, and communication skills.

CHEM 475. Central Concepts in Chemistry - Safety**1 Credit (1)**

Students will obtain university safety training plus departmental-specific safety guidelines for the research laboratory

Learning Outcomes

1. Students completing this course will be knowledgeable of all safety guidelines delineated by the University, College, and Department.
2. When possible accident case-studies will be incorporated within the curriculum.

CHEM 476. Central Concepts in Chemistry - Research Ethics**1 Credit (1)**

Students will complete Federal Agency (NSF, NIH, etc.) on-line training modules in responsible conduct in research and discuss relevant case-studies of research misconduct.

Learning Outcomes

1. Completion of this class will yield researchers fully aware of federal and professional guidelines regarding the ethical conduction and dissemination of data and conclusions.

CHEM 477. Central Concepts in Chemistry - Professional Development**1 Credit (1)**

Students will receive basic instruction in research dissemination strategies (presentations) and career planning.

CHEM 501. Central Concepts in Chemistry - Energy**3 Credits (3)**

This course will provide the students with a detailed examination of several topics in chemical energetics. These topics include: (1) basic thermodynamics concepts, (2) statistical thermodynamics (3) chemical equilibria, and (4) intermolecular interactions.

Learning Outcomes

1. Students completing this course will gain an understanding of chemical thermodynamics and equilibria as they relate to all areas of chemistry.

CHEM 502. Central Concepts in Chemistry - Structure**3 Credits (3)**

This course will provide the students with a detailed examination of several topics in chemical reactivity. These topics include: (1) principles of chemical bonding and (2) organic, inorganic and biochemical structure determination.

Learning Outcomes

1. Students completing this course will understand the fundamental components of molecular interactions and their impact on molecular structure and function in all areas of chemistry.
2. In addition, they will learn the theory and practice of physical techniques used to determine molecular structure.

CHEM 503. Central Concepts in Chemistry - Dynamics**3 Credits (3)**

This course will provide the students with a detailed examination of several topics in chemical reactivity. These topics include: (1) basic kinetic concepts, (2) fundamental gas phase kinetics (3) organic, inorganic and biochemical reaction mechanisms.

Learning Outcomes

1. Students who successfully complete this course will understand the fundamentals of chemical dynamics: from simple gas or solution phase reaction mechanisms to biomolecular interactions.

CHEM 504. Central Concepts in Chemistry - Measurements**3 Credits (3)**

This course will provide the students with a detailed examination of several topics in chemical measurements. These topics include: (1) spectroscopic, electrochemical and chromatographic techniques, (2) statistical methods of measurement and validation relevant to biomolecules, synthetic polymers and mixtures.

Learning Outcomes

1. The collection of quantitative data is central to all subdisciplines of chemistry.
2. Students completing this course will understand the basic principles of chemical measurements and the uncertainties inherently associated with those measurements.
3. They will also gain knowledge of tools available to minimize those uncertainties in data interpretation.

CHEM 507. Chemistry of the Elements**3 Credits (3)**

Discussion of the reactions and structures of inorganic compounds.

CHEM 510. Graduate Student Seminar**1 Credit (1)**

Research seminar for graduate students in Chemistry. Enrollment required each semester for all graduate students. Masters or Doctoral candidates presenting a research seminar enroll for a letter grade. All other participating students enroll using the S/U grading option.

Learning Outcomes

1. Graduate students will gain experience organizing a research presentation.
2. Graduate students will develop oral presentation skills.

CHEM 514. Organic Structure Determination**1-3 Credits (1-3)**

This course is made up of three independent modules of 1 credit each. May be taught in one, two or three modules. Module 1: Infrared Spectroscopy and Other Spectroscopic Methods, Applications of infrared spectroscopy to the structure determination of organic compounds. Module 2: Mass Spectrometry, Application of mass spectrometry to the structure determination of organic compounds. Module 3: NMR spectroscopy, Applications of NMR spectroscopy to the structure determination of organic compounds. May be repeated up to 3 credits.

Learning Outcomes

1. By the end of module one, students will have a general understanding of the physical basis of infrared spectroscopy and molecular vibrations, be able to describe and use the frequency, shape and intensity of diagnostic absorptions in the IR spectra to correlate with common organic functional groups, recognize the utility of the fingerprint region of an IR spectrum to establish identity of small organic compounds, and integrate IR knowledge with other spectroscopic methods for the structure determination of small organic compounds.
2. By the end of module two, students will understand the basis of mass spectrometry as a tool for structure determination, have a general understanding of the different techniques commonly used for sample ionization, describe fragmentation patterns for common classes of organic compounds: alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, amines and carbonyl compounds,

use molecular ion and fragmentation pattern information to propose structures of small organic molecules, integrate mass spectrometry knowledge with other spectroscopic methods for the structure determination of small organic compounds.

- By the end of module three, students will understand the physical basis of the nuclear magnetic resonance experiment and the relationship between nuclear and magnetic properties of atoms, describe and use the concepts of chemical and magnetic equivalence, chemical shift, and anisotropic effects in oneH NMR spectra, use information from homonuclear (oneH-oneH) and heteronuclear (oneH-thirteenC) coupling experiments to propose structures of small organic molecules, use information from twoD-NMR experiments (COSY, HMQC, HMBC, NOESY) to propose structures of small organic molecules including stereochemistry, integrate NMR knowledge with other spectroscopic methods for the structure determination of small organic compounds.

CHEM 515. Modern Organic Chemistry
3 Credits (3)

Recent developments in synthesis and theoretical principles of organic chemistry.

CHEM 520. Comprehensive Literature Review Seminar for Graduate Students
1 Credit (1)

Graduate student presents a literature review on an approved topic. The seminar presentation will include cover new developments of primary significance to the topic based on current research papers and culminate in a testable hypothesis. A passing grade allows the student to take the comprehensive exam.

Learning Outcomes

- Student will prepare an abstract of their presentation understandable to a broad chemistry/biochemistry audience
- Student will demonstrate a reasonable understanding of every concept introduced
- Student will present a well-organized topic leading to a logical hypothesis
- Student will demonstrate the ability to develop a data-supported hypothesis

CHEM 526. Advanced Analytical Chemistry
3 Credits (3)

Equilibria, and the theories of gravimetric, volumetric, and instrumental analysis.

CHEM 527. Separations
3 Credits (3)

Covers the fundamentals of separation methods and relationships to modern analytical techniques such as gas chromatography and liquid chromatography.

CHEM 598. Special Research Programs
1-3 Credits

Individual investigations, either analytical or experimental. Graded S/U.

CHEM 599. Master's Thesis
15 Credits

Thesis preparation.

CHEM 600. Research
1-15 Credits

Course used for assigning credit for research performed prior to successful completion of the doctoral qualifying examination.

CHEM 619. Topics in Organic Chemistry
1-3 Credits

Selected topics of current interest designated by subtitle.

CHEM 629. Advanced Topics in Analytical Chemistry
3 Credits (3)

Discussion of advanced topics in the field of analytical chemistry. May be repeated with different subtitles. Consent of instructor required.

CHEM 639. Topics in Physical Chemistry
1-3 Credits

Selected topics of current interest designated by subtitle.

CHEM 700. Doctoral Dissertation
17 Credits

Dissertation preparation.

CHIN-CHINESE

CHIN 311. Advanced Chinese Language I
3 Credits (3)

This course emphasizes the development of advanced oral, aural, reading and writing skills in Mandarin Chinese. Expanding of vocabulary and development of reading comprehension will be through different genres of authentic texts. Students will be trained to write short essays on a variety of topics.

CHIN 312. Advanced Chinese Language II
3 Credits (3)

This course emphasizes the development of advanced oral, aural, reading and writing skills in Mandarin Chinese. Expanding of vocabulary and development of reading comprehension will be through different genres of authentic texts. Students will be trained to write short essays on a variety of topics.

Prerequisite(s): Grade of C or better in CHIN 311.

CHME-CHEMICAL & MATERIALS ENGR

CHME 101. Introduction to Chemical Engineering Calculations
2 Credits (2)

Introduction to the discipline of chemical engineering, including: an overview of the curriculum; career opportunities; units and conversions; process variables; basic data treatments; and computing techniques including use of spreadsheets.

Prerequisite/Corequisite: MATH 1220G, or MATH 1250G, or MATH 1511G.
Learning Outcomes

- Describe career opportunities available to holders of a BSChE degree.
- Find and use learning and advising resources within CHME and Engineering.
- Create a course registration plan for future semesters that meets the degree and prerequisite requirements for the BSChE in the timeliest manner.
- Diagram a process with unit operations and material and energy flows.
- Perform unit analysis and unit conversions accurately and efficiently.
- Validate calculated results using estimation techniques.
- Apply the concept of significant figures to numerical answers.
- Identify and describe process variable measurements using engineering vocabulary.
- Express and convert concentrations using mass, mole, and volume bases. 1

- Convert between absolute and relative pressure and temperature scales. 1
- Perform calculations in Excel using built-in and custom functions. 1
- Generate 2-D plots of data and functions in Excel. 1
- Perform a regression of data to a mathematical model.

CHME 102. Material Balances

2 Credits (2)

Perform material balances in single- and multi-phase, reacting and non-reacting systems under isothermal conditions.

Prerequisite: MATH 1220G, or MATH 1250G, or MATH 1511G.

Learning Outcomes

- Analyze data using trendlines. Linearize when necessary.
- Use unit conversions when solving problems.
- Turn a verbal or written problem statement into a diagram and a mathematical form.
- Write and solve material balances on single and multi-unit processes, for both nonreactive and reactive processes.
- Identify what phase a substance is in and then be able to use the correct equations to relate volume to mass and moles.
- Use Raoult's and Henry's law when solving mass balances.

CHME 201. Energy Balances & Basic Thermodynamics

3 Credits (3)

Chemical Engineering energy balances; combined energy and material balances including those with chemical reaction, purge and recycle; thermochemistry; application to unit operations. Introduction to the first and second laws of thermodynamics and their applications. May be repeated up to 3 credits.

Prerequisite: CHME 102 and MATH 1250G or MATH 1511G.

Prerequisite/Corequisite: CHEM 1216 or CHEM 1215G.

Learning Outcomes

- Correctly implement unit conversions (outcome (a) an ability to apply knowledge of mathematics, science, and engineering).
- Analyze and solve elementary material balances on single and multi-unit process, for both nonreactive and reactive processes.
- Apply the first law of thermodynamics to batch and flow processes.
- Locate thermophysical property data in the literature and estimate properties when data are not available.
- Conduct combined material and energy balances around continuous multi-unit processes with and without chemical reaction.
- Perform process calculations using psychrometric charts, enthalpy concentration diagrams and steam tables.
- Derive and solve differential equations for transient heat and material balances on dynamic systems.
- Determine individual learning style and describe how learners of that style can help themselves.
- Use modern engineering tools (example, Excel) to solve material and energy balance problems.

CHME 303. Chemical Engineering Thermodynamics

4 Credits (4)

Applications of the First Law and Second Law to chemical process systems, especially phase and chemical equilibria and the behavior of real fluids. Development of fundamental thermodynamic property relations and complete energy and entropy balances. Modeling of physical properties for use in energy and entropy balances, heat and mass transfer, separations, reactor design, and process control.

Prerequisite: CHME 201.

Prerequisite/Corequisite: MATH 1511G.

Learning Outcomes

- Use an engineering approach to solve a problem (identify scope, create diagram, determine knowns and unknowns, apply appropriate equations, calculate solutions and evaluate reasonableness of the solution)
- Solve engineering problems using material, energy and entropy balances
- Compile appropriate property data for chemical compounds and mixtures
- Choose and solve appropriate equations of state
- Use equilibrium relationships to solve chemical engineering problems
- Acquire and apply new knowledge as needed, using appropriate learning strategies (maps to ABET Student Outcome seven) by analyzing a current environmental issue in chemical engineering

CHME 305. Transport Operations I: Fluid Flow

3 Credits (3)

Theory of momentum transport. Unified treatment via equations of change. Shell balance solution to 1-D problems in viscous flow. Analysis of chemical engineering unit operations involving fluid flow. General design and operation of fluid flow equipment and piping networks. May be repeated up to 3 credits.

Prerequisite: CHME 201.

Prerequisite/Corequisite: MATH 1521G.

Learning Outcomes

- Mathematical Solutions: solve applied math problems involving linear ordinary differential equations with boundary conditions; solve partial differential equations that can be analytically solved with boundary conditions; identify how coordinate systems are used with ODEs and PDEs; simplify second order PDEs with assumptions; identify when an analytical solution to a PDE is possible and when numerical methods are required.
- Basic Fluid Concepts and Calculations: identify the properties of fluids, calculate problems that involve pressure measurements, fluid statics, and fluid kinematics; describe physical phenomena of fluid flow; define and explain viscosity, density, specific gravity, surface forces, velocity fields, Newtonian vs. Non-Newtonian, laminar flow, turbulent flow, Reynold's number, and other fluid motion topics.
- Bernoulli and Energy Equations: apply the Bernoulli equation to sets of fluid problems; solve energy balances in the context of fluids and fluid motion, distinguish between approximations of and appropriate models for Bernoulli's Equation (i.e friction losses, x, pumps, compressors, turbines, surface forces, gas-liquid flow, non-Newtonian fluids, and the Moody diagram).
- Momentum Analysis: apply momentum balances using the governing equations of momentum to solve one dimensional velocity profile problems of external or internal viscous fluid flow; interpret the different approximations of the momentum balance; classify differential vs. integral forms of momentum analysis; and calculate problems using the Navier Stoke's Equations.
- Special topics: identify different turbo- and fluid-machinery; explain why computational fluid dynamics is important; solve problems using external flow with applications: boundary layers, lift, drag; and calculate problems with dimensional analysis methods.

CHME 306. Transport Operations II: Heat and Mass Transfer

4 Credits (4)

Theory of heat and mass transport. Unified treatment via equations of change. Analogies between heat and mass transfer. Shell balance

solution to 1-D problems in heat and mass transfer. Analysis of chemical engineering unit operations involving heat transfer. Design principles for mass transfer equipment. May be repeated up to 4 credits.

Prerequisite: CHME 305.

Prerequisite/Corequisite: MATH 392.

Learning Outcomes

1. Adopt a systematic problem solving approach, consistently and effectively.
2. Diagram heat flows for conductive, convective, and radiative processes.
3. Find and use material property values.
4. Convert and use appropriate units of energy, power, flux, etc.
5. Write conservation equations for planar, cylindrical, and spherical systems.
6. Apply assumptions such as steady state, number of dimensions, order of magnitude, and/or constant properties to simplify conservation equations.
7. Solve the energy conservation equation for the temperature distribution using appropriate boundary and/or temporal conditions.
8. Calculate heat fluxes into and out of a control volume.
9. Draw resistance circuits and calculate the overall heat transfer coefficient, U , for compound systems. 1
10. Calculate the temperature distribution, heat flux, efficiency, and effectiveness of extended surfaces such as fins. 1
11. Use lumped capacitance and exact solution models to solve transient heat transfer problems. 1
12. Calculate transport dimensionless numbers and explain what they represent. 1
13. Use fluid velocity profiles to calculate boundary layer shapes and thicknesses. 1
14. Calculate convection heat transfer coefficient, h , for external and internal flows using formulas and graphs of experimental results. 1
15. Explain the causes and relative magnitudes of free convection. 1
16. Calculate free convection coefficients using equations and experimental results. 1
17. Label key regimes and heat transfer features of boiling and condensation curves. 1
18. Compare and contrast parallel, cross, and countercurrent flow in heat exchangers. 1
19. Determine the needed surface areas and/or fluid flow rates for heat exchangers given unit operation or process energy needs. 2
20. Calculate and explain heat exchanger efficiency. 2
21. Predict likelihood and account for consequences of fouling. 2
22. Define radiation terminology such as blackbody, grey surface, emissivity, etc. 2
23. Relate surface temperature to radiation wavelength and energy. 2
24. Calculate the view factor between two surfaces and use it to calculate heat transfer. 2
25. Write and solve the mass and molar forms of the one-D mass conservation equations. 2
26. Calculate absolute and relative species velocities and fluxes. 2
27. Use heat transfer relationships and analogous equations to solve diffusion and advection mass transfer problems. 2
28. Predict which kind(s) of heat transfer will be relevant for a given situation. 2

29. Describe implications of problem solutions and perform additional "what if" calculations to understand patterns in the bigger picture.

CHME 307. Transport Operations III: Staged Operations

3 Credits (3)

Theory of mass transport. Mass transfer coefficients. Analysis of chemical engineering unit operations involving mass transfer and separations. Equilibrium stage concept. General design and operation of mass-transfer equipment and separation sequences. Restricted to Chemical Engineering Majors. May be repeated up to 3 credits.

Prerequisite: CHME 303, CHME 306.

Prerequisite/Corequisite: CHEM 313.

Learning Outcomes

1. Determine which kind of separation (e.g., distillation, adsorption, membrane, etc.) is best suited to separate a particular mixture.
2. Design various kinds of separation units to achieve a target flow rate and purity.
3. Evaluate the cost effectiveness and energy requirements of a separation.
4. Perform McCabe-Theile analysis.
5. Include efficiencies and mass transfer effects in the design of separation units.

CHME 323 L. Transport Operations and Instrumentation Laboratory

2 Credits (6P)

Laboratory experiments demonstrate the principles of process measurement and instrumentation through the determination of thermodynamic properties, transport phenomena properties, heat transfer, and material physical properties. Treatment of data includes regression techniques, analysis of error, and statistical analysis. Restricted to: Chemical Engineering majors. May be repeated up to 1 credit.

Prerequisite: I E 311.

Prerequisite/Corequisite: CHME 306.

Learning Outcomes

1. Introduce students to practical skills needed to be able to apply the scientific and engineering concepts acquired in earlier coursework and to achieve the following.
2. Organize and carry out experimental design and actual hands-on experiments.
3. Understand safety regulations and safe operation procedures in the Chemical Engineering laboratory.
4. Be able to analyze and interpret experimental data with theories learned in previous courses.
5. Write organized and cohesive technical and reports.
6. Organize and prepare standard operating procedures.
7. Work effectively in a team environment.
8. Prepare and present technical works and answer questions.

CHME 341. Chemical Kinetics and Reactor Engineering

3 Credits (3)

Analysis and interpretation of kinetic data and catalytic phenomena. Applied reaction kinetics; ideal reactor modeling; non-ideal flow models. Mass transfer accompanied by chemical reaction. Application of basic engineering principles to design, operation, and analysis of industrial reactors. Restricted to: CHME, CMEG, CH E majors. May be repeated up to 3 credits.

Prerequisite: CHME 303, CHME 306.

Learning Outcomes

1. Perform mole balances in systems involving reactions.
2. Calculate conversion in batch and flow systems.
3. Size single and staged continuous-stirred tank, and plug flow reactors.
4. Develop rate laws from mechanisms and experimental data.
5. Calculate pressure drops and the effect on kinetics in packed-bed PFRs.
6. Apply the differential and integral methods of kinetic data analysis.
7. Maximize product selectivity for systems involving multiple reactions.
8. Understand effects of non-isothermal operation and unsteady-state behavior.
9. Apply rate limiting step and quantify performance in catalytic systems. 1
10. Quantify mass transfer limitations on heterogeneous systems. 1
11. Understand the idea of a residence time distribution, and the effect on reactor ideality.

CHME 352 L. Simulation of Unit Operations**2 Credits (2P)**

Definition, specification, and convergence of basic unit operations in a process simulator. Course will cover how to access variables, define and converge design specifications and converge tear/recycle streams. Restricted to: CHME majors. May be repeated up to 2 credits.

Prerequisite/Corequisite: CHME 307, CHME 341.

Learning Outcomes

1. Apply Aspen Plus programming solutions to specify and converge unit operations involving: non-rigorous balance units (RSTOIC, SEP, MIX, FSPLIT, SSPLIT DUPL); pressure changers (PUMP, COMPR, VALVE); pipe networks (PIPE, PIPELINE); heat exchangers (HEATER, HEATX); reactors and kinetic models (RPLUG, RCSTR, BATCH, REQUIL, RGIBBS); flash drums and decanters (FLASHII, DECANter); distillation columns (DSTWU, intro to RADFRAC)

CHME 361. Engineering Materials**3 Credits (3)**

Bonding and crystal structure of simple materials. Electrical and mechanical properties of materials. Phase diagrams and heat treatment. Corrosion and environmental effects. Application of concepts to metal alloys, ceramics, polymers, and composites. Selection of materials for engineering design. May be repeated up to 3 credits.

Prerequisite: CHEM 1215G or CHEM 1216.

Learning Outcomes

1. Explain the effects of composition, bonding, structure, and defects on material properties.
2. Compute the response of materials to external influences.
3. Predict rates of materials failures.
4. Select materials for applications.

CHME 391. Industrial Employment**1-3 Credits (1-3)**

Employment in chemical, petroleum, food, biotechnology, materials, environmental, pharmaceutical, or other industry relevant to the discipline, with opportunity for professional experience and training in chemical engineering. Requires written report covering work period approved by employer. Consent of Instructor required. May be repeated up to 6 credits.

Learning Outcomes

1. Gain educational and work experiences that are directly related to the BSCE curriculum and the student's career goals.

2. Develop an understanding of the demands, responsibilities, and opportunities of professional employment.
3. Be provided an opportunity to apply principles and techniques learned in the CHME curriculum to real life problem-solving situations.
4. Gain a better understanding of decision-making and implementation processes.
5. Criterion three Student Outcomes specifically addressed by this course are found in a mapping of outcomes against all CHME courses in the curriculum.

CHME 392. Numerical Methods in Engineering**3 Credits (3)**

Study and application of numerical methods in solving problems commonly encountered in engineering. MATLAB will be used as the working environment for implementing and performing the numerical methods in computers.

Prerequisite/Corequisite: MATH 1521G.

Learning Outcomes

1. Use MATLAB as a tool to solve chemical engineering problems;
2. Import and graph data using MATLAB;
3. Write and use script M-files and function M-files;
4. Understand the differences between script M-files and function M-files and why they are used in different situations;
5. Be able to translate algebraic equations into matrices, and use MATLAB to solve systems of linear algebraic equations;
6. Fit equations to data, obtain parameters, and determine the goodness of fit;
7. Linearize non-linear equations and obtain parameters for the nonlinear equations;
8. Use MATLAB to symbolically and numerically integrate one-dimensional integrals;
9. Solve systems of ordinary differential equations analytically (by hand); 1
10. Solve systems of ordinary differential equations numerically and analytically using MATLAB. 1
11. Criterion three Student Outcomes specifically addressed by this course are found in a mapping of outcomes against all CHME courses in the curriculum.

CHME 395V. Brewing Science and Society**3 Credits (3)**

An overview of the science of brewing and the interrelationships between society, technology, business, and the evolution of the current beer market. Topics covered are history of brewing and the interrelationships between societal attitudes, technology, and cultural preferences; beer styles and evaluation techniques; production and characteristics of ingredients used in brewing; brewing unit operations; biochemistry of malting, mashing, and fermentation; engineering in the brewery; homebrewing; and societal and health issues related to beer and alcohol. Students must be at least 21 years of age by the first day of instruction of the semester to enroll in this course.

CHME 412. Process Dynamics and Control**3 Credits (3)**

Process modeling, dynamics, and feedback control. Linear control theory and simulation languages. Application of Laplace transforms and frequency response to the analysis of open-loop and closed-loop process dynamics. Dynamic response characteristics of processes. Stability analysis and gain/phase margins. Design and tuning of systems for control of level, flow, and temperature. May be repeated up to 3 credits.

Prerequisite: CHME 341.

Learning Outcomes

1. Mathematical Solutions: solve applied math problems involving linear ordinary differential equations, integration by parts, perform partial fraction expansion; use the Laplace Transform to solve differential equations; Laplace Transform look-up tables, solve inverse Laplace Transform problems.
2. Model-based Control: use MATLAB, Simulink, and/or visual basic simulator to computationally model process control, to make simple mathematic calculations, to solve differential equations, to take the Laplace Transform of a function, to plot curves representing response of a control loop, and to implement other simulation-based actions covered in class.
3. Basic Process Control Concepts and Calculations: draw and use block diagrams of open and closed-loop transfer functions for control problems; identify control system instrumentation (sensors, transmitters, transducer, final control elements); use process control techniques to address safety concerns; use process control vocabulary appropriately; choose a control strategy for a process; formulate control objectives; identify, formulate and solve linear chemical process dynamics problems; formulate and solve an approximate linear model to a nonlinear process; analyze the stability of a dynamic system.
4. PID Control Concepts: tune a P, PI, or PID controller using control theory; choose the appropriate control action (P, PI, PID) for a particular process,
5. Other topics: develop process models of non-steady-state process dynamics; Identify appropriate loop pairings for multivariable control; identify and implement feedforward and feedback control strategies; implement single-variable controllers (temperature, pressure, concentration, flow, level); and identify advanced control strategies and apply them in appropriate situations (cascade, ratio, pH).

CHME 423 L. Unit Operations Laboratory

2 Credits (6P)

Experiments with chemical engineering unit operations including the use of computer data acquisition. Covers control systems with closed-loop process control, instrumentation and development of empirical models from process data. Includes written and oral reports. May be repeated up to 1 credit.

Prerequisite: CHME 307, CHME 341.

Corequisite: CHME 412.

Learning Outcomes

1. Understand and apply engineering experimentation techniques and safety procedures common to the chemical industry.
2. Apply principles developed in chemical engineering courses to the analysis of chemical engineering processes and unit operations.
3. Know the materials characterization methods.
4. Improve skills necessary for group work—interpersonal skills, coordination of the efforts of several persons, leader and subordinate roles, etc. Introduce students to practical skills needed to be able to apply the scientific and engineering concepts acquired in earlier coursework.

CHME 448. Industrial Safety

3 Credits (3)

An introduction to the fundamentals of chemical process safety, including toxicology, industrial hygiene, source models, fires and explosions, relief systems, hazard identification, risk assessment, environmental fate and transport, hazardous waste generation, pollution prevention, and regulatory requirements. May be repeated up to 3 credits.

Corequisite: CHME 323 L.

Learning Outcomes

1. Demonstrate a knowledge and understanding of the elements of process safety management.
2. Be able to pro-actively identify and analyze safety hazards.
3. Demonstrate knowledge and understanding of risk management tools, programs and processes associated with process safety.
4. Understand the OSHA PSM requirements.
5. Understand and appreciate the need for professional integrity and ethical decision making in the professional practice of engineering.
6. Demonstrate an understanding of issues encountered including business, environmental, health, safety and public interest issues.

CHME 451. Intellectual Property for Engineers and Scientists

3 Credits (3)

An overview of intellectual property with an emphasis on patents. Terminology, patentability requirements, invention disclosures, inventorship, scope of claims, patent application content and the patent prosecution process, and post-allowance matters including infringement and enforcement. May be repeated up to 3 credits.

Learning Outcomes

1. Assess what kind of protection – patent, trade secret, copyright, trademark – is appropriate for particular intellectual property.
2. Describe relevant subject matter and standards for protection under patent, trade secret, copyright, and trademark.
3. Differentiate inventorship, authorship and ownership in an intellectual property context.
4. Devise search strategies to assess ‘prior art’ and public information that may affect availability of intellectual property protection.
5. Generate sample content for a patent application (including claims) and a trademark application.
6. Analyze office actions and propose solutions for issues raised during patent prosecution and trademark prosecution.
7. Compare and contrast the procedures for obtaining a patent, securing a trademark, registering a copyright and establishing trade secret protection.
8. Describe basic considerations relating to enforcement and infringement of intellectual property.

CHME 452. Chemical Process Design & Economic Evaluation

3 Credits (3)

Concepts in chemical engineering process design, including: capital and manufacture cost estimation; discounted cash flows; interest; taxes; depreciation; profitability analysis; project specifications. May be repeated up to 3 credits.

Prerequisite: CHME 307, CHME 341.

Learning Outcomes

1. Write and explain the meanings of the basic equations related to engineering economic analysis.
2. Formulate mathematical models and solve problems involving process design and economic analysis.
3. Discuss the environmental, social, and economic implications of process design.
4. Criterion three Student Outcomes specifically addressed by this course are found in a mapping of outcomes against all CHME courses in the curriculum.

CHME 455. Chemical Plant Design

3 Credits (3)

Design and analysis of integrated process plants. Consideration given to optimizing performance, operability, reliability, safety, control, energy integration, and cost effectiveness. Requires written report covering solution of a capstone design problem. May be repeated up to 3 credits. Restricted to: CHME majors.

Prerequisite: CHME 452.

Corequisite: CHME 455L.

Learning Outcomes

1. Understand government regulation of chemical processes.
2. Be knowledgeable of process safety analysis procedures.
3. Understand "normal" process conditions vs. those of concern.
4. Be able to perform a process optimization (topological vs. parametric).
5. Be able to perform a heat integration analysis through pinch technology.
6. Use heuristics to confirm the suitability of a process design.
7. Understand how to perform a base case analysis.
8. Be able to complete an analysis of a chemical plant design that includes: base case development and justification; process simulation; topological and parametric optimizations; societal impact assessment; and economic evaluation; including making recommendations based on their findings.

CHME 455 L. Chemical Plant Simulation

1 Credit (1P)

Construction, convergence, and optimization of chemical processes in a process simulator. Dynamic process simulation and control. May be repeated up to 1 credit.

Prerequisite: CHME 412, CHME 352 L.

Corequisite: CHME 455.

Learning Outcomes

1. Understand how to input from the Aspen Plus Graphical User Interface (GUI).
2. How to specify unit operations in Aspen Plus.
3. Be able to perform a sensitivity analysis and an optimization.
4. Understand how to apply a design specification in Aspen Plus.
5. Understand how to use Calculator Blocks such as Fortran or Excel.
6. Be able to specify a catalytic reactor with LH kinetics.
7. Be able to optimize a RADFRAC distillation column on an economic basis.
8. Be able to converge complex multicomponent RADFRAC distillations.
9. Be able to use the economics analyzer package in conjunction with a simulation.

CHME 461. Calculation of Material and Molecular Properties

3 Credits (3)

The aim is to describe and apply techniques for computing common properties of materials and molecules: optimized geometries, transition states, vibrational spectra, energies (electronic, internal energy, enthalpy, and Gibbs free energy), heat capacities, net atomic charges, atomic spin moments, and effective bond orders. These techniques allow one to estimate the thermodynamic properties of a chemical, as well as to compute the mechanisms and energy barriers for chemical reactions and catalytic processes, and to quantify the electronic, magnetic, and chemical ordering in materials. The theory behind these techniques will be described and students will perform hands-on computer exercises using common computational chemistry programs. Taught with CHME 561. May be repeated up to 3 credits.

Prerequisite: CHEM 1216 or CHEM 1226, MATH 1521G or MATH 1521H, (PHYS 2140 or PHYS 1320G).

Learning Outcomes

1. Basic concepts of computational chemistry.
2. Calculating the energies and geometries of reactants and products for chemical reactions.
3. Finding the transition state of a chemical reaction: determining the reaction pathway, transition state geometry, and the energy barrier. Meaning of the energetic span for a catalytic cycle.
4. Quantifying whether the transition state is closer to the reactant (early transition state) or closer to the product (late transition state). Postulates related to transition state lateness.
5. Computing vibrational spectra.
6. Using the harmonic approximation to estimate thermodynamics properties: internal energy, enthalpy, Gibbs free energy, and heat capacities.
7. Computing net atomic charges, atomic spin moments, and effective bond orders to determine the electronic, magnetic, and chemical ordering of materials.

CHME 464. Polymer Science & Engineering

3 Credits (3)

This course covers concepts in science and engineering of macromolecules, such as synthesis and chemistry, characterization of molecular weight, morphology, rheology, and mechanical behavior, structure and property relationships, and polymer processing. Taught with CHME 564. May be repeated up to 3 credits.

Prerequisite: CHEM 313 or CHEM 2115.

Learning Outcomes

1. Describe the fundamental concepts in polymer science and engineering;
2. Analyze the microstructure and molecular weight of polymers;
3. Discuss the chemistry, importance and applications of natural polymers;
4. Interpret different synthesis methods of polymers;
5. Analyze the kinetics of polymerization;
6. Discuss the polymer rheology and viscoelastic behavior of polymers;
7. Explain the characterization and processing of polymers; and
8. Argue the selection of polymer and/or design a specific polymer for specific applications (through final project).
9. Criterion three Student Outcomes specifically addressed by this course are found in a mapping of outcomes against all CHME courses in the curriculum.

CHME 467. Nanoscience and Nanotechnology

3 Credits (3)

This is a lecture/laboratory course designed to present the basic concepts, the techniques and the tools to synthesize and characterize nanometer scale materials, and the latest achievements in current and future nanotechnology applications in engineering, materials, physics, chemistry, biology, electronics and energy. It is intended for a multidisciplinary audience with a variety of backgrounds. This course should be suitable for graduate students as well as advanced undergraduates. Topics covered will include: nanoscience and nanotechnology, nanofabrication, self-assembly, colloidal chemistry, sol-gel, carbon nanotubes, graphene, thin film, lithography, physical vapor deposition, chemical vapor deposition, quantum dots, lithium batteries, X-ray diffraction, scanning electron microscopy, transmission electron microscopy, nanoelectronics, nanophotonics and nanomagnetism, etc. Students must also have completed (EH&S Safety training to include the

courses: (1) Employee & Hazard Communication Safety (HazCom); (2) Hazardous Waste Management; and (3) Laboratory Standard) trainings to enroll. Crosslisted with: PHYS 520 . May be repeated up to 3 credits.

Prerequisite: (CHEM 1216 or CHEM 1226), (PHYS 1230G or PHYS 1310G).

Learning Outcomes

1. Understand the basic and state-of-art synthesis methods and applications in nanoscience and nanotechnology (Student outcome (a) an ability to apply knowledge of mathematics, science, and engineering).
2. Do lab work to use tools and analyze data (Student outcome (b) an ability to design and conduct experiments, as well as to analyze and interpret data).
3. Form a team for lab work and lab report (Student outcome (d) an ability to function on multidisciplinary teams).
4. Present literature review and ask questions (Student outcome (g) an ability to communicate effectively).

CHME 470. Introduction to Nuclear Energy

3 Credits (3)

Atomic and nuclear structure, nuclear stability and radioactivity, nuclear reactions, detection and measurement of radiation, interaction of radiation with matter, radiation doses and hazard assessment, principles of nuclear reactors, and applications of nuclear technology. May be repeated up to 3 credits.

Prerequisite: CHEM 1215G or CHEM 1225G, MATH 1521G or MATH 1521H.

Learning Outcomes

1. Basic Concepts. Write and explain the meanings of the basic balances and equations of nuclear science and engineering.
2. Problem Solving. Solve problems involving radioactive decay rates, radiation interactions, rates of nuclear reactions, energies of nuclear transformations, and applications.
3. Model Building. Given a verbal or pictorial description, create useful mathematical models of nuclear engineering systems, such as radiation shields, radiation detectors, nuclear reactors, and energy converters.
4. Social and Economic Effects. Discuss the global environmental, social, and economic effects of nuclear technology.

CHME 471. Health Physics

3 Credits (3)

Introduction to radiation protection, radiation/radioactivity, radioactive decay/fission, interactions of radiation and matter, biological effects of radiation, radiation measurement and statistics, sampling for radiation protection, radiation dosimetry, environmental transport, radiation protection guidance, external and internal radiation protection, and hazards analysis.

Prerequisite(s): MATH 1521G or MATH 1521H, CHME 470.

CHME 476. Nuclear Fuel Cycles

3 Credits (3)

Physical and chemical processes in the conventional nuclear fuel cycle: uranium mining and milling, conversion, enrichment, fuel fabrication, reactor operations, interim storage, reprocessing and recycling, waste treatment and disposal. Alternative fuel cycles and future prospects. Consent of Instructor required.

Prerequisite(s): CHME 470.

CHME 478. Electrochemistry: Basics & Applications

3 Credits (3)

Theory and application of electrochemical devices. Topical information related to electrochemistry are concepts, principles, and examples of

energy storage, mechanisms responsible for electrochemical devices, and current progress and problems. Relevant devices covered include the lithium ion battery, supercapacitor, fuel cell, solar cell and electrolyzer.

Learning Outcomes

1. Understand the mechanisms responsible for electrochemical device.
2. Realize the current progress in electrochemistry.
3. Identify the problems and hurdles for electrochemical device practical applications.

CHME 479. Corrosion and Degradation of Materials

3 Credits (3)

Failure of engineering materials in aggressive environments. Chemical and electrochemical mechanisms of corrosion. Influence of chemical composition and microstructure on corrosion behavior. Types of corrosion and chemical attack, including uniform corrosion, galvanic corrosion, pitting and other forms of localized corrosion, stress corrosion cracking, and corrosion fatigue. Methods of corrosion mitigation including cathodic protection, coatings, passivation, and corrosion inhibitors. Corrosion in nuclear reactors and nuclear waste repositories.

Prerequisite(s): CHME 361.

CHME 481. Biomedical Engineering and Engineering Healthcare

3 Credits (3)

Orientation to solving human and world health issues with biological engineering systems, tools, and analysis methods. Introduces general concepts including applied biology for engineers, biophotonics, biosensing, bioinstrumentation, tissue and biomaterials engineering, biomedical engineering research practices, and physical bioanalytical methods. May be repeated up to 3 credits.

Prerequisite: CHEM 1216 or CHEM 1226.

Learning Outcomes

1. Solve problems related to the design of biomedical instruments.
2. Apply basic mathematics, biology concepts, and laws of physics and chemistry to solve biomedical engineering type problems.
3. Explain differences in biomedical research and industries.
4. Identify the current challenges in the field of biomedical engineering and predict what investigators and industries are doing to tackle such problems.
5. Critique biomedical engineering research through interpretation of peer-reviewed literature, formal presentations and formal reports.
6. Design a solution to a current biomedical engineering problem by computational modeling, experimental design, and/or researching a specific subject in biomedical engineering (i.e. reading peer-reviewed research articles/manuscripts/textbooks).
7. Engage in hands-on learning of biomedical devices such as the building of a simple flow-cytometer.

CHME 486. Biofuels

3 Credits (3)

Introduction to the fundamentals and applications of biofuels and bioenergy production; biomass resources and their composition; types of biofuels; conversion technologies (thermochemical and biochemical conversion processes); biodiesel production, algae to biofuels; economic and environmental assessments; term paper of selected topics relevant to biofuels. May be repeated up to 3 credits.

Prerequisite: CHEM 313 or consent of instructor.

Learning Outcomes

1. Understand basic concepts about biomass derived energy;
2. Identify potential biomass feedstocks including energy crops;
3. Understand the concept of 1st generation, 2nd generation and advance biofuels;

- Understand terminologies related to biomass conversion and biofuel production;
- Have an understanding of the existing and emerging biomass to energy technologies;
- Understand and apply mass and energy balances in biomass conversion;
- Apply engineering thermodynamics, organic chemistry, chemistry of plant materials;
- Familiarize with characterization of biomass feedstocks;
- Understand the unit processes/ unit operations involved in biofuel/ bioenergy production; 1
- Be able to do the basic engineering calculations related to biofuel production; 1
- Understand the concept of a biorefinery system and be able to develop major unit operations of an integrated biorefinery; 1
- Describe techno-economic analyses of biofuel conversion technologies; 1
- Have an understanding of environmental implications; and 1
- Apply biomass-derived energy in different applications.

CHME 490. Senior Seminar**1 Credit (1)**

Research seminar attended by graduate students is open to CHME undergraduates who are research active. May be repeated up to 2 credits. Students must be in Senior Standing to enroll in this course.

Prerequisite(s)/Corequisite(s): CHME 498. Restricted to: CHME, CH E majors.

CHME 491. Undergraduate Special Topics**3 Credits (3)**

Lecture and/or laboratory instruction on special topics in chemical engineering. May be repeated up to 6 credits.

Learning Outcomes

- Gain exposure to, knowledge of, and practice solving problems in a variety of CHME topics that are directly related to broadening the BSChE curriculum and the student's career goals.
- Topics will vary by years and section depending on current topics of interest in CHME and availability of instructors.
- be provided an opportunity to apply principles and techniques learned in the CHME curriculum to real life problem-solving situations in specialized topics.

CHME 495. Brewing Science & Engineering**3 Credits (3)**

Details of beer production, fermentation science, brewery operation, and process design & economics. Engineering considerations including process safety, fermentation kinetics, unit operations, and economics of scale. Beer styles, recipe formulation, product quantification for tax purposes, and brew analytical methods will also be discussed. Students must be 21 years old to enroll. Crosslisted with: FSTE 430.

Learning Outcomes

- To provide the undergraduate student with a broad perspective of beer and the brewing industry as well as technical knowledge about the brewing process.

CHME 495 L. Brewing Science & Technology Lab**1 Credit (3P)**

Brewing and brewing operations in a one-barrel brewery. Topics addressed will include brewery safety, characteristics and handling of brewing ingredients, recipe formulation, water treatment, wort preparation, fermentation, waste disposal, and packaging.

Corequisite(s): CHME 495.

CHME 497. Undergraduate Special Projects**1-3 Credits (1-3)**

Provides an opportunity for undergraduate students to work on special projects under the direction of a faculty member. Written report covering work is required. May be repeated up to 6 credits.

Learning Outcomes

- Prepare a written project report conforming to the format of the CHME writing standard.
- Articulate a clear project question or problem.
- Define, articulate, and use appropriate terminology and concepts.
- Use library and other tools to search for existing body of information relevant to their project.
- Identify and practice appropriate engineering ethics.
- Know and apply problem solving skills to constructively address setbacks.
- Work collaboratively with others, using listening and communication skills.
- Work autonomously in an effective manner, setting and meeting deadlines.
- Reflect on own project outcomes, identifying lessons learned, strengths, and ways to improve. 1
- Communicate confidently and constructively with students, faculty, and project sponsor (as required). 1
- Explain project to others in the field and to broader audiences through presentations. 1
- Articulate the relevance of their project to their coursework and professional future, synthesizing their project, academic, and professional interests and goals.

CHME 498. Undergraduate Research**1-3 Credits (1-3P)**

Provides an opportunity for undergraduate students to work in research studies under the direction of a faculty member. Consent of Instructor required. May be repeated up to 6 credits.

Learning Outcomes

- Prepare a written research report conforming to the format of the CHME writing standard.
- Articulate a clear research question or problem and formulate a hypothesis.
- Identify and demonstrate appropriate research methodologies.
- Define, articulate, and use appropriate terminology, concepts, and theory.
- Use library and other tools to search for existing body of research relevant to their topic.
- Know existing body of research relevant to their topic and explain how their project fits.
- Identify and practice research ethics and responsible conduct in research.
- Know and apply problem solving skills to constructively address research setbacks.
- Work collaboratively with other researchers, using listening and communication skills. 1
- Work autonomously in an effective manner, setting and meeting deadlines. 1
- Reflect on own research, identifying lessons learned, strengths, and ways to improve. 1

12. Communicate confidently and constructively with graduate students, other researchers, and faculty. 1
13. Explain research to others in the field and to broader audiences through presentations. 1
14. Articulate the relevance of their research to their coursework and professional future, synthesizing their research, academic, and professional interests and goals. 1
15. Criterion Three Student Outcomes specifically addressed by this course are NOT found in a mapping of outcomes against all CHME courses in the curriculum as this is a technical elective, not a required core course.

CHME 501. Graduate Thermodynamics for Chemical Engineers
3 Credits (3)

Advanced applications of the first and second law to chemical process systems. The calculus of thermodynamics, equilibrium and stability criteria. Properties relationships for real fluids, both pure materials and mixtures. An introduction to molecular thermodynamics and statistical mechanics. Restricted to: CHME, CH E majors.

CHME 506. Graduate Transport Phenomena(s)
3 Credits (3)

Covers the analysis of simultaneous momentum, energy, and mass transport. Development of integral and local balance equations in vector-tensor form. Application of vector-tensor analysis to transport equations. Boundary layer theory and turbulence.

CHME 516. Graduate Numerical Methods in Chemical Engineering
3 Credits (3)

Survey of numerical methods for solving problems commonly encountered in heat and mass transfer, fluid mechanics, and chemical reaction engineering.

CHME 542. Graduate Reactor Analysis and Design (s)
3 Credits (3)

Application and analysis of equations of continuity to multicomponent reaction systems. Introduction to homogeneous and heterogeneous catalysis, single-phase combustion, and shock reaction systems.

CHME 548. Industrial Safety
3 Credits (3)

Same as CHME 448 with graduate-level projects.

Prerequisite(s): CHEM 1216 or CHEM 1215G.

CHME 564. Polymer Science & Engineering
3 Credits (3)

Synthesis, structure, property relationships of synthetic polymers. Taught with CHME 464. May be repeated up to 3 credits.

Prerequisite(s): CHME 201, CHEM 314.

CHME 565. Rheology and Viscoelasticity
3 Credits (3)

This course is an introduction to rheology and viscoelasticity. In particular, the flow behavior of Non-Newtonian Fluids and Viscoelastic Fluids will be covered. Rheometry, the technique for characterization of fluids, will be discussed. Most of the course is quantitative and uses mathematical modeling. Taught with CHME 465.

Prerequisite(s): CHME 306.

CHME 567. Nanoscience and Nanotechnology
3 Credits (3)

This is a lecture/laboratory course designed to present the basic concepts, the techniques and the tools to synthesize and characterize nanometer scale materials, and the latest achievements in current and future nanotechnology applications in engineering, materials, physics, chemistry, biology, electronics and energy. It is intended

for a multidisciplinary audience with a variety of backgrounds. This course should be suitable for graduate students as well as advanced undergraduates. Topics covered will include: nanoscience and nanotechnology, nanofabrication, self-assembly, colloidal chemistry, sol-gel, carbon nanotubes, graphene, thin film, lithography, physical vapor deposition, chemical vapor deposition, quantum dots, lithium batteries, X-ray diffraction, scanning electron microscopy, transmission electron microscopy, nanoelectronics, nanophotonics and nanomagnetism, etc. Taught with CHME 467.

Prerequisite(s): (CHEM 1225G or CHEM 1226) and (PHYS 1230G or PHYS 1310G).

CHME 578. Electrochemistry: Basics & Applications
3 Credits (3)

Theory and application of electrochemical devices. Topical information related to electrochemistry are concepts, principles, and examples of energy storage, mechanisms responsible for electrochemical devices, and current progress and problems. Relevant devices covered include the lithium ion battery, supercapacitor, fuel cell, solar cell and electrolyzer.

Prerequisite: CHEM 1215G or CHEM 1216.

Learning Outcomes

1. Understand the mechanisms responsible for electrochemical devices, realize the current progress and identify the problems that challenge the practical applications.

CHME 590. Graduate Seminar
1 Credit (1)

Presentations on topics of professional interest in chemical engineering. Includes seminars by faculty, graduate students, and invited speakers from academia, government, and industry. May be repeated up to 6 credits. Restricted to: CHME majors.

CHME 591. Graduate Special Topics
1-3 Credits (1-3)

Lecture and/or laboratory instruction on special topics in chemical engineering. May be repeated up to 12 credits.

Learning Outcomes

1. Gain exposure to, knowledge of, and practice solving problems in a variety of CHME topics that are directly related to broadening the MSCHE, MECPI, and PHDCHE curriculum and the student's career goals.
2. Topics will vary by years and section depending on current topics of interest in CHME and availability of instructors.
3. Be provided an opportunity to apply principles and techniques learned in the CHME curriculum to real life problem-solving situations in specialized topics.

CHME 593. Graduate Special Projects
1-3 Credits (1-3)

Provides an opportunity for graduate students to work on special projects under the direction of a faculty member. Written report covering work is required. May be repeated up to 6 credits.

Learning Outcomes

1. Prepare a written project report conforming to the format of the CHME writing standard.
2. Articulate a clear project question or problem.
3. Define, articulate, and use appropriate terminology and concepts.
4. Use library and other tools to search for existing body of information relevant to their project.
5. Identify and practice appropriate engineering ethics.
6. Know and apply problem solving skills to constructively address setbacks.

7. Work collaboratively with others, using listening and communication skills.
8. Work autonomously in an effective manner, setting and meeting deadlines.
9. Reflect on own project outcomes, identifying lessons learned, strengths, and ways to improve. 1
10. Communicate confidently and constructively with students, faculty, and project sponsor (as required). 1
11. Explain project to others in the field and to broader audiences through presentations. 1
12. Articulate the relevance of their project to their coursework and professional future, synthesizing their project, academic, and professional interests and goals.

CHME 594. Professional Communication in Chemical Engineering **2 Credits (2)**

Connections between interpersonal relationships and the effective communication of information. Strategies for formal and informal written and verbal communication in the context of presentations, interviews, reports and publications. Factors affecting non-verbal communication. Special focus will be given to understanding and adapting to the audience's perspective. 2 credits. Open to chemical engineering graduate students or by permission of instructor. This class will prepare you to communicate technical information effectively within a variety of contexts and to a variety of audiences. Class assignments will be partially based on current student needs such as preparing presentations for professional conferences, giving research progress reports, and writing research manuscripts. Restricted to: CHME majors. May be repeated up to 2 credits.

Learning Outcomes

1. Describe why and how interpersonal relationships affect communication of information, even within technical contexts.
2. Describe and implement methods for improving interpersonal relationships; introduce themselves to others, implement strategies for dealing with conflicts.
3. Assess the rhetorical situation for a given communication.
4. Display evidence and reasoning as well as convey credibility.
5. Understand different stakeholder audiences, and how to communicate with them differently.
6. Analyze the consequences of actions and ethical principles.
7. Design documents for users, including dividing content into manageable units.
8. Write a manuscript for the research community, including appropriate citations; manage time to allow for revisions and peer evaluation, provide useful feedback to peers during the revision process, find, understand and follow directions for manuscript and proposal preparation, locate relevant peer-reviewed journal articles using library and web resources.
9. Choose precise, accurate and concise language, and eliminate jargon, prepare effective graphs, illustrations, tables and equations. 1
10. Prepare, rehearse and deliver a research presentation.

CHME 595. Chemical Process Design and Business Analysis **3 Credits (3)**

Graduate chemical process design principles, emphasizing literature review, patent search, heuristics application, process simulation assistance to process creation, synthesis of reactor and separator trains, second-law analysis, heat and power integration, process equipment mechanical design specifications, process design optimization,

cost accounting and capital estimation, annual costs, earnings, and profitability analysis.

Prerequisite(s)/Corequisite(s): CHME 506, CHME 516, CHME 542.
Prerequisite(s): CHME 452, CHME 455 L or equivalent.

CHME 596. Chemical Process Industries Research **1 Credit (1)**

Independent graduate-level chemical process design project development, literature search, and proposal/defense.

Prerequisite(s): CHME 595.

CHME 597. Advanced Chemical Process Industry Analysis **2 Credits (2)**

In-depth analysis and defense of a timely commercially-relevant chemical process design.

Prerequisite: CHME 596.

CHME 599. Master's Thesis **1-15 Credits (1-15)**

Thesis.

CHME 690. Graduate Seminar **1 Credit (1)**

Presentations on topics of professional interest in chemical engineering. Includes seminars by faculty, graduate students, and invited speakers from academia, government, and industry. Required each semester for every Ph.D. student. All candidates for graduate degrees required to give seminar. May be repeated up to 8 credits. Restricted to: CHME majors.

CHME 698. Ph.D. Research **1-9 Credits (1-9P)**

Advanced topics for current research. Course subtitled in the Schedule of Classes. May be repeated up to 99 credits.

Learning Outcomes

1. To make progress toward a PhD degree.

CHME 700. Doctoral Dissertation **1-9 Credits (1-9)**

Individual research in selected topics of current interest in chemical engineering. May be repeated up to 88 credits.

Learning Outcomes

1. Demonstrate skills in the (a) design of experiments or simulations, (b) collection of experimental/simulated data, (c) development of appropriate models, and (d) make appropriate use of those models;
2. Complete an independent research project, resulting in at least a thesis/dissertation and peer-reviewed journal article(s);
3. Defend original research in front of a panel of peers and experts;
4. Be knowledgeable of the contemporary issues that are relevant to their chosen area of research.

CHSS - COMM HEALTH/SOC SRVCS

CHSS 1110. Intro to Health & Community Services **3 Credits (3)**

This course offers a holistic and multidisciplinary approach towards health promotion, wellness and a healthy lifestyle. Emphasis is placed on the major problems/issues that have the greatest significance to personal and community health. Topics to be discussed include: nutrition, fitness, stress management, sexuality, drug education and others. May be repeated up to 3 credits.

Learning Outcomes

1. Understand basic foundations of community health –history, framework and present progress: Identify key historical advances, people and events in public health; Understand Healthy People 2020

- goals and objectives; Understand the levels of prevention (primary, secondary, tertiary) of public health
- Identify organizations that help shape community health and their role in promoting health: Governmental; Quasi-Governmental; Nongovernmental; Identify local resources/agencies focused on health and human services
 - Conduct research in public health: Identify major sources for public health research; Governmental websites; Journals; Interpret and evaluate public health resources for academic use; Write a basic journal article critique
 - Understand the history and function of the school health program: Identify components of a coordinated school health program; Identify and overcome barriers common to CSHP; Apply the CSHP to contemporary issues in child/adolescent health

CHSS 2510. Service Learning

4 Credits (4)

Service Learning Experience in Human and Community Service: Exploration of contemporary social, civil, economic and ethical problems that require student participation in collaborative efforts within the community. Restricted to Community Colleges campuses only.

Prerequisite: PHLS 2110.

Prerequisite/Corequisite: PHLS 1110G, CHSS 1110, and PHLS 2120.

Learning Outcomes

- Understand the importance of service learning in community building and civic participation.
- Students will complete 120 hours of service learning experience with a collaborating community agency.
- Compile and submit a list of detailed daily service learning activities including contact individuals, meetings attended, presentations, specific tasks accomplished or contributions to agency or community, new skills learned, trainings, and number of hours spent on each activity.
- Design a service learning project incorporating the key elements of Public Health, and addressing a need in the community.
- Provide an oral presentation and write a personal reflection of the service learning experience in class.
- Practice critical thinking, decision making skills, and civic responsibility in promoting better health and general well-being.

CHSS 2511. Service Learning - Community Health Worker

1 Credit (1)

Service Learning Experience in Community Health Work: Exploration of contemporary social, civil, economic and ethical problems that require student participation in collaborative efforts within the community. May be repeated up to 1 credit.

Prerequisite: PHLS 2110, consent of instructor.

Prerequisite/Corequisite: PHLS 1110G, CHSS 1110, and PHLS 2120.

Learning Outcomes

- Understand the importance of service learning in community building and civic participation.
- Students will complete 30 hours of service learning experience with a collaborating community agency focusing on Community Health Work.
- Compile and submit a list of detailed daily service learning activities including contact individuals, meetings attended, presentations, specific tasks accomplished or contributions to agency or community, new skills learned, trainings, and number of hours spent on each activity.

- Attend CHW trainings focused on community health including (but not limited to) chronic disease, environmental and mental health.
- Provide an oral presentation and write a personal reflection of the service learning experience in class.
- Practice critical thinking, decision making skills, and civic responsibility in promoting better health and general well-being

CJUS-CRIMINAL JUSTICE

CJUS 1110G. Introduction to Criminal Justice

3 Credits (3)

This course provides an overall exploration of the historical development and structure of the United States criminal justice system, with emphasis on how the varied components of the justice system intertwine to protect and preserve individual rights. The course covers critical analysis of criminal justice processes and the ethical, legal, and political factors affecting the exercise of discretion by criminal justice professionals.

Learning Outcomes

- Describe the history, structure and function of the criminal justice system in the United States.
- Discuss the role of law enforcement, court systems, corrections, and security in maintaining social order.
- Identify and describe crime causation theories, various measures of crime and their reliability and victimization theories.
- Relate fundamental principles, concepts and terminology used in criminal justice to current events.
- Apply basic analytical and critical thinking skills in evaluating criminal justice issues, policies, trends and disparities.

CJUS 1120. Criminal Law

3 Credits (3)

This course covers basic principles of substantive criminal law including elements of crimes against persons, property, public order, public morality, defenses to crimes, and parties to crime. May be repeated up to 3 credits.

Learning Outcomes

- Explain the concepts of substantive criminal liability in the United States, including actus reus, mens rea, causation, concurrence, and parties to crime.
- Define the differences between criminal law and civil law in the United States.
- Demonstrate basic knowledge of legal terminology as it relates to criminal law.
- Identify the elements of crimes against persons, property, public order and the administration of justice, public morality, and the inchoate crimes.
- Describe the various defenses to crimes.

CJUS 1996. Special Topics in Criminal Justice

1-3 Credits

Specific subjects to be announced in the Schedule of Classes. May be repeated under different topics for a maximum of 6 credits.

Learning Outcomes

- Varies

CJUS 2120. Criminal Courts and Procedure

3 Credits (3)

This course covers the structures and functions of American trial and appellate courts, including the roles of attorneys, judges, and other court personnel, the formal and informal process of applying constitutional law,

rules of evidence, case law and an understanding of the logic used by the courts.

Learning Outcomes

1. Explain the application of the Constitutional Amendments that apply to criminal justice.
2. Explain and describe the dual court system in the U.S. and how courts enforce the rule of law.
3. Identify and list the duties and requirements of the courtroom workgroup.
4. Describe courtroom procedures, rules of the court, and due process of law.
5. Articulate basic knowledge of the U.S. criminal court system.
6. Define legal terms.
7. Explain the use of discretion in criminal procedure.
8. Differentiate the role of courts of limited jurisdiction, courts of general jurisdiction, and the appellate courts in the processing of criminal cases.

CJUS 2140. Criminal Investigations

3 Credits (3)

This course introduces criminal investigations with in the various local, state, and federal law enforcement agencies. Emphasis is given to the theory, techniques, aids, technology, collection, and preservation procedures which insure the evidentiary integrity. Courtroom evidentiary procedures and techniques will be introduced. Community Colleges only. (Note: students completing CJUS 2140 may not take CJUS 321.)

Learning Outcomes

1. Identify developments in investigation technology.
2. Identify common types of criminal investigations and their key components.
3. Apply proper crime scene investigative protocols.
4. Explain proper evidentiary gathering and handing procedures, and utilize various interviewing techniques.
5. Identify and compare different law enforcement agencies and the role they play in criminal investigations.
6. Describe proper collection, evidence preservation, documentation, and court presentation.
7. Develop effective search authorization.

CJUS 2150. Corrections System

3 Credits (3)

This course introduces the corrections system in the United States, including the processing of an offender in the system and the responsibilities and duties of correctional professionals. The course covers the historical development, theory, and practice, as well as the institutional and community-based alternatives available in the corrections process.

Learning Outcomes

1. Describe the purposes of the corrections system and the issues facing the corrections system.
2. Explain the components of the corrections system and describe their functions.
3. Compare and contrast the different forms of correction practices.
4. Explain the goals of corrections, the different factors affecting the sentencing process, the legal rights of prisoners, and the issues concerning prison violence.
5. Explain the impact of reentry into society.
6. Identify the issues concerning capital punishment.

7. Describe the effectiveness of various correction programs on offenders.

CJUS 2160. Field Experience in Criminal Justice

3-6 Credits

This course is designed to provide actual experience working for a criminal justice agency and the opportunity to apply criminal justice concepts and theory to a field situation. Students already working in an agency will complete an approved learning project while on the job.

Prerequisites: CJUS 1110G, prior arrangement and consent of instructor and a GPA of 2.0 or better in major.

Learning Outcomes

1. Obtain practical experience by observing, researching, and working in a criminal justice agency.
2. Apply the knowledge of principles, theories, and methods that were learned in the classroom to situation in which field experience will be devoted
3. Instill an understanding for general and specific problems that criminal justice agencies encounter on a daily basis.
4. Develop a professional work ethic and attitudes, including reliability, professional responsibility, and the ability to work cooperatively with others.

CJUS 2220. The American Law Enforcement System

3 Credits (3)

This course covers the historical and philosophical foundations of law and order, with an in-depth examination of the various local, state, ad federal law enforcement agencies and how they interact within the criminal justice system.

Learning Outcomes

1. Discuss, evaluate, and analyze the role of police in the democratic society today, and the historical development of modern day law enforcement
2. Define and explain the different types of community policing and the valid reasons behind their application within a community
3. List and discuss the ways to overcome the barriers to change within a police organization, good recruitment, screening, and retention of employees
4. Analyze and discuss the history of and the different types of police patrol, as well as the use of force and deadly force, and methods used for controlling police behavior
5. Describe and discuss the different types of police behavior, potential oversight, and remedy and their limitations
6. List and discuss the benefits of higher and continued education, along with the minimum educational requirements for police officers
7. Evaluate and discuss the reasons for police stress and the methods of dealing with stressors
8. Interpret current court cases, both state and federal, that affect police procedures

CJUS 300. Introduction to Criminal Justice Research

3 Credits (3)

Overview and evaluation of criminal justice research. Selection of research topics, methods of data selection and collection, analysis techniques, and presentation of findings.

Prerequisite: restricted to majors or consent of instructor.

CJUS 301. Advanced Research Methods

3 Credits (3)

Study of selected quantitative and qualitative skills and their application to criminal justice research.

Prerequisite: Restricted to majors or consent of instructor.

CJUS 302. Crime, Justice and Society

3 Credits (3)

Through critical analysis students build a rich understanding of the role of crime in our contemporary landscape and explore ideas and practices associated with justice, victimization, criminality, morality and righteousness. The course cultivates knowledge & awareness of the interactions between socially constructed phenomena (race, class, power, ethnicity, economic structures) and popular beliefs, policies, and practices associated with crime, punishment, and formal social control. It is recommended that you complete three of the following English courses before enrolling in this class: ENGL 1110G, ENGL 2210G, ENGL 2221G & ENGL 2130G. Restricted to: Criminal Justice majors.

CJUS 303. Introduction to Criminological Theory

3 Credits (3)

Defining and measuring crime, crime causation, and the criminal behavior system, and their linkage to criminal justice policies, procedures, and practices. Students must be enrolled or have completed third English writing class and completed two of the following: ENGL 1110G, ENGL 2210G, ENGL 2221G or ENGL 2130G. Restricted to: C J majors.

Prerequisite(s): CJUS 300.

CJUS 304. Historical Perspectives of Criminal Justice Systems

3 Credits (3)

Examines the precursors to and development of three distinct systems associated with crime and punishment in the United States: the Courts, the Police, & Corrections. By studying the historical context and socio-political backdrop in which these institutions emerged and expanded students will come to a richer understanding of them and their attendant policies, practices, conventions, and assumptions. It is recommended that you complete three of the following English courses before enrolling in this class: ENGL 1110G, ENGL 2210G, ENGL 2221G or ENGL 2130G. Restricted to: Criminal Justice majors.

Prerequisite(s): CJUS 300.

CJUS 306. Criminal Procedural Law

3 Credits (3)

Legal analyses of the rights of criminal defendants; legal duties and responsibilities of criminal justice personnel in the processing of criminal defendants. May be repeated up to 3 credits. Restricted to: C J majors.

Prerequisite(s): Restricted to majors, Forensic Science minors, or consent of instructor.

CJUS 307. Law of Evidence

3 Credits (3)

Evidentiary rules and concepts and their application in a criminal trial. May be repeated up to 3 credits. Restricted to: C J majors.

Prerequisite(s): Restricted to majors, Forensic Science minors, or consent of instructor.

CJUS 321. Criminal Investigation and Intelligence

3 Credits (3)

Principles of criminal investigation and intelligence production; processing cases from complaint through crime scene search, identification and collection of evidence, interviewing and interrogation, and case preparation for courts. May be repeated up to 3 credits. Restricted to: C J majors.

Prerequisite(s): Restricted to majors, Forensic Science minors, or consent of instructor.

CJUS 331. American Correctional Institutions

3 Credits (3)

Structure, organization, and operations of United States jails and prisons. Overview of correctional standards and classification systems, emphasizing current theory and practice.

Prerequisite: restricted to majors or consent of instructor.

CJUS 332. Correctional Law

3 Credits (3)

Federal and state laws and rules of post-conviction procedures; rights of the convicted related to sentencing, appeals, clemency, and restoration of rights.

Prerequisite: restricted to majors or consent of instructor.

CJUS 333. Juvenile Corrections

3 Credits (3)

Development and implementation of juvenile facilities and community programs. Effectiveness of current corrections practices. Restricted to majors.

CJUS 345. Victimology

3 Credits (3)

Study of risk factors in crime victimization, the impact of crimes upon victims, and the role of the victim in the criminal justice system.

Prerequisite: restricted to majors or consent of instructor.

CJUS 347. Sex Crimes

3 Credits (3)

Dynamics of sex crimes for victims and offenders, plus consideration of the legal and correction systems' response to sex crimes. Restricted to majors.

CJUS 348. Serial Killers

3 Credits (3)

Overview and critical assessment of serial homicide and its relevance for contemporary U.S. society. Focus on factors influencing definitions and cultural understanding of serial homicide.

Prerequisite(s): 60 credit hours.

CJUS 360. The Juvenile Justice System

3 Credits (3)

History, development, and philosophy behind a separate juvenile justice system. Role of the juvenile court, evaluation of juvenile law and procedure, and the processing of juvenile offenders.

Prerequisite: restricted to majors or consent of instructor.

CJUS 380. Introduction to Terrorism

3 Credits (3)

Overview of the phenomenon of terrorism, psychological and sociological theories of terrorism, and various contemporary governmental policies.

CJUS 391. Special Readings in Criminal Justice

1-3 Credits

Individually chosen subject areas not readily available in other courses. May be repeated for a maximum of 6 credits under different subtitles.

Restricted to majors.

Prerequisites: at least a 2.5 GPA and consent of instructor.

CJUS 393. Internship in Criminal Justice

1-12 Credits

Field experience in a local, state, or federal criminal justice or private security agency. Includes orientation, observation, conferences, and work experience. Credits limited to six if student has taken CJUS 2160. May be repeated for a maximum of 12 credits. Restricted to majors. Graded S/U.

Prerequisites: consent of instructor and GPA of 2.5 or better.

CJUS 399. New Mexico Law

3 Credits (3)

Examination of the history, development and implementation of law in New Mexico with an emphasis on legal issues unique to New Mexico. Crosslisted with: POLS 399. May be repeated up to 3 credits.

Learning Outcomes

1. To understand the unique legal issues of New Mexico through critical examination of the history, development and implementation of law in the state.
2. To develop skills to critically analyze debates over legal issues in New Mexico.
3. To develop skills to effectively communicate analysis of legal issues in New Mexico in oral and written forms.

CJUS 405. Juvenile Courts and Law

3 Credits (3)

History, development, and current status of juvenile courts. Legal status of juveniles in court and constitutional protections afforded them.

Restricted to majors.

CJUS 410. Criminal Justice Administrative Systems

3 Credits (3)

Administrative structures in criminal justice agencies and institutions; relationship of administrative structures to practical police, courts, and corrections problems.

Prerequisite: restricted to majors or consent of instructor.

CJUS 412. Introduction to Security Technology and Loss Prevention

3 Credits (3)

Private and public responses to security problems, including employee theft, perimeter security, and domestic or foreign terrorism; reviews related law and management practices.

CJUS 414. Race, Crime and Justice

3 Credits (3)

Historical and contemporary analysis of the relationship between race and crime in the United States with emphasis upon human equality and fairness. Overview of racial and ethnic social categorizations and how they impact law and order.

CJUS 416. Global Perspectives on Youth and Drug Use

3 Credits (3)

Overview of global drug use among young people, comparative legal structures, formal and informal responses. Restricted to C J, ANTH, GOVT, SOC, GNDR, S WK majors.

CJUS 417. Drugs In Our World

3 Credits (3)

Comparative analysis of patterns and theories of drug use, formal government mitigation strategies.

CJUS 424. Forensic Law

3 Credits (3)

Overview of the rules and issues related to the use of scientific information in the legal process. May be repeated up to 3 credits.

Restricted to: C J majors.

Prerequisite(s): C J major, Forensic Science minors, or consent of instructor.

CJUS 425. Issues in Ethics, Law, and Criminal Justice

3 Credits (3)

Examination of the key ethical and decision-making dilemmas facing professionals working in the field of law and criminal justice.

Prerequisite: restricted to majors or consent of instructor.

CJUS 427. Race and Crime in Film

3 Credits (3)

Critical analysis of film where messages relating race and crime are present, with emphasis on how this imagery informs problem definition, policies, and practice within the criminal justice system.

Prerequisite(s): 60 credit hours.

CJUS 428. Mexican-Americans and Issues of Social Justice

3 Credits (3)

In this course we will explore and discuss social issues related to the Mexican American community in the U.S., with special emphasis on their collective historical struggles and contributions to society. We will discuss the political, economic and cultural forces that exemplify their experience as a "whole."

Prerequisite(s): Students must have completed CJUS 300 or research methods equivalent or consent from the instructor.

CJUS 429. Immigration & Justice

3 Credits (3)

This course is designed to introduce undergraduate students to the complexities of immigration in the United States through a social justice lens. Students will explore the intersections of race, ethnicity, gender, and class in immigration through different groups' historical and contemporary experiences, including immigrants' experience with the criminal justice system.

Prerequisite(s): Student must have completed CJUS 300 or Research Methods equivalent or consent of the instructor.

CJUS 432. Issues in Criminal Justice

3 Credits (3)

Seminar on problems and conflicts encountered in major criminal justice issues. Topics announced in the Schedule of Classes. May be repeated for unlimited credits under different subtitles.

CJUS 434. Probation, Parole, and Community Corrections

3 Credits (3)

Structure, organization, and operation of probation, parole, and other community-based correctional programs in the U.S. Overview of historical and recent trends in the supervision of offenders in the community and in the development of alternatives to incarceration. Analysis of issues related to community correctional policies and practices. Restricted to majors.

CJUS 435. Political Penology

3 Credits (3)

Comparative analysis of incarceration and sanctions as punishment for crimes of conscience, religious intolerance, and dissidence.

CJUS 436. Courts and Sentencing

3 Credits (3)

This course will focus on the structure, organization, and operation of the state and federal court systems in the United States. It examines courtroom decision making and dynamics of courthouse justice—prosecutorial discretion, plea bargaining practices, jury and judicial decision making and sentencing. Additional topics will include racial, gender and class disparities in sentencing outcomes and the impact of recent reforms directed at the criminal court system. Restricted to: Criminal Justice majors.

CJUS 437. Wrongful Convictions

3 Credits (3)

This course will address causes (e.g. problems in witness identification, forensics, police and attorney conduct) as well as results of erroneous dispositions (e.g. compensation, media dynamics, possible reforms) in a critical analysis. Appropriate for prospective police, legal, and policy professionals. Restricted to: Criminal Justice majors.

CJUS 440V. Comparative Criminal Justice Systems

3 Credits (3)

Cross-national study of selected Western and non-Western legal systems. Comparison of structures and functions of police, court systems, and corrections in different systems.

CJUS 453. Women and Justice**3 Credits (3)**

Critical analysis of the impact of the criminal justice system, race and class upon the lives of women. Restricted to majors.

CJUS 454. Human Trafficking**3 Credits (3)**

Study of global human trafficking, its causes and costs, and mitigation strategies. Restricted to C J, GOVT, SOC, GNDR, S WK majors.

CJUS 456. Police and the Community**3 Credits (3)**

This course is an advanced introduction to policing in the United States. The course will also cover current issues in policing, such as new technologies and the role of police in terrorism prevention.

Learning Outcomes

1. Describe the evolution of police community relations and community policing.
2. Compare and contrast traditional policing with community policing.
3. Examine discretion in police work and relate it to legal, operational, and ethical issues and problems.
4. Examine police misconduct and corruption.
5. Examine the importance of professionalism and ethics in police work.
6. Identify strategies for interacting with the physically and mentally disabled, the elderly, and crime victims.

CJUS 484. Hate Crimes & Groups**3 Credits (3)**

Explores the phenomenon of hate-motivated violence. Examines the hate crime laws, organized hate groups, and social theories attempting to explain violent hate.

CJUS 501. Research Methods in Criminal Justice**3 Credits (3)**

Research design, methods of data collection and analysis, and preparation of research reports. Restricted to majors.

Prerequisite: C J major or consent of instructor.

CJUS 502. Statistics in Criminal Justice**3 Credits (3)**

Intermediate level statistical techniques applied to criminal justice data.

Learning Outcomes

1. Understand the basic statistical procedures for criminal justice research.
2. Use statistical software to enter and edit data, and conduct basic analysis.
3. Allow students the opportunity to recognize the critical role of empirical research in informing, influencing, and evaluating criminal justice practices and policies.
4. Developing a basic understanding of the role of statistics in criminal justice research.
5. Interpret and evaluate research evidence and statistical operations.

CJUS 511. Nature of Crime**3 Credits (3)**

Defining and measuring crime, crime causation, and criminal behavior systems. Restricted to majors.

Prerequisite: C J major or consent of instructor.

CJUS 514. Advanced Race, Crime, and Justice**3 Credits (3)**

Advanced analysis of the historical and contemporary relationship between race and crime in the United States with emphasis upon human equality and fairness. Overview of racial and ethnic social categorizations and how they impact law and order.

CJUS 515. A Course on Punishment**3 Credits (3)**

Exploration and analysis of the idea and practice of punishment through a variety of philosophical perspectives, seeking to understand its moral and practical viability as employed in contemporary society, including its application within the criminal justice system.

CJUS 520. Advanced Girls, Women & Crime**3 Credits (3)**

Advanced critical social science analysis of concepts of violence and justice as experienced by women impacted by the criminal justice system. Restricted to C J, GNDR majors. Crosslisted with: GNDR 520

CJUS 525. Issues in Ethics, Law, and Criminal Justice**3 Credits (3)**

Examination of the key ethical and decision-making dilemmas facing professionals working in the fields of law and criminal justice. Restricted to majors.

CJUS 527. Advanced Race & Crime in Film**3 Credits (3)**

Advanced critical analysis of film where messages relating race and crime are present, with emphasis on how this imagery informs problem definition, policies, and practice within the criminal justice system.

CJUS 528. Advanced Mexican-Americans and Issues of Social Justice**3 Credits (3)**

Advanced analysis of social issues related to the Mexican American community in the U.S., with special emphasis on their collective historical struggles and contributions to society. We will discuss the political, economic and cultural forces that exemplify their experience as a "whole."

Learning Outcomes

1. Explore and discuss social issues related to the Mexican American community in the U.S.
2. Gain a better understanding of the history of the Mexican American experience in the U.S.
3. Understand current social justice issues impacting the Mexican American community.
4. Explore the Mexican American community experience particularly in the southwest.
5. Critically engage the challenges faced by the Mexican American community on issues such racial discrimination, racial profiling, immigration, and crime.

CJUS 529. Advanced Immigration & Justice**3 Credits (3)**

Advanced analysis of the complexities of immigration in the United States through a social justice lens. Students will explore the intersections of race, ethnicity, gender, and class in immigration through different groups' historical and contemporary experiences, including immigrants' experience with the criminal justice system.

CJUS 531. Advanced Family Violence and the Law**3 Credits (3)**

This course will examine how practitioners are involved in the criminal justice system in areas of family violence including: child physical abuse; child sexual abuse; child neglect; child ritualistic abuse; child exploitation; sibling abuse; intimate partner abuse; stalking; sexual abuse

and elder abuse. This course will be helpful for those who wish to go into law enforcement or victim's advocacy work. Restricted to: Criminal Justice majors.

CJUS 532. Advanced Issues in Criminal Justice (f, s, sum)
3 Credits (3)

Seminar on problems and conflicts encountered in major criminal justice issues. Topics announced in the Schedule of Classes. May be repeated under different subtitles for unlimited credit.

CJUS 537. Advanced Wrongful Convictions
3 Credits (3)

This course will address causes (e.g. problems in witness identification, forensics, police and attorney conduct) as well as results of erroneous dispositions (e.g. compensation, media dynamics, possible reforms) in a critical analysis. Appropriate for prospective police, legal, and policy professionals. Restricted to: Criminal Justice majors.

CJUS 541. Seminar in Criminal Justice Policy Analysis and Planning
3 Credits (3)

Seminar on policy development, planning and implementation processes in criminal justice. Links formal policy goals as they relate to theory and outcomes. Topics announced in the Schedule of Classes. Restricted to majors.

Prerequisite: C J major or consent of instructor.

CJUS 545. Advanced Victimology
3 Credits (3)

Study of risk factors in crime victimization, the impact of crimes upon victims, and the role of the victim in the criminal justice system. Consideration of the impact of criminal justice policy on victim outcomes.

CJUS 560. Juvenile Justice Systems
3 Credits

Policy development and operations in police, court, and correctional agencies in response to juveniles. Analysis of programs designed to identify, prevent and treat juvenile offenders. CJUS 570. Probation and Parole 3 cr. Advanced analysis of goals, theories and practices of all forms of correction in the community, including probation, parole, plus other intermediate sanctions. Restricted to majors.

CJUS 581. Community Policing
3 Credits (3)

Overview and analysis of community policing issues from various perspectives. Analysis of strategies that facilitate police and community collaboration. Restricted to majors.

CJUS 591. Directed Readings in Criminal Justice
3 Credits (3)

Supervised review of literature in specialized areas of the nature of crime, law and social control, and criminal justice administration. Consent of instructor required.

CJUS 592. Independent Research
1-3 Credits

Design and execution of a criminal justice research project. Requires a written paper in standard format, including literature review, hypotheses, methodology, findings, and conclusions.

CJUS 593. Internship
3-6 Credits

Supervised placement in an applied or research setting in criminal justice. An in-depth written report of the project is required. Restricted to C J majors. May be repeated for a maximum of 6 credits. Graded S/U.

Prerequisites: introductory graduate course in the area of the internship and consent of the internship supervisor.

CJUS 599. Master's Thesis
1-15 Credits
 Thesis.

COMM-COMMUNICATION

COMM 1115G. Introduction to Communication
3 Credits (1+2P)

This survey course introduces the principles of communication in the areas of interpersonal, intercultural, small group, organizational, public speaking, mass, and social media. May be repeated up to 3 credits.

Learning Outcomes

1. Describe basic communication terms, forms and concepts.
2. Identify basic communication research methods and theories.
3. Explain the significance of ethics and diversity in communication processes.
4. Apply various concepts and skills in multiple communication contexts

COMM 1130G. Public Speaking
3 Credits (3)

This course introduces the theory and fundamental principles of public speaking, emphasizing audience analysis, reasoning, the use of evidence, and effective delivery. Students will study principles of communication theory and rhetoric and apply them in the analysis, preparation and presentation of speeches, including informative, persuasive, and impromptu speeches. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate effective speech preparation.
2. Demonstrate effective speech delivery through use of language, nonverbal elements and the creation of presentation aids.
3. Analyze a potential audience and tailor a speech to that audience.
4. Evaluate presentations according to specific criteria.
5. Explain common propaganda techniques and logical fallacies, and identify them in the speeches of others.
6. Recognize diversity and ethical considerations in public speaking.

COMM 2110. Communication Theory
3 Credits (3)

This course provides an exploration of major theories, concepts and methods of research in the study of human communication. May be repeated up to 3 credits.

Learning Outcomes

1. Identify, explain, and illustrate key concepts and principles of the major traditions of communication theory.
2. Analyze practical problems and situations using theories.
3. Integrate research correctly and ethically from credible sources to support the primary purpose of communication.

COMM 2996. Special Topics
1-3 Credits (1-3)

Specific subjects and credits to be announced in the Schedule of Classes. May be repeated up to 12 credits.

Learning Outcomes

1. Define and describe key concepts and principles related to the group study or selected topic as identified by the course subtitle.
2. Apply key concepts and principles related to the group study or selected topic as identified by the course subtitle.

COMM 2997. Independent Study**1-3 Credits (1-3)**

Individualized, self-paced projects for students with a special interest in communication topics. Students must be sophomore standing to enroll. May be repeated up to 6 credits.

Prerequisite: COMM 1115G.

Learning Outcomes

1. The student will study a selected topic and conduct a literature review or comparable research assignment.
2. The student will apply knowledge and understanding of the topic in a final paper or project.

COMM 3110. Communication Theory and Discovery**3 Credits (3)**

The course explores the nature of communication science, major communication theories, and how communication research is conducted and interpreted.

Learning Outcomes

1. Understand philosophical underpinnings of communication theories and methods
2. Understand the relationship between theory and research methods in the field of communication
3. Apply concepts, theories, and research findings to various contexts outside of the classroom
4. Become an intelligent consumer of research: have the ability to read, comprehend, demonstrate understanding and critically evaluate communication and other research reported in scholarly journals and published documents as well as in the popular press.

COMM 3120. Persuasion Theory and Practice**3 Credits (3)**

Training in understanding and applying the principles and techniques of argumentation and persuasion. May be repeated up to 3 credits.

Learning Outcomes

1. Identify and explain key concepts and theories in persuasion.
2. Apply concepts, theories, and research findings to various contexts outside of the classroom.
3. Create persuasive messages utilizing principles from one or more of the theories covered in class.
4. Become a critical consumer of persuasive messages and persuasive campaigns.

COMM 3510. Organizational Communication**3 Credits (3)**

Communication strategies and patterns of private and governmental organizations, including research on the communication process. May be repeated up to 3 credits.

Learning Outcomes

1. Evaluate the organizational theory, concepts, and research discussed in class and their implications for the field of organizational communication.
2. Explain the role communication plays in each of the organizational communication processes discussed in class.
3. Critically assess communication practices within all types of organizations.
4. Evaluate the ethical issues brought forth in organizational communication.

COMM 3530. Conflict Management**3 Credits (3)**

Communication strategies to manage and negotiate conflict in intrapersonal, interpersonal, group, and organizational settings. May be repeated up to 3 credits.

Learning Outcomes

1. Analyze the role of communication in conflict and conflict management processes.
2. Analyze the components of conflict that lead to constructive or destructive communication patterns.
3. Evaluate the effectiveness and appropriateness of strategies, methods, and responses that are appropriate to a given conflict situation.

COMM 3610. Interpersonal Communication**3 Credits (3)**

Theories of interpersonal communication and relational communication including study of relevant models, contexts and constructs. May be repeated up to 3 credits.

Learning Outcomes

1. To define and describe communication and interpersonal communication.
2. To identify and describe concepts and behaviors related to nonverbal, verbal, relational, interpretive, role, self, and goal competence in the context of interpersonal communication.
3. To compare and apply concepts of interpersonal communication competence by reflecting on examples from communication in personal and everyday relationships.
4. To define, apply, and analyze concepts of family communication competence in media portrayals of, and in one's own experience of, family communication.
5. To define, apply, and analyze concepts of romantic communication competence in either a personal romantic relationship or in the example of a couple observed/interviewed.

COMM 3710. Communication and Culture**3 Credits (3)**

Cultural and intercultural communication theory and behavior, with a concentration on the development of specific communication skills which should facilitate effective intercultural communication. May be repeated up to 3 credits.

Learning Outcomes

1. Define culture and other related concepts.
2. Explain processes of enculturation and acculturation.
3. Apply the concepts to one's own experience.
4. Create new ways of presenting material about culture and communication.

COMM 4210. Political Communication**3 Credits (3)**

Presidential and congressional campaigns, political persuasion techniques, political advertising, power in language, and media aspects of political information. Ideology, resistance to political manipulation, and dependence of democracies on communication. May be repeated up to 3 credits.

Learning Outcomes

1. Identify and explain key concepts in political communication, and apply that knowledge to your own life experiences and views on the world.
2. Read and critically analyze current research in political communication.

3. Become informed and critical consumers of political messages and the news media.

COMM 4220. Communication Technologies

3 Credits (3)

Development and evolution of human communication technologies from prehistory through the future of computer-mediated communication networks. Examines behavioral, cognitive, social, cultural, and political issues of new communication technologies and their use and management. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the key concepts, theories, and research findings regarding scholarly investigations of new media technologies.
2. Apply concepts, theories, and research findings related to social media to a variety of social issues and one's own lived experiences.
3. Develop the ability to think about social media critically and analytically.
4. Learn how to effectively communicate ideas, information, and messages through new media technologies (particularly, social media platforms) in order to achieve a specific goal.
5. Articulate the benefits and drawbacks of living in a digital world.

COMM 4230. Strategic Communication

3 Credits (3)

This course covers history, theory, and research related to the use of strategic organizational communication to change attitudes. The course is a survey course designed to help you understand how organizations create targeted, creative, research-based communication to accomplish their objectives. Students will examine the role of communication in organizational planning and execution of advertising, marketing, public relations, and social change. Strategic Communication provides insight into how communicators use critical and creative thinking to gather, organize, evaluate and deliver information in a culturally diverse world. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the role and functions of Strategic Communication in a culturally diverse world.

COMM 4310. Sports Communication

3 Credits (3)

This course provides a senior-level exploration of the role sports and sports communication plays in contemporary culture. Readings will examine the interrelationship between sports and media in society, the identities that fans assume when engaging in fandom and sports viewership, the pervasiveness of sports communication practices in the sports industry, the role of media in story telling, and the way cultural identifiers of class, ethnicity, and gender play out in the media. This is taught with COMM 5310. May be repeated up to 3 credits.

Learning Outcomes

1. Evaluate the historical impact of sports on society.
2. Understand the evolution of sports media and ESPN and its impact on American culture.
3. Assess existing and future sports communication research and media theory.
4. Assess the current trends in sports media and the culture of sports.
5. Transfer knowledge of sports communication to a critical appreciation of sports media; including the study of image repair and framing theory.

COMM 4520. Small Group Communication

3 Credits (3)

Principles and methods of modern group discussion with emphasis on the role of the group in problem solving. May be repeated up to 3 credits.

Learning Outcomes

1. Recognize and develop a complex understanding of the theories and principles of group communication.
2. Become an intelligent consumer of group research literature.
3. Adopt and articulate a clearly developed communication perspective toward group research.
4. Gain an understanding of the within-group phenomena.

COMM 4530. Leadership Communication

3 Credits (3)

Examination of traditional theories and concepts of leader-follower dynamics; presentation of cognitive, systems, and symbolic interpretative views of leadership with an emphasis on persuasion and motivation in leader-follower interactions. May be repeated up to 3 credits.

Learning Outcomes

1. Apply leadership concepts and theories.
2. Analyze leadership philosophies.
3. Identify the fundamental ways leadership is practiced in organizations.
4. Assess your own leadership traits and behaviors.
5. Develop your own personal leadership philosophy.

COMM 4550. Case Studies in Leadership Communication

3 Credits (3)

Students will assess, synthesize, integrate and evaluate research in the area of leadership and organizational communication. Students will interact with modern topics related to communication and organizations through the analysis and discussion of various cases pulled from current events in organizational research.

Learning Outcomes

1. Practice case analysis related to organizational theories and skills.
2. Apply leadership communication concepts and theories to real life scenarios.
3. Develop critical thinking skills for inclusive leaders.
4. Examine the role of the inclusive model of leadership within organizations.
5. Develop your own case studies related to current organizational topics.
6. Examine emerging organizational ethics issues such as gender, ethics, and morality within leadership.
7. Develop an understanding of the personal and organizational factors related to leading teams and organizations.

COMM 4560. Ethics & Diversity in Leadership Communication

3 Credits (3)

To provide students with an opportunity to explore the issues related to ethical decision-making and personal ethical development as they apply to interpersonal communication, followership, organizations, diversity, and organizational citizenship.

Learning Outcomes

1. Practice personal ethical decision-making in organizations.
2. Apply ethical leadership concepts and theories to real-life scenarios.
3. Develop critical thinking skills for inclusive leaders.
4. Examine the role of individual morals and philosophies in organizational ethics.
5. Develop your own personal philosophy of organizational ethics.
6. Examine emerging organizational ethics issues.

7. Develop an understanding of the personal and organizational factors related to ethics and diversity.

COMM 4620. Deception and Communication

3 Credits (3)

Deceptive communication including nonverbal indicators of lies, types of lies, and influence of relationships on lying behavior and interpretation.

May be repeated up to 3 credits.

Learning Outcomes

1. Students will acquire basic knowledge of research on Deception.
2. Students will be able to identify reasons for why people lie.
3. Students will be able to apply the course concepts to real world situations.
4. Students will be able to tell the difference between what is "true" and what is "false" about how we deceive in the popular press and movies/TV.
5. Students will learn about THE two theories in the area of Deception and be able to differentiate between them.

COMM 4630. Family Communication

3 Credits (3)

This course examines cutting edge research on family communication, as well as classic theories and research findings that have influenced and revolutionized the way scholars conceptualize family interaction. May be repeated up to 3 credits.

Learning Outcomes

1. To develop a communication perspective on the family as a system.
2. To identify and distinguish between theories of family interaction.
3. To recognize and explain how family communication patterns and processes affect communication between family members.
4. To analyze communication processes that are unique to family subsystems such as romantic, parent-child, sibling, and extended family relationships.
5. To analyze the role of family interaction in the development and course of mental and physical health problems.
6. To analyze theories of family stress and the impact of specific family stressors on family interaction and well-being.
7. To apply theories and concepts to real-life scenarios.

COMM 4640. Nonverbal Communication

3 Credits (3)

Study of and experimentation with nonverbal aspects of human communication as vital components of the total communication process.

May be repeated up to 3 credits.

Learning Outcomes

1. To analyze nonverbal channels of communication between persons, including channels such as the voice, face, eyes, posture, gestures, space, territory, clothing, paralanguage, and touch.
2. To analyze how nonverbal behaviors collectively communicate functions such as dominance, deception, intimacy, and turn-taking.
3. To analyze individual and social factors affecting the production of nonverbal behaviors, and the effects of such behaviors on others' attitudes, perceptions, cognitions, and relationships.
4. To analyze the origins of nonverbal communication, by examining developmental trends, continuities with other animal species, cultural similarities and differences, and physiological bases.
5. To examine applications of nonverbal research and theory to infant development, personality, gender, relational satisfaction, relationship development, culture, aging, and social media.

COMM 4720. International Communication

3 Credits (3)

Exploration of the forms and channels of communication is substantially influenced by international cultural and political factors. Covers: global communication technology; news, information, and entertainment flows; and international diplomacy and negotiation. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate an understanding of the history of international communications, and the issues and controversies that have appeared.
2. Demonstrate an understanding of the international agencies responsible for the regulation of media, including content, and technologies.

COMM 4730. Environmental Communication

3 Credits (3)

Examines the link between communication and environment within the context of communication scholarship. Topics include sense of place, cultural approaches to interacting with environment as well as exploring current themes surrounding environment. May be repeated up to 3 credits.

Learning Outcomes

1. Identify ways in which public discourses socially construct relationships between nature and humans.
2. Demonstrate an understanding of critical and cultural approaches to environmental communication.
3. Identify key issues in environmental conflicts, risk communication, and democratic participation in policy-making.
4. Demonstrate an ability to critically evaluate environmental advocacy, deliberation, and public relations.

COMM 4750. Health Communication

3 Credits (3)

Examination of central issues in communication theory and practice as applied to health care. Includes communication in health care organizations, media dissemination of health information, role of communication in disease prevention and health promotion, and symbolic meaning of illness within cultures. May be repeated up to 3 credits.

Learning Outcomes

1. Students will gain an understanding of health communication theories and concepts.
2. Students will be able to apply theories and concepts to a real-world health issue.
3. Students will be able to differentiate among health communication theories and concepts.

COMM 4996. Selected Topics

1-6 Credits (1-6)

Individual and/or group study of selected topics. To be identified by subtitle. May be repeated up to 12 credits.

Learning Outcomes

1. Gain basic knowledge regarding the group study or selected topic as identified by the course subtitle.
2. Gain expert insight into the selected topic identified by the course subtitle.

COMM 4997. Independent Study

1-3 Credits (1-3)

Individualized, self-paced projects for advanced students. Students must be in junior standing to enroll. May be repeated up to 6 credits.

Prerequisite: COMM 1115G.

Learning Outcomes

1. The student will study a selected topic and conduct a literature review or comparable research assignment.
2. The student must demonstrate both quantity and quality of knowledge and understanding of the topic in a final written paper.

COMM 4998. Communication Internship

3 Credits (3)

Internship opportunity to apply what has been learned to a real-world situation. Students must be in junior standing to enroll. Students must be in Junior or Senior Standing. May be repeated up to 6 credits.

Prerequisite: COMM 3510.

Learning Outcomes

1. Apply course concepts and discussion topics to the internship experience.
2. Differentiate between good and poor communication skills.
3. Evaluate the complex communication phenomena within the workplace.
4. Apply a valuable experiential education outside of the classroom.

COMM 5110. Theories of Communication

3 Credits (3)

The theories covered in this course are intended to provide you with a foundational background for future graduate courses that will explore theoretical and topical areas of study in more depth. May be repeated up to 3 credits.

Learning Outcomes

1. Learn how theories are developed, analyzed, evaluated, and applied.
2. Be able to assess, synthesize, and evaluate communication theories.
3. Gain a broad overview of the field of human communication theory.
4. Appreciate the diversity of theoretical ideas within communication literature.
5. Develop a deeper understanding through the exploration of selected topics.
6. Begin to solidify a theoretical stance of your own that will motivate and guide further studies.

COMM 5120. Persuasion Theory

3 Credits (3)

Work with an actual persuasion campaign, such as public information, political, or commercial marketing campaigns. Includes case studies of large-scale persuasion efforts, current theoretical models of persuasion processes, and methods for studying, evaluating, and refining messages for optimal effects. May be repeated up to 3 credits.

Learning Outcomes

1. Become a critical consumer of persuasive messages and persuasive campaigns.
2. Create persuasive messages utilizing principles from one or more of the theories covered in class.
3. Apply concepts, theories, and research findings to various contexts outside of the classroom.

COMM 5130. Quantitative Research Methods

3 Credits (3)

Seminar in the quantitative study of human communication phenomena, research design, and statistical analysis. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the logic of social science research.
2. Compare different research methods (experiment, survey, content analysis, and so on).
3. Develop and write clear hypotheses.
4. Understand how to assess the validity and reliability of measures.
5. Design a survey to test your hypotheses.
6. Use statistical analyses to answer questions in the field of communication.
7. Discuss the limitations of your study and the implications for your conclusions.
8. Become a better consumer of statistics and social science research.

COMM 5140. Qualitative Research Methods in Communication

3 Credits (3)

Survey of qualitative research methods in the study of human communication, including historical and critical approaches, interviewing, participant-observation, and communication ethnography. Students apply methods to their own research. May be repeated up to 3 credits.

Learning Outcomes

1. Learn about the nature and application of qualitative research in social and organizational research.
2. Learn to conceptualize qualitative research and to formulate problem statements and research questions.
3. Learn how to design a qualitative research study.
4. Learn about qualitative data collection procedures—observation, interviews, focus group interviews, and collection and use of documents and archival data.
5. Apply research design and data collection skills by undertaking a pilot research study.

COMM 5210. Political Communication

3 Credits (3)

Political communication theory, research, and issues. Empirical studies of campaigns, movements, news media, voter decision-making, political participation, socialization, and knowledge. Political theory, field research, communication science findings and research methods. May be repeated up to 3 credits.

Learning Outcomes

1. Identify and explain key concepts in political communication, and apply that knowledge to your own life experiences and views on the world.
2. Read and critically analyze current research in political communication.
3. Become informed and critical consumers of political messages and the news media.

COMM 5220. Communication Technologies

3 Credits (3)

Seminar on design, usage, and social impact of electronic mail, communication through computer networks, and new technologies of organizational communication such as group decision support systems (GDSS). Each student will study an actual application of a major communication technology in an organization. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the key concepts, theories, and research findings regarding scholarly investigations of new media technologies.
2. Apply concepts, theories, and research findings related to social media to a variety of social issues and one's own lived experiences.

3. Develop the ability to think about social media critically and analytically.
4. Learn how to effectively communicate ideas, information, and messages through new media technologies (particularly, social media platforms) in order to achieve a specific goal.
5. Articulate the benefits and drawbacks of living in a digital world.

COMM 5230. Strategic Communication

3 Credits (3)

This course covers history, theory, and research related to the use of strategic organizational communication to change attitudes. The course is a survey course designed to help you understand how organizations create targeted, creative, research-based communication to accomplish their objectives. Students will examine the role of communication in organizational planning and execution of advertising, marketing, public relations, and social change. Strategic Communication provides insight into how communicators use critical and creative thinking to gather, organize, evaluate and deliver information in a culturally diverse world. Graduate students will be required to fulfill advanced research and presentation requirements. May be repeated up to 3 credits.

Learning Outcomes

1. Understand the role and functions of Strategic Communication in a culturally diverse world.

COMM 5310. Sports Communication

3 Credits (3)

This seminar provides a graduate-level exploration of the role sports and sports communication plays in contemporary culture. Readings will examine the interrelationship between sports and media in society, the identities that fans assume when engaging in fandom and sports viewership, the pervasiveness of sports communication practices in the sports industry, the role of media in story telling, and the way cultural identifiers of class, ethnicity, and gender play out in the media. This is taught with COMM 4310. May be repeated up to 3 credits.

Learning Outcomes

1. Evaluate the historical impact of sports on society.
2. Understand the evolution of sports media and ESPN and its impact on American culture.
3. Assess existing and future sports communication research and media theory.
4. Assess the current trends in sports media and the culture of sports.
5. Transfer knowledge of sports communication to a critical appreciation of sports media; including the study of image repair and framing theory.

COMM 5510. Organizational Communication

3 Credits (3)

Communication strategies and patterns of private and governmental organizations, including research on communication systems. May be repeated up to 3 credits.

Learning Outcomes

1. Recognize and develop a complex understanding of the theories and principles of organizational culture and communication.
2. Become an intelligent consumer of organizational culture.
3. Plan, design, execute, interpret, and/or critically evaluate the conclusions of an original organizational communication research project.
4. Adopt and articulate a clearly developed communication perspective toward organizational research.

COMM 5530. Leadership Communication

3 Credits (3)

This course examines traditional theories and concepts of leadership and also highlights popular and historic leaders. May be repeated up to 3 credits.

Learning Outcomes

1. Equip students with effective leadership skills.
2. Apply leadership concepts and theories to real-life scenarios.
3. Develop critical thinking skills for inclusive leaders.
4. Analyze leadership philosophies.
5. Identify the fundamental ways leadership is practiced in organizations.
6. Develop your own personal philosophy of organizational ethics.
7. Develop skills to be able to identify modern trends in organizations and emerging organizational leaders.

COMM 5550. Case Studies in Leadership Communication

3 Credits (3)

Students will assess, synthesize, integrate and evaluate research in the area of leadership and organizational communication. Students will interact with modern topics related to communication and organizations through the analysis and discussion of various cases pulled from current events in organizational research. COMM 5550 is the graduate version of COMM 4550. Additional work will be required for Graduate Students.

Learning Outcomes

1. Practice case analysis related to organizational theories and skills.
2. Apply leadership communication concepts and theories to real life scenarios.
3. Develop critical thinking skills for inclusive leaders.
4. Examine the role of the inclusive model of leadership within organizations.
5. Develop your own case studies related to current organizational topics.
6. Examine emerging organizational ethics issues such as gender, ethics, and morality within leadership.
7. Develop an understanding of the personal and organizational factors related to leading teams and organizations.

COMM 5560. Ethics & Diversity in Leadership Communication

3 Credits (3)

To provide students with an opportunity to explore the issues related to ethical decision-making and personal ethical development as they apply to interpersonal communication, followership, organizations, diversity, and organizational citizenship. Additional work will be required for Graduate Students.

Learning Outcomes

1. Practice personal ethical decision-making in organizations.
2. Apply ethical leadership concepts and theories to real-life scenarios.
3. Develop critical thinking skills for inclusive leaders.
4. Examine the role of individual morals and philosophies in organizational ethics.
5. Develop your own personal philosophy of organizational ethics.
6. Examine emerging organizational ethics issues.
7. Develop an understanding of the personal and organizational factors related to ethics and diversity.

COMM 5610. Interpersonal Communication

3 Credits (3)

Theories of interpersonal communication and communication within a relationship, including study of relevant models, contexts, and constructs. May be repeated up to 3 credits.

Learning Outcomes

1. To define interpersonal communication, explore relationship types, and analyze demographic trends in personal relationships.
2. To examine the human need for interpersonal relationships, as well as social networks, the development of social skills, and the role of social support.
3. To analyze how people develop and communicate their identity within relationships.
4. To examine the role of communication in developing and maintaining relationships, with a focus on relational stages, turning points, dialectics, uncertainty, expectations, self-disclosure, affection, intimacy, influence, conflict, power, as well as cultural influences to close relationships.
5. To analyze relational hurt, relational transgressions, relational deterioration, and termination from a communication perspective.
6. To analyze and review current theory and peer-reviewed research in interpersonal communication.
7. To examine practical applications of interpersonal communication that have the potential to help or harm people, and to explore the gaps and links between theory and practice.

COMM 5630. Family Communication

3 Credits (3)

This course examines cutting edge research on family communication, as well as classic theories and research findings that have influenced and revolutionized the way scholars conceptualize family interaction. Topics include basic family communication processes, communication in family subsystems, communication during family stress, and the role of family interaction in health and well-being. Students will explore how family relationships are built, maintained, and destroyed by communication as well as the potentially important and long lasting effects of family relationships on individuals. May be repeated up to 3 credits.

COMM 5640. Nonverbal Communication

3 Credits (3)

This course focuses on human physical behaviors as the basis of communication between persons. This physical behavior includes such variables as the voice, face, eyes, posture, gesture, space, territory, clothing, and touch. The content of the course considers the individual and social factors affecting the production of such behaviors, and the effects of such behaviors on others' attitudes, perceptions, cognitions, and relationships. Applications of research and theory in nonverbal communication to infant development, personality, sex differences, marital satisfaction, relationship development, culture, aging, and brain functioning are also studied throughout the course. May be repeated up to 3 credits.

COMM 5710. Communication and Culture

3 Credits (3)

Cultural and intercultural communication theory and research. Focuses on discovering and describing distinctive ways of speaking within and between cultures. May be repeated up to 3 credits.

Learning Outcomes

1. Discuss the practical application of the study of culture.

COMM 5994. MA Project

1-6 Credits (1-6)

Project credits are used for the master's degree project option. May be repeated up to 6 credits.

Learning Outcomes

1. Propose and defend the project during the first semester.
2. Complete and defend the project during the second semester.

COMM 5996. Special Topics

1-9 Credits (1-9)

Individual and/or group study of special topics. To be identified by subtitle. May be repeated up to 99 credits.

Learning Outcomes

1. Gain basic knowledge regarding the group study or selected topic as identified by the course subtitle.
2. Gain expert insight into the selected topic identified by the course subtitle.

COMM 5997. Independent Study

1-6 Credits (1-6)

Individualized, self-paced projects. May be repeated up to 99 credits.

Learning Outcomes

1. The student will study a selected topic and conduct a literature review or comparable research assignment.
2. The student must demonstrate both quantity and quality of knowledge and understanding of the topic in a final written paper.

COMM 5998. Communication Internship for Graduate Students

3 Credits (3)

Internship opportunity to apply what students have learned to the real world. May be repeated up to 3 credits.

Learning Outcomes

1. Apply course concepts and discussion topics to the internship experience.
2. Differentiate between good and poor communication skills.
3. Evaluate the complex communication phenomena within the workplace.
4. Apply a valuable experiential education outside of the classroom.

COMM 5999. Master's Thesis

1-15 Credits (1-15)

Thesis. May be repeated up to 88 credits.

Learning Outcomes

1. Submit Thesis Proposal and defend the first semester of enrollment.
2. Complete Thesis and defend during the second semester of enrollment.

CSEC - CYBERSECURITY

CSEC 110. Principles of Cybersecurity

3 Credits (3)

Course covers contemporary trends in cybersecurity including understanding characteristics of security vulnerabilities as they relate to hardware, software, data, procedures, and user actions. Restricted to Community Colleges campuses

Learning Outcomes

1. Explain the importance of cybersecurity in the global economy.
2. Explain why cybersecurity is a growing profession.
3. Explain how hackers use unsuspecting individuals to propagate risk
4. Explain why cybersecurity is critical to industry and public safety
5. Explain approach to cybersecurity.
6. Explain the characteristics of cyber warfare.

7. Explain trends in the cyber threat landscape.
8. Explain the framework of enterprise security solutions.

CSEC 127. Internet of Things Integration

3 Credits (3)

Continuation of concepts taught in CTEC 127. Course expands on the importance of the Internet of Things (IoT) in society, control systems, communications, sensors, actuators, cloud computing, security, and databases. May be repeated up to 6 credits.

Prerequisite: CTEC 127.

Learning Outcomes

1. Demonstrate a detailed understanding of IoT.
2. Understand the societal impact of IoT.
3. Recognize challenges the IoT presents to security.
4. Develop an understanding of embedded programming language syntax and attributes.
5. Demonstrate assembly of electronic circuitry using a single-board computer.

CSEC 180. Introduction to Data Analytics

3 Credits (3)

A broad introduction to the field of data analytics that prepares students to explore key areas of the analytical process of how data is created, stored, cleaned, visualized, and analyzed. May be repeated up to 6 credits.

Learning Outcomes

1. Demonstrate basic principles of data analysis using analytical tools.
2. Apply data analytics to contemporary workplace performance.
3. Describe how data is stored and accessed through relational database(s).
4. Use programming language(s) to analyze data.
5. Integrate application software to analyze and visualize simple dataset.

CSEC 275. Introductory to Cryptography

3 Credits (3)

Introduction to the foundation of cryptography, principles behind cryptographic design, and cryptographic applications. Topics include encryption techniques, common cryptographic protocols and security functions.

Prerequisite(s)/Corequisite(s): MATH 1215 or above. Restricted to Las Cruces campus only.

Learning Outcomes

1. Describe the operations and benefits of cryptography
2. Able to understand necessary cryptography encoding
3. Able to use standard tools for penetration testing and compliance
4. Describe the basic need for cryptography and why it is essential for security.

CSEC 280. Introduction to Cyber Defense

3 Credits (3)

Introduction to the foundation of cryptography, principles behind cryptographic design, and cryptographic applications. Topics include encryption techniques, common cryptographic protocols and security functions.

Prerequisite(s)/Corequisite(s): MATH 1215. Restricted to Las Cruces campus only.

CSEC 283. Ethical Hacking and Penetration Testing

3 Credits (3)

Introduces students to the tools and software used in ethical hacking and penetration testing as well as introducing them to some of the vulnerabilities and exploits that exist within the cybersecurity field.

Prerequisite: E T 153 and E T 156.

Prerequisite/Corequisite: E T 283.

Learning Outcomes

1. Identify and describe common threats and vulnerabilities.
2. Describe/demonstrate how to secure a network.
3. Identify and demonstrate common tools used in ethical hacking/penetration testing.
4. Identify and describe legal/ethical issues pertaining to ethical hacking.

CSEC 285. Introduction to Managing Information Security

3 Credits (3)

Managerial aspects of information security and assurance including access control models, information security governance, accountability metrics, legal responsibilities, and information security program assessment.

Prerequisite(s)/Corequisite(s): CTEC 290 or OECS 269. Restricted to Las Cruces campus only.

CSEC 286. Information Security Certification Preparation

4 Credits (4)

Covers the examination objectives and detailed preparation to prepare students to take the CompTia Security+ exam.

Prerequisite: E T 153, E T 156, and E T 283.

Learning Outcomes

1. Identify and describe common threats and vulnerabilities.
2. Identify and demonstrate common security devices/programs.
3. Describe/demonstrate how to secure a network.

CSEC 295. Cybersecurity Capstone

3-4 Credits (3-4)

Experiential hands-on learning applying skills and knowledge gained in technology and cybersecurity-related courses supporting contemporary workforce performance. May be repeated up to 8 credits.

Learning Outcomes

1. Evaluate technical components, systems and integrated systems.
2. Demonstrate individualized project-based skills.
3. Develop integrated system solutions.
4. Integrate cyber technology to support workplace performance.

CTEC-CYBER TECHNOLOGY

CTEC 115. TOPICS IN IT

1-3 Credits (1-3)

Topics to be announced in the Schedule of Classes. May be repeated up to 6 credits. Restricted to Community Colleges campuses only.

CTEC 120. IT Infrastructure Support I

1-3 Credits (1-3)

Introduction to most common types of PC configurations, installations, and failures. This course will explore troubleshooting skills for maintaining and repairing common hardware and software related problems. May be repeated up to 3 credits. Restricted to Community Colleges campuses only.

CTEC 127. Introduction to Internet of Things

1-3 Credits (1-3)

Exploration of the importance of IoT in society, components of typical IoT devices and future trends. IoT design considerations, constraints,

interfacing and key components of networking will also be covered. May be repeated up to 6 credits. Restricted to Community Colleges campuses only.

CTEC 130. Linux Workstation

1-3 Credits (1-3)

Installation, configuration, and maintenance of the Linux operating system. Covers file organization, user management, and system security. Addresses general procedures for working with and modifying the operating system. May be repeated up to 6 credits. Restricted to Community Colleges campuses only.

CTEC 135. Windows Workstation

1-3 Credits (1-3)

Installation, configuration, and maintenance of the Windows operating system. Covers file organization, user management, and system security. Addresses general procedures for working with and modifying the operating system. May be repeated up to 6 credits. Restricted to Community Colleges campuses only.

CTEC 140. Introduction to Database Design

1-3 Credits (1-3)

Introduction to basic relational database concepts including terminology, tables, queries, forms, and reports. The course teaches data modeling concepts, building Entity Relationship Diagrams (ERDs), mapping ERDs, and use of data management system applications. May be repeated up to 6 credits. Restricted to Community Colleges campuses only.

CTEC 145. Introduction to Database Management

1-3 Credits (1-3)

Use of SQL to analyze complex business scenarios as well as to design and create, and manage databases. Course includes exposure to Application Express (APEX) to provide practical, hands-on activities. May be repeated up to 6 credits. Restricted to Community Colleges campuses only.

Prerequisite(s): CTEC 140 or OECS 220.

CTEC 150. Mobile Application Programming

1-3 Credits (1-3)

Introduction to elements of mobile application coding including concepts, design strategies, and tools needed to create, test, and deploy applications for mobile devices. May be repeated up to 6 credits.

CTEC 152. JAVA Programming

1-3 Credits (1-3)

Introduction to concepts of programming in the Java language. Topics include data types, control structures, functions, arrays, files, and the mechanics of running, testing, and debugging code. This is a hands-on course that does not require students to have prior programming experience. May be repeated up to 6 credits. Restricted to Community Colleges campuses only.

CTEC 154. C++ Programming

1-3 Credits (1-3)

Introduction to concepts of programming in the C++ language. Topics include data types, control structures, functions, arrays, files, and the mechanics of running, testing, and debugging code. This is a hands-on course that does not require students to have prior programming experience. May be repeated up to 6 credits.

CTEC 156. Python Programming

1-3 Credits (1-3)

Introduction to concepts of programming in the Python language. Topics include data types, control structures, functions, arrays, files, and the mechanics of running, testing, and debugging code. This is a hands-on course that does not require students to have prior programming

experience. May be repeated up to 6 credits. Restricted to Community Colleges campuses only.

CTEC 158. Visual Basic Programming

1-3 Credits (1-3)

Introduction to concepts of programming in the Visual Basic language. Topics include data types, control structures, functions, arrays, files, and the mechanics of running, testing, and debugging code. This is a hands-on course that does not require students to have prior programming experience. May be repeated up to 6 credits. Restricted to Community Colleges campuses only.

CTEC 180. Introduction to Networking

3-4 Credits (3-4)

This course introduces the architecture, structure, functions, components, and models of the Internet and computer networks. Course includes the principles and structure of IP addressing and the fundamentals of Ethernet concepts, media, and operations to build simple LANs, perform basic configurations for routers and switches. May be repeated up to 8 credits. Restricted to Las Cruces campus only.

CTEC 185. Routing and Switching Essentials

3-4 Credits (3-4)

This course covers the architecture, components, and operations of routers and switches in a small network. Students learn how to configure routers and switches for basic functionality. Course demonstrates how to configure and troubleshoot routers and switches to resolve common issues with RIPv1, RIPv2, single area and multi-area OSPF, virtual LANs, and inter-VLAN routing in both IPv4 and IPv6 networks. May be repeated up to 8 credits.

Prerequisite(s)/Corequisite(s): CTEC 180 or OECS 261. Restricted to Las Cruces campus only.

CTEC 220. Internship

1-3 Credits (1-3)

Work experience, directly related to a student's field of study, that provides an opportunity to explore career options while experiencing hands-on application, knowledge, and theory learned in the classroom. May be repeated up to 6 credits. Consent of Instructor required. Graded: S/U Grading (S/U, Audit). Restricted to Las Cruces campus only.

Prerequisite(s): (CTEC 120 or OECS 185) AND (CTEC 130 or OECS 204), AND (CTEC 180 or OECS 261).

CTEC 230. Introduction to Linux Server Administration

1-3 Credits (1-3)

This course addresses the implementation and support needs of IT professionals that are planning to deploy and support Linux Server(s). It provides in-depth, hands-on training for IT professionals responsible for the planning, implementation, management, and support of Linux Server operating system(s). May be repeated up to 6 credits.

Prerequisite(s)/Corequisite(s): CTEC 130 or OECS 204. Restricted to Community Colleges campuses only.

CTEC 235. Introduction to Windows Server Administration

3 Credits (3)

This course addresses the implementation and support needs of IT professionals that are planning to deploy and support Window Server(s). It provides in-depth, hands-on training for IT professionals responsible for the planning, implementation, management, and support of Windows Server operating system(s).

Prerequisite(s)/Corequisite(s): CTEC 135 or OECS 207. Restricted to Las Cruces campus only.

CTEC 245. Fundamentals of Cloud Based Data Systems

1-3 Credits (1-3)

Introduction to the techniques and tools required to develop database driven web applications. The course teaches students how to design, develop, and deploy efficient and responsive, database-driven web applications using Oracle Application Express. Restricted to Community Colleges campuses only. May be repeated up to 6 credits.

Prerequisite/Corequisite: CTEC 240.

CTEC 255. Special Topics

1-3 Credits (1-3)

Topics to be announced in the Schedule of Classes. May be repeated up to 6 credits. Restricted to Community Colleges campuses only.

CTEC 280. Scaling Networks

3-4 Credits (3-4)

This course covers the architecture, components, and operations of routers and switches in WLANs and complex networks. Students learn how to configure routers and switches for advanced functionality and to resolve common issues with OSPF, EIGRP, and STP in both IPv4 and IPv6 networks. May be repeated up to 8 credits.

Prerequisite(s)/Corequisite(s): CTEC 185 or OECS 262. Restricted to Las Cruces campus only.

Learning Outcomes

1. Configure and troubleshoot DHCP and DNS operations for IPv4 and IPv6
2. Describe the operations and benefits of the Spanning Tree Protocol (STP)
3. Configure and troubleshoot STP operations
4. Describe the operations and benefits of link aggregation and Cisco VLAN Trunk Protocol (VTP)
5. Configure and troubleshoot basic operations of routers in a complex routed network for IPv4 and IPv6
6. Configure and troubleshoot advanced operations of routers and implement RIP, OSPF, and EIGRP routing protocols for IPv4 and IPv6
7. Manage Cisco IOS® Software licensing and configuration files

CTEC 285. Connecting Networks

3-4 Credits (3-4)

This course covers WAN technologies and network services required by converged applications in a complex network. Students learn about selection criteria of network devices, VLANs and WAN technologies to meet network requirements to resolve common issues with data link protocols. May be repeated up to 8 credits.

Prerequisite(s)/Corequisite(s): CTEC 280 or OECS 263. Restricted to Las Cruces campus only.

CTEC 290. Network Security

3-4 Credits (3-4)

Fundamentals of design and implementation of network security solutions that will reduce the risk of system vulnerability. Topics include: threats, attacks, vulnerabilities, tools, architecture, design, access management, risk management, and cryptography. May be repeated up to 8 credits.

Prerequisite(s)/Corequisite(s): (CTEC 120 or OECS 185), AND (CTEC 180 or OECS 261). Restricted to Las Cruces campus only.

CTEC 295. Cyber Technology Capstone

3-4 Credits (3-4)

Experiential hands-on learning applying skills and knowledge gained in computer and technology-related courses supporting contemporary workforce performance. May be repeated up to 8 credits.

Learning Outcomes

1. Evaluate technical components, systems and integrated systems.
2. Demonstrate individualized project-based skills.

3. Develop integrated system solutions.

4. Integrate cyber technology to support workplace performance.

CTEC 299. Independent Study

1-4 Credits (1-4)

Specific subject to be determined based upon student need. May be repeated up to 8 credits. Restricted to Community Colleges campuses only.

CTFM-CLTHNG/TXTLS/FSHN MRCHDSG

CTFM 1110. Fundamentals of Fashion

3 Credits (3)

Survey of the fashion business from fiber to end product.

Learning Outcomes

1. Describe the roles and functions of industry jobs and sectors involved in the designing, production, marketing, and distribution of fashion brands within the global context.
2. Describe the business strategies of industry sectors involved in the designing, production, marketing, and distribution of fashion brands within the global context.
3. Describe the interrelationships among line planning, line development, and line presentation at manufacturing and retail levels.
4. Provide examples of the fashion industry's environmental and social impact.
5. Learn about all career tracks involved in the fashion industry and the global fashion supply chain.
6. Synthesize industry-relevant information on current issues in the fashion industry.

CTFM 2120. Fashion Illustration

3 Credits (1+4P)

This course explores aspects of fashion illustration, from drawing basic fashion figures to producing finished professional illustrations in color. This course provides the opportunity for students to integrate their fashion design development with computer-aided systems. The emphasis is on fashion innovation and concept design exploration enhanced by computer applications. May be repeated up to 3 credits.. Prerequisites: ARTS 1145G and CTFM 1110

Learning Outcomes

1. To learn Adobe Illustrator and Adobe Photoshop as drawing and design tools for electronic design and rendering.
2. To understand and utilize the computer as a tool for fashion design.
3. To understand methods of design input, including scanning, digitizing and resizing.
4. To develop customer profiles
5. To Understand Concept Style

CTFM 2130. Concepts in Apparel Construction

3 Credits (1+4P)

Students are introduced to professional standard sewing techniques and apparel construction. The techniques learned are applied to produce finished garments. Restricted to: FCSE,CTFM majors. Restricted to Las Cruces campus only.

Learning Outcomes

1. Define sewing construction terminology, equipment and sewing machine parts.
2. Learn to select suitable patterns and fabrics for garments.

3. Learn to alter commercial patterns for different body types.
4. Identify fabric types, finishes, and labeling.
5. Perform standard operating procedures on sewing machines.
6. Perform clothing construction techniques for various garments.
7. Apply knowledge of industry sewing methods to recognition of garment workmanship.

CTFM 2990. Fashion Practicum**1-3 Credits (1-3)**

Applied field experience in the related areas of apparel design, fashion merchandising, and textile science. May be repeated up to 3 credits.

Restricted to: CTFM majors. Restricted to Las Cruces campus only.

Learning Outcomes

1. Gain hands-on knowledge of the fashion industry.
2. Demonstrate the ability to analyze the practices of management, as observed in the industry.
3. Demonstrate an attitude that is appropriate for a prospective manager in the industry.
4. Demonstrate the understanding of, and the ability to use research and problem solving methods to develop, analyze, and present a critical incident analysis.

CTFM 300. Special Topics**1-4 Credits**

Specific subjects and credits to be announced in the Schedule of Classes. Maximum of 4 credits per semester and a total of 9 credits toward a degree. Restricted to Las Cruces campus only.

Prerequisite(s): CTFM 1110; CTFM 2120.

CTFM 365. Apparel Analysis**3 Credits (3)**

An in-depth investigation of the development, production and comparison of wearing apparel. Focus on the structural, functional and decorative aspects of apparel. Emphasis on sourcing of companies and materials, costing of the product line, comparing design and manufacturing techniques that affect price, quality, and size of apparel. Restricted to: CTFM majors.

Prerequisite(s): CTFM 1110 and CTFM 2130.

CTFM 366. Historic Fashion**3 Credits (3)**

The study of clothing styles from 3500 BC through the 20th century.

Restricted to: CTFM majors.

Prerequisite(s): CTFM 2120.

CTFM 371. Textile Science**3 Credits (1+4P)**

The study of fiber characteristics, fabric properties and the manufacturing processes that affect the selection, use, and care of textile goods. Restricted to: CTFM majors.

Prerequisite(s): CTFM 1110.

CTFM 372. Fashion Merchandising**3 Credits (3)**

A study of the processes required to bring consumer goods to the marketplace.

Prerequisite(s): CTFM 1110 and CTFM 2130.

CTFM 373. Advanced Apparel Construction II**3 Credits (1+4P)**

This course builds on Basics of Apparel Construction and explores the application of advanced sewing technology across a range of fashion products. Restricted to: CTFM majors.

Prerequisite(s): CTFM 2130.

CTFM 375. Fashion Buying**3 Credits (3)**

The application of planning, purchasing and controlling inventories using industry data and analytics. Includes merchandising math with an emphasis on product selection and pricing.

Prerequisite(s): ACCT 2110, CTFM 1110, and CTFM 2130.

CTFM 377. Fashion Study Tour**1-3 Credits (1-3)**

Study of international/domestic fashion, designers, manufacturers, merchandisers and/or retailers. May be repeated up to 6 credits. Consent of Instructor required.

CTFM 401. Professional Development**1 Credit (1)**

Introduction to the field experience including resume writing, interviewing skills, understanding business ethics and etiquette. Also includes a discussion of career paths and advice from industry guest speakers.

Restricted to: CTFM majors.

Prerequisite(s): CTFM 372 and CTFM 375.

CTFM 402. Field Experience**1-3 Credits (1-3)**

Practical experience in fashion, clothing design, manufacturing, merchandising, or retailing. May be repeated up to 3 credits. Consent of Instructor required. Restricted to: CTFM majors.

Prerequisite(s): CTFM 401.

CTFM 403. Post-Field Experience**1 Credit (1)**

A case based approach to analyzing internship experiences. Students will share their experiences and prepare case studies about specific business issues they encountered during CTFM 402. Restricted to: CTFM majors.

Prerequisite(s): CTFM 402.

CTFM 460. Cultural Perspectives in Dress**3 Credits (3)**

Explores the social, psychological and cultural aspects of dress and appearance. Consent of Instructor required.

CTFM 473. Flat Pattern for Apparel Design**3 Credits (1+4P)**

Applied design principles to flat patterns techniques including bodies, skirts, sleeves, neckline, and bodies-sleeve combinations. Projects will require three-dimensional approaches in apparel design. Restricted to: CTFM majors.

Prerequisite(s): CTFM 2120 and CTFM 373.

CTFM 474. Fashion Promotion**3 Credits (3)**

A comprehensive examination of promotion in the merchandising environment of fashion related goods. Restricted to: CTFM majors.

Prerequisite(s): CTFM 372.

CTFM 476. Draping for Apparel Design**3 Credits (1+4P)**

Development of garment shapes using draping techniques. Emphasis placed on torso development, contouring principles and design development on the form. This course exposes the student to the design process, from initial concept and muslin sample development to final execution of the finished garments. Restricted to: CTFM majors.

Prerequisite(s): CTFM 2120 and CTFM 373.

CTFM 477. Capstone in Fashion Merchandising**3 Credits (3)**

Synthesizes previous coursework. Students apply multi-disciplinary principles to the analysis of fashion merchandising case studies and industry related challenges.

Prerequisite(s): CTFM 372, CTFM 375 and CTFM 402.

CTFM 492. Special Problems

1-4 Credits

Individual research study in a selected subject area of family and consumer sciences. Maximum of 4 credits per semester and a total of 6 credits toward a degree.

CTFM 571. Textile Science

3 Credits (1+4P)

The study of fiber characteristics, fabric properties and the manufacturing processes that affect the selection, use and care of textile goods. Students will be required to complete additional assignments beyond what is required for CTFM 371.

CTFM 598. Special Research Programs

1-4 Credits

Individual investigations, either analytical or experimental. May be repeated for a maximum of 4 credits per semester and no more than 6 credits toward a degree.

DANC-DANCE

DANC 1110G. Dance Appreciation

3 Credits (3)

This course introduces the student to the diverse elements that make up the world of dance, including a broad historic overview, roles of the dancer, choreographer and audience, and the evolution of the major genres. Students will learn the fundamentals of dance technique, dance history, and a variety of dance aesthetics. Restricted to: Main campus only. May be repeated up to 3 credits.

Learning Outcomes

1. Explain a range of ideas about the place of dance in our society.
2. Identify and apply critical analysis while looking at significant dance works in a range of styles.
3. Identify dance as an aesthetic and social practice and compare/contrast dances across a range of historical periods and locations.
4. Recognize dance as an embodied historical and cultural artifact, as well as a mode of nonverbal expression, within the human experience across historical periods and cultures.
5. Use dance to consider contemporary issues and modes of thought.

DANC 1130. Ballet I

1 Credit (1)

This course is the beginning level of ballet technique. Students learn the basic fundamentals and performance skills of ballet techniques, which may include flexibility, strength, body alignment, coordination, range of motion, vocabulary, and musicality. May be repeated up to 2 credits.

Learning Outcomes

1. Apply fundamental movements of ballet techniques.
2. Enhance flexibility, strength, body alignment, coordination, balance, kinesthetic awareness, range of motion, and musicality.
3. Employ basic theories of classical ballet placement and proper alignment.
4. Develop basic ballet terminology, variations in timing and changes of facing, and barre and center combinations.

DANC 1131. Introduction to Ballroom Dance

1 Credit (1)

An introduction to ballroom dance at the beginning level. Students will learn the fundamentals of technique including carriage, common movement vocabulary, and partnering, and will be introduced to steps and dances from the Bronze Syllabus of American Smooth and International Standard dances. Offered every Fall. May be repeated up to 2 credits.

Learning Outcomes

1. Execute the basic figures of various Ballroom dances in American and International styles
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow
3. Develop the skills of style and performance quality within the dance
4. Demonstrate improved overall physical capability, musicality, and movement memory
5. Appreciate Ballroom dancing as an artform and a discipline

DANC 1135. Introduction to Argentine Tango

1 Credit (1)

An introduction to Argentine Tango at the beginning level. Students will learn the fundamentals of technique including carriage, common movement vocabulary, and partnering, as well as the history and culture of the form. Offered Spring of even years. May be repeated up to 2 credits.

Learning Outcomes

1. Execute the basic figures of Tango and Argentine Tango
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow
3. Develop the skills of style and performance quality within the dance
4. Articulate the cultural and historical underpinnings of these forms as World dances
5. Demonstrate improved overall physical capability, musicality, and movement memory
6. Appreciate Tango as an artform and a discipline

DANC 1140. Flamenco I

1 Credit (1)

This course introduces the student to the art of flamenco and its cultural features and significance. Students will learn the fundamentals of this art form and introductory techniques and skills, which may include handwork, footwork, postures, and specific dances. May be repeated up to 2 credits.

Learning Outcomes

1. Demonstrate a basic level of competency in the principles of alignment, anatomy, coordination, mobility, stability, and stamina.
2. Demonstrate fundamental flamenco techniques relative to spatial awareness, rhythm, phrasing, and sequencing.
3. Demonstrate competency with basic flamenco movement vocabulary.
4. Perform a variety of flamenco dances, poses, steps, hand movements, and combinations.

DANC 1150. Modern Dance I

1 Credit (1)

Modern Dance techniques and styles. Students are introduced to proper warm-up techniques, body alignment, control and flexibility. Students work with various rhythms and combinations of movements. The course emphasizes dance technique and creative experience. The history, terminology and philosophy of Modern Dance are also discussed. May be repeated up to 2 credits.

Learning Outcomes

1. Use a more developed sense of muscle control and strength, stretch and balance, coordination.

2. Demonstrate and verbalize an increased awareness of Modern Dance techniques
3. Execute dance phrases, combining several movements and in more than one rhythm.
4. Demonstrate an increased awareness of musicality while dancing and use Modern Dance Techniques creatively.

DANC 1185. Introduction to Country Western Dance

1 Credit (1)

An introduction to Country Western Dance at the beginning level.

Students will learn the fundamentals of technique and several dances, including Country Western Two-Step, Nightclub Two-Step, Polka, and Line Dance. Offered Fall of odd years. May be repeated up to 2 credits.

Learning Outcomes

1. Execute the basic figures of various Country Western social dances.
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow.
3. Develop the skills of style and performance quality within the dance.
4. Demonstrate improved overall physical capability, musicality, and movement memory.
5. Appreciate Country Western dancing as an artform and a discipline.

DANC 1220. Introduction to Latin Social Dance

1 Credit (1)

An introduction to Latin social dance at the beginning level. Students will learn the fundamentals of technique including carriage, common movement vocabulary, and partnering, and will be introduced to steps and dances from the Bronze Syllabus of American Rhythm and International Latin dances. Offered every Spring. May be repeated up to 2 credits.

Learning Outcomes

1. Execute the basic figures of various Latin dances in American and International styles.
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow.
3. Develop the skills of style and performance quality within the dance.
4. Demonstrate improved overall physical capability, musicality, and movement memory.
5. Appreciate Latin dancing as an artform and a discipline.

DANC 1235. Introduction to West Coast Swing Dance

1 Credit (1)

An introduction to West Coast Swing dancing at the beginning level.

Students will learn the fundamentals of technique of several Swing forms and the Hustle, including basic steps, partnering, and musical forms.

Offered Fall of even years. May be repeated up to 2 credits.

Learning Outcomes

1. Execute the basic figures of both West Coast Swing and the Hustle.
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow.
3. Develop the skills of style and performance quality within the dance.
4. Demonstrate improved overall physical capability, musicality, and movement memory.
5. Appreciate Swing dancing as an artform and a discipline.

DANC 2130. Ballet II

2 Credits (2)

Intermediate level of ballet technique; Introduction of more advanced Ballet vocabulary at barre/center work; increase flexibility, strength, body alignment, and coordination for practice of steps/combinations with variations in timing and changes of facing. Restricted to Las Cruces campus only. May be repeated up to 8 credits.

Learning Outcomes

1. A successful student will be able to understand and execute with accuracy all the steps presented on the take home quizzes and are encouraged and expected to attend at least two semesters of each level in order to advance to the next level of ballet technique

DANC 2150. Modern Dance II

2 Credits (2)

Modern II is designed to further the student's abilities in modern dance technique, to enhance efficient use of weight and momentum, to release held patterns in the body's mechanics, to enrich spatial awareness, and to begin work on performance techniques. May be repeated up to 8 credits.

Learning Outcomes

1. Improve accuracy in alignment and shape
2. Improve precision in space, in timing and rhythm, and in focus/intent
3. Learn combinations and movement dynamics quickly
4. Begin to integrate performance techniques while working in the classroom setting
5. Use a concentrated attitude and an open, creative mind to approach the work in an artistic manner unique to your abilities
6. Listen, see and apply all the information given within one class period and over the semester
7. Self-awareness and mindfulness: how much space do you take in the class and why? How aware are you of those around you, and those you are dancing with?
8. Release of weight to create controlled momentum
9. Locating center and moving from there

DANC 2157. Hip-Hop Dance

2 Credits (2)

An introduction to hip hop dance and its relationship to other aspects of hip-hop culture, music, and media, with an emphasis on creativity, individuality, and expression. Coursework may include street styles, breaking, and various regional forms. No previous dance experience is expected. May be repeated up to 6 credits.

Learning Outcomes

1. Recognize and articulate the fundamentals of various styles of hip hop dance technique and vocabulary.
2. Contextualize the history and cultural aspects of hip hop dance.
3. Examine the relationship between dance and other aspects of hip hop culture such as music and media representation.
4. Demonstrate improvement in overall physical capability, musicality, and movement memory.
5. Appreciate hip hop dance as an artform and a discipline.

DANC 2270. Dance Improvisation

2 Credits (2)

An introduction to the practice of dance improvisation focusing on play and discovery as methods for generating movement and exploring the full potential of the communicative, authentic body in motion. Course content includes concepts in Body, Effort, Shape, Space, Kinesthetic Response, Scoring, and Contact. Offered Spring of even years.

Prerequisite: DANC 1150.

Learning Outcomes

1. Understand the core concepts of exploration and authenticity and the importance of these ideas to a modern dancer and choreographer.
2. Demonstrate immediacy of presence, both physically and mentally, in the way that they responding to both choices and instincts in the moment.
3. Connect the concepts learned in Modern dance technique to the study of dance improvisation and the concepts of this class to outside work as dancers, students, and citizens.
4. Access the constantly expanding movement vocabulary which will inform their work moving forward in dance technique and composition.
5. Improvise confidently both individually and as part of a group.

DANC 2310. Bronze American Rhythm**2 Credits (2)**

Bronze level American Rhythm patterns, techniques, and partnering with emphasis on elements of dance. May be repeated up to 6 credits.

Learning Outcomes

1. Learn to dance the Bronze DIVIDA Manual in American Rhythm
2. Develop Bronze level dance technique
3. Gain deeper understanding of the Elements of Dance
4. Develop rhythmic accuracy in movement, ability to dance on time discover phrasing
5. Further develop lead follow skills that will enable you to dance at more advanced levels

DANC 2311. Bronze American Smooth**2 Credits (2)**

Bronze level American Smooth patterns, technique, and partnering with an emphasis on the elements of dance. May be repeated up to 4 credits.

Learning Outcomes

1. Learn to dance the Bronze DIVIDA Manual in International Latin
2. Develop Bronze level dance technique
3. Gain deeper understanding of the Elements of Dance
4. Develop rhythmic accuracy in movement, ability to dance on time discover phrasing
5. Further develop lead follow skills that will enable you to dance at more advanced levels

DANC 2320. Bronze International Latin**2 Credits (2)**

This is the style of Latin dance that is danced around the globe and is featured in the World DanceSport Championships. Students will learn the Bronze Level figures and techniques in four (4) International Style dances: Rumba, Cha Cha, Samba & Jive. May be repeated up to 6 credits.

Learning Outcomes

1. Learn to dance the Bronze DIVIDA Material for the International Latin Syllabus
2. Develop Bronze level dance technique
3. Gain deeper understanding of the Elements of Dance
4. Develop Smooth accuracy in movement, ability to dance on time discover phrasing
5. Further develop lead follow skills that will enable you to dance more advanced levels

DANC 2321. Bronze International Standard**2 Credits (2)**

This is the style of Ballroom dance that is performed around the globe and is featured in the World DanceSport Championships. Learn the

Bronze Level figures and techniques in five (5) International Style dances: Waltz, Tango, Viennese Waltz, Foxtrot & Quickstep. Students will focus on understanding technical elements of dance, memorizing and performing routines. May be repeated up to 6 credits.

Learning Outcomes

1. Learn to dance the Bronze DIVIDA Manual in International Standard
2. Develop Bronze level dance technique
3. Gain deeper understanding of the Elements of Dance
4. Develop Smooth accuracy in movement, ability to dance on time discover phrasing
5. Further develop lead follow skills that will enable you to dance at more advanced levels

DANC 2460. Dance for Musical Theatre**2 Credits (2)**

This course will supplement the dance technique curriculum specifically in support of the study of Musical Theatre. Students will practice various social, world, and theatrical dance forms, learn selections from iconic choreography, experience mock dance auditions, and explore the skill of dance composition for musical theatre repertory. Offered every Spring. May be repeated up to 4 credits.

Prerequisite: DANC 1130 or DANC 1160.

Learning Outcomes

1. Participate successfully in dance techniques and styles outside of the basic tap, jazz, ballet, and modern dance curriculum.
2. Recognize and contextualize musical theatre history and repertory through exposure to significant historical choreography and choreographers.
3. Understand and excel at the skill of taking part in a musical theatre dance audition.
4. Demonstrate improvement in overall physical capability, musicality, and movement memory.
5. Appreciate the practice of musical theatre dance as an artform and a discipline.

DANC 3110. DanceSport Pedagogy: Smooth**3 Credits (3)**

In this teacher education course, students will begin to develop skills necessary in becoming a successful, professional Ballroom Dance Instructor. Students will gain technical mastery of Bronze level figures in the four (4) American Style Smooth Ballroom Dances to include the Waltz, Foxtrot, Tango and Viennese Waltz. Students will gain practical teaching experience in the area of Group Class Instruction with required in class practicums. May be repeated up to 12 credits.

Prerequisite: DANC 2311.

Learning Outcomes

1. Students will understand several philosophies of teaching
2. They will gain teaching skills through practical experience.
3. The students will teach both group and private lessons.
4. The student will gain knowledge about learning styles.

DANC 3114. DanceSport Ensemble**1 Credit (1)**

Involvement with the DanceSport performance ensemble rehearsal and performance process. May substitute for 1 credit of the Contemporary Dance Ensemble course in the Dance Major. May be taken in every semester of undergraduate study or for up to 8 hours credit. Students can enroll by audition only. Consent of the instructor is required. May be repeated up to 8 credits.

Learning Outcomes

1. Collaborate in the process of creating a work of Latin or Ballroom dance.
2. Participate in the process of producing a dance concert with fully realized technical elements including lighting and costumes.
3. Apply the knowledge and skills that are being developed in the study of dance technique, choreography, and pedagogy to the culminating performance experience.
4. Demonstrate a more developed sense of artistry, energy, ingenuity, and presence onstage.

DANC 3130. Ballet III**2 Credits (2)**

The theory and practice of ballet technique at the advanced level. A high level of technical accomplishment, artistry, and professionalism is expected. May be repeated twice for a maximum of 6 credits. May be repeated up to 6 credits.

Prerequisite: DANC 2130.

Learning Outcomes

1. Achieve a greater clarity of line, released use of turnout, and expressivity in port de bras and epaulement, demonstrating improved adagio and allegro skills at the advanced level.
2. Experience the idiosyncrasies of the Cecchetti, Vaganova, and Bournonville techniques and differentiate the Romantic, Classical, Neo-Classical, and Contemporary styles.
3. Apply experience from other disciplines such as modern dance to the exercise of ballet, referencing concepts such as body patterning and energy pathways.
4. Demonstrate an increased level of physical and artistic achievement and professionalism.

DANC 3150. Modern Dance III**2 Credits (2)**

The theory and practice of modern dance technique at the advanced level. A high level of technical accomplishment, artistry, and professionalism is expected. Course may be repeated twice for a maximum of 6 credits. May be repeated up to 6 credits.

Prerequisite: DANC 2150.

Learning Outcomes

1. Delve into movement concepts with a greater sense of risk and challenge at the advanced level.
2. Achieve an increased mastery of alignment, control, and efficiency, taking full advantage of the knowledge of body patterning and energy pathways.
3. Improvise solo, in an ensemble, and with a partner, demonstrating the application of instinct and choice in the authentic body.
4. Increase the student driven problem-solving skill that is essential to a professional modern dance artist.
5. Demonstrate a high level of physical and artistic achievement.

DANC 3250. Contemporary Dance Ensemble**1 Credit (1)**

Involvement with the Contemporary performance ensemble rehearsal and performance process, which may include faculty or student-produced choreography, performance in up to 3 concerts per academic year, and travel to festivals or conferences. Course content will also include practical experience in theatrical production and design for concert dance. This course should be taken by dance majors for at least 4 semesters. May be taken in every semester of undergraduate study or for up to 8 hours credit. By audition only. Permission of the instructor is

required. Course should be taken in conjunction with any Ballet or Modern Dance technique class. Student can enroll by audition only. Consent of the instructor is required. May be repeated up to 8 credits.

Learning Outcomes

1. Collaborate in the process of creating a work of concert dance.
2. Participate in the process of producing a dance concert with fully realized technical elements including lighting and costumes.
3. Apply the knowledge and skills that are being developed in the study of dance technique, choreography, and pedagogy to the culminating performance experience.
4. Demonstrate a more developed sense of artistry, energy, ingenuity, and presence onstage.

DANC 3265. Principles of Choreography I**3 Credits (3)**

An introduction to the basic tools of dance composition, beginning with improvisation and including body, space, time, energy, and elements of design. Offered Fall of even years.

Prerequisite: DANC 2270.

Learning Outcomes

1. Understand the core improvisational concepts of exploration, authenticity, instinct, and choice, and the importance of these ideas to a modern dancer and choreographer.
2. Connect the concepts learned in Modern I to the study of dance improvisation and composition and the concepts of this class to outside work as dancers, students, and citizens.
3. Build a constantly expanding movement vocabulary.
4. Recognize and use the basic components of dance composition- body, space, time, and energy- and explore the roles of invention and communication in the creation of contemporary dances.
5. Develop the communication skills necessary to articulate and defend academic and artistic choices and to give and receive feedback.
6. Begin building a body of creative work and developing a sense of personal values as an individual and as an artist.

DANC 3310. Silver American Rhythm**3 Credits (3)**

Silver level American Rhythm patterns and technique with emphasis on performance. May be repeated up to 9 credits.

Prerequisite: DANC 2310.

Learning Outcomes

1. To enhance advanced dance sport skills beyond Bronze Level

DANC 3311. Silver American Smooth**3 Credits (3)**

Silver level American Smooth patterns and technique with emphasis on performance. May be repeated up to 9 credits.

Prerequisite: DANC 2311.

Learning Outcomes

1. Advance introductory skill levels and enhancing technique towards Gold level

DANC 3320. Silver International Latin**3 Credits (3)**

Students will learn Silver Level syllabus figures in four (4) International Style dances: Rumba, Cha Cha, Samba & Jive and Bronze Level figures in Paso Doble. Continued training and practice in International Style Latin dance technique. May be repeated up to 9 credits.

Prerequisite: DANC 2320.

Learning Outcomes

1. Learn and work towards mastery for the four different styles of dances in Dance Sport

DANC 3321. Silver International Standard**3 Credits (3)**

Learn Silver Level syllabus figures in the five (5) International Style Standard dances: Waltz, Tango, Viennese Waltz, Foxtrot & Quickstep. Students will focus on increased technical understanding to increase their ability in partnering and musicality. May be repeated up to 9 credits.

Prerequisite: DANC 2321.

DANC 3350. Dance Pedagogy I**3 Credits (3)**

This course will include discussion of human development, body patterning, teaching methods, the structure and analysis of course content, and educational values as they apply to teaching creative movement and dance technique. Student must have one semester each of ballet and modern technique or permission of the instructor to enroll. Offered Spring of odd years.

Prerequisite: DANC 2130 and DANC 2150.

Learning Outcomes

1. Understand the basic progression of human development and how the study of Creative Movement and Dance can aid in that development physically, cognitively, and emotionally.
2. Recognize basic sociological and developmental demographic factors and determine how to develop lessons that are appropriate, safe, and constructive.
3. Communicate clearly, assertively, thoughtfully, appropriately, and constructively, recognizing communication as a vital skill in education.
4. Expand upon an existing syllabus of terminology, rhythmic structures, and movement vocabulary that is necessary in a comprehensive elementary dance education.
5. Practice executing a basic dance class structure including short and long-term lesson plans and a variety of teaching methods.
6. Begin developing a system of personal values and a philosophy of education that will engender an effective, ethical, and responsible teaching practice.

DANC 3510V. World Dance**3 Credits (3)**

Examination of dance forms from a cross-cultural perspective, focusing on the role of dance in different cultures around the globe. Same as HNRS 347V. May be repeated up to 3 credits.

Learning Outcomes

1. An understanding of the social importance of dance in diverse cultural settings
2. A familiarity with the importance of dance as a vehicle through which various identities (i.e. cultural, gender and personal), roles (i.e. social and status) and values (i.e., personal and cultural) are identified and expressed.
3. An understanding of dance as a form of non-verbal communication.
4. The ability to discuss and compare culture's dance forms.
5. The ability to recognize how other art forms, religions, and political climates affect cultural identity.

DANC 3610. Dance History**3 Credits (3)**

A survey of dance history from ancient Greece to the 21st century. Major emphasis on the development of dance as a Theatrical artform, on Ballet

and Modern dance in Europe, Russia, and the U.S., and on criticism and theory of choreography and performance. Offered Fall of even years.

Learning Outcomes

1. Quantify factual knowledge of the progression of dance including primitive forms, court dance, ballet, and modern dance.
2. Recognize and contextualize important choreography, dancers, choreographers, composers, events, and phenomena in the history of Western Theatrical dance.
3. Discuss some of the root problems that dance historians face, such as the imperfect nature of documentation.
4. Understand how history shapes contemporary practices in dance.
5. Watch dance critically in order to derive choreographic intention and meaning in the work.
6. Articulate and support an informed point of view, both verbally and in writing, about works of concert dance.

DANC 3710. Somatics and Anatomy of Movement**3 Credits (3)**

This course combines the study of human anatomy and physiology with the principles of Somatics in various forms to address dance movement in terms of body connectivity, efficiency, and access to full physical capability. Student should complete one semester of Modern Dance technique before enrolling. Offered Fall of odd years.

Learning Outcomes

1. Understand the mechanics of basic human anatomy and physiology, including but not limited to bones, muscles, and joints, and explore the way that this quantitative knowledge can help in understanding and developing the dancer's kinesthetic ability.
2. Recognize the vitality of basic components of wellness, including nutrition and injury prevention and treatment, and the impact that these issues have on dance as a professional practice.
3. Integrate the basic principles of various somatic fields outside of ballet and modern dance technique into their personal artistic practice and understand the ways that these additional methods can enhance their physical capability.
4. Apply their knowledge of physiology, wellness, and somatic systems to the study and practice of dance pedagogy.

DANC 3720. Dance, Technology, and Design**3 Credits (3)**

This course explores the integration of technology into the creative process, focusing on projects in graphic design and filmmaking. Students will learn the fundamentals of photography, publicity design, sound editing and design, film documentation of live dance, and Dance for the Camera, and will be introduced to software including Photoshop and Final Cut. Offered Spring of odd years.

Prerequisite: DANC 3265.

Learning Outcomes

1. Demonstrate proficiency with some of the relevant technology, software, and tools that are used in producing digital images and video.
2. Effectively promote themselves and their work in their communities and online as 21st century artists and professionals must be prepared to do.
3. Think more broadly about the capabilities of their creative work, beginning with the choreographic process, with respect for the way that technology can enhance the artform of concert dance, and produce choreography in non-traditional formats.

4. Apply the skill of articulating specific and purposeful artistic choices, as is also being developed in technique, pedagogy, and composition classes.

DANC 4250. Dance Pedagogy II

3 Credits (3)

The theory and practice of dance pedagogy focusing in greater depth on technique and branching into professional preparation, including dance studio management. Coursework will include application of somatic and anatomical principles and diverse teaching methods in many disciplines, plus the creation of a business plan and professional portfolio. Outside field experience in teaching dance technique will be required. Offered Spring of even years.

Prerequisite: DANC 3350.

Learning Outcomes

1. Demonstrate a deepening understanding of both theoretical and practical aspects of dance pedagogy, organizing the knowledge, skills, and artistic content of dance into effective, ethical, and responsible teaching practices.
2. Give and receive constructive critical feedback to and from their peers.
3. More effectively communicate with their students to answer questions and address concerns in the classroom.
4. Integrate artifacts, readings, and teaching tools which facilitate critical thinking and technical development in the dance class.
5. Prepare and implement a plan to establish and run a school of dance as a business.
6. Continue formulating an expanding system of educational values regarding the rights and responsibilities of the teacher, the student, and the institution.

DANC 4265. Principles of Choreography II

3 Credits (3)

Using the tools introduced in Principles of Choreography I, students will explore new methods of generating movement, delving into language, rhythmic and musical studies, props and architecture, sources of inspiration, and meaning making. Students will also be guided to consider the integration of technical and theatrical elements into the choreographic process and the relationship between their artistic work and their personal and social values. Offered Fall of odd years.

Prerequisite: DANC 3265.

Learning Outcomes

1. Surpass the principles learned in Choreography I to create increasingly complex contemporary work, informed by new points of inspiration, broader subject matter, and greater relevance.
2. Demonstrate a deepening understanding of the choreographic process as an exercise in Meaning-Making, using an unlimited movement vocabulary applied with absolute clarity.
3. Articulate the choices in craft and intention that are the underpinnings for the creation of work that is reflective of the artist's personal and social values.
4. Create a wide and diverse body of work, utilizing multiple dancers, various styles of music, and varied creative processes.

DANC 4266. Advanced Independent Projects

1-3 Credits (1-3)

Independent work in dance practice, pedagogy, composition, or theory under faculty guidance. Intended to allow the student to broaden their experience and expertise in an artistic or academic area of dance beyond the published coursework. This course may substitute for Special Topics within the dance major if a project of sufficient depth and rigor

is proposed. Consent of Instructor required. May be repeated up to 6 credits.

Learning Outcomes

1. Demonstrate development in the skill of self-driven learning.
2. Apply strong practices of inquiry and discovery, developed in other cross-disciplinary coursework, to their own personal areas of research and creative interest.
3. Exhibit a deeper understanding of specific artistic, academic, or theoretical field within the study of dance, reflective of the student's goals and values.

DANC 4310. Gold American Rhythm

3 Credits (2+2P)

Advanced level American Rhythm dance technique and partnering work with choreography and performance emphasized. Includes cultural history and pedagogy methods. May be repeated up to 6 credits.

Prerequisite: DANC 3310.

Learning Outcomes

1. To enhance dance sport skills beyond Silver Rhythm

DANC 4311. Gold American Smooth

3 Credits (3)

Gold level American Smooth technique and choreography with an emphasis on performance and competition dancing. May be repeated up to 9 credits.

Prerequisite: DANC 3311.

Learning Outcomes

1. Continue to work towards mastery of dance sport perfection through advanced training

DANC 4320. Gold International Latin

3 Credits (3)

Students will complete all syllabus figures through the Gold level in the Rumba, Cha Cha, Samba, Jive and Paso Doble. Advanced training and practice in International Style Latin dance technique. May be repeated up to 9 credits.

Prerequisite: DANC 3320.

DANC 4321. Gold International Standard

3 Credits (3)

Students will learn Gold Level syllabus figures in the five (5) International Style Standard dances: Waltz, Tango, Viennese Waltz, Foxtrot & Quickstep. Students will focus on physical and cognitive mastery of standard dance technique and elements as well as high-level performance ability, musicality and choreography. May be repeated up to 9 credits.

Prerequisite: DANC 3321.

DANC 4610. DanceSport Certification Preparation

3 Credits (3)

The Professional Certification process offers extraordinary benefits to dance teachers, deeply enriching their dancing and teaching, and greatly expanding their career opportunities. This intensive course is designed to fully prepare students in taking the DVIDA and/or ISTD exams in the Smooth, Rhythm, Standard or Latin dances depending on course offered. See subtitle for specific style being taught in schedule of classes. May be repeated up to 12 credits.

DANC 4710. Senior Project

3 Credits (3)

As a capstone to the undergraduate study of dance, majors will select a research topic of interest to them and use the information gathered to inform the choreographic or pedagogical process. The project will include

both academic and creative components. Students must be in Senior standing. Consent of Instructor required.

Learning Outcomes

1. Synthesize the complete undergraduate study of dance technique, performance, pedagogy, and choreography.
2. Connect the practice of academic research to the choreographic or pedagogical process.
3. Demonstrate a reinforced understanding of dance as an art form and the essential practices of creation, communication, meaning making, and reflection.
4. Present a professional portfolio appropriate to a dance artist, including a cover letter, CV, resume, and statement of teaching philosophy.

DANC 4996. Special Topics

1-3 Credits (1-3)

Specific subjects to be announced in the Schedule of Classes. May be repeated up to 3 credits.

Learning Outcomes

1. Varies

DANC 4997. Problems

1-6 Credits (1-6)

Problems in dance education, dance pedagogy, dance performance and independent work in their solutions. May be repeated up to 6 credits.

Learning Outcomes

1. Varies

DAS-DENTAL ASSISTING

DAS 101. Introduction to Dental Assisting

2 Credits (2)

An introduction to the duties and responsibilities of a dental assistant. Includes brief lessons on head and neck anatomy, chair side assisting, sterilization techniques, dental office emergencies, and dental office management. Restricted to: Community Colleges only.

DAS 111. Bio-Dental Science

4 Credits (4)

An introduction to biomedical and dental sciences with emphasis on head and neck anatomy and tooth morphology. Includes microbiology, general anatomy and physiology, histology and embryology of the oral cavity, pathology and pharmacology as they relate to dentistry. May be repeated up to 4 credits.

Learning Outcomes

1. Demonstrate the ability to express the history of dentistry, important contributions of historical figures to dentistry, and the importance of professional organizations (also DAS 125).
2. Discuss how the study of microbiology relates to dentistry (also DAS 113).
3. Utilize and demonstrate the ability to use basic anatomic terms to describe and identify structures of general human anatomy and physiology (also DAS 113, 121, 130).
4. Identify and describe the structures associated with head and neck anatomy (also DAS 121, 130).
5. Identify, locate, and describe bones muscles, and major vessels of head and neck.
6. Summarize function and location of bones, muscles, and major vessels of the head and neck.

7. Differentiate between primary and permanent dentition by nomenclature, development, eruption patterns, and crown/root morphology (also DAS 129).
8. Explain location, function, and dysfunctions of major salivary glands .
9. Summarize normal and abnormal actions of the temporomandibular joint. 1
10. Identify major areas and function of lymph nodes in the head and neck region. 1
11. Differentiate extra oral and intra oral landmarks (also DAS 115). 1
12. Describe normal prenatal, embryonic and histological development with emphasis on face, neck, oro-facial structures and dentition. 1
13. Demonstrate the ability to be able to distinguish between normal and pathological abnormalities of the oral structures. 1
14. Describe the use/effect of pharmacological agents in dentistry (also DAS 113, 121, 129, 130).

DAS 113. Dental Assisting I

5 Credits (3+2P)

Introduction to chair side assisting procedures, instrumentation, infection control, equipment safety and maintenance, dental office emergencies, and management of pain and anxieties. Restricted to: OEDA majors. Restricted to Alamogordo and Dona Ana campuses. May be repeated up to 5 credits.

Prerequisite: ENGL 1110G, BIOL 1130, and (COMM 1130G or COMM 1115G).

Learning Outcomes

1. Demonstrate their knowledge of four handed dental assisting through clinical application.
2. Demonstrate proper infection and hazard controls.
3. Identify principles and techniques of disinfection and sterilization.
4. List regulatory and advisory agencies related to dentistry, infection control, and materials.
5. Define biofilm and its importance in dentistry.
6. Demonstrate proper ergonomics for the dental assistant and proper adjustment of the assistant stool.
7. Apply proper procedures when seating and dismissing a patient.
8. State appropriate post op instructions for patients after a given procedure.
9. Recognize the importance of preventive education and oral hygiene instructions. 1
10. Recognize the need for continued care and maintenance. 1
11. State customized oral hygiene instructions for patients. 1
12. Demonstrate proper cleaning of removable appliances. 1
13. Demonstrate proper instrument transfer techniques in 4 handed and 6 handed dentistry. 1
14. Diagram the zones of operation and patient positioning.

DAS 115. Dental Radiology

4 Credits (3+1P)

Radiation physics, hygiene, and safety theories. Emphasis on the fundamentals of oral radiographic techniques and interpretation of radiographs. Includes exposure of intra-oral radiographs, quality assurance, radiographic interpretation, patient selection criteria, and other ancillary radiographic techniques. Restricted to: OEDA majors. Restricted to Alamogordo and Dona Ana campuses.

Prerequisite: ENGL 1110G, BIOL 1130, and (COMM 1130G or COMM 1115G).

Learning Outcomes

1. Explain the basic principles and concepts of radiation in general and x-radiation in particular.
2. Identify the component parts and workings of the dental x-ray machine and the production of x-rays.
3. Discuss the effects of ionizing radiation on living tissues including protective and recommended health and safety factors.
4. Use appropriate procedures for selecting films and exposure factors and for processing and evaluating radiographs in the production of quality radiographs.
5. Recognize the characteristics of an acceptable x-ray image, the factors that influence the image, and the importance of quality assurance in imaging.
6. Analyze the legal issues related to dental radiography and the role of the dental radiographer in patient education and patient relations.
7. Demonstrate effective patient management techniques for intraoral and extraoral radiographs, panoramic and alternate imaging modalities utilized in dental radiography.
8. Demonstrate competency in radiographic interpretation including normal radiographic landmarks and radiographic pathology.
9. Demonstrate the radiographic techniques of interproximal, paralleling, bisection, panoramic and occlusal radiography which meet SJC standards for acceptable radiographs. 1
10. 1
11. Demonstrate acceptable radiographic processing, film duplication, evaluation of radiographs, and radiographic equipment maintenance utilizing radiation safety and infection control protocols.

DAS 117. Dental Materials**3 Credits (2+1P)**

Composition, chemical and physical properties, manipulation and uses of dental materials. Laboratory experiences include the application and manipulation of various materials used in dentistry. Restricted to: OEDA majors. Restricted to Alamogordo and Dona Ana campuses. May be repeated up to 3 credits.

Prerequisite: ENGL 1110G, BIOL 1130, and (COMM 1130G or COMM 1115G).

Learning Outcomes

1. Recognize general rules for handling dental materials.
2. Recognize and identify materials science and dentistry.
3. Implement proper infection control and safety in the dental office.
4. Recognize the properties and uses of impression materials.
5. Demonstrate proper disinfection of impressions, dentures and other appliances and materials.
6. Understand the process and demonstrate the technique for taking of alginate impressions and elastomeric impressions.
7. Recognize the properties and demonstrate the use of gypsum materials.
8. Demonstrate the fabrication and trimming of study models.
9. Recognize the properties and demonstrate the use of Adhesive materials, Direct polymeric restorative materials, Amalgam and other direct metallic restorative materials, Polishing materials and abrasion, and Dental cements. 1
10. Demonstrate the steps for fabricating and delivery protocol of an oral appliance. 1
11. Recognize and apply the concepts of vital tooth whitening.

DAS 123. Dental Assisting Practicum**6 Credits (2+4P)**

This course is the clinical component of the program that combines general practice and experiences in the work place. Seminar topics focus on the practicum experiences and critique of performance. May be repeated up to 6 credits.

Learning Outcomes

1. Assist the dentist chairside in general and specialty practices with procedures such as oral evacuation, instrument transfer, dental material preparation, various infection control procedures, and charting.
2. Perform various chairside, lab, and front office duties.
3. Work independently, but with direct supervision from licensed/certified dental assistant, hygienist or dentist in placement of rubber dam, coronal polishing, pit and fissure sealants, and topical fluoride. Receive dental/medical information and take vital signs.
4. Expose, process, and duplicate radiographs in accordance with New Mexico Dental Regulations.
5. Educate patients about dental disease, plaque control, oral hygiene and the role of proper nutrition in managing dental disease. Organize and participate a community project included in this objective.
6. Identify and manage medical emergencies in the dental environment.
7. Create study models, temporary crowns, custom trays, and mix a wide variety of dental materials.
8. Maintain aseptic and safe environment through proper disinfection and sterilization techniques with adherence to safety and OSHA guidelines.
9. Recognize and Adhere to HIPAA. 1
10. Manage the business/financial aspects of a dental practice (i.e. preparing insurance forms, appointment scheduling, answering telephone, bookkeeping, and inventory control). 1
11. Demonstrate ethical and professional behavior in the clinical setting. 1
12. Demonstrate competency in skills needed to function as a dental assistant. To include confidence in patient management, positive attitude about self, members of the dental team, and the dental profession. 1
13. Display professional dependability and ability to promote teamwork. 1
14. Demonstrate ethical decision making processes. 1
15. Define oral pathology and identify the dental assistant's role in this specialty.

DAS 125. Professional Concepts**2 Credits (2)**

Emphasis on the development of professionalism for the dental office. Includes oral communication, psychology, patient relations, problem-solving skills, stress management, and employability in addition to dental jurisprudence and ethics. May be repeated up to 2 credits.

Learning Outcomes

1. Recognize and discuss ethical and legal aspects of the delivery of dentistry as the relate to the practice of dentistry and to dental assisting.
2. Differentiate between verbal and non-verbal communication and discuss the role of communication in dentistry.
3. Utilize problem solving/critical thinking skill, psychology and stress management skills to improve patient and office relationships.
4. Develop strategies to find and secure employment, gain job satisfaction, stay physically fit, and meet career as well as life goals.

5. Identify the value and benefits of membership in professional associations as related to dentistry.

DAS 127. Dental Office Management

2 Credits (2)

This capstone course is an introduction to business office procedures, including telephone management, appointment control, accounts payable, completion of third party reimbursement forms, inventory control data entry for charges and payments, management recall, basic dental computer software and operating basic business equipment. May be repeated up to 2 credits.

Learning Outcomes

1. Identify the duties of the dental office manager and management staff.
2. Compare and contrast manual and computerized systems to process dental information, including billing, payment, appointments, cancellations and clinical notes dealing with written and oral communication.
3. Discuss and practice learned dental office management and communication skills and maintenance and retention of business records.
4. Explain fundamental principles of financial management.
5. Operate basic office equipment.
6. Demonstrate a working knowledge of hospitable customer service management of patient information
7. Business ethics and jurisprudence
8. Identify inventory systems and supply ordering
9. To enable the student to possess skills and knowledge in order to secure employment as a dental office manager. 1
10. Utilize computer and dental software.

DAS 129. Preventive Dentistry

3 Credits (2+1P)

Prevention of dental diseases, oral hygiene instruction, fluoride, community dental health, and nutrition. Development, implementation and evaluation of a community dental health project.

Learning Outcomes

1. Describe the process of dental disease and demonstrate (both verbally and clinically) the oral hygiene methods essential to individual patient needs. Students will demonstrate preventive counseling techniques, behavioral management, and accommodations (where necessary) for children, adults, edentulous, infants, and special persons. Students will articulate the ability to adapt to these individuals' needs, abilities, and health concerns.
2. Discuss the utilization of fluorides employed in the prevention of oral diseases.
3. Demonstrate the ability to obtain, analyze, and evaluate a patient's diet with emphasis on advising the patients on proper nutritional needs and the dental benefits from a health diet.
4. State indications and contraindications for coronal polishing and the objective of polishing. Demonstrate proper coronal polishing techniques on a manikin.
5. Describe the characteristics of current community public health systems and their influence on community and public dental health.
6. Plan, implement, and evaluate a community dental health project based on community needs.
7. Review current literature- choose a topic dealing with dental health, prepare and present a classroom presentation.

DAS 130. Dental Assisting II

4 Credits (2+2P)

Continuation of chair side assisting skills and techniques with a major emphasis on four-handed dentistry. This capstone course includes specialties within dentistry and expanded chair side functions. May be repeated up to 4 credits.

Learning Outcomes

1. Recognize and discuss ethical and legal aspects of the delivery of dentistry as they relate to the practice of dentistry and to dental assisting in New Mexico.
2. Differentiate between verbal and non-verbal communication.
3. Perform the duties of the dental auxiliary in patient education/relations.
4. Demonstrate critical thinking skills in relation to patient treatment.
5. Demonstrate through self and clinical site evaluations progression in chair side assisting skills along with the ability to perform these skills with minimal supervision.
6. Identify and pronounce head and neck anatomy terminology correctly during clinical procedures.
7. Set up the correct armamentarium (including materials) for various dental procedures without assistance (clinical practicum).

DAS 131. Dental Office Management I

3 Credits (3)

Introduction to the field of dental office management with emphasis placed on professional verbal and written communication skills utilized within the dental office. Content includes dental terminology, charting, and back office experience as they relate to dental reception and management.

Prerequisite(s)/Corequisite(s): DAS 101, AHS 120, and AHS 202.

Prerequisite(s): ENGL 1110G. Restricted to Alamogordo, Carlsbad and Dona Ana campuses.

DAS 133. Dental Office Management II

3 Credits (3)

Places emphasis on computer programs specifically designed for dental office management (Dentrix, Sof Dent, etc.) Expanded course content on oral communication and telephone skills, appointment scheduling, patient relations, stress management solutions, and comprehensive critical thinking/problem solving skills.

Prerequisite(s)/Corequisite(s): AHS 202. Prerequisite(s): ENGL 1110G, DAS 101, and AHS 120. Restricted to Alamogordo, Carlsbad and Dona Ana campuses.

DAS 155. Special Topics

1-6 Credits

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 12 credits.

Prerequisite: consent of instructor.

DHYG - DENTAL HYGIENE/HYGIENIST

DHYG 110. Preclinical Dental Hygiene

3 Credits (3)

Basic scientific principles and current theory, prevention of disease transmission, ethical and professional treatment of patients, clinical learning preparation, and introduction to comprehensive patient care. Offered concurrently with DHYG 112 to provide dental hygiene students with introductory knowledge, skills and attitudes to function in the clinical setting. May be repeated up to 3 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 112. Preclinical Dental Hygiene Lab**3 Credits (12P)**

Clinical application to basic theories and procedures used in dental hygiene practice. Techniques of instrumentation used in performing diagnostic, preventive and therapeutic services utilized when providing comprehensive patient care. Student will practice these techniques on manikins and student partners in the clinic. May be repeated up to 3 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 114. Oral Histology and Embryology**2 Credits (2)**

Introduction and description of general histology and embryology with emphasis on the microscopic structures of enamel, dentin, pulp, cementum, periodontal ligament, bone, oral mucosa, epithelial attachment and development of orofacial structures. May be repeated up to 2 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 116. Head and Neck Anatomy**3 Credits (3)**

Comprehensive study of the anatomy of the head and neck regions, including skeletal, nervous, circulatory, lymphatic, and muscular systems. May be repeated up to 3 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 117. Dental Anatomy**2 Credits (2+1P)**

A detailed study of nomenclature, morphologic characteristics, and physiologic relationships of human primary and permanent teeth as related to the clinical practice of dental hygiene. Laboratory activities develop observation and dexterity skills. May be repeated up to 2 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 118. Dental Radiology**4 Credits (3+1P)**

Study of radiation physics, hygiene and safety theories. Fundamentals of oral radiographic techniques and interpretation of radiographs. Includes exposure of intra-oral radiographs, quality assurance, radiographic interpretation, patient selection criteria, ancillary radiographic techniques and application to dental hygiene treatment. Restricted to Community College campuses.

Learning Outcomes

1. Explain the basic principles and concepts of radiation in general and x-radiation in particular.
2. Identify the component parts and workings of the dental x-ray machine and the production of x-rays.
3. Discuss the effects of ionizing radiation on living tissues including protective and recommended health and safety factors.
4. Use appropriate procedures for selecting films and exposure factors and for processing and evaluating radiographs in the production of quality radiographs.
5. Recognize the characteristics of an acceptable x-ray image, the factors that influence the image, and the importance of quality assurance in imaging.
6. Analyze the legal issues related to dental radiography and the role of the dental radiographer in patient education and patient relations.
7. Demonstrate effective patient management techniques for intraoral and extraoral radiographs, panoramic and alternate imaging modalities utilized in dental radiography.
8. Demonstrate competency in radiographic interpretation including normal radiographic landmarks and radiographic pathology.

9. Demonstrate the radiographic techniques of interproximal, paralleling, bisection, panoramic and occlusal radiography which meet SJC standards for acceptable radiographs. 1

10. Demonstrate acceptable radiographic processing, film duplication, evaluation of radiographs, and radiographic equipment maintenance utilizing radiation safety and infection control protocols.

DHYG 120. Dental Hygiene Theory I**3 Credits (3)**

Continuation of the theoretical basis for dental hygiene clinical practice. Emphasis on emergency care, planning dental hygiene care, health promotion and disease prevention, oral rehabilitation and care of appliances, modifications of dental hygiene care through the life-span, and an introduction to medically comprised patients. May be repeated up to 3 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 122. Clinical Dental Hygiene I**3 Credits (16P)**

Application of dental hygiene procedures on a variety of clinical patients under direct supervision of faculty. Emphasis on patient assessment and diagnosis, treatment procedures, appointment planning and prevention techniques. Theory is simultaneously related to practical experience. Offered concurrently with DHYG 120. May be repeated up to 3 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 124. General and Oral Pathology**3 Credits (3)**

Introduction to general pathology with focused study of diseases and disorders of the oral cavity and their interrelationship with body systems; developmental anomalies of the teeth and jaws; manifestations of disease in the oral cavity, head and neck. May be repeated up to 3 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 126. Periodontology**3 Credits (3)**

Study of normal and diseased periodontium to include the structural, functional and environmental factors. Emphasis on etiology, pathology, evaluation of disease, treatment modalities, and therapeutic and preventative periodontics relative to the hygienist's role as a co-therapist in a contemporary practice setting. May be repeated up to 3 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 132. Clinical Dental Hygiene II**2 Credits (2)**

Continuation of clinical skills, patient assessment and diagnosis, treatment and appointment planning, preventive techniques and application of dental hygiene procedures at an intermediate level under the direct supervision of faculty. Clinical-based instruction helps students synthesize new knowledge, apply previous knowledge, and gain experience managing the workflow. Theory is simultaneously related to practical experience. May be repeated up to 2 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

Prerequisite(s): "C" or above in DHYG 120, DHYG 122, DHYG 124, DHYG 126, DHYG 134.

Corequisite(s): DHYG 218.

DHYG 134. Dental Materials**3 Credits (2+1P)**

Study of the composition, chemical and physical properties, manipulations, and uses of dental materials. Emphasis on materials and procedures for which the dental hygienist is directly responsible.

Laboratory experiences include application and manipulation of various materials used in dentistry. Restricted to Community College Campuses only. May be repeated up to 3 credits.

Learning Outcomes

1. Recognize general rules for handling dental materials.
2. Recognize and identify materials science and dentistry.
3. Implement proper infection control and safety in the dental office.
4. Recognize the properties and uses of impression materials.
5. Demonstrate proper disinfection of impressions, dentures and other appliances and materials.
6. Understand the process and demonstrate the technique for taking of alginate impressions and elastomeric impressions.
7. Recognize the properties and demonstrate the use of gypsum materials.
8. Demonstrate the fabrication and trimming of study models.
9. Recognize the properties and demonstrate the use of Adhesive materials, Direct polymeric restorative materials, Amalgam and other direct metallic restorative materials, Polishing materials and abrasion, and Dental cements. 1
10. Demonstrate the steps for fabricating and delivery protocol of an oral appliance. 1
11. Recognize and apply the concepts of vital tooth whitening.

DHYG 210. Dental Hygiene Theory III

2 Credits (2)

Advanced theory of dental hygiene and information on periodontal therapies relative to the hygienist's role as a co-therapist in clinical practice. Continuation of the study of dental hygiene care for medically comprised patients and an introduction to special needs patients. May be repeated up to 2 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 212. Clinical Dental Hygiene III

4 Credits (16P)

Continuation of clinical skills, patient assessment and diagnosis, treatment and appointment planning, preventive techniques and applications of dental hygiene procedures at the intermediate to competent level under supervision of faculty. Emphasis on dental hygiene treatment for the medically compromised and periodontally involved patients. Theory is simultaneously related to practical experience. Offered concurrently with DHYG 210. May be repeated up to 4 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 214. Dental Pharmacology

3 Credits (3)

Study of the pharmacologic aspects of drugs and drug groups with which the dentist and dental hygienist are directly and indirectly concerned. Emphasis is placed on nomenclature, origin, physical and chemical properties, preparation, modes of administration and effects of drugs upon the body systems. May be repeated up to 3 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 215. Medical and Dental Emergencies

2 Credits (2)

This course provides an overview of medical and dental emergencies encountered most frequently in the dental setting. It also provides the student with knowledge and techniques on how to address those emergencies should they occur. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 217. Research Methodology

2 Credits (2)

This course provides an introduction to the principles and application of research methods in social, behavioral and medical research. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 218. Pain and Anxiety Management

2 Credits (2)

Study of the application of various physical, chemical, and psychological modalities to the prevention and treatment of preoperative and postoperative patient anxiety and pain. Emphasis on administration of local anesthesia and nitrous oxide. May be repeated up to 2 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 219. Pain and Anxiety Management Clinical

1 Credit (4P)

Clinical application of concepts learned in DHYG 218. Emphasis on the administration and techniques of local anesthesia and monitoring nitrous oxide. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

Prerequisite(s): DHYG 218.

DHYG 220. Dental Hygiene Theory IV

3 Credits (3)

Theoretical preparation for advanced clinical practice. In-depth study of dental hygiene care for patients with special needs. Case Study presentations and a Board Review are utilized to demonstrate the synthesis of comprehensive dental hygiene knowledge, skills and attitudes. The most current dental and dental hygiene technology will be reviewed as it related to clinical practice. May be repeated up to 3 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 222. Clinical Dental Hygiene IV

4 Credits (16P)

Clinical sessions combine basic and advanced dental hygiene skills with time management techniques essential for private practice. Comprehensive patient care to include assessment, dental hygiene diagnosis, treatment planning, implementation and evaluation of dental care, nonsurgical periodontal therapy, adjunct clinical procedures, ultrasonic instrumentation, patient management, sealants, and comprehensive programs for control of oral diseases will be emphasized. Theory is simultaneously related to practical experience. Students are encouraged to develop independent decision-making with minimal faculty supervision. May be repeated up to 4 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 224. Principles of Practice

2 Credits (2)

Examination of the dental hygienist's role in both traditional and non-traditional employment settings. Career planning, resume preparation and interviewing are practices. An understanding of the law, professional ethics of dental hygiene and the need for lifelong learning are emphasized. Future roles of the dental hygienist and emerging issues in dental hygiene will be explored. May be repeated up to 2 credits. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 225. Dental Public Health Education

3 Credits (3)

Study of principles and concepts of community public health and dental health education. Emphasis on dental epidemiology and statistical methods, community assessment, educational planning, implementation, and evaluation, scientific review of literature, and classroom presentation. Restricted to: DHYG majors. Restricted to Community Colleges campuses only.

DHYG 255. Special Topics in Dental Hygiene**1-6 Credits (1-6)**

Study of special topics related to the advanced practice of dental hygiene. May include educational methodology as well as applications in clinical practice, research, or community service. Consent of instructor required. Restricted to: Community Colleges only. Restricted to DHYG majors.

DMS-DIAGNOSTIC MED SONOGRAPHY

DMS 100. Introduction to Clinical Practicum**1 Credit (1)**

Introduction to working in the medical environment. Includes preparation for clinical internship and observation hours in the ultrasound department. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 101. Introduction Sonography/Patient Care**2 Credits (2)**

Introduction to the careers in sonography, terminology, medical ethics, scanning planes, applications of ultrasound, professional standards and patient care.

Learning Outcomes

1. Students will describe essential functions of the sonographer in the health care setting.
2. Students will distinguish key patient care differences based on patient demographics.
3. Students will develop and apply professional ethics in line with industry standards.

DMS 105. Introduction to Clinical Practicum II**1 Credit (1P)**

Development of technical and professional aspects of diagnostic ultrasound in a hospital or clinical setting at the developmental level. Ongoing reinforcement and broadening of knowledge base related to hospital procedures and policies. Continued observation, assistance and performance of patient care and sonographic duties under direct supervision.

Learning Outcomes

1. Demonstrate proficiency in patient care skills.
2. Recognize sonographic anatomy.
3. Assist with basic sonographic procedures in the clinical setting.
4. Describe aspects of the clinical experience.

DMS 116. Vascular Technology I**2 Credits (2)**

Review of basic ultrasound physics and principles, peripheral vascular anatomy, hemodynamics, Doppler evaluation, peripheral vascular scanning techniques, physiologic testing and the carotid arteries and the peripheral vascular system. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 116 L. Vascular Technology I Lab**1 Credit (2P)**

Includes protocol development, scanning techniques, recognition of anatomical relationships and the normal ultrasound appearance of the carotid arteries and peripheral vasculature utilizing real-time sonographic equipment including Doppler. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 130. Pelvic Sonography**2 Credits (2)**

Includes the anatomy, sectional anatomy and normal physiology of the pelvic structures; including the uterus, ovaries, prostate, pelvic muscles, lower GI, appendix and vessels as well as scanning techniques, sonographic appearance and Doppler evaluation of the pelvis. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

Learning Outcomes

1. Students will describe the relational anatomy of the pelvic organs.
2. Students will distinguish the sonographic appearance of male and female pelvic anatomy.
3. Students will discuss the physiology of pelvic organ systems.
4. Students will correlate the physiologic cycles of pelvic organs with the appropriate sonographic appearances.

DMS 130 L. Pelvic Sonography Lab**1 Credit (2P)**

Includes protocol development, scanning techniques, recognition of anatomical relationships and the normal ultrasound appearance of the pelvic structures including the uterus, ovaries, prostate, lower gastrointestinal system, appendix and pelvic muscles utilizing real-time sonographic equipment including Doppler. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 140. Abdominal Sonography**3 Credits (3)**

Includes the anatomy, sectional anatomy and normal physiology of prevertebral vessels, liver, biliary system, pancreas, upper gastrointestinal system, kidneys, adrenals, and spleen as well as scanning techniques, sonographic appearance and Doppler evaluation of the deep abdominal organs. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 140 L. Abdominal Sonography Lab**1 Credit (4P)**

Includes protocol development, scanning techniques, recognition of anatomical relationships and the normal ultrasound appearance of prevertebral vessels, liver, biliary system, pancreas, upper gastrointestinal system, kidneys and spleen utilizing real-time sonographic equipment including Doppler. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 150. Sonographic Principles and Instrumentation I**1 Credit (1)**

Includes the fundamental properties and mathematical relationships between variables of wave parameters, acoustic variables, attenuation, pulsed wave operation, transducers, system operation, Doppler, and artifacts utilizing real-time sonographic equipment. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 160. 1st Trimester Obstetric Sonography**1 Credit (1)**

Includes the embryology, anatomy, sectional anatomy, normal physiology, biometrics, assessment, and sonographic appearance of the 1st trimester fetus, placenta, uterus and adnexa as well as scanning techniques according to recognized protocols. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 165. 2nd/3rd Trimester Obstetric Sonography**1 Credit (1)**

Includes the anatomy, sectional anatomy, normal physiology, biometrics, assessment, and sonographic appearance of the 2nd and 3rd trimester fetus, placenta, uterus, and adnexa as well as scanning techniques

according to recognized protocols. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 170. Clinical Practicum I**1 Credit (8-10P)**

Development of technical and professional aspects of diagnostic ultrasound in a hospital or clinical setting at the developmental level. Ongoing reinforcement and broadening of knowledge base related to hospital procedures and policies. Continued observation, assistance and performance of patient care and sonographic duties under direct supervision. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

Learning Outcomes

1. Develop professional skills necessary in the clinical environment.
2. Perform basic sonographic procedures with minimal assistance from preceptors.
3. Assist with complex/advanced sonographic procedures under the guidance of preceptors.

DMS 180. Clinical Practicum II**4 Credits (4)**

Development of technical and professional aspects of diagnostic ultrasound in a hospital or clinical setting at the beginner level. Ongoing reinforcement and broadening of knowledge base related to hospital procedures and policies. Continue observation, assistance and performance of patient care and sonographic duties under direct supervision. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

Prerequisite: DMS 170.

Learning Outcomes

1. Students will demonstrate general and sonographic knowledge to function as a member of the healthcare team.
2. Students will identify and interpret data from patient charts.
3. Students will perform a broad range of general sonographic examinations with minimal to moderate assistance.
4. Students will demonstrate effective oral and written communication skills.

DMS 201. Applied Sonographic Procedures**1 Credit (8P)**

Advances scanning skills, system optimization, anatomic recognition of abdominal and pelvic structures utilizing real-time sonographic equipment including Doppler. Includes sonographic evaluation of the first trimester pregnancy and normal fetus. Restricted to: DMS majors. Restricted to Las Cruces campus only.

DMS 216. Vascular Technology II**2 Credits (2)**

Includes the pathology and pathophysiology of the vascular system, scanning techniques, clinical presentation, ultrasound appearance and Doppler evaluation seen with pathological conditions of the carotid arteries, deep and peripheral vascular systems. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 226. Sonographic Case Studies I**1 Credit (1)**

Includes integration of didactic knowledge, clinical presentation, laboratory values, sonographic appearance and related medical imaging of a variety of pathological conditions through a variety of case analysis and presentations. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 227. Sonographic Case Studies II**1 Credit (1)**

Continuation of DMS 226, integration of didactic knowledge, clinical presentation, laboratory values, sonographic appearance and related medical imaging of a variety of pathological conditions through a variety of case analysis and presentations. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 230. Gynecologic Pathology**2 Credits (2)**

Includes the pathology and pathophysiology of the female reproductive system, scanning techniques, clinical presentation, ultrasound appearance and Doppler evaluation seen with pathological conditions of the uterus, ovaries, and adnexa. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 240. Abdominal Pathology I**2 Credits (2)**

Includes the pathology and pathophysiology of abdominal structures of the prevertebral vessels, liver, biliary system, pancreas, spleen and gastrointestinal system; scanning techniques, ultrasound appearance, clinical presentation and Doppler evaluation seen with pathological conditions. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 245. Abdominal Pathology II**2 Credits (2)**

Includes the pathology and pathophysiology of abdominal structures of the genitourinary system, spleen, retroperitoneum, adrenal glands, abdominal wall and prostate; scanning techniques, ultrasound appearance, clinical presentation and Doppler evaluation seen with pathological conditions. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 248. Pediatric Sonography**2 Credits (2)**

Includes the anatomy of the brain, skull, spine, hips, and normal developmental changes as well as pathology and pathophysiology of specific conditions that affect the premature infant, newborn and pediatric population across a variety of body systems. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 250. Sonographic Principles and Instrumentation II**3 Credits (3)**

Includes properties of sound and its use in diagnostic imaging, artifacts, system operation, Doppler, basic hemodynamics, image optimization, bio effects, quality assurance, and new technologies in ultrasound imaging. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 260. High Risk Obstetric Sonography**3 Credits (3)**

Includes congenital malformations of the developing fetus, high risk pregnancies, multiple gestation, maternal conditions and invasive procedures. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 270. Clinical Practicum III**3 Credits (32P)**

Continued development of technical and professional aspects of diagnostic ultrasound in a hospital or clinical setting at an intermediate level. Ongoing reinforcement and broadening of knowledge base related to hospital procedures and policies. Continued observation, assistance and performance of patient care and sonographic duties under limited supervision. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

Learning Outcomes

1. Consistently demonstrate professional skills and etiquette in the clinical setting.
2. Perform basic and advanced sonographic procedures with minimal assistance from preceptors.
3. Perform complex sonographic procedures with guidance from preceptors.
4. Analyze clinical experiences to broaden patient care skills.

DMS 280. Clinical Practicum IV**5 Credits (20P)**

Application of technical and professional aspects of diagnostic ultrasound in a hospital or clinical setting at a proficient level. Ongoing reinforcement and broadening of knowledge base related to hospital procedures and policies. Continued observation, assistance and performance of patient care and sonographic duties under limited supervision. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 290. Small Parts & Superficial Structures**2 Credits (2)**

Includes anatomy, pathology and pathophysiology, protocol development, scanning techniques, recognition of anatomical structures and the normal and pathological ultrasound appearance of the breast, thyroid, neck, scrotum, non-cardiac chest and musculoskeletal ultrasound. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 290 L. Small Parts & Superficial Structures Lab**1 Credit (3P)**

Includes scanning of various small part exams and phantoms, including breast, thyroid, scrotal, non-cardiac chest, and musculoskeletal ultrasound exams. Includes targeted scanning exercises to enhance sonographic skills.

Learning Outcomes

1. Demonstrate proficiency in scanning breast and testicular phantoms.
2. Recognize and document sonographic anatomy of the thyroid and neck structures.
3. Demonstrate understanding of limited musculoskeletal sonographic examinations.
4. Complete targeted scan exercises in a variety of body systems.

DMS 291. Registry Preparation: OB/GYN**1 Credit (1)**

Registry preparation mock examinations over materials covered in Obstetric and Gynecological ultrasound. Students must pass this course with a 74% or better OR pass national certification in OB/GYN Sonography. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 292. Registry Preparation: Abdomen**1 Credit (1)**

Registry preparation mock examinations over materials covered in abdominal ultrasound including small parts and superficial structures. Students must pass this course with a 74% or better OR pass ARDMS national certification exam in Abdominal Sonography. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

DMS 293. Registry Preparation: Vascular**1 Credit (1)**

Registry preparation mock examinations over materials covered in vascular ultrasound. Students must pass this course with a 74% or better OR pass national certification in Vascular Technology. Restricted to: DMS majors. Restricted to Community Colleges campuses only.

Learning Outcomes

1. Identify and describe vascular anatomy.
2. Recognize vascular pathology based on sonographic images.
3. Describe hemodynamic changes associated with vascular pathology.
4. Demonstrate understanding of patient care, exam protocols, and department procedures.

DMS 294. Musculoskeletal Sonography I**3 Credits (3)**

Includes the anatomy, sectional anatomy, and normal physiology, and pathology of musculoskeletal joints; including the shoulder, elbow, wrist, and hand, as well as the sonographic appearance and protocols for scanning these exams.

Learning Outcomes

1. Students will describe the normal and pathological anatomy of upper extremity musculoskeletal joints.
2. Students will distinguish the sonographic appearance of upper extremity musculoskeletal structures.
3. Students will correlate clinical presentation of symptoms with upper extremity musculoskeletal pathologies.
4. Students will produce diagnostic-quality sonographic images of upper extremity musculoskeletal structures.

DMS 295. Musculoskeletal Sonography II**3 Credits (3)**

Includes the anatomy, sectional anatomy, and normal physiology, and pathology of musculoskeletal joints; including the hip, knee, calf, ankle, and foot, as well as the sonographic appearance and protocols for scanning these exams.

Learning Outcomes

1. Students will describe the normal and pathological anatomy of lower extremity musculoskeletal joints.
2. Students will distinguish the sonographic appearance of lower extremity musculoskeletal structures.
3. Students will correlate clinical presentation of symptoms with lower extremity musculoskeletal pathologies.
4. Students will produce diagnostic-quality sonographic images of lower extremity musculoskeletal structures.

DRFT-DRAFTING

DRFT 100. Introduction to Architecture, Engineering, & Construction**3 Credits (3)**

Introduction to and exploration of careers in the fields of architecture, engineering, and construction. Specific fields to include: architecture, civil engineering, mechanical engineering, structural engineering, engineering technology, residential construction, commercial construction, geographical information systems (GIS), surveying, sustainable design, and green building

Learning Outcomes

1. Prepare accurate written technical documents,
2. Produce drawing documents that are technically sound,
3. Develop and practice productive work skills, and
4. Upgrade technical knowledge and skills to keep pace with real-world changes
5. Describe different career options in architecture, engineering, and construction,
6. Define the roles of different design professionals and support staff,
7. Explain related educational and professional licensing requirements,

8. Articulate employer expectations,
9. Explore related courses and programs of study at DACC and NMSU, and 1
10. Develop good workplace skills and professional, productive work habits.

DRFT 105. Technical Drawing for Industry

3 Credits (2+2P)

Technical sketching, basic CAD, and interpretation of drawings with visualization, speed and accuracy highly emphasized. Areas of focus include various trades such as machine parts, welding, heating and cooling, and general building sketches/plan interpretation.

DRFT 108. Drafting Concepts/Descriptive Geometry

2 Credits (1+2P)

Basic manual drafting skills, sketching, terminology and visualization. Graphical solutions utilizing applied concepts of space, planar, linear and point analyses. Metric and S.I. units introduced.

DRFT 109. Computer Drafting Fundamentals

3 Credits (2+2P)

Introduction to principles and fundamentals of drafting using both manual drawing techniques and computer-aided drafting (CAD) applications. Crosslisted with: E T 109 and C E 109. May be repeated up to 3 credits.

Learning Outcomes

1. Describe related career options/pathways.
2. Explain and apply common drafting terms, concepts, and conventions.
3. Utilize various AutoCAD commands and Coordinate Entry methods to produce accurate and precise Two-Dimensional drawings.
4. Setup AutoCAD working environment, drawings, styles, and applicable settings.
5. Navigate the AutoCAD user interface efficiently.
6. Apply different drafting methods, strategies, and processes.
7. Utilize AutoCAD to produce basic 2D CAD working drawings.
8. Measure utilizing scales accurately.
9. Create drawings with different scales and units. 1
10. Plot drawings produced in AutoCAD at various scales and on various sheet sizes. 1
11. Utilize the two Drawing Environments: Paper Space and Model Space. 1
12. Manage AutoCAD drawing files.

DRFT 112. Drafting Concepts/Computer Drafting Fundamentals I

4 Credits (2+4P)

Basic drafting skills, terminology, and visualization. Introduction to principles and fundamentals of computer-aided drafting. Same as E T 106.

Prerequisites: OECS 207, OECS 125 or consent of instructor.

DRFT 113. Drafting Concepts/Computer Drafting Fundamentals II

4 Credits (2+4P)

Drafting for mechanical/industrial applications; machine part detailing, assemblies in orthographic, isometric, auxiliary, oblique, and sectional views. Two-dimensional AutoCAD with introduction to 3-D AutoCAD. Same as E T 216. Restricted to: Community Colleges only.

Prerequisite: DRFT 112.

DRFT 114. Introduction to Solid Modeling

3 Credits (2+2P)

Introduction to 3D mechanical parametric solid modeling and basic assembly creation utilizing Autodesk Inventor as well as other applicable solid modeling software packages. Creation of 2D working drawings from 3D solid models and 3D models for machining/manufacturing purposes will be emphasized. Application of Geometric Dimensioning and Tolerancing (GD&T), material properties, and industry standard fastening and manufacturing practices methods will be introduced. Restricted to Community Colleges campuses only.

Prerequisite: DRFT 109.

Learning Outcomes

1. Create 3D solid models.
2. Read and interpret 2D technical drawings.
3. Read and interpret 3D technical drawings.
4. Define and sketch the standard, sectional, and auxiliary views of a given object.
5. Annotate working mechanical drawings following industry standards.
6. Dimension working mechanical drawings following industry standards.
7. Identify standard threads callouts.
8. Identify standard fasteners callouts.
9. Identify standard metal shapes and sizes. 1
10. Produce sheet and assembly drawings. 1
11. Manage Electronic files.

DRFT 115. General Construction Safety

3 Credits (3)

Overview of general construction safety related to building, highway and road construction, and surveying field work for entry-level individuals. Students will also have the opportunity to earn a 10-hour construction industry OSHA card.

Learning Outcomes

1. Discuss the general history of OSHA.
2. Discuss the general history of the U.S. safety movement.
3. Utilize the OSHA web site as a basic safety resource.
4. Utilize the Call Before You Dig website as a basic safety resource.
5. Recognize construction site hazards.
6. Identify construction site hazards.
7. Avoid construction site hazards.
8. Follow proper basic first aid procedures in an emergency.
9. Avoid exposure to blood-borne pathogens in an emergency situation. 1
10. Interpret hazard communication. 1
11. Recognize proper lifting techniques. 1
12. Recognize personal protective equipment.

DRFT 124. Introduction to Geometric Dimensioning and Tolerancing

3 Credits (2+2P)

Introduction to geometric dimensioning and tolerancing (GD&T) for the mechanical CAD drafting, solid modeling, mechanical engineering technology, mechanical engineering, and manufacturing industries. Related industry standard finishes and fasteners will also be introduced and explored.

Prerequisite(s)/Corequisite(s): DRFT 114. Restricted to Community Colleges campuses only.

DRFT 130. General Building Codes

3 Credits (2+2P)

Interpretation of the Building Code, local zoning codes, A.D.A. Standards and the Model Energy Code to study construction and design

requirements and perform basic plan checking. Restricted to: Community Colleges only.

Learning Outcomes

1. Navigate, interpret, and apply Codes as necessary to meet different agency or governmental entities' requirements for their approval.
2. Develop critical thinking strategies to develop a preliminary design and plan to check for code compliance.
3. Classify occupancy classification of buildings and structures.
4. Determine "Location on Property" requirements of buildings and structures.
5. Classify occupant loads of buildings and structures.
6. Calculate exit requirements of buildings and structures.
7. Determine fire rating of building elements.
8. Define specific construction requirements based on types of construction and materials.
9. Determine the number of plumbing fixture counts based on occupancy group and occupant load. 1
10. Determine accessibility requirements of buildings and structures.

DRFT 135. Electronics Drafting I

3 Credits (2+2P)

Drafting as it relates to device symbols; wiring, cabling, harness diagrams and assembly drawings; integrated circuits and printed circuit boards; schematic, flow and logic diagrams; industrial controls and electric power fields. Drawings produced using various CAD software packages.

Prerequisites: DRFT 108 and DRFT 109.

DRFT 143. Civil Drafting Fundamentals

3 Credits (2+2P)

Introduction to drafting in the field of Civil Engineering. Drawings, projects, and terminologies related to topographic, contour drawings, plan and profiles, and street/highway layout. Restricted to Community Colleges only. Taught with E T 143 and SUR 143.

Prerequisite: DRFT 109.

Learning Outcomes

1. Use appropriate drafting/technical terminology.
2. Identify of the different types of Civil Engineering work drawing plan sets.
3. Understanding and the use of the terminologies used in the industry.
4. Use AutoCAD Civil 3D.
5. Enter appropriate data into AutoCAD software in order to retrieve necessary outcomes.
6. Plot/Print different types of civil engineering working plans.
7. Read, interpret and understand engineering drawings.
8. Define and understand the different types of engineering drawings.

DRFT 151. Construction Principles and Print Reading

3 Credits (2+2P)

Introduction to construction materials, methods, and basic cost estimating and print reading applicable in today's residential, commercial, and public works industry. Instruction by print reading and interpretation, field trips, and actual job-site visits and progress evaluation.

Learning Outcomes

1. Read, Interpret, and Reference Construction Working Drawings and Construction Specifications.
2. Perform basic sketches related to construction details, plans, etc.
3. Apply standard working drawing/drafting practices including appropriate scale, units, linetypes, text, dimensions, etc.

4. Differentiate among the various construction/design disciplines including Civil/Survey, Structural, Architectural, Mechanical, Plumbing, Electrical, etc.
5. Know the basic principles related to the following processes: Construction Document Development, Bidding, Permitting, and Construction.
6. Identify common construction materials and quality control practices associated with the various construction disciplines listed above.
7. Know basic construction methods associated with the various construction disciplines listed above.
8. Conduct safe construction observations for the sole purpose of documenting construction materials, methods, and progress.
9. Utilize proper, technical construction terminology. 1
10. Conduct material research, and utilize the organization standards of the Construction Specifications Institute. 1
11. Document construction phases by visiting construction sites and developing a digital, construction project portfolio.

DRFT 153. Survey Drafting Applications

3 Credits (2+2P)

Introduction to drafting in the field of survey engineering. Drawings, projects and terminologies related to Point Data, topography, land/ boundary surveys, legal descriptions and plat surveys. Using the current Autodesk software. Taught with SUR 143. Restricted to: Community Colleges only.

Prerequisite: DRFT 109.

Learning Outcomes

1. Use appropriate drafting/technical terminology.
2. Identify different types of survey work drawings.
3. Understand and use terminologies used in the industry.
4. Use AutoCAD Civil 3D.
5. Enter appropriate data into AutoCAD software in order to retrieve necessary outcomes.
6. Plot/Print different types of civil engineering working plans
7. Read, interpret and understand surveying drawings.

DRFT 163. Civil Infrastructure Detailing

3 Credits (2+2P)

Infrastructure detailing related to civil engineering projects including: ponding, roadway, sewer, and storm-water structures; concrete foundations; and related utility details. Restricted to Community Colleges campuses

Prerequisite(s): DRFT 109.

Learning Outcomes

1. I. Prepare accurate written technical documents,
2. Produce drawing documents that are technically sound,
3. Develop and practice productive work skills, and
4. Upgrade technical knowledge and skills to keep pace with real-world changes DRFT 163 Course Competencies I. Create applicable details utilizing AutoCAD and other software packages,
5. Interpret local design standards, applicable codes, and industry practices,
6. Apply local design standards,
7. Apply applicable codes,
8. Follow standards industry practices,
9. Design applicable details within given parameters, and

- Develop good workplace skills and professional, productive work habits.

DRFT 164. Intermediate Mechanical Drafting/Solid Modeling

3 Credits (2+2P)

Intermediate 3D mechanical parametric solid modeling and assembly creation utilizing Solidworks as well as other applicable parametric modeling software packages. Creation of 2D working drawings from 3D solid models, 3D models for machining/manufacturing, and assemblies will be emphasized. Geometric Dimensioning and Tolerancing (GD&T), material properties, and industry standard fastening and manufacturing practices and methods will be further explored. Restricted to Community Colleges campuses only.

Prerequisite/Corequisite: DRFT 114.

Learning Outcomes

- Recognize standard views of a given object.
- Recognize auxiliary views of a given object.
- Dimension working mechanical drawings following appropriate industry standards.
- Produce sectional views of a given object.
- Apply Geometric Dimensioning and Tolerancing (GDT) practices and standards to working drawings.
- Identify standard thread and fastener callouts.
- Apply standard thread and fastener specifications.
- Create 3D solid models.
- Produce sheet and assembly drawings. 1
- Manage Electronic files.

DRFT 165. Introduction to Building Information Modeling

3 Credits (2+2P)

Introduction to Building Information Modeling (BIM) in the development of virtual 3D building models, construction documents, renderings and basic animations related to architectural, structural, and mechanical/electrical/plumbing building components. Utilizes the latest BIM technologies in the integration one, parametric BIM. Restricted to Community Colleges campuses only.

DRFT 180. Residential Drafting

3 Credits (2+2P)

Basic residential drafting including, floor plans, foundation plans, sections, roof plans, exterior and interior elevations, and site plans. Applicable residential building and zoning codes, construction methods and materials, adaptable residential design, and drawing and sheet layout for architectural drafting will be introduced. Restricted to Community Colleges campuses only.

Prerequisite(s): DRFT 109.

DRFT 181. Commercial Drafting

3 Credits (2+2P)

Drafting principles, plan coordination, and code analysis applicable in the development of working drawings for commercial, public, and industrial building projects. Students will utilize National Cad Standards, ADA Standards, and will be introduced to modern office practice. Restricted to Community Colleges campuses.

Prerequisite: DRFT 109.

Learning Outcomes

- Setup AutoCAD drawings for architectural projects.
- Apply building code to residential drafting projects.
- Apply design standards to residential drafting projects.
- Produce a residential floor plan working drawing.
- Produce residential foundation plan working drawings.

- Produce a residential wall section working drawing.
- Produce residential exterior elevation working drawings.
- Produce a residential interior elevation working drawing.
- Produce a residential site plan working drawing. 1
- Coordinate details and referencing throughout a set of residential working drawings. 1
- Set drawings to scale, including multiple scaled drawing on one sheet layout.

DRFT 190. Finding and Maintaining Employment

2 Credits (2)

Techniques in self-evaluations, resume writing, application completion, job interviewing, and job retention. Exposure to work ethics, employee attitudes, and employer expectations.

DRFT 204. Geographic Information Systems Technology

3 Credits (2+2P)

The use of digital information for which various digitized data creation methods are captured. Users will capture, store, analyze and manage spatially referenced data in a modeled mapping procedure.

Learning Outcomes

- Present projects and critiques using visual, oral, and written communication skills.
- Prepare written technical documents use appropriate drafting/technical terminology.
- Produce documents that are technically sound.
- Analyze information to develop solutions to technical aspects of a problem/situation.
- Upgrade knowledge and skills to keep pace with real-world changes.
- Produce projects that respect the intellectual property of others.
- Participate in activities of professional organization and community service.
- Demonstrate professionalism with regard to attendance, punctuality and contribution to course.
- Demonstrate professional demeanor. 1
- Practice productive work skills. 1
- Create an employment portfolio.

DRFT 214. Advanced Solid Modeling

3 Credits (2+2P)

Advanced 3D mechanical parametric solid modeling and assembly creation utilizing Inventor, Solidworks, and/or other applicable solid modeling and parametric modeling software packages. Creation of complete working drawing sets and/or sheet sets, PDF documents, and assembly drawings will be emphasized. Developing and designing parts and assemblies to meet client needs will be introduced and explored. Restricted to Community Colleges campuses only.

Prerequisite/Corequisite: DRFT 114.

Learning Outcomes

- Recognize standard views of a given object.
- Recognize auxiliary views of a given object.
- Evaluate shop drawings and hand drawings.
- Create PDFs and Three-Dimensional PDFs from Three-Dimensional models and assemblies.
- Dimension working mechanical drawings following appropriate industry standards.
- Produce sectional views of a given object.
- Apply Geometric Dimensioning and Tolerancing (GDT) practices and standards to working drawings.

8. Identify standard thread and fastener callouts.
9. Apply standard thread and fastener specifications. 1
10. Produce assembly drawings. 1
11. Produce working drawing sets and/or sheet sets. 1
12. Interpret client needs/instructions.

DRFT 222. Introduction to Geomatics**3 Credits (2+3P)**

Theory and practice of geomatics as applied to plane surveying in the areas of linear measurements, angle measurements, area determination, differential and trigonometric leveling, and topographic mapping.

Crosslisted with: SUR 222.

Prerequisite: MATH 1250G or MATH 1430G.

Learning Outcomes

1. Various

DRFT 230. Building Systems Drafting**3 Credits (2+2P)**

Development of working drawings for electrical, plumbing, and HVAC systems, for residential and commercial building through the applications of both 2D Drafting and 3D Building Information Modeling (BIM) techniques. Basics of project setup, National CAD Standards, ADA Standards, modern office practice, code analysis, as well as Sustainability and LEED for new construction. Restricted to: Community Colleges only.

Prerequisite: DRFT 180 or DRFT 181.

Learning Outcomes

1. Differentiate between three phases of electrical installation: temporary, rough-in, and finish.
2. Define basic electrical terms.
3. Cite basic rules of electrical circuit design.
4. Specify methods of wiring a home with energy conservation techniques.
5. Draft basic electrical symbols, including switches, duplex receptacle outlets, ceiling and wall-mounted lights, and circuit lines.
6. Identify basic service specification requirements, including service capacity, service entrance, meter base, and distribution panel locations.
7. Create and utilize symbols legends and schedules used in preparing electrical plans.
8. Identify plumbing fixtures and materials typically included in residential and commercial plans.
9. Cite sizing standards of plumbing piping. 1
10. Specify methods to conserve energy in the plumbing installation. 1
11. Draft plumbing lines and symbols with proper line weights and abbreviations. 1
12. Describe drainage and vent systems. 1
13. Differentiate between public and private sewage disposal systems, and identify basic component of each system. 1
14. Create and utilize symbols legends and schedules used in preparing plumbing plans. 1
15. Identify code requirements related to heating and cooling equipment and duct systems. 1
16. Explain how differing heating and cooling systems work. 1
17. Contrast zonal and central heating systems and list the advantages and disadvantages of each. 1
18. List the code requirements for HVAC systems. 1
19. Define basic HVAC terminology and identify basic HVAC symbols. 2

20. Describe how schedules are used in HVAC drawings, and cite the kind of information included in schedules. 2
21. Create and utilize symbols legends and schedules used in preparing HVAC plans.

DRFT 240. Structural Systems Drafting**3 Credits (2+2P)**

Study of foundations, wall systems, floor systems and roof systems in residential, commercial and industrial design/construction. Produce structural drawings including foundation plans, wall and building sections, floor and roof framing plans, shop drawings and details; schedules, materials lists and specifications. Use of various software.

Prerequisite/Corequisite: DRFT 180 or DRFT 181. Restricted to Community Colleges campuses only.

Learning Outcomes

1. Have a basic understanding of Structural Systems.
2. Have a knowledge of the different types of materials used in Structural Design.
3. Understand the complete lifecycle of a project as it pertains the Structural Systems.
4. Be able to take basic hand sketches and turn them into usable construction documents.
5. Project File management skills.

DRFT 242. Roadway Development Drafting**3 Credits (2+2P)**

Advanced civil/survey technology and drafting related to roadway development. Emphasis is on relevant terminology, codes/standards, and the production of complex working drawings such as topographical/grading, drainage, master utilities, roadway P P/details/etc., according to agency standards. Restricted to Community Colleges campuses only.

Prerequisite: DRFT 143.

Learning Outcomes

1. Become familiar with industry terminology.
2. Utilize file management.
3. Configure AutoCAD for the civil drafting environment.
4. Recognize and utilize line types associated with Civil Drafting.
5. Create a standardized layering system for duplication of drawings.
6. Understand industry standards and conventions for roadway development.
7. Utilize design standards in the creation of roadway development drawings.
8. Generate roadway alignments.
9. Generate existing ground profiles. 1
10. Generate proposed finish ground roadway profiles while adhering to design standards. 1
11. Create utility plans that incorporate main lines, service lines, and all associated fittings. 1
12. Understand utility terminology and standards. 1
13. Determine flow line, BOC elevations, etc. 1
14. Understand the concepts of super elevated roadways roadway transitions. 1
15. Generate finish grade surfaces.

DRFT 243. Land Development Drafting**3 Credits (2+2P)**

Advanced civil/survey technology and drafting related to land development. Emphasis is on relevant terminology codes/standards, and the production of complex working drawings such as subdivision plats,

local utility and drainage plans, construction details roadway P P, etc., according to local development/ agency standards.

Prerequisite: DRFT 143 and DRFT 153.

Learning Outcomes

1. Use appropriate drafting/technical terminology.
2. Produce documents that are technically sound.
3. Analyze information to develop solutions to technical aspects of a problem/situation.
4. Upgrade knowledge and skills to keep pace with real-world changes.
5. Demonstrate professionalism.
6. Practice productive work skills.
7. Read engineering drawings.
8. Produce complex engineering drawings.
9. Read and interpret design standards related to land development and subdivision design. 1
10. Plot or print to industry size sheets of paper.

DRFT 250. Principles of Detailing and Design

3 Credits (2+2P)

Advanced practice in construction documentation in the development and coordination of working drawings & specifications. In particular, will utilize Architectural Graphic Standards, National CAD Standards, and ADA standards to develop detail drawings related to Architectural, Civil, Structural and Building Mechanical systems. Will also be introduced to basic principles, factors, and process of building design such as space planning, site analysis, and basic architectural programming.

Prerequisite/Corequisite: DRFT 180 or DRFT 181. Restricted to Community Colleges campuses only.

Learning Outcomes

1. Experience producing the various types of detailed working drawings and related information for Civil, Residential Commercial Projects.
2. Industry Standards: Architectural Graphic Standards, National CAD Standards, Building, and Land Development Codes, etc.
3. Internet Research methods for construction materials/methods, construction documents, CAD details, etc.
4. Architectural design process, including programming, schematic design documents, design development documents, and construction documents.
5. Sustainability and LEED in architecture.
6. AutoCAD software for 2-D Drafting.
7. Revit software for Building Information Modeling (BIM).
8. Accuracy, legibility, neatness, and professional appearance of drawings.
9. Drafting skills and speed. 1
10. Work ethics, professionalism, and productive work habits. 1
11. Teamwork and presentations.

DRFT 254. Spatial Data Processing

3 Credits (2+2P)

Utilizes the tools and technologies of GIS, processing volumes of geodata identifying a numerical, coded or listed map. Involves the analysis of spatial data from various diverse applications and place in a descriptive mapping process. Restricted to Community Colleges campuses only.

Prerequisite: DRFT 204.

Learning Outcomes

1. Present projects and critiques using visual, oral, and written communication skills.

2. Prepare written technical documents use appropriate drafting/ technical terminology.
3. Produce documents that are technically sound.
4. Analyze information to develop solutions to technical aspects of a problem/situation.
5. Upgrade knowledge and skills to keep pace with real-world changes.
6. Produce projects that respect the intellectual property of others.
7. Participate in activities of professional organization and community service.
8. Demonstrate professionalism with regard to attendance, punctuality and contribution to course.
9. Demonstrate professional demeanor. 1
10. Practice productive work skills. 1
11. Create an employment portfolio.

DRFT 255. Independent Study

1-3 Credits (1-3)

Instructor-approved projects in drafting or related topics specific to the student's individual areas of interest and relevant to the drafting and graphics technology curriculum. Consent of instructor required. May be repeated for a maximum of 6 credits.

DRFT 258. Introduction to Infracworks

3 Credits (2+2P)

Introduction to the utilization of Infracworks software for the conceptualization, optimization, and visualization of infrastructure projects in the context of the built and natural environment. Restricted to Community Colleges campuses

Prerequisite(s): DRFT 143.

Learning Outcomes

1. Prepare accurate written technical documents,
2. Produce drawing documents that are technically sound,
3. Develop and practice productive work skills, and
4. Upgrade technical knowledge and skills to keep pace with real-world changes DRFT 253 Course Competencies I. Navigate within a 3D drawing/modeling space,
5. Connect drawings to data sources,
6. Stylize data sources,
7. Create models elements,
8. Analyze models,
9. Collaborate on a project with others,
10. Communicate design, and
11. Develop good workplace skills and professional, productive work habits.

DRFT 265. Advanced Building Information Modeling Applications

3 Credits (2+2P)

Advanced applications of Building Information Modeling (BIM) including the creation of, and practice in collaborative work sets, data and design analyses, energy modeling and analysis, preliminary LEED analysis, construction take-offs & estimation, and construction animation, through use of various BIM and related software. Restricted to: Community Colleges only.

Prerequisite: DRFT 165.

Learning Outcomes

1. Create full 3D Structural project model by "converting" Revit Architectural model.
2. Perform advanced Revit tasks including Family Editing Creation, Phasing, and Work-sharing.

3. Have a working knowledge of the tools that the majority of users will use to work with Revit and Navisworks.
4. Perform basic Navisworks tasks including Clash Detection and Timeliner.
5. Improve Project File management skills in particular.
6. Improve efficiency in use of Revit.

DRFT 274. GIS Theory and Analysis**3 Credits (2+2P)**

Analyzes the hypothesis in which location and spatial data sufficiently quantifies the appropriate statistical methodology. May be repeated up to 3 credits. Restricted to Community Colleges campuses only.

Prerequisite(s): DRFT 254.

DRFT 276. Computer Rendering and Animation I**3 Credits (2+2P)**

Introduction to technical applications of computer generated renderings and animations for the architecture and engineering fields. 3D models, photo-realistic renderings, and basic animation movie files will be produced utilizing industry standard modeling and animation software.

DRFT 288. Portfolio Development**3 Credits (2+2P)**

Production of a portfolio consisting of previously produced student work related to the student's individualized degree option. Process shall include the compilation and organization of working and presentation drawings, construction documents, BIM Models, and renderings/animations. Students will learn the basics of design layout and online portfolio documentation. Job search and resume preparation activities will also be required. Production of new material and content may also be required. This course is designed as a last semester course in the Drafting & Design curricula. Restricted to Community Colleges campuses only.

Prerequisite: Consent of Instructor.

Learning Outcomes

1. Produce a professional quality portfolio.
2. Produce working drawings (if required).
3. Prepare a professional resume.
4. Prepare for a job interview.
5. Conduct a job search.
6. Work independently.
7. Practice professional networking skills.

DRFT 290. Special Topics**1-4 Credits (1-4)**

Topics subtitled in the Schedule of Classes. May be repeated for a maximum of 12 credits.

DRFT 291. Cooperative Experience**1-6 Credits (1-6)**

Supervised cooperative work program. Student is employed in an approved occupation and supervised and rated by the employer and instructor. Student meets with advisor weekly. Graded S/U.

Prerequisite: consent of instructor.

DRFT 295. Professional Development and Leadership DAGA**1 Credit (1)**

Students gain experience in leadership, team building, performing community service, and membership and/or leadership in a student organization. May be repeated up to 6 credits. Restricted to Community Colleges campuses only.

E E-ELECTRICAL ENGINEERING

E E 200. Linear Algebra, Probability and Statistics Applications**4 Credits (3+3P)**

The theory of linear algebra (vectors and matrices) and probability (random variables and random processes) with application to electrical engineering. Computer programming to solve problems in linear algebra and probability.

Prerequisite: C- or better in ENGR 140 and (MATH 1521G or MATH 1521H or ENGR 190).

Learning Outcomes

1. Perform vector and matrix operations, including matrix inversion, eigen analysis, finding basis and dimension of vector spaces and rank of a matrix, and solving a set of linear equations.
2. Calculate probabilities using probability mass, density, and cumulative distribution functions for single and multiple, discrete and continuous random variables, and relate them to electrical engineering applications.
3. Perform simple parameter estimation, such as finding sample mean and variance, and relate to confidence intervals.
4. Describe random processes in the context of signal processing and communications systems problems.
5. Use MATLAB to solve problems involving linear algebra and probability, including designing and performing simple numerical experiments.

E E 240. Multivariate and Vector Calculus Applications**3 Credits (3)**

Vector algebra, cylindrical and spherical coordinates, partial derivatives, multiple integrals. Calculus of vector functions through electrostatic applications. Divergence, gradient, curl, divergence theorem, Stokes's theorem, Coulomb's Law, Gauss's Law, electric field, electric potential. Applications in Matlab.

Prerequisite: C- or better in (MATH 1521G or MATH 1521H or ENGR 190) and ENGR 140.

Learning Outcomes

1. Students will demonstrate conceptual understanding of the fundamental principles and theories in vector calculus
2. Students will analyze and solve problems using vector calculus in three coordinate systems

E E 300. Cornerstone Design**2 Credits (1+3P)**

Application and realization of engineering principles to a guided team-based design project. Formulation and implementation of test procedures, evaluation of alternate solutions and oral and written communication of the design and test results. Restricted to: E E majors. Restricted to Las Cruces campus only.

Prerequisite: C- or better in ENGR 140 and ENGR 230 and E E 200.

Learning Outcomes

1. Formulate and implement test procedures for validation of requirements.
2. Evaluate alternative design solutions.
3. Document test procedures and design solutions.
4. Implement design to include a printed-circuit board, electronics and coding.
5. Communicate the design and validation both orally and in writing to a wide range of target audiences.
6. Work in teams.

E E 317. Semiconductor Devices and Electronics I**4 Credits (3+3P)**

Analysis and design of opamp circuits, diode circuits and single-transistor MOS and BJT amplifiers. Introduction to solid-state semiconductor devices.

Prerequisite: C- or better in ENGR 230 and CHEM 1215G.

Learning Outcomes

1. Analysis and design of single time-constant circuits, op-amp circuits, and linear power supplies.
2. Understanding of solid-state devices.
3. Biasing and small-signal analysis of MOS and BJT single transistor amplifiers.
4. Using computer tools to simulate electronic circuits.
5. Testing electronic circuits using power supplies, function generators, digital multi-meters, and oscilloscopes.
6. Writing and documenting laboratory results.

E E 320. Signals and Systems I**3 Credits (3)**

Introduction to the modeling and analysis of continuous- and discrete-time signals and systems using time- and frequency-domain methods suitable for both mathematical approaches and computer-aided simulations.

Prerequisite: C- or better in ENGR 190.

Learning Outcomes

1. Understand different types of signals (continuous-time, discrete-time, periodic, etc.) and how these signals are represented mathematically and in a computer.
2. Understand systems representations (e.g., impulse responses), implementations (e.g., convolution and difference/differential equations), and properties (e.g., linearity).
3. Gain insight into transform-domain analysis for signals and systems.
4. Develop the ability to apply transform domain and LTI analysis to simple applications in signal processing, communications, and controls using Matlab.

E E 325. Signals and Systems II**4 Credits (3+3P)**

Introduction to communication systems including amplitude and frequency modulation. Introduction to control systems including linear feedback systems, root-locus analysis, and graphical representations. Introduction to digital signal processing including sampling, digital filtering, and spectral analysis.

Prerequisite: C- or better in E E 200 and E E 320.

Learning Outcomes

1. To model, analyze, simulate, and perform calculations with continuous- and discrete-time systems.
2. To develop an understanding of basic modulations in communication systems.
3. To gain insight into the basics of control systems.
4. To develop insight into filtering and analysis of digital signals.
5. To learn how to use MATLAB and SIMULINK to perform analysis, design, and simulation of communication, control, and signal processing systems.

E E 333. AC Circuit Analysis and Introduction to Power Systems**3 Credits (2+3P)**

Steady-state analysis of AC circuits, three-phase circuits, and an introduction to power systems.

Prerequisite: C- or better in ENGR 230.

Learning Outcomes

1. To introduce students to the basic structure and requirements of any electric power supply system and the nature of power systems engineering and the profession which will establish background for further studies in power systems.
2. To develop an understanding of components in a power system and to understand the basic electromagnetic and electromechanical principles involved in these components.
3. To develop an understanding of the physical-principles—to-electric-equivalent circuit approach to the analysis and design of components and systems.
4. To develop skills in equivalent circuit based analysis techniques building upon competencies developed in prior coursework.
5. To explore analysis and design principles for the complete power system
6. To understand measurement, analysis, simulation and design techniques, through laboratory exercises involving hardware and software.

E E 340. Fields and Waves**4 Credits (3+3P)**

Static electromagnetic field. Maxwell's equation and time-varying electromagnetic fields. Generalized plane wave propagation, reflection, transmission, superposition and polarization. Transmission line theory. Extensions to optical wave propagation. Applications including Time Domain Reflectometry (TDR) and fiber optic transmission. Laboratory experience with RF/microwave test equipment and optical apparatus.

Prerequisite: C- or better in ENGR 230 and E E 240.

Learning Outcomes

1. Students will demonstrate an understanding of the fundamental principles, theories, and equations (such as Maxwell's) governing transmission lines, static and time-varying fields, propagation, reflection and transmission of plane waves, waveguides, and antennas.
2. Students will analyze and solve electromagnetic-related problems by applying fundamental principles, theories, and equations (such as Maxwell's equations).
3. Students will demonstrate effective team work.
4. Students will demonstrate the use of RF/microwave test equipment to perform basic RF circuit measurements.

E E 362. Introduction to Computer Organization**4 Credits (3+3P)**

Concepts of modern computer organization, CPU control, pipelining, memory hierarchies, memory mapping, hardware-software interface, and operating systems.

Prerequisite: C- or better in ENGR 120 and ENGR130 and ENGR140 and MATH 1250G.

Learning Outcomes

1. Be conversant with fundamental concepts of computer organization.
2. Compare and contrast organizational features of different computer.
3. Understand the use of microprocessors and peripheral devices in practical applications.

E E 395. Introduction to Digital Signal Processing**3 Credits (3)**

Undergraduate treatment of sampling/reconstruction, quantization, discrete-time systems, digital filtering, z-transforms, transfer functions, digital filter realizations, discrete Fourier transform (DFT) and fast Fourier transform (FFT), finite impulse response (FIR) and infinite

impulse response (IIR) filter design, and digital signal processing (DSP) applications. Laboratory will emphasize practical implementation of signal processing including real-time signal processing.

Prerequisite(s): C- or better in E E 325.

E E 400. Undergraduate Research

1-3 Credits

Directed undergraduate research. May be repeated for a maximum of 9 credits.

Prerequisite: consent of the department head.

E E 403. Geometric Algebra

3 Credits (3)

Geometric algebra provides a common mathematical language for many areas of physics (classical and quantum mechanics, electrodynamics, special and general relativity), computer science (graphics, robotics, computer vision), engineering, and other fields. Topics include: the geometric product and multivectors; Euclidean, Lorentzian, Galilean, and Projective Geometries; Complex, Hyperbolic, and Dual Numbers; Quaternions and Rotations. Taught with E E 576.

Prerequisite: C- or better in E E 320.

Learning Outcomes

1. Formulate and solve problems related to multivectors and the geometric product while building geometric intuition.
2. Formulate and solve problems related to complex, hyperbolic, and dual numbers as well as quaternions.
3. Formulate and solve problems related to non-Euclidean spaces including Lorentzian, Galilean, and projective geometries.

E E 405. Electricity Markets

3 Credits (3)

Power systems operation in regulated and competitive environments. Topics include: basics of microeconomics; linear programming, duality; electricity market pricing and settlement; RTO operation. Taught with E E 502.

Prerequisite: C- or better in E E 431.

Learning Outcomes

1. Understand basic microeconomic principles, basics of market power, Cournot equilibrium
2. Understand basics of linear programming, the primal dual problems, economic interpretation of dual variables, basics of mixed integer programming
3. Understand dispatch optimization problems in the electric energy markets including economic dispatch, unit commitment
4. Understand motivation and objectives of market design, including uniform vs. pay-as-bid pricing, locational marginal prices (LMPs), dual of the DCOPF and the various terms (load payment, congestion rent, etc.), pricing issues in non-convex markets, financial transmission rights, ancillary services market

E E 406. Quantum Computing

3 Credits (3)

This course is an introduction to quantum computing (QC), emphasizing the underlying theory. Topics covered include single and multiple qubit systems, state transformations, algorithms, subsystems, and error correction. The course is intended to be accessible to a wide audience of engineers, mathematicians, and scientists; no previous exposure to quantum physics is required. It is highly recommended that students have completed a college-level linear algebra course. Taught concurrently with E E 506.

Learning Outcomes

1. Explain the quantum computing paradigm.
2. Apply the principles of quantum mechanics for computation.
3. Analyze quantum algorithms and evaluate possible quantum speedups.
4. Describe the framework of quantum error correction codes.

E E 407. Introduction to Control Systems

3 Credits (3)

This course provides an introduction to the analysis of control systems. The main focus will be on techniques in classical control theory. System dynamics and modeling techniques in both the frequency domain and the time domain will be covered. Students will learn how to transform linear dynamical systems between state-space and frequency domains, and evaluate conditions for stability in each domain. Students will analyze and characterize both the transient and steady-state response, and examine root locus, Bode, and Nyquist plots. Concepts of robust control, including tradeoffs between sensitivity and performance, will be emphasized throughout. Applications will range across electrical, mechanical, chemical, biomedical, and biological systems. Laboratory activities include modeling, analysis and simulation of physical processes.

Prerequisite: C- or better in E E 325 and MATH 392.

Learning Outcomes

1. Obtain mathematical models of electrical and mechanical systems from their idealized elements.
2. Derive the transfer function of a control system.
3. Apply their mathematical knowledge to determine the response of a linear system to various types of inputs.
4. Develop familiarity and confidence with analyzing transient and steady state responses of a linear system.
5. Apply their mathematical knowledge to understand the concept of stability.
6. Develop familiarity and confidence with controller design based on Routh-Hurwitz, Root locus and P, PI, PID modes of control.
7. Develop proficiency in systems simulation using MATLAB and SIMULINK.

E E 408. Noncooperative Game Theory

3 Credits (3)

The purpose of this course is to teach students to formulate problems as mathematical games and provide the basic tools to solve them. The course covers: Static games, starting with two-player zero-sum games and eventually building up to n-player non-zero sum games. Saddle-points and Nash equilibria will be covered. Dynamic optimization (dynamic programming) for discrete and continuous time. Dynamic games, both open and closed-loop policies. The intended audience includes (but is not restricted to) students in engineering and computer science. The class is heavily project-oriented and the students are strongly encouraged to choose a project that is relevant to their own area of research. Taught with E E 553.

Prerequisite: C- or better in E E 200 or ((MATH 2415 or MATH 480) and (STAT 371 or STAT470) and (C S 172 or C S 271)) or equivalent.

Learning Outcomes

1. Comprehend the key principles of noncooperative game theory.
2. Apply the Minimax Theorem and evaluating mixed saddle-point equilibria.
3. Analyze stochastic policies for games in extensive form, and apply them to the existence and computation of saddle-point equilibria.
4. Comprehend games with N-players.

- Analyze potential games and evaluate Nash equilibria for potential games.
- Analyze dynamic games: the optimal control of a dynamical system.
- Evaluate the saddle-point equilibria of zero-sum discrete-time and continuous-time dynamic games in state-feedback policies.

E E 409. Hardware & Software Codesign

3 Credits (3)

This course introduces the concept and techniques of designing electronic systems that integrates both hardware and software components. Topics include nature of hardware and software, dataflow modeling, software and hardware implementations of dataflows, analysis of control flows and dataflows, FSM with Datapath, microprogramming, embedded cores, and trade-offs between hardware and software components, etc. Students gain experience in implementing hardware and software co-design solutions for solving real-world problems through hands-on laboratory/project on a programmable System-on-Chip (SoC) platform that integrates a dual-core ARM Cortex-A9 processor and FPGA fabrics. Students develop a fundamental understanding of state-of-the-art practices in developing codesign solutions to problems that prepare them well for industrial and academic careers in this field. Taught with E E 556.

Prerequisite: C- or better in ENGR 140 and ENGR 130 and (E E 362 or C S 473).

Learning Outcomes

- Formulate and solve problems related to basic concepts and methodologies in hardware/software co-design.
- Analyze concurrent specification of an algorithm to be partitioned into software (C code) and hardware (HDL) components.
- Design and implement both the software and hardware components integration as a solution to real-world problems to achieve optimal performance, power and cost.
- Describe various types of system architectures regarding their attributes including speed, energy, design complexity, design cost, etc.
- Experience working with commercially available Computer-Aided Design (CAD) development tools such as Xilinx Vivado
- Experience working in translation between C code and HDL of practical problems and verify/test the solution on FPGA SoC architecture

E E 412. ASIC Design

3 Credits (3)

This course provides students with experiential knowledge of modern application specific integrated circuits. Topics include ASIC packaging and testing, I/O pads and ESD, Verilog programming and simulation, FPGA verification, Register-transfer level synthesis, timing and area optimization, floorplanning and routing, digital interfaces, full custom and standard cell design, post-layout simulation, and PCB schematics and layout. Taught with E E 512.

Prerequisite: C - or better in E E 480.

Learning Outcomes

- Cadence ASIC design tools and design flow
- Verilog programming, simulation, and FPGA verification
- Padding, I/O, and ESD for ASIC
- CMOS standard cell library for large scale digital circuit
- MOSIS Tapeout options and ASIC package selections
- Typical digital interfaces
- Allegro PCB schematic and layout, ASIC testing
- Digital Signal Processing Circuits implementation in ASIC

E E 431. Power Systems II

3 Credits (3)

Analysis of a power system in the steady-state. Includes the development of models and analysis procedures for major power system components and for power networks. Taught with E E 542.

Prerequisite: C- or better in E E 333.

Learning Outcomes

- To introduce students to the basic structure and requirements of any electric power supply system and the nature of power systems engineering and the profession. To establish background for further studies in power systems
- To develop an understanding of components in a power system and to understand the basic electromagnetic and electromechanical principles involved in these components.
- To develop an understanding of the physical-principles—to-electric-equivalent circuit approach to the analysis and design of components and systems.
- To develop skills in equivalent circuit based analysis techniques building upon competencies developed in prior coursework.
- To explore analysis and design principles for the complete power system
- To convey to the student a thorough understanding of both the theory and the mechanics involved in the modeling and analysis of power system components and networks
- To study how such modeling and analysis is used in the design/ planning of power systems

E E 432. Power Electronics

3 Credits (2+3P)

Basic principles of power electronics and its applications to power supplies, electric machine control, and power systems. Taught with E E 537.

Prerequisite: C- or better in E E 317 and E E 333.

Learning Outcomes

- To introduce students to the basic structure and requirements of any electric power supply system and the nature of power systems engineering and the profession. To establish background for further studies in power systems
- To develop an understanding of components in a power system and to understand the basic electromagnetic and electromechanical principles involved in these components.
- To develop an understanding of the physical-principles—to-electric-equivalent circuit approach to the analysis and design of components and systems.
- To develop skills in equivalent circuit based analysis techniques building upon competencies developed in prior coursework.
- To explore analysis and design principles for the complete power system
- To convey to the student a thorough understanding of both the theory and the mechanics involved in the modeling and analysis of power system components and networks
- To study how such modeling and analysis is used in the design/ planning of power systems

E E 433. Power System Operation

3 Credits (3)

Basics of power system operation; linear programming, economic dispatch, mixed integer programming, power system security and contingency analysis; RTO operation; generation control; renewable integration.

Prerequisite: C- or better in E E 431.

Learning Outcomes

1. Understand basic microeconomic principles, basics of market power, Cournot equilibrium.
2. Understand basics of linear programming and can use software to solve simple linear programming problems.
3. Understand the different between AC and DC power flow. Understand dispatch optimization problems in the electric energy markets including economic dispatch, unit commitment.
4. Understand the control schemes in power system, including governor repose, automatic generation control.
5. Understand the power system security including N-1 criteria, contingency analysis, and security constraints.

E E 440. Photovoltaic Devices and Systems

3 Credits (3)

Technical concepts of photovoltaics, with primary focus on solar cell technology. Solar cell device level operation, packaging, and manufacturing. Design of photovoltaic systems for stand-alone or grid-tied operation. Business-case analysis using real-life scenarios of photovoltaic system solutions. Taught with E E 540.

Prerequisite: C- or better in E E 317.

Learning Outcomes

1. Name at least three different types of photovoltaic materials and cells;
2. Derive equations governing operation of photovoltaic cells;
3. Design and create electrical engineering drawings for photovoltaic systems of different nameplate capacity;
4. Describe principles of operation of the “balance of the system” (BOS) components of the photovoltaic system.

E E 443. Mobile Application Development

3 Credits (3)

Introduction to mobile application development. Students will develop applications for iOS devices including iPhone and iPad. Topics include object-oriented programming using Swift, model-view-controller (MVC) pattern, view controllers including tables and navigation, graphical user interface (GUI) design, data persistence, GPS and mapping, camera, and cloud and web services. Taught with E E 593.

Prerequisite: C- or better in C S 151 or C S 152 or C S 172 or C S 271 or C S 451 or C S 452.

Learning Outcomes

1. The objective of this course is to gain an understanding of mobile application development, including Swift, Model-View-Controller (MVC) pattern, Memory management, View controllers, Frameworks: Foundation, CoreGraphics, CoreLocation, MapKit, UIKit, WebKit

E E 444. Advanced Image Processing

3 Credits (3)

Advanced topics in image processing including segmentation, feature extraction, object recognition, image understanding, big data, and applications. Taught with E E 588.

Prerequisite: C- or better in E E 446.

Learning Outcomes

1. Implement and analyze segmentation of color and grayscale images.
2. Implement and analyze morphological analysis of binary images
3. Implement and analyze compression of images
4. Implement and analyze feature extraction and classification of images

5. Implement and analyze convolutional neural networks (CNNs) for classification of images

E E 446. Digital Image Processing

3 Credits (3)

Two-dimensional transform theory, color images, image enhancement, restoration, segmentation, compression and understanding. Taught with E E 596.

Prerequisite: C- or better in E E 325.

Learning Outcomes

1. Analyze human visual perception and the implications to science and society
2. Formulate and analyze problems that utilize the mathematics behind multidimensional image processing
3. Formulate and analyze problems involving multidimensional transformation transform-domain processing
4. Formulate and analyze problems related to color image acquisition, processing, and display
5. Implementing image processing algorithms on computers in Matlab or python

E E 447. Neural Signal Processing

3 Credits (3)

Cross-disciplinary course focused on the acquisition and processing of neural signals. Students in this class will be learn about basic brain structure, different brain signal acquisition techniques (fMRI, EEG, MEG, etc.), neural modeling, and EEG signal processing. To perform EEG signal processing, students will learn and use Matlab along with an EEG analysis package. Taught with E E 597.

Prerequisite: C- or better in E E 325.

Learning Outcomes

1. Demonstrate understanding and skill in the Structure and basic operation of the human brain
2. Demonstrate understanding and skill in processing of EEG brain signals using Matlab and EEGLAB
3. Demonstrate understanding and skill in EEG-related neural modeling
4. Demonstrate understanding and skill in brain signal types and acquisition

E E 448. Signal Compression

3 Credits (3)

Fundamentals of information source encoding and decoding. Includes information theory bounds on source coding, lossless coding algorithms, scalar quantizing and vector quantizing. Taught with E E 573.

Prerequisite: C- or better in E E 200.

Learning Outcomes

1. Formulate and analyze problems related to rate-distortion tradeoffs in compression
2. Formulate and analyze problems related to scalar and vector quantization
3. Formulate and analyze problems related to transform coding
4. Formulate and analyze problems related to entropy coding (Huffman arithmetic)
5. Formulate and analyze problems related to standardized codecs, including MPEG, JPEG, MP3
6. Formulate and analyze problems related to compressive sensing/ sampling

E E 452. Introduction to Radar

3 Credits (3)

Basic concepts of radar. Radar equation; detection theory. AM, FM, and CW radars. Analysis of tracking, search, MTI, and imaging radar. Recommended foundation: E E 496. Taught with E E 548.

Prerequisite: C- or better in E E 325 and E E 340.

Learning Outcomes

1. Students will demonstrate an understanding of fundamental principles of various types of radar systems and their applications,
2. Students will learn to analyze a given radar system,
3. Students will learn to use simulation techniques to design a radar system that will yield desired characteristics,
4. Students will experience working in groups/teams

E E 453. Microwave Engineering

3 Credits (3)

Techniques for microwave measurements and communication system design, including transmission lines, waveguides, and components. Microwave network analysis and active device design. Taught with E E 521.

Prerequisite: C- or better in E E 340.

Learning Outcomes

1. Students will demonstrate an understanding of fundamental principles and theories related to microwave systems, components, and devices
2. Students will analyze and solve microwave engineering-related problems using the fundamental microwave engineering theories and principles
3. Students will demonstrate the use of microwave engineering design tools
4. Students will demonstrate effective team work
5. Students will demonstrate an understanding of the impact of engineering solutions in a global, economic, environmental, and societal context
6. Students will demonstrate an understanding of the knowledge of contemporary professional, societal and global issues

E E 454. Antennas and Radiation

4 Credits (3+3P)

Basic antenna analysis and design. Fundamental antenna concepts and radiation integrals. Study of wire antennas, aperture antennas, arrays, reflectors, and broadband antennas. Taught with E E 541.

Prerequisite: C- or better in E E 340.

Learning Outcomes

1. Students will demonstrate an understanding of the fundamental principles, theories, and equations governing antenna radiation, antenna arrays, and matching, etc.
2. Students will analyze and solve the antenna-related radiation problems, antenna structures.
3. Students will demonstrate the use of antenna synthesis techniques and simulation software to solve antenna related problems
4. Students will demonstrate effective team work
5. Students will demonstrate an understanding of the impact of engineering solutions in a global, economic, environmental, and societal context
6. Students will demonstrate an understanding of the knowledge of contemporary professional, societal and global issues

E E 458. Hardware Security and Trust

3 Credits (3)

This course introduces and investigates recent technology development for the design and evaluation of secure and trustworthy hardware and

embedded systems. Topics include IoT security, cryptography, hardware security primitives, authentication and key generation, invasive and non-invasive attacks and countermeasures, IC piracy and intellectual property protection, hardware trojans, and secure boot. Taught with E E 558.

Prerequisite: C- or better in E E 362.

Learning Outcomes

1. Understand the security goals of information security
2. Understand cryptography basics and their applications
3. Formulate and analyze problems related to security threats in integrated circuits, electronic devices and semiconductor supply chain
4. Formulate and analyze problems related to security countermeasures to the threats of integrated circuits and electronic devices
5. Use metrics to measure and assess the security level of security mechanisms or primitives in hardware security applications
6. Analyze and assess potential security vulnerabilities in hardware and embedded systems
7. Learn state-of-art security mechanisms and research topics in the hardware and embedded security area

E E 460. Space System Mission Design and Analysis

3 Credits (3)

Satellite system design, including development, fabrication, launch, and operations. A systems engineering approach to concepts, methodologies, models, and tools for space systems. Students must be in junior standing to enroll.

Learning Outcomes

1. Apply knowledge from science, math and engineering to satellite design.
2. Experience the "system engineering" of satellite design through the design of a space mission.
3. Understand the professional and ethical responsibilities related to satellite design.
4. Understand the impact of satellite related engineering solutions in a global, economic, environmental, and societal context.
5. Maintain a knowledge of contemporary professional, societal and global issues as they relate to satellites.

E E 462. Computer Systems Architecture

3 Credits (3)

The course covers uniprocessors, caches, memory systems, virtual memory, storage systems, with introduction to multiprocessor and distributed computer architectures; models of parallel computation; processing element and interconnection network structures, and nontraditional architectures. Taught with E E 562.

Prerequisite: C- or better in E E 362.

Learning Outcomes

1. Recognize the basic principles and current practices of computer architectures of processors, memory systems, interconnects, and input/output systems
2. Reason about the issues that influence the architectures of processors, memory systems, interconnects, and input/output systems
3. Evaluate and improve computer system performance through analysis and computer simulation
4. Solve and implement a small research problem in computer architecture.

E E 465. Machine Learning I

3 Credits (3)

An undergraduate-level introduction to machine learning algorithms, including supervised and unsupervised learning methods. Topics covered include clustering, linear regression models, linear discriminant functions, feed-forward neural networks, statistical pattern classification and regression, maximum likelihood, naive Bayes, non-parametric density estimation, mixture models, decision trees, and ensemble learning. Taught with E E 565.

Prerequisite: C- or better in E E 200.

Learning Outcomes

1. Formulate and solve problems related to the basic concepts and mathematical techniques of machine learning.
2. Gain an understanding of machine learning algorithms/methods by solving problems using software.
3. Gain experience doing independent study and research.
4. Formulate and solve problems related to the basics of regression, classification, and unsupervised learning.
5. Gain practical experience through project-based assignments and technical report writing.

E E 467. ARM SOC Design

3 Credits (3)

The course aims to produce students who are capable of developing ARM-based SoCs from high level functional specifications to design, implementation and testing on real FPGA hardware using standard hardware description and software programming languages. Taught with E E 567.

Prerequisite: C- or better in E E 362 and E E 317.

Learning Outcomes

1. Formulate and solve problems requiring knowledge and understanding of ARM processor architectures and ARM-based SoCs
2. Capture the design of ARM-based SoCs in a standard hardware description language
3. Conduct low-level software design for ARM-based SoCs and high-level application development
4. Demonstrate the ability to use and choose between different techniques for digital system design and capture;
5. Evaluate implementation results (e.g. speed, area, power) and correlate them with the corresponding high level design and capture;
6. Demonstrate the ability to use a commercial tools to develop ARM-based SoCs

E E 473. Introduction to Optics

3 Credits (3)

The nature of light, geometrical optics, basic optical instruments, wave optics, aberrations, polarization, and diffraction. Elements of optical radiometry, lasers and fiber optics. Crosslisted with: PHYS 473.

Prerequisite(s): C- or better in PHYS 1320G or PHYS 2120.

E E 475. Control Systems Synthesis

3 Credits (3)

An advanced perspective of linear modern control system analysis and design, including the essential algebraic, structural, and numerical properties of linear dynamical systems. Computer-aided solution of real-world design problems. Taught with E E 551.

Prerequisite: C- or better in E E 407.

Learning Outcomes

1. Understand the concepts of Model Identification and Parameter Estimation (least-square identification of a auto-regressive model; nonparametric identification in the time domain; and nonparametric identification in the frequency domain)

2. Understand Robust Control techniques (Nyquist-plots, small-gain, and passivity)
3. Understand Optimal control techniques (LQR/LQG for state-space systems and time-optimal controller for the positioning of a mass using force actuation)
4. Understand Nonlinear control techniques (Lyapunov's stability method; feedback linearization controller for a fully actuated 2nd order mechanical system; backstepping for triangular nonlinear systems; actuator limitations)

E E 478. Fundamentals of Photonics

4 Credits (3+3P)

Ray, wave and guided optics, lasers and thermal sources, radiometry, photon detection and signal-to-noise ratio. Elements of photonic crystals, polarization, acousto-optics, electro-optics, and optical nanostructures. Recommended foundation: E E 473 /PHYS 473. Taught with E E 528.

Prerequisite: C- or better in PHYS 1320G or PHYS 2120.

Learning Outcomes

1. Understand the fundamentals of the different theories of light including ray, wave, electromagnetic (vector) and photon optics, and how these theories are represented mathematically and on a computer.
2. Develop the ability to perform calculations for the different theories (ray tracing, wave interference, polarization calculus, photon detection) to determine the propagation characteristics and describe the manipulation of light.
3. Gain insight and experience with materials and devices for manipulating and detecting light (glass, mirrors, lenses, fiber optics, polarization elements, liquid crystals, semiconductors, and photodiodes).
4. Apply the theoretical, mathematical, and practical understanding of optics to describe real-world applications of light technology with supporting analysis and calculations.

E E 480. Introduction to Analog and Digital VLSI

3 Credits (3)

Introduction to analog and digital VLSI circuits implemented in CMOS technology. Design of differential amplifiers, opamps, CMOS logic, flip-flops, and adders. Introduction to VLSI fabrication process. Taught with E E 510.

Prerequisite: C- or better in E E 362 and E E 317.

Learning Outcomes

1. Explain the basic concepts of CMOS VLSI system design
2. Formulate and solve problems related to pseudo ideal operation of MOS transistors as switches and implementation with transistors of basic and complex Boolean functions
3. Use modern software tools to simulate integrated circuits
4. Formulate and solve problems related to operation and design of basic analog building blocks
5. Formulate and solve problems related to operation and design of basic digital building blocks
6. Formulate and solve problems related to key aspects of performance characteristics (speed, power dissipation, Silicon area..) of VLSI systems and how to size transistors in order to achieve desired performance specifications.

E E 485. Analog VLSI Design

3 Credits (2+3P)

Analysis, design, simulation, layout and verification of CMOS analog building blocks, including references, opamps, switches and

comparators. Teams implement a complex analog IC. Taught with E E 523.

Prerequisite: C- or better in E E 320 and E E 480.

Learning Outcomes

1. Analysis, design, simulation, and layout of current mirrors, current sources, and voltage references
2. Analysis, design, simulation, and layout of differential and operational amplifiers
3. Analysis, design, simulation, and layout of switched-capacitor circuits
4. Using VLSI CAD tools for simulating and laying out analog integrated circuits
5. Writing laboratory reports and project documentation

E E 490. Selected Topics

1-3 Credits

May be repeated for a maximum of 9 credits. Graduate students may not use credits of E E 490 toward an M.S. or Ph.D. in electrical engineering.

Prerequisite: consent of instructor.

E E 493. Power Systems III

3 Credits (3)

Analysis of a power system under abnormal operating conditions. Topics include symmetrical three-phase faults, theory of symmetrical components, unsymmetrical faults, system protection, and power system stability. Taught with E E 543.

Prerequisite: C- or better in E E 431.

Learning Outcomes

1. To introduce students to the basic structure and requirements of any electric power supply system and the nature of power systems engineering and the profession. To establish background for further studies in power systems
2. To develop an understanding of components in a power system and to understand the basic electromagnetic and electromechanical principles involved in these components.
3. To develop an understanding of the physical-principles—to-electric-equivalent circuit approach to the analysis and design of components and systems.
4. To develop skills in equivalent circuit based analysis techniques building upon competencies developed in prior coursework.
5. To explore analysis and design principles for the complete power system
6. To understand measurement, analysis, simulation and design techniques, through laboratory exercises involving hardware and software.

E E 496. Introduction to Communication Systems

3 Credits (3)

Introduction to the analysis of signals in the frequency and time domains. A study of baseband digital transmission systems and digital/analog RF transmission systems. Introduction to telecom systems as well as satellite systems.

Prerequisite(s): C- or better in E E 325.

E E 497. Digital Communication Systems I

3 Credits (3)

Techniques for transmitting digital data over commercial networks. Topics include baseband and bandpass data transmission and synchronization techniques. Recommended foundation: E E 496. Taught with: E E 581.

Prerequisite: C- or better in E E 200 and E E 325.

Learning Outcomes

1. Analyze bandwidth and error performance of baseband and bandpass signals through mathematical explanations and simulated experimental data.
2. Evaluate channel code structures and their performance.
3. Analyze communication system issues involving link budgets, synchronization and resource allocations.
4. Develop a wider perspective recognizing contemporary technologies, impact of the solutions and professional and ethical responsibilities.

E E 501. Research Topics in Electrical and Computer Engineering

1 Credit (1)

Ethics and methods of engineering research; contemporary research topics in electrical and computer engineering.

E E 502. Electricity Markets

3 Credits (3)

Power systems operation in regulated and competitive environments. Topics include: basics of microeconomics; linear programming, duality; electricity market pricing and settlement; RTO operation. Recommended foundation: E E 431. Taught with: E E 405.

Learning Outcomes

1. Understand basic microeconomic principles, basics of market power, Cournot equilibrium
2. Understand basics of linear programming, the primal dual problems, economic interpretation of dual variables, basics of mixed integer programming
3. Understand dispatch optimization problems in the electric energy markets including economic dispatch, unit commitment
4. Understand motivation and objectives of market design, including uniform vs. pay-as-bid pricing, locational marginal prices (LMPs), dual of the DCOPF and the various terms (load payment, congestion rent, etc.), pricing issues in non-convex markets, financial transmission rights, ancillary services market

E E 506. Quantum Computing

3 Credits (3)

This course is an introduction to quantum computing (QC), emphasizing the underlying theory. Topics covered include single and multiple qubit systems, state transformations, algorithms, subsystems, and error correction. The course is intended to be accessible to a wide audience of engineers, mathematicians, and scientists; no previous exposure to quantum physics is required. It is highly recommended that students have completed a college-level linear algebra course. Taught with E E 406.

Learning Outcomes

1. Explain the quantum computing paradigm.
2. Apply the principles of quantum mechanics for computation.
3. Analyze quantum algorithms and evaluate possible quantum speedups.
4. Describe the framework of quantum error correction codes.

E E 510. Introduction to Analog and Digital VLSI

3 Credits (3)

Introduction to analog and digital VLSI circuits implemented in CMOS technology. Design of differential amplifiers, opamps, CMOS logic, flip-flops, and adders. Introduction to VLSI fabrication process.

Recommended foundation: E E 362 and E E 317 Taught with E E 480.

Learning Outcomes

1. Explain the basic concepts of CMOS VLSI system design
2. Formulate and solve problems related to pseudo ideal operation of MOS transistors as switches and implementation with transistors of basic and complex Boolean functions
3. Use modern software tools to simulate integrated circuits
4. Formulate and solve problems related to operation and design of basic analog building blocks
5. Formulate and solve problems related to operation and design of basic digital building blocks
6. Formulate and solve problems related to key aspects of performance characteristics (speed, power dissipation, Silicon area..) of VLSI systems and how to size transistors in order to achieve desired performance specifications.

E E 512. ASIC Design**3 Credits (3)**

This course provides students with experiential knowledge of modern application specific integrated circuits. Topics include ASIC packaging and testing, I/O pads and ESD, Verilog programming and simulation, FPGA verification, Register-transfer level synthesis, timing and area optimization, floorplanning and routing, digital interfaces, full custom and standard cell design, post-layout simulation, and PCB schematics and layout. Recommended foundation: E E 480. Taught with E E 412.

Learning Outcomes

1. Cadence ASIC design tools and design flow
2. Verilog programming, simulation, and FPGA verification
3. Pading, I/O, and ESD for ASIC
4. CMOS standard cell library for large scale digital circuit
5. MOSIS Tapeout options and ASIC package selections
6. Typical digital interfaces
7. Allegro PCB schematic and layout, ASIC testing
8. Digital Signal Processing Circuits implementation in ASIC

E E 515. Electromagnetic Theory I**3 Credits (3)**

Electromagnetic theory of time-harmonic fields in rectangular, cylindrical and spherical coordinates with applications to guided waves and radiated waves. Induction and equivalence theorems, perturbational and variational principles applied to engineering problems in electromagnetics. Recommended foundation: E E 340.

E E 521. Microwave Engineering**3 Credits (3)**

Techniques for microwave measurements and communication system design, including transmission lines, waveguides, and components. Microwave network analysis and active device design. Recommended foundation: E E 340. Taught with: E E 453.

E E 523. Analog VLSI Design**3 Credits (2+3P)**

Analysis, design, simulation, layout and verification of CMOS analog building blocks, including references, opamps, switches and comparators. Teams implement a complex analog IC. Recommended foundation: E E 320 and E E 480. Taught with: E E 485.

Learning Outcomes

1. Students completing the course with a grade of C or better will perform satisfactorily on analysis, design, simulation, and layout of current mirrors, current sources, and voltage references.

2. Students completing the course with a grade of C or better will perform satisfactorily on analysis, design, simulation, and layout of differential and operational amplifiers.
3. Students completing the course with a grade of C or better will perform satisfactorily on analysis, design, simulation, and layout of switched-capacitor circuits.
4. Students completing the course with a grade of C or better will perform satisfactorily on using VLSI CAD tools for simulating and laying out analog integrated circuits.
5. Students completing the course with a grade of C or better will perform satisfactorily on writing laboratory reports and project documentation.

E E 528. Fundamentals of Photonics**4 Credits (3+3P)**

Ray, wave and guided optics, lasers and thermal sources, radiometry, photon detection and signal-to-noise ratio. Elements of photonic crystals, polarization, acousto-optics, electro-optics, and optical nanostructures. Recommended foundation (PHYS 1320G or PHYS2120) and (E E 473 or PHYS 473), Taught with E E 478. Crosslisted with PHYS 528.

Learning Outcomes

1. Describe the fundamental properties of light.
2. Formulate the concepts of ray, wave, and photon optics mathematically.
3. Represent and incorporate basic elements of an optical system.
4. Perform an analysis of a simple photonic/optical system mathematically by hand and with computer tools such as MATLAB.
5. Discuss ethical, societal, and professional issues related to photonics and optics.

E E 534. Power System Relaying**3 Credits (3)**

Fundamental relay operating principles and characteristics. Current, voltage, directional, differential relays; distance relays; pilot relaying schemes. Standard protective schemes for system protection. Operating principles and overview of digital relays. Recommended foundation: E E 493.

E E 537. Power Electronics**3 Credits (2+3P)**

Basic principles of power electronics and its applications to power supplies, electric machine control, and power systems. Recommended foundation: E E 317 and E E 333. Taught with: E E 432.

Learning Outcomes

1. To introduce students to the basic structure and requirements of any electric power supply system and the nature of power systems engineering and the profession. To establish background for further studies in power systems
2. To develop an understanding of components in a power system and to understand the basic electromagnetic and electromechanical principles involved in these components.
3. To develop an understanding of the physical-principles—to-electric-equivalent circuit approach to the analysis and design of components and systems.
4. To develop skills in equivalent circuit based analysis techniques building upon competencies developed in prior coursework.
5. To explore analysis and design principles for the complete power system

- To convey to the student a thorough understanding of both the theory and the mechanics involved in the modeling and analysis of power system components and networks
- To study how such modeling and analysis is used in the design/planning of power systems

E E 540. Photovoltaic Devices and Systems

3 Credits (3)

Technical concepts of photovoltaics, with primary focus on solar cell technology. Solar cell device level operation, packaging, and manufacturing. Design of photovoltaic systems for stand-alone or grid-tied operation. Business-case analysis using real-life scenarios of photovoltaic system solutions. Recommended foundation: E E 317. Taught with: E E 440.

Learning Outcomes

- Name at least three different types of photovoltaic materials and cells.
- Derive equations governing operation of photovoltaic cells.
- Design and create electrical engineering drawings for photovoltaic systems of different nameplate capacity.
- Describe principles of operation of the "balance of the system" (BOS) components of the photovoltaic system.

E E 541. Antennas and Radiation

4 Credits (3+3P)

Basic antenna analysis and design. Fundamental antenna concepts and radiation integrals. Study of wire antennas, aperture antennas, arrays, reflectors, and broadband antennas. Recommended foundation is E E 340. Taught with E E 454.

Learning Outcomes

- Students will demonstrate an understanding of the fundamental principles, theories, and equations governing antenna radiation, antenna arrays, and matching, etc.
- Students will analyze and solve the antenna-related radiation problems, antenna structures.
- Students will demonstrate the use of antenna synthesis techniques and simulation software to solve antenna related problems
- Students will demonstrate effective team work
- Students will demonstrate an understanding the impact of engineering solutions in a global, economic, environmental, and societal context
- Students will demonstrate an understanding of the knowledge of contemporary professional, societal and global issues

E E 542. Power Systems II

3 Credits (3)

Analysis of a power system in the steady-state. Includes the development of models and analysis procedures for major power system components and for power networks. Recommended foundation: E E 333. Taught with E E 431.

Learning Outcomes

- To introduce students to the basic structure and requirements of any electric power supply system and the nature of power systems engineering and the profession. To establish background for further studies in power systems
- To develop an understanding of components in a power system and to understand the basic electromagnetic and electromechanical principles involved in these components.

- To develop an understanding of the physical-principles—to-electric-equivalent circuit approach to the analysis and design of components and systems.
- To develop skills in equivalent circuit based analysis techniques building upon competencies developed in prior coursework.
- To explore analysis and design principles for the complete power system
- To convey to the student a thorough understanding of both the theory and the mechanics involved in the modeling and analysis of power system components and networks
- To study how such modeling and analysis is used in the design/planning of power systems

E E 543. Power Systems III

3 Credits (3)

Analysis of a power system under abnormal operating conditions. Topics include symmetrical three-phase faults, theory of symmetrical components, unsymmetrical faults, system protection, and power system stability. Recommended foundation: E E 431. Taught with: E E 493.

Learning Outcomes

- To introduce students to the basic structure and requirements of any electric power supply system and the nature of power systems engineering and the profession. To establish background for further studies in power systems
- To develop an understanding of components in a power system and to understand the basic electromagnetic and electromechanical principles involved in these components.
- To develop an understanding of the physical-principles—to-electric-equivalent circuit approach to the analysis and design of components and systems.
- To develop skills in equivalent circuit based analysis techniques building upon competencies developed in prior coursework.
- To explore analysis and design principles for the complete power system
- To understand measurement, analysis, simulation and design techniques, through laboratory exercises involving hardware and software.

E E 544. Distribution Systems

3 Credits (3)

Concepts and techniques associated with the design and operation of electrical distribution systems. Recommended foundation: E E 542 and E E 543.

E E 545. Digital Signal Processing II

3 Credits (3)

Non-ideal sampling and reconstruction, oversampling and noise shaping in A/D and D/A, finite word length effects, random signals, spectral analysis, multirate filter banks and wavelets, and applications. Recommended foundation: E E 395.

E E 548. Introduction to Radar

3 Credits (3)

Basic concepts of radar. Radar equation; detection theory, AM, FM, and CW radars. Analysis of tracking, search, MTI, and image radar. Recommended foundation: E E 325, E E 340 and E E 496. Taught with: E E 452.

Learning Outcomes

- Students will demonstrate an understanding of fundamental principles of various types of radar systems and their applications.
- Students will learn to analyze a given radar system.

- Students will learn to use simulation techniques to design a radar system that will yield desired characteristics.
- Students will experience working in groups/teams.

E E 549. Smart Antennas**3 Credits (3)**

Smart antenna and adaptive array concepts and fundamentals, uniform and planar arrays, optimum array processing. Adaptive beamforming algorithms and architectures: gradient-based algorithms, sample matrix inversion, least mean square, recursive least mean square, sidelobes cancellers, direction of arrival estimations, effects of mutual coupling and its mitigation. Recommended foundation: E E 325 and E E 340. Crosslisted with: E E 449.

E E 551. Control Systems Synthesis**3 Credits (3)**

An advanced perspective of linear modern control system analysis and design, including the essential algebraic, structural, and numerical properties of linear dynamical systems. Computer-aided solution of real-world design problems. Recommended foundation: E E 407 Intro to Control Systems or equivalent. Taught with E E 475.

Learning Outcomes

- Understand the concepts of Model Identification and Parameter Estimation (least-square identification of a auto-regressive model; nonparametric identification in the time domain; and nonparametric identification in the frequency domain)
- Understand Robust Control techniques (Nyquist-plots, small-gain, and passivity)
- Understand Optimal control techniques (LQR/LQG for state-space systems and time-optimal controller for the positioning of a mass using force actuation)
- Understand Nonlinear control techniques (Lyapunov's stability method; feedback linearization controller for a fully actuated 2nd order mechanical system; backstepping for triangular nonlinear systems; actuator limitations)

E E 553. Noncooperative Game Theory**3 Credits (3)**

The purpose of this course is to teach students to formulate problems as mathematical games and provide the basic tools to solve them. The course covers: Static games, starting with two-player zero-sum games and eventually building up to n-player non-zero sum games. Saddle-points and Nash equilibria will be covered. Dynamic optimization (dynamic programming) for discrete and continuous time. Dynamic games, both open and closed-loop policies. The intended audience includes (but is not restricted to) students in engineering and computer science. The class is heavily project-oriented and the students are strongly encouraged to choose a project that is relevant to their own area of research. Recommended foundation: undergraduate linear algebra and probability. Taught with E E 408.

Learning Outcomes

- Comprehend the key principles of noncooperative game theory.
- Apply the Minimax Theorem and evaluating mixed saddle-point equilibria.
- Analyze stochastic policies for games in extensive form, and apply them to the existence and computation of saddle-point equilibria.
- Comprehend games with N-players.
- Analyze potential games and evaluate Nash equilibria for potential games.
- Analyze dynamic games: the optimal control of a dynamical system.

- Evaluate the saddle-point equilibria of zero-sum discrete-time and continuous-time dynamic games in state-feedback policies.

E E 556. Hardware & Software Codesign**3 Credits (3)**

This course introduces the concept and techniques of designing electronic systems that integrates both hardware and software components. Topics include nature of hardware and software, dataflow modeling, software and hardware implementations of dataflows, analysis of control flows and dataflows, FSM with Datapath, microprogramming, embedded cores, and trade-offs between hardware and software components, etc. Students gain experience in implementing hardware and software co-design solutions for solving real-world problems through hands-on laboratory/project on a programmable System-on-Chip (SoC) platform that integrates a dual-core ARM Cortex-A9 processor and FPGA fabrics. Students develop a fundamental understanding of state-of-the-art practices in developing codesign solutions to problems that prepare them well for industrial and academic careers in this field. Recommended foundation ENGR 140, ENGR 130, (E E 362 or C S 473). Taught with E E 409.

Learning Outcomes

- Formulate and solve problems related to basic concepts and methodologies in hardware/software co-design.
- Analyze concurrent specification of an algorithm to be partitioned into software (C code) and hardware (HDL) components.
- Design and implement both the software and hardware components integration as a solution to real-world problems to achieve optimal performance, power and cost.
- Describe various types of system architectures regarding their attributes including speed, energy, design complexity, design cost, etc.
- Experience working with commercially available Computer-Aided Design (CAD) development tools such as Xilinx Vivado.
- Experience working in translation between C code and HDL of practical problems and verify/test the solution on FPGA SoC architecture.

E E 558. Hardware Security and Trust**3 Credits (3)**

This course introduces and investigates recent technology development for the design and evaluation of secure and trustworthy hardware and embedded systems. Topics include IoT security, cryptography, hardware security primitives, authentication and key generation, invasive and non-invasive attacks and countermeasures, IC piracy and intellectual property protection, hardware trojans, and secure boot. Recommended foundation: E E 362. Taught with: E E 458.

Learning Outcomes

- Students completing the course with a grade of C or better will perform satisfactorily on understanding of security goals of information security.
- Students completing the course with a grade of C or better will perform satisfactorily on understanding of Cryptography basics and their applications.
- Students completing the course with a grade of C or better will perform satisfactorily on security threats in integrated circuits, electronic devices and semiconductor supply chain.
- Students completing the course with a grade of C or better will perform satisfactorily on security countermeasures to the threats of integrated circuits and electronic devices.

- Students completing the course with a grade of C or better will perform satisfactorily on metrics used to measure and assess the security level of security mechanisms or primitives in hardware security applications.
- Students completing the course with a grade of C or better will perform satisfactorily on analysis and assessment of potential security vulnerabilities in hardware and embedded systems.
- Students completing the course with a grade of C or better will perform satisfactorily on state-of-art security mechanisms and research topics in the hardware and embedded security area.

E E 562. Computer Systems Architecture

3 Credits (3)

The course covers uniprocessors, caches, memory systems, virtual memory, storage systems, with introduction to multiprocessor and distributed computer architectures; models of parallel computation; processing element and interconnection network structures, and nontraditional architectures. Recommended foundation is E E 362.

Taught with: E E 462.

Learning Outcomes

- Recognize the basic principles and current practices of computer architectures of processors, memory systems, interconnects, and input/output systems.
- Reason about the issues that influence the architectures of processors, memory systems, interconnects, and input/output systems.
- Evaluate and improve computer system performance through analysis and computer simulation.
- Solve and implement a small research problem in computer architecture.

E E 563. Computer Performance Analysis I

3 Credits (3)

Issues involved and techniques used to analyze performance of a computer system. Topics covered include computer system workloads; statistical analysis techniques such as principal component analysis, confidence interval, and linear regression; design and analysis of experiments; queuing system analysis; computer system simulation; and random number generation. Recommended foundation: E E 200 and E E 462.

E E 565. Machine Learning I

3 Credits (3)

A graduate-level introduction to machine learning algorithms, including supervised and unsupervised learning methods. Topics covered include clustering, linear regression models, linear discriminant functions, feed-forward neural networks, statistical pattern classification and regression, maximum likelihood, naive Bayes, non-parametric density estimation, mixture models, decision trees, and ensemble learning. Recommended foundation: E E 200, E E 571, and MATH 480. Taught with: E E 465.

Learning Outcomes

- Formulate and solve problems related to the basic concepts and mathematical techniques of machine learning.
- Gain an understanding of machine learning algorithms/methods by solving problems using software.
- Gain experience doing independent study and research.
- Formulate and solve problems related to the basics of regression, classification, and unsupervised learning.
- Gain practical experience through project-based assignments and technical report writing.

E E 567. ARM SOC Design

3 Credits (3)

The course aims to produce students who are capable of developing ARM-based SoCs from high level functional specifications to design, implementation and testing on real FPGA hardware using standard hardware description and software programming languages.

Recommended foundation E E 362 and E E 317. Taught with: E E 467.

Learning Outcomes

- Formulate and solve problems requiring knowledge and understanding of ARM processor architectures and ARM-based SoCs.
- Capture the design of ARM-based SoCs in a standard hardware description language.
- Conduct low-level software design for ARM-based SoCs and high-level application development.
- Demonstrate the ability to use and choose between different techniques for digital system design and capture.
- Evaluate implementation results (e.g. speed, area, power) and correlate them with the corresponding high level design and capture.
- Demonstrate the ability to use a commercial tools to develop ARM-based SoCs.

E E 571. Random Signal Analysis

3 Credits (3)

Application of probability and random variables to problems in communication systems, analysis of random signal and noise in linear and nonlinear systems. Recommended foundation E E 200 and E E 240. May be repeated up to 3 credits.

Learning Outcomes

- To specify sample space and solve problems requiring probability computations based on axioms of probabilities and basic properties of event probabilities.
- To characterize discrete and continuous random variables through various functions, example distributions, and moment calculations. To describe and compute probabilities involving multiple random variables in electrical engineering problems.
- To analyze different notions of convergence, limit theorems, and specify their significance in communication system applications.
- To describe and characterize random processes relevant to electrical engineering in general, and communications systems in particular. To perform differentiation and integration of random processes and to analyze specific classes of random processes including random walk, Gaussian processes, and AR processes.
- To relate the significance of random processes to problems in electrical engineering, and solve problems involving power spectral density and transfer functions.

E E 572. Modern Coding Theory

3 Credits (3)

Error control techniques for digital transmission and storage systems. Introduction to basic coding bounds, linear and cyclic block codes, Reed-Solomon codes, convolutional codes, maximum likelihood decoding, maximum a posteriori probability decoding, factor graphs, low density parity check codes, turbo codes, iterative decoding. Applications to data networks, space and satellite transmission, and data modems.

Recommended foundation: E E 200 and E E 496.

E E 573. Signal Compression

3 Credits (3)

Fundamentals of information source encoding and decoding. Includes information theory bounds on source coding, lossless coding algorithms,

scalar quantizing and vector quantizing. Recommended foundation E E 200. Taught with E E 448.

Learning Outcomes

1. Formulate and analyze problems related to rate-distortion tradeoffs in compression
2. Formulate and analyze problems related to scalar and vector quantization
3. Formulate and analyze problems related to transform coding
4. Formulate and analyze problems related to entropy coding (Huffman arithmetic)
5. Formulate and analyze problems related to standardized codecs, including MPEG, JPEG, MP3
6. Formulate and analyze problems related to compressive sensing/sampling

E E 576. Geometric Algebra

3 Credits (3)

Geometric algebra provides a common mathematical language for many areas of physics (classical and quantum mechanics, electrodynamics, special and general relativity), computer science (graphics, robotics, computer vision), engineering, and other fields. Topics include: the geometric product and multivectors; Euclidean, Lorentzian, Galilean, and Projective Geometries; Complex, Hyperbolic, and Dual Numbers; Quaternions and Rotations. Recommended foundation E E 320. Taught with E E 403.

Learning Outcomes

1. Formulate and solve problems related to multivectors and the geometric product while building geometric intuition.
2. Formulate and solve problems related to complex, hyperbolic, and dual numbers as well as quaternions.
3. Formulate and solve problems related to non-Euclidean spaces including Lorentzian, Galilean, and projective geometries.

E E 577. Fourier Methods in Electro-Optics

3 Credits (3)

Linear systems theory, convolution and Fourier transformation are applied to one-dimensional and two dimensional signals encountered in electro-optical systems. Applications in diffraction, coherent and incoherent imaging, and optical signal processing. Recommended foundation: E E 320 and E E 528. Crosslisted with: PHYS 577.

E E 578. Optical System Design

3 Credits (3)

Optical design software is used to study optical systems involving lenses, mirrors, windows and relay optics. Systems considered include camera lenses, microscopes and telescopes. Recommended foundation: E E/PHYS 473, E E/PHYS 528 and E E/PHYS 577. Crosslisted with: PHYS 578.

E E 581. Digital Communication Systems I

3 Credits (3)

Techniques for transmitting digital data over commercial networks. Topics include baseband and bandpass data transmission and synchronization techniques. Recommended foundation: E E 200, E E 325, and E E 496. Crosslisted with: E E 497.

E E 583. Wireless Communication

3 Credits (3)

Cellular networks, wireless channels and channel models, modulation and demodulation, MIMO, diversity and multiplexing, OFDM, wireless standards including LTE and WiMAX. Recommended foundation: E E 571 and E E 325.

E E 586. Information Theory

3 Credits (3)

This class is a study of Shannon's measure of information and discusses mutual information, entropy, and channel capacity, the noiseless source coding theorem, the noisy channel coding theorem, channel coding and random coding bounds, rate-distortion theory, and data compression.

Restricted to: Main campus only. Crosslisted with: MATH 509

Prerequisite(s): E E 571 or MATH 515.

E E 587. Deep Learning for Image Processing

3 Credits (3)

Implementation and analysis of deep learning architectures for image processing. Specific projects will be adjusted according to current state-of-the-art research, but may include such topics as networks for: segmentation of images, captioning of images, understanding of images at a human interpretable level, visualization of network behavior, incorporation of temporal information from image sequences.

Prerequisite: E E 446 or E E 596.

Learning Outcomes

1. Read, synthesize, and discuss academic research papers describing deep learning architectures for image processing.
2. Install, run, modify, and analyze results from third-party software (e.g., from github) implementing deep learning architectures for image processing.
3. Present project results orally.
4. Present project results in a written report following the conventions expected of technical writing in engineering disciplines.

E E 588. Advanced Image Processing

3 Credits (3)

Advanced topics in image processing including segmentation, feature extraction, object recognition, image understanding, big data, and applications. Taught with: E E 444.

Prerequisite: E E 446 or E E 596.

E E 590. Selected Topics

1-9 Credits

May be repeated for a maximum of 18 credits.

E E 593. Mobile Application Development

3 Credits (3)

Introduction to mobile application development. Students will develop applications for iOS devices including iPhone and iPad. Topics include object-oriented programming using Swift, model-view-controller (MVC) pattern, view controllers including tables and navigation, graphical user interface (GUI) design, data persistence, GPS and mapping, camera, and cloud and web services. Recommended foundation: C S 151 or C S 152 or C S 172 or C S 271 or C S 451 or C S 452. Taught with: E E 443.

Learning Outcomes

1. The objective of this course is to gain an understanding of mobile application development, including Swift, Model-View-Controller (MVC) pattern, Memory management, View controllers, Frameworks: Foundation, CoreGraphics, CoreLocation, MapKit, UIKit, WebKit

E E 596. Digital Image Processing

3 Credits (3)

Two-dimensional transform theory, color images, image enhancement, restoration, segmentation, compression and understanding. Recommended foundation E E 325. Taught with: E E 446.

Learning Outcomes

1. Analyze human visual perception and the implications to science and society.

2. Formulate and analyze problems that utilize the mathematics behind multidimensional image processing.
3. Formulate and analyze problems involving multidimensional transformation transform-domain processing.
4. Formulate and analyze problems related to color image acquisition, processing, and display.
5. Implementing image processing algorithms on computers in Matlab or python.

E E 597. Neural Signal Processing**3 Credits (3)**

Cross-disciplinary course focused on the acquisition and processing of neural signals. Students in this class will be learn about basic brain structure, different brain signal acquisition techniques (fMRI, EEG, MEG, etc.), neural modeling, and EEG signal processing. To perform EEG signal processing, students will learn and use Matlab along with an EEG analysis package. Recommended foundation E E 325. Taught with: E E 447.

Learning Outcomes

1. Demonstrate understanding and skill in the Structure and basic operation of the human brain.
2. Demonstrate understanding and skill in processing of EEG brain signals using Matlab and EEGLAB.
3. Demonstrate understanding and skill in EEG-related neural modeling.
4. Demonstrate understanding and skill in brain signal types and acquisition.

E E 598. Master's Technical Report**1-9 Credits (1-9)**

Individual investigation, either analytical or experimental, culminating in a technical report. Graded PR/S/U. May be repeated up to 18 credits. Thesis/Dissertation Grading.

E E 599. Master's Thesis**1-15 Credits (1-15)**

Thesis. May be repeated up to 88 credits. Thesis/Dissertation Grading.

E E 600. Doctoral Research**1-15 Credits**

Research.

E E 615. Computational Electromagnetics**3 Credits (3)**

The numerical solution of electromagnetics problems. Topics include differential equation techniques, integral equation methods, hybrid techniques, algorithm development and implementation, and error analysis. Particular algorithms, including FEM, finite differences, direct solvers, and iterative solvers, are studied.

E E 690. Selected Topics**1-9 Credits**

May be repeated for a maximum of 9 credits.

E E 700. Doctoral Dissertation**1-15 Credits (1-15)**

Dissertation. May be repeated up to 88 credits. Thesis/Dissertation Grading.

E T-ENGINEERING TECHNOLOGY

E T 101. Introduction to Engineering Technology and Geomatics**1 Credit (1)**

An introduction to geomatics and the various engineering technology disciplines, the engineering approach to problem solving, and the design

process. Projects emphasize the importance of teamwork, written & oral communication skills, as well as ethical responsibilities.

Learning Outcomes

1. Develop a basic understanding of all programs in the Engineering Technology and Surveying Engineering Department.
2. Create a solid curriculum plan for their degree program.
3. Describe the Engineering Design Process.
4. Define and visit campus support programs and student engineering programs.
5. Describe and discuss communication skills in the engineering profession.

E T 104. Soldering Techniques**1 Credit (3P)**

Fundamentals of soldering, desoldering, and quality inspection of printed circuit boards.

E T 109. Computer Drafting Fundamentals**3 Credits (2+2P)**

Introduction to principles and fundamentals of drafting using both manual drawing techniques and computer-aided drafting (CAD) applications. Crosslisted with: DRFT 109 and C E 109. May be repeated up to 3 credits.

Learning Outcomes

1. Describe related career options/pathways.
2. Explain and apply common drafting terms, concepts, and conventions.
3. Utilize various AutoCAD commands and Coordinate Entry methods to produce accurate and precise Two-Dimensional drawings.
4. Setup AutoCAD working environment, drawings, styles, and applicable settings.
5. Navigate the AutoCAD user interface efficiently.
6. Apply different drafting methods, strategies, and processes.
7. Utilize AutoCAD to produce basic 2D CAD working drawings.
8. Measure utilizing scales accurately.
9. Create drawings with different scales and units. 1
10. Plot drawings produced in AutoCAD at various scales and on various sheet sizes. 1
11. Utilize the two Drawing Environments: Paper Space and Model Space. 1
12. Manage AutoCAD drawing files.

E T 110. Introduction to 3-D Modeling (Solid Works)**3 Credits (2+3P)**

Introduction to SolidWorks, a 3-D modeling software. The foundation for designing mechanical parts and assemblies.

E T 120. Computation Software**2-3 Credits (2-3)**

The use of spreadsheet software in the field of engineering technology.

E T 125. Introduction to Renewable Energy**3 Credits (3)**

Renewable energy systems, including topics in thermal-solar photovoltaic, wind, geothermal systems, and other current topics. Theory, practical applications, safety considerations and the economics of alternative renewable energy systems compared to conventional systems.

E T 143. Civil Drafting Fundamentals**3 Credits (2+2P)**

Introduction to drafting in the field of Civil Engineering. Drawings, projects, and terminologies related to topographic, contour drawings, plan and profiles, and street/highway layout. Restricted to Community Colleges only. Taught with DRFT 143 and SUR 143.

Prerequisite: DRFT 109.

Learning Outcomes

1. Use appropriate drafting/technical terminology.
2. Identify of the different types of Civil Engineering work drawing plan sets.
3. Understanding and the use of the terminologies used in the industry.
4. Use AutoCAD Civil 3D.
5. Enter appropriate data into AutoCAD software in order to retrieve necessary outcomes.
6. Plot/Print different types of civil engineering working plans.
7. Read, interpret and understand engineering drawings.
8. Define and understand the different types of engineering drawings.

E T 153. Fundamentals of Networking Communications

3 Credits (3)

Introduction to networking basics, including computer hardware and software, electricity, networking terminology, protocols, LANs, WANs, OSI model, IP addressing, and design and documentation of basic network and structure cabling.

Learning Outcomes

1. Students will identify network types/protocols utilizing the OSI reference model and compute numbering system network problems.
2. Students will explain issues related to managing and documenting network environments.
3. Students will list, compare, and discuss industry standards for addressing computers on a network.
4. Students will list and distinguish between computer networking historical milestones.
5. Students will identify, compare, and evaluate networking data transport techniques.
6. Students will identify and compare network transmission media and build/evaluate network cabling.
7. Students will discuss IT industry certifications and summarize current technology trends.

E T 154. Construction Methods and Communications

3 Credits (3)

Blueprint reading, specifications, and introduction to materials used in construction. May be repeated up to 3 credits.

Learning Outcomes

1. Students will develop a basic knowledge of AutoCad Civil Three-Dimensional software as they relate to the civil drafting process.
2. Students will become familiar with a basic understanding of computers, drafting, and trigonometry as required.
3. Use of long-term projects will be utilized to simulate real-world work environments to aid the understanding and applying vocabulary on surveying drafting plans.
4. An ability to apply current knowledge and adapt to emerging applications of mathematics, science, engineering, and technology.

E T 155. Network Operating Systems I

3 Credits (3+1P)

Introduction to a computer network operating system. May not be used as part of an E T degree program on main campus. Restricted to: Community Colleges only.

Prerequisite(s): E T 120 or E T 122.

E T 156. Introduction to Information Security

2 Credits (2)

This course introduces information security terminology, historical evolution of digital security, types of PC and network system vulnerabilities and types of information loss. In addition, methods of information protection and integrity, intrusion detection, and recovery of data are introduced.

Prerequisite(s)/Corequisite(s): E T 120. Restricted to Community Colleges campuses only.

E T 160. Windows Fundamentals for IET

3 Credits (3)

Fundamental review of the Windows operating system including installation and upgrades as well as managing applications, files, folders, devices and maintenance.

Learning Outcomes

1. Properly deploy the Windows OS.
2. Manage Windows OS data and devices.
3. Apply network and connection configurations.
4. Provide Windows OS maintenance.

E T 182. Introduction to Digital Logic

2 Credits (1.5+1.5P)

An introduction to logic design and the basic building blocks of digital systems. Topics include numbering systems, Boolean algebra, digital logic theory, combinational logic, and applications such as adders. Includes hands-on laboratory

Prerequisite: A grade of C- or better in MATH 1220G or higher.

Learning Outcomes

1. Demonstrate ability to convert numerical values to commonly-used digital representations and their use for arithmetic and logical functions.
2. Demonstrate understanding of Boolean logic functions and truth tables.
3. Demonstrate ability to simplify logic expressions.
4. Demonstrate understanding of combinational logic functions, and the ability to build digital circuits using breadboards.

E T 183. Applied DC Circuits

3 Credits (2+2P)

Application of Ohm's law, Kirchhoff's laws, Thevenin's, and Norton's theorems to the analysis of DC passive circuits. Embedded Lab.

Prerequisite(s)/Corequisite(s): MATH 1220G.

E T 183 L. Applied DC Circuits Lab

1 Credit (2P)

DC applied circuits lab.

Corequisite(s): E T 183.

E T 184. Applied AC Circuits

2-3 Credits (1-2+2P)

Application of circuit laws and theorems to analysis of AC passive circuits. Resonant circuit, polyphase circuit and magnetic circuit topics are introduced. Embedded Lab.

Prerequisite: A grade of C- or better in ENGR 120.

Learning Outcomes

1. Analyze and design AC circuits, including ideal op-amps, using concepts of voltage, current, power, Kirchhoff's laws, and network theorems.
2. Design simple systems involving AC circuits.

E T 190. Applied Circuits**4 Credits (3+2P)**

Application of Ohm's law, Kirchhoff's laws, and Thevenin's theorems to the analysis of AC and DC passive circuits. Electronic circuit topics are introduced. Embedded lab. May be repeated up to 4 credits.

Prerequisite/Corequisite: MATH 1250G or higher.

Learning Outcomes

1. Analyze and design DC and AC circuits, including ideal op-amps, using concepts of voltage, current, power, Kirchhoff's laws, and network theorems.
2. Design simple systems involving DC and AC circuits.

E T 191. Applied Circuits Laboratory**1 Credit (2P)**

Applied Circuits Lab

E T 200. Special Topics**1-3 Credits**

Directed study or project. May be repeated for a maximum of 6 credits.

Prerequisite: consent of department head.

E T 210. Intermediate 3-D Modeling (Solid Works)**3 Credits (3)**

Intermediate 3-D modeling. Applied modeling of techniques to prepare for SolidWorks certification (CSWA).

Prerequisite: A grade of C- or better in ENGR 110.

Learning Outcomes

1. Properly operate a CAD system in the most efficient manner.
2. Generate and easily update Part models.
3. Ability to create complex assembly models.
4. Create usable production drawings from Three-Dimensional CAD models.
5. Understand the basic fundamentals of available add-in software compatible with SolidWorks (FEA, CAM, PDM).
6. Work in a group and operate effectively on a team.
7. Use creative and technical thinking skills in design.

E T 217. Manufacturing Processes**3 Credits (2+3P)**

Introduction to manufacturing and processing, including: casting, forming, and machining. Emphasis on creating products with the appropriate techniques. Crosslisted with: I E 217.

Prerequisite(s): A grade of C- or better in either E T 110 or ENGR 110 and C- or better in MATH 1220G.

Learning Outcomes

1. Identify the different manufacturing processes and their applications.
2. Use, set up, and calibrate measuring tools.
3. Apply geometric tolerances to engineering drawings.
4. Demonstrate basic knowledge of materials and material properties.
5. Demonstrate basic knowledge of GM codes and their application.
6. Proficiently use CAM packages such as SolidWorks CAM.
7. Identify different tooling, their use, and manufacturing application.

E T 217 L. Manufacturing Processes Lab**1 Credit (3P)**

Hands-on laboratory in machine shop to apply topics from E T 217, including: casting, forming, and machining.

Corequisite: E T 217.

Learning Outcomes

1. Various

E T 220. Internship**1-6 Credits**

Internship requiring an approved number of hours of varied and progressive experience in the field of study. The scope and other requirements of the internship are stated in an individualized syllabus and through a memorandum of understanding between the faculty mentor and the industry partner. May be repeated up to 6 credits. Consent of Instructor required.

Prerequisite(s): E T 283.

E T 240. Applied Statics**3 Credits (3)**

Fundamental topics of applied statics, including force system analysis, equilibrium, free body diagrams, methods of joints and sections, distributed loads, friction, centroids, area moments, and shear and moment diagrams.

Prerequisite(s)/Corequisite(s): MATH 1430G or MATH 1511G.

Prerequisite(s): PHYS 1230G or PHYS 1310G.

E T 241. Applied Dynamics**3 Credits (3)**

The foundation for understanding particles and bodies in motion and the forces involved, including: projectile motion, Newton's Laws of Motion, conservation of energy, and impulse and momentum.

Prerequisite: A grade of C- or better in either E T 240 or ENGR 233.

Prerequisite/Corequisite: (MATH 1440 or MATH 1521G or MATH 1521H).

Learning Outcomes

1. Various

E T 246. Electronic Devices I**4 Credits (3+3P)**

Solid-state devices including diodes, bipolar-transistors, and field effect transistors. Use of these devices in rectifier circuits, small signal and power amplifiers.

Prerequisite: A grade of C- or better in one of the following: E T 190 or E T 183 or ENGR 120.

Prerequisite/Corequisite: E T 184 or ENGR 230.

Learning Outcomes

1. Describe semiconductor devices and their properties.
2. Apply the characteristics of diodes to analyze diode rectifier and regulator circuits.
3. Apply the characteristics of bipolar junction transistors (BJTs) to analyze BJT amplifier circuits.
4. Apply the characteristics of metal-oxide-semiconductor field-effect transistors (MOSFETs) to analyze MOSFET amplifier circuits.
5. Describe and analyze complementary MOS (CMOS) digital circuits.
6. Learn to solder and layout printed-circuit boards (PCBs).
7. Design, simulate, and test diode and transistor-amplifier circuits.

E T 253. Networking Operating Systems II**3 Credits (3+1P)**

Introduction to a computer network operating system. May not be used as part of an E T degree program on main campus. Restricted to Community Colleges campuses only.

Prerequisite: E T 120 and E T 153.

Learning Outcomes

1. Identify Linux utilities and terminology.
2. Use the Linux filesystem.
3. Install, administer, and manage a Linux system.
4. Utilize Linux user/group management.

5. Install software packages.
6. Apply data management skills.

E T 254. Concrete Technology**3 Credits (2+2P)**

Fundamentals of aggregates, Portland cement, and asphalt used in design and construction. May be repeated up to 3 credits.

Learning Outcomes

1. Define the fundamentals of aggregates and their use in construction including concrete and asphalt.
2. Define the types of concrete and their uses.
3. Prepare and test concrete mix designs.
4. Executing tests for AASHTO Certification.

E T 255. Linux System Administration**3 Credits (3)**

Operating systems applications and interfacing with an introduction to systems administration. Topics include Shell Programming, Programming Tools, Database Management, System Backups, Security, Setup and Maintenance of Linux Servers.

Learning Outcomes

1. Describe the key features of the Linux operating system.
2. Plan the Linux Filesystem to match system requirements.
3. Design BASH scripts to optimize common Linux operations.
4. Interpret Linux performance data to solve hardware and software issues.
5. Students will demonstrate the Core Linux System Administration.
6. Students will be able to link the use of shell commands to managing Linux server daemons and software.
7. Students will apply these concepts to build application servers running Linux, Apache, MySQL, and PHP (LAMP); Tomcat, CUPS print servers; and create backup solutions.
8. Students will apply problem analysis, object-oriented structured logic, and development concepts.
9. Students will demonstrate an understanding of theory and hands-on experience administrating a Linux Based server.

E T 256. Networking Operating Systems III**3 Credits (3+1P)**

Introduction to a computer network operating system. May not be used as part of an E T degree program on main campus. Restricted to Community Colleges campuses only.

Prerequisite(s): E T 253.

E T 262. Software Technology I**3 Credits (2+2P)**

An introduction to computer programming concepts as applied to engineering technology. Includes basic logic design, algorithm development, debugging and documentation. History and use of computers and their impact on society.

Prerequisite/Corequisite: (E T 182 or ENGR 130) or (MATH 1250G or MATH 1430G).

Learning Outcomes

1. Set up and use a rich programming environment for programming with C
2. Analyze existing code
3. Employ effective use of basic programming and basic troubleshooting
4. Write, debug and test code given software requirements

5. Apply testing and documentation best practices
6. Transfer programming knowledge and apply coding knowledge

E T 272. Electronic Devices II**4 Credits (3+3P)**

Operational amplifiers, positive and negative feedback, computer aided circuit analysis. In addition circuits include integrator, differentiators and phase shift networks.

Prerequisite: A grade of C- or better in E T 246.

Learning Outcomes

1. Design ideal operational amplifier (opamp) circuits.
2. Determine the frequency response of BJT and MOSFET amplifier circuits.
3. Predict the impact of non-ideal properties of opamps on opamp circuits.
4. Design opamp integrator and differentiator circuits.
5. Implement electronic wave-generating and wave-shaping circuits.
6. Solder and layout surface-mount printed-circuit boards (PCBs).
7. Simulate and test opamp and transistor-amplifier circuits.

E T 273. Advanced Networking Communications**4 Credits (2+4P)**

Explores advanced networking communications to include Wireless Networking, Virtualization and Cloud Computing, Subnets and VLANs, Network Risk Management, Network Security Design, Network Performance, and WANS. The course covers the examination objectives and detailed preparation for students to take the CompTIA Network+ exam.

Prerequisite: E T 153.

Learning Outcomes

1. Identify, describe, and apply wireless transmission characteristics and standards.
2. Explain the benefits of cloud virtualization and cloud computing.
3. Explain the purpose of network segmentation and describe how VLANs work and how they are used.
4. Identify basic concepts of network risk management and configure devices for increased security.
5. Identify network design security features and discuss options in network access control.
6. Use tools to evaluate network performance and discuss best practices for incident response and disaster recovery.
7. Explain characteristics of WAN technology and troubleshoot connection methods.

E T 276. Electronic Communications**3 Credits (2+2P)**

Antennas, transmission devices, A-M and F-M transmission and detection, pulse systems, microwave systems.

Prerequisite(s): E T 246.

E T 280. Web Design and Multimedia**3 Credits (3)**

Introduction to front-end web development including webpage design, structure, layout, positioning, responsiveness, and foundational layers of how the web works. Video, audio, and other digital presentation tools are covered.

Learning Outcomes

1. Create multiple frontend development micro-components.
2. Create single and multi-page websites.
3. Use flexbox, grid, and media queries and different design patterns.

4. Employ effective use of web development and basic troubleshooting.
5. Build small web site projects.

E T 282. Digital Electronics**4 Credits (3+3P)**

Applications of digital integrated circuits, multiplexers, counters, arithmetic circuits, and microprocessors.

Prerequisite(s)/Corequisite(s): (E T 190 or E T 184). Prerequisite(s): E T 182.

E T 283. Hardware PC Maintenance**3 Credits (3+1P)**

Installing, configuring, troubleshooting, and maintaining personal computer hardware components.

Prerequisite(s): E T 120 or E T 122.

E T 284. Software PC Maintenance**3 Credits (3+1P)**

Installing, configuring, troubleshooting, and maintaining personal computer operating systems.

Prerequisite(s): E T 120 or E T 122.

E T 285. Advanced Information Security**3 Credits (3)**

The course covers detailed analysis of network security, including security operations and policy adherence; internal and external vulnerabilities; methods of identifying, controlling and managing system access, and the protection of system information.

Prerequisite(s)/Corequisite(s): E T 283. Prerequisite(s): E T 156.

E T 286. Information Security Certification Preparation**4 Credits (4)**

The course covers the examination objectives and detailed preparation for a certification in information security.

Prerequisite(s): E T 285.

E T 291. PC Forensics and Investigation**3 Credits (3)**

Introduction to computer forensics and investigative fundamentals. Topics include understanding computer forensic and investigation law and requirements, processing crime and incident scenes, and the extraction, preservation, analysis and presentation of computer-related evidence.

Prerequisite(s): E T 120 or E T 122.

E T 300. Special Topics**1-3 Credits**

Directed study or project. May be repeated for a maximum of 6 credits.

Prerequisite: consent of department head.

E T 305. Introduction to Product Design**3 Credits (2+3P)**

The process of designing an innovative product for a real customer. Working through ideas, prototypes, 3-D models, concept validation, and entrepreneurship.

Prerequisite: A grade of C- or better in (COMM 1115G or COMM 1130G or AXED 2120G or HNRS 2175G) or consent of instructor for non-MET majors.

Prerequisite/Corequisite: E T 210 and E T 217.

Learning Outcomes

1. Learn and follow design process.
2. Develop experience working in a team to solve a design problem.
3. Develop experience presenting ideas and concepts orally.
4. Learn and apply creative problem-solving techniques.
5. Perform interviews with customer.

6. Translate customer needs into product specifications.
7. Design novel product for customer.
8. Build low-resolution prototype of product.
9. Develop a recognition of the importance of innovation and entrepreneurship.

E T 306. Fundamental and Applied Thermodynamics**3 Credits (3)**

First and second laws, properties of substances, thermodynamic cycles including power generation and refrigeration.

Prerequisite: A grade of C- or better in the following: CHEM 1120G and ENGR 233 and (PHYS 1240G or PHYS 1320G) and (PHYS 1240L or PHYS 1320L).

Corequisite: E T 306 L.

Prerequisite/Corequisite: ENGR 140, and (MATH 1440 or MATH 1521G).

Learning Outcomes

1. Students will acquire an understanding of the physical concepts and basic principles of fundamental and applied thermodynamics.
2. Students will become acquainted with the problem-solving methods and tools in the field of applied thermodynamics,
3. Students will gain experience through practice in the implementation of systematic, fundamental approaches to solving problems in applied thermodynamics.

E T 306 L. Thermodynamics Lab**1 Credit (3P)**

Applications of thermodynamic theory to lab devices. Practice in testing, instrumentation, and data collection.

Corequisite: E T 306.

Learning Outcomes

1. Effectively communicate results of laboratory work and in-class studies in written formal technical reports.
2. Present one lab experiment through a PowerPoint presentation.
3. Find thermodynamic properties through lab experiments.
4. Describe performance indicators of a laboratory refrigeration cycle and a heat engine.
5. Describe power plant operation.

E T 308. Fluid Technology**3 Credits (3)**

Application of basic principles of fluid mechanics to practical applied problems.

Prerequisite: A grade of C- or better in both, (MATH 1435 or MATH 1511G) and (E T 240 or ENGR 233).

Corequisite: E T 308 L.

Learning Outcomes

1. Solve hydrostatic problems.
2. Describe and measure physical properties of a fluid.
3. Describe the motion of fluids.
4. Apply conservation equations.
5. Design pipeline and pump systems.

E T 308 L. Fluid Technology Lab**1 Credit (3P)**

Measurements in fluid statics, dynamics, and hydraulic systems.

Corequisite: E T 308.

Learning Outcomes

1. Effectively communicate results of laboratory work and in-class studies in written formal memoranda.
2. Experimentally find properties of fluids.

3. Experiment head losses in pipe flows.
4. Analyze pipeline systems and open channel flows.
5. Analyze flow regimes and equipment selection.

E T 309V. Manufacturing: History and Technology**3 Credits (3)**

The history of manufacturing, the technology on which it is based, and its impact on society.

E T 310. Applied Strength of Materials**3 Credits (3)**

Application of principles of strength of materials to practical design and analysis problems.

Prerequisite/Corequisite: A grade of C- or better in E T 240 or ENGR 233.

Corequisite: E T 310 L.

Prerequisite/Corequisite: ENGR 190 or MATH 1440 or MATH 1521G or MATH 1521H.

Learning Outcomes

1. To obtain knowledge of basic engineering materials and their use in civil and mechanical construction.
2. To perform basic structural analysis, stress, strain and deformation calculations as they apply to current engineering practices.
3. To conduct appropriate experiments in the laboratory as they apply to straight of materials and be able to interpret the results.
4. To effectively communicate results of laboratory work and in-class studies in written memoranda, business letters, and formal technical reports.
5. To recognize that the field of engineering materials is constantly changing and therefore, needs to be studied throughout one's career.

E T 310 L. Applied Strength of Materials Lab**1 Credit (3P)**

Testing and analyzing the physical properties of materials. cursory review of Excel, PowerPoint, FEA, Instron machine, and testing standards.

Corequisite: E T 310.

Learning Outcomes

1. Effectively communicate results of laboratory work and in-class studies in written formal memoranda.
2. Demonstrate an understanding of the tensile, compressive, shear, torsional and buckling properties of basic materials through hands-on testing per ASTM Standards.
3. Evaluate the results of the hands-on laboratory testing through modeling exercises using SOLIDWORKS simulations.
4. Effectively communicate industry practices through oral presentations of ASTM standards.

E T 314. Communications Systems I**3 Credits (3)**

Circuits and devices used for transmission, reception, and processing of RF signals. May be repeated up to 3 credits.

Prerequisite: A grade of C- or better in both, E T 246 and (MATH 1250G or higher).

Learning Outcomes

1. Analyze analog and digital communication systems.
2. Apply the fundamental communication concepts of AM and FM techniques.
3. Build an AM/FM communication system.
4. Apply basic antenna theory and satellite communication theory.

E T 317. Advanced Manufacturing and Design**3 Credits (3)**

Advanced 3-D modeling with current engineering design practices. Students will use SolidWorks add-ins such as CAMWorks, Product Data Management (PDM), and Model-Based Definition in conjunction with Geometric Dimensioning and Tolerancing (GD&T) practices. Students will have the opportunity to take the Certification SolidWorks Professional Exam (CSWP).

Prerequisite: A grade of C- or better in both, E T 210 and E T 217 or ENGR 217.

Learning Outcomes

1. Create manufacturing drawing packages in accordance with ANSI.
2. Relate design data using proper geometric dimensioning and tolerancing practices.
3. Knowledge of advanced manufacturing processes.
4. Knowledge of requirements design for manufacturability (DFM).
5. Write and understand G-Code toolpaths.
6. Use CAD/CAM systems to create toolpaths.
7. Operate and setup CNC machining center.
8. Work in a group and operate effectively on a team.
9. Use creative and technical thinking skills in design.

E T 324. Signal Processing and Filtering**4 Credits (3+3P)**

Application of digital and analog signal conversion models. Discrete time signals and systems. Time and frequency domain concepts. Presentation of Fourier and Z transforms. Application of analog and digital signal filtering with and without feedback.

Prerequisite: A grade of C- or better in E T 272, ENGR 140, and (MATH 1521G or higher).

Prerequisite/Corequisite: (PHYS 1240G or PHYS 1320G) and (PHYS 1240L or PHYS 1320L).

Learning Outcomes

1. Analyze signals and systems and differentiate between discrete and continuous-time signals and systems.
2. Determine the impulse response of a differential or difference equation.
3. Apply the convolution theorem for continuous-time signals to determine the response of linear systems.
4. Evaluate the Fourier series of periodic signals.
5. Apply bilateral Laplace transforms for continuous signals and Z transforms for discrete signals.
6. Apply the Sampling theorem, reconstruction, aliasing, and Nyquist's theorem to represent continuous-time signals in discrete time.
7. Design and analyze signals and systems using the programming language MATLAB and /or Simulink.

E T 328. Kinematics of Machines**3 Credits (2+3P)**

Kinematic analysis of machine elements using linkages, cams, and gears. Applied design of mechanical systems using SolidWorks simulation and Excel modeling.

Prerequisite: A grade of C- or better in both, E T 210 and (E T 241 or ENGR 234).

Prerequisite/Corequisite: E T 305.

Learning Outcomes

1. Design mechanical device with specific points of motion to solve engineering problem.
2. Develop experience working in a team to solve a design problem.
3. Develop experience presenting technical concepts in writing and orally.

4. Develop understanding of classic four bar mechanisms, including crank-rocker, crank-crank, double-rocker, and crank-slider.
5. Using algebra and trigonometry, analyze points of motion for displacement, velocity, and acceleration.
6. Using SolidWorks Motion Analysis, analyze points of motion for displacement, velocity, and acceleration.
7. Reverse-engineer a Franz Rouleaux mechanism.

E T 332. Applied Design of Structures I

4 Credits (3+3P)

An introduction to structural analysis and design. Use of various building codes for development of allowable and factored loads on structures. Allowable stress and strength design concepts for structural components using concrete and steel. Required use of computer software such as spreadsheets, databases, and self-developed programs and design aids.

Prerequisite: A grade of C- or better in both, E T 310 and (ENGR 190 or MATH 1440 or MATH 1521G or higher).

Learning Outcomes

1. Demonstrate mastery of the knowledge, techniques, skills and use of modern tools of their disciplines.
2. Design structural components of a system, component, or process to meet desired needs.
3. Identify, formulate, and solve structural analysis problems.
4. Describe professional and ethical responsibility.
5. Communicate effectively with peers and faculty.

E T 339. Introduction to Digital Forensics and Incident Response

3 Credits (2+3P)

Introduction to the skills required to perform digital forensics and incident response on Windows operating systems. Topics include: live response, evidence acquisition, Windows operating system artifacts, documentation and reporting.

Prerequisite: A grade of C- or better in both, E T 255 and E T 160.

Learning Outcomes

1. To understand Digital Forensics terms and definitions and why digital forensics is needed.
2. To study what is required and how to perform digital forensics.
3. To become familiar and aware of the hindrances/obstacles that affects effective digital/computer forensic operations.
4. To learn about the tools and procedures for how deleted data is recovered during digital forensic operations.
5. To use forensic tools and procedures to perform digital forensic operations on Windows operating systems, Emails, Mobile devices, and Communication networks (Computer, wireless, cellular networks).
6. To learn about incident response and procedures.

E T 344. Microprocessor Systems

3 Credits (2+3P)

Microcomputer and/or microcontroller systems, applications and architectures with an emphasis on software using high-level and assembly programming languages. May be repeated up to 3 credits.

Prerequisite: A grade of C- or better in both, (E T 182 or ENGR 130) and (MATH 1250G or higher).

Prerequisite/Corequisite: E T 362.

Learning Outcomes

1. Compare and contrast microprocessor architectures and their characteristics.
2. Configure a Nios II microprocessor architecture core on an FPGA.
3. Write programs in assembly language targeting the Nios II microprocessor.

4. Write programs in C targeting the Nios II microprocessor.
5. Present, demonstrate and document a team project.

E T 354. Soil and Foundation Technology

4 Credits (3+3P)

Fundamentals of investigation of soil properties and their importance in design, construction, and testing as related to buildings, roads, dams, and other structures. Design of foundations considering slope stability, bearing capacity and settlement.

Prerequisite: A grade of C- or better in E T 254.

Prerequisite/Corequisite: E T 310.

Learning Outcomes

1. Demonstrate an understanding of the basic soil types and the accepted soil classification systems: USCS, AASHTO, USDA.
2. Demonstrate an understanding of the various engineering properties of soils and how they apply to the built environment: compaction, permeability, consolidation, shear strength and stress distribution.
3. Perform advance calculations on lateral earth pressure, retaining structures and slope stability.
4. Perform basic designs of shallow foundations and pile structures.
5. Demonstrate an ability to perform laboratory tests: soil classification, Atterburg Limits, compaction (proctors), permeability, shear strength, and compression. Confirm these abilities through completion of the NMDOT soil testing certification program.

E T 355. Site/Land Development and Layout

3 Credits (3)

Techniques, methods, and takeoffs for infrastructure layout, site plan design, grading, earthwork, utilities, road construction. Students must be in Junior or Senior standing to enroll.

Prerequisite: A grade of C- or better in E T 143 or DRFT 143 or DRFT 153.

Learning Outcomes

1. Describe the purpose of Land Development and its process.
2. Define Feasibility and Programming (Environmental policy, Environmental Site Feasibility, Engineering Feasibility) for land development.
3. Base Map Preparation (Control Surveys, Boundary Surveys Topographic Surveys).
4. Examine Flood Plain Studies (FEMA) and Preliminary Hydrological Analysis.
5. Compute the TOC/Intensity of rainfall on a property, runoff for pre/post-development, and peak flow.
6. Implement types of Grading - Earthwork (end section method)/ production estimations/Preliminary layout/Grading work Grid Method).
7. Analyze asphalt designs for different types of cross-sections.

E T 356. Applied Power Technologies

3 Credits (2+3P)

Basic elements of modern power systems, energy sources, substation configuration, load cycles, and three-phase circuits. Students will gain experience in power factor correction, transmission line configurations and impedance, voltage regulation of transformers, and the per-unit system. Study of load flow, fault analysis, and economic operations is included. Students must be in junior or senior standing in order to enroll.

Prerequisite: A grade of C- or better in the following: (ENGR 190 or MATH 1435 or MATH 1511G) and E T 272 and ((PHYS 1240G and PHYS 1240L) or (PHYS 1320 and PHYS 1320L)).

Learning Outcomes

1. To apply concepts of electronics, magnetism and induction.
2. To solve single and three phase transformers circuits.
3. To understand different operations of DC machines and generators.
4. To analyze single phase and three phase power circuits in per-unit analysis.
5. To analyze transmission lines for power loss and power efficiency.
6. To understand load flow, fault analysis and economic operations of the power system generation and transmission.
7. To describe modern power systems, energy sources and substation configurations.

E T 360V. Technology in Business and Society**3 Credits (2+2P)**

Examination of how technology affects business and society with specific attention to understanding the role of technical personnel and their interaction with nontechnical personnel.

E T 362. Software Technology II**3 Credits (3)**

Concepts of modern computer organization, CPU control, pipelining, memory hierarchies, memory mapping, hardware-software interface, and operating systems.

Prerequisite: C- or better in ENGR 120 and ENGR130 and ENGR140 and MATH 1250G.

Learning Outcomes

1. Set up and use a rich programming environment for programming with Python
2. Analyze existing code
3. Employ effective use of basic programming and basic troubleshooting
4. Employ effective use of Object-Oriented Programming (OOP) and troubleshooting
5. Apply testing and documentation best practices

E T 377. Computer Networking I**3 Credits (2+2P)**

Topics include the principles and structure of the OSI model, IP addressing, media, LANs, TCP/IP networks, routing protocols (RIPv2, EIGRP, OSPF) and their advanced functionality, as well as VLANs and inter-VLAN communication. This course focuses on the architecture of networks, the configuration of devices, how to identify and resolve common issues, and troubleshooting (from physical to transport layers).

Prerequisite: A grade of C- or better in both, (E T 182 or ENGR 130) and (MATH 1250G or Higher).

Learning Outcomes

1. Define and distinguish the role of a network administrator (from other roles in the IT world)
2. Identify the OSI model, its layers, and relationship to TCP/IP model
3. Identify different cable media and networking devices and their use
4. Design, configure, and troubleshoot basic networks.
5. Identify MAC, IPv4, and IPv6 addressing
6. Apply different techniques for IP allocation and subnet design (IPv4)
7. Use Cisco IOS software for basic switch and router configurations
8. Configure and troubleshoot basic setup for static and dynamic routing protocols

E T 381. Renewable Energy Technologies**3 Credits (3)**

Renewable energy systems, including topics in thermal-solar, photovoltaic, wind, geothermal systems, and other current topics. Theory, practical applications, safety considerations and the economics of alternative renewable energy systems compared to conventional systems.

Prerequisite: A grade of C- or better in MATH 1220G or higher.

Learning Outcomes

1. Define renewable energy sources.
2. Understand the current state of the art of renewable energy technologies and performance improvements. This includes solar, wind, hydro, ocean, biomass, and geothermal energies.
3. Understand the benefits and disadvantages of using renewable resources.
4. Research or design a renewable energy system as a class project.

E T 382. Solar Energy Technologies**3 Credits (2+3P)**

Solar energy technologies, including topics in passive, solar thermal, and photovoltaic systems. Theory, practical applications, safety considerations and the economics of solar renewable energy systems compared to conventional systems.

Prerequisite: A grade of C- or better in MATH 1220G.

Learning Outcomes

1. Define renewable energy sources.
2. Understand the current state of the art of photovoltaic and solar thermal energy technologies and performance improvements.
3. Evaluate the economics of implementing a solar system.
4. Design and size a PV or solar thermal energy system as a class project.

E T 384. Wind and Water Energy Technologies**3 Credits (3)**

Wind and Water energy technologies, including topics in small and large scale systems. Theory, practical applications, safety considerations and the economics of wind and water renewable energy systems compared to conventional systems.

Prerequisite: A grade of C- or better in MATH 1220G or higher.

Learning Outcomes

1. Define renewable energy sources.
2. Understand the current state of the art of wind and water energy technologies and performance improvements.
3. Evaluate the economics of implementing wind or water systems.
4. Design and size a wind or water energy system as a class project.

E T 386. Sustainable Construction and Green Building Design**3 Credits (3)**

Sustainable Building materials, methods, and techniques including green architecture and design, codes, standards and specifications.

Prerequisite: A grade of C- or better in MATH 1220G or higher.

Learning Outcomes

1. Demonstrate an understanding of the basic principles of Green Building: sustainability, life-cycle costing, triple bottom line, return periods and unintended consequences.
2. Interpret the various categories present in the LEED certification process and other green certification systems commonly used.
3. Evaluate different "green" technologies as they apply to the student's area of interest.
4. Evaluate energy efficiency scenarios and resulting cost analyses using RETScreen and RESCheck softwares.

5. Navigate the various certification opportunities as they apply to the Green Building industry.

E T 396. Heat Transfer and Applications

3 Credits (2+3P)

Fundamentals of conduction, convection, and radiation heat transfer. Application of heat transfer, thermodynamics, and fluid mechanics principles to thermal system analysis and design.

Prerequisite: A grade of C- or better in both E T 306 and E T 308.

Learning Outcomes

1. Understand the concepts and basic principles of fundamental and applied heat transfer.
2. Model and solve engineering problems involving one, two, or three heat transfer modes: conduction, convection, and radiation.
3. Analyze the performance of industrial equipment like heat exchangers.
4. Validate theoretical concepts through heat transfer lab experiments.

E T 398. Digital Systems

4 Credits (3+3P)

Analysis, design, implementation, and testing of digital systems, including microprocessor blocks, using state machine logic, FPGAs, and hardware description language programming. May be repeated up to 4 credits.

Prerequisite: A grade of C- or better in both (E T 282 or ENGR 130) and (MATH 1250G or higher).

Prerequisite/Corequisite: E T 362.

Learning Outcomes

1. Apply design, synthesis, and analysis methods for digital systems that incorporate programmable logic devices (FPGAs).
2. Utilize CAD tools such as Altera Quartus II to design digital systems.
3. Evaluate and apply methods to analyze the timing behavior and to detect timing hazards in digital circuits.
4. Apply methods for analysis and design of sequential digital circuits with feedback.
5. Design complex circuits using VHSIC Hardware Description Language (VHDL) for programming FPGA systems.

E T 400. Special Topics

1-3 Credits

Directed study or project. May be repeated for a maximum of 6 credits.

Prerequisite: consent of department head.

E T 401. Heating and Air-Conditioning Systems

3 Credits (3)

HVAC system design including heating and cooling load calculations, psychometrics, piping, duct layout, and system control. May be repeated up to 3 credits.

Prerequisite: A grade of C- or better in E T 306.

Prerequisite/Corequisite: E T 396.

Learning Outcomes

1. Master the use of thermodynamics software, EES for this course, and design software, HVAC Calc for this course.
2. Understand the principles of indoor/outdoor psychometrics.
3. Calculate the heating/cooling loads.
4. Design/size an HVAC system for a given building through a class project.

E T 402. Instrumentation

3 Credits (2+3P)

Sensors/transducers, signal conditioning and transmission for measurement and control systems. Student project in an area of instrumentation and/or control is required. Students be in Senior level standing to enroll.

Prerequisite/Corequisite: E T 396 or E T 398.

Learning Outcomes

1. Apply physical concepts, operational principles, and components of basic instrumentation and control in industrial process systems.
2. Learn relevant problem-solving methods and aspects of good practice.
3. Use LabView data acquisition systems, PLC ladder logic, and basic Arduino controllers.
4. Prototype a control system through a class project.

E T 410. Senior Seminar

1 Credit (1)

Transition from academics to business and industry. Students must be senior standing in E T majors to enroll. May be repeated up to 1 credit.

Learning Outcomes

1. Explain the path to professional licensure (CET, ECET, MET).
2. Implement a plan to test and pass the fundamental exam (CET, ECET, MET).
3. Identify and work towards completing different certifications used in industry, and work towards (IET).

E T 412. Highway Technology

3 Credits (3)

Road-vehicle performance, geometric alignment, traffic analysis, highway materials, pavement design, and plan and profile development.

Prerequisite: A grade of C- or better in E T 354.

Learning Outcomes

1. Design of a roadway including geometric design, materials selection, pavement design, and drainage.
2. Develop an understanding of design criteria based on traffic characteristics.
3. Interpret the purpose of course requirements, gather correct resources, present criteria, study alternatives, and finally develop a design.

E T 414. Communications Systems

3 Credits (3)

Circuits and devices used for transmission, reception, and processing of RF signals.

Prerequisite: A grade of C- or better in both, E T 246 and (MATH 1250G or higher).

Learning Outcomes

1. Analyze analog and digital communication systems.
2. Apply the fundamental communication concepts of AM and FM techniques.
3. Build an AM/FM communication system.
4. Apply basic antenna theory and satellite communication theory.

E T 418. Applied Hydraulics

3 Credits (3)

Introduction to hydrology, hydraulic equations, hydraulic cross-sections, control structures, and collection and distribution of water, wastewater, and storm runoff using closed conduit and open channel flow. May be repeated up to 3 credits.

Prerequisite: A grade of C- or better in E T 308.

Learning Outcomes

1. Perform basic rainfall/runoff calculations using the Rational Method, TR-fifty-five and the Unit Hydrograph method.
2. Design hydraulic conveyance structures using Manning's equation and basic culvert equations, both by hand and various software packages.
3. Perform advanced calculations of pipe flow and head loss, both by hand and various software packages.
4. Evaluate pumping scenarios and pumping design, both by hand and various software packages.
5. Demonstrate an understanding of basic groundwater hydraulics.

E T 420. Senior Internship**1-6 Credits**

Internship requiring an approved number of hours of varied and progressive experience in the field of study. The scope and other requirements of the internship are stated in an individualized syllabus and through a memorandum of understanding between the faculty mentor and the industry partner. Taken in the senior year of program.

Prerequisites: Senior standing in E T.

E T 421. Senior Project**3 Credits (3)**

Project in an area of civil engineering technology conducted under the direction of civil engineering technology faculty member. Project must be one that can be completed within a semester and of sufficient complexity for 3 credits. Taken last semester of program. May be repeated up to 3 credits.

Learning Outcomes

1. Write a transmittal letter in a format consistent with industry practices.
2. Develop a scheduling table delineating the various project stages.
3. Develop a table of contents to organize all work documents.
4. Use the knowledge learned in CET courses to develop/design a project and prepare a professionally written report.
5. Communicate effectively with the faculty advisor and industry mentor.
6. Develop skills to work independently or in teams on a self-paced project.

E T 426. Analysis and Design of Machine Elements**3 Credits (2+3P)**

Analysis and design of power transmission components, including: gears, sprockets, belts, chains, bearings, and shafts. Experiential design project using SolidWorks and Excel modeling.

Prerequisite: A grade of C- or better in both ENGR 234 and E T 310.

Prerequisite/Corequisite: E T 305.

Learning Outcomes

1. Design mechanical device with specific machine elements to solve engineering problem.
2. Develop experience working in a team to solve design problems.
3. Develop experience presenting technical concepts in writing and orally.
4. Apply strength of materials concepts to design machine elements.
5. Learn about various types of machine elements, including shafts, sheaves, gears, sprockets, bearings, fasteners, retaining rings, o-rings, and motors.
6. Analyze the performance of various types of machine elements, including shafts, sheaves, gears, sprockets, and bearings.

7. Using SolidWorks Simulation, design and analyze machine elements and mechanical systems.
8. Conduct FEA simulation and validate results mathematically.

E T 432. Applied Design of Structures II**4 Credits (3+3P)**

Continuation of E T 332. Design of structural systems and study of their responses. Wood and masonry systems included.

Prerequisite: A grade of C- or better in E T 332.

Learning Outcomes

1. Demonstrate mastery of the knowledge, techniques, skills and use of modern tools of their disciplines.
2. Design a system, component, or process to meet desired needs.
3. To effectively function as a member of a team while designing, constructing and testing structural scale model.
4. To identify, formulate, and solve engineering problems including material selection and cost analysis.
5. Recognize of professional and ethical responsibility.

E T 435. Senior Project**3 Credits (2+3P)**

Capstone course. Practical application of student's cumulative knowledge to an assigned design projects. Design principles, teamwork, and project management skills are stressed. Demonstration of written and oral communication skills via project documentation and presentation of results. Must be graduating senior. Consent of Instructor required.

Learning Outcomes

1. Demonstrate an ability to apply knowledge, techniques, skills and modern tools of mathematics, science, engineering, and technology to solve broadly-defined engineering problems appropriate to the discipline.
2. Demonstrate an ability to design systems, components, or processes meeting specified needs for broadly-defined engineering problems appropriate to the discipline.
3. Demonstrate an ability to apply written, oral, and graphical communication in broadly-defined technical and non-technical environments; and an ability to identify and use appropriate technical literature.
4. Demonstrate an ability to conduct standard tests, measurements, and experiments and to analyze and interpret the results to improve processes.
5. Demonstrate an ability to function effectively as a member as well as a leader on technical teams.

E T 439. Advanced Digital Forensics and Incident Response**3 Credits (3)**

Advanced topics in digital forensics and incident response. Topics include network analysis and advanced cybersecurity concepts.

Prerequisite: A grade of C- or better in both, E T 339 and E T 377.

Learning Outcomes

1. Students will become familiar with tools and processes to analyze and detect memory resident processes that include malware, rootkits, and user recoverable data.
2. Students will also have exposure to methods and processes used by hackers to penetrate and compromise targets.

E T 444. Computer Hardware Senior Design**3 Credits (2+3P)**

The design, development, implementation, documentation, and formal demonstration of a computer hardware system. Emphasis on interfacing

FPGA to peripheral devices using VHDL. A student project is required. Students must be in senior standing to enroll. May be repeated up to 3 credits.

Prerequisite: A grade of C- or better in both, E T 344 and E T 398.

Learning Outcomes

1. To design, analyze and simplify digital logic circuits for practical problems.
2. To understand basic and complex digital logic circuits, such as memory, registers, and other arithmetic circuits.
3. To design sequential digital circuits using basic digital gates in Moore and Mealy model.
4. To design Finite State Machines and implement them on an FPGA board.
5. To interface different sensors and user inputs in VHDL and implement them on an FPGA board.
6. To complete a design project, working in teams, solving a real-life problem, and demonstrate their practical solution.

E T 455. Cost Estimating and Scheduling

3 Credits (3)

Methods and techniques in construction estimating including final bid preparation, construction planning and scheduling using various network methods and other techniques.

Prerequisite: junior or senior standing in E T.

E T 456. Applied Power Technologies

3 Credits (2+3P)

Basic elements of modern power systems, energy sources, substation configuration, load cycles, and three-phase circuits. Students will gain experience in power factor correction, transmission line configurations and impedance, voltage regulation of transformers, and the per-unit system. Study of load flow, fault analysis, and economic operations is included. Students must be in junior or senior standing in order to enroll.

Prerequisite: A grade of C- or better in the following: (ENGR 190 or MATH 1435 or MATH 1511G) and E T 272 and ((PHYS 1240G and PHYS 1240L) or (PHYS 1320 and PHYS 1320L)).

Learning Outcomes

1. To apply concepts of electronics, magnetism and induction.
2. To solve single and three phase transformers circuits.
3. To understand different operations of DC machines and generators.
4. To analyze single phase and three phase power circuits in per-unit analysis.
5. To analyze transmission lines for power loss and power efficiency.
6. To understand load flow, fault analysis and economic operations of the power system generation and transmission.
7. To describe modern power systems, energy sources and substation configurations.

E T 458. Web Development and Database Applications

3 Credits (3)

Design, planning, and building of interactive and dynamic web applications which are customizable and contain real-time information. Topics include relational databases, object oriented programming, secure-coding practices and web security, user authentication and personalization, as well as front-end and back-end technology integration.

Prerequisite: A grade of C- or better in both, E T 362 and E T 280.

Learning Outcomes

1. Setting up a development server
2. Read, design, and write code for backend web dev.

3. Design, create, and access databases that support web applications.
4. Implement effective security and authentication on Web applications

E T 459. Construction Technology and Management

3 Credits (3)

This is a Technical Specialty course that builds on topics presented in the construction sequence thus far: E T 154, E T 254, E T 354, and E T 355. The course introduces students to the different civil engineering approach to construction and management, including planning, construction estimating & scheduling, foundations, formwork, concrete work, steel fabrication and erection installation, equipment basics, quality control, and safety. Methods and techniques involved in construction including use of Primavera Project Management® software.

Prerequisite/Corequisite: E T 354 and E T 355.

Learning Outcomes

1. Understand the basic concepts of construction planning, cost estimation, scheduling, and types of project management
2. Obtain basic knowledge on techniques to construct structures based on site condition
3. Develop work breakdown system and quantity take-offs
4. Develop project cost estimation for different construction projects
5. Prepare work schedule for construction project
6. Identify and implement the suitable method and equipment to construct various structures.

E T 463. Enterprise Linux Administration

3 Credits (3)

Advanced Linux Includes an advanced look at the use of Coding repositories, Linux-based containers, virtual machines, and scripting tools including Dockerfiles, Vagrantfiles, and Ansible.

Prerequisite: A grade of C- or better in both, E T 255 and E T 362.

Learning Outcomes

1. Demonstrate the ability to use Software Versioning systems using Windows and Linux.
2. Apply best practices with versioning repositories when creating software.
3. Deploy single and clustered microservice containers to support a web application.
4. Use script-based code to deploy and configure a full stack web server.
5. Use infrastructure management software to deploy defined roles in multiple environments.

E T 464. Windows Enterprise Administration

3 Credits (3)

Installation, configuration, and maintenance of Windows Enterprise services which includes Active Directory, distributed file systems, SQL Server, Web Server, Authentication Procedures, and enterprise elasticity. Topics covered include: Server Maintenance and Troubleshooting Methodologies.

Prerequisite: A grade of C- or better in E T 160 and (E T 262 or ENGR 140 or C S 172).

Learning Outcomes

1. Set up and use a Windows Enterprise environment with Active Directory.
2. Use best practices to design an organizational Structure and define AD DS Objects.
3. Deploy an AD DS embedded DHCP server with IPv4 and IPv6.
4. Analyze existing cmd shell and PowerShell code for process automation.
5. Deploy security and user settings using Group Policy.

6. Apply version updates and establish an intra-domain trust relationship.
7. Employ effective use of the WDS service to deploy template images.

E T 471. Transportation Engineering and Technology

3 Credits (3)

Learn the principles of transportation engineering and technology with a focus on highway engineering and traffic analysis. Provide a basic skill set that will allow a student to address most of the transportation problems. Provide a foundation for future coursework in transportation should a student wish to pursue further coursework in the field.

Prerequisite: A grade of C- or better in E T 354.

Learning Outcomes

1. To introduce students to techniques for designing a roadway including geometric design, materials selection, pavement design, and drainage.
2. To help students develop an understanding of design criteria based on traffic characteristics.
3. Assess student's ability to: interpret the purpose of course requirements, gather correct resources, present criteria, study alternatives, and finally develop a design.

E T 472. Intelligent Transportation Systems (ITS)

3 Credits (3)

Traffic flow theory, telecommunication and information technology application in transportation, system architecture and standards, transportation management, incident and emergency management, corridor management, dynamic route guidance, in-vehicle systems, and traffic signal timing. Consent of instructor required. May be repeated up to 3 credits.

Learning Outcomes

1. Demonstrate traffic flow theory, telecommunication, and information technology applications in transportation.
2. Discover Intelligent Transportation System (ITS) architecture and standards, transportation management, incident and emergency management, corridor management, dynamic route guidance and in-vehicle systems, and traffic signal timing.
3. Apply knowledge of the ITS to select traffic engineering as a career path or apply the knowledge in their engineering or engineering technology career.

E T 475. Special Topics in Information Technology

3 Credits (3)

Contemporary topics in Information Technology.

Prerequisite: A grade of C- or better in both, ((E T 362 or ICT 362) and (E T 377 or ICT 377)), or Consent of Instructor.

Learning Outcomes

1. Students will learn two way Bluetooth, Wi-Fi, and NFC communication technologies
2. The student will practice building and programming IOT prototype devices
3. The student will develop customer value proposition and perform one round of customer discovery
4. The student will prototype their IOT device
5. The student will demonstrate their IOT device
6. The student will learn to integrate IOT devices into IT architecture

E T 477. Computer Networking II

3 Credits (2+2P)

Advanced concepts in computer network design and applications including managing the campus network infrastructure (LANs and virtual

LANs), network services (DNS and DHCP), network security and firewall, network monitoring and forensics, wireless networks, high-speed optical networks and Internet.

Prerequisite: A grade of C- or better in E T 377.

Learning Outcomes

1. Demonstrate an understanding of key fundamental concepts of networking.
2. Apply networking concepts to design networks for real-life application scenarios using applicable software.
3. Configure network hardware such as computers, switches, and routers.
4. Troubleshoot, analyze, and solve network problems with applicable software.

E T 480. Innovation and Product Development

3 Credits (3)

Experiential product design and development. Students will learn about different types of innovation, business models, and methods for developing products. Students will apply the scientific method to develop a product idea of their own. Students will propose ideas, develop hypotheses, test hypotheses, and iterate until they have validated their product idea or identified a need to pivot.

Learning Outcomes

1. The student will be able to apply the scientific method to design a product.
2. The student will be able to develop a plan to learn about the Product-Market-Fit of their innovation.
3. The student will be able to describe the basics of Business Models and Product-Market-Fit.

E T 483. Mobile App Programming and Development

3 Credits (3)

Planning and creation of mobile device applications. Programming tools and technical design considerations. Entrepreneurship and App development.

Prerequisite: A grade of C- or better in both, ICT 152 and (E T 377 or ICT 377)), or Consent of Instructor.

Learning Outcomes

1. The student will learn to create a modern and flexible mobile device User Interface using Java
2. The student will develop a high functioning prototype their mobile app
3. The student will implement a business model canvas including development of a customer value proposition and a minimum of one round of customer discovery
4. The student will implement database and information storage using a mobile device
5. The student will implement the developer's dashboard for their mobile app
6. Student will publish and monetize their mobile app

E T 485. White Hat System Testing

3 Credits (3)

System penetration testing and repair. Review of methods utilized to gain access to unprotected systems. Testing system repairs and fixes for future prevention. Test documentation.

Prerequisite: A grade of C- or better in both, ((E T 362 or ICT 362) and (E T 377 or ICT 377)), or Consent of Instructor.

Learning Outcomes

1. The student will practice modern methods for penetration testing
2. The student will demonstrate advanced ethical hacking methods
3. The student will evaluate in-place security systems
4. The student will run-through simulated attacks and system break-ins
5. The student will learn to prepare detailed reports on system vulnerabilities and weaknesses

E T 490. Selected Topics**1-3 Credits**

Selected topics in engineering technology and related areas.

Prerequisite: consent of instructor.

E T 505. Special Topics in Information Technology**3 Credits (3)**

Contemporary topics in Information Technology Restricted to: M-IT majors. May be repeated up to 9 credits.

Learning Outcomes

1. Various

E T 539. Advanced Enterprise Security**3 Credits (3)**

This course provides the student with an overview of enterprise cybersecurity and a foundation for understanding the critical issues of protecting digital and information assets. Restricted to: M-IT majors.

Learning Outcomes

1. Demonstrate an understanding of information security concepts and risk management.
2. Demonstrate an understanding of Intrusion Detection and Prevention Systems and Other Security Tools.
3. Demonstrate an understanding of cryptographic techniques.
4. Demonstrate an understanding of authentication methods.
5. Demonstrate an understanding of access control systems.
6. Demonstrate an understanding of various network security controls.
7. Demonstrate an understanding of the legal, ethical, and professional issues in information security.

E T 551. Enterprise Architecture I**3 Credits (3)**

A study of current enterprise architecture methodologies, tools, and techniques. Restricted to: M-IT majors.

Learning Outcomes

1. Demonstrate the ability to utilize and develop architectural enterprise artifacts.
2. Assess multiple enterprise architecture methodologies.
3. Demonstrate IT architecture landscaping capability.
4. Assess integrating IT initiatives utilizing the enterprise architecture processes.

E T 552. Enterprise Architecture II**3 Credits (3)**

Advanced topics in enterprise architecture including availability, access, and architecture map development. Restricted to: M-IT majors.

Prerequisite: A grade of C- or better in E T 551.

Learning Outcomes

1. Demonstrate the differences and similarities in multiple enterprise architectures.
2. Demonstrate the ability for independent research on enterprise architectures.

3. Assess architectural artifacts for impact on IT planning and implementation.

E T 555. Virtualization**3 Credits (3)**

An analysis and review of system and IT virtualization techniques.

Restricted to: M-IT majors.

E T 562. Development and Operations**3 Credits (3)**

Software development including Python scripting. Operations programming. Restricted to: M-IT majors.

Learning Outcomes

1. Demonstrate a basic knowledge of Operations Management and it's relationship to DevOps.
2. Demonstrate knowledge in current software used in DevOps.
3. Apply DevOps practices to a software deployment workflow.
4. Demonstrate the ability to define a Continuous Integration pipeline with automated testing.
5. Students will apply the continuous feedback principles to project monitoring.
6. Apply best practices to build security into DevOp projects.

E T 577. Advanced Computer Networking**3 Credits (3)**

Advanced networking design and analysis. Modernization of infrastructures. Restricted to: M-IT majors.

E T 580. IT Innovation and Product Development**3 Credits (3)**

Experiential product design and development in information technology. Students will learn about different types of innovation, business models, and methods for developing products. Students will apply the scientific method to develop a product idea of their own related to their field of study. Students will propose ideas, develop hypotheses, test hypotheses, and iterate until they have validated their product idea or identified a need to pivot. Experience in industry and student perspectives are discussed to support the development of their innovations.

Learning Outcomes

1. The student will be able to apply the scientific method to design a product, software, or service.
2. The student will be able to develop a plan to learn about the Product-Market-Fit of their innovation.
3. The student will be able to describe the basics of Business Models and Product-Market-Fit.
4. The student will be able to explain how course concepts relate to the field of information technology.

E T 583. Mobile App Programming and Development**3 Credits (3)**

Planning and creation of mobile device applications. Programming tools and technical design considerations. Entrepreneurship and App development. Restricted to: M-IT majors.

E T 585. White Hat System Testing**3 Credits (3)**

System penetration testing and repair. Review of methods utilized to gain access to unprotected systems. Testing system repairs and fixes for future prevention. Test documentation. Restricted to: M-IT majors.

Learning Outcomes

1. Describe cryptology.
2. Identify common information-gathering tools and techniques.

3. Perform system hacking, and web and database attacks.
4. Analyze vulnerabilities exploited by hackers.
5. Identify common types of malware and the threats they pose.
6. Perform network traffic analysis and sniffing by using appropriate tools.
7. Identify security controls and defensive technologies.

ET 595. Capstone Projects in Information Technology

3 Credits (3)

Capstone course. Practical application of student's cumulative Information Technology knowledge to an assigned design projects. Project management skills.

Learning Outcomes

1. Demonstrate ability to manage complex work-related IT technical projects.
2. Demonstrate the ability to create an IT engineering project timeline.
3. Demonstrate the ability to self-motivate and organize project timeline.
4. Demonstrate the ability to work in teams and execute project.
5. Demonstrate advanced project goal setting, skills assessment, and weekly updates.

ECDV-ECONOMIC DEVELOPMENT

ECDV 550. Introduction to Local and Regional Development

3 Credits (3)

Serves as the introductory course in the Doctor of Economic Development program. Overview of the economic development field.

ECDV 590. Special Topics

1-3 Credits (1-3)

Selected topics in the area of Economic Development. Subtitle reflects content. May be repeated up to 9 credits. Consent of instructor required.

ECDV 596. Individual Study

1-3 Credits (1-3)

Individual studies directed by consenting faculty with the prior approval of the Department Head. May be repeated up to 6 credits.

ECDV 602. Microeconomics II

3 Credits (3)

This course covers advanced microeconomics, including decision-making under uncertainty, the role of information, game theory, general equilibrium, market power and market failures. May be repeated up to 3 credits.

Prerequisite: AEEC 502.

Learning Outcomes

1. Understand the complications that arise when decisions involve uncertainty.
2. Be able to demonstrate an understanding of the properties and application of the theories of information and information asymmetries.
3. Be able to demonstrate an understanding of the basics of game theoretic applications to microeconomics.
4. Be able to demonstrate an understanding of the implications of market failures as a result of externalities and potential corrective policies.
5. Be able to demonstrate an ability to extend partial equilibrium analysis to a general equilibrium framework.

ECDV 661. Regional Economic Modeling

3 Credits (3)

Introduction to the tools and methods of regional economic development analysis. May be repeated up to 3 credits. Restricted to: ECDV majors.

Prerequisite(s): AEEC 501, AEEC 502, and AEEC 540.

ECDV 664. Population Economics

3 Credits (3)

Examines the causes and consequences of demographic change. Examines theories of basic demographic processes, population projection and estimation. Consent of instructor required.

ECDV 668. Economic Development Finance

3 Credits (3)

Focuses on the tools and methods of economic development finance.

ECDV 670. Research in Economic Development

3 Credits (3)

Intense examination of the academic literature on economic development at all levels.

Prerequisites: ECDV 651, ECDV 661 and ECDV 662.

ECDV 671. Sustainable Economic Development

3 Credits (3)

Focuses on the interconnections between economic development and the environment. Provides a broad set of tools and ideas related to the impacts of human activities on the environment.

Prerequisites: AEEC 501, AEEC 502 and AEEC 540.

ECDV 673. Research Methods

3 Credits (3)

An overview of alternative research methods and tools. Students explore quantitative and qualitative research methods as alternatives and complements to statistical methods. Research design, ethics, and presentation are emphasized.

Prerequisites: AEEC 501, AEEC 502 and AEEC 540.

ECDV 681. Urban Economic Development

3 Credits (3)

Examines causes and consequences of economic change in urban and metropolitan areas. Covers both theory and tools for analysis.

Prerequisites: ECDV 651, ECDV 661 and ECDV 662.

ECDV 682. Rural Development

3 Credits (3)

Examines causes and consequences of economic change in rural areas, communities and small, open economies. Covers both theory and tools for analysis.

Prerequisites: ECDV 651, ECDV 661 and ECDV 662.

ECDV 683. Seminar in National Economic Development

3 Credits (3)

Explores specific examples and cases of rural and urban economic development. Involves applied analysis of specific rural and/or urban economic issues/projects.

Prerequisites: ECDV 681 and ECDV 682.

ECDV 692. Seminar in Economic Development

3 Credits (3)

Seminars in selected topics in economic development. Subtitle reflects content. May be repeated up to 9 credits.

Prerequisite: Completion of at least nine semester hours of ECDV courses.

ECDV 694. Internship

1-9 Credits (1-9)

Internship in Economic Development. May be repeated up to 9 credits. Restricted to: ECDV majors. Graded: S/U Grading (S/U, Audit).

Prerequisite(s): Completion of core requirements of Doctor of Economic Development.

ECDV 699. Doctoral Project**1-9 Credits (1-9)**

Doctoral Project. May be repeated up to 9 credits. Completion of all DED coursework and successful completion of comprehensive exams.

ECECED-EARLY CHILDHOOD EDUCATION**ECED 1110. Child Growth, Development, and Learning****3 Credits (3)**

This basic course in the growth, development, and learning of young children, prenatal through age eight, provides students with the theoretical foundation for becoming competent early childhood professionals. The course includes knowledge of how young children grow, develop and learn. Major theories of child development are integrated with all domains of development, including biological-physical, social, cultural, emotional, cognitive and language. The adult's role in supporting each child's growth, development and learning is emphasized. May be repeated up to 3 credits.

Learning Outcomes

1. Incorporate understanding of developmental stages, processes, and theories of growth, development, and learning into developmentally appropriate practice. A.one
2. Demonstrate knowledge of the interaction between maturation and environmental factors that influence physical, social, emotional, cognitive, and cultural domains in the healthy development of each child. A.two
3. Demonstrate knowledge of the significance of individual differences in development and learning.
4. Demonstrate knowledge of how certain differences may be associated with rate of development and developmental patterns associated with developmental delays and/or specific disabilities. A.three
5. Demonstrate knowledge of the similarities between children who are developing typically and those with diverse abilities. A.four
6. Demonstrate knowledge of the many functions that language serves in the cognitive, social, and emotional aspects of development in the formative years. A.seven
7. Demonstrate knowledge of the developmental sequence of language and literacy, including the influence of culture and home factors. A.eight
8. Demonstrate knowledge of how children acquire and use verbal, non-verbal, and alternative means of communication. A.nine
9. Demonstrate knowledge of the relationship among emotions, behaviors, and communication skills to assist children in identifying and expressing their feelings in appropriate ways. A.ten 1
10. Use appropriate guidance to support the development of self-regulatory capacities in young children. A.eleven

ECED 1115. Health, Safety, and Nutrition**2 Credits (2)**

This course provides information related to standards and practices that promote children's physical and mental well-being sound nutritional practices, and maintenance of safe learning environments. It includes information for developing sound health and safety management procedures for indoor and outdoor learning environments for young children. The course examines the many scheduling factors that are important for children's total development, healthy nutrition, physical activity, and rest. May be repeated up to 2 credits.

Learning Outcomes

1. Recognize and respond to each child's physical health, intellectual and emotional well-being, and nutritional and safety needs. B.one
2. Articulate an understanding of indoor and outdoor learning environments that provide opportunities for children to put into practice healthy behaviors (physically, socially and emotionally). B.two
3. Use appropriate health appraisal and management procedures and makes referrals when necessary. B.three
4. Recognize signs of emotional distress, child abuse, and neglect in young children and use procedures appropriate to the situation, such as initiating discussions with families, referring to appropriate professionals, and, in cases of suspected abuse or neglect, reporting to designated authorities. B.four
5. Establish an environment that provides opportunities and reinforcement for children's practice of healthy behaviors that promote appropriate nutrition and physical and psychological well-being. B.five
6. Provide a consistent daily schedule for rest/sleep, as developmentally appropriate. B.six
7. Implement health care and educational activities for children and families based on health and a.nutritional information that is responsive to diverse cultures. B.seven
8. Assist young children and their families, as individually appropriate, in developing decision-making and interpersonal skills that enable them to make healthy choices and establish health-promoting behaviors. B.eight

ECED 1120. Guiding Young Children**3 Credits (3)**

This course explores various theories of child guidance and the practical applications of each. It provides developmentally appropriate methods for guiding children and effective strategies and suggestions for facilitating positive social interactions. Strategies for preventing challenging behaviors through the use of environment, routines and schedule will be presented Emphasis is placed on helping children become self-responsible, competent, independent, and cooperative learners and including families as part of the guidance approach. May be repeated up to 3 credits.

Learning Outcomes

1. Apply knowledge of cultural and linguistic diversity and the significance of socio-cultural and political contexts for development and learning and recognize that children are best understood in the contexts of family, culture and society. A.six
2. Demonstrate knowledge of the many functions that language serves in the cognitive, social, and emotional aspects of development in the formative years. A.seven
3. Demonstrate knowledge of the relationship among emotions, behaviors, and communication skills to assist children in identifying and expressing their feelings in appropriate ways. A.ten
4. Use appropriate guidance to support the development of self-regulatory capacities in young children. A.eleven
5. Recognize and respond to each child's physical health, intellectual and emotional well-being, and nutritional and safety needs. B.one
6. Demonstrate knowledge and skill in building positive, reciprocal relationships with families. C.one
7. Demonstrate knowledge of and respect for variations across cultures, in terms of family strengths, expectations, values, and child-rearing practices. C.four

8. Demonstrate the ability to incorporate the families' desires and goals for their children into classroom or intervention strategies. C.seven
9. Demonstrate knowledge and skills in developmentally appropriate guidance techniques and strategies that provide opportunities to assist children in development positive thoughts and feelings about themselves and others through cooperative interaction with peers and adults. E.three 1
10. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.seven 1
11. Demonstrate knowledge of assessment techniques, interpretation of assessment information in the application of this
10. Demonstrate knowledge of a variety of techniques and procedures to evaluate and modify program goals for young children and their families. F.ten 1
11. Demonstrate knowledge and use of program evaluation to ensure comprehensive quality of the total Environment for children, families, and the community. F.eleven 1
12. Use both self and collaborative evaluations as part of ongoing program evaluations. F.twelve

ECED 1125. Assessment of Children and Evaluation of Programs 3 Credits (3)

This basic course familiarizes students with a variety of culturally appropriate assessment methods and instruments, including systematic observation of typically and non-typically developing children. The course addresses the development and use of formative and summative assessment and evaluation instruments to ensure comprehensive quality of the total environment for children, families, and the community. Students will develop skills for evaluating the assessment process and involving other teachers, professionals and families in the process. May be repeated up to 3 credits.

Prerequisite: ECED 1110 and (ENGL 1110G or ENGL 1110H or ENGL 1110M).

Learning Outcomes

1. Demonstrate ability to choose valid tools that are developmentally, culturally, and linguistically appropriate; use the tools correctly; make appropriate referrals; and interpret assessment results, with the goal of obtaining valid, useful information to inform practice and decision making. F.one
2. Demonstrate knowledge of maintaining appropriate records of children's development and behavior that safeguard confidentiality and privacy. F.two
3. Demonstrate knowledge of the educator's role as a participating member of the assessment process as described and mandated by state and federal regulations for Individual family service plans (IFSP) and individual education plans (IEP). F.three
4. Demonstrate understanding of the influences of environmental factors, cultural/linguistic differences, and diverse ways of learning on assessment outcomes. F.four
5. Involve the family and, as appropriate, other team members in assessing the child's development, strengths, and needs in order to set goals for the child. F.five
6. Articulate an understanding of the distinctions and definitions of assessment concepts (e.g., screening, diagnostic assessment, standardized, testing, accountability assessment). F.six
7. Apply understanding of assessment concepts toward selection of appropriate formal assessment measures, critiquing the limitations of inappropriate measures, and discussing assessment issues as part of interdisciplinary teams. F.seven
8. Articulate an understanding that responsible assessment is legally and ethically grounded and guided by sound professional. It standards is collaborative and open with the goal of supporting diverse children and families. F.eight
9. Demonstrate knowledge of assessment techniques, interpretation of assessment information in the Application of this data to curriculum development and/or intervention planning. F.nine 1
10. Demonstrate knowledge and skill in building positive, reciprocal relationships with families. C.one
2. Articulate an understanding of a safe and welcoming environment for families and community members. C.two
3. Develop and maintain ongoing contact with families through a variety of communication strategies. C.three
4. Demonstrate knowledge of and respect for variations across cultures, in terms of family strengths, expectations, values, and child-rearing practices. C.four
5. Articulate understanding of the complexity and dynamics of family systems. C.five
6. Demonstrate understanding of the importance of families as the primary educator of their child. C.six
7. Involve families and community members in contributing to the learning environment. C.nine
8. Demonstrate ability to communicate to families the program's policies, procedures, and those procedural safeguards that are mandated by state and federal regulations. C.eleven
9. Apply knowledge of family theory and research to understand family and community characteristics including socioeconomic conditions; family structures, relationships, stressors, and supports (including the impact of having a child with diverse abilities); home language and ethnicity. C.twelve 1
10. Demonstrate knowledge of and skill to access community resources that assist families and contribute directly or indirectly to children's positive development such as mental health services, health care, adult education, English language instruction, and economic assistance. C.thirteen 1
11. Demonstrate effective written and oral communication skills when working with children, families, and early care, education, and family support professionals. E.fourteen 1
12. Demonstrate a commitment to leadership and advocacy for excellence in programs and services for young children and their families. G.six

ECED 1130. Family and Community Collaboration 3 Credits (3)

This beginning course examines the involvement of families and communities from diverse cultural and linguistic backgrounds in early childhood programs. Ways to establish collaborative relationships with families in early childhood settings is discussed. Families' goals and desires for their children will be supported through culturally responsive strategies. May be repeated up to 3 credits.

Prerequisite: ECED 1110 and (ENGL 1110G or ENGL 1110H or ENGL 1110M).

Learning Outcomes

1. Demonstrate knowledge and skill in building positive, reciprocal relationships with families. C.one
2. Articulate an understanding of a safe and welcoming environment for families and community members. C.two
3. Develop and maintain ongoing contact with families through a variety of communication strategies. C.three
4. Demonstrate knowledge of and respect for variations across cultures, in terms of family strengths, expectations, values, and child-rearing practices. C.four
5. Articulate understanding of the complexity and dynamics of family systems. C.five
6. Demonstrate understanding of the importance of families as the primary educator of their child. C.six
7. Involve families and community members in contributing to the learning environment. C.nine
8. Demonstrate ability to communicate to families the program's policies, procedures, and those procedural safeguards that are mandated by state and federal regulations. C.eleven
9. Apply knowledge of family theory and research to understand family and community characteristics including socioeconomic conditions; family structures, relationships, stressors, and supports (including the impact of having a child with diverse abilities); home language and ethnicity. C.twelve 1
10. Demonstrate knowledge of and skill to access community resources that assist families and contribute directly or indirectly to children's positive development such as mental health services, health care, adult education, English language instruction, and economic assistance. C.thirteen 1
11. Demonstrate effective written and oral communication skills when working with children, families, and early care, education, and family support professionals. E.fourteen 1
12. Demonstrate a commitment to leadership and advocacy for excellence in programs and services for young children and their families. G.six

ECED 2110. Professionalism 2 Credits (2)

This course provides a broad-based orientation to the field of early care and education. Early childhood history, philosophy, ethics and advocacy are introduced. Basic principles of early childhood systems

are explored. Multiple perspectives on early care and education are introduced. Professional responsibilities such as cultural responsiveness and reflective practice are examined. May be repeated up to 2 credits.

Learning Outcomes

1. Recognize signs of emotional distress, child abuse, and neglect in young children and use procedures appropriate to the situation, such as initiating discussions with families, referring to appropriate professionals, and, in cases of suspected abuse or neglect, reporting to designated authorities. B.four
2. Demonstrate ability to communicate to families the program's policies, procedures, and those procedural safeguards that are mandated by state and federal regulations. C.eleven
3. Use both self and collaborative evaluations as part of ongoing program evaluations. F.twelve
4. Demonstrate ability to adhere to early childhood professional codes of ethical conduct and issues of confidentiality. G.one
5. Demonstrate awareness of federal, state, and local regulations, and public policies regarding programs and services for children birth through eight years of age. G.two
6. Demonstrate understanding of conditions of children, families, and professionals; the historical and current issues and trends; legal issues; and legislation and other public policies affecting children, families, and programs for young children and the early childhood profession. G.three
7. Demonstrate critical reflection of one's own professional and educational practices from community, state, national, and global perspectives. G.four
8. Demonstrate understanding of the early childhood profession, its multiple historical, philosophical, and social foundations, and how these foundations influence current thought and practice. G.five
9. Demonstrate knowledge in technology resources to engage in ongoing professional development. G.seven

ECED 2115. Introduction to Language, Literacy, and Reading

3 Credits (3)

This course is designed to prepare early childhood professionals for promoting children's emergent literacy and reading development. Through a developmental approach, the course addresses ways in which early childhood professionals can foster young children's oral language development, phonemic awareness, and literacy problem solving skills, fluency, vocabulary, and comprehension. . This course provides the foundation for early childhood professionals to become knowledgeable about literacy development in young children. Instructional approaches and theory-based and research based strategies to support the emergent literacy and reading skills of native speakers and English language learners will be presented. May be repeated up to 3 credits.

Prerequisite: ECED 1110 and (ENGL 1110G or ENGL 1110H, or ENGL 1110M).

Learning Outcomes

1. Demonstrate knowledge of the many functions that language serves in the cognitive, social, and emotional aspects of development in the formative years. A.seven
2. Demonstrate knowledge of the developmental sequence of language and literacy, including the influence of culture and home factors. A.eight
3. Demonstrate knowledge of how children acquire and use verbal, non-verbal, and alternative means of communication. A.nine
4. Develop partnerships with family members to promote early literacy in the home. C.eight

5. Establish partnerships with community members in promoting literacy. C.ten
6. Demonstrate knowledge of the reading and writing components of emergent literacy at each developmental level. D.four
7. Provide and use anti-bias materials/literature and experiences in all content areas of the curriculum. D.seven
8. Create and manage a literacy-rich environment that is responsive to each child's unique path of development. E.nine
9. Use a variety of strategies during adult-child and child-child interactions and facilitate communication and dialogue of expressive language and thought. E.ten 1
10. Demonstrate a variety of developmentally appropriate instructional strategies that facilitate the development of literacy skills. E.eleven

ECED 2120. Curriculum Development through Play Birth through Age 4 (PreK)

3 Credits (3)

The beginning curriculum course places play at the center of curriculum in developmentally appropriate early childhood programs. It addresses content that is relevant for children birth through age four in developmentally and culturally sensitive ways of integrating content into teaching and learning experiences. Information on adapting content areas to meet the needs of children with special needs and the development of IFSPs is included. Curriculum development in all areas, including literacy, numeracy, the arts, health, science, social skills, and adaptive learning for children, birth through age four, is emphasized. Consent of instructor required. May be repeated up to 3 credits.

Prerequisite: ECED 1110 and (ENGL 1110G or ENGL 1110H or ENGL 1110M).

Corequisite: ECED 2121.

Learning Outcomes

1. Use appropriate guidance to support the development of self-regulatory capacities in young children. A.eleven
2. Demonstrate knowledge of relevant content for young children and developmentally appropriate ways of integrating content into teaching and learning experiences for children from birth to four years of age. D.one
3. Demonstrate the integration of knowledge of how young children develop and learn with knowledge of the concepts, inquiry tools, and structure of content areas appropriate for different developmental levels. D.two
4. Adapt content to meet the needs of each child, including the development of individualized family service plans (IFSP) or individualized education plans (IEP) for children with diverse abilities through the team process with families and other team members. D.six
5. Demonstrate knowledge of varying program models and learning environments that meet the individual needs of all young children, including those with diverse abilities. E.one
6. Create environments that encourage active involvement, initiative, responsibility, and a growing sense of autonomy through the selection and use of materials and equipment that are suitable to individual learning, developmental levels, diverse abilities, and the language and cultures in New Mexico. E.two
7. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.four

8. Demonstrate understanding that each child's creative expression is unique and can be encouraged through diverse ways, including creative play. E.five
9. Plan blocks of uninterrupted time for children to persist at self-chosen activities, both indoors and outdoors. E.six 1
10. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.seven 1
11. Use and explain the rationale for developmentally appropriate methods that include play, small group projects, open-ended questioning, group discussion, problem solving, cooperative learning and inquiry experiences to help young children develop intellectual curiosity, solve problems, and make decisions. E.eight 1
12. Demonstrate a variety of developmentally appropriate instructional strategies that facilitate the development of emergent literacy skills. E.eleven 1
13. Demonstrate knowledge of assessment techniques, interpretation of assessment information in the application of this data to curriculum development of intervention planning. F.

ECED 2121. Curriculum Development through Play Birth through Age 4 (PreK) Practicum

2 Credits (2)

The beginning practicum course is a co-requisite with the course Curriculum Development through Play – Birth through Age 4. The field based component of this course will provide experiences that address curriculum content that is relevant for children birth through age four in developmentally and culturally sensitive ways of integrating content into teaching and learning experiences. Information on adapting content areas to meet the needs of children with special needs and the development of IFSPs is included. Curriculum development in all areas, including literacy, numeracy, the arts, health, science, social skills, and adaptive learning for children, birth through age four, is emphasized. Consent of instructor required. May be repeated up to 2 credits.

Prerequisite: ECED 1110 and (ENGL 1110G or ENGL 1110H or ENGL 1110M).

Corequisite: ECED 2120.

Learning Outcomes

1. Provide a variety of activities that facilitate development of the whole child in the following areas: Physical/motor, social/emotional, language/cognitive and adaptive/living skills. A.five
2. Develop, implement and evaluate an integrated curriculum that focuses on children's development and interests, using their language, home experiences, and cultural values. D.five
3. Provides and uses anti-bias materials and literature, and experiences in all content areas of the curriculum. D.seven
4. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.four
5. Demonstrate understanding that each child's creative expression is unique and can be encouraged through diverse ways, including creative play. E.five
6. Plan blocks of uninterrupted time for children to persist at self-chosen activities, both indoors and outdoors. E.six
7. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.seven

8. Use and explain the rationale for developmentally appropriate methods that include play, small group projects, open-ended questioning, group discussion, problem solving, cooperative learning and inquiry experiences to help young children develop intellectual curiosity, solve problems, and make decisions. E.eight

ECED 2130. Curriculum Development and Implementation Age 3 (PreK) through Grade 3

3 Credits (3)

The curriculum course focuses on developmentally appropriate curriculum content in early childhood programs, age 3 through third grade. Development and implementation of curriculum in all content areas, including literacy, numeracy, the arts, health and emotional wellness, science, motor and social skills, is emphasized. Information on adapting content areas to meet the needs of children with special needs and the development of IEP's is included. Consent of instructor required. May be repeated up to 3 credits.

Prerequisite: ECED 1110, ECED 2120 and ECED 2121 (ENGL 1110G or ENGL 1110H or ENGL 1110M).

Corequisite: ECED 2131.

Learning Outcomes

1. Use appropriate guidance to support the development of self-regulatory capacities in young children. A.Eleven
2. Demonstrate the integration of knowledge of how young children develop and learn with knowledge of the concepts, inquiry tools, and structure of content areas appropriate for different developmental levels. D.Two
3. Demonstrate knowledge of what is important in each content area, why it is of value, and how it links with early and later understandings within and across areas. D.Three
4. Demonstrate knowledge of the language, reading and writing components of emergent literacy at each developmental level. D.Four
5. Adapt content to meet the needs of each child, including the development of individualized family service plans (IFSP) or individualized education plans (IEP) for children with diverse abilities through the team process with families and other team members. D.Six
6. Demonstrate knowledge of varying program models and learning environments that meet the individual needs of all young children, including those with diverse abilities. E.One
7. Create environments that encourage active involvement, initiative, responsibility, and a growing sense of autonomy through the selection and use of materials and equipment that are suitable to individual learning, developmental levels, diverse abilities, and the language and cultures in New Mexico. E.Two
8. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.Four
9. Demonstrate understanding that each child's creative expression is unique and can be encouraged through diverse ways, including creative play. E.Five 1
10. Plan blocks of uninterrupted time for children to persist at self-chosen activities, both indoors and outdoors. E.Six 1
11. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.Seven 1
12. Demonstrate knowledge of developmentally appropriate uses of technology, including assistive technology. E.Twelve 1

13. Demonstrate knowledge of assessment techniques, interpretation of assessment information in the application of this data to curriculum development of intervention planning. F.Nine

ECED 2131. Curriculum Development and Implementation Age 3 (PreK) through Grade 3 Practicum
2 Credits (2)

The beginning practicum course is a co-requisite with the course Curriculum Development and Implementation: Age 3 through Grade 3. The field based component of this course will provide experiences that address developmentally appropriate curriculum content in early childhood programs, age 3 through third grade. Development and implementation of curriculum in all content areas, including literacy, numeracy, the arts, health and emotional wellness, science, motor and social skills is emphasized. Information on adapting content areas to meet the needs of children with special needs and the development of IEPs is included. Consent of instructor required. May be repeated up to 2 credits.

Prerequisite: ECED 1110 (ENGL 1110G or ENGL 1110H or ENGL 1110M), ECED 2120, and ECED 2121.

Corequisite: ECED 2130.

Learning Outcomes

1. Provide a variety of activities that facilitate development of the whole child in the following areas: Physical/motor, social/emotional, language/cognitive and adaptive/living skills. A.Five
2. Develop, implement and evaluate an integrated curriculum that focuses on children's development and interests, using their language, home experiences, and cultural values. D.Five
3. Provides and uses anti-bias materials and literature, and experiences in all content areas of the curriculum. D.Seven
4. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.Four
5. Demonstrate understanding that each child's creative expression is unique and can be encouraged through diverse ways, including creative play. E.Five
6. Plan blocks of uninterrupted time for children to persist at self-chosen activities, both indoors and outdoors. E.Six
7. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.Seven
8. Use and explain the rationale for developmentally appropriate methods that include play, small group projects, open-ended questioning, group discussion, problem solving, cooperative learning and inquiry experiences to help young children develop intellectual curiosity, solve problems, and make decisions. E.Eight

ECED 2140. Effective Program Development for Diverse Learners and their Families
3 Credits (3)

This course addresses the role of a director/administrator in the implementation of family-centered programming that includes individually appropriate and culturally responsive curriculum in a healthy and safe learning environment for all children and their families. May be repeated up to 3 credits.

Learning Outcomes

1. Describe important aspects of leadership that an administrator in an early childhood setting must demonstrate.

2. Identify and describe ways in which classrooms can have a multicultural environment.
3. Observe a classroom and identify, using photographs good practice with classroom environment.
4. Describe important aspects of a good early childhood curriculum
5. Describe how culture and socioeconomic factors influence classroom environment.

ECED 2141. Effective Program Development for Diverse Learners and their Families Practicum
2 Credits (2)

Provides opportunities for students to apply knowledge gained from Curriculum for Diverse Learners and their Families in a practicum setting. Consent of instructor required. Restricted to ECED majors. May be repeated up to 2 credits.

Corequisite: ECED 2140.

Learning Outcomes

1. Describe the requirements to maintain and enhance the physical and mental health, safety, and nutrition components of a program: Demonstrate knowledge of facility management to include evaluation, maintenance, security, and meeting applicable codes; Demonstrate knowledge of planning for appropriate indoor and outdoor environments; Identify ways to support early childhood educators in the selection of appropriate materials and equipment for the environment; Demonstrate knowledge of the impact of the environment on children's learning and development.
2. Demonstrate knowledge of early care and education curriculum that is individually, culturally, linguistically, and developmentally responsive: Describe a variety of curriculum goals and teaching strategies; Describe the importance of ongoing curriculum assessment and planning, and collaboration with teachers, families and community entities; Identify ways to support early childhood educators in curriculum assessment and planning.
3. Demonstrate knowledge of family/community involvement in effective program development: Describe the importance of supporting families as partners in early care and education program development; Describe both informal and formal communication systems with families that encourage information sharing and joint decision making; Identify strategies for resolving conflicts and supporting families with diverse backgrounds and parenting expectations; Identify the range of family needs including transitional periods; Identify within the community the network to support families with their special needs; Describe a "family friendly" inclusive philosophy
4. Demonstrate knowledge of a director's role as an educational leader in an inclusive setting: Describe what a director does in supporting the instructional component of the program for children, staff, and families; Identify resources that a director might use to keep current with information relating to the instructional component of the program; Describe ways to involve teachers in instructional decision making.

ECED 2215. Program Management
3 Credits (3)

This course emphasizes the technical knowledge necessary to develop and maintain an effective early care and education program. It focuses on sound financial management and vision, the laws and legal issues that affect programs, and state and national standards such as accreditation. Consent of instructor required. May be repeated up to 3 credits.

Learning Outcomes

1. Develop a comprehensive program philosophy.
2. Demonstrate the ability to develop systems that are effective for quality program operation.
3. Create a program budget and understand the Income and Expense sides and what affects each part.
4. Model best practices that integrate various leadership styles.

ECED 2280. Professional Relationships**3 Credits (3)**

This course addresses staff relations that will foster diverse professional relationships with families, communities and boards. Topics of staff recruitment, retention, support and supervision will lay the foundation for positive personnel, family and community relationships. Consent of instructor required. May be repeated up to 3 credits.

Corequisite: ECED 2281.

Learning Outcomes

1. Interview an administrator and write a paper describing personnel management, staff support, supervision, and professional development.
2. Identify and describe ethical and legal requirements in maintaining a professional relationship with subordinates, the community, clients, and fellow administrators.
3. Identify and describe technologies which may be used in an early childhood setting.
4. Identify and describe legal and ethical considerations in the employment of others.

ECED 2281. Professional Relationships Practicum**2 Credits (2)**

Practical experience in the development of staff relationship that will foster professional relationships with families, communities and boards. Issues of staff recruitment, retention, support and supervision will lay a foundation for positive personnel management. Consent of instructor required. Restricted to ECED majors.

Corequisite(s): ECED 2280.

Learning Outcomes

1. Demonstrate knowledge of personnel management, staff support, supervision, and professional development within a diverse and inclusive organization: Describe methods for recruiting and retaining a diverse staff; Describe job descriptions for each position; Review a sampling of personnel policies and procedures; Review a variety of staff handbooks; Explain why on-going system of supervision should include regular meetings for professional goal setting, self-assessment, and feedback; Review program needs to effectively manage the work of the program including scheduling, covering ratios, initial orientation, in-service, staff meeting, etc.
2. Demonstrate an awareness of appropriate communication and collaboration skills: Improve written and oral communication skills; Describe strategies for resolving conflicts; Explain how to promote consensus building as a decision making process.
3. Demonstrate knowledge that promotes effective professional relationships with families, communities, and board members: Describe methods for demonstrating respect, understanding, and appreciation for all people; Identify the aspects of culture that facilitate relationship building among people; Describe how to build a common vision and develop long range program plans with parents, staff, board, and the community; Communicate program goals to visitors, prospective parents, volunteers, and board members; Describe how public relations and marketing strategies can impact programs; Review assessment tools that identify needs for early

care, education and family support; Develop a personal professional development plan; Describe methods to work effectively with a board and advisory group.

4. Demonstrate knowledge of technology uses and skill acquisition: Describe how to use technology resources to engage in ongoing professional development and lifelong learning; Describe how you will use technology to communicate and collaborate in your leadership role

ECED 3110. Research in Child, Growth, Development and Learning**3 Credits (3)**

This advanced course in child growth, development, and learning builds upon the foundational material covered in the basic course in child growth, development, and learning. An integration of major theories of child development is provided by focusing on contemporary research in all aspects of development, including bio-ecological, social-affective, cognitive, language, and the methodological aspects of research in early childhood development and education. Restricted to ECED majors (TEP and Zero-to-Four) and ECED minors. May be repeated up to 3 credits.

Prerequisite: ECED 1110;

Learning Outcomes

1. Incorporate understanding of developmental stages, processes and theories of growth, development, and learning into developmentally appropriate practice. (I.A)
2. Demonstrate knowledge of the interaction between maturation and environmental factors that influence physical, social, emotional, cognitive, and cultural domains in the healthy development of each child

ECED 3120. Family, Language, and Culture**3 Credits (3)**

This course analyzes the interrelationships between family, language, and culture as connected to children's development and learning. In this course, language is understood as a human activity and higher mental process which build on the children's families, community, and cultural background. Restricted to: ECED majors (TEP and Zero-to-Four) and ECED minors. May be repeated up to 3 credits.

Prerequisite: ECED 1130.

Learning Outcomes

1. Apply knowledge of cultural and linguistic diversity and the significance of socio-cultural and political contexts for development and learning and recognize that children are best understood in the contexts of family, culture, and society. A.6
2. Demonstrate knowledge of the many functions that language serves in the cognitive, social, and emotional aspects of development in the formative years. A.7

ECED 3210. Emergent Literacy**3 Credits (3)**

This advanced course is designed to prepare early childhood professionals to study literacy development, specifically oral language, writing and reading. This course focuses on children from birth through age 4, including children with special needs. Through a developmental approach, the course addresses: 1) recent theory and research that translates into practical strategies, assessment materials and preparation of rich literacy environments, 2) the socio-cultural contexts in which children develop literacy, 3) culturally, linguistically and developmentally appropriate literacy curricula, 4) processes used to determine the appropriateness of various literacy strategies, 5) assessment, evaluation, and accountability and 5) literacy leadership. Restricted to: Zero-to-Four majors. May be repeated up to 3 credits.

Prerequisite: ECED 2115.

Learning Outcomes

1. Demonstrate knowledge of the developmental sequence of language and literacy, including the influence of culture and home factors. A. eight
2. Knowledge of how children acquire and use verbal, non-verbal and alternative means of communication. A. nine
3. Develop partnerships with family members to promote early literacy in the home. C. eight
4. Establish partnerships with community members in promoting literacy. C. ten
5. Knowledge of the language, reading and writing components of emergent literacy at each developmental level. D. four
6. Create and manage a literacy-rich environment that is responsive to each child's unique path of development. E. nine
7. Use a variety of language strategies during adult-child and child-child interactions and facilitate dialogue of expressive language and thought. E. ten
8. A variety of developmentally appropriate instructional strategies that facilitate the development of emergent literacy skills. E. eleven
9. Demonstrate and facilitate conceptual understanding of family roles in the development of their infant and toddler, including support for family acquisition of knowledge concerning infant and toddler's growth, learning and development and cultural and linguistic diversity represented within the home setting. H. one 1
10. Apply theoretical knowledge f and ability to provide screening and assessment unique for infants and toddlers. H. two 1
11. Articulate and demonstrate conceptual understanding of respectful, responsive, and reciprocal interactions that serve as basis for infant/toddler curriculum and learning environments. H. five 1
12. An understanding and applications of flexible teaching approaches that span a continuum from child-initiated to adult-directed and from free exploration to scaffolded support or teacher modeling. I. three 1
13. Link child characteristics, needs, and interests with informal opportunities to build children's language, concept development, and skills. I. five 1
14. Establish priorities for high-quality and meaningful language and pre-literacy experiences across the developmental continuum, using language, pre-reading and pre-writing to facilitate skill development while strengthening children's cultural identity. I. eleven 1
15. Knowledge of second- language acquisition and bilingualism including the diversity of home language environments. I. twelve
Conceptual knowledge of the principles and standards derived from professional organizations for curriculum decision- making. I. fifteen

ECED 3996. Special Topics**1-3 Credits (1-3)**

Each course will be identified by a qualifying subtitle. A maximum of 3 credits in any one semester and a grand total of 6 credits. May be repeated up to 6 credits.

Learning Outcomes

1. Engage in the study of an ECED topic.

ECED 4110. Young Children with Diverse Abilities**3 Credits (3)**

Addresses competencies for working with young children with exceptionalities, ages three-eight, and their families. Public school, private school, Head Start and other models are included. Taught with ECED 5110. Restricted to ECED majors (TEP and Zero-to-Four) and ECED Minors. May be repeated up to 3 credits.

Prerequisite: SPED 3105.

Corequisite: ECED 4120.

Learning Outcomes

1. Demonstrate knowledge of the significance of individual differences in development and learning.
2. Demonstrate knowledge of how certain differences may be associated with rate of development and developmental patterns associated with developmental delays or specific disabilities.
3. Demonstrate knowledge of the similarities between children who are developing typically and those with diverse disabilities.

ECED 4120. Assessment of Young Children, Birth-Eight**3 Credits (3)**

Covers instruments and procedures for assessing young children and their families in order to determine atypical development. Screening, diagnosis, program planning, placement and evaluation issues are covered. Restricted to ECED Majors (TEP and Zero-to-Four) and ECED Minors. May be repeated up to 3 credits.

Prerequisite: SPED 3105.

Corequisite: ECED 4110.

Learning Outcomes

1. Understand the technical aspects of early childhood assessments
2. Conduct and utilize assessments
3. Collaborate with other professionals

ECED 4210. Integrated Early Childhood Curriculum**4 Credits (4)**

This advanced course focuses on developmentally appropriate content, learning environments, and curriculum implementation for children birth through age 4. It emphasizes integration of content areas (the arts, literacy, math, health/emotional wellness, science, social studies, motor, and adaptive living skills) and the development of rich learning environments for infants, toddlers, and preschool children. Restricted to: Zero-to-Four majors. May be repeated up to 4 credits.

Prerequisite: ECED 1115, ECED 2120, ECED 2121, ECED 2130, ECED 2131, ECED 2110, and ECED 1120.

Corequisite: ECED 4211.

Learning Outcomes

1. Develop, implement and evaluate an integrated curriculum that focuses on children's development and interests, using their language, home experiences, and cultural values. D. five
2. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E. four

ECED 4211. Integrated Curriculum Practicum**2 Credits (2)**

The advanced practicum course is a field based course that will provide opportunities for the integration of content areas (the arts, literacy, math, health/emotional wellness, science, social studies, motor, and adaptive living skills) and the development of rich learning environments for infants, toddlers, and preschool children. Restricted to Zero-to-Four majors. May be repeated up to 2 credits.

Prerequisite: ECED 1115, ECED 2120, ECED 2121, ECED 2130, ECED 2131, ECED 2110, ECED 1120.

Corequisite: ECED 4210.

Learning Outcomes

1. Develop, implement and evaluate an integrated curriculum that focuses on children's development and interests, using their language, home experiences, and cultural values. D. five

2. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.four
3. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.seven
4. Use and explain the rationale for developmentally appropriate methods that include play, small group projects, open-ended questioning, group discussion, problem solving, cooperative learning and inquiry experiences to help young children develop intellectual curiosity, solve problems, and make decisions. E.eight
5. Demonstrate an understanding and application of flexible teaching approaches that span a continuum from child-initiated to adult-directed and from free exploration to scaffolded support or teacher modeling. I.three

ECED 4220. Advanced Caregiving for Infants and Toddlers

3 Credits (3)

The advanced field-based course is intended to assist students to define and implement advanced elements of quality programming for all infants, toddlers in safe, healthy, responsive caring environments. The experiences in the approved setting will support strong nurturing relationships, cultural competence, diverse learning needs and styles of every child, appropriate guidance techniques and partnership with the families, cultures, and community represented. Students are assisted through the course in advancing their ability to observe, discuss, and implement elements of quality programming for infants and toddlers in home, small-group or whole-group care situations. Restricted to: Zero-to-Four majors. May be repeated up to 3 credits.

Prerequisite: ECED 2120 and ECED 2121; ECED 2130 and ECED 2131.

Learning Outcomes

1. The primary goal of your participation in this course is to develop an increased understanding of infant/toddler (Birth through age three) development and developmentally appropriate care/education practices.

ECED 4250. Teaching and Learning Math and Science

4 Credits (4)

Standards, principles, and practices in teaching mathematics and science to young children in preschool through grade 3. An emphasis is placed on developing a content-rich integrated math and science curriculum that focuses on children's development and interests, includes appropriate content, processes, environment, and materials with an emphasis on problem-solving as the major means of constructing basic concepts. Field experience required. Restricted to: TEP-ECED majors. May be repeated up to 4 credits.

Corequisite: ECED 4310, ECED 4260, ECED 4320.

Learning Outcomes

1. The arithmetic of real numbers and their subsets of rational numbers, integers, and whole numbers including a large repertoire of interpretations of the four basic operations and ways they can be applied, and an understanding of place value and its implications for ordering numbers and estimation. H.two.a.i
2. Three dimensional geometry based on the concept of distance, and two dimensional geometry as a method of drawing plans and representing three dimensional objects H.two.a.ii
3. Measurement of length, perimeter, area, time, weights, and temperature H.two.a.iii
4. Handling money problems such as cost and unit price. H two.a.iv

5. Demonstrate understanding and skill in the constructions of solids, measurements of their volumes and surface areas, drawing their projections, and making plans for their construction; defining relevant variables and writing formulas describing their relationships in problem-solving activities; and using measurement tools and appropriate techniques for recording data and displaying results. H two.b
6. Facilitate curriculum with open-ended activities that promote children's expansion of the material learned, and in which children learn to use a variety of mathematical skills and concepts, including problem solving, reasoning, and logic. H.two.c
7. Provide opportunities for children to learn how to use tools, technology, and manipulatives in problem solving. H two.d
8. Establish a classroom environment of respect for cultural diversity and gender equity in which all children develop skills in communicating, discussing, and displaying mathematical ideas. H two.e
9. Demonstrate understanding and apply the fundamental concepts in the subject matter of science including physical, life, and earth and space sciences as well as concepts in science and technology, science in personal and social perspectives, the history and nature of science, the unifying concepts of science, and the inquiry process scientists use in discovery of new knowledge to build a base for scientific inquiry. H two.a 1
10. Apply the scientific method to develop children's abilities to identify and communicate a problem, and to design, implement, and evaluate a solution. H three.b 1
11. Demonstrate the ability to integrate a variety of technologies into planned science activities. H three.c 1
12. Establish a classroom environment of respect for cultural diversity and gender equity where all children participate fully in science learning. H three.d Support play in young children's learning and development from age Pre-K-grade three. I.six 1
13. Demonstrate sound knowledge and skills in using technology as a teaching and learning tool. I.seven 1
14. Demonstrate the ability to analyze and critique early childhood curriculum experiences in terms of the relationship of the experiences to the research base and professional standards. I.nine 1
15. Facilitate family involvement so that families are engaged with curriculum planning, assessing of children's learning, and planning for children's transitions to new programs. I.twelve 1
16. Demonstrate conceptual knowledge of the principles and standards derived from professional content organizations (zero to three, NAEYC, DEC) for curriculum-decision making. I.thirteen 1
17. Demonstrate the use of reflective practice. I.fourteen

ECED 4260. Teaching and Learning Social Studies, Fine Arts and

Movement

3 Credits (3)

The course focuses on the aims, scope, and integration of methods of teaching social studies, the fine arts and movement across the curriculum. This course emphasizes an integrated approach to teaching the what and why of social studies; assessing student learning; planning units, lessons, and activities; effective instructional strategies; and knowledge of social studies content. Concepts of expressive art include the visual arts, music, movement and drama. Restricted to: TEP-ECED majors. May be repeated up to 3 credits.

Corequisites: ECED 4310, ECED 4250, ECED 4320.

Learning Outcomes

1. Demonstrate an understanding of the principles of teaching and learning processes that underscore social studies concepts and can translate these into meaningful learning activities focusing on inquiry, authenticity, and collaboration. H.four.a
2. Demonstrate understanding that social studies encompass history, geography, anthropology, archeology, economics, political science, psychology, sociology, and the interdisciplinary relationship of all facets of social studies. H.four.b
3. Demonstrate understanding that the definition of social studies requires that children be socially aware of and are active participants in local, state, national, and global issues; and that children recognize and respect diverse local and global perspectives concerning cultures other than their own. H.four.c
4. Implement a variety of teaching strategies to assist children to use multiple resources including primary (e.g., documents, artifacts/regalia, direct observation, human resources, personal background) and secondary (e.g., books, newspapers, internet) as part of the inquiry/research process. H.four.d
5. Create curriculum experiences that provide opportunities for children to appreciate the historical development of democratic values, institutions, nations, and cultures. H.four.e
6. Demonstrate the ability to plan for and engage children in activities that require them to formulate, analyze, synthesize, and critique issues by using well-reasoned, clearly supported arguments, policies, and positions. H.four.f
7. Demonstrate the ability to plan for and engage children in the presentation of social studies knowledge using a variety of sign systems including writing, charts, graphs, maps, art, music, drama, dance, and technology. H.four.g
8. Demonstrate an understanding and implementation of arts activities such as history, art making, appreciation, and criticism through dance, music, theater, and the visual arts, appropriate to young children's developmental levels interests. H.five.
9. Demonstrate knowledge of the distinctions, connections, and integration between arts disciplines and arts experiences and encourages study and active participation that leads to skill development and appreciation. H.five.b 1
